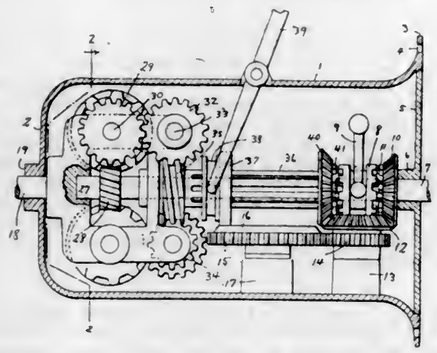
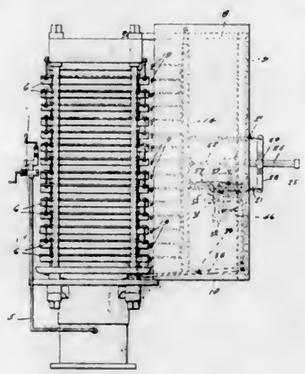
in upright positions in the groove and provided with longitudinally extending slots in the front faces thereof, elongated knives positioned in the slots in the holders with the cutting ends of the knives projecting from the outer ends of the holders, means for clamping the sides of the holders laterally against the contained knives and separate means for clamping the holders in the groove.

1,803,742. FOLDING DISPLAY STAND. MELCHER G. WERME, Worcester, Mass., assignor to Wickmire Spencer Steel Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 31, 1928. Serial No. 316,187. 6 Claims. (Cl. 211—85.)

2. A folding display stand comprising rigid side members, upper and lower shelves each formed in two parts, said parts being hinged together and to said side members, spacing members effective, when operatively connected, to hold said side members at a predetermined distance apart, and sway braces connecting the center hinged portion of said upper shelf to the lower parts of said side members.



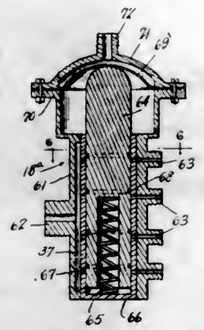
1,803,743. DISPLAY TABLET. HAROLD WIEDEMANN, Seattle, Wash.. Filed Jan. 3, 1929. Serial No. 330,085. 2 Claims. (Cl. 40—133.)



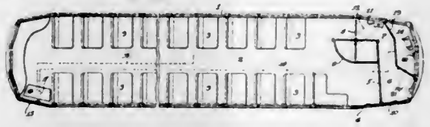
1. The combination with a hardened plastic stone, of spaced channel-shaped letters embedded therein having edges flush with the face of the stone, tie bars connecting said letters and embedded in the stone, grooves in the side walls of the channel-shaped letters, and panels of transparent material in said grooves.

1,803,744. TRANSMISSION. GIACOMO ABBONA, Mondovi Breo, Italy. Filed Oct. 13, 1930. Serial No. 488,512. 1 Claim. (Cl. 74—34.)

A transmission of the class described comprising a housing, a horizontally arranged drive shaft extending into one end of the housing, a horizontally arranged driven shaft extending into the other end of the housing, an intermediate shaft supported for rotary movement in the housing and in alinement with the other shafts, a pair of vertically arranged shafts in the housing, a gear carried by one of said vertical shafts, a friction disk on said gear, a gear carried by the other vertical shaft and meshing with the first gear, a gear loosely arranged on the drive shaft, a gear on the last-mentioned vertical shaft with which the loose gear meshes, a gear fastened to the intermediate shaft and meshing with the last-mentioned gear on the vertical shaft, manually operated clutch means for connecting the drive shaft with either the loose gear or the gear on the intermediate shaft, a sleeve rotatably arranged on the intermediate shaft, a friction disk slidably but non-rotatably mounted on the sleeve, and adapted to engage with the first friction disk, manually operated means for sliding the first disk on the sleeve, U-shaped member having its bight connected with the driven shaft with its limbs of forked construction, a shaft journaled in the extremities of each pair of forks, a gear on the outer end of each shaft, the gears being arranged on opposite ends of the two shafts, a worm gear on each shaft located between the forks, a worm on the sleeve on the intermediate shaft meshing with said worm gears, a shaft journaled in each pair of forks adjacent the light, a gear on one end of the one shaft and a gear on the opposite end of the other shaft, these gears meshing with the gears on the shafts at the ends of the forks, worm gears on the shafts located adjacent the bight part of the member and located between the forks and a worm on the intermediate shaft meshing with the last-mentioned worm gear.



1,803,745. CAKE KNOCKER FOR OIL PRESSES. SAMUEL RUSSELL CARPENTER, Sweetwater, Tex. Filed July 1, 1929. Serial No. 375,095. 8 Claims. (Cl. 100—50.)

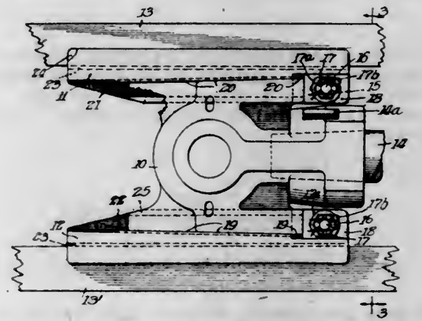


1. A device for pushing cakes from the boxes of an oil press, and comprising a plurality of fingers, one for each box, a vertical beam to which one end of the fingers are attached, said fingers at their opposite ends respectively provided with a depending extension for engagement with a cake in one box, and means for actuating the beam to push the fingers for extracting the cakes from the boxes.

1,803,746. LUBRICATING DEVICE. MATTHIAS CHRISTMAN, Springfield, Mo. Filed July 25, 1927. Serial No. 208,282. 1 Claim. (Cl. 137—139.)

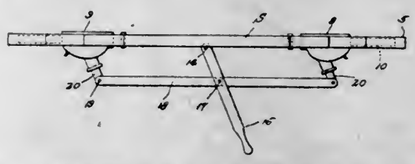
In a lubricating system of the class described a valve comprising a cylindrical casing having an inlet port, a cylindrical bushing located in the casing, one of said parts having a longitudinal groove therein which, with a portion of the other part, forms a chamber for receiving lubricant introduced through the said port, said bushing having ports arranged on diametrically opposite sides thereof, the ports on one side being in communication with said groove, the casing having outlet ports which are in communication with the ports in the other side of the bushing, a plunger slidably mounted within the bushing and having annular grooves therein, a spring for normally holding the plunger in position with the grooves out of alinement with the ports in the bushing, and means for moving the plunger to a position where each of its grooves will aline with a pair of the diametrically spaced ports in the bushing.

1,803,747. STREET CAR. LEONARD F. CLERC, Detroit, Mich. Filed Nov. 19, 1928. Serial No. 320,336. 1 Claim. (Cl. 105—341.)



In a one man street car having a rear exit, a seating compartment, a vestibule at one end thereof, a barrier between said compartment and vestibule, entrance doors in the wall of said car at opposite sides of said barrier and leading respectively to said compartment and vestibule, and a gate in said barrier.

1,803,748. SPRING OILER. EARL E. CRONENWETH and CHARLES G. HAMER, San Fernando, Calif. Filed May 13, 1930. Serial No. 451,983. 1 Claim. (Cl. 267—37.)

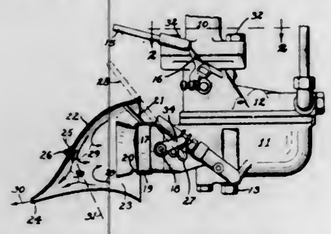


In a spring oiler, a casing open at its opposite ends adapted to receive a leaf spring extending therethrough, said casing comprising a top section, a bottom section, said sections being substantially channel-shaped in cross section, the sides of one of said section being arranged in overlapping relation with respect to the sides of the other of said section, means at the ends of the section to prevent the escape of lubricants, said bottom section formed with a lubricant well having communication with the interior of the bottom section, a lubricant absorbing pad arranged in the bottom section for substantially the full length of said section, wicks extending from the well into said bottom section to merge with said absorbing pad, a clamp overlapping the sections at one end, and co-acting retractile means on the other end of the sections for holding said sections together.

1,803,749. CROSSHEAD SHOE. THOMAS W. DEMAREST, Pittsburgh, Pa. Filed Jan. 5, 1920. Serial No. 349,557. 35 Claims. (Cl. 308—3.)

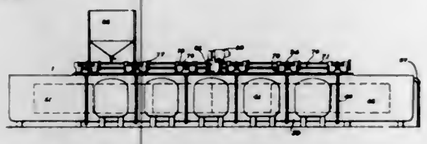
1. A device of the character described, comprising, in combination, a body and a shoe provided with means for interlocking the body and shoe together, said body and shoe each being further provided with co-operating inclined contacting surfaces which limit relative movement of the shoe and body in one direction, and said interlocking means being adapted for holding said body and shoe in predetermined relative position.

1,803,750. DEVICE FOR REMOVING AND INSTALLING SPRINGS. HARRISON DRODDY, El Dorado, Ark., assignor of one-half to Jack Roach, El Dorado, Ark. Filed Oct. 14, 1929. Serial No. 399,542. 2 Claims. (Cl. 29—87.1.)



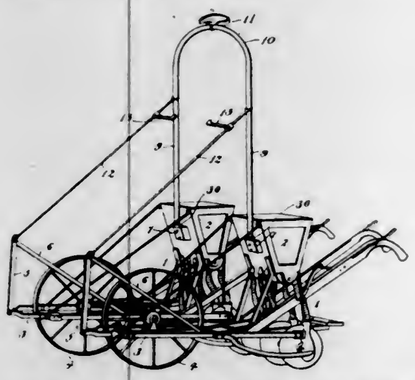
1. An apparatus of the class described comprising a pair of jacks, a connecting bar between the jacks, a lever rockably engaged with the connecting bar, and means operatively connecting the lever with the jacks for simultaneous operation thereof, each jack comprising a stationary part engaged with the bar and a movable part having a beveled terminal, the inner ends of the stationary parts of the jack having formed thereon sockets, and the bar having extensions receivable in said sockets.

1,803,751. AIR CLEANER. HENRY FORD, Dearborn, Mich., assignor to Ford Motor Company, Dearborn, Mich., a Corporation of Delaware. Filed Aug. 28, 1929. Serial No. 388,952. 7 Claims. (Cl. 183—75.)



6. In an air cleaner for an internal combustion engine carburetor, an open ended conical shaped casing having

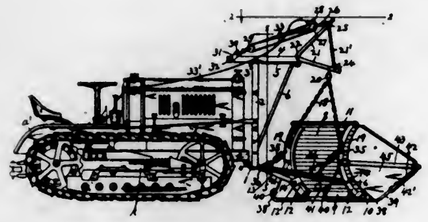
its large end facing the air stream created by the fan of said engine, and having its small end turned rearwardly from said air stream, so that air will be forced into the



large end and drawn out of the small end of said casing, and a clean air outlet supported within the large end of said casing so that air entering said outlet must reverse its direction from said air stream.

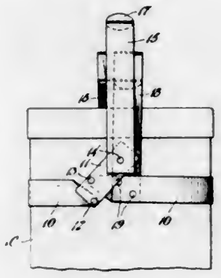
1,803,752. GLASS GRINDING MACHINE. HENRY FORD, Dearborn, Mich., assignor to Ford Motor Company, Dearborn, Mich., a Corporation of Delaware. Filed Feb. 7, 1930. Serial No. 426,535. 7 Claims. (Cl. 51—112.)

1. In a glass grinding machine, means for conveying a sheet of glass on edge between opposed grinding discs to thereby grind both faces of the sheet simultaneously, and means for submerging said sheet in a cooling liquid during the grinding operation.



1,803,753. AGRICULTURAL IMPLEMENT. KLAAS N. FRIESEN, Geneseo, Kans. Filed Sept. 30, 1929. Serial No. 396,291. 4 Claims. (Cl. 111—54.)

1. The combination with a pair of grain drills, each having a hopper at its rear end, of a high coupling arch mounted at the lower ends of its legs upon the hoppers of the grain drills.

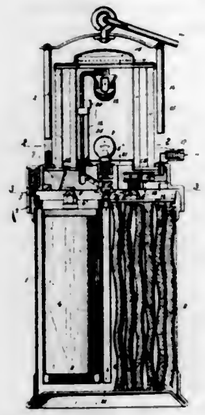


1,803,754. SIDEWALK SNOWPLOW. CARL H. FRINK, Clayton, N. Y. Filed Oct. 18, 1929. Serial No. 400,527. 4 Claims. (Cl. 37—42.)

1. A snow plow attachment for motor tractors comprising a cross bar having means for securement to the front end of the tractor frame, upright posts secured to the cross bar in transversely spaced parallel relation, an additional cross bar secured to the upper ends of the posts, lengthwise bars secured to the upper cross bar to extend forwardly and rearwardly therefrom, braces between the front ends of the lengthwise bars and posts, a mold board extending diagonally across and to opposite sides of the longitudinal center of the tractor frame some distance in

front of the posts, thrust bars pivoted to the lower ends of said posts and diverging forwardly therefrom and having their front ends pivotally connected to the moldboard to permit the latter to swing forwardly and rearwardly, spring connections between the moldboard and thrust bars, and means including a bell crank lever pivotally mounted upon the front end of the upper lengthwise bars for raising and lowering the moldboard.

1,803,755. ARTICLE CARRIER. WILLIAM F. GOEZ, Keokuk, Iowa, assignor to Iowa Fiber Box Company, Keokuk, Iowa, a Corporation of Delaware. Filed Jan. 12, 1931. Serial No. 508,296. 7 Claims. (Cl. 294—27.)



1. An article carrier comprising, in combination, a pair of clamping members; a ball; a pair of links each pivotally connected at one end to one end of one clamping member, and each having its intermediate portion pivotally connected to the adjacent end of the other clamping member, the other end of each link being pivotally connected to one arm of the ball.

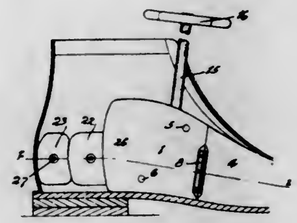
1,803,756. INCANDESCENT GAS-LIGHT MINERS' LAMP. WALTER GOSMANN, Dortmund, Germany. Filed Aug. 14, 1929, Serial No. 385,783, and in Germany Sept. 3, 1928. 7 Claims. (Cl. 240—11.3.)

1. In a miner's lamp of the type described, a sectional body, electric current and combustible gas supply means contained within the lowermost section, inner and outer glasses sealed on the uppermost section and forming an outer compressed air chamber and an inner combustible chamber, a gas burner within the combustible chamber having communication with said gas supply means, an electric glow bulb in the last named chamber, and having

circuit connection with the current supply means, an inlet passage adapted to be connected with an external source

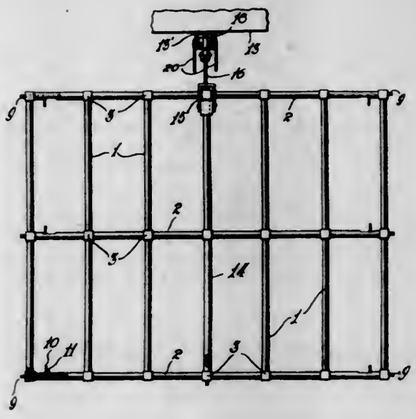
of air pressure and a compressed air controlled means controlling said circuit and communication between said inlet passage and said chambers.

1,803,757. VAT DYESTUFFS OF THE ANTHANTHRONE SERIES AND PROCESS OF MAKING SAME. RICHARD HERZ, Frankfort-on-the-Main, and WERNER ZERWECK, Fechenheim, near Frankfort-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 1, 1926, Serial No. 145,697, and in Germany Nov. 7, 1925. 18 Claims. (Cl. 260—61.)



1. A process for producing orange to red vat dyestuffs which process comprises reacting upon anthanthrone with a halogenating agent with addition of a diluent of the group consisting of sulfuric acid, sulfuric acid monohydrate, fuming sulfuric acid, chlorosulfonic acid, sulfuryl chloride, sulfur chlorides, thionylchloride and inert organic diluents of the aromatic series possessing high boiling points.

1,803,758. HALOGENATED VAT DYESTUFFS AND PROCESS OF MAKING SAME. RICHARD HERZ, Frankfort-on-the-Main, and WERNER ZERWECK, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Original application filed Nov. 1, 1926, Serial No. 145,697, and in Germany Nov. 7, 1925. Divided and this application filed Dec. 11, 1929. Serial No. 413,420. 6 Claims. (Cl. 260—61.)

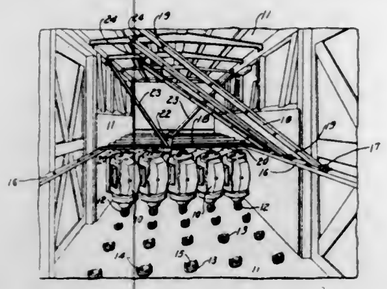


2. The process which comprises reacting upon anthanthrone with a brominating agent, in the presence of an inorganic diluent selected from the group consisting of concentrated sulfuric acid, sulfuric acid monohydrate, fuming sulfuric acid, chlorsulfonic acid, sulfuryl chloride, sulfur chlorides and thionyl chloride, and of a carrier selected from the group consisting of I, $SbCl_5$, $FeCl_3$ and ICl_3, at an elevated temperature below 100° C., and then cooling down and passing chlorine into the mixture.

1,803,759. SHOE EXPANDER. JOSEPH HESSEL, Winnipeg, Manitoba, Canada. Filed May 9, 1930. Serial No. 451,068. 7 Claims. (Cl. 12—128.6.)

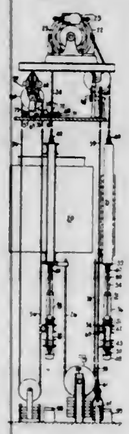
1. In a shoe expander, a pair of mating heel sections permanently fastened together and providing an internal cavity, a gear casing housed within the cavity, mating toe sections pivotally connected to the heel sections, a jack screw slidably carried by the gear casing and having the forward end thereof extending between the toe sections, expansion arms pivotally connected to the forward end of the jack screw and received within mating cavities provided in the toe sections and pivotally attached to the toe sections, a bevel pinion mounted on the jack screw and prevented from end shifting by the gear casing, an upwardly extending spindle rotatably carried by the gear casing and provided at its upper end with a hand wheel, and a bevel gear secured to the lower end of the spindle and engaging the former bevel gear.

1,803,760. OVERHEAD BULKHEAD DROP GATE FOR BOX AND REFRIGERATOR CARS. GEORGE F. JONES, Dallas, Tex. Filed Oct. 11, 1929. Serial No. 398,930. 3 Claims. (Cl. 105—376.)



1. A gate for the purpose described in combination with a railway freight car, comprising a trackway support from which the gate is suspended and adapted to ride; swivel means for enabling the gate to be swung from a cross-wise to a length-wise position of the car from said support; means for spacing the gate in the car according to car contents; said means including side wall and floor elements to which the gate is removably attached; and means for suspending the gate on a plane higher than normal loading conditions required in loading certain kinds of freight.

1,803,761. BRACING FOR FREIGHT. FREDERICK W. LUDWIG, Detroit, Mich., assignor to Ford Motor Company, Dearborn, Mich., a Corporation of Delaware. Filed June 25, 1930. Serial No. 463,594. 14 Claims. (Cl. 105—367.)

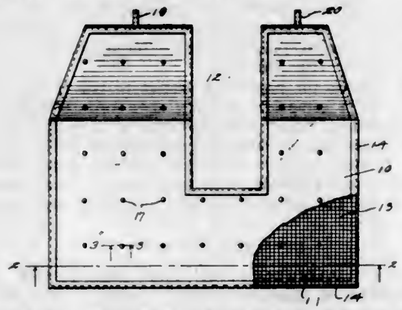


1. In a device of the character described, a freight carrier, an engine unit disposed in said carrier with its crank shaft extending in a vertical direction, a flange secured to the floor of said carrier which pilots the lower end of

said engine, and means extending across the carrier and detachably secured to each side thereof which pilots the upper end of said engine.

2. In a device of the character described, a freight carrier, a plurality of engine units disposed in said carrier with their crank shafts extending in a vertical direction and with their cylinder blocks projecting diagonally to the lines of said carrier so that the crank case of one unit may overlap the cylinder head of the next unit, flanges secured to the floor of said carrier in position to pilot the lower ends of said units, and means extending across the carrier and detachably secured to each side thereof which pilots the upper ends of said units.

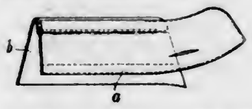
1,803,762. ELEVATOR SAFETY APPARATUS. ALEXANDER MARKS, Chicago, Ill., assignor to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Filed July 5, 1929. Serial No. 375,953. 7 Claims. (Cl. 187—91.)



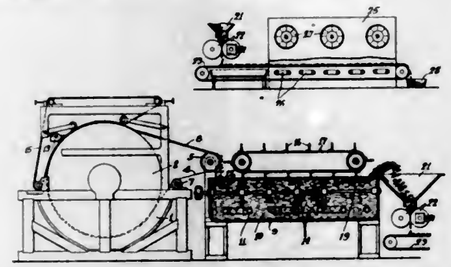
1. In an elevator installation, a hatchway, a body movable in said hatchway, guide rails for said body, a buffer carried by said body, safety brake mechanism carried by said buffer and adapted upon operation to grip said rails to cause the operation of said buffer to retard and stop the descending of said body, means for causing the operation of said safety brake mechanism at any point in the hatchway, and resilient means surrounding a portion of said buffer for retarding the latter upon operation of said safety brake mechanism.

1,803,763. PUZZLE. HARRY B. MEIBERS, Springfield, Ohio. Filed Nov. 18, 1929. Serial No. 408,062. 1 Claim. (Cl. 273—153.)

A set of cards adapted to be assembled in edge abutting engagement in transverse and longitudinal rows, each card bearing a single letter of the alphabet, the letters being so chosen as to spell a word in each transverse row when the cards are arranged in certain sequence, each of the cards being further provided with two different numerals, said numerals being so chosen that all of the numerals within a given range will appear in each transverse row of the cards when said cards are arranged in the aforementioned certain sequence, the numerals further being so chosen that one of said numerals will be common to all of the cards in one of the vertical rows to provide a key card for each transverse row.

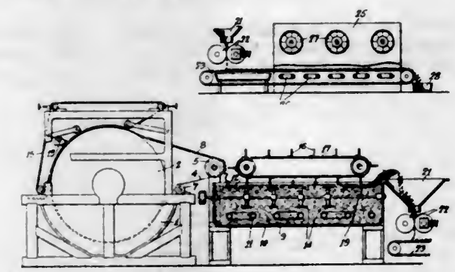


1,803,764. VEHICLE RADIATOR. ERNEST E. MILLER, David City, Nebr. Filed Feb. 16, 1929. Serial No. 340,565. 2 Claims. (Cl. 257—256.)



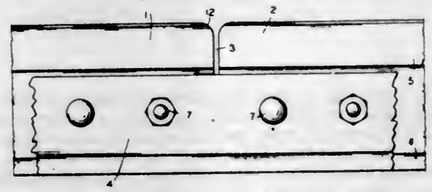
1. A heater for vehicles comprising a flat body adapted to be placed upon the vehicle deck and corresponding in contour and outline to the shaping of the deck, said body comprising upper and lower plates sealed to one another about their edges, a member disposed between said plates and maintaining the plates in spaced relation to one another while subdividing said space into tortuous channels, and means for introducing a heating medium to and withdrawing said heating medium from the space between the plates, one of said plates having pressed portions extending through openings formed in the other of the plates and sealed to the edges of said openings, said pressed portions being positioned at spaced intervals about the plate and between the edge portions thereof.

1,803,765. STAND-UP DOUBLE COLLAR. HUGO MUELLER, Mannheim, and HANS BERTELSMANN, Bielefeld, Germany. Filed Mar. 11, 1929, Serial No. 346,155, and in Germany Feb. 25, 1928. 1 Claim. (Cl. 2—138.)



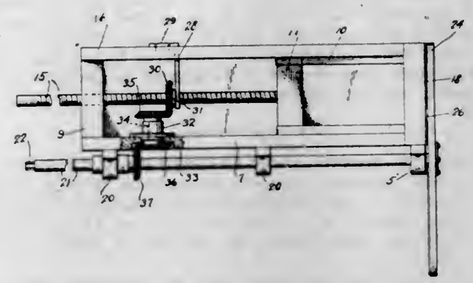
A stiffened turned-over collar, comprising an inner multi-ply neck embracing portion of dense fabric; each ply being substantially indifferent to absorption of starch; an outer multi-ply collar portion of porous fabric with its plies capable of free absorption of a large amount of starch; said neck embracing portion being freely yieldable and the outer collar portion rigid; and reinforcement marginally of the inner neck embracing portion.

1,803,766. APPARATUS FOR DRYING. GEORGE W. O'KEEFFE, New Rochelle, N. Y. Filed Jan. 8, 1927. Serial No. 159,831. 25 Claims. (Cl. 34—2.)



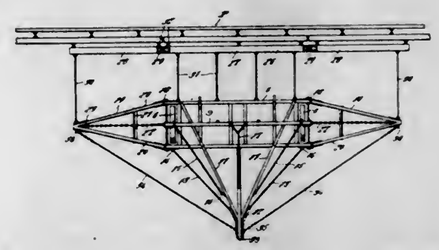
1. Apparatus for drying substances repellant to entrained fluid comprising a tank of liquid, means to raise the liquid to that temperature at which the substance is fluid repellant, means to immerse the substance in the liquid, means to agglomerate the substance while immersed and means to remove the substance from the liquid.

1,803,767. DRYING. GEORGE W. O'KEEFFE, New Rochelle, N. Y. Filed Jan. 8, 1927. Serial No. 159,832. 22 Claims. (Cl. 34—24.)



22. The method of drying substances having the characteristics of a precipitate obtained by treating a gum with an alkali and acid, which precipitate has the property of becoming suddenly fluid repellant when raised to a certain critical temperature, consisting in heating the substance to said critical temperature, which temperature is below the boiling point of the entrained fluid.

1,803,768. RAILWAY RAIL JOINT. FREDERICK L. RE QUA, San Francisco, Calif. Filed Oct. 3, 1930. Serial No. 486,133. 2 Claims. (Cl. 238—173.)

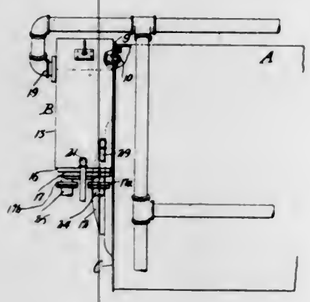


1. A rail joint with the abutting rail ends arcuately chamfered transversely of their tread portions.

1,803,769. ROTARY VEGETABLE CUTTING MACHINE. CHARLES B. ROHLAND, Barberton, Ohio. Filed June 26, 1929. Serial No. 373,887. 1 Claim. (Cl. 146—113.)

In a vegetable cutter of the class described including an elongated casing and a follower slidable in the casing, means for shifting the follower longitudinally in the casing comprising a threaded shaft fixed to the follower and disposed longitudinally in the casing, a gear threaded on the shaft having a collar thereon, a stop bracket mounted on the casing and extending thereinto through which the shaft slidably extends and with which the collar on the gear engages, a shaft extending transversely through an opening in one side of the casing, a bearing for the second named shaft extending through the casing, a gear on the inner end of the second named shaft meshing with the first mentioned gear, said first named gear being retained against longitudinal movement in the casing by the bracket and the second named gear, a third gear fixed on the outer end of the transverse shaft, bearings on one side of the casing, a shaft journaled for rotation in the bearing, a gear fixed on the last mentioned shaft meshing with the third mentioned gear and cutting means fixed on one end of the last mentioned shaft and disposed at one end of the casing.

1,803,770. TRACTOR HITCH FOR FARM MACHINERY. JOHN W. RUSH, La Grande, Oreg. Filed Sept. 10, 1929. Serial No. 391,527. 3 Claims. (Cl. 97—233.)

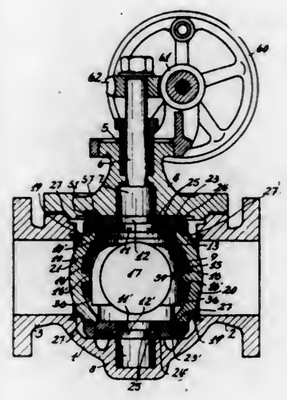


1. In a hitch of the class described, a main frame, wheels supporting said main frame at each end of the frame, wing frames hingedly connected to said main frame at opposite ends of the main frame, and adapted to extend laterally from said main frame, said wing frames adapted to be swung upwardly to assume vertical positions, means for securing said wing frames in said vertical positions, a draft tongue extending forwardly from said main frame intermediate the ends of said main frame, brace bars secured to the main frame and said draft tongue, brace rods secured to said main frame at opposite ends of the main frame and said draft tongue at the forward end of said draft tongue, a pair of flexible members secured at one end to the forward end of said draft tongue, and at their opposite ends to the free

ends of said wing frames, a sectional draft bar, said draft bar comprising an intermediate section and a pair of end sections, means hingedly connecting the end sections of the draft bar to said intermediate section of the draft bar, links extending rearwardly of said main frame, said links adapted to be secured to the intermediate section of said draft bar, links extending rearwardly from the free ends of said wing frames, said last mentioned links adapted to be secured to the outer free ends of said end sections of the draft bar.

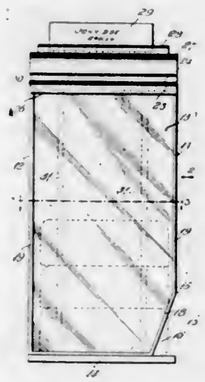
1,803,771. REMOVAL OF ARSENIC FROM LEAD BULLION. RONALD CAMPBELL RUTHERFORD, El Paso, Tex., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed July 26, 1929. Serial No. 381,397. 4 Claims. (Cl. 75—15.)

2. The process of treating lead ore containing sulphur, copper and arsenic to produce partially refined lead, which comprises roasting said ore to reduce the sulphur content to less than the chemical equivalent of the copper content whereby an excess of copper is available to unite with the arsenic, and smelting the roasted ore to cause the copper to unite with the remainder of the sulphur and form matte and the excess of copper to unite with the arsenic to form speiss, and removing the matte and speiss from the residue which comprises a base lead bullion containing less than .05% of arsenic.



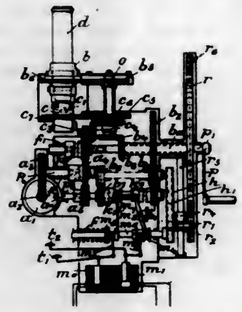
1,803,772. FEED WATER HEATER. EUGENE L. SCHELLENS, Millburn, N. J., and CHRISTOPHER A. SCHELLENS, Marblehead, Mass., assignors to C-S Engineering Company, Jersey City, N. J., a Corporatiorn of Delaware. Filed Mar. 13, 1926. Serial No. 94,370. 24 Claims. (Cl. 122—441.)

22. An arcuate locomotive feed water heater comprising a casing, water tubes therein, extending from end to end thereof, means cooperating with walls of the casing to form an arcuate steam chamber from end to end thereof, means for admitting steam to said chamber, and a plurality of jet openings from said chamber directed toward said tubes.



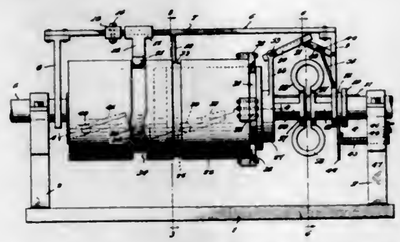
1,803,773. ROTARY VALVE. ALFRED SCHMIDT, Dusseldorf, and EDWALD HASELHORST, Halle-on-the-Saale, Germany. Filed Aug. 9, 1929, Serial No. 384,690, and in Germany Apr. 16, 1928. 7 Claims. (Cl. 251—102.)

1. A rotary valve comprising a valve casing, inlet and outlet branches on the said casing, a bored valve spindle, a bored body surrounding the said spindle, valve plates on the said bored body, means for coupling the bored body with the spindle during a portion of the rotary motion of the spindle and for uncoupling it during another portion of the rotary motion, means for locking the rotary body to the valve-casing during this latter



portion of the revolution and eccentric parts on the spindle for causing the relative rotation of the spindle and rotary body to displace the said valve plates, as and for the purpose set forth.

1,803,774. DISPENSING CABINET. THOMAS B. SCHMIDT, Harrisburg, Pa. Filed May 4, 1929. Serial No. 360,587. 1 Claim. (Cl. 312—42.)

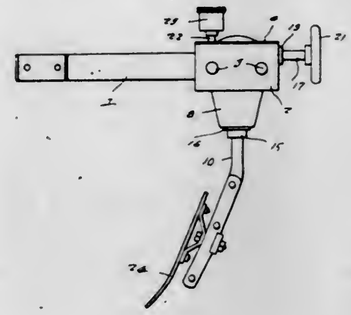


A dispensing cabinet for loaves of bread or the like, comprising a rectangular body including a back, side walls and a transparent front wall, a cover for said body, an inverted U-shaped band arranged at the top of said body, the back and side walls of said body extending into said band, and a strip interposed between the inner walls of said band and extending across the front of the body for protecting the latter against breakage.

1,803,775. FUSE SETTING MACHINE. HERMANN SCHULER and ANTON GIETMANN, Dusseldorf, Germany, assignors to Rheinische Metallwaaren und Maschinenfabrik, Dusseldorf-Derendorf, Germany, a Corporation of Germany. Filed July 15, 1929, Serial No. 378,377, and in Germany Aug. 29, 1927. 11 Claims. (Cl. 86—23.)

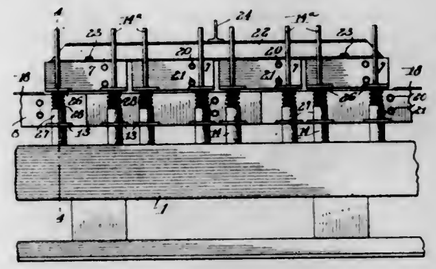
1. A fuse setting machine including a projectile receiving head, a fuse ring gripping device revoluble with respect to said head, a constantly revolving motor, means temporarily to connect the motor operatively with the fuse gripping device to revolve the latter, and a remote control for said means.

1,803,776. CLUTCH. WILLIAM C. SEITZ, Amsterdam, N. Y. Filed July 17, 1929. Serial No. 379,005. 9 Claims. (Cl. 192—30.)



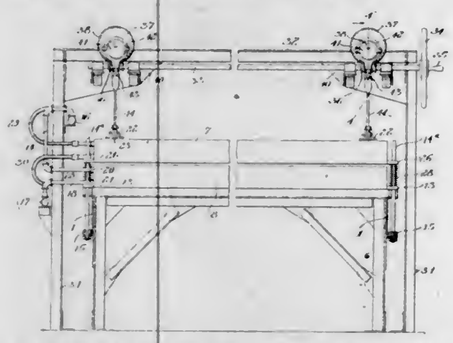
2. A clutch comprising a driving shaft and a driven shaft, an outer cylindrical member, eccentrics mounted in the member and keyed to the respective shafts, means for interlocking the eccentrics with the cylindrical member, a frame slidably keyed to the driving shaft for movement around the cylindrical member, and interlocking means between said member and frame to shift the member and the eccentrics to cause the shafts to rotate simultaneously.

1,803,777. FISH LURE. JULIUS E. SPEICH, Nedrow, N. Y. Filed May 31, 1929. Serial No. 367,600. 2 Claims. (Cl. 43—47.)



1 An artificial fish-bait comprising a body portion having a forwardly tapered front end and spiral peripheral ribs extending rearwardly from the tapered end to cause the body to rotate when drawn through the water, fish-hooks secured to opposite sides and projecting rearwardly in spaced relation beyond the rear end of said body portion, and a flexible rudder attached to the rear end of the body to extend between the hooks.

1,803,778. CULTIVATOR SHOVEL MOUNTING. JOHN HENRY STARR and HOWARD STARR, Shickley, Nebr. Filed Dec. 7, 1929. Serial No. 412,483. 1 Claim. (Cl. 97—187.)

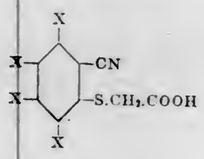


A cultivator shovel of the class described comprising a metallic casing adapted to be mounted on the free end of a cultivator beam and having an open chamber in its upper portion, a removable cover plate mounted on the casing and extending over the chamber, an integral downwardly tapering extension depending from the lower side of the casing, said extension and casing having a vertical bore extending therethrough communicating with the chamber at its lower side, a vertical shovel standard extending through the bore, a reduced threaded extension on the upper end of the standard extending upwardly into the chamber, a gear fixed on the extension, a retaining nut for the gear threaded on the extension, stop means on the standard engaging with the lower end of the extension on the casing for limiting the upward movement of said standard through the bore, a horizontally disposed shaft extending longitudinally and rotatably in the casing and through the chamber, a worm gear fixed on said shaft within the chamber and in mesh with the first named gear, means for manually rotating the shaft, a cultivator shovel on the lower end portion of the standard and means mounted on the casing for lubricating the gears therein.

1,803,779. PLATEN SUPPORT FOR HEAT PROCESSING MACHINES. JOHN A. STEVENS, Lowell, Mass., assignor to The Upson Company, Lockport, N. Y., a Corporation of New York. Filed Aug. 14, 1928. Serial No. 299,562. 10 Claims. (Cl. 154—1.)

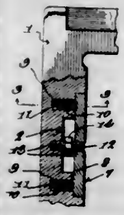
1. In a heat processing machine for sheets and boards, the combination with a lower platen element, an upper platen element, and means independent of said platen elements for drawing sheet material continuously between said elements, of a resilient support for one of said platen elements to maintain it properly spaced from the other element.

1,803,780. PLATEN MECHANISM FOR HEAT PROCESSING MACHINES. CHARLES A. UPSON, Lockport, N. Y., assignor to The Upson Company, Lockport, N. Y., a Corporation of New York. Filed Aug. 14, 1928. Serial No. 299,560. 7 Claims. (Cl. 154—1.)



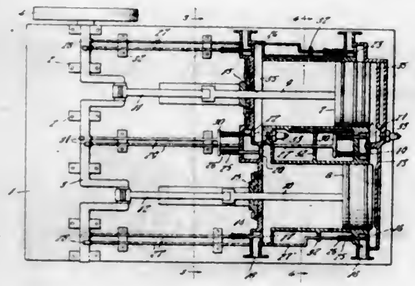
1. A machine for heat processing sheets and boards, comprising in combination, a frame, a lower platen element, an upper platen element, means for supporting the latter in proper spaced relationship to the former, means for heating said platen elements, and lifting mechanism for the upper platen element embodying a hand operated device accessible from one side of the frame.

1,803,781. PROCESS OF PREPARING THE 2-NITRILE OF ARYL-1-THIOGLYCOL-2-CARBOXYLIC ACIDS CONTAINING BROMINE AND NEW PRODUCTS OBTAINABLE THEREBY. HERMANN WAGNER, Bad Sodon-on-the-Taunus, and RUDOLF BRUNS, Frankfort-on-the-Main-Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 6, 1928, Serial No. 324,311, and in Germany May 5, 1925. 7 Claims. (Cl. 260—108.)



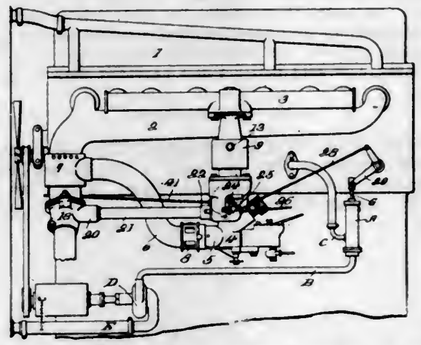
1. The process which comprises subjecting an aryl-1-thioglycollic-2-carboxylic acid nitrile to the action of bromine in the presence of a solvent which is inert to halogen.

6. As new products the compounds of the following formula:



wherein one X stands for bromine, at least one X for alkoxy, halogen or alkyl, and the other X's for hydrogen or univalent substituents.

1,803,782. PRINTER'S QUOIN CHASE. CHARLES F. WELDON, Lake Geneva, Wis. Filed Dec. 22, 1928. Serial No. 327,881. 1 Claim. (Cl. 101—394.)



A printing-press chase and quoin assemblage comprising a chase frame, a quoin, the chase frame having spaced sockets therein, spaced stems upon the quoin of greater length than the thickness of said quoin slidably fitting in said sockets and constituting means for slidably supporting the quoin with respect to the said side of the chase frame for adjustment toward and from the same and bracing the quoin when the quoin is moved beyond the chase frame and preventing lateral displacement of the quoin, the said stems and sockets constituting also means for maintaining the said quoin parallel to the said side of the frame, springs within the sockets coacting and extending within said stems and urging the stems outwardly in the sockets and constituting means for normally urging the quoin away from the said side of the frame, the quoin and frame having threaded sockets therein in opposition to each other, the threads in the sockets being oppositely directed, and an adjusting screw having oppositely threaded end portions fitting in said sockets and an intermediate head of polygonal contour for the application of a tool for effecting adjustment of said screw to effect positive adjustment of the quoin in either direction with respect to the said side of the frame.

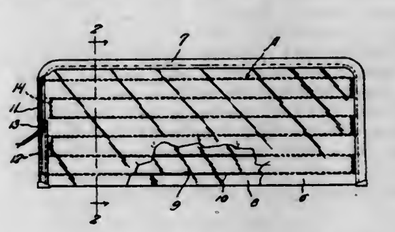
1,803,783. INTERNAL COMBUSTION ENGINE. ISAAC MITCHELL WHERRY, Zearing, Iowa. Filed Oct. 17, 1929. Serial No. 400,309. 4 Claims. (Cl. 123—61.)

4. An internal combustion engine of the character described comprising a power cylinder having inlet and outlet ports at its opposite ends, a compressor cylinder having inlet and outlet ports at its opposite ends, the outlet ports thereof communicating with the inlet ports of the power cylinder, pistons mounted for reciprocation in the cylinders, a crank shaft coupled to the pistons to cause simultaneous movement thereof in the cylinders, cams mounted on said crank shaft, valves in the inlet ports of the compressor cylinder for admitting a fuel charge thereto throughout the strokes of the piston therein, valves in the outlet ports of the power cylinder for exhausting gases therefrom throughout portions only of the strokes of the piston therein and simultaneously operated pairs of valves in the communicating inlet ports of the power cylinder and the outlet port of the compressor cylinder for the passage of the fuel charge from said compressor cylinder to said power cylinder while the piston in the latter cylinder is traversing the portions of its strokes at which the valves in the outlet ports thereof are closed, and means for actuating the valves comprising independent reciprocating rods engaged at one end with certain of the cams on the crank shaft and at their opposite ends with the inlet and outlet valve of the compressor and power cylinder respectively and reciprocating rods each having one end engaged with one of the remaining cams on the crank shaft and having heads on their opposite ends engaged with the pairs of valves in the communicating outlet and inlet ports of the compressor and power cylinders respectively.

1,803,784. HEAT CONTROLLING MEANS FOR CHARGE FORMING DEVICES. REA P. WRIGHT, Washington, D. C., assignor to Marvel Carburetor Company, Flint, Mich., a Corporation of Illinois. Filed Aug. 15, 1929. Serial No. 386,126. 19 Claims. (Cl. 123—122.)

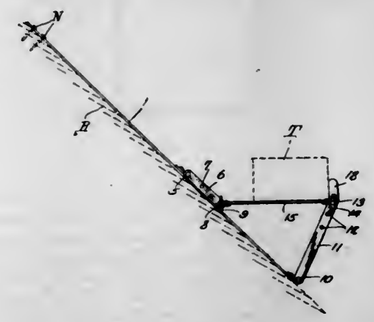
1. In a heat control for internal combustion engines having a forced feed water cooling system, the combination with valves arranged to throttle the exhaust gases and explosive charge, of means controlled by the pressure of the water cooling system of the internal combustion engine to vary the effect of movement of the charge controlling valve on the exhaust controlling valve.

1,803,785. CORE POSITION INDICATOR FOR WELL DRILLING APPARATUS. JOHN EDWARD ABLER, Hollywood, Calif. Filed July 9, 1928. Serial No. 291,293. 4 Claims. (Cl. 33—205.)



1. An instrument of the character described comprising a casing having a bottom wall provided with a concave upper surface, a vertically yieldable pendulum supporting needle rising centrally from said surface, a normally vertical pendulum having its upper end bearing on the tip of said needle, a pointer projecting centrally from the upper end of the pendulum and adapted in the vertical position of the pendulum to align with the pendulum supporting needle, a magnetic compass needle carried by the pendulum and extending at right angles to said pointer, said compass needle being rotatable about an axis coinciding with the longitudinal axis of the pointer, a lens mounted on the casing and provided with a plurality of concentric lines with which the pointer cooperates and displaceable holding means yieldingly engaging the upper end of the pendulum to force the pendulum downwardly into engagement with the concave bottom wall surface of the casing whereby the pendulum is effectively secured in a vertical position.

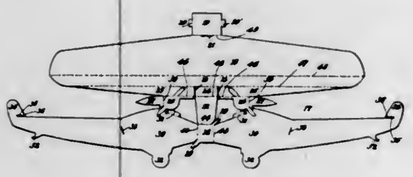
1,803,786. GARTER. THURMAN ANDREW, Jamaica Plain, Mass. Filed July 9, 1930. Serial No. 466,812. 1 Claim. (Cl. 241—6.)



A garter including a band, a shield thereon, a member seated within the shield having an elongated slot, said shield having an aperture through which the slotted portion of the member is exposed, a tape secured at one end to the band and having a clasp at its other end, an intermediate portion of the tape being looped through the slotted member, a buckle carried by said member and movable in the aperture in the shield to engage and release the tape, a fastener at one end of the band, and means on the slotted member for engagement by the fastener.

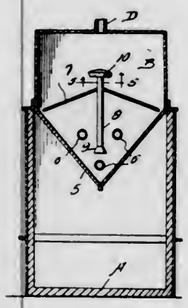
1,803,787. CLEAR VISION DEVICE. JOHN W. BOUR, Los Angeles, Calif. Filed July 24, 1929. Serial No. 380,611. 2 Claims. (Cl. 20—40.5.)

1. A transparent panel for windshields, windows and other closures comprising a pair of spaced companion transparent panes, transparent strips disposed between and engaging said panes and arranged slightly in spaced relation defining passageways, a continuous resistance wire extending from one passageway to the other, and feed and return wires for said resistance wire secured to the opposite terminals thereof and extending from said panels.



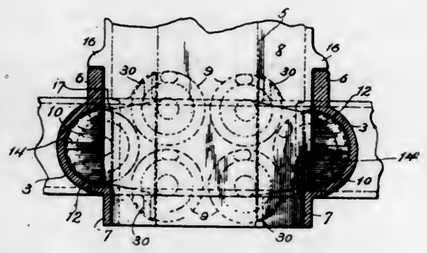
1,803,788. SHINGLE BRACKET. MARSHALL BROWN, Heltonville, Ind. Filed June 25, 1929. Serial No. 373,653. 1 Claim. (Cl. 304—20.)

A shingle bracket including a strap for attachment to a supporting structure, arms pivotally connected thereto,



links pivotally connected to the strap, a supporting strip, and pivotal adjustable connections between the ends of said strip and the links and arms, respectively, whereby said links, arms and strip can be folded against the strap or can be moved to position to support the strip at an angle to the strap without disconnecting said strip from the links and arms.

1,803,789. DISPLAY TOY AEROPLANE. JOSEPH EDWIN BURGESS, New York, N. Y., assignor to The United States Printing & Lithograph Company, Brooklyn, N. Y., a Corporation of Ohio. Filed June 20, 1928. Serial No. 286,973. 5 Claims. (Cl. 46—50.)

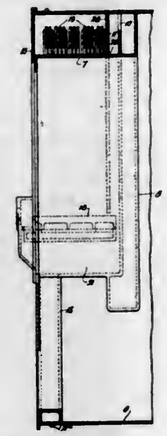


1. A flexible blank for forming a toy display aeroplane comprising a medial head portion, fuselage side portions extending laterally and oppositely from the same, adapted to be folded rearwardly therefrom, and having slits therein, and rear end upright rudder portions having slits, a slit transverse wing portion to rest against the folded fuselage side portions and be secured in the side slits, and a top having a rear slit fuselage portion with a forward tongue to enter the rear slit of the wing, and a rear end horizontal rudder portion to enter the slits in the upright rudder portion, and also receiving the rudder portion in the rear slit.

1,803,790. STEAM BOILER. JEREMIAH BURKE, Terre Haute, Ind. Filed July 13, 1928. Serial No. 292,518. 1 Claim. (Cl. 122—406.)

In a steam boiler for furnaces, a boiler body, the bottom wall of which merges at one end into a water pit having inclined side walls, fire tubes extending longitudinally through the pit and communicating at opposite ends with the interior of the furnace, a plate arranged longitudinally within the boiler above said pit and having its major portion at all times disposed above the normal level of the water within the pin, said plate being provided with downwardly directed surfaces terminating in spaced relation with the inclined walls of the pit, vertical tubes arranged through the plate and having their lower ends below the plate within the pit, the upper ends thereof terminating slightly above the plate, manifolds arranged upon the upper ends of the tubes and having discharge openings whereby the water flowing upwardly through the tubes will drop upon the plate to be directed toward the walls of the boiler, a cold water inlet pipe having discharge openings disposed relative to said tube manifolds whereby cold water may be discharged onto said manifolds, and said boiler being provided with a steam outlet.

1,803,791. CAR TRUCK CONSTRUCTION. SAMUEL P. BUSH, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Filed Jan. 4, 1927. Serial No. 158,950. 19 Claims. (Cl. 105—197.)



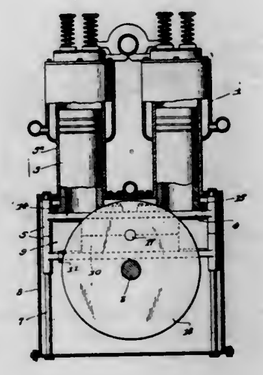
10. In a car truck, a side frame having an upper member, a lower member and columns connecting said members, spring seats near the bases of the columns over the lower member of the side frame, brackets on the side frame adjacent the inner edges of the spring seats, a spring plank resting on the lower member of the side frame between said brackets and the lower portions of the columns, a group of springs supported by the spring plank, the spring seats and said brackets, and a bolster supported by the springs.

1,803,792. METHOD AND APPARATUS FOR SPRAYING FLUID PULPS. NIELS C. CHRISTENSEN, Salt Lake City, Utah. Filed Nov. 24, 1926. Serial No. 150,580. 5 Claims. (Cl. 261—92.)

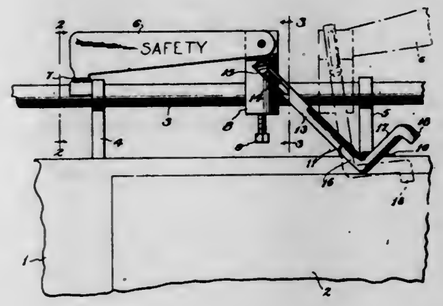
1. The method of making a spray from fluid mixtures of liquids and finely divided solids which consists in agitating said mixture to keep said solids in suspension and rotating a rapidly revolving horizontal cylinder dipping slightly into said mixture to be sprayed, at such a speed that a portion of said fluid mixture is carried out of the body of said mixture on the surface of said cylinder and is thrown from the surface of said cylinder as a spray.

1,803,793. LOCOMOTIVE FRONT END CONSTRUCTION. JOEL S. COFFIN, Jr., Englewood, N. J., assignor to C-S Engineering Company, Jersey City, N. J., a Corporation of Delaware. Filed July 30, 1927. Serial No. 209,504. 28 Claims. (Cl. 122—423.)

1. A cast steel smoke box having an arcuate feed water heater receiving pocket formed integral therewith and extending within its cylindrical portion.



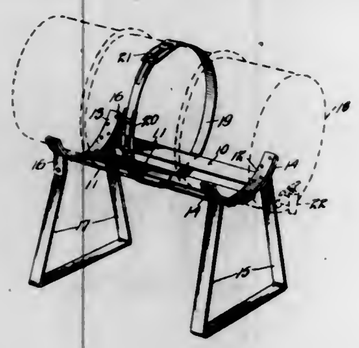
1,803,794. MECHANICAL PENCIL. HERMANN DEUTSCH, Gross-Lichterfelde, near Berlin, Germany, assignor, by mesne assignments, to Pencil Mechanism Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 24, 1925, Serial No. 25,546, and in Germany May 8, 1924. 19 Claims. (Cl. 120—17.)



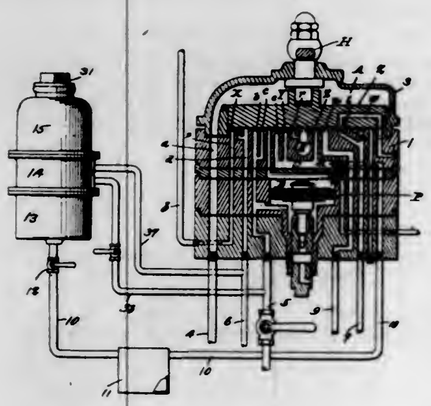
1. In a propelling pencil, in combination, telescoping inner and outer tubes, a slotted-lead-guiding tube secured in said outer tube, a gripper operatively connected with said inner tube and comprising jaws formed on the ends of resilient arms and adapted to pass through the slots in said guiding tube and engage a lead therein, and means operatively connected with said inner tube for controlling said jaws.

1,803,795. SLIDE TRANSMISSION FOR INTERNAL COMBUSTION ENGINES. THOMAS M. FINLEY, St. Louis, Mo. Filed July 9, 1926. Serial No. 121,441. 4 Claims. (Cl. 74—14.)

1. The combination with a plurality of cylinders and pistons, of a slide transmission, comprising spaced guide rods rigid with and extending longitudinally from the cylinders, a cross head rigidly connecting the pistons and slidable on the guide rods and provided with spaced guides extending longitudinally of the cross head, a reciprocating slide mounted between the guides of the cross head and movable longitudinally thereof and having a bearing, a crank shaft composed of sections, fly wheels mounted on the sections and arranged at opposite sides of the cross head and slide, and an eccentric wrist pin connecting the fly wheels and mounted in the bearing of the slide.

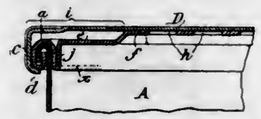


1,803,796. COMBINED SHIPPER AND GEAR CASING LOCK. DARBY G. FLOYD and MILLEN H. MCLENDON, Winnsboro, S. C. Filed Oct. 24, 1928. Serial No. 314,758. 3 Claims. (Cl. 192—135.)



2. The combination with a gear box closure, a shipper rod and a bearing therefor, of a post adjustably secured to the shipper rod, a latch member pivoted to the post and adapted to engage the said bearing of the shipper rod, and fastening means pivotally mounted intermediate its ends, and having one end adapted to secure the said gear box closure, and having the opposite end slidably connected with the said post.

1,803,797. BARREL RACK. JOHN M. GERHARDT, Charleston, Ill. Filed Dec. 7, 1927. Serial No. 238,433. 8 Claims. (Cl. 248—11.)

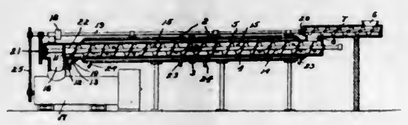


1. A barrel stand comprising an elongated transversely curved cradle formed of a pair of spaced curved end members connected by spaced slats, a support at one end of the cradle fixed relative thereto, and another support at the opposite end of the cradle, substantially as set forth.

1,803,798. AIR BRAKE. ELBERT R. GREENLEE, Kansas City, Kans. Filed June 24, 1929. Serial No. 373,340. 5 Claims. (Cl. 303—60.)

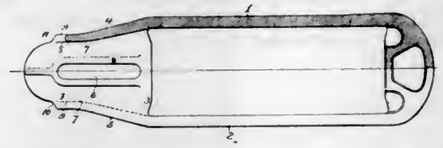
1. In an air brake system the combination with a feed valve pipe, a brake pipe, an automatic brake valve having a piston chamber in the seat portion thereof, of a supplemental chamber in said seat portion, a valved connection between said chambers for holding pressure in said supplemental chamber, an auxiliary feed valve having a control chamber in communication with the supplemental chamber, an equalizing chamber in communication with the brake pipe, a supply chamber in communication with the feed valve pipe, a diaphragm separating the control and equalizing chambers, a spring controlled valve normally closing communication between the equalizing and supply chambers, and means coupled to the valve and actuated by the diaphragm under predetermined pressure in the control chamber, for opening the valve to release pressure from the supply chamber to the equalizing chamber.

1,803,799. SIFTING TOP CAN. CHARLES GUERITEY, Passaic, N. J. Filed Aug. 16, 1927. Serial No. 213,336. 5 Claims. (Cl. 221—62.)



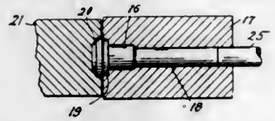
1. A receptacle having its top double-seamed to its body, the top having openings, and the portion of the top formed with such openings raised above the bottom of such seam, and a slide having its middle portion lying close above the said portion of the top to close one or more of said openings according to its position and having resilient lateral portions extended freely above said seam and bent down against and under said seam to resiliently embrace the seam, whereby they may be sprung down to release their cling under said seam.

1,803,800. BLOTTING MEDIUM. WILLIAM A. HARTLINE, Tampa, Fla. Filed July 26, 1928. Serial No. 295,607. 1 Claim. (Cl. 120—26.)



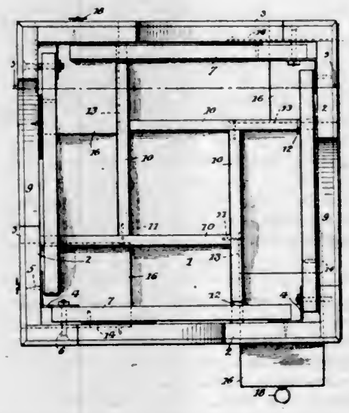
A blotting roller of argillaceous material having a bearing spindle of illium alloy embedded axially therein.

1,803,801. CONTINUOUS COOKER FOR FISH REDUCTION. GEORGE R. HENSHALL, Vancouver, British Columbia, Canada. Filed Apr. 29, 1929, Serial No. 358,935, and in Canada Feb. 28, 1929. 1 Claim. (Cl. 87—13.)



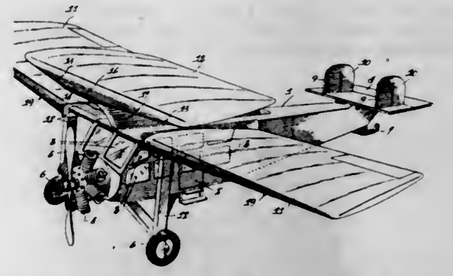
In a continuous cooker for fish reduction processes the combination comprising, a cylindrical casing enclosing a helical conveyor and encircled by an annular steam jacket, the construction of the same in connective sections, whereby said cooker may be conformed to space requirements either in the linear or superposed relation of its parts, the construction of the delivery end of said cooker characterized by a cone-shaped termination of the boss of the conveyor helix whereby the effective cross-sectional area of the delivery end of said casing is gradually decreased thereby subjecting the fish material to an increasing pressure which reaches a maximum at the point of delivery, a drainage receptacle of the nature of a sump at the bottom of the said cooker and adjacent its delivery end, a removable strainer of suitable fabricated metal between said sump and said casing, an apertured baffle plate forming a transverse closure to said casing and through which the expressed fish material is discharged, the construction of said cooker being characterized by the giving to the said casing of an angular inclination whereby the liquid content of the fish material is constantly drained towards the delivery end of the said cooker, the construction characterized by the addition of radial paddles secured at spaced apart intervals along said helical conveyor, and the construction characterized by the application of separate steam control members to each of the said sections whereby one section may be operated at a different temperature to another section.

1,803,802. COUPLER YOKE. GEORGE T. JOHNSON, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Filed July 28, 1927. Serial No. 208,998. 2 Claims. (Cl. 213—70.)



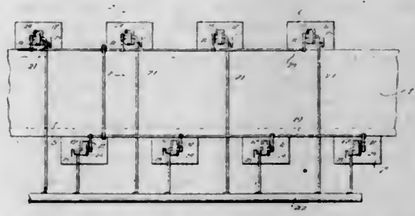
1. A draft yoke provided at its forward end with a hood in which a coupler shank may be inserted and having standard key-receiving slots in its sides, the roof and floor of the hood being extended forward and terminating approximately in the vertical plane of the front ends of the slots, the inner opposed surfaces of the front end portions of the roof and the floor being flat and parallel with the plane of the slots to form a guide for the coupler shank and being set nearer the slots than their rear portions.

1,803,803. PROCESS OF MAKING SCREWS AND BOLTS. CHARLES KAUFMAN, Garfield Heights, Ohio. Filed Feb. 3, 1930. Serial No. 425,408. 4 Claims. (Cl. 10—27.)



1. The method of making bolt and screw blanks which comprises drawing a portion of a length of stock of cross-sectional area greater than that of the shank of the blank to form a round cross section of a diameter equal to the overall diameter of the threads of the finished article, drawing down a portion of said round cross section to a diameter equal to the pitch diameter of the threads, and upsetting the unreduced portion of the stock to form a head.

1,803,804. CARD TABLE. CHARLES KOLODNY, Brookline, Mass. Filed Mar. 1, 1930. Serial No. 432,427. 1 Claim. (Cl. 45—11.)

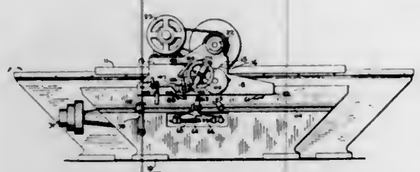


In a table, a top, depending side strips for said top extending along marginal portions thereof, bracing bars against the under face of the top in parallel spaced relation to the side strips and each having its outer end secured against a side strip in spaced relation to an end thereof and its inner end secured against a side face of a companion bracing bar transversely thereof in spaced relation to its ends, a recess being formed in the under face of each bracing bar at its outer end, a bearing bracket carried by each side bar and projecting from the inner side face thereof in spaced relation to an intersecting side strip, supporting legs pivoted between the side strips and brackets and when folded extending longitudinally of the side strips with their free end portions overlapping the bracing bars and engaged in the recesses formed therein, each side strip having an opening formed in one end portion thereof and the side strips and bracing bars having their confronting faces formed with grooves constituting tracks leading inwardly from opposite sides of the openings, and drawers engaged through the openings and slidably supported upon said tracks.

1,803,805. AEROPLANE. EDWARD H. LANIER, Covington, Ky. Filed Sept. 20, 1930. Serial No. 483,299. 14 Claims. (Cl. 244—14.)

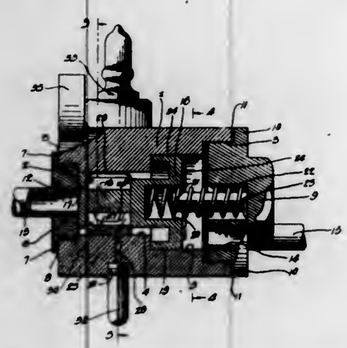
1. In an aeroplane, a fuselage, a pair of side wings extending laterally thereof and having their inner edges spaced apart from the fuselage, a central longitudinal partition in the space between the inner edges of said side wings, and a top wing overlying the space between said side wings and itself spaced from the side wings, the under side of said top wing merging with said partition.

1,803,806. METHOD OF AND MEANS FOR FIRING KILNS. HENRY G. LYKKEN, Minneapolis, Minn. Filed Aug. 28, 1926. Serial No. 132,062. 20 Claims. (Cl. 25—151.)



5. A firing device, comprising a common source of mixed pulverized fuel and air, a plurality of firing chambers located at different loci, means for supplying said mixed fuel and air from said source to each of said chambers, and means for regulating the supply at each of said chambers.

1,803,807. GRINDING MACHINE. CHARLES H. NORTON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 8, 1920. Serial No. 422,412. 3 Claims. (Cl. 51—45.)

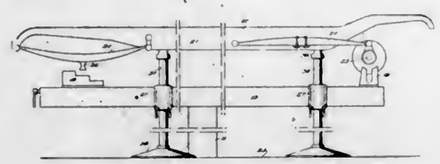


1. A grinding machine comprising a base having parallel ways thereon, two tables mounted on said ways for

reciprocation past each other, one of said tables constituting a work support, a wheel slide on the other table which is reciprocable transversely thereof, a rotatable grinding wheel carried on said slide, a cross feed mechanism to move the slide and feed the grinding wheel relative to the

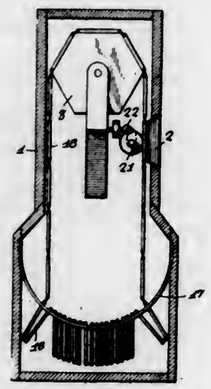
work, a single driving and reversing mechanism to reciprocate the tables in opposite directions past each other simultaneously and means including adjustable dogs actuated by one of said tables to operate said mechanism and reverse the direction of movement of both tables.

1,803,808. SIGNALING DEVICE. HARRY E. PLATT, Ottumwa, Iowa. Filed May 9, 1930. Serial No. 451,144. 4 Claims. (Cl. 116—55.)



1. A signaling device comprising a body portion having a valve mechanism slidably disposed therein, an auditory signal communicating with said valve mechanism, and means for conveying fluid under pressure to the valve mechanism whereby the fluid may assume a common pressure upon both sides of the valve mechanism, said valve mechanism being operable by releasing the fluid under pressure upon one side of the valve mechanism, whereby said auditory signal will be operated, and comprising a spring-pressed valve body portion and a spring-pressed U-shaped portion, said valve body portion having a cylindrical end portion and a triangular end portion, said end portion being connected by a rectangular portion, said U-shaped portion being mounted on said rectangular portion, said hollow body portion and said U-shaped portion having fluid conduits adapted to become aligned with each other and release said fluid for operating said signal.

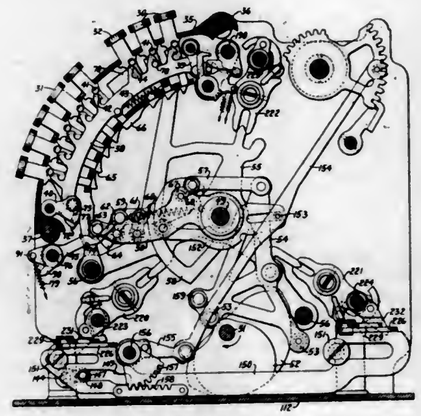
1,803,809. METHOD OF PRODUCING AND REFINING ALLOYS. HARRY F. PORTER, Trenton, N. J. Original application filed Jan. 20, 1927, Serial No. 162,245. Divided and this application filed Sept. 28, 1928. Serial No. 309,087. 4 Claims. (Cl. 75—22.5.)



3. The method of simultaneously producing and refining a copper-nickel-iron alloy which comprises melting by induced electric currents a predetermined amount of copper having relatively high oxygen content, melting and dissolving a predetermined amount of nickel and commercial iron in said melt, effecting reduction of carbon in said iron by the oxygen content of the copper, and effecting a stirring motion of said solution to insure uniformity thereof by said induced currents.

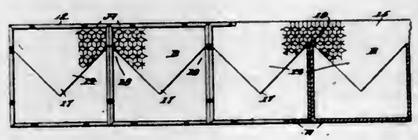
1,803,810. JACK STANCHION. EDWIN R. SAGE, Jersey City, N. J. Filed July 31, 1928. Serial No. 296,620. 4 Claims. (Cl. 254—89.)

4. In a device of the class described, the combination of a ground supported stanchion provided with means for engaging part of a vehicle, and a vehicle lifting mechanism having a part thereof slidably mounted for vertical movement on said stanchion and restrained thereby from movement in all other directions.



1,803,811. STREET AND STATION INDICATOR. DAVID M. SAUNDERS, Hicksville, Ohio. Filed Sept. 5, 1928. Serial No. 304,048. 2 Claims. (Cl. 40—101.)

1. A device of the class described comprising a casing having a window therein, a drum rotatably arranged in the upper part of the casing, an endless member passing over the drum and passing before the window during the rotary movement of the drum, a disk connected with one of the pintles of the drum, a weighted arm pivotally connected with the pintle, ratchet means for connecting the upper end of the arm with the disk, a segmental part on the lower end of the arm forming the weight therefor, a lever pivotally connected with the pintle, a set screw for connecting the lever with either lower corner of the segmental part, means for reversing the ratchet means and a cable connected with the lever.

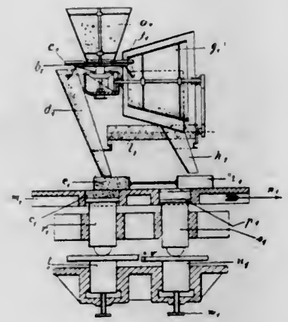


1,803,812. CASH REGISTER. BERNIS M. SHIPLEY, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Original application filed Jan. 14, 1924, Serial No. 687,305. Divided and this application filed Apr. 9, 1927. Serial No. 182,871. 26 Claims. (Cl. 235—22.)

1. In a machine of the class described, the combination of a plurality of multiple-item transaction keys, a money receptacle having an accessible position, and an inaccessible position, means for retaining said money receptacle in the inaccessible position, means for releasing said re-

taining means, and a differentially slidable means for disabling said releasing means when any one of said multiple-item transaction keys is in operated position.

1,803,813. STARTER AND POUND SECTION. OWEN SMITH, Monroe, Va. Filed June 7, 1928. Serial No. 283,531. 3 Claims. (Cl. 6—11.)



1. The combination of a series of honey comb frames, each having a slot located medially of and extending transversely through the top and a distance into the ends of the same, and a foundation formed from a blank having an unbroken area and an irregular edge constituting alternate planes and recisions, the unbroken area being insertable in the slots when the frames are arranged in a row in end abutting relation to each other with the planes protruded into the respective frames, whereby the latter and the foundation will be joined as a unit.

3. A comb foundation of wax formed from a single piece having an unbroken upper portion to be accommodated within the tops of adjacent comb frames and supported only from the ends of the latter and also provided with a depending plane to extend into said frame.

1,803,814. PROCESS OF AND APPARATUS FOR PRODUCING PRESSED BODIES OF POWDEROUS MATERIAL. PETER JOSEPH SPENGLER and JOHANN PETER SPENGLER, Ostswine, near Swinemunde, Germany. Filed Aug. 23, 1928, Serial No. 301,581, and in Germany Jan. 11, 1926. 17 Claims. (Cl. 25—67.)

10. A rotary table press having upper ram and lower ram comprising in combination a charging hopper, a rotary table plate, moulds in said plate, a charging box above this rotary table plate, scrapers for charging unscreened material for a coarse grained layer directly from said charging hopper to said charging box, a charging box for fine grained material above said rotary plate, a screening drum above said second mentioned charging box for delivering the screened material to said second mentioned

charging box, and a conveyor connected to said screening drum for conveying the coarse material from said drum to said first mentioned charging box.

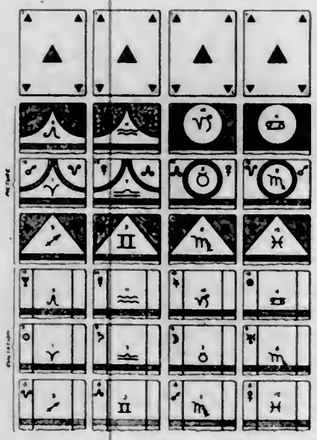
1,803,815. REFLECTOR. MELVIN B. SPRIGG, Weston, W. Va. Filed Aug. 11, 1928. Serial No. 299,093. 4 Claims. (Cl. 40—135.)

1. In a device of the class described, a glass plate formed with a recess in the rear side thereof, an integral lens formed on the opposite side of said plate and in alignment with the recess, a disc of colored translucent material secured in said recess, and a reflecting element positioned behind said disc.

1,803,816. WATERPROOF PAPER. CLARENCE J. STROBEL, Marysville, Mich., and ALLEN P. TALLMAN, Toledo, Ohio. Filed Mar. 21, 1928. Serial No. 263,583. 1 Claim. (Cl. 92—21.)

As a new article of manufacture, a paper having distributed throughout between its fibers, Pará-cumarone and menhaden oil.

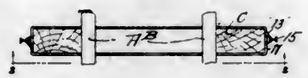
1,803,817. HOLDER FOR RECEPTACLES. WILLIAM ELMER TREMELLEN, Los Angeles, Calif. Filed Dec. 2, 1929. Serial No. 411,149. 2 Claims. (Cl. 248—20.)



2. A device for holding a plurality of inverted receptacles stacked in nested relationship adjacent to, and

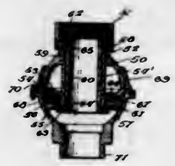
in easily removable contact with a wall portion for holding the stack in an upright and accessible position at all times, comprising a resilient standard having means at

one end for attachment to the wall, said standard extending upwardly and outwardly, and carrying receptacle engaging means at its free end for receiving and holding the receptacles in clamped and removable contact with the wall.



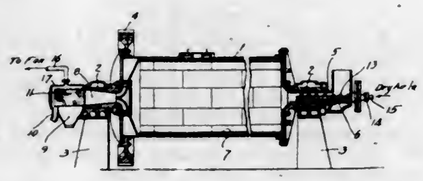
1,803,818. PLAYING CARDS. VIRGIE VAIL, Kansas City, Kans. Filed Nov. 15, 1928. Serial No. 319,635. 2 Claims. (Cl. 273—152.)

1. A set of playing cards embracing four suits each based on an astrological triplicity and each suit including groups of three cards each, each of the cards in each group of the same suit having depicted thereon the symbol of a different one of the signs of the same astrological triplicity, and the corresponding cards of the other suits having depicted thereon in a similar manner the symbols of the signs of other astrological triplicities but of a different triplicity for each suit, cards in the various groups having depicted thereon symbols of various astrological planets in astrological relation to the various signs to indicate the relative values of the cards.



1,803,819. FORM TIE FOR CONCRETE STRUCTURES. JOSEPH L. WEBER, Green Bay, Wis., assignor to Weber-McDonald Wall Tie Company, a Corporation of Wisconsin. Filed Oct. 8, 1928. Serial No. 310,987. 1 Claim. (Cl. 25—131.)

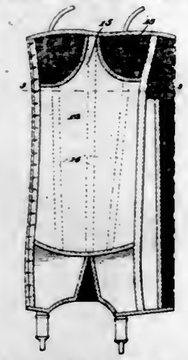
A form tie of the kind described, comprising a pair of relatively stiff wire members, each including a long stretch and relative short bent terminals, the terminals being constructed to embrace a wall form, and eyes formed on the terminals and adapted to receive fasteners to be driven into the wall form to hold said terminals in embracing



relation thereto, said eyes of the respective terminals being free of each other and non-twisted together, the long stretches of the members being adapted to lie crosswise of the wall form.

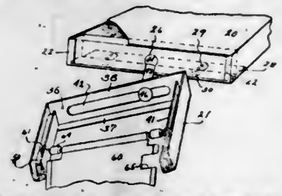
1,803,820. FLEXIBLE PIPE JOINT. WALTER C. WHITE, Pittsburgh, Pa., assignor to International Couplers Co., Pittsburgh, Pa., a Common-Law Trust. Filed Sept. 3, 1925. Serial No. 54,296. 5 Claims. (Cl. 285—95.)

2. In a flexible pipe joint, coacting joint members one providing a socket and the other including opposed followers forming a ball fitting in said socket, a packing interposed between said followers to coact between the ball and socket, means slidably supporting said followers to cooperate with the packing, a fluid conducting stem accommodated within said means, and a nut threaded on the stem for engagement with one of the followers.



1,803,821. METHOD OF GRINDING MATERIAL. GUSTAV A. WITTE, Riverside, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed June 8, 1927. Serial No. 197,302. 7 Claims. (Cl. 83—9.)

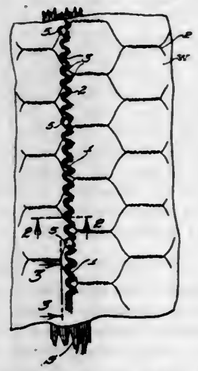
1. The method of grinding Portland cement clinker to a fine state of division while maintaining the normal setting time of the finished cement, which comprises subjecting the same to a grinding operation in the presence of air, and maintaining such air at a relative humidity lower than that of the atmosphere.



1,803,822. CORSET. MARGARET H. WITTENBERG, Worcester, Mass., assignor to The Royal Worcester Corset Company, a Corporation of Massachusetts. Filed Sept. 11, 1930. Serial No. 481,299. 2 Claims. (Cl. 2—30.)

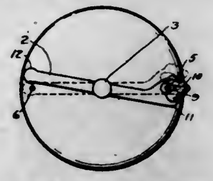
1. A brassière corset the front of which consists of a brassière part and a body part, said body part comprising two plies or thicknesses of material of a length to extend largely below the waist line and being secured together at their side edges, the inner ply or thickness of material forming an inner belt or pad which extends well down bodily towards the bottom of the outer ply and which inner ply is free at its lower edge and has at its top an upwardly tapering extension reaching up to the middle top of the brassière part, at which point said extension is

attached to said brassière part, said inner belt or pad being loose at its bottom and between its side edges, leaving the two breast sections of the brassière entirely free.



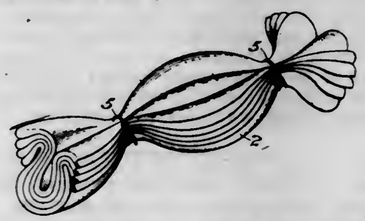
1,803,823. VISIBLE INDEX FILING DEVICE. CARLOS WITTENMYER, Mount Clemens, Mich. Filed Nov. 23, 1927. Serial No. 235,131. 15 Claims. (Cl. 129—16.)

12. In a filing device, a bottomless drawer, means supporting said drawer in a manner such that the drawer may be inverted on said means, record holders suspended from the side members of said drawer, and means adapted to secure said holders against falling out when said drawer is inverted.



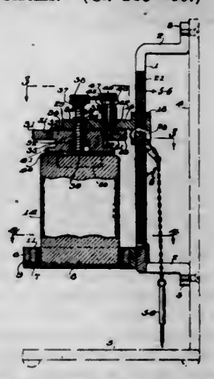
13. In a filing device, a record holder comprising a pocket having a notch in one vertical edge whereby the contents are exposed and having an edge open to facilitate withdrawal of records.

1,803,824. PAPER AND PLASTER FOUNDATION SUPPORTING DEVICE. GUY L. WOODJARD, San Diego, Calif., assignor to Kirstine Laustrup. Filed Jan. 26, 1928. Serial No. 249,526. 4 Claims. (Cl. 72—118.)



3. In a device of the class described, a metallic strip adapted to rest on one edge and provided with closely positioned short corrugations, the valleys of which are adapted to approximately fit a nail and half encircle the same, and a nail adapted to fit in any of said valleys and provided with a head adapted to engage the edge of said strip with more than half of the circumference of said nail head.

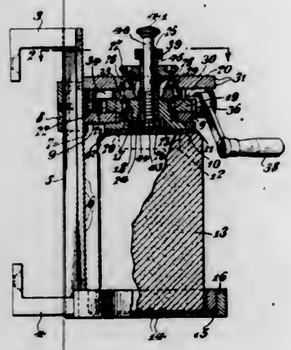
1,803,825. MILK CAN COVER. ROLLIN M. ABERNATHY, Seattle, Wash. Filed Dec. 14, 1929. Serial No. 413,995. 1 Claim. (Cl. 220—30.)



A cover for milk cans or the like embodying a cylindrical shaped casing with one end closed, the other open, slits in the side adjacent the open end, and openings in the closed end, and a bar pivotally attached to the center of the closed end, with means at the ends for closing the openings, and a spout at the side of one end of said bar adapted to be placed over one of the openings.

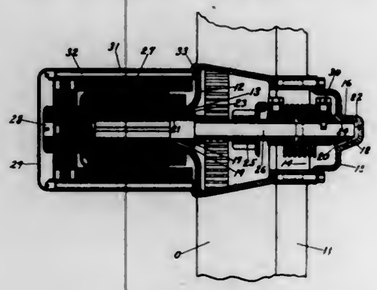
1,803,826. METHOD OF BUNDLING TOWELS PREPARATORY FOR WASHING. JOSEPH H. ADDLER, Brooklyn, N. Y., assignor to Pullclean Manufacturing Corporation, Bridgeport, Conn., a Corporation of Delaware. Filed Dec. 5, 1929. Serial No. 411,792. 5 Claims. (Cl. 270—30.)

1. Method of bundling towels preparatory for washing, consisting in piling the towel in reversely extending superimposed folds, then locally compressing the towel transversely of the folds to bunch and open up the same, and thereafter securing the same in such bunched condition.



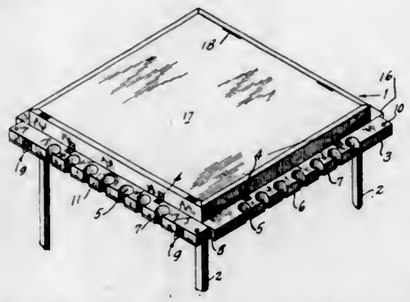
1,803,827. SOAP DISPENSER. MAURICE ALLAND, Atlantic City, N. J. Filed Sept. 24, 1929. Serial No. 394,767. 10 Claims. (Cl. 146—60.)

1. A soap dispenser, comprising a bracket bar having a ratchet surface, a grating element supported by said



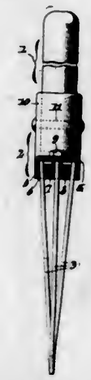
bracket, an arm slidably carried and wholely supported by said bar, ratchet means normally permitting relative movement of said arm upon said bar in one direction and preventing such movement in the opposite direction, and rotatable means carried and wholly supported by said arm to permit rotation of a soap cake with respect to said element.

1,803,828. SOAP DISPENSER. MAURICE ALLAND, Atlantic City, N. J. Filed Jan. 29, 1930. Serial No. 424,181. 8 Claims. (Cl. 146—60.)



1. A soap dispenser, comprising a bracket having a rack-toothed portion, a member slidable thereon, a soap-engaging element carried by said member, a worm normally engaging said rack, a worm gear normally connected to rotate with said worm, a second worm in engagement with said gear, and a hub for said first worm adapted to be moved longitudinally of its axis, to permit said first worm to move transversely thereof freely from engagement with said rack, to permit rapid movement of said first member with respect to said rack.

1,803,829. ELECTRIC STARTING DEVICE. VINCENT G. APPLE, Dayton, Ohio. Filed Jan. 20, 1928. Serial No. 248,232. 20 Claims. (Cl. 290—48.)

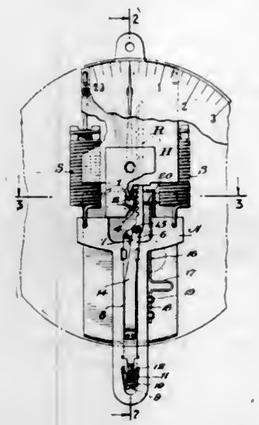


1. The combination of an internal combustion engine having a housing surrounding its rotatable parts, with a gear situated within said housing and adapted to rotate with said engine, a pinion within said housing adapted to mesh with said gear, a shaft secured to said pinion for rotation therewith, said shaft being within said housing but having an end extending through and beyond one wall of said housing, a bearing for said shaft in said wall, a rotatable member of a dynamo electric machine secured in overhung fashion outside of said housing to the extending end of said shaft, and a non-rotatable member of said dynamo electric machine secured to the outside of said wall in operative relation with said rotatable element.

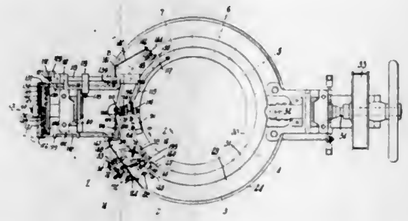
1,803,830. CARD TABLE. FRED RICHARD AREY, Oakland, and WILLIAM EDWARD JONES, Jr., Alameda, Calif. Filed July 5, 1927. Serial No. 203,364. 8 Claims. (Cl. 273—136.)

3. In a card table a first receptacle having pins extending beyond the ends thereof, second receptacle each having a hole in one end thereof to receive one of said pins of said first receptacle, and a locking receptacle having holes in the ends thereof in operative relation to said pins of said second receptacle, said receptacles being foldably secured to the table.

1,803,831. FIRE FIGHTING IMPLEMENT. GEORGE M. ARTHUR, Glassboro, N. J. Filed June 13, 1929. Serial No. 370,533. 1 Claim. (Cl. 15—197.)



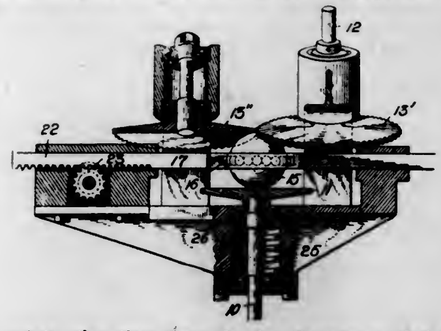
The combination in a fire fighting implement of the type described, of an elongated two-piece head, one section whereof is provided with an inner row of holes in the true vertical and outer longitudinal rows of holes complementarily inclined with respect to the median plane of the implement, and the other section of said head having a handle securing socket, and bristles formed in pairs through doubling of suitable lengths of tape metal with the bristles of each such pair engaged in neighboring holes of the longitudinal rows in the head section aforesaid with their flats placed crosswise, the bristles of the outer rows being in convergent relation, and all of said bristles having their free ends aligned in the median plane of the implement in chisel-like formation transversely thereof and being retained in place by clamping screws securing the head sections together.



1,803,832. SPRING SCALE. SYLVESTER G. AVERELL, New York, N. Y., assignor to John Chatillon & Sons, New York, N. Y., a Corporation of New York. Filed June 6, 1929. Serial No. 368,857. 6 Claims. (Cl. 265—69.)

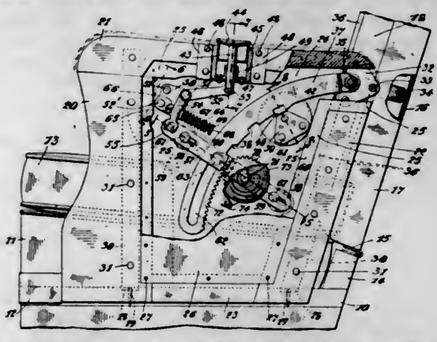
1. In a spring scale, the combination of an indicator, an indicator pinion and a rack having its teeth cut at

a progressively increasing angle, and a thermostat adapted to automatically change the position of the rack laterally with reference to the teeth of the pinion under changing temperature conditions so as to correct indicator errors due to temperature changes.



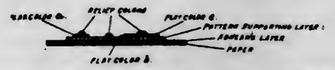
1,803,833. CIRCULAR KNITTING MACHINE. WILLIAM T. BARRATT, Bennington, Vt., assignor to Charles Cooper Company, Inc., Bennington, Vt., a Corporation of Vermont. Filed Apr. 4, 1930. Serial No. 441,493. 18 Claims. (Cl. 66—18.)

18. A circular spring needle knitting machine having, in combination, a primary rotary needle cylinder, a secondary rotary needle cylinder, spring needles on each of said needle cylinders, a presser for the primary needles, a presser for the secondary needles, a rotary driving contact member rotating synchronously with said needle cylinders a driven contact member adapted to be engaged and operated by said rotary driving contact member, mechanism operated by said driven contact member to throw said presser for the primary needles out of operative position, and mechanism operated by said driving contact member to throw said presser for the secondary needles out of operation.



1,803,834. POWER TRANSMISSION. MORTIMER F. BATES, Brooklyn, N. Y., assignor, by mesne assignments, to Sperry Gyroscope Company, Inc., a Corporation of New York. Filed Aug. 9, 1927. Serial No. 211,655. 9 Claims. (Cl. 74—26.)

1. In a power transmission, a driving element, a driven element, a disc carried by each of said elements, a single ball interposed between said disc in driving engagement therewith, means for shifting said ball said discs being inclined relative to each other so as to engage said ball

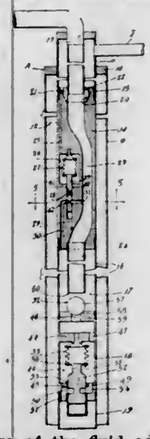


at points other than the ends of a diameter so that said ball is in rolling contact with said discs when shifted with respect thereto.

1,803,835. RECLINING SEAT. ALFRED B. BELL, Philadelphia, Pa., assignor to Hale & Kilburn Co., Philadelphia, Pa., a Corporation of Delaware. Filed June 3, 1929. Serial No. 367,902. 7 Claims. (Cl 155—163.)

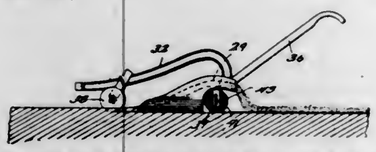
1. In combination with a seat having an arm rest portion and a hinged back rest portion, of means for adjusting the inclination of said seat back portion, said means including a member hinged to said back rest portion at one end and having a toothed portion at the other end thereof, a pinion mounted on said arm rest portion and adapted to operatively engage the toothed portion of said member, and driving means associated with said pinion operative to swing said back rest portion forwardly when pressure against said seat back portion is removed.

1,803,836. DECALCOMANIA AND METHOD OF MAKING THE SAME. ALPHONSE BIHR, New York, N. Y. Filed Oct. 21, 1929. Serial No. 401,064. 8 Claims. (Cl. 41—33.)



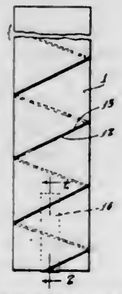
6. A positive decalcomania transfer comprising a layer of paper, a layer of adhesive substance on said paper, a layer of lacquer, on the face of said adhesive layer, and a design or lettering in bold relief constituted of material fused upon the lacquer.

1,803,837. GAS LIFT MEANS. MARK P. BURKE, Long Beach, Calif. Filed Mar. 28, 1927. Serial No. 178,962. 10 Claims. (Cl. 103—234.)



1. In a device of the class described, the combination of a pair of concentrically mounted pipes, a connecting

member secured to the lower ends of said concentrically mounted pipes, one of said pipes providing an inlet gas fluid conduit and the other of said pipes providing an outlet fluid conduit, a fluid pressure operated valve mounted in the said connecting member and adapted to be actu-

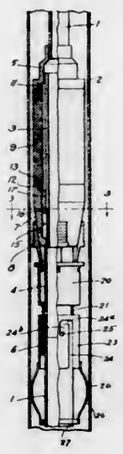


ated by the pressure of the fluid admitted through the fluid inlet conduit, a pipe secured to the lower end of the connecting member and providing a gas lift chamber, and means actuated by the fluid pressure in the gas lift chamber for exhausting the gas under pressure from the gas lift chamber through the fluid outlet conduit.

1,803,838. ERADICATION OF QUACK GRASS AND THE LIKE. CHARLES E. CARPENTER, Chicago, Ill. Filed Oct. 11, 1929. Serial No. 398,967. 3 Claims. (Cl. 97—10.)

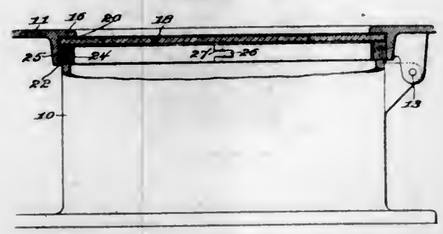
2. A method of eradication of quack grass and the like from soil which consists in isolating a relatively thin layer of soil at the top of the ground from the ground beneath it by the use of a substantially impervious layer of fibrous material, to thereby discontinue supply of moisture from the body of the ground upwardly to plants in said layer of soil and at the same time discontinue the supply of oxygen downwardly to the roots in the ground beneath said layer of soil, substantially as described.

1,803,839. WELL CASING AND METHOD OF REMOVING THE SAME FROM A WELL. OMAR A. CAVINS, Glendale, Calif. Filed Jan. 2, 1929. Serial No. 329,721. 15 Claims. (Cl. 166—5.)



1. A well casing comprising a tubular member of tearable material provided with a slot extending from end to end thereof, and a pull member inside of said tubular member connected with the lower end of the tubular member adjacent to the slot at a point that produces tearing of the tubular member along the line of said slot when the pull member is drawn upwardly.

1,803,840. ASBESTOS INSULATING TAPE. OSBORN H. CILLEY, Manheim, Pa., assignor to United States Asbestos Co., Manheim, Pa., a Corporation of Pennsylvania. Filed Sept. 22, 1928. Serial No. 307,632. 6 Claims. (Cl. 154—44.)



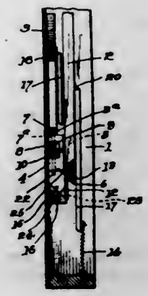
1. Material for covering pipes and the like, consisting of flat tubular tape of woven fabric, each face of the tape presenting a diagonal twill, and a pad for the tape.

1,803,841. PACKER. ERD V. CROWELL, Los Angeles, Calif. Filed May 16, 1928. Serial No. 278,232. 4 Claims. (Cl. 166—12.)

1. In combination, tubing adapted for reception in a well bore and comprising relatively telescopic upper and lower sections, a wedging member fixed to the lower tubing section, packing mounted on the wedging member with the upper tubing section abutting against the upper end of the packing, a slip slidably mounted on the lower tubing section below the wedging member, a spring mounted on the lower tubing section and supporting the slip, the spring being normally compressed by the weight of the slip for spacing the slip below the wedging member but adapted for expansion for positively elevating the slip relative to the tubing and engaging the slip by the wedging member in the event of sudden dropping of the tubing, a sleeve slidable on the lower tubing section below the spring, manually releasable means for locking the sleeve and lower tubing section against relative axial movement, and means tending to frictionally hold the sleeve in the well bore so as to permit lowering of the lower tubing section relative to the frictionally held sleeve upon manual release of said locking means, said lowering of the lower tubing section relative to the sleeve abutting the slip against the sleeve for elevating the slip relative to the tubing and thereby engaging the slip by the wedging member, with said engagement of the slip by the wedging member, either by expansion of the spring or by lowering of the tubing relative to the sleeve, expanding the slip against the wall of the well bore for anchoring the wedging member in the well bore, and abutment by the upper tubing section against the upper end of the packing axially compressing the packing against the anchored wedging member so as to anchor the tubing in the well bore and radially expand the packing to operative engagement with the wall of the well bore.

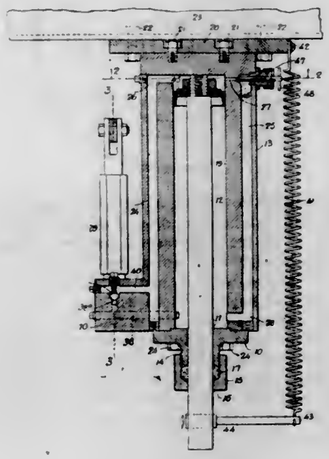
1,803,842. GAUGE GLASS MOUNTING. KENNETH S. M. DAVIDSON, Newton Highlands, Mass., assignor to Crosby Steam Gage & Valve Co., Boston, Mass., a Corporation of Massachusetts. Filed July 13, 1929. Serial No. 377,967. 1 Claim. (Cl. 20—56.4.)

An instrument glass mounting comprising a removable rim, a glass assembled within the rim, an inwardly extending flange projecting partially across the front portion of the glass, a sealing ring of flexible material assembled within the rim behind the glass and loosely fitting the rim, and a resilient band assembled within the sealing ring and serving through its normally expansive tendency to distort the ring in two directions, thus maintaining the glass in sealing engagement with the flange in addition to sealing the rim directly through the ring.



1,803,843. SHOE FORM. WILLIAM J. DE WITT, Auburn, N. Y., assignor to Shoe Form Co., Inc., Auburn, N. Y., a Corporation of New York. Filed Dec. 2, 1929. Serial No. 410,942. 4 Claims. (Cl. 12—128.2.)

1. A shoe form comprising a hollow toe form, a cross brace connecting the walls of said toe form, one end of said brace being pivotally secured to one wall of the top form and the other end having a slidable engagement with the other wall of the toe form, a coil intermediate the ends of the cross brace forming a longitudinally extending passage and a back part wire terminating in a portion at an angle to the body thereof which portion is passed through the passage in the coil in the cross brace and by which the cross brace and back part wire are connected.

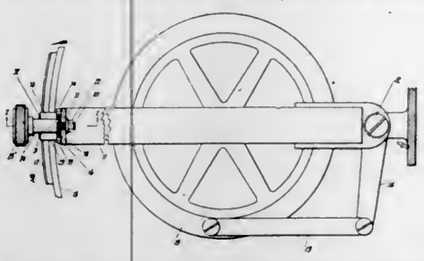


1,803,844. IRONING BOARD. JOHN P. DOMAN, Los Angeles, Calif. Filed Aug. 28, 1929. Serial No. 388,926. 6 Claims. (Cl. 68—10.)

5. In combination, a transverse bearing rod, a board having a rearward extension at its upper surface forming an angular recess beneath said extension with said recess open at its underside and at its rear end for reception of the extension on the bearing rod so as to pivotally mount the board for swinging to horizontal operative position or substantially vertical inoperative position, and an abut-

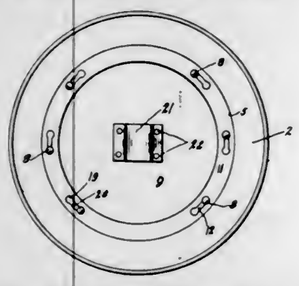
ment adapted to be engaged by the extension for holding the board against longitudinal movement on its bearing rod when the board has been swung to operative position.

1,803,845. HYDRAULIC PRESS. ALEXANDER G. DU FRANE and JOHN L. DU FRANE, Oakland, Calif. Filed Nov. 13, 1928. Serial No. 319,046. 4 Claims. (Cl. 138—9.)



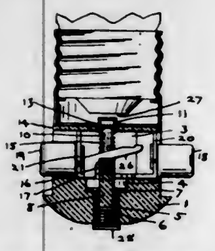
1. A hydraulic press comprising a cylindrical member having a central bore therethrough closed at its ends, spaced apart bores within the wall of the cylindrical member and spaced from the central bore, communicating means between the bores within the walls of the cylinder and the central bore at their respective ends, a piston having a rod for reciprocal movement within the central bore and means for withdrawing a fluid from the bottom of the central bore and delivering it to the top thereof at a point above the piston.

1,803,846. TUNER CONTROL MECHANISM. HAROLD F. ELLIOTT, Camden, N. J., assignor, by direct and mesne assignments, to Victor Talking Machine Company, Camden, N. J., a Corporation of New Jersey. Filed Mar. 13, 1928, Serial No. 261,311. Renewed Sept. 9, 1930. 18 Claims. (Cl. 74—7.)



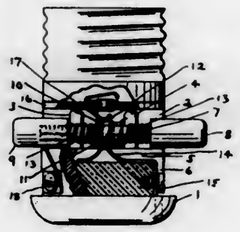
1. In an actuator, a movable arm, means for moving the arm, means providing a slot adjacent said arm moving

means, a main roller engaging one edge of the slot and carried by the arm, and one or more auxiliary rollers engaging



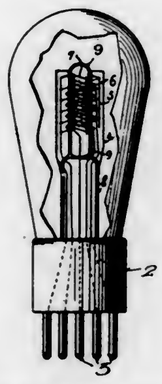
the opposite edge of the slot and also carried by said arm, said auxiliary rollers being actuated by the said main roller.

1,803,847. CLOSURE FOR METALLIC DRUMS AND THE LIKE AND METHOD OF MAKING SAME. HARTLEY ELLIS, Cleveland, Ohio, assignor of twenty-one fortieths to Elizabeth M. Ellis, Erie, Pa. Filed Mar. 3, 1928. Serial No. 258,752. 8 Claims. (Cl. 220—55.)



1. The combination with a metallic drum, or the like, having an annular header, of a disk-like closure therefor comprising a central depressed portion adapted to fit within said header and an annular flange adapted to overlie said header, said flange being formed with a plurality of spaced keyhole slots and cam members at the lateral edges of said slots, the surface of each of said cam members rising from a point adjacent the enlarged end of said slot to a point just short of the other end of said slot, and dropping from said last-mentioned point to said other end of said slot said header being provided with a plurality of correspondingly spaced headed lugs for cooperation with said cam members.

1,803,848. ELECTRIC SWITCH. GEORGE HENRY ELWELL, New Haven, Conn., assignor to The Greist Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Oct. 10, 1927. Serial No. 225,196. 7 Claims. (Cl. 173—355.)

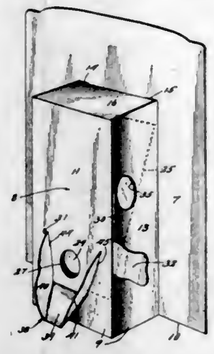


1. An electrical switch comprising a supporting base of insulation providing intersecting runways, two reciprocating members, each member intersecting and movable at right angles to the other within the runways, and connections between the members adapting one member to instantaneously move the other member in alternate directions.

1,803,849. ELECTRIC SWITCH. GEORGE HENRY ELWELL, New Haven, Conn., assignor to The Greist Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Oct. 10, 1927. Serial No. 225,197. 4 Claims. (Cl. 173—355.)

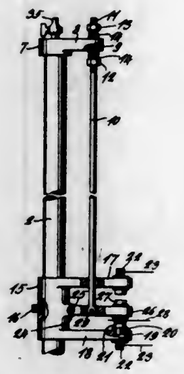
1. An electric switch comprising a supporting base having a transverse passage partially intercepted by spaced abutments therein, and a reciprocating operating member mounted within the passage and carrying a relatively sliding spring-pressed peaked cam movable between the abutments and adapted by means of the operating member to be reciprocally spring-pressed into and out of electrical engagement with a fixed contact mounted upon the base.

1,803,850. ELECTRON DISCHARGE DEVICE. FREDERICK W. HOCHSTETTER, Pittsburgh, Pa. Filed Mar. 27, 1930. Serial No. 439,280. 5 Claims. (Cl. 250—27.5.)



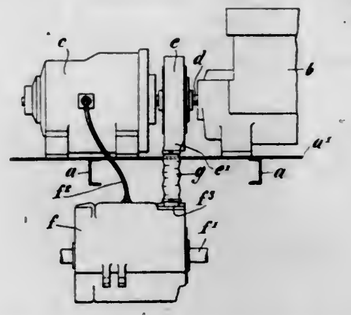
1. An electron discharge device comprising an evacuated envelope, a plate and filament therein, a grid between said plate and filament, a dielectric stem within said filament and a second grid within said stem.

1,803,851. DISPLAY STAND AND THE LIKE. JULIUS HORWATH, Chicago, Ill., assignor to Arvey Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 23, 1929. Serial No. 409,265. 5 Claims. (Cl. 229—7.)



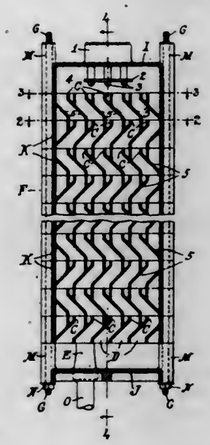
5. As a new article of manufacture, a device of the class described including in combination a main panel, a housing member comprising front and side panels, means for hingedly connecting the rear edges of the side panels aforesaid to the main panel with said side panels parallel to each other, a false bottom panel having its rear portion

hinged adjacent to the lower portion of the front panel of the housing member, and there being windows in the side panels of the housing member and a delivery opening in the lower portion of the front panel of the housing member, said windows and delivery opening being located



above the position of the false bottom panel when the same is in working position, whereby when the false bottom member is folded up against the front panel of the housing member said housing member may be folded over against the main panel, substantially as described.

1,803,852. SIGNAL SYSTEM AND APPARATUS FOR BOILERS. JOHN C. JACKSON, Fort Collins, Colo., assignor to The Modern Oil Well Supply Company, Fort Collins, Colo., a Corporation of Colorado. Filed Mar. 11, 1929. Serial No. 346,106. 2 Claims. (Cl. 200—137.)

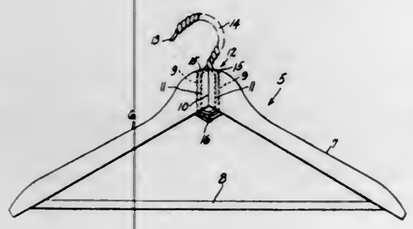


1. In a boiler means for controlling the operation of signals in accordance with the water level comprising, in combination, a tubular member having means at its lower end for connecting it with the interior of the boiler, the upper end of the tubular member being closed, and provided with laterally extending bracket, a switch secured to the lower end of the tubular member, said switch comprising, a body member having an opening through which the tubular member extends, two spaced arms extending laterally from the body member, a switch contact secured to each arm and insulated therefrom, a movable switch arm pivotally connected with the body member at a point between the arms, the outer end of said switch arm having a switch contact secured thereto by insulating material, and a rod connected at its upper end with the bracket and at its lower end with the movable switch contact whereby when the tubular member expands and contracts the movable switch member will be rotated about its pivot.

1,803,853. MOUNTING AND COOLING CONSTRUCTION FOR DRIVING UNITS OF LOCOMOTIVES. WILLIAM B. JUPP and ROBERT G. ANDERSON, Plainfield, N. J., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 19, 1929. Serial No. 415,267. 2 Claims. (Cl. 105—59.)

2. A power plant for a vehicle comprising an engine and generator unit, a fan driven by the engine and mounted between the engine and generator, a motor electrically connected to the generator, and means to conduct cooling air from the fan to the motor.

1,803,854. METHOD OF SEPARATING FINELY DIVIDED LIQUIDS FROM GASES AND APPARATUS THEREFOR. WALTER H. KNISKERN, Syracuse, N. Y., assignor to Atmospheric Nitrogen Corporation, Solvay, N. Y., a Corporation of New York. Filed Oct. 14, 1926. Serial No. 141,498. 20 Claims. (Cl. 183—79.)



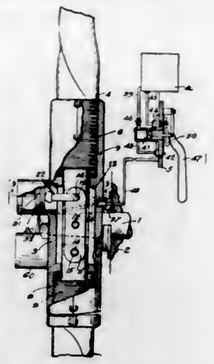
1. The method of separating finely divided liquids suspended in a gas which comprises leading the gas stream into consecutive contact with a multiplicity of surfaces, each adapted to change the direction of flow of the gas whereby liquids suspended in said gas are deposited on said surfaces, leading such so deposited liquids into a plurality of separately maintained pools of said liquid, blocking the passage of the gas stream through said separately maintained pools by means of the accumulated liquid in the respective separately maintained pools and establishing a confluence of successive accumulations from the several separately maintained pools, whereby the gas passes away as a liquid-freed gas, while the minute liquid particles extracted from the gas are passed away as a flowing stream of liquid.

1,803,855. MANUFACTURE OF CARBON. OSKAR KRAMER and LEOPOLD BUB, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed July 9, 1927, Serial No. 204,659, and in Germany July 13, 1926. 3 Claims. (Cl. 134—60.)

1. In the manufacture of carbon by the thermal decomposition of gases containing carbon monoxid, the step of adding to the gases about 0.1 to 0.2 per cent by volume of a vaporized carbonyl compound of a metal of the iron group.

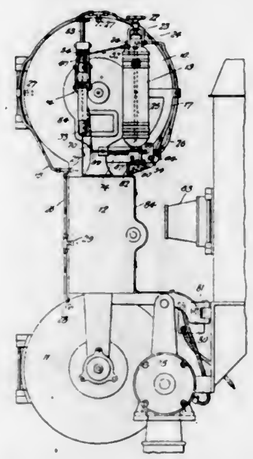
1,803,856. GARMENT HANGER. ISAAC LEVIN, Brooklyn, N. Y. Filed Nov. 27, 1929. Serial No. 410,012. 1 Claim. (Cl. 223—61.)

A garment hanger comprising a pair of sections abutting each other, each of the sections being provided with an opening near its abutting surface, a suspension hook, and a pair of legs on the said suspension hook passing through the said openings and twisted to tie the said hanger sections together.



1,803,857. LUMBER RETURN ATTACHMENT FOR SAW TABLES. HENRY T. LUMB, Poughkeepsie, N. Y. Filed May 1, 1930. Serial No. 448,812. 2 Claims. (Cl. 143—33.)

1. In a device of the class described and in combination with a saw and table, of a delivery table mounted on the same plane as said saw table and comprising a stationary member and a movable member, means for carrying the lumber out upon said members, means actuated by the travel of said lumber for allowing the movable member to swing downward, means for returning the lumber to the saw table, means for diverting its line of travel past the saw, and means for bringing the several mechanisms back to their normal positions.

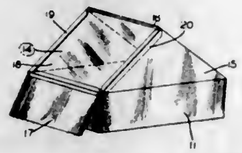


1,803,858. ADJUSTABLE PROPELLER. JOHN W. MACCLATCHIE, Compton, Calif. Filed Mar. 7, 1928. Serial No. 259,708. 6 Claims. (Cl. 170—163.)

1. The combination of a propeller including a hub and diametrically opposite propeller blades rotatable on their longitudinal axes, a rock arm medially pivoted in the hub and connected at its respective ends to the respective propeller blades so that swinging movement of said rock arm will reversely rotatably adjust the propeller blades to vary the pitch of the propeller, a cylinder in the propeller hub, a piston in said cylinder operatively connected

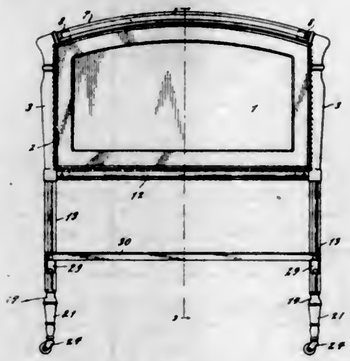
to said rock arm, and a fluid pressure conduit extending through the hub and communicating with the cylinder for actuating the piston.

1,803,859. FIRE EXTINGUISHING APPARATUS. PETER GRAHAM MACGREGOR, Pequannock, N. J., assignor to Pyrene Manufacturing Company, Newark, N. J., a Corporation of Delaware. Filed Nov. 1, 1927. Serial No. 230,239. 1 Claim. (Cl. 169—2.)



In combination with a motion picture projector having a film housing provided with an opening, a cage movably mounted adjacent said opening and adapted to contain a highly inflammable material, fusible thermal release means for holding said cage in a suspended position and adapted when fused to release said cage, a liquid receptacle adapted to contain a fire extinguishing liquid, a conduit leading from said receptacle into said housing, a valve in said conduit cooperating with said cage and retained closed by the latter when said cage is in its suspended position and permitted to open when said cage is released, a source of fluid pressure, means for releasing said fluid pressure and directing it into said receptacle for expelling the contents of the latter through said conduit, and means cooperating with said thermal release means for rendering said fluid releasing means inoperative until said thermal release means is fused.

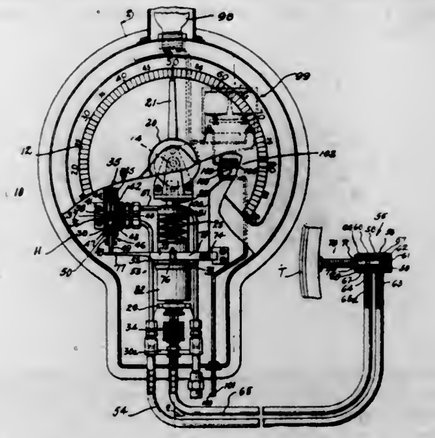
1,803,860. TOILET TANK WATER SOFTENING DEVICE. DAN G. MARKS, Los Angeles, Calif. Filed Feb. 6, 1929. Serial No. 337,832. 1 Claim. (Cl. 210—29.)



A device for disseminating a water softener in the water in a toilet flush tank comprising a container having perforated walls, a baffle within the container opposite the walls and a water softening composition disposed within the baffle.

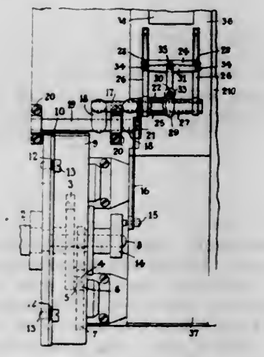
1,803,861. DISPLAY BOX. BURDETTE K. MARVIN, Riverside, Calif. Filed Sept. 11, 1929. Serial No. 391,846. 7 Claims. (Cl. 206—44.)

1. A display box having front and back cover flaps and side flaps, the side flaps having inclined forward edges, a transparent member and means for attaching the transparent member to the forward edges of the side flaps.



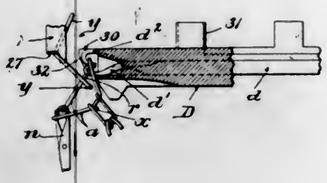
1,803,862. METAL BED. LOUIS H. MORIN, New York, N. Y., assignor to Doehler Die-Casting Co., a Corporation of New York. Filed Mar. 14, 1928. Serial No. 261,446. 6 Claims. (Cl. 5—280.)

1. A head or foot piece for beds comprising side posts having inwardly opening channels and upper and lower inwardly extending integral projections, tubular cross members the ends of which receive said projections, longitudinal troughs in said cross members, and a panel member with its edges in engagement with said troughs and channels.



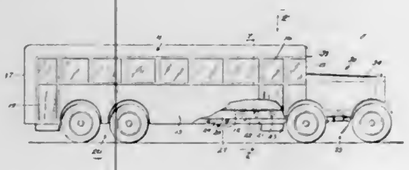
1,803,863. TIRE INFLATING AIR PRESSURE CONTROLLER. ALBIN JOHN NELSON and CARL JOHN ESSMANN, Brooklyn, N. Y. Filed Aug. 20, 1928. Serial No. 300,758. 5 Claims. (Cl. 50—4.)

1. A tire inflating air pressure controller, including a pressure supply conduit, and a pressure control conduit, a valve for the pressure supply conduit, a pneumatic motor for the pressure control conduit, a body with which said conduits communicate, said body having a valve automatically closing the pressure supply conduit, said valve being opened on engaging the body with the tire valve structure, to permit pressure to flow into the tire, said motor closing



the first mentioned valve when the required pressure in the tire has been attained, and a vent opened by the first mentioned valve as the same closes the pressure supply conduit.

1,803,864. CINEMATOGRAPH APPARATUS. ARTHUR SAMUEL NEWMAN, Highgate, England, assignor to Kodak, Limited, Holborn, London, England. Filed May 28, 1929, Serial No. 366,719, and in Great Britain June 1, 1928. 12 Claims. (Cl. 88—18.4.)



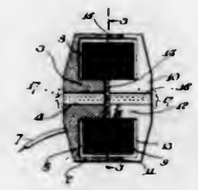
1. In means for driving cinematograph apparatus the combination of a driving shaft, a crank on said main shaft, a driving pin on said crank, a slotted crank driven by the crank pin, a driven shaft on which the slotted crank is mounted, a casing having a closing plate, a bearing on said closing plate in which the driving shaft is mounted, a bearing on the casing in which the driven shaft is mounted, means provided on the closing plate and on the casing to enable these latter to slide and to be fixed with respect to each other, a crank on the driven shaft, a lever one end of which is driven by the said last mentioned crank, a swinging shaft on which the said lever is pivoted intermediate of its ends, and claws moved by the other end of said lever, substantially as set forth.

1,803,865. MACHINE FOR KNITTING SPLICED FABRICS AND METHOD OF KNITTING THE SAME. ALBERT E. PAGE, Brooklyn, N. Y., assignor to Scott & Williams, Incorporated, New York, N. Y., a Corporation of Massachusetts. Original application filed May 22, 1925, Serial No. 32,046. Divided and this application filed Feb. 20, 1930. Serial No. 429,940. 17 Claims. (Cl. 66—13.)

1. Method of knitting spliced sections on a knitting machine having two sets of needles for ribbed knitting, comprising feeding to one set of said needles a main yarn and operating the needles to knit a plain fabric segment and a contiguous ribbed fabric segment of said yarn, and feeding a splicing yarn to accompany the main yarn during a part of the knitting of the plain fabric segment, and into the space between the face wale and back wale loops of the ribbed fabric.

1,803,866. VEHICLE. LOUIS L. PATTERSON, Los Angeles, Calif. Filed May 2, 1928. Serial No. 274,471. 10 Claims. (Cl. 180—11.)

1. A motor vehicle having a truck unit with a power plant and steering wheels with means to control same from a platform extending rearwardly with inner structure beams adjacent the side edges of the platform, a load carrying unit having a floor with an opening at the front forward end, a pair of outer structural beams on each side of said opening, the inner beams of the platform being adapted to telescopically interfit with the outer beams adjacent the floor, and means to rigidly secure said beams together, the load carrying unit having wheels adjacent the rear end.



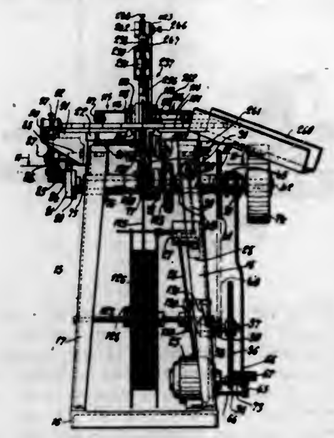
1,803,867. CHAIN TONGS. JAMES I. PHILLIPS, Mannington, W. Va., assignor of one-half to Ernest Barger Miller, Tulsa, Okla. Filed Feb. 19, 1930. Serial No. 429,525. 15 Claims. (Cl. 81—70.)

1. In tongs of the character described, a handle having a head, jaws carried on opposite sides of said head, a pivoted latch disposed intermediate said jaws and having hook-like members at its front end, a chain pivoted at one end to said head, the link-connecting pivot-pins of the free end portion of said chain having projecting ends engageable with said hook members, said latch having a tail-piece, and sleeve-like means mounted for rotary movement

on said handle and having a skirt portion which is engageable with said tail-piece for maintaining said latch in chain-holding position.

1,803,868. MAGNETIC DEVICE. HARRY F. PORTER, Trenton, N. J. Filed Sept. 28, 1928. Serial No. 309,086. 12 Claims. (Cl. 175—356.)

1. Reactor structure comprising a pair of cup-like members of magnetizable material, a coil disposed in each of said members, and a plate of magnetizable material interposed between said members and forming a partition between said coils whereby mutual inductance of said coils is controlled.

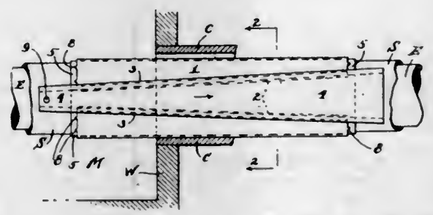


1,803,869. PROCESS OF TREATING YARN. SAMUEL P. RUFF, Jr., Bowling Green, Nether Providence Township, Pa., assignor to Aberfoyle Manufacturing Company, Chester, Pa., a Corporation of Pennsylvania. Filed Jan. 13, 1930. Serial No. 420,598. 1 Claim. (Cl. 28—1.)

A yarn package characterized by an identifying odor provided by an odoriferous compound evenly distributed throughout the yarn strand.

1,803,870. PROCESS OF FORMING COLLOIDAL SUSPENSIONS CONTAINING COPPER AND PRODUCT THEREOF. GEORGE E. SANDERS, New York, N. Y. Filed Oct. 3, 1927. Serial No. 223,850. 10 Claims. (Cl. 167—16.)

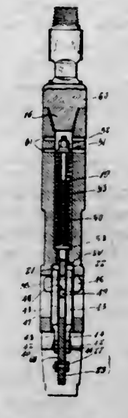
7. A dry composition containing a compound of a metal, the salts of which are adapted to kill low forms of life, and a casein compound adapted to react upon the metal compound in the presence of water to form a colloidal suspension of said metal, the proportion of the casein compound being not less than 1 pound of actual casein to 2 pounds of the metallic metal.



1,803,871. AUTOMATIC WICK THREADING MACHINE. ALFONSO SCAITTA, Brooklyn, N. Y. Filed Oct. 11, 1928. Serial No. 311,766. 4 Claims. (Cl. 18—1.)

2. A machine of the character described, including means to support a candle, means to thread a wick into the candle, means to sever the wick, means to actuate the machine, and other means operated by a knot in the wick to cause the actuating means to stop.

4. A machine of the character described, including a table rotatable about a vertical axis, said table being adapted to support a plurality of candles thereon, means to thread a wick into the candles, means to sever the wick, a hammer to cause a clip on an end of the candle to grip the wick therein, the rotation of the table bringing the candles in succession to the wick threading means, and a chute means coacting with the table, said candles impinging a portion of the chute means and being discharged down the same due to the aforesaid rotation of the table.



1,803,872. SLEEVE ATTACHMENT FOR ELECTRIC CABLES AND CONDUITS. KENNETH R. SHAW and PHILIP A. SALMON, Newark, N. J. Filed Mar. 10, 1928. Serial No. 260,662. 4 Claims. (Cl. 247—4.)

1. A split, flexible sleeve having tapered and grooved edges and adapted to encircle an electric cable, and a closing member having tapered and grooved edges adapted to co-act with the said tapered and grooved edges upon said flexible sleeve to hold and lock said sleeve upon said cable to protect same against abrasion from contacting parts.

1,803,873. CABLE TOOL UNDERREAMER. ROBERT E. SIMPSON, Taft, Calif. Filed July 30, 1925. Serial No. 47,130. 13 Claims. (Cl. 255—75.)

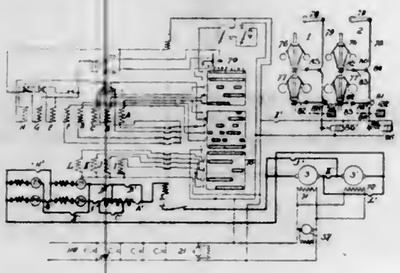
1. An underreamer comprising a body, reaming cutters mounted by the body and vertically movable from a contracted position to an expanded position, a cutter operating rod within the body, a spring connected to said rod, a cutter gripping rod at one end engaging both of said

cutters and extending into said body, said rod being mounted to move on its axis, and means within the body for attaching said gripping rod to said operating rod.

1,803,874. NUT LOCK. ORLOW C. SNYDER, Long Island City, N. Y. Filed Jan. 28, 1929. Serial No. 335,630. 1 Claim. (Cl. 151—1.)

A nut lock comprising in combination with a bolt and a nut threaded thereon, of a flat seat formed on one side of the bolt, said bolt having a groove around its threaded portion, said groove passing through said flat seat, a comparatively stiff wire ring seated in said groove and having the ends twisted together and extending radially from the axis of the bolt opposite said seat, and a solder cap enveloping said seat, said ring and the twisted together ends of the ring, and entering said groove, said solder cap binding together in a rigid unitary assembly the ring the nut and the bolt.

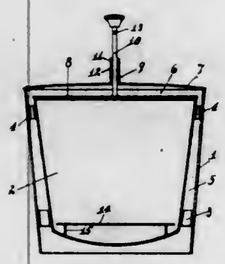
1,803,875. METHOD OF FACING TOOLS AND RESULTING PRODUCT. WINSTON F. STOODY, SHELLEY M. STOODY, and NORMAN W. COLE, Whittier, Calif., assignors to Stoody Company, Whittier, Calif., a Corporation of California. Filed Jan. 30, 1928. Serial No. 250,698. 25 Claims. (Cl. 76—108.)



1. A method of facing tools comprising fusing a layer of metal containing pieces of a material having a greater melting point than said metal upon the face of a tool, and fusing a second layer of a metal on top of the first layer, said second layer having a melting point considerably higher than said first layer.

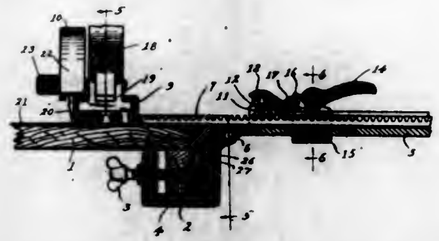
4. A tool having an operating face comprising two fused layers, the first layer consisting of a metal of comparatively low melting point having embedded therein pieces of an alloy of a considerably higher melting point, and the second layer comprising tool steel.

5. The method of facing tools which comprises first associating together a metal of relatively low melting



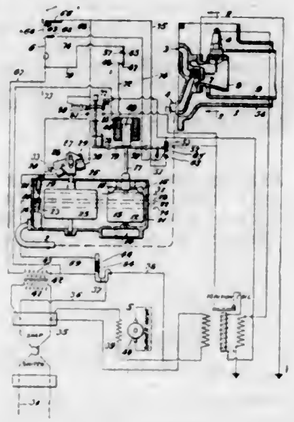
point and pieces of a hard substance of relatively high melting point, supplying heat to the associated mass to cause the metal of low melting point to melt and be deposited on the tool and carry with it the pieces of hard substance depositing them on the tool without materially changing their identity, causing a fusion to take place between the metal of low melting point and the metal of the tool, and allowing the metal of low melting point to cool and harden about the pieces and thus anchor them to the tool.

1,803,876. COMBUSTION ENGINE LOCOMOTIVE. ELMER A. SPERRY, Brooklyn, N. Y., assignor to Sperry Development Company, Dover Green, Del., a Corporation of Delaware. Filed Jan. 20, 1922. Serial No. 530,687. 8 Claims. (Cl. 290—3.)



1. In a combustion engine electric locomotive drive for trains, in combination, a locomotive and train cars, a combustion engine and generator on the locomotive, motors on said locomotive and a car of the train, electric circuits between said motors and generator whereby said motors are driven from said generator, and controllers on said locomotive and a car of the train adapted to control both the circuits between said generator and the said motors and the combustion engine.

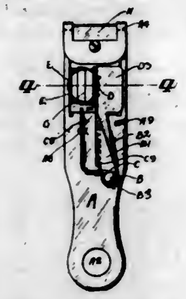
1,803,877. COOKER. CONRAD STEHL, Oakland, Calif. Filed Aug. 10, 1929. Serial No. 384,994. 4 Claims. (Cl. 53—1.)



1. A cooker comprising a frustro-conical shell open at both ends, a removable frustro-conical vessel with segmento-spheroidal bottom disposed within and spacedly related to said shell, spacing members interiorly attached to said shell, a cover for said shell provided with a centrally disposed vertical bearing, a cover for said vessel provided with a centrally disposed vertical rod passing through said bearing, and means cooperating between said bearing and said rod whereby said shell cover may be supported in spaced relation relative to the top of the shell and supported by the vessel cover.

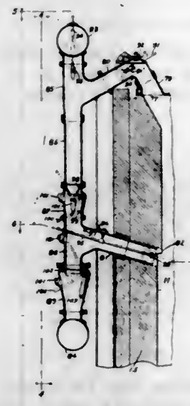
1,803,878. MEASURING AND CUTTING DEVICE. FRED STOUT and GEORGE R. O'DANIELL, Grand Rapids, Mich., assignors, by direct and mesne assignments, of two-fifths to said Stout, one-fifth to said O'Daniell, and two-fifths to Ella Kenyon Stout. Filed June 24, 1929. Serial No. 373,367. 3 Claims. (Cl. 164—73.)

1. A device for cutting paper sheets and the like, comprising spaced clamps provided with means for gripping a table, parallel tracks pivoted to the clamps, a tiltable frame composed of parallel arms extending along and guided by the said tracks, a transverse guide member rigidly connecting the inner ends of the said arms and maintaining the same in parallelism and the clamps and tracks in proper spaced relation, a slide mounted on the guide member, and cutting means carried by the slide.



1,803,879. CONTROL FOR OIL BURNERS. HARRY F. TAPP, Brooklyn, N. Y., assignor to Socony Burner Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 11, 1926. Serial No. 80,479. 3 Claims. (Cl. 158—28.)

1. In a liquid-fuel heating system, the combination with a burner, of means for supplying fuel thereto comprising a constant-level supply chamber with a float for controlling the level thereof, a fuel cut off valve, a weighted member associated with said valve and acting when lowered to close the valve irrespective of the level of the fuel in the supply chamber, and means controlled by combustion conditions in the burner for lifting the weight while the burner flame persists but for causing its descent to close the valve when the burner flame fails.

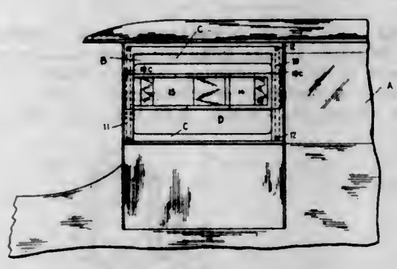


1,803,880. BEAN STRINGING AND SLICING IMPLEMENT. WILLIAM TATHAM, Sydney, New South Wales, Australia. Filed Nov. 14, 1928, Serial No. 319,356, and in Australia Sept. 12, 1928. 7 Claims. (Cl. 146—210.)

1. In a bean stringing and slicing implement, a base having parallel horns formed at one end thereof, a topping blade adapted to lie across the horns formed on the end of the base, a holder having horns similar to the horns formed on the base, the ends of the horns on the

holder being reversely bent to form clips which engage the topping blade and the ends of the horns formed on the base, and means for securing the holder to the base to hold the topping blade in position.

1,803,881. DOUBLE OFFTAKE FOR COKING RETORTS. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 12, 1925. Serial No. 1,718. 11 Claims. (Cl. 202—257.)

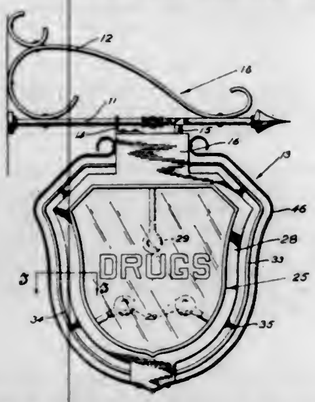


1. In a coking retort oven, in combination: a coking chamber; an upper gas offtake leading therefrom; a gas collecting main; a stand-pipe connected at its upper end with said offtake and said main; a lower gas offtake leading from said chamber at a point below the point of communication of the upper gas offtake with said chamber and also connected with said standpipe at a point intermediate the ends thereof and spaced from the upper end thereof and communicating through said standpipe with said gas main so that gas from the lower offtake may pass upwardly by the upper offtake and thence with gases therefrom to said main; means adapted for discharging liquid gas purifying medium into said standpipe so that said medium will pass therethrough from below the point of communication of the upper offtake therewith past the point of communication of the lower offtake with the standpipe and thereby may treat, in said standpipe, gas that may pass therein from said lower offtake by said upper offtake before said gas reaches said upper offtake; and a seal for said standpipe disposed below the points of communication of both of the offtakes with said standpipe and adjustable to permit either the medium and precipitates alone, or both the medium and precipitates and gas to pass therethrough; and an additional seal for said standpipe disposed between the points of communication of said offtakes with said standpipe, said additional seal also being adjustable to permit either the medium and precipitates alone, or the medium and precipitates and gas to pass therethrough; substantially as specified.

1,803,882. METAL COMPOSITION. RICHARD R. WALTER, Nuremberg, Germany. Filed Nov. 21, 1927, Serial No. 234,897, and in Germany Sept. 1, 1927. 3 Claims. (Cl. 75—1.)

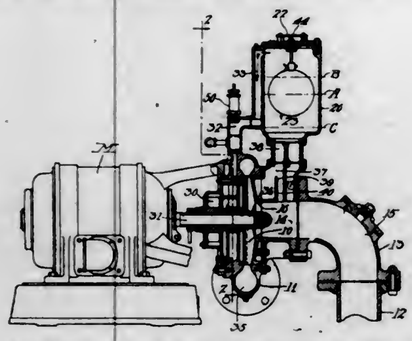
1. In a metal composition capable of resisting wear during use for cutting, the combination of metal particles including tungsten and fritted to each other into a coherent mass having minute cavities between said particles and a filling of an alloy in said structure cavities, said alloy including a metal of the iron group and a metal of the chromium group and constituting about twenty per cent by weight of the tungsten mass.

1,803,883. SIDE DOOR CURTAIN FOR AUTOMOBILES. CORA P. WEAVER, Alhambra, Calif. Filed Mar. 16, 1927. Serial No. 175,661. 1 Claim. (Cl. 296—138.)



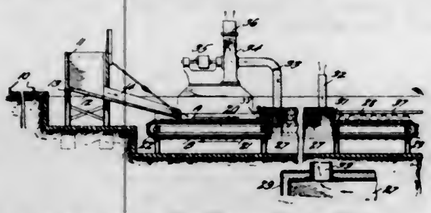
In combination with a frame having a window opening, a fabric curtain stretched so as to bridge said window opening, vertical runners disposed at the opposing ends of the frame window opening and slidably engaged by the opposing ends of said curtain to allow the curtain to be raised or lowered relatively to the window opening, said curtain being composed of overlying alining panel-carrying sections, a pair of parallel fabric tapes having terminals secured to but projecting beyond one end of one curtain section, the major length of which tape is free, said tapes designed to interengage and to skirt the edges of the overlying curtain sections, a pair of parallel tapes similar in mounting and manner of attachment to the foregoing tapes but secured to the other section, flexible loops carried marginally by the respective sections thru which the tapes of the cooperating adjacent section adjustably pass and by means of which the curtain sections are longitudinally adjustable in alinement, the ends of the tapes of one curtain section, and those of the other section being tied together to connect said tapes together and to provide terminals by means of which the completed curtain may be grasped for positioning same upon the runners.

1,803,884. DISPLAY SIGN. WILLIAM B. WILSON, Los Angeles, Calif., assignor, by mesne assignments, to Metlox Corporation, Ltd., a Corporation of California. Filed Oct. 29, 1928. Serial No. 315,650. 7 Claims. (Cl. 40—130.)



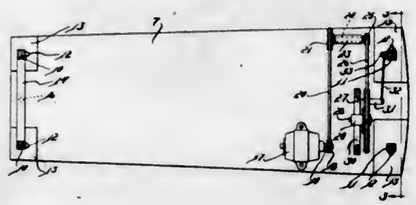
6. An illuminated sign comprising a relatively flat sign body, sets of socket members disposed along the edge of said sign body, luminous gas tubes adapted to be electrically connected with said socket members, said tubes extending along and being uniformly spaced with

relation to the perimeter of the sign and a flat shield strip lying in a plane parallel with the edge of the sign body and being spaced around and conforming to the contour



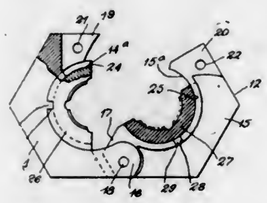
of the lengths of said tubes whereby to shield the same while permitting an unobstructed view of the tubes from opposite sides of the sign.

1,803,885. PRIMING MECHANISM FOR CENTRIFUGAL PUMPS. HAROLD E. ADAMS, South Norwalk, Conn., assignor to Nash Engineering Company, South Norwalk, Conn., a Corporation of Connecticut. Filed Dec. 2, 1929. Serial No. 410,915. 8 Claims. (Cl. 103—113.)



1. Mechanism for priming a centrifugal pump comprising an air pump, a control chamber, connections from said control chamber to said air pump and to said centrifugal pump, a vent valve for said control chamber, a float effective to open said vent valve when the water in said chamber reaches a predetermined level, and a vacuum relief valve for said control chamber.

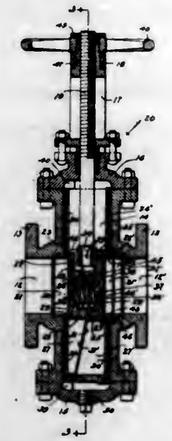
1,803,886. SLAG COOLING APPARATUS. PAUL W. AUSMAN, Birmingham, Ala. Filed Feb. 20, 1929. Serial No. 341,509. 4 Claims. (Cl. 49—77.5.)



1. In a slag cooling apparatus, a receiver for slag, a chute leading therefrom, a conveyer having a plurality of receptacles located in operative relation to the said chute, a housing constituting a cooling zone through which the conveyer operates, a water jacket in the said cooling zone through which water may circulate for modifying the temperature of the wall of the said cooling zone, means for circulating air therethrough, and means for applying water to the slag in the receptacles as they leave the cooling zone.

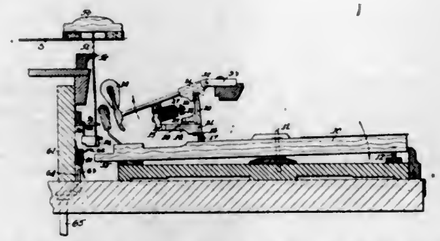
1,803,887. ELECTRICALLY OPERATED CRADLE. CARL B. H. BARNES, Detroit, Mich. Filed Feb. 1, 1930. Serial No. 425,135. 1 Claim. (Cl. 5—109.)

A device of the class described, comprising: a portable base; wear plates on the upper surface of said base at opposite ends thereof; a cradle; supporting standards for supporting said cradle and engaging said wear plate; a bolster secured to said standards at one end of said cradle; a pin projecting into said bolster for pivotally connecting one end of said cradle to said base; and power driven means for oscillating said cradle on said pin as a pivot.



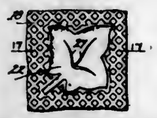
1,803,888. DIE NUT. ANTHONY BASOLA and FRANK NEMARNICK, Long Island City, N. Y. Filed Sept. 5, 1928. Serial No. 304,086. 2 Claims. (Cl. 10—125.)

1. A screw threading tool for cutting screw threads in an intermediate portion of a bolt or the like and for use in restricted places by operation of an ordinary wrench and comprising a nut member made up of hingedly connected parts having the external configuration of a hexagonal nut and having a circular interior, a circular thread cutting die member in cooperating separable segments to fit the circular interior of the nut member, the separable parts of said nut member and the separable parts of said die member having centrally disposed interfitting annular ribs and grooves, and keys and key receiving grooves transversely intersecting the annular ribs and grooves for removably holding the separable die parts in definitely positioned relation within the nut parts.



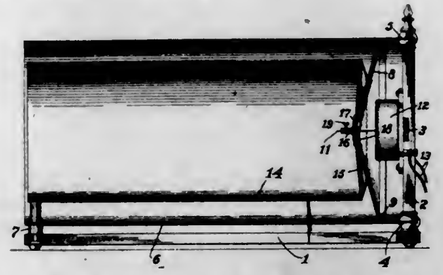
1,803,889. NONCORRODING VALVE. CHARLES F. H. BOHNHARDT and BRUNO F. BOHNHARDT, Lynwood, Calif. Filed Mar. 14, 1927. Serial No. 175,085. 5 Claims. (Cl. 251—68.)

1. In a valve of the general character described: a main body providing a passage for the advance of a fluid; a seat element secured therein; an interior organization shiftable within said body between a flow-obstructing position and a flow-permitting position relatively to said seat; and means for shifting said interior organization relatively to said seat,—said interior organization comprising a plurality of shiftable units each provided with



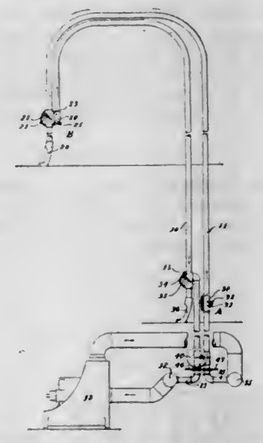
a closure section and with an apertured section and each provided with a wedge face, resilient means being interposed between said units.

1,803,890. GRAND PIANO ACTION. GORDON G. CAMPBELL, Upper Montclair, and JOSEPH KLEPAC, Fort Lee, N. J., assignors to Kohler-Brambach Piano Company, New York, N. Y., a Corporation of New York. Filed Oct. 17, 1930. Serial No. 489,414. 7 Claims. (Cl. 84—239.)



4. In a grand piano action, a key, a whip actuated thereby, a jack pivoted to said whip, a hammer having a butt engaged by said jack, means to release the jack from the hammer as the jack approaches its upper limit of travel, and cam means formed on the hammer butt and through which the weight of the hammer acts on said jack as the hammer swings downward and forces said jack into operative lifting relation with said hammer butt.

1,803,891. METHOD OF PRODUCING A CONTOURED SURFACE ON STONE. ELROY A. CHASE, Northfield, Vt., assignor to Rock of Ages Corporation, Burlington, Vt., a Corporation of Vermont. Filed Oct. 7, 1927. Serial No. 224,745. 3 Claims. (Cl. 41—39.)

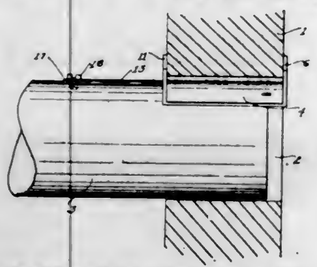


1. The method of producing a contoured surface on a block of stone which consists in coating the surface with glue, removing a narrow outline strip about the figure or design, sand blasting a corresponding outline groove in the stone, removing the glue from the background, sinking the background, recoating the grooved and background portions with additional glue, removing the old glue from the figure, and shaping the contour of said figure by use of a sand blast while the background remains covered.

1,803,892. LOUD SPEAKER. JAMES T. CORRIGAN, Washington, D. C. Filed Apr. 12, 1927. Serial No. 183,083. 11 Claims. (Cl. 181—31.)

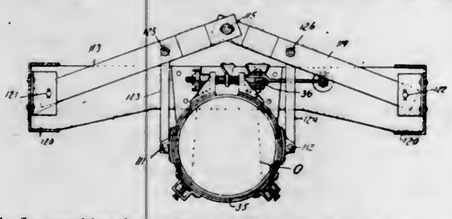
7. A loud speaker comprising an actuating means, two cone-shaped diaphragms of different frequencies physically connected to said actuating unit, the magnitude of the angle of one diaphragm being different from the other and the area of the one diaphragm being also different from the other and cylinders secured to the said diaphragms, one cylinder being positioned within the other.

1,803,893. PNEUMATIC DISPATCH SYSTEM. JAMES T. COWLEY, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Aug. 7, 1929. Serial No. 384,095. 6 Claims. (Cl. 243—9.)



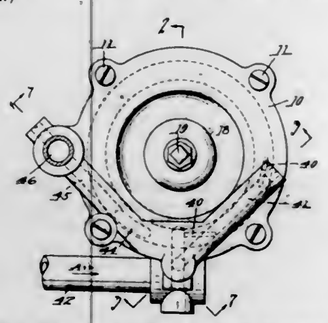
1. In a pneumatic dispatch system of the double transmission tube type, an air compressor, means connecting said compressor with both tubes, whereby the tubes and compressor form a closed circuit, and means for maintaining a minimum flow of air through the circuit and for initiating a carrier impelling flow upon the insertion of a carrier in the line.

1,803,894. STOVEPIPE ANCHOR AND LOCK. RALEIGH B. CROSS, Oregon City, Oreg. Filed Mar. 13, 1929. Serial No. 346,606. 1 Claim. (Cl. 126—318.)



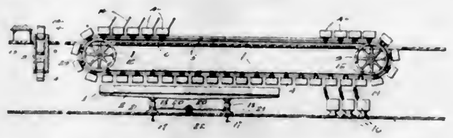
A device of the class described, comprising a metallic strip having a transverse curvature adapted to fit against a stove pipe, and having ears formed at the inner end of the strip adapted to engage the inner wall of a chim-

ney, and projections at the outer end adapted to engage the outer wall of a chimney, stop lugs on the body of the strip adjacent the ears at the inner end, and adapted to engage the end of a stove pipe, a tongue extending from the outer end of the strip and having a screw



threaded hole adjacent its outer end, a stove pipe section having a screw threaded hole corresponding to the hole in the tongue of the strip and a screw-bolt engaging said threaded holes and securing the tongue to the stove-pipe section.

1,803,895. TORQUE EQUALIZING MECHANISM. CHARLES B. CURTISS, Bay City, Mich. Filed June 20, 1928. Serial No. 286,983. 21 Claims. (Cl. 74—14.)

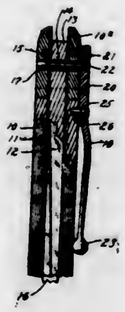


1. In combination with a body subjected to torque, a relatively stationary support, a non-load-supporting means connecting the body to said support at two separated points substantially in the plane of action of the torque forces, whereby the forces causing the torque in the body are re-applied to the body in opposite directions to nullify the same.

1,803,896. AIR TURBINE. MARK H. DAMERELL, Worcester, Mass., assignor to Wyman-Gordon Company, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 4, 1927. Serial No. 165,971. 6 Claims. (Cl. 253—74.)

1. An air turbine comprising a casing, a rotor mounted therein, said rotor having a central web with an annular groove at each side thereof in its rim portion, a rotor plate mounted in each of said grooves and having a series of forwardly inclined recesses disposed about its periphery, with the inner end of each recess closed by said central web, means to inject air under pressure into said recesses successively, and means to thereafter release the compressed air from each recess.

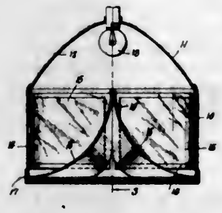
1,803,897. WASHING APPARATUS. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Apr. 7, 1927. Serial No. 181,869. 4 Claims. (Cl. 68—37.)



1. A washing apparatus comprising a series of washing vats, a series of clothes receptacles, an endless carrier, arranged so that opposite runs thereof extend horizontally, the receptacles being connected to the carrier to move into and out of alignment with the vats, and means for moving one series toward and from the other when the receptacles are in line with the washing vats and thereby bringing the receptacles into and out of the vats.

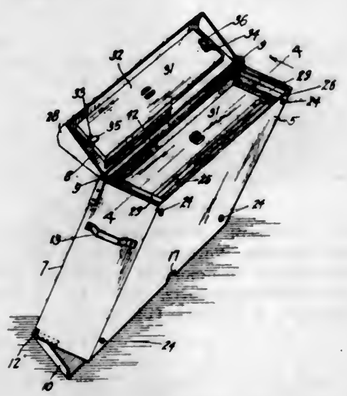
1,803,898. NONSINKABLE BATHING SUIT. EMANUEL DIAMOND, New York, N. Y. Filed Oct. 20, 1930. Serial No. 490,013. 1 Claim. (Cl. 9—20.)

In combination, a bathing suit, an inflatable chamber secured to the inner face of the front of said bathing suit, an inflatable chamber secured to the inner face of the back of said bathing suit, and an apron secured to the bathing suit in a position to overlie the inner wall of each of said inflatable chambers.



1,803,899. POCKETKNIFE. JAMES E. FULLER, New York, N. Y., assignor to New York Knife Company, New York, N. Y., a Corporation of New York. Filed Apr. 26, 1930. Serial No. 447,578. 3 Claims. (Cl. 24—3.)

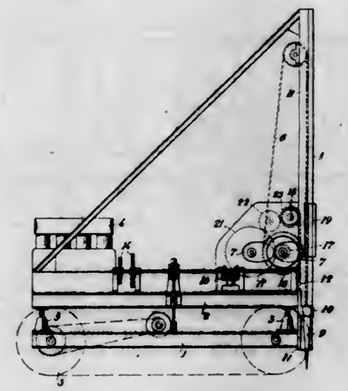
3. A pocket knife having a grooved handle, blade swinging into and from such groove, back spring acting upon the tang of the blade, and combined holding rivet and blade pivot stud near the end of the handle; characterized in that the said stud is tubular, and that the knife is provided with a longitudinal resilient holding member



along one end of the handle and having a perforation in line with the passage in said stud, a rivet pin extending clear through said stud and through the perforation in said holding member, and clinched at its ends to secure the end of the holding member, and a projection at the inner side of the holding member slightly removed from said perforation, for preventing swinging of the holding member, and the handle formed with a recess for receiving said projection.

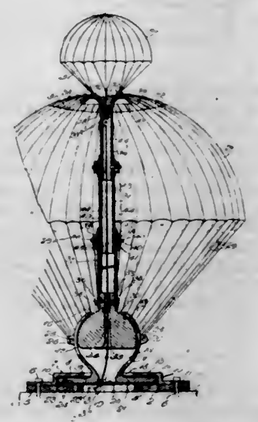
1,803,900. HEADLIGHT. HENRY J. GODIN, Augusta, Ga. Filed Jan. 18, 1930. Serial No. 421,850. 1 Claim. (Cl. 240—41.35.)

A headlight including a casing having a front light opening and light openings in the lower side thereof, a reflector for directing light rays through said front opening, and reflectors disposed in the lower field of reflection of the first reflector extending forwardly from said first reflector in curving divergent relation toward said front opening, said divergent reflectors being inclined upwardly and away from each other into partially covering relation to said lower openings, whereby to direct light rays through said lower openings.



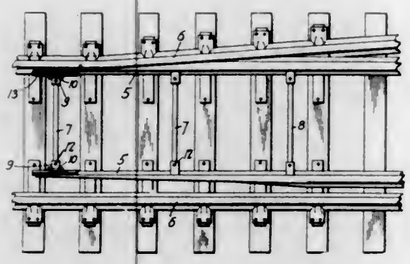
1,803,901. COMBINED TRUNK AND CAMPING OUTFIT. HENRY GOEDDERTZ, Denver, Colo. Filed Apr. 16, 1928. Serial No. 270,448. 9 Claims. (Cl. 190—12.)

1. A combination trunk and camping outfit comprising a box, nested seat-supports fitted within the box, the supports having open frames conforming with the interior contour of the box, and seats for the supports within the box, one of the seats being disposed horizontally of the box to divide the same into upper and lower compartments.



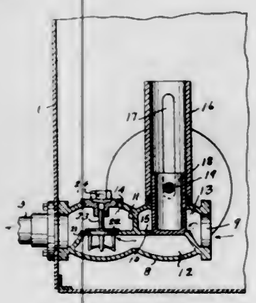
1,803,902. DEVICE FOR SPLITTING STUMPS IN THE GROUND. FRIEDRICH WILHELM GRUPE, Berlin, Germany. Filed May 27, 1929, Serial No. 366,276, and in Germany May 10, 1928. 1 Claim. (Cl. 144—193.)

An automotive piledriver-like device for splitting stumps and the like, comprising a drop weight, a chain for suspending said weight, a splitting tool independent of said weight and located below it, a holder for said tool, a chain for suspending said holder separately, means for guiding said holder separately, said holder being adapted to withdraw said tool from the stump after having



been driven in by said weight, and a pair of elliptical wheels in the driving gear for said chains, so that during the pulling out of the splitting tool the holder and during each lift of the weight the said elements are started slowly and only highly accelerated during the stroke.

1,803,903. PARACHUTE. ALBERT CASPER JENEZON. Baltimore, Md. Filed Dec. 17, 1928. Serial No. 326,330. 6 Claims. (Cl. 244—21.)

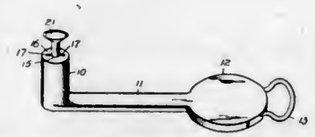


1. In a parachute for use on aircraft, a bag, a mast, having a funnel-shaped top, a central opening in said bag, cords radially disposed on said bag and meeting at a point in said opening, and means for pulling said cords into said funnel shaped top.

1,803,904. SWITCH POINT PROTECTOR. ISAAC J. KILBURN, Denver, Colo., assignor to The American Switch Point Protector and Railroad Equipment Company, Denver, Colo., a Corporation of Colorado. Filed Aug. 20, 1928. Serial No. 300,884. 11 Claims. (Cl. 246—437.)

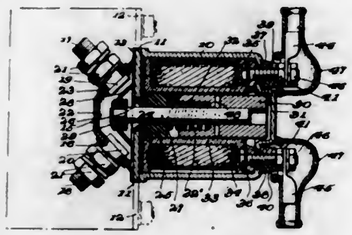
1. A protector for switch-rails comprising a plate having parallel longitudinal wear-edges to extend along the tread of a switch-rail and having bolt openings transverse to and at equal distances from said edges, for the application of bolts by which the plate is fastened to the rail.

1,803,905. VALVE MECHANISM. ALFRED KINZBACH, Sour Lake, Tex. Filed May 8, 1928. Serial No. 276,000. 3 Claims. (Cl. 137—68.)



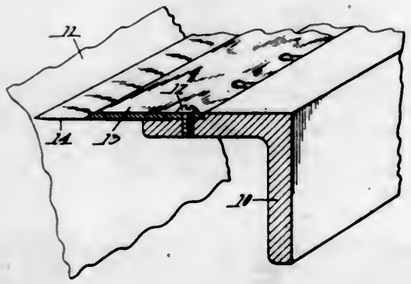
1. A valve mechanism for controlling the flow of fluid from a tank and including a casing anchored to the tank and having an inlet in the tank and an outlet, partitions fixed in said casing separating the same into an inlet chamber into which said inlet leads, an outlet chamber from which said outlet leads and a flow chamber, openings connecting the flow-chamber with the inlet and outlet chambers, and surrounded by valve seats, and valves controlling said seats, and a float connected to one of said valves, a valve guide attached to said casing in which one of said valves works, a float outside of the guide connected, to said last named valve, and means limiting the range of movement of said valve.

1,803,906. DIAZO-TYPES STABILIZED WITH A DERIVATIVE OF THIOCARBONIC ACID AND A PROCESS OF PREPARING THEM. WILHELM KRIEGER and RUDOLF ZAHN, Wiesbaden-Biebrich, Germany, assignors to Kalle & Co., Aktiengesellschaft, Wiesbaden-Biebrich, Germany, a Corporation of Germany. Filed Feb. 6, 1929, Serial No. 338,025, and in Germany Feb. 16, 1928. 9 Claims. (Cl. 95—7.)



1. The process of stabilizing diazo-types which consists in adding to the light-sensitive layer a derivative of thiocarbonic acid.

1,803,907. ADJUSTABLE GOLF TEE AND ANCHOR THEREFOR. MAURICE M. KRUSE, Long Island City, N. Y. Filed Oct. 22, 1929. Serial No. 401,408. 4 Claims. (Cl. 273—33.)

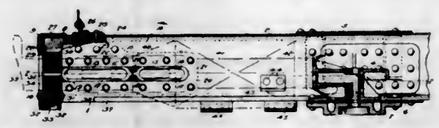


2. An anchoring device for a golf tee, comprising an integral connecting bar, an upright cylindrical member having an axial bore, and a tee adjustably mounted in said bore, the upper end of the cylinder being closed by a flexible piece having a restricted opening and oppositely disposed cuts, said tee having an enlarged portion for the end within the bore of the cylindrical member to frictionally engage the wall of the bore to support the tee at different elevations.

1,803,908. SWITCH MECHANISM. RAYMOND P. LANSING, Montclair, N. J., assignor to Eclipse Machine Company, Elmira Heights, N. Y., a Corporation of New York. Filed Oct. 23, 1928. Serial No. 314,462. 9 Claims. (Cl. 200—111.)

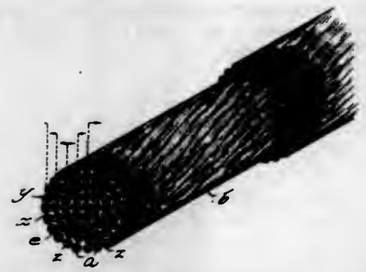
1. In a solenoid switch, a shell closed at one end, an insulating spool within said shell and secured thereto at its closed end, a solenoid coil carried by said spool, closure means for the shell embodying a magnetic pole piece, switch operating means embodying a slidable pole piece adjacent said first named pole piece, said spool constituting a guiding member for said slidable pole piece, and means for yieldably separating the pole pieces.

1,803,909. DOCTOR. FREDERICK W. LODDING and JOHN WARREN VEDDER, Worcester, Mass., assignors to Rice, Barton & Fales, Incorporated, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 2, 1928. Serial No. 266,579. 3 Claims. (Cl. 92—74.)



1. A doctor for the purpose described comprising a rigid support, a flexible blade resting on said support and projecting a material distance beyond it and having an edge parallel with it for engaging the surface to be operated upon, and a rigid plate secured to said support and bearing on the upper surface of the flexible blade throughout a space extending from the edge of said support to a line along the blade near the operative edge thereof but spaced therefrom.

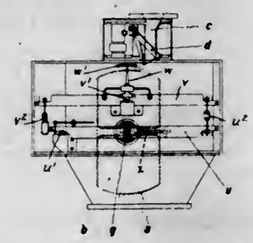
1,803,910. MANUFACTURE OF DIBENZANTHRONYLS. ARTHUR LÜTTRINGHAUS and HUGO WOLFF, Mannheim, and HEINRICH NERESHEIMER, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Original application filed June 5, 1926, Serial No. 114,011, and in Germany June 15, 1925. Divided and this application filed Jan. 25, 1930. Serial No. 423,538. 2 Claims. (Cl. 260—61.)



1. As new articles of manufacture, practically pure 2.2'-dibenzanthronyls in which one of the benzanthrone radicles is substituted by a methyl group.

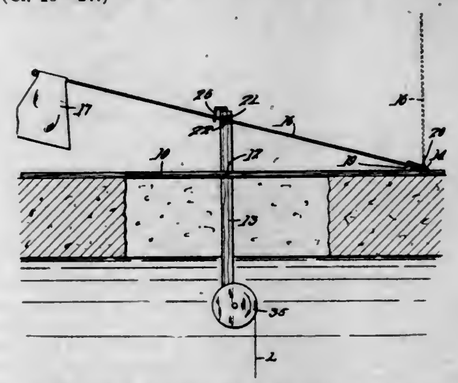
1,803,911. DRAFT DEVICE. MARK H. MARTIN, Baltimore, Md., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Aug. 24, 1925. Serial No. 52,061. 15 Claims. (Cl. 213—50.)

4. An integral draft device comprising an outer portion adapted to embrace a coupler stem and rear portions formed as cheek plates and adapted for application and connection outside of the center sills of a car.



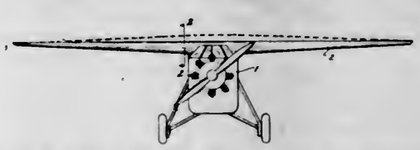
1,803,912. ROPE STRUCTURE. HENRY S. MEARS, Portland, Oreg. Filed Jan. 15, 1929. Serial No. 332,589. 3 Claims. (Cl. 117—52.)

1. A rope having a strand comprising a plurality of yarns twisted together, the yarns lying in the center of the strand having individual turns in the same direction as the turns of the strand, and the individual turns of the yarns being less from the center of the strand outward until the yarns lying on a circle located concentric with and between the center and the circumference of the strand are without turns, lying in parallel relation and the turns of the yarns lying exterior of said circle being in the opposite direction and gradually increasing towards the circumference of the strand from the yarns lying on the said circle in parallel relation.



1,803,913. AUTOMATIC WEIGHING MACHINE. OTTO MEYER, Wettelswalde, near Crimmitschau, Germany. Filed Jan. 23, 1928, Serial No. 248,716, and in Germany Jan. 25, 1927. 5 Claims. (Cl. 249—19.)

1. A weighing apparatus comprising a weighing vessel mounted for rotary movement between receiving and discharging positions and for downward and upward movements under the weight of a load and when relieved of such weight, respectively, a feed conduit, a valve controlling the feed of material from said conduit to the vessel, and a pair of successively operating stop members supported for coacting with the valve to control the operation thereof, one of said stop members being engageable with the vessel to effect the opening of the valve and in



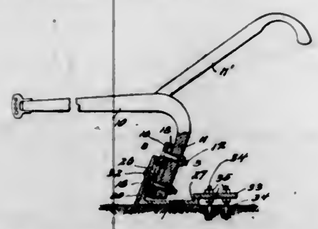
hold it open until the vessel is filled to a predetermined degree and adapted to be released by a certain downward movement of the vessel under the weight of the material therein to permit the valve to partially close, and the other of said stop members being adapted for engagement with the vessel to hold the valve partly closed and adapted to be released upon a further downward movement of the vessel when loaded to the full extent desired to effect a closing of the valve.

1,803,914. TIP-UP. JOHN A. OBERG, Worcester, Mass. Filed Apr. 28, 1930. Serial No. 447,869. 8 Claims. (Cl. 43—17.)

1. In a tip-up, the combination with a plate adapted to rest on the ice and a spring-pressed signal device mounted thereon, of a support having a notch for receiving the signal device, a trigger for releasing the signal device, and a reel carried by said support under water and having means for operating the trigger.

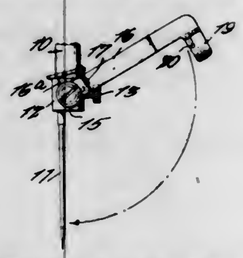
1,803,915. WING CONSTRUCTION FOR AEROPLANES. WILLIAM RAY PARMELE, Portland, Oreg. Filed Dec. 11, 1928. Serial No. 325,205. 5 Claims. (Cl. 244—12.)

1. In a device of the class described, the combination in the wing structure of an aeroplane, of primary ribs.



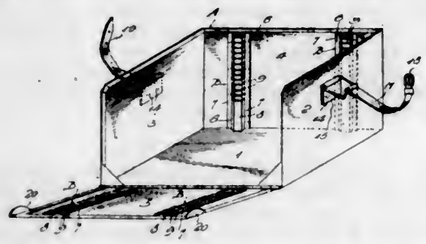
superposed secondary ribs, one end of each secondary rib being hingedly disposed at the leading end of the primary rib and the oppositely disposed end of each secondary rib being slidably disposed relative to the primary rib, said secondary rib being comprised of sectional members hingedly connected, a metallic skin covering for the upper surface of the wing and directly supported by the secondary rib, a strut composed of links hingedly secured together and to the secondary rib elements for raising and lowering the secondary rib and means for manipulating the link strut.

1,803,916. SEAL. MAX PINKERT, Pforzheim, and IMANUEL MÜLLER, Neuenburg, Germany; said Pinkert assignor to said Müller. Filed Apr. 24, 1928, Serial No. 272,428, and in Germany Aug. 10, 1927. 2 Claims. (Cl. 292—320.)



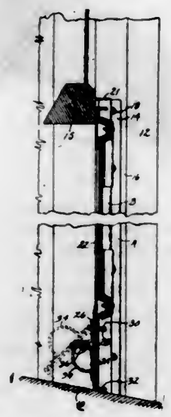
1. A seal comprising a metallic strip having a catch end and a keeper end, adapted for interlocking engagement, the keeper end being provided with a keeper member and a casing substantially enclosing the same, the keeper member comprising two parts, one having an opening and the other a nipple projecting through said opening, and a body of material engaging the member having the opening and extending through the nipple of the other member and interconnecting said members.

1,803,917. AGRICULTURAL IMPLEMENT. JOSEPH C. POWELL, Minden, La. Filed Feb. 24, 1930. Serial No. 430,879. 4 Claims. (Cl. 97—8.)



1. An agricultural implement comprising, in combination, a stock, a body member mounted on said stock for angular adjustment in a substantially horizontal plane, a scraper blade vertically adjustably mounted on the front of said body member, said body member being provided with a rearward extension, and harrow teeth mounted for vertical adjustment on said rearward extension.

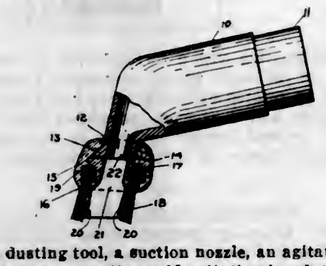
1,803,918. NEEDLE THREADER. JOHN ROZDILSKI, Mayfield, Pa., assignor of one-half to Joseph A. Kiehart, Mayfield, Pa. Filed Nov. 27, 1926, Serial No. 151,077. Renewed Mar. 20, 1931. 3 Claims. (Cl. 112—225.)



1. A needle threader, a mounting adapted to be mounted for oscillation on a needle bar of a sewing machine, said mounting comprising an arm with an angularly disposed and integral extension, a guide member integral with the lower edge of said extension, a guide integral with the upper edge of said extension, one of said guides lying approximately parallel with said extension on one side and the other of said guides lying approximately parallel with the extension on its opposite side, the said extension having slots to form a seat therethrough, a tongue located between the guides and having a thread hook.

1,803,919. FILE CABINET AND SHIPPING CASE. THOMAS HARDIE SEAY, Washington, D. C. Filed Dec. 10, 1928. Serial No. 325,074. 2 Claims. (Cl. 320—1.)

1. A container constituting a combination file cabinet and shipping case, comprising a movable side, a pair of slotted ridge members secured to said movable side, and a pair to the opposite side, a compression plate selectively engageable with certain slots of one pair and with corresponding slots of the pair on the movable member when the same is in closed position, a closure for said container, an auxiliary tag holding receptacle carried by said closure, and means for securing the closure on the container, whereby the container initially serves as a file cabinet and when the contents have been locked against displacement and the closure secured therein, the same constitutes a complete shipping cabinet with an address tag secured therein.

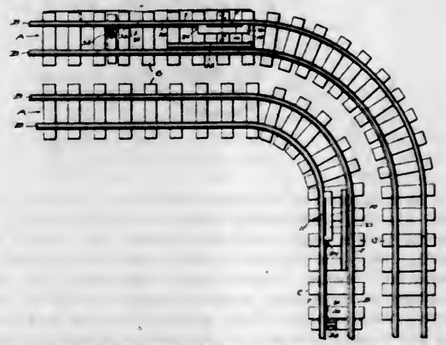


1,803,920. SCREEN CONSTRUCTION. DARIUS E. SHRAUGER, Atlantic, Iowa. Filed Feb. 24, 1930. Serial No. 430,575. 4 Claims. (Cl. 156—14.)

1. In a screen construction for a window having a cross bar, a pair of supporting bars adapted to be secured to the sides of the frame of said window, a screen frame adapted to contact with the inner surfaces of said supporting bars and the outer surface of said cross bar, and thus be confined against both outward and inward movement respectively at its upper end and means to retain it against the supporting bars at its lower end, said screen frame having

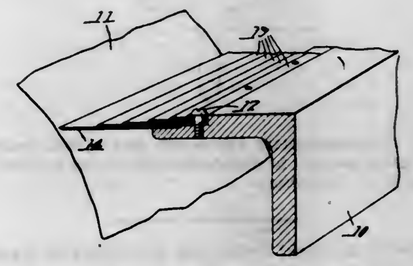
a section thereof movable with respect to the remaining portion thereof whereby it may be shortened to lower it from contact with said cross bar whereby it may thereafter be removed inwardly from contact with said supporting bars.

1,803,921. DUSTING TOOL. DONALD G. SMELLIE, Canton, Ohio, assignor to The Hoover Company, a Corporation of Ohio. Filed Nov. 4, 1927. Serial No. 230,957. 5 Claims. (Cl. 15—158.)



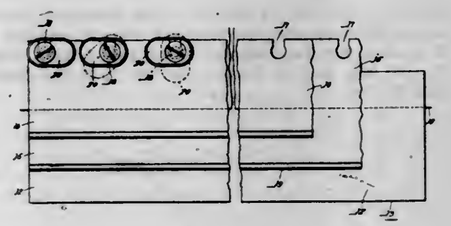
4. In a dusting tool, a suction nozzle, an agitating brush, resilient means connecting said agitating brush to said suction nozzle and means formed integrally with said connecting means to restrict the flow of air into the suction nozzle to the proximity of the point of agitation of the agitating brush.

1,803,922. DRIVING BELT HAVING WEDGE-SHAPED LINKS. CLAUDE O. STREETER, Shrewsbury, Mass., assignor to Graton & Knight Company, Worcester, Mass., a Corporation of Massachusetts. Filed May 18, 1928. Serial No. 278,890. 3 Claims. (Cl. 74—64.)



1. A driving belt comprising substantially unyielding inner links, metal connecting links pivoted thereto, spacing links of a thickness substantially equal to said connecting links located between said inner links, and leather outer links assembled with said inner links, said leather outer links having their outer driving faces formed entirely of the grain face of the leather, and being substantially thinner at one longitudinal edge than at the other, whereby the outer grain face is disposed at a substantial angle to the central longitudinal plane of said belt.

1,803,923. WHEEL AND RAIL LUBRICATOR. ROBERT ALLEN TANNER, Barboursville, W. Va., assignor to The American Valve & Meter Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 6, 1928. Serial No. 259,503. 7 Claims. (Cl. 184—3.)

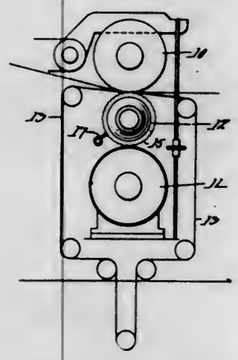


1. In a rail lubricating device, the combination of a flexible rail, of an oil reservoir located adjacent the rail and below the head thereof, an oil distributing bar within the reservoir and normally disposed in a position alongside of the rail head, and means for moving the bar downwardly into the reservoir through the flexing of the rail by the weight of rolling stock passing along said flexible rail.

1,803,924. LAMINATED DOCTOR. JOHN WARREN VEDDER, Worcester, Mass., assignor to Rice, Barton & Fales, Incorporated, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 2, 1928. Serial No. 266,613. 4 Claims. (Cl. 92—74.)

1. A doctor for the purposes described comprising a flexible blade mounted at a distance from its point of contact with the surface which it engages and made up of a series of flexible leaves, each bearing on the one below along a line at a short distance from the edge thereof and parallel therewith to prevent the blade from bending or getting out of position along that line and also prevent enough transverse flexibility to cause the upper edge of the doctor to become spaced from the roll at any point.

1,803,925. FLEXIBLE DOCTOR. JOHN WARREN VEDDER and FREDERICK W. LODDING, Worcester, Mass., assignors to Rice, Barton & Fales, Incorporated, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 28, 1929. Serial No. 335,600. 16 Claims. (Cl. 92—74.)

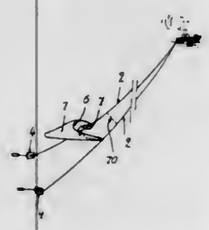


1. A doctor apparatus comprising a support, a flexible blade carried thereby, and means whereby the flexure of the blade can be changed at different places along its length transversely.

1,803,926. PRESS ROLL. JOHN WARREN VEDDER, Worcester, Mass. Filed Oct. 4, 1929. Serial No. 397,342. 1 Claim. (Cl. 92—49.)

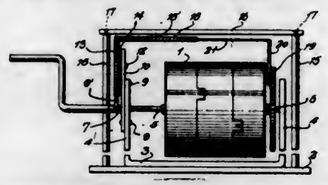
In a press for a paper making machine, the combination of three rolls, a smooth surfaced cylindrical upper roll, a

cylindrical intermediate roll for engagement therewith having surface indentations and a crowned lower roll on



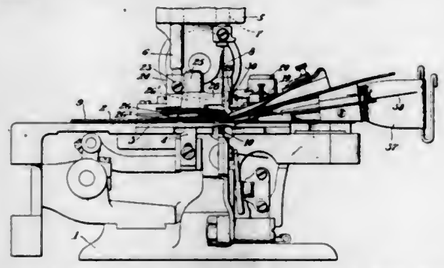
which the intermediate roll bears, said surface indentations being adapted to receive moisture at the top and discharge it at the bottom.

1,803,927. FLEXIBLE DOCTOR OR SCRAPER BLADE. JOHN WARREN VENDER, Worcester, Mass., assignor to Rice, Barton & Fales, Incorporated, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 26, 1930. Serial No. 484,523. 5 Claims. (Cl. 92—74.)



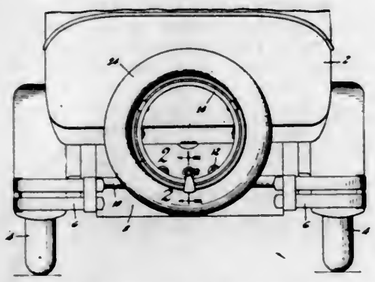
1. The combination of a support, a scraper or doctor blade carried thereby, a spring blade on top of the doctor blade, said spring blade being provided with slots extending backwardly from its front edge to divide the same into sections separately engaging the doctor blade, and an adjusting or tightening device for each section.

1,803,928. TRAWLING GEAR. JEAN BAPTISTE JOSEPH ALPHONSE VIGNERON, La Rochelle, France, assignor to V. D. Ltd., London, England. Filed Feb. 4, 1928, Serial No. 251,954, and in France Apr. 23, 1927. 4 Claims. (Cl. 43—9.)



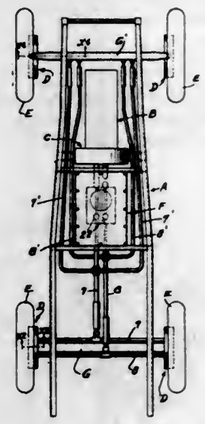
1. A trawling gear comprising two towing hawsers, traction means connected to one end of said hawsers, a net connected to said towing hawsers, and means for spreading the net laterally, so connected with said hawsers as to be situated beyond the attaching point of the net upon said hawsers with respect to said traction means.

1,803,929. OVERWINDING PREVENTER FOR SPRING MOTORS. JOSEPH P. ZAIDAN, Scranton, Pa. Filed Aug. 16, 1930. Serial No. 475,736. 7 Claims. (Cl. 185—43.)



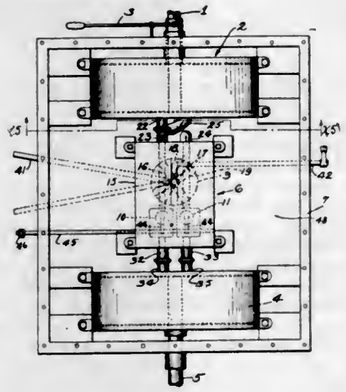
1. In combination with a spring motor, an overwinding preventer for the motor spring comprising, a gear member adapted to be rotated by the winding key, support means for said gear and a member associated with the gear adapted to prevent further rotation of the gear after a predetermined number of turns of the winding key.

1,803,930. PRESSER-DEVICE FOR SEWING MACHINES. RUDOLPH BECKER, North Plainfield, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Apr. 26, 1929. Serial No. 358,187. 8 Claims. (Cl. 112—235.)



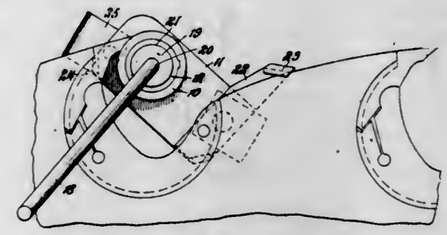
1. In a sewing machine, the combination with stitch-forming mechanism including a reciprocating needle and a feeding device, of a presser-disk having a peripheral edge-portion and an under face and disposed with its under face cooperatively opposed to said feeding device, in rear of said needle.

1,803,931. SPARE TIRE LOCK. LLOYD BLACKMORE, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 24, 1928. Serial No. 314,622. 5 Claims. (Cl. 70—90.)



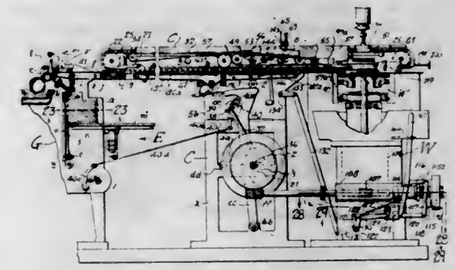
1. In a means for securing a tire and its rim to a vehicle, a frame permanently secured to said vehicle and adapted to removably receive said tire rim, means for securing said rim and said frame together including a headed bolt, means for permanently concealing said head including an operating member placed in end to end relation with said bolt head, means on one of said abutting parts and slidable over the other to cause the turning of the bolt through said operating member, and a lock for throwing the parts to inoperative position.

1,803,932. HYDRAULIC MECHANISM FOR DRIVING MOTOR VEHICLES. GEORGE W. DOOLEY, Ducor, Calif. Filed July 12, 1927. Serial No. 205,236. 1 Claim. (Cl. 180—66.)



In a driving mechanism for vehicles, a tractor wheel, a stator having a hollow spindle and fixed to a shaft; a rotor in the stator and provided with a drive shaft extending through the spindle; a collar fixed on the end of the drive shaft and non-rotatably connecting such drive shaft with the traction wheel; said stator being fixed to the axle and comprising a shell having a shaft co-axial with the drive shaft and journalled in the axle.

1,803,933. HYDRAULIC DRIVING MECHANISM. GEORGE W. DOOLEY, Ducor, Calif. Filed Apr. 16, 1928. Serial No. 270,512. 3 Claims. (Cl. 60—53.)



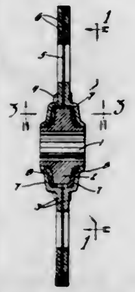
1. The combination with a pump and a motor, of a casing provided with a sump, a reversing valve seat, two poppet valve seats, a passage connecting the pump outlet with the reversing valve seat; a passage connecting the reversing valve seat with the motor through one of the poppet valve seats; a poppet valve to prevent return of fluid from the motor through such poppet valve seat; there being an indirect passage leading from the motor to the sump through the reversing valve seat; a poppet valve in the second poppet valve seat to pass fluid to the sump, means for closing the poppet valves; means to open the poppet valves, respectively, and a reversing valve in the reversing valve seat to pass the fluid alternately at the will of the operator to the motor through one or the other of said poppet valves.

1,803,934. SAW SHARPENER. CHARLES V. EAST, Molson, Wash. Filed Aug. 23, 1927. Serial No. 214,953. 2 Claims. (Cl. 76—37.)

1. A sharpener for circular saws comprising, in combination, an elongated sheet metal plate having a lateral lug adjacent to one end; a band file having a handle journaled in the plate; a hook-shaped member secured to the plate on the end opposite from said lug and adapted to engage the edge of the saw; and a sheet metal, bail-shaped handle secured to the plate on the opposite side from said band file.

1,803,935. CONVEYING SYSTEM. THEODORE A. FEDERWITZ and WALTER T. BAILEY, Philadelphia, Pa., assignors to Stokes and Smith Company, Summerdale, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 1, 1925. Serial No. 40,769. 42 Claims. (Cl. 93—54.)

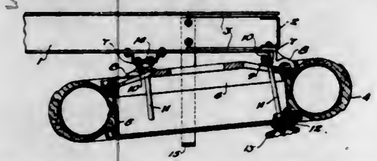
15. A conveyor unit comprising means for conveying sheets in succession, means for conveying box structures in succession, and means common to said conveying means for effecting simultaneous adjustment thereof, whereby box structures and sheets of different dimensions may be conveyed.



16. A conveyor unit comprising belts for conveying boxes in succession, and means for adjusting a belt transversely of the direction of movement of said belts.

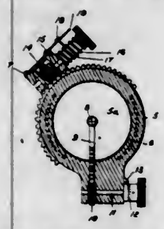
22. In a system for applying wrappers to boxes, the combination with a wrapping machine and a machine spaced therefrom comprising mechanism for removing from a stack and applying adhesive to wrappers in succession, of a conveyer bridging the span between said machines and comprising means for transporting the wrappers from said second named machine to said wrapping machine and means for transporting boxes to said wrapping machine in the same direction as the wrappers.

1,803,936. TREATMENT OF FIBROUS MATERIAL. HANS FRIEDLAENDER, Berlin, Germany. Filed Apr. 9, 1928, Serial No. 268,798, and in Germany May 17, 1927. 16 Claims. (Cl. 92—21.)



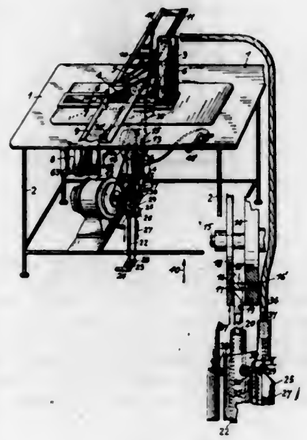
1. The process of producing impregnated artificial fibrous materials, which comprises effecting the precipitation in and on the artificial fibre of hard wax.

1,803,937. CUSHION CONNECTION. AXEL J. JANSSON, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 30, 1929. Serial No. 336,150. 3 Claims. (Cl. 192—68.)



1. In a driven element of a clutch, a disc having frictional driving surfaces at its periphery and a central opening, a pair of plates secured on opposite sides of the disc adjacent said central opening and provided with a series of corelated offset portions providing cups that are closed at outer ends, a hub positioned within said opening in sliding contact with the inner ends of said plates to close the inner ends of the cups and provided with lugs that extend into said cups, and a pair of continuous rings of elastic deformable material interposed between opposite sides of the lugs and said plates and completely incased within said cups.

1,803,938. UNDERSLUNG TIRE CARRIER. VICTOR JANTSCH, Pontiac, Mich., assignor to Yellow Truck & Coach Manufacturing Company, Pontiac, Mich., a Corporation of Maine. Filed Nov. 3, 1927. Serial No. 230,802. 10 Claims. (Cl. 224—29.)

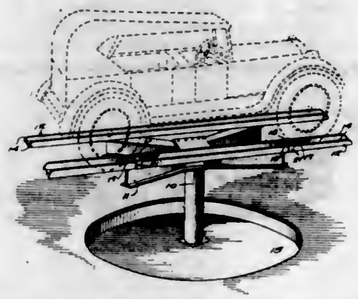


1. The combination with a chassis frame, of tire-carrying means associated therewith, including tire-engaging brackets fixedly secured on the underside of the frame, each being provided with a pair of forked fingers, suspension bolts hung from said brackets, having T-shaped heads engageable with said forked fingers, and tire-engaging lugs adjustably carried by said bolts, upon which the weight of the tire is received and by the adjustment of which the tire is lifted into engagement with said brackets and firmly clamped in carrying position.

1,803,939. ANTIAIRCRAFT SIGHT. JAMES C. KARNES, Buffalo, N. Y. Filed Feb. 26, 1927. Serial No. 171,354. 4 Claims. (Cl. 33—53.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. A sight for guns including a body having a sight opening, a member mounted in the body for movement radially of the sight opening, an aiming point on the inner extremity of the member and disposed within the sight opening, means for moving the member and amount corresponding to the vertical lead to be given a gun and means for rotating the body whereby the member is displaced an amount corresponding to horizontal lead to be given the gun.

1,803,940. PRINTING MACHINE. JOSEPH KRELL, Berlin-Pankow, Germany. Filed Nov. 18, 1926, Serial No. 149,192, and in Germany Dec. 4, 1925. 2 Claims. (Cl. 192—125.)



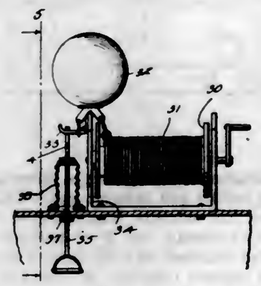
1. In a printing machine, driving mechanism comprising a clutch, automatic means tending to throw in said clutch, manually operated means for throwing out said clutch against the action of said automatic means, a lock for said automatic means, and hand-operated-means comprising a Bowden cable for releasing said lock.

1,803,941. METHOD OF PRODUCING LUBRICATING OILS. ERWIN R. LEDERER, Fort Worth, Tex., assignor to Texas Pacific Coal & Oil Co., Fort Worth, Tex., a Corporation of Texas. Filed Mar. 5, 1929. Serial No. 344,605. 13 Claims. (Cl. 196—19.)

3. The method of producing fully dewaxed 0° F. cold test paraffin base residual lubricating oil from crude oil from which the lighter fractions have been distilled at a temperature approximating the lower range of the boiling temperature of the particular fraction to provide a residuum bright stock of green color and sweet odor, containing amorphous wax and substantially free from crystalline wax, which would interfere with centrifugal separation of the wax and oil, which comprises ageing the residuum oil, treating the same with sulphuric acid at 115 to 125° F., removing the acid sludge, storing the oil to permit settling of the acid sludge, treating the oil with clay at a temperature approximating 420° F., reducing the temperature of the clay and oil to 135° F., diluting the oil with naphtha and filtering to remove the clay further diluting the oil, chilling at a rate approximately 2½° per hr. to about 10° F. and chilling more rapidly to —20 to —40° below zero, centrifuging the wax from the oil, and separating the diluent from the dewaxed oil.

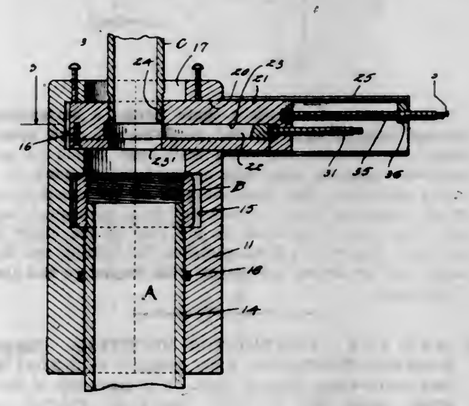
9. The cold dewaxed unblended paraffin base, residual lubricating oil having a viscosity of from 50 seconds at 210° F. to 200 seconds at 210° F. on the Saybolt universal viscosimeter and a cold test of zero to 10° F. and capable of flowing freely at 7 to 10 lbs. absolute pressure at temperatures as low as —30° F., produced from originally residual cylinder stock containing amorphous wax and substantially free from crystalline wax by treatment with sulphuric acid to remove tarry and asphaltic ingredients, treatment with filter clay to remove discoloring material, dilution of the oil with lighter hydrocarbons, chilling to —30° to —40° F., separating the wax from the chilled oil and separating the diluent from the dewaxed oil.

1,803,942. CHOCK. PETER J. LUNATI, Memphis, Tenn. Original application filed June 9, 1925, Serial No. 36,019. Divided and this application filed Feb. 24, 1926. Serial No. 90,399. 5 Claims. (Cl. 188—32.)



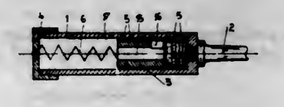
1. A chock for use with a rail having a horizontal base portion and a vertical edge flange, said chock comprising a substantially inverted V-shaped supporting member adapted to slidably receive the edge flange of the rail, and an integral block pivotally connected at one edge to said supporting member, said block having one vertical wall adapted to contact at its lower edge with the base portion of the rail and an inclined wall adapted to contact with a wheel of a vehicle.

1,803,943. PROCESS FOR THE PRODUCTION OF ASH-FREE ADSORBENT CARBON. ELROY J. MILLER, East Lansing, Mich., assignor to Michigan State Board of Agriculture, East Lansing, Mich. Filed Nov. 11, 1927. Serial No. 232,709. 6 Claims. (Cl. 252—3.)



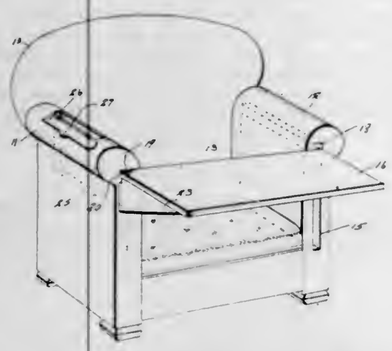
3. The process of purifying commercial grades of activated charcoal comprising admixture with hydrofluoric acid, removing the said acid, boiling with hydrochloric acid, and then removing the last named acid.

1,803,944. LIFE SAVING AND SALVAGE APPARATUS FOR USE WITH SUBMARINES. WILLIAM HUGH MILLS, Attleboro, Mass. Filed Mar. 2, 1929. Serial No. 343,888. 2 Claims. (Cl. 114—16.5.)



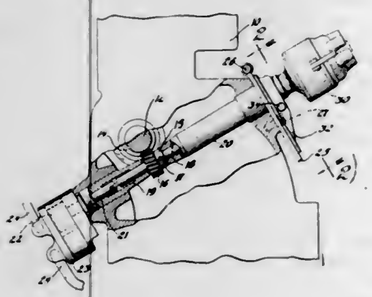
1. Means for indicating the position of a sunken vessel comprising a float, a reel, means for rotatably mounting the reel on the vessel, a flexible member wound about said reel, a V-shaped member secured to said float and removably seating on said mounting means for said reel, means for connecting one side of said V-shaped member to the flexible means, a ring loosely mounted in the opposite side of said V-shaped member, a pivoted arm secured to said mounting means, said arm having an upturned end portion, said arm being adapted to extend through said ring whereby to releasably hold said float on said mounting means, and a vertical movable member engaging the upturned end portion of said arm whereby to normally hold said arm in outstanding position, said movable vertical member extending inwardly of the vessel whereby to permit operation thereof remotely from the float.

1,803,945. WELL CAPPER. HORACE G. RETHERFORD, Vilas, and SAMUEL T. ELMORE, Campo, Colo. Filed Nov. 11, 1930. Serial No. 494,976. 7 Claims. (Cl. 166—15.)



1. An oil well capper comprising a casing formed of two hinged, semi-cylindrical sections, the casing being formed on the interior to receive and clamp upon the coupling on the upper end of a well pipe and have gas-tight engagement therewith, a main valve having a screw-threaded opening therethrough and slidable transversely across the casing to intersect an opening thereof or be withdrawn therefrom, and a second valve mounted on the main valve for movement toward or from a position closing the screw-threaded opening, and means to shift either of said valves independently of the other.

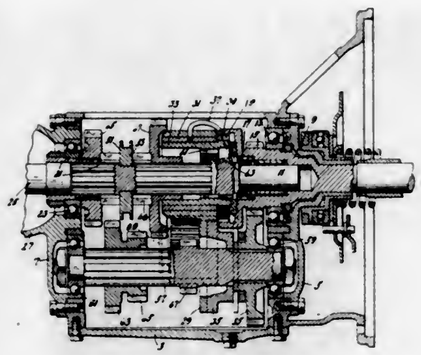
1,803,946. AUTOMATIC FIREARM ACTUATED BY COMPRESSED AIR. BETHEL ABIEL REVELLI, Turin, Italy, assignor, by mesne assignments, to Metallurgica Bresciana Gia Tempini, Fiumegrande, Brescia, Italy, a Company of Italy. Filed Aug. 21, 1929, Serial No. 387,431, and in Italy June 6, 1929. 3 Claims. (Cl. 42—3.)



3. In an automatic firearm, in combination with a barrel, a breech, and an air compression chamber in said breech, of a movable member acting as breech bolt for said barrel and as a piston for said compression chamber, and means for placing said compression chamber in connection with the exterior before said movable member has reached the end of its rearward and forward movement respectively.

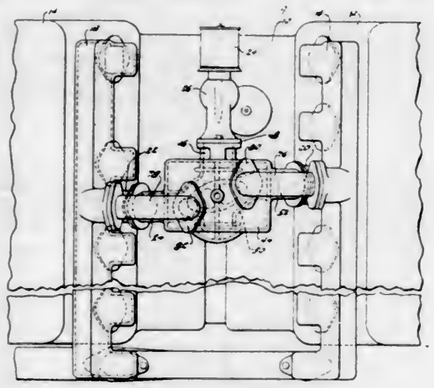
1,803,947. COMBINATION CHAIR AND WRITING DESK. ELSIE MAE RUNKLES and FLOYD BLACKBURN, Detroit, Mich. Filed Sept. 26, 1929. Serial No. 395,311. 5 Claims. (Cl. 155—127.)

3. In combination with a chair having a horizontally disposed compartment in one arm thereof, desk means, means for slidably mounting said desk means in said horizontal opening, said desk means being adapted to be moved outwardly and longitudinally of the opening and swung upwardly and downwardly into horizontal position, stop means mounted in one arm of the chair for said desk means, and locking means for holding the desk means against lateral movement with respect to the arms of the chair.



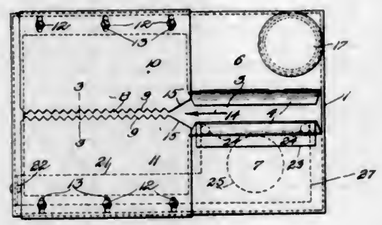
1,803,848. DISTRIBUTOR MOUNTING. HERMAN SCHWARZE, Birmingham, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 7, 1927. Serial No. 231,754. 16 Claims. (Cl. 123—195.)

2. In an internal combustion engine, a distributor housing having an anchoring element fixed thereon in said engine, a distributor shaft within said housing and driven by said engine, a pointer fixed on said housing, means for fixing said anchoring element to said engine, and means for angularly adjusting said housing in said anchoring element.



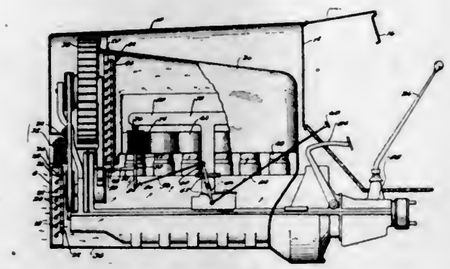
1,803,949. OVERGEAR TRANSMISSION. CLAUDE H. STERLING, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 12, 1927. Serial No. 160,620. 8 Claims. (Cl. 74—58.)

1. In a transmission device, aligned driving and driven shafts, a sleeve within which said driven shaft is slidable and nonrotatably mounted, means to drive said sleeve from said driving shaft, driving means carried by said sleeve whereby the power transmitted to said sleeve from said driving shaft is transmitted from said sleeve, a bearing for said sleeve, a gear ring eccentrically mounted around said shafts, means to drive said gear ring from said driving



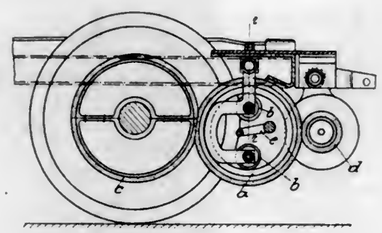
shaft, gearing including an integral driven shaft gear, a gear member on the gear ring for cooperation therewith, and means to reciprocate said driven shaft to move said driven shaft to a position where its external gear is engaged with the cooperating gear on the gear ring.

1,803,950. INTAKE MANIFOLD HEATER. WILLIAM R. STRICKLAND, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Sept. 21, 1927. Serial No. 221,078. 5 Claims. (Cl. 123—122.)



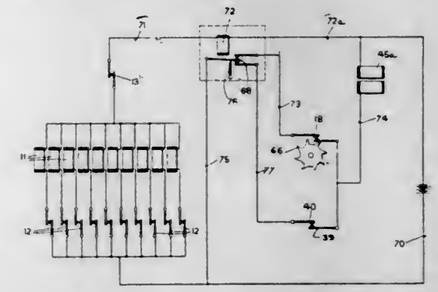
1. In combination with a V-type internal combustion engine having intake and exhaust manifolds, a means for preheating the fuel mixture comprising a heating chamber located well within the V, a horizontal carburetor attached to the chamber and similarly located, a connection from the exhaust manifold of each bank of cylinders attached to said chamber at diagonally opposite points, means for conducting the fuel mixture through the chamber, and means attached to the chamber at diagonally opposite points for leading the fuel mixture to the intake manifold.

1,803,951. SHOE FILLER COATING APPARATUS. ANDREW THOMA, Cambridge, Mass., assignor to North American Chemical Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 24, 1927. Serial No. 228,235. 9 Claims. (Cl. 91—32.)



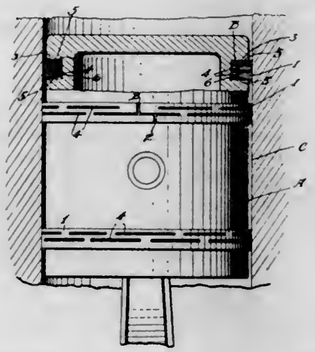
1. The herein described apparatus for treating shoe-bottom filler pieces, comprising a receptacle for holding a sluggishly plastic coating material for application to said pieces, and means for converting the coating into heaped deposits on the piece as the dipped piece is removed from the receptacle.

1,803,952. SHUTTER CONTROL FOR AIR-COOLED ENGINES. GEORGE BURR UPTON, Ithaca, N. Y., and ROLAND V. HUTCHINSON, Lansing, Mich., assignors to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 12, 1928. Serial No. 277,343. 25 Claims. (Cl. 123—174.)



1. In combination with an engine, heat sensitive means for controlling the flow of air to the engine, and means connected with the controlling parts of the engine for controlling the flow of air from the engine.

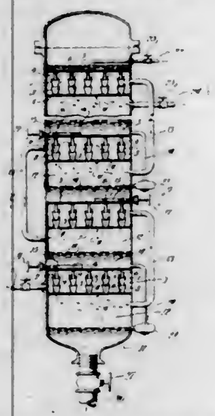
1,803,953. POWER TRANSMITTING FRICTION WHEEL. ROMAN VON KRENSKI, Berlin-Charlottenburg, Germany. Filed May 9, 1927, Serial No. 190,099, and in Germany May 18, 1926. 1 Claim. (Cl. 74—26.)



The combination with the frame of a railway vehicle, an axle thereof and a driving friction wheel fixed on said axle, of a dynamo having a driven friction wheel fixed on its shaft, said dynamo being suspended from the frame of the vehicle, an annular coupling member interposed between said friction wheels and having an elastic tyre in engagement with the driving friction wheel and driven friction wheel for transmitting motion from the former to the latter without shocks, supporting means for said annular coupling member suspended from the frame of the vehicle and having rollers engaging the coupling member so as to enable the coupling member to rotate freely between the friction wheels, said supporting means having a gap capable of allowing other devices not belonging to the friction wheels and their supporting means to be passed through the annular coupling member and a brake actuating member passed through said coupling member and said gap, as and for the purposes set forth.

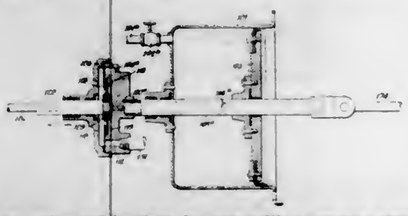
1,803,954. TYPEWRITER CONTROLLED PERFORATING MACHINE. HERMANN ADALBERT WEINLICH, Berlin, Germany, assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed June 2, 1927, Serial No. 195,971, and in Germany Jan. 24, 1927. 11 Claims. (Cl. 164—113.)

1. In a machine of the class described, printing elements, means for perforating a record corresponding to data printed by said printing elements and means controlled by the printing elements for causing actuation of the perforating mechanism only when printing is effected.



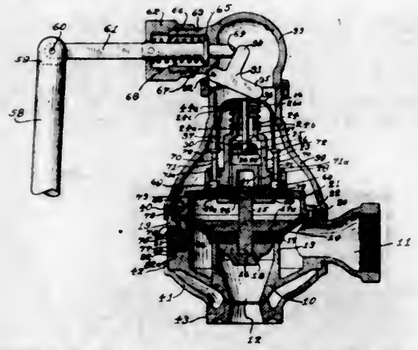
1,803,955. PACKING RING. ALBERT W. WENZEL, St. Cloud, N. J. Filed July 25, 1928. Serial No. 295,197. 9 Claims. (Cl. 74—109.)

1. The combination with a piston having a circumferential groove, of a one-piece metallic split radially and axially resilient packing ring having opposite side surfaces converging toward the inner side of the ring, said ring when axially expanded being of a width intermediate its inner and outer sides greater than the width of said groove, and when radially expanded being of a diameter



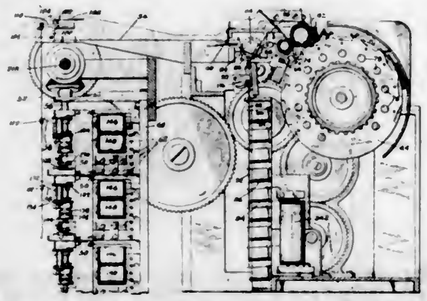
greater than the cylinder, so that when the ring is applied to a piston and inserted in a cylinder axial and radial pressures are developed in the ring sufficient respectively to resist the pressures in the combustion chamber in the cylinder and to overcome the resistance to radial expansion of the ring caused by frictional contact of the side surfaces of the ring with the side walls of said groove, whereby said side surfaces constantly tightly engage both side walls of the groove and the outer surface of the ring is maintained in tight contact with the cylinder walls.

1,803,956. PROCESS AND APPARATUS FOR VAPOR FRACTIONATION. DONALD J. BERGMAN, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Apr. 22, 1927. Serial No. 185,689. 5 Claims. (Cl. 261—113.)



1. A process of vapor dephlegmation, which comprises introducing vapors into a confined zone in a dephlegmating column, jetting cooling liquid downwardly through said zone in a multiplicity of streams with sufficient force that the vapors are entrained therein and passed therewith to a separating zone wherein vapor and liquid separate, withdrawing the vapors from said separating zone and passing same out of contact with the liquid descending through the first mentioned zone and discharging said vapors into a second confined zone above the first mentioned zone where entrainment and subsequent separation again takes place, repeating these operations throughout the height of the dephlegmating column, withdrawing from an upper portion of same those vapors which escape condensation, and withdrawing from a lower portion of same the liquid.

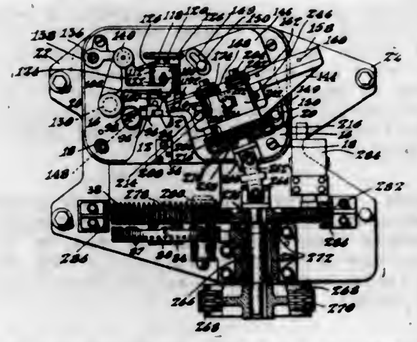
1,803,957. POWER ACTUATOR. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed Nov. 7, 1927. Serial No. 231,724. 21 Claims. (Cl. 121—41.)



1. In valve mechanism for controlling power actuators, the combination with a hollow valve casing provided with means for connecting it with a portion of an actuator between opposed faces of its actuating members, and for independently connecting it with sources of higher and lower pressures, of a diaphragm valve dividing said casing into two chambers, a diaphragm engaging seat in one of said chambers dividing said chamber when the diaphragm valve is seated into two compartments, one of which is in communication with one of said fluid pressure sources, a disc valve in said chamber with said seat and having sealing portions for seating upon the diaphragm and forming a separate chamber between said disc and diaphragm valves, means for placing said separate chamber in communication with the other of said fluid pressure sources, a valve actuating part operatively connected to said disc and diaphragm valves and having cealing engagement therewith, said valves coacting to connect the said portion of the actuator with one or the other of said fluid pressure sources when either of said valves is in unseated position, and to disconnect said portion of the actuator from both of said sources when both valves are seated.

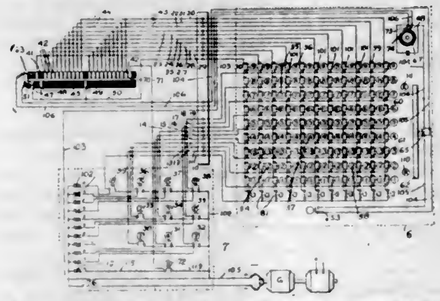
1,803,958. SEAT OPERATED FLUSH VALVE. WILLIAM H. CADWELL and JOHN OTT, New Britain, Conn., assignors to The Beaton & Cadwell Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed Sept. 13, 1926. Serial No. 135,025. 12 Claims. (Cl. 137—93.)

1. In a flush valve, a main chamber having an inlet and an outlet, a control chamber, a by-pass for slowly equalizing the pressure between said chambers after the flush has been operated, a releasing chamber having communication with said control chamber, a normally open release valve located in said releasing chamber and adapted to release fluid therefrom, means for normally shutting off said communication, means for closing said release valve and opening said communication, whereby the flush valve will operate when the release valve is next opened.



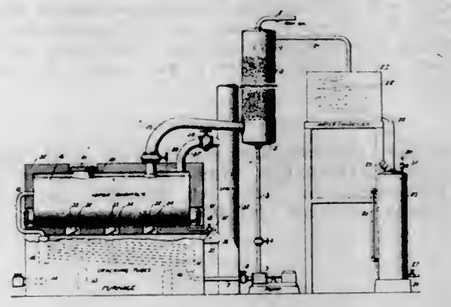
1,803,959. TABULATING MACHINE. FRED M. CARROLL, Yonkers, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Oct. 21, 1925. Serial No. 63,826. 26 Claims. (Cl. 235—58.)

8. In a machine of the class described a supporting frame provided with a plurality of compartments for receiving individual adder units, a common drive shaft located in proximity to said frame, a plurality of driving elements mounted on said shaft each element corresponding in position to the position of one of said compartments, a plurality of removable adder units each comprising an adder element with an individual differential mechanism for operating it and driving means for said differential mechanism adapted to cooperate with a driving element on the common shaft when the unit is placed in one of said compartments.



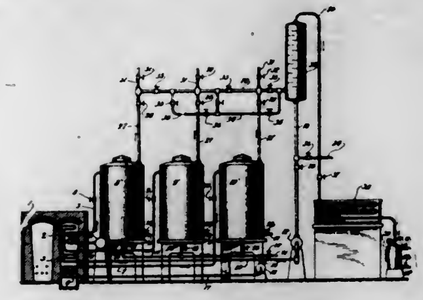
16. An accounting machine comprising a recording device, a plurality of accumulator wheels adapted to be differentially displaced from normal home position to represent data, a plurality of rotating axially shiftable actuators, means for simultaneously shifting said actuators into driving engagement with said wheels to reset the wheels and means actuated according to the differential times at which the wheels reach normal home position on such resetting for controlling the recording device to record the data represented by the differential displacement of the wheels prior to such resetting.

1,803,960. COILING MACHINE. RAYMOND H. CRAMER, Newark, N. J., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 26, 1927. Serial No. 215,638. 21 Claims. (Cl. 153—64.)



1. In a machine of the character described, a winding head comprising a series of conical rolls having one element of each roll parallel to a common center line to form a coiling recess in which a coil is formed and moved endwise, the smaller ends of the conical rolls projecting in the same direction from the winding head, and means for feeding a strip of material into the space between the rolls; substantially as described.

1,803,961. ACCOUNTING MEANS. SHERWIN K. DECKER, GUSTAV ALFRED JOHNSON, JOHN W. DAVIS, and JOHN BRUCE JUNOR, Los Angeles, Calif., assignors to International Business Machines Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 19, 1927. Serial No. 220,372. 9 Claims. (Cl. 101—93.)

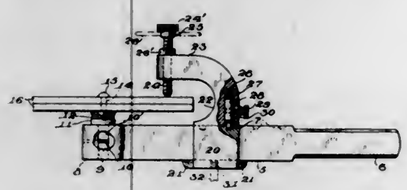


1. In combination a key operated billing machine, a punch including a plurality of series of punches with means for selecting the punches of the several series successively and connections intermediate the billing machine and punch to effect operation of the punch selecting means for the several punch series form the keyboard of the billing machine.

1,803,962. PROCESS FOR CONVERTING HYDROCARBON OILS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 1, 1925. Serial No. 34,132. 1 Claim. (Cl. 196—58.)

A continuous process for cracking hydrocarbon oil, consisting in heating the oil to a cracking temperature in a heating zone, in delivering the highly heated oil to an enlarged vapor chamber, wherein substantial conversion occurs, in maintaining the oil in said vapor chamber at a temperature such that the oil constituents separate into vapors representing at least 80 per cent of the oil charged to the heating zone and a liquid residue by circulating controlled quantities of combustion gases from the heating zone about said vapor chamber, in subjecting such vapors to reflux condensation, in returning the reflux condensate to the heating zone for further treatment, and in maintaining a superatmospheric pressure on the oil undergoing treatment in the process.

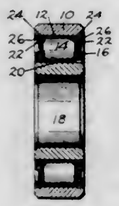
1,803,963. PROCESS OF CRACKING PETROLEUM. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 21, 1925. Serial No. 76,640. 3 Claims. (Cl. 196—49.)



1. A process for cracking hydrocarbon oil, comprising initially subjecting charging oil to given cracking conditions of temperature and pressure, permitting the heated oil to undergo conversion in an enlarged zone, subjecting vapors evolved from the initially treated oil to dephlegmation, whereby a substantial quantity of reflux condensate is formed, separately and independently subjecting oil unvaporized by said initial cracking conditions and the reflux condensate formed as a result of said dephlegmation to further cracking conditions of temperature and pressure,

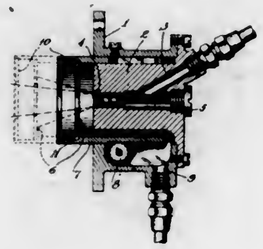
such as will effect further conversion thereof and commingling the vapors released from said unvaporized oil and said reflux condensate as a result of said separate independent treatments with the vapors evolved from the charging oil as a result of said initial treatment.

1,803,964. PROCESS OF DESULPHURIZING CRACKED HYDROCARBONS. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 26, 1926. Serial No. 118,823. 1 Claim. (Cl. 196—27.)



The method of treating dephlegmated cracked hydrocarbon oil vapors as they leave the dephlegmator of an oil cracking apparatus, which consists in subjecting the hot vapors to the action of ozone in the presence of a silent electric discharge.

1,803,965. ADJUSTABLE BUCKING-UP TOOL WITH INTERCHANGEABLE DIES. HARRY N. EVANS, Sr., Philadelphia, Pa. Filed Feb. 28, 1928. Serial No. 257,667. 2 Claims. (Cl. 78—53.5.)



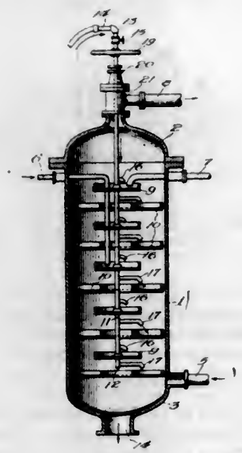
1. A bucking-up tool, comprising a shank, forming a lever and terminating in one direction in a manually engageable portion constituting a lever power arm, a rivet-engageable die supported by the opposite end portion of said shank which constitutes a lever work arm and angularly disposed with respect thereto, a bracket having a gooseneck extension adapted to partially surround and overhang a member being riveted to provide a fulcrum, and spring-pressed means to adjustably secure said bracket longitudinally upon and with respect to said shank, to vary the ratio between the power and work arms of the lever.

1,803,966. ANTIFRICTION BEARING. HAROLD R. GIBBONS, Chatham, N. J., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 13, 1927. Serial No. 183,338. 7 Claims. (Cl. 308—212.)

1. In an antifriction bearing, a race ring having a cylindrical raceway and a continuous cylindrical land, the land and the raceway lying in the surface of the same cylinder whose continuity is interrupted by a groove, a series of rollers running on the raceway, and a continuous flat-sided retaining ring having widely spaced projecting tongues in the groove, the ends of the tongues being arcuate and lying in a circle of the same diameter as the bottom of the groove to fit against it, the ring presenting a flat guiding surface to the ends of the rollers and being applicable to the race ring purely by elastic deformation whereby the guiding surface has inherent tendency to retain its flat form; substantially as described.

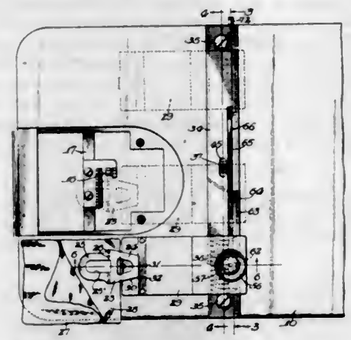
1,803,967. FUEL SPRAYING. JOHN GOOD, Garden City, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Filed Jan. 9, 1925. Serial No. 1,452. 15 Claims. (Cl. 158—73.)

1. Liquid spraying apparatus comprising a unitary head structure having a spray source orifice and a liquid chamber therein, a supply passage leading to the spray orifice and a return passage leading from said chamber, an adjustable member extending into the spray cone to intercept a portion only of the spray and adapted to direct variable amounts of the sprayed liquid into said chamber.



1,803,968. MACHINE FOR PROCESSING FABRIC. GEORGES HEBERLEIN, Wattwil, Switzerland, assignor to Heberlein Patent Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 4, 1926, Serial No. 146,187, and in Germany Aug. 19, 1926. 5 Claims. (Cl. 8—20.)

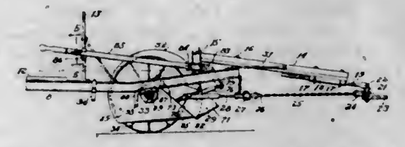
1. In a machine of the character described the combination of means by which a web of fabric to be processed is subjected to a reagent, wringers for removing the excess reagent, a conveyer belt, means for driving the conveyer belt at a slower speed than the web as received, another conveyer for receiving said web from said first mentioned conveyer and means for driving it at a greater speed than the first conveyer so as to have the web deposited thereon in straightened out or flattened condition.



1,803,969. PROCESS FOR CLEANING DEPHLEGMATORS. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Original application filed Oct. 18, 1923, Serial No. 669,251. Divided and this application filed Apr. 13, 1925. Serial No. 22,559. 3 Claims. (Cl. 196—69.)

3. A process for removing solid and semisolid residual-like accumulations from the vertically spaced pans of a dephlegmating column employed in the distillation of the hydrocarbon oil, comprising discharging an independent stream of a cleansing fluid into each separate pan under pressure, causing said streams to contact with

each pan in the dephlegmating column, and withdrawing the cleansing fluid and removed residual deposits from the dephlegmating column.

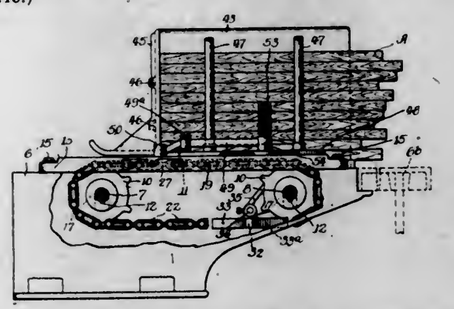


1,803,970. APPARATUS FOR APPLYING TROUSER HOOKS. OWEN KENT, Downers Grove, Ill., assignor to Briede & Rogovsky, a Copartnership consisting of Henry J. Briede and W. P. Rogovsky, Chicago, Ill. Filed Mar. 26, 1928. Serial No. 264,727. 9 Claims. (Cl. 112—104.)

1. In an apparatus of the character set forth, the combination with a sewing machine having the usual feed mechanism, of a carrier having means for receiving and holding a trouser hook provided with holes for receiving stitching, a guide for said carrier, a stop member on the carrier, a stop on the guide for stopping the carrier at a predetermined position, a pawl adapted to engage with teeth on the carrier, and means actuated by the machine for moving the pawl to cause it to engage the teeth and feed the carrier past the needle.

1,803,971. WHEELED SCRAPER. GEORGE C. KEOWN, Rapid City, S. Dak., assignor to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed Nov. 4, 1926. Serial No. 146,120. 14 Claims. (Cl. 37—129.)

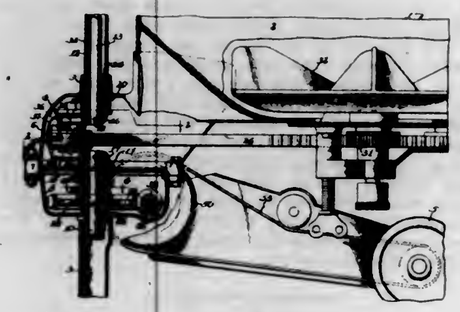
1. A scraper comprising a frame, a bucket mounted on said frame to rock about a transverse axis, an apron pivotally mounted on the frame to swing into and out of operative relation with the front edge of the bucket, and means directly connected with said apron and actuated by the swinging thereof toward loading position to tip the front edge of the bucket downward.



9. In a wheeled scraper, the combination with a frame and a bucket supported thereby to turn about a transverse axis, said bucket having side walls lying within the side members of the frame, and supporting wheels disposed between such side walls and the frame, of pivotal mountings connecting the bucket and wheels with the frame comprising inner and outer spaced coaxial bearing members connected with the side portions of the bucket at opposite sides of each wheel, the outer bearing member being journaled upon the frame, tubular wheel spindles coaxial with and nonrotatably secured to the wheels, the end portions of said spindles being journaled in said bearing members, and shouldered tie-bolts extending through said wheel spindles and connected with said bearing members.

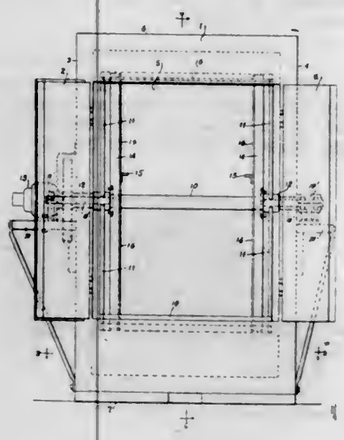
1,803,972. ELECTRIC RADIANT HEATER. LOUIS LEBAU, Pittsburgh, Pa. Filed Jan. 19, 1929. Serial No. 333,684. 2 Claims. (Cl. 219—34.)

1. In an electric radiant heater comprising a casing, a hollow refractory radiant member supported in the casing and having a plurality of resistor-receiving chambers formed by vertically extending partition walls and an open-work front portion, said walls and front portion constituting integral portions of the radiant member, a series of electrically connected resistor units positioned in said chambers to the rear of said front portion, said units each including a relatively thin flexible current-conducting strip having transverse slots to provide a sinuous path for the current.



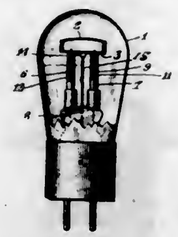
1,803,973. FEED MECHANISM. LOUIS T. MEDHOLDT, Rockford, Ill., assignor to Mattison Machine Works, Rockford, Ill., a Corporation of Illinois. Filed Sept. 21, 1928. Serial No. 307,544. 29 Claims. (Cl. 144—245.)

1. A feed mechanism comprising, in combination, a magazine to receive a stack of articles, feed means including a plurality of members projectable into the lower portion of said magazine into feeding engagement with the side face of the lowermost of said articles,



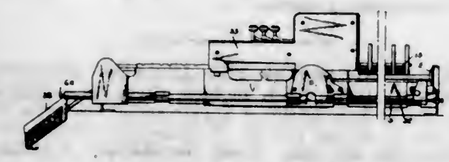
and means engaging said members successively at a predetermined point to project said members into said magazine and into engagement with the side of the article.

1,803,974. DRIVING MEANS FOR WASHING MACHINES. JOHN MIKULASEK, Newton, Iowa, assignor to The Maytag Company, Newton, Iowa, a Corporation of Delaware. Filed Mar. 20, 1929. Serial No. 348,534. 7 Claims. (Cl. 74—14.)



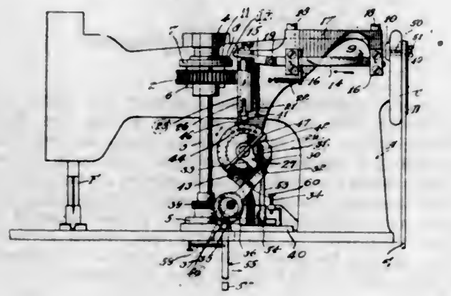
1. In a washing machine, a leg rigid therewith, said leg having chambered parts comprising a multi-piece casting, said pieces being provided with bearings, a one-piece crank having hub portions journalled in the walls of one of said parts, and driving means journalled in the walls of the other of said parts for driving said crank.

1,803,975. BAKING OVEN. IRA M. PETERSIME, Gettysburg, Ohio. Filed Sept. 19, 1927. Serial No. 220,480. 8 Claims. (Cl. 107—55.)



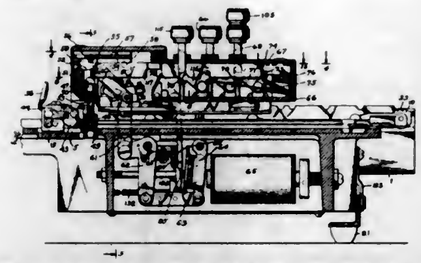
7. In an oven, a supporting track in said oven, a stirrer mounted in said oven for rotation about said track, and a rack adapted to be placed in said oven on said track.

1,803,976. RECTIFIER. EUGENE A. QUARRIE, New York, N. Y., assignor to C. E. Manufacturing Co., Providence, R. I., a Corporation of Rhode Island. Filed June 10, 1927. Serial No. 197,787. 6 Claims. (Cl. 250—27.5.)



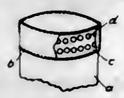
3. In a rectifying tube, a cathode consisting of a cup-shaped element supported by metallic legs and a cap having a frictional fit on said element; and rod-shaped anodes insulated within said metallic legs.

1,803,977. AUTOMATIC CARD EJECTOR. ERICH F. W. RICHTER, Berlin, Germany, assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Feb. 8, 1927, Serial No. 166,626, and in Germany Oct. 16, 1926. 31 Claims. Cl. 271—82.)



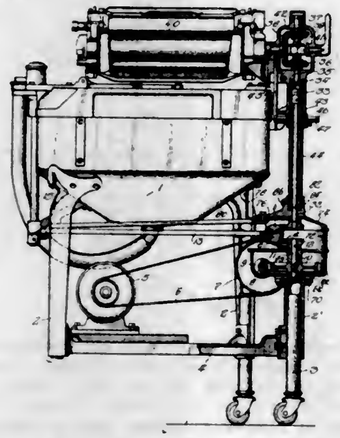
1. In a machine for operating upon records, a record carriage movable in one direction to feed records through the machine and in a reverse direction to receive records for feeding, an ejecting gripping mechanism controlled by said carriage for automatically gripping and ejecting the records from the machine at the completion of a feeding operation and means controlled by said carriage in its reverse movement for settling said ejecting mechanism in readiness for a subsequent ejecting operation.

1,803,978. AUTOMATIC STOP FOR SEWING MACHINES. LEO ROSEMAN, Newark, N. J. Filed Mar. 27, 1928. Serial No. 265,124. 12 Claims. (Cl. 112—219.)



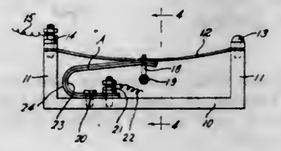
1. The combination with a stitch forming mechanism of means for automatically stopping operation of said mechanism after a predetermined number of stitches have been made, comprising means for counting stitches singly, means for counting stitches by groups each of an equal number of stitches, said means for stopping operation of said stitch-forming mechanism being controlled by co-operation of said two stitch counting means.

1,803,979. KEY PUNCH. JOHN T. SCHAAFF, Washington, D. C., assignor to The Tabulating Machine Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 15, 1925. Serial No. 2,552. 19 Claims. (Cl. 164—112.)



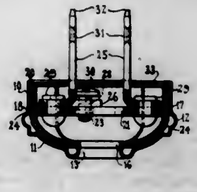
2. In a card perforating machine including perforating elements, a card carriage for carrying the card while it is being operated on by said perforating elements, means for retaining cards in said carriage including a member adapted to project horizontally over the card, and means for automatically withdrawing said member from over the card when the carriage is in a predetermined position.

1,803,980. SOCK. PAUL LINUS SCHÖNFELD, Chemnitz, Germany. Filed Aug. 29, 1925, Serial No. 53,219, and in Great Britain Nov. 6, 1924. 2 Claims. (Cl. 2—240.)



1. A stocking having a hollow hem on the upper end thereof and a rubber ring permanently enclosed within said hem, said ring being provided with unobstructed perforations to prevent alteration of the dimensions of the ring when the stocking is washed and of substantial size sufficient to permit ventilation of that portion of the leg encircled by the ring.

1,803,981. DRIVING MECHANISM FOR WASHING MACHINES AND THE LIKE. HOWARD F. SNYDER, Newton, Iowa, assignor to The Maytag Company, Newton, Iowa, a Corporation of Delaware. Original application filed June 16, 1921, Serial No. 477,888. Divided and this application filed July 9, 1927. Serial No. 204,496. 17 Claims. (Cl. 74—14.)

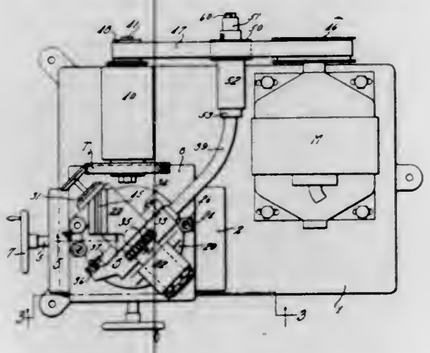


1. In combination with two vertically superimposed shafts disposed with their adjacent ends spaced apart, driving gearing for the lower shaft, a detachable crank connecting the ends of the shafts, a connecting rod pivotally mounted on said crank, an open top casing enclosing the lower shaft and its gearing, an open topped intermediate casing having a horizontally disposed plate closing the top of said first casing and provided with a depending boss acting as a bearing for said lower shaft, said intermediate casing having an upstanding wall enclosing the crank and formed with an opening through which the connecting rod passes, an upper casing closing the open top of the intermediate casing and likewise formed with an opening registering with the opening of the intermediate casing to permit free oscillation of the connecting rod.

1,803,982. THERMOSTAT. ADOLPH A. THOMAS, New York, N. Y. Filed Mar. 26, 1927. Serial No. 178,639. 7 Claims. (Cl. 297—15.)

1. A thermostat comprising a flat U-shaped frame, a buckling spring mounted at its ends on the two limbs of said frame and adapted to change its curvature abruptly by external force, a bimetallic thermostat bar mounted on the base of said frame and arranged to engage said spring substantially at the center thereof so as to exert pressure against the spring in a direction substantially radial to the curvature of the spring, whereby the latter is snapped by said bar at predetermined temperature into a position of reverse curvature, said spring and said bar being mechanically disconnected and mounted to move in the same plane, whereby a flat structure is produced, and connecting means carried by one of said movable parts whereby said bar on cooling becomes automatically coupled to the central portion of said spring and snaps it back to initial position.

1,803,983. PLUG CAP FOR SEPARABLE ATTACHMENT PLUGS. WILLIAM C. TREGONING, Milwaukee, Wis., assignor, by mesne assignments, to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed Sept. 13, 1926. Serial No. 135,096. 10 Claims. (Cl. 173—361.)



1. In an attachment plug cap, the combination with a cup-shaped cap of sheet insulation, of a separately formed contact carrying disk arranged within said cap, said cap and disk having interengaging parts integral therewith to secure them in assembled relation and to secure them against relative rotation.

1,803,984. BENCH TOOL. CHARLES E. VAN NORMAN, Springfield, Mass. Filed Aug. 15, 1927. Serial No. 213,048. 3 Claims. (Cl. 51—105.)

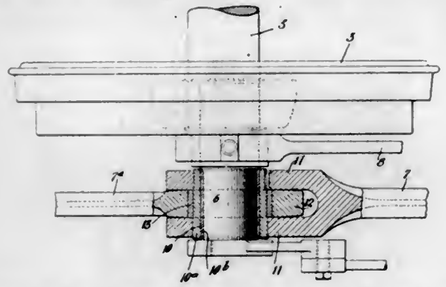
1. A bench tool comprising a rotatable grinding wheel, a work carrying spindle angularly mounted with respect

to the grinding wheel and adapted to hold and rotate a valve with its seating edge in contact with the periphery of the grinding wheel, and a guideway an-

gularly mounted with relation to the work carrying spindle and adapted to receive the shank of the valve and to position it with its end square against the side of the grinding wheel.

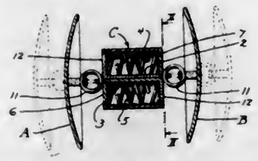
1,803,985. ELECTRODE. WARREN R. WALKER, Great Kills, N. Y., assignor to General Electric Vapor Lamp Company, Hoboken, N. J., a Corporation of New Jersey. Filed July 20, 1925. Serial No. 44,697. 6 Claims. (Cl. 176—126.)

1. In a gaseous discharge device, a nickel plated conductor sealed therein, said conductor being impregnated with hydrogen.



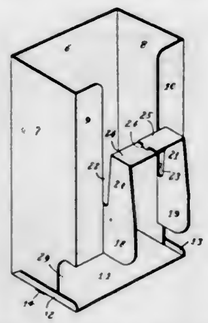
1,803,986. ELECTRIC LIQUID FLOW SWITCH. WARREN R. WALKER, Short Hills, N. J., assignor to General Electric Vapor Lamp Company, Hoboken, N. J., a Corporation of New Jersey. Filed Oct. 18, 1929. Serial No. 400,688. 13 Claims. (Cl. 200—152.)

1. In a mercury switch, mercury, a substance which tends to promote the maintenance of globules of said mercury, and a substance which promotes coalescence of said globules dissolved in said mercury and counteracting the effect of said first named substance.



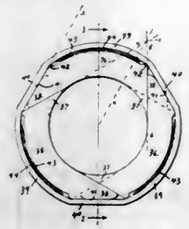
1,803,987. LOCOMOTIVE DRIVING CONNECTION. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed Aug. 27, 1928. Serial No. 302,315. 2 Claims. (Cl. 105—84.)

1. A multi-part main driving rod for locomotive driving wheels, having adjacent parts of solid-headed construction, one head being bifurcated and the other fitting in the bifurcation and each apertured to receive a driving wheel crank pin, a rigid bushing extending through the apertures and pressed into the apertures of the bifurcated head whereby the parts are articulated together as an operative unit for unitary application to and removal from the pin, and an internal anti-friction



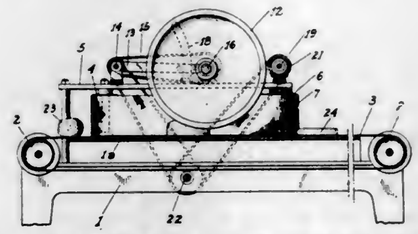
lining in said bushing forming therewith a unified composite sleeve, whereby all the parts may be reduced in diameter and weight for a given rod thrust.

1,803,988. EXPANSIBLE CUFF LINK. JOSEPH E. ALM, San Francisco, Calif. Filed Dec. 16, 1930. Serial No. 502,699. 3 Claims. (Cl. 24—102.)



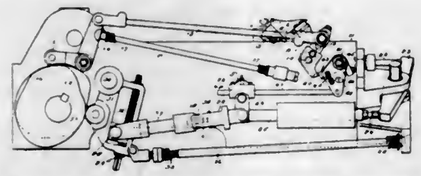
1. In a device of the character described, a pair of cuff buttons, a housing intermediate the buttons, a pair of links insertible in the housing from opposite ends thereof, said links contacting and being guided by each other substantially throughout their length, a head member on each link and at one side, an end plate on each end of the housing, said plates having openings formed thereon to permit entrance of the head members and to form guides for the links, means connecting the links with the buttons and a spring interposed between each link head and the housing end plates, said springs being guided throughout their length by the adjacent links and the housing.

1,803,989. MATCH BOX CONTAINER AND HOLDER. GUST A. ANDERSON, Rockford, Ill. Filed July 28, 1930. Serial No. 471,210. 3 Claims. (Cl. 206—31.)



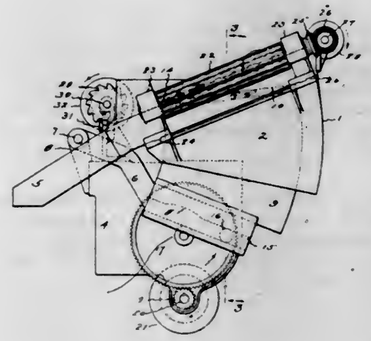
1. The combination in a match box container and holder of side walls, a back wall, and a bottom integral therewith, front panels integral with said side walls, having oppositely spaced inner edges, said walls and panels forming a container to support a vertical row of match boxes upon said bottom, and a holder secured to said panels at right angles thereto to hold a box of matches open for use, the whole constituting a single piece of sheet metal.

1,803,990. METALLIC ROD-PACKING. JOHN BADEKER, Chicago, Ill. Filed Feb. 3, 1930. Serial No. 425,486. 10 Claims. (Cl. 288—3.)



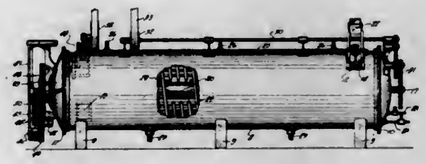
1. In a metallic rod-packing, a pair of adjoining packing-rings each comprising a plurality of segments having parallel side-faces and contacting plane-surface end-faces, the latter extending substantially tangent to the bore of the ring, whereby each segment has a tapered inner end portion and an undercut outer end portion overlapping the tapered inner end of the adjoining segment, and chordal guide-portions on each segment of the rings, said chordal guide-portions of both rings being slidably connected to prevent relative circumferential movement of said rings and to control closing movements of the segments toward the bore of the rings.

1,803,991. PLASTIC MOLDING MACHINE. GEORGE K. BAINBRIDGE, Ripon, Calif. Filed May 12, 1930. Serial No. 451,619. 3 Claims. (Cl. 107—12.)



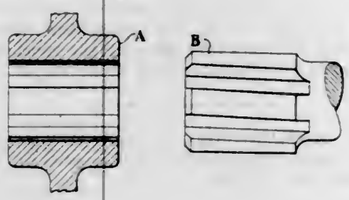
3. In a shaping machine for plastic material having a horizontal movable belt to support and convey lumps of material, and vertical transversely spaced members to engage the lump advancing on the belt and give such lump a predetermined width, a lump flattening disc projecting between said members in spaced relation to the belt, a horizontal arm on one end of which the disc is mounted, a transverse shaft about which the other end of the arm is turnably supported, a fixed bar curved concentric with the shaft and disposed against one side of the arm intermediate its ends, means carried by the arm for clamping engagement with the bar, and drive connections between the shaft and disc.

1,803,992. SAFETY MEANS FOR BLANK FEEDING MECHANISM. THEODORE H. BAUCK, Waterbury, Conn., assignor to The E. J. Manville Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 14, 1930. Serial No. 452,461. 8 Claims. (Cl. 10—23.)



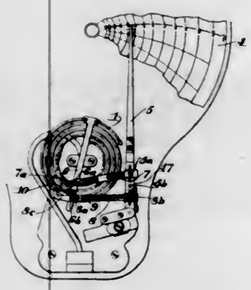
1. Mechanism for operating upon metal blanks comprising a fixed tubular punch adapted to receive the shanks of blanks, a reciprocatory tubular die adapted to operate upon the heads of blanks, means for feeding blanks into line with the punch and die, a pin longitudinally movable within the punch and adapted to eject blanks therefrom, mechanism for reciprocating said pin, said mechanism including fragile means designed to fracture and interrupt the action of the pin should the pin fail to eject a blank from the punch, and mechanism adapted to stop the feed of blanks into line with the punch and die, operated upon the fracture of said fragile means.

1,803,993. HOPPER FEED. CHARLES T. BRENNAN, Waterbury, Conn. Filed Jan. 15, 1930. Serial No. 420,901. 5 Claims. (Cl. 10—167.)



1. A feed for headed blanks comprising a hopper, a fixed inclined track leading from the hopper, mechanism for lifting blanks from the hopper to said track, rotatable means with its axis extending substantially parallel with and at one side of and adjacent to the upper edge of the track for positioning blanks on the track, and mechanism for rotating said means.

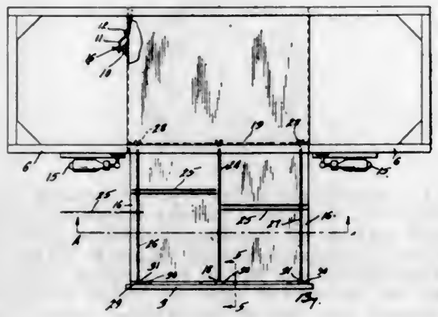
1,803,994. AUTOMATIC COOKER. FRANK D. CHAPMAN, Berlin, Wis. Filed May 5, 1928. Serial No. 275,452. 17 Claims. (Cl. 126—272.)



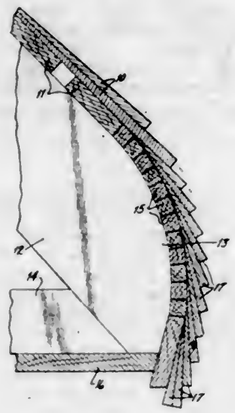
1. An automatic cooker, comprising a drum having an inlet opening and an outlet opening, a carrier within the drum, means for feeding cans of food into the inlet opening to the carrier, means for rotating the carrier in one direction to charge or discharge the cans into or out of the carrier, means for heating the cans carried by the carrier, means for alternately rotating the carrier in opposite directions to agitate the cans carried by the carrier, and means for receiving the cans discharged through the discharge opening of the drum.

1,803,995. SPLINED CONNECTION. ROLAND CHILTON, Ridgewood, N. J., assignor to Wright Aeronautical Corporation, a Corporation of New York. Filed May 15, 1930. Serial No. 452,597. 9 Claims. (Cl. 287—53.)

1. In a splined connection; a driven member; a driving member; one said member having formed therein a groove, the side walls of which are substantially parallel and a spline on the other said member adapted for fitting engagement within said groove, said spline having substantially parallel side walls which are not, however, in parallelism with the side walls of said groove.



1,803,996. PRESSURE RESPONSIVE INSTRUMENT. ALBERT E. CLAWSON, Bryn Mawr, Pa., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed July 26, 1928. Serial No. 295,365. 3 Claims. (Cl. 74—5.)

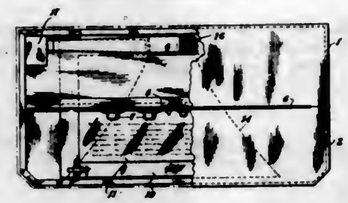


1. In instruments of the character described, the combination with a driving element including an arm having angular motion, a driven element pivotally supported near one end, of two links pivotally connected to said arm and the driven element, said arms being of such relative length and so disposed relatively to the arm and the driven element as to transmit motion at different rates, means on the arm, the links and the driven element for causing one link to transmit motion during one part of the range of motion of the driving element and for causing the other link to transmit motion during another part of the range of motion of the driving element and means for changing the effective length of one link relatively to the other link.

1,803,997. FILING DEVICE. JOSEPH T. CONWAY, Cleveland, Ohio. Filed Mar. 5, 1929. Serial No. 344,448. 7 Claims. (Cl. 40—67.)

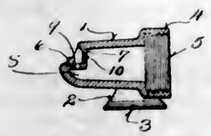
1. A device of the character described including a card container having an open top and a card retaining rod extending longitudinally of the container near one of the sides thereof, in combination with a series of filing cards, each comprising a main body portion and having an opening through which the retaining rod extends, said cards being capable of being independently turned approximately 180° about the axis of the rod to offset the same beyond the side of the container in a substantially horizontal position with respect to the other cards of the series.

1,803,998. ROOFING. WILLIAM N. CRAMER, Chicago, Ill. Filed May 31, 1930. Serial No. 458,207. 4 Claims. (Cl. 108—8.)



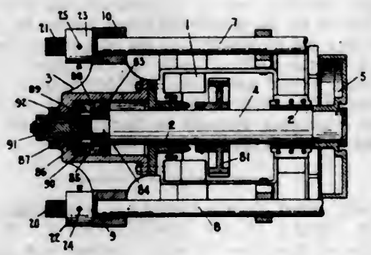
1. In combination, a shingled roof simulating the effect of thatch, a frame work at the edge thereof defining a roll and relatively short stout shingles applied to the roll with a small portion of the butt end exposed to simulate the stubble effect of thatch.

1,803,999. CLAY PRODUCT, CERAMIC COMPOSITION, AND ASSOCIATED PROCESSES. THOMAS S. CURTIS, Huntington Park, Calif., assignor to The Vitrefrax Company, Los Angeles, Calif., a Corporation. Filed June 22, 1926. Serial No. 117,869. 19 Claims. (Cl. 106—11.)



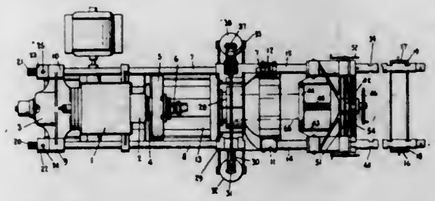
2. A ceramic composition for strengthening clay products which comprises a mineral product of fibrous crystalline structure obtained by heating treating a fibrous aluminum silicate mineral to a temperature of from approximately 1700° F. to approximately 1800° F.

1,804,000. RADIOCABINET. CHARLES H. DERBY, Alliance, Ohio. Filed July 18, 1925. Serial No. 44,546. 1 Claim. (Cl. 250—14.)



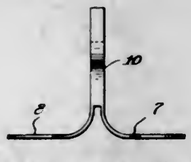
A radio cabinet comprising a box arranged to house a receiving set in its rear portion, and a slidable shelf in the lower portion of the box, having a glass panel and a log chart located beneath said panel.

1,804,001. SPRINKLER. GUY E. W. ECK, Manitowoc, Wis. Filed Aug. 9, 1926. Serial No. 128,054. 1 Claim. (Cl. 299—75.)



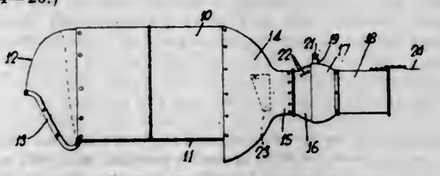
A sprinkler comprising a hollow body portion having a vertical and horizontal front wall adjoining each other, located within the body portion, and closing the front end of the body portion, said body portion having a rear portion adapted for attachment to a hose, and having an aperture through its horizontal wall and an aperture through its vertical wall positioned so that streams of water are projected outwardly from such walls and direct each other to form a diffused spray, an arcuate flange adjacent the aperture in the vertical wall and projecting forwardly therefrom over a portion of the aperture in the horizontal wall to prevent rearward discharge of the spray, and a pair of outwardly and downwardly extending legs integral with the body portion and terminating in bearing feet.

1,804,002. MACHINE FOR FLANGING PIPES. FRED C. FANTZ, Webster Groves, Mo., assignor to Midwest Piping & Supply Co. Inc., St. Louis, Mo., a Corporation of Missouri. Filed Aug. 13, 1930. Serial No. 474,920. 8 Claims. (Cl. 78—14.)



1. In combination with a machine for flanging pipes having a headstock carrying tie rods, a die clamp, a tail stock slidable on said rods, and having quick engaging means thereon to engage slots formed in the tie rods, of a cylinder in said head stock, a spindle, a stem on said spindle a non-rotating, reciprocating block in said cylinder secured to said spindle, a thrust collar on said stem transmitting the thrust from the spindle to said block, antifriction means in said block to hold said stem central in said cylinder for rotation in said block, a non-rotating piston secured to said block, packing means intermediate said piston and the wall of the cylinder, means to introduce hydraulic fluid into said cylinder, there being ports or passages of reduced area to carry the hydraulic fluid intermediate the non-rotating block and the thrust collar.

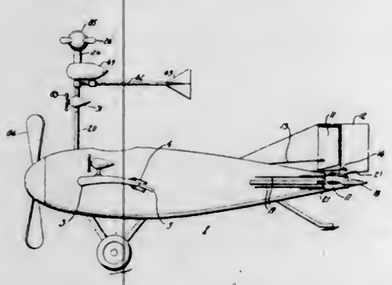
1,804,003. TAILSTOCK FOR MACHINES FOR FLANGING PIPES. FRED C. FANTZ, Webster Groves, Mo., assignor to Midwest Piping & Supply Co. Inc., St. Louis, Mo., a Corporation of Missouri. Filed Aug. 13, 1930. Serial No. 474,921. 9 Claims. (Cl. 78—14.)



7. In a machine of the type described, a headstock, tension rods, supports on the head of the machine through which said rods pass, a tailstock slidable upon said tension rods, manually operable means to move said tailstock along said rods, quick operating means secured to said tailstock to detachably engage a predetermined pair of slots formed in said tension rods, to positively hold said tailstock against movement after adjustment by said manual means.

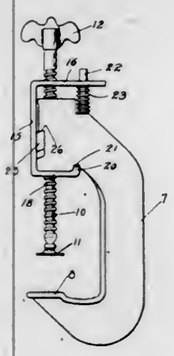
1,804,004. METHOD OF FABRICATING STRIKERS. JOHN B. FLYNN, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed July 20, 1929. Serial No. 379,682. 5 Claims. (Cl. 29—148.)

1. The method of fabricating a striker for a refrigerator latch, or the like, which comprises forming a metallic bar into a predetermined shape, removing a section from such bar, removing a portion of said section to form an opening therein, and then turning the metal adjacent the opening to form a base for the striker.



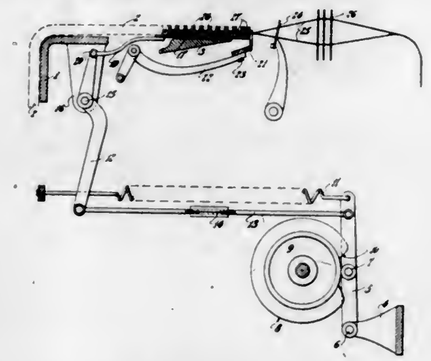
1,804,005. HAIR-DRYING HOOD. ERNEST O. FREDERICS, New York, N. Y., assignor to E. Frederics, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 13, 1929. Serial No. 385,532. 5 Claims. (Cl. 34—26.)

1. A hair-drying hood, comprising a longitudinally extended inverted trough-like member having at its rear



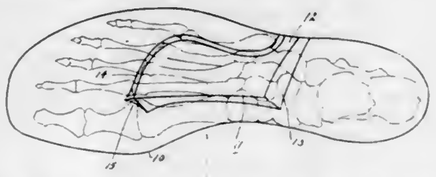
end means to introduce a gaseous drying medium in a generally longitudinal direction, and having at its forward end a rim adapted to fit against the forehead and sides of the head of a subject, said trough-like member providing a space above and at the side of the subject's head to permit gases projected at its rear end to dry the subject's hair, and providing an outlet space at the rear of the subject's neck.

1,804,006. AUTOMATIC AIRPLANE CONTROL MECHANISM. FRAZER W. GAY, Newark, N. J. Filed Mar. 17, 1930. Serial No. 436,334. 5 Claims. (Cl. 244—29.)



1. In an airplane having a rudder, a motor and connected transmission means for operating said rudder, propeller driven generators mounted on the wings of said airplane, the generator of one wing being connected in opposition to the generator of the opposite wing, said generators being connected to said motor, whereby the differential energy output of said generators serves to operate said motor.

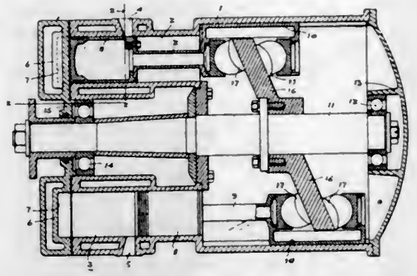
1,804,007. CLAMP. JOHN GOLNICK, Detroit, Mich. Filed Dec. 10, 1930. Serial No. 501,353. 2 Claims. (Cl. 144—305.)



1. A clamp, comprising: a main body portion; a stationary jaw mounted thereon, said main body portion having a bore formed therein at the end opposite said jaw and provided with an opening communicating with said bore, said opening having a beveled edge at one side; a screw threaded into said bore; a substantially U-shaped frame having its bight extended parallel to the longitudinal axis of said screw and each of its legs being provided with an opening for accommodating said screw, one of said legs being angularly turned at its end and adapted for engagement in a groove formed in said main body portion; a half nut mounted on the bight of said U-shaped member adapted for engagement, when in operative position, with said screw, and for disengagement therefrom upon the disengagement of said angularly turned portion of said leg from said groove, said half nut having a beveled surface adapted for engagement with the beveled edge of said opening; and resilient means for normally retaining said half nut in engagement with said screw.

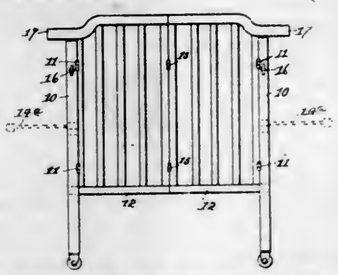
1,804,008. RUG OR CARPET WEAVING LOOM. WILLIAM B. GREAVES and WILLIAM M. STEVENSON, Springfield, Mass. Filed Dec. 2, 1929. Serial No. 410,982. 3 Claims. (Cl. 139—2.)

1. In a machine of the kind described, a press plate, a comb member, a slidable plate mounted on the press plate and extending beyond the outer end of the press plate, when operated, for supporting and engaging the tuft threads of a rug and for effecting a tight draw of tuft threads around the weft threads, when the comb is elevated.



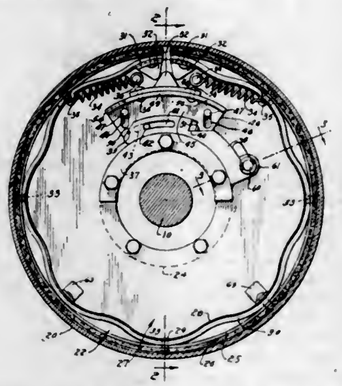
1,804,009. COMBINED INSOLE AND ARCH SUPPORT. OTTO GREGAREK, Philadelphia, Pa. Filed June 14, 1929. Serial No. 370,773. 2 Claims. (Cl. 36—71.)

1. As an article of manufacture, an insole having an arch support formed thereon and projecting from one face thereof and fashioned to provide a major portion extending longitudinally of the insole to support the longitudinal arch extending from the posterior arch to the anterior arch with the forward end projecting between the great and second toes and extending toward the exterior edge of the device as a support for the metatarsal bones, having an extension at the rear end terminating at the edge of the insole as a support for the posterior arch, and the edges of the support being skived outwardly and downwardly from the top face of the support to the top face of the insole to provide a gradual decrease in thickness of the support from its surface to the surface of the insole.



1,804,010. TWO CYCLE INTERNAL COMBUSTION ENGINE SWASH PLATE CONSTRUCTION. HERALD B. GREENING, Hamilton, Ontario, Canada, and JAMES W. GALLOWAY, Detroit, Mich., assignors to Galloway Engineering Company, Limited, Hamilton, Ontario, Canada. Filed Jan. 14, 1929. Serial No. 332,385. 1 Claim. (Cl. 123—53.)

An internal combustion engine, comprising a casing having a plurality of pairs of cylinders extending from the end thereof parallel with the axis of the casing, the cylinders of each of said pairs being connected by a common combustion head, one cylinder of each pair having an intake port and the other cylinder of each having an exhaust port, a shaft axially mounted in said casing, a

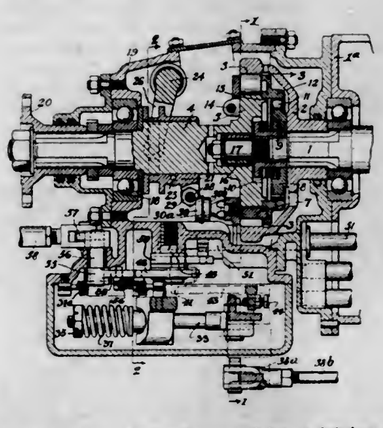


swash plate rigidly secured to said shaft, pistons operating in said cylinders, and cross-heads slidably arranged in said casing and connected with said pistons and operatively engaging the angled surfaces of said swash plate.

1,804,011. COLLAPSIBLE BED. HANS GUBBEL, Philadelphia, Pa. Filed May 23, 1929. Serial No. 365,258. 1 Claim. (Cl. 5—99.)

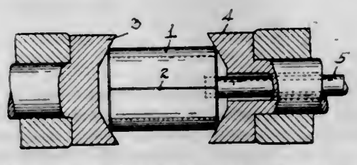
In a bedstead of the character described, two pairs of posts, two side frames, each of the latter connecting one pair of posts, sectional end frames, each section being hinged to one of the posts, the inner ends of each pair of end frames being hinged together and an extension formed with each section of the end frames, said extension projecting over the upper ends of the posts for contact therewith to increase the rigidity of the bedstead when in its open adjustment.

1,804,012. SELF ADJUSTING BRAKE. FRANK HUNYADY, Chicago, Ill. Filed Feb. 25, 1928. Serial No. 256,892. 20 Claims. (Cl. 188—78.)



1. A brake comprising a brake-drum, a brake-band internally engaged therewith, an undulated continuous member co-acting throughout its length with said brake-band, and means including rotatably and radially movable elements for operating said member to cause the band to frictionally engage the drum.

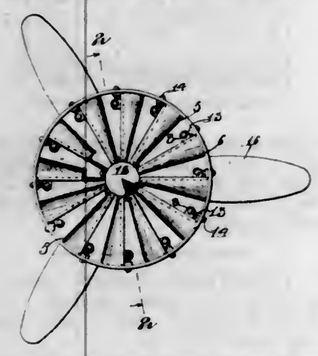
1,804,013. ATTACHMENT FOR LICENSE PLATES. JACOB R. JONES, Indianapolis, Ind. Filed Aug. 23, 1930. Serial No. 477,244. 2 Claims. (Cl. 40—125.)



1. The combination with a license plate having numerals thereon, of a hollow frame adapted to be attached to said plate, and an extension at one inner corner of said frame having one or more numerals thereon adapted to cover numerals on said plate.

1,804,014. FREE-WHEEL CLUTCH. FELIX ALEXANDER JOSEPH, Hampstead, London, England. Filed Sept. 1, 1928, Serial No. 303,561, and in Great Britain Oct. 3, 1927. 10 Claims. (Cl. 192—48.)

1. A uni-directional clutch comprising a driving member, a driven member, at least one main wedging member and at least one auxiliary wedging member for assisting the main wedging member to be carried into wedging position, the said auxiliary wedging member being adapted to wedge in one direction of rotation and to be free in the other direction of rotation.

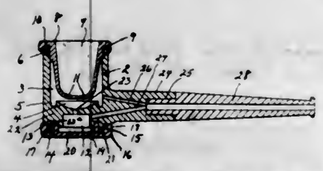


1,804,015. METHOD OF MAKING BEARINGS. WILLIAM H. KLOCKE, Woodhaven, N. Y., assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 28, 1928. Serial No. 328,965. 2 Claims. (Cl. 22—65.)

1. In a method of making lined bearings, the steps which consist in forming two semicylindrical shells,

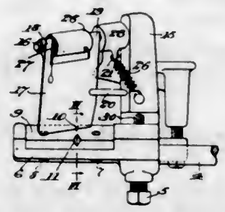
assembling the same into a cylinder with intermediate elements engaged between the adjacent ends of said half shells and snugly clamped therebetween, rotating the assembled cylinder while maintaining a pressure across the adjacent ends of the half cylinders and introducing molten bearing metal into the interior of said shell.

1,804,016. PROPELLER. JOSEPH KOENIG, Manitowoc, Wis.; Remus Koenig and Ruby K. Ellis administrators of said Joseph Koenig, deceased. Filed June 12, 1929. Serial No. 370,273. 3 Claims. (Cl. 170—176.)



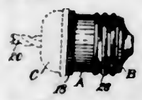
1. A propeller of the class described including a central hollow shaft, a disc at one end of the shaft, radial blades connected to the shaft, means connecting the blades to the disc, a band encircling the blades and connected to their outer edges, said band extending inwardly from the outer ends toward the disc and tapering curved portions formed at the outer ends of said blades.

1,804,017. MERCURY SWITCH. ROY D. MAILEY, East Orange, N. J., assignor to General Electric Vapor Lamp Company, Hoboken, N. J., a Corporation of New Jersey. Filed May 1, 1926. Serial No. 105,935. 3 Claims. (Cl. 200—152.)



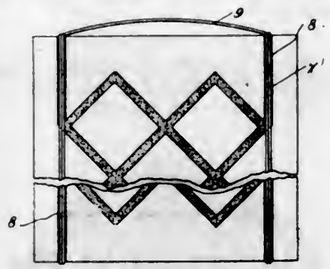
1. A mercury switch comprising a longitudinal tubular envelope, a plurality of cups formed in the envelope wall and arranged transversely of the length thereof, electrodes extending into said cups, mercury in said envelope, and a septum between said cups.

1,804,018. TOBACCO PIPE. PASQUALE MANCUSI, New York, N. Y., assignor to Pursmoke Pipe Company, Inc., New York, N. Y., a Company of Delaware. Filed Sept. 25, 1929. Serial No. 395,039. 3 Claims. (Cl. 131—12.)



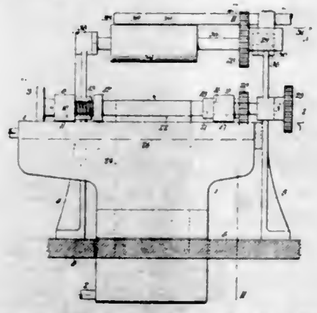
1. A tobacco pipe including a bowl recessed at the upper and lower ends, a partition between said recesses in which is formed a large central cavity, a groove surrounding the cavity and an aperture to provide communications between said cavity and the lower recess, a closure for the lower recess, a tobacco bowl removably mounted in the upper recess and a stem carried by said bowl and provided with two ducts leading from a common point to each of the recesses.

1,804,019. SLUB CATCHER. JOHN O. MCKEAN, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed June 13, 1930. Serial No. 460,910. 26 Claims. (Cl. 28—64.)



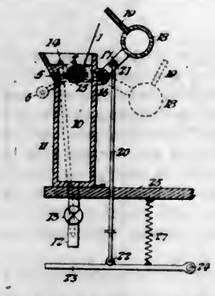
1. In a slub catcher, a yarn plate, and a slub engaging member disposed diagonally across the plate in a plane oblique to the plane of yarn travel.

1,804,020. ELECTRIC ATTACHMENT PLUG. BENJAMIN P. MCKINLEY, Bridgeport, Conn., assignor to The Bryant Electric Company, a Corporation of Connecticut. Filed May 19, 1927. Serial No. 192,507. 10 Claims. (Cl. 173—348.)



10. An attachment plug part comprising a cup member of molded insulator material having a hub integral therewith fixed centrally within and extending axially from the end wall of said cup member, a contact member molded in and extended axially from said hub, and openings through said end wall at diametrically opposite sides of said hub.

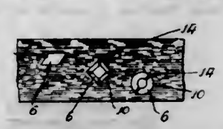
1,804,021. PROCESS OF REPRODUCING DESIGNS IN METAL. FREDERICK WILLIAM MILLER, Hockley Heath, England. Filed Mar. 29, 1930, Serial No. 440,155, and in Great Britain Apr. 9, 1929. 3 Claims. (Cl. 41—25.)



1. A method of reproducing designs in metal consisting in exposing behind a transparency of the design a photographic plate coated with a soluble light-sensitized medium which permits of a powdered electric conducting medium adhering only to the unexposed portion, applying to the undeveloped coating a powdered electric conducting medium so as to adhere only to the nonexposed portions, covering the adhering conducting medium with a film of a substance not readily soluble in water and to which the said conducting medium will adhere, washing away the whole of the original sensitized coating leaving only the conducting medium supported upon the covering film in the form of the design to be reproduced, and depositing metal upon the said conducting medium by electro-deposition.

1,804,022. MEANS FOR MAKING TUBES OF CELLULOID AND THE LIKE. SAMUEL A. NEIDICH, Edgewater Park, N. J. Filed Jan. 3, 1929. Serial No. 330,128. 7 Claims. (Cl. 18—3.)

1. Means for making tubes of celluloid and the like from primarily plane sheets of such material, comprising a rotary head stock having means to rotatably engage one end of a mandrel; a rotary tail stock having means to engage the opposite end of said mandrel; said tail stock being spring pressed toward said head stock to maintain a mandrel between them; but said tail stock being capable of axial movement away from said head stock to release said mandrel; a pressure roller mounted to rotate in parallel relation with the common axis of said head and tail stocks; means arranged to support said head and tail stocks, in such relation, including a pair of arms having bearings and rigidly connected with a rock shaft; whereby the axis of said stocks may be swung toward and away from said roller; means arranged to moisten the surface of said pressure roller with the minimum quantity of a suitable solvent of celluloid or the like, sufficient to prevent adherence of said pressure roller to any such sheet being pressed against it, including a perforated pipe extending parallel with the axis of said roller above the latter.

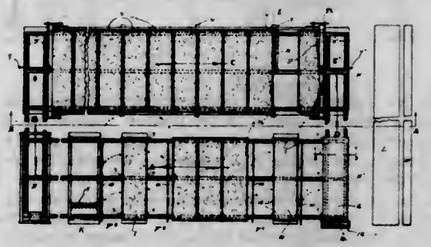


1,804,023. MEANS FOR MAKING TUBES OF CELLULOID AND THE LIKE. SAMUEL A. NEIDICH, Edgewater Park, N. J. Filed Jan. 18, 1929. Serial No. 333,354. 5 Claims. (Cl. 18—3.)

1. Means for forming tubes of celluloid and the like; including a mandrel holder for such material; a bath of solvent of such material, beneath said holder; and means arranged to alternately raise and lower the level of said bath, and thereby alternately submerge and emerge said holder.

1,804,024. METAL PRINTING ROLLER AND PRINTING PLATE. HERBERT BEVAN NICOLAS, Chorltonville, Manchester, and THOMAS ROBINSON FOTHERGILL, Rossendale, England. Filed May 12, 1927, Serial No. 190,961, and in Great Britain May 26, 1926. 1 Claim. (Cl. 41—43.)

The process of producing patterns on metal surfaces for multiple reproduction, which consists in varnishing the surface to be treated, forming lines in the varnish thereby to expose the metal, and subjecting said surface to repeated applications of a stencil of the design in reverse, treating the exposed parts at each application of the



stencil with a medium resistant to etching and on removal of the stencil applying an etching medium to the surfaces previously covered by the stencil, thereby to produce gradations and variations in the depth of etching.

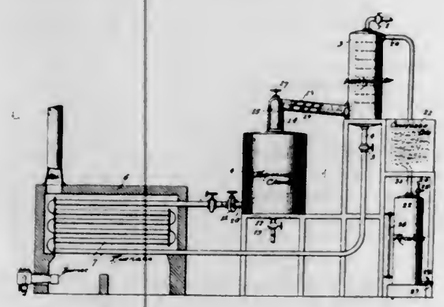
1,804,025. REMOTE MECHANICAL BRAKE CONTROL FOR TRAILERS. CHARLES H. NORTH, San Francisco, Calif. Filed June 27, 1927. Serial No. 201,736. 4 Claims. (Cl. 188—3.)

3. The combination with a tractor and a trailer of brake mechanism for the trailer, said brake mechanism including brake setting means constantly tending to set the trailer brakes, said brake setting means comprising a transverse shaft extending across the trailer and having an operating arm and provided with arms connected with the trailer brakes, a rod slidably mounted on the trailer and connected with said operating arm, and a spring for urging the rod in one direction to apply the trailer brakes, a manually operable lever mounted on the trailer and connected with a slidable rod for manually releasing the trailer brakes, and means mounted on the tractor for operating the trailer brakes.

1,804,026. CANDY HANDLING SYSTEM. ANDREW OLSEN, Jr., and JAMES A. OLSEN, San Francisco, Calif., assignors to Golden Nuggett Sweets, San Francisco, Calif., a Firm. Filed July 11, 1928. Serial No. 291,896. 6 Claims. (Cl. 107—4.)

6. In apparatus for handling candy in the manufacture thereof, a horizontally extending runway, candy slab boards movable along the runway, a paper supply roll at one end of the runway positioned for drawing across the boards in succession, and a candy slab cutter extending across the runway above the boards adapted for cutting candy slabs on the boards.

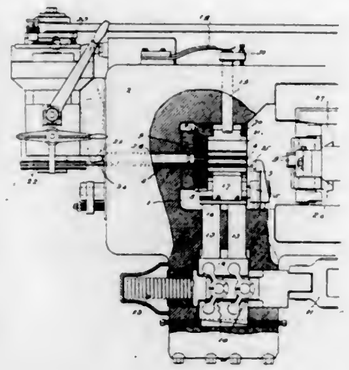
1,804,027. LINK MAT AND BORDER. MARTIN H. O'TOOLE, Everett, Mass., assignor to Boston Rubber Mat Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 11, 1926. Serial No. 253,707. 1 Claim. (Cl. 15—239.)



A mat consisting of links and connecting pintles, and a border extending continuously along one edge of the

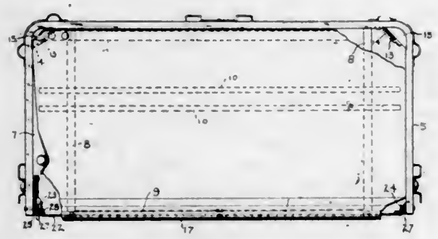
mat beside the endmost course of links, said pintles extending at one end beyond said endmost course of links and being bent to form hooks on their protruding ends, the border having a longitudinal passage between its top and bottom faces and branch openings in such passage ex-

tending through the face of the border adjacent to the link structure and in alinement with the several pintles, the pintles extending from the outermost course of links through said branch openings and having bent ends located in said passage.



1,804,028. APPARATUS FOR CRACKING OILS. ROBERT T. POLLOCK, New York, N. Y., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Mar. 14, 1921, Serial No. 452,096. Renewed Feb. 5, 1927. 2 Claims. (Cl. 196—136.)

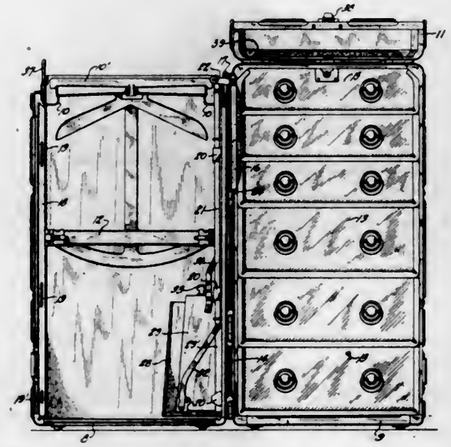
1. An apparatus for cracking oil, comprising a conversion chamber and a dephlegmator, connecting means between the conversion chamber and the dephlegmator, said means consisting of a vapor line downwardly inclined from the point of connection to the said conversion chamber to the point of connection to said dephlegmator, and a helical baffling means arranged in said vapor line to form a circuitous path for the vapors passing therethrough.



1,804,029. DIE CONTROLLING MECHANISM FOR OPEN DIE METAL HEADING MACHINES. JOHN E. PRAGNY, Waterbury, Conn., assignor to The E. J. Manville Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 16, 1930. Serial No. 468,293. 8 Claims. (Cl. 10—24.)

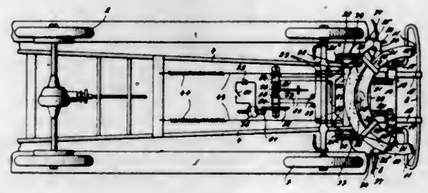
1. A heading machine having a die pocket, a cutting die and an extruding die fixed in said pocket and dies movable transversely in the pocket, means for feeding stock through the cutting die and movable dies, means for moving both movable dies together across the cutting die and severing a length of the stock and carrying it into line with the extruding die, a reciprocating punch adapted to strike the stock held by the movable dies and drive its inner end into the extruding die, means for ejecting the stock from the extruding die, means for returning one movable die to line with the cutting die while the stock is being ejected

from the extruding die, and means for restraining the return of the other movable die until after the stock has been ejected from the extruding die.



1,804,030. TRUNK CURTAIN AND LAUNDRY BAG. JULIUS RITTER, Jr., Racine, Wis., assignor to Hartmann Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed Jan. 11, 1926. Serial No. 80,596. 3 Claims. (Cl. 190—13.)

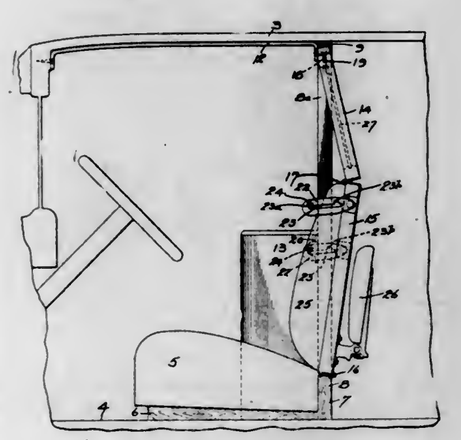
1. In combination with a wardrobe trunk section having an open front and provided with opposite side slots extending inwardly toward the rear portion of the trunk section, a curtain for covering the front opening of the section, a bar carried by said curtain, said bar being relatively wide in the plane of the curtain and having its opposite ends bent inwardly of said plane and insertable through said slots, and means engageable with said bar for locking said ends within said slots to position said bar flatwise across said front opening when said curtain is in covering position.



1,804,031. WARDROBE TRUNK. JULIUS RITTER, Jr., Racine, Wis., assignor to Hartmann Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed Sept. 2, 1927. Serial No. 217,187. 4 Claims. (Cl. 190—13.)

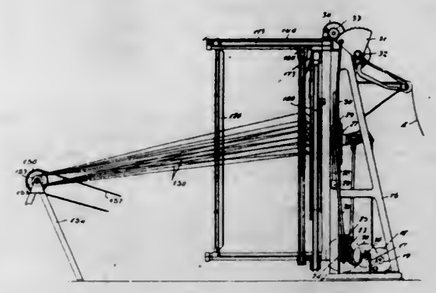
1. The combination with a wardrobe trunk formed of two hinged together sections swingable horizontally to open position, one of said sections having an open top and an open front closed by the other sections, an outer top cover hinged to one of the sections for closing the upper open end of the other section, an inner front door interposed between the two sections and hingedly connected to one of the sections for closing the open front, an inner top cover hinged to the upper edge portion of the front door for closing the upper open top and swingable to an open position alongside of the front door, garment hangers within the section with the open top guard means within the wardrobe section controlled by the movement of the front door, a cushion mounted on the lower side of the inner top cover for engaging the garment hangers or the garments draped thereon when the cover is in closed position, and a cushion mounted on the lower side

of the outer top cover for yieldingly engaging and holding said inner top cover in its garment engaging position when both covers are in closed position, said inner front door and inner top cover permitting closing the open top section while the two sections remain in open position.



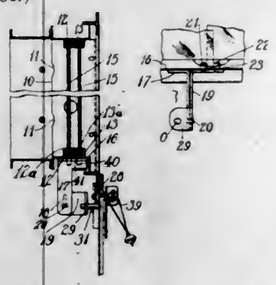
1,804,032. SAFETY APPARATUS FOR MOTOR VEHICLES. GEORGE ROTTMAN, Brooklyn, N. Y. Filed Nov. 14, 1929. Serial No. 407,167. 19 Claims. (Cl. 293—16.)

1. Safety apparatus for motor vehicles comprising parts for holding a pedestrian, parts for supporting the pedestrian and parts controller by the supporting parts for applying the brakes and further obstructing the wheels to bring the vehicle to a standstill when the parts for holding the pedestrian are actuated.



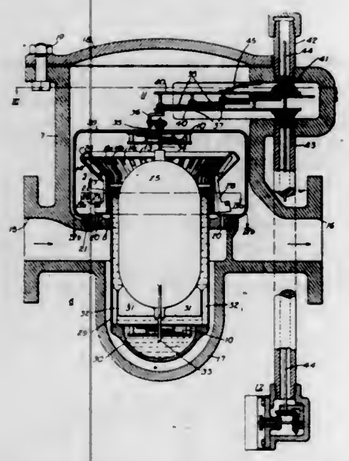
1,804,033. PARTITION FOR AUTOMOBILES. FREDERICK A. SIGGINS and CLARENCE L. SIGGINS, Detroit, Mich. Filed Feb. 4, 1929. Serial No. 337,208. 4 Claims. (Cl. 296—1.)

1. A partition of the character described comprising a frame having an opening therein and adapted to extend upwardly from the floor of a vehicle body, means for supporting said frame in said body, a lower movable portion in said frame having its lower end pivotally mounted on said frame adjacent the lower end of said opening, an upper movable portion having its lower margin pivotally attached to the upper margin of said lower movable portion, pivoting means for holding the upper end of said upper movable portion between the sides of said frame opening so that it is permitted movement therein about a horizontal axis, said movable portions being adapted either to assume



a substantially vertical position or to be moved so that the upper portion is downwardly and rearwardly inclined and the lower portion is upwardly and rearwardly inclined, a seat back on said lower movable portion, and means for holding said movable portions against accidental movement when in either position.

1,804,034. CUTTING AND STRIPPING MACHINE. WALTER W. SPADONE, New York, and CHARLES C. SPADONE, Rockville Centre, N. Y. Filed May 13, 1929. Serial No. 362,468. 12 Claims. (Cl. 164—73.)

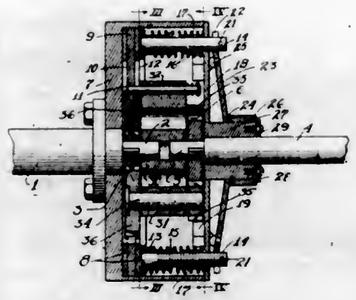


1. In a cutting machine including means for intermittently feeding a web of material in predetermined steps, the combination of a raceway non-yielding in the direction of cutting pressure and provided with a lengthwise extending channel and a cutting slot the ends of which define the opposite limits of the line of cut, endless cutting means arranged to travel lengthwise of said channel in a direction which is constant, and means for adjusting said cutting means into and out of said cutting slot in alternate sequence.

1,804,035. VOTING MACHINE. WILLIAM H. STARING, Willoughby, Ohio, assignor to Automatic Registering Machine Company, Inc., a Corporation of New York. Filed Oct. 28, 1926. Serial No. 144,838. 10 Claims. (Cl. 235—51.)

1. In a voting machine having a compartment, channels fixed in and adjacent one wall of said compartment, plates slidable in said channels, and reciprocable pins in said channels, which pins in one position permit and in another position prevent the movement of said plates, when said plates close said compartment.

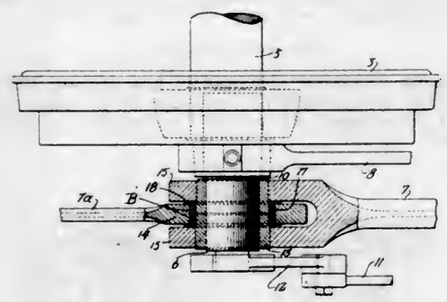
1,804,036. FLUID FLOW METER. WILBUR W. STEVENSON, Pittsburgh, Pa. Filed Mar. 20, 1928. Serial No. 263,052. 22 Claims. (Cl. 73—37.)



4. A weighted turbine blade having a plurality of angularly related portions and pivotally mounted to automatically transfer under the influence of revolution of said blade one portion or the other into the path of an impinging fluid.

7. A turbine blade member having two distinct elongated side members in substantially parallel planes, each terminating at one end in angularly related fluid-engaging portions.

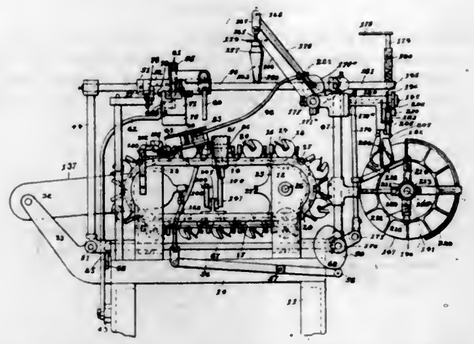
17. In a fluid flow device, a stationary separable nozzle ring, a tank supported solely thereby and extending on both sides thereof, and having a bearing in the lower end thereof and a turbine rotor associated with said bearing and adapted to be operatively supported by fluid in said tank for co-operating with said nozzle ring.



1,804,037. CLUTCH MECHANISM. OCTAVE J. ST. PIERRE, Chicago, Ill. Filed May 8, 1930. Serial No. 450,608. 7 Claims. (Cl. 74—34.)

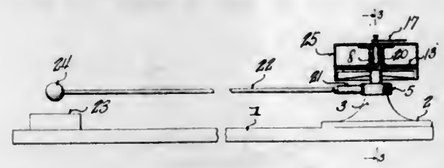
1. In a clutch mechanism, the combination with a driving shaft and a driven shaft, of gear mechanisms connected with said shafts, a spider rotatably mounted on said shafts between the gear mechanisms and affording support for a plurality of said gears, a friction plate clutch mechanism, apertured arms on one of the clutch friction plates, pins carried by said spider and engaged through said friction plate arms, a spring-controlled governing

means for regulating the frictional pressure between the clutch plates, and a plurality of fulcrumed members connected with said spring-controlled governing means for actuating the same to permit varying relative speeds to be transmitted from the driving shaft to said driven shaft.



1,804,038. LOCOMOTIVE DRIVING CONNECTION. LEWIS GEORGE TANDY, New York, N. Y. Filed Aug. 14, 1928. Serial No. 299,603. 10 Claims. (Cl. 74—17.)

2. A multi-part main driving rod composed of unitary solid rod members, one member of which has a solid forked end, and an adjacent member of which has an eyed end fitted in said fork, a hard sleeve pressed into the forked end and extending through the eye to articulate said members, and means to prevent galling of the eyed end in the jaws of said fork.

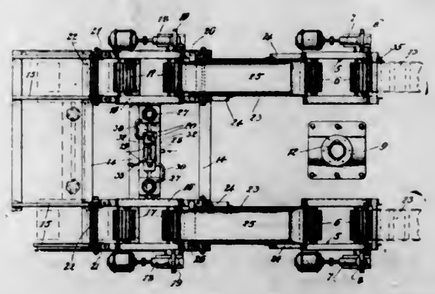


1,804,039. MACHINE FOR FORMING AND STACKING ICE CREAM CONES. HARRY G. TATOSIAN, Bridgeport, Conn., assignor to Ice Cream Cone Machinery, Inc., Bridgeport, Conn., a Corporation of Connecticut. Filed June 22, 1929. Serial No. 372,907. 36 Claims. (Cl. 107—58.)

36. The combination with a baking machine, of means for forming cones from baked cakes while in a pliable condition, means for singly feeding the cakes to said forming means, means for singly delivering the cakes from the baking machine to said feeding means, a rotatably supported drum having spaced compartments adapted to singly receive the cones in nested relation, means for stacking the cones in said compartments and including a pair of relatively movable yieldably connected cone receiving jaws, a yoke-shaped support located above the normal position of said jaws, means for singly removing the cones from said forming means and conveying the same to said jaws, said last mentioned means including a cone-shaped mandril, a pair of toothed jaws movably supported on said mandril, means for spreading said jaws to engage the cone when the mandril is lowered

into the latter to remove the same from said forming means, means for resting the mandril on said support, means for retracting said toothed jaws to release the cone from the mandril when the latter is brought to rest upon said support, and thereby deliver the cone into said relatively movable jaws, and means for intermittently rotating said drum to singly present each compartment for use.

1,804,040. GOLF GAME. VERNON L. TANNEHILL, Fort Wayne, Ind. Filed Mar. 11, 1929. Serial No. 346,076. 2 Claims. (Cl. 265—20.)

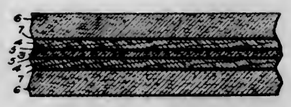


1. An indicating device of the class described including a supporting base having a central raised portion and a reduced part at the upper end thereof, said reduced part and raised portion having a central bore, a sleeve having a cup at one end fitting over the reduced part, a shaft within the sleeve and having its lower end within the bore, a pinion on the upper end of the sleeve and rotatable gears supported upon opposite sides of the sleeve and cooperating with the pinion.

2. An indicating device of the character described including a base having a central raised portion provided with a central bore and a reduced portion at the upper end thereof, an upright shaft having its lower end fitted in the bore, means for retaining said shaft against rotation, a sleeve mounted on the shaft, a cup member on the sleeve and embracing the reduced part of he base, a pinion carried by the sleeve, a bracket on the upper end of the shaft having radial arms, bearing sleeves at the outer ends of the arms, shafts supported within said sleeves and gears on the shafts carried by the bracket and adapted to cooperate with said pinion.

1,804,041. VEHICLE BRAKE ADJUSTING STAND. SYDNEY G. TILDEN, Stewart Manor, N. Y. Filed Mar. 27, 1928. Serial No. 265,098. 8 Claims. (Cl. 265—25.)

1. An adjusting stand for motor vehicle brakes including rear sets of rollers upon which the rear wheels of the vehicle are adapted to be positioned, front sets of rollers upon which the front vehicle wheels are adapted to be positioned, means for mounting said front sets of rollers for horizontal traveling movement as a unit with respect to the rear sets of rollers, a brake testing machine associated with each of said front and rear sets of rollers and



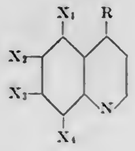
having a driving connection with one of the rollers, a stationary lifting jack for the rear end of the vehicle centrally mounted between the rear sets of rollers, and a lifting jack for the front end of the machine supported upon said mounting for the front sets of rollers for bodily movement as a unit therewith.

1,804,042. METHOD FOR PRODUCTION OF PROTEIN PRODUCTS. WILLIAM BURTON WESCOTT, Wellesley, Mass., assignor to American Protein Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 5, 1922, Serial No. 605,090. Renewed Feb. 6, 1930. 4 Claims. (Cl. 99—11.)

1. The commercial method of producing a protein product comprising gathering the blood from a plurality of food animals during the commercial slaughtering routine in a manner such as to prevent the formation of free hemoglobin therein, retarding coagulation of the gathered blood and thereafter passing a stream of animal blood containing practically no free hemoglobin into the rotating bowl of a centrifuge of a continuous type, in a manner such that the blood stream initially encounters a slowly rotating body of liquid, bringing the blood stream up to the speed of the bowl solely by contact with a liquid surface and preventing passage of air currents through the centrifuge during its operation to thereby centrifugally separate the clear liquid portion of the blood substantially free from the red portion.

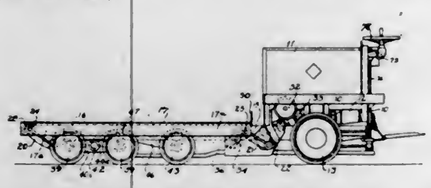
1,804,043. LAMINATED INSULATING STRUCTURE. JOHN E. WHITTLESEY, Newton, Mass. Filed Dec. 28, 1929. Serial No. 417,184. 1 Claim. (Cl. 154—44.)

An insulating, laminated structure comprising, in combination, two outer sheets, each comprising a body of asbestos and hydraulic cement; a core between said sheets, said core comprising a central sheet of fibrous material of high dielectric strength and having no definite grain, two sheets of fibrous, grained material on opposite sides, respectively, of said central sheet, and layers of waterproof, adhesive material uniting said two sheets with said central sheet; and layers of waterproof, adhesive material uniting said core with said outer sheets.



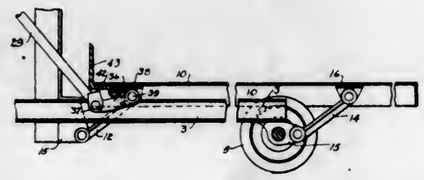
1,804,044. GARTER. BENZION WOLF, Chicago, Ill. Filed Mar. 31, 1930. Serial No. 440,194. 5 Claims. (Cl. 241—6.)

1. A garter comprising a band adapted to encircle the ankle of a wearer, a plurality of upwardly extending members fastened to said band, said members constructed and arranged in the shape of a V, a strip or band connecting said members together near their upper ends, a keeper fixed to said garter, a clasp cooperating with the keeper, and reinforcing stays arranged in said members.



1,804,045. PRODUCTION OF QUINOLINE DERIVATIVES. CLEMENS ZÖLLNER, Berlin-Charlottenburg, Germany, assignor to Schering-Kohlbaum Aktiengesellschaft, Berlin, Germany. Filed Jan. 11, 1928, Serial No. 246,086, and in Germany Jan. 14, 1927. 19 Claims. (Cl. 260—38.)

1. The process of producing 4-alkyl quinolines having the formula



wherein R is an alkyl, while X_1, X_2, X_3, X_4, are hydrogen atoms or any univalent substituents, comprising reacting with an alkyl-β-halogen ethyl ketone in watery solution on an aniline and isolating the resulting alkyl quinoline.

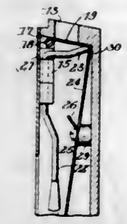
1,804,046. INDUSTRIAL TRUCK. EDWARD J. ABBE, Cleveland, Ohio, assignor to The Elwell Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 10, 1928. Serial No. 253,318. 3 Claims. (Cl. 180—22.)

1. In an industrial power driven truck a main frame having a low portion, a platform surmounting said low portion and connected thereto, a plurality of pairs of relatively small load supporting wheels disposed beneath said platform, the pairs of wheels being spaced longitudinally of said platform to thereby distribute the weight of the load on the platform over the major extent of the traction surface beneath the platform, means for steering some of said wheels beneath the platform about a common turning center, a sub frame structure carrying those of the wheels which are dirigible, mechanism pivotally joined to said low portion of the main frame and the sub frame, and supporting a pair of non dirigible wheels disposed intermediate the small dirigible wheels and the inner end of the platform, the axis line of said last named wheels being the locus of the turning center of the dirigible wheels.

1,804,047. INDUSTRIAL TRUCK. EDWARD J. ABBE, Cleveland, Ohio, assignor to The Elwell-Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 7, 1928. Serial No. 317,846. 7 Claims. (Cl. 254—10.)

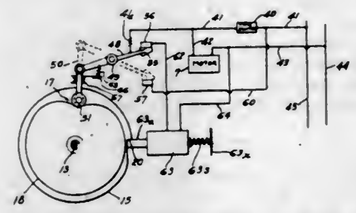
1. In an industrial truck, a frame, a movable load carrier, means acting positively in two directions, carried by the frame and connected to the carrier to move it, the connection including a safety device arranged to permit shifting movement of the carrier relative to the frame and said means to prevent damage to said means in the event of the carrier being abnormally forced to move with relation to the frame.

1,804,048. TIMEPIECE SERVING AS A WATCH OR TRAVELING CLOCK. FRITZ BOSCH, Pforzheim, Germany. Filed Aug. 16, 1929, Serial No. 386,297, and in Germany Apr. 13, 1929. 3 Claims. (Cl. 58—88.)



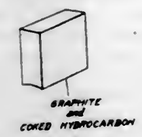
1. A time-piece adapted to serve as watch or traveling clock, comprising in combination a casing, a lid hingedly mounted in said casing, a watch case fixed by a hinge on the inner surface of said lid, a spring controlling said hinge to hold said watch case lying against said lid, means for securing said lid in the shut position, means for releasing said lid, and a spring for automatically bringing said lid with said watch case into the upright position.

1,804,049. ELECTRIC LAMP. BRUNO CLAUS, Sangerhausen, Germany. Filed Feb. 16, 1926, Serial No. 88,610, and in Germany Mar. 9, 1925. 8 Claims. (Cl. 176—1.)



2. Electric lamp comprising a curved, ellipsoidal mirror, an electric source of heat in one focus of said mirror and a selective radiating body in the other focus of said mirror.

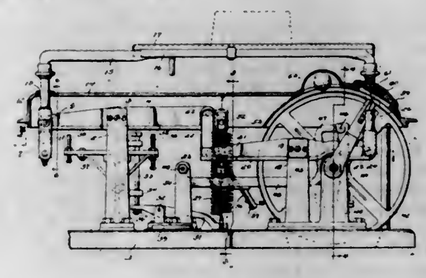
1,804,050. CLOSURE FOR MAIL CHUTES. JOSEPH WARREN CUTLER, Rochester, N. Y., assignor to Cutler Mail Chute Co., Rochester, N. Y., a Corporation of New York. Filed Feb. 1, 1930. Serial No. 425,303. 6 Claims. (Cl. 193—8.)



1. In a mail chute, the combination with a chute section and a removable and replaceable panel therefor provided with a mail receiving element provided with an aperture, of a closure for the aperture, and an operating member for the closure pivoted to turn on a vertical axis and accessible only from the inner side of the panel.

1,804,051. INTERMITTENT CONTROL MECHANISM. ROBERT O. FORTUNE, Los Angeles, Calif. Filed May 20, 1930. Serial No. 454,068. 5 Claims. (Cl. 40—53.)

1. A time controlled mechanism for advancing a display strip comprising a motor, a wheel operatively related to said motor to be driven thereby, a shaft whereon said wheel is loosely mounted, a clutch mounted upon and fixed to said shaft, said clutch comprising two gripping elements between which said wheel is situated, a reel operatively related to said shaft to be advanced thereby, a display strip advanceable by the rotation of said wheel, said gripping elements engaging said wheel with sufficient friction to cause the rotation of said wheel to advance said display strip, said clutch comprising a disc having a ratchet shoulder, a solenoid having an armature which normally obstructs the advance of said shoulder to prevent the rotation of said clutch, and a time controlled means to intermittently energize said solenoid to withdraw its said armature from said shoulder thus permitting said clutch and the shaft to which it is attached to perform a complete rotation.

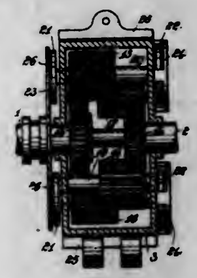


1,804,052. DYNAMO BRUSH. NELSON ROBERT HAAS, Dayton, Ohio, assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 10, 1925. Serial No. 61,842. 19 Claims. (Cl. 171—325.)

1. A dynamo brush in which the different ingredients contained in said brush are uniformly distributed therethrough and comprising a sintered mixture of graphite, particles of previously coked phenolic-condensation product and a hydrocarbon binder.

10. The method of making a dynamo brush comprising graphite and a hydro-carbon binder, which consists in coking a part of the binder, mixing graphite with the uncoked portion of the binder, then mixing the coked portion of said binder with the mixture thus formed, shaping the mixture into the desired form and heating said mixture in a non-oxidizing atmosphere.

1,804,053. SCALE. NATHAN A. HALLWOOD, Columbus, Ohio. Filed June 7, 1928. Serial No. 283,620. 11 Claims. (Cl. 265—69.)



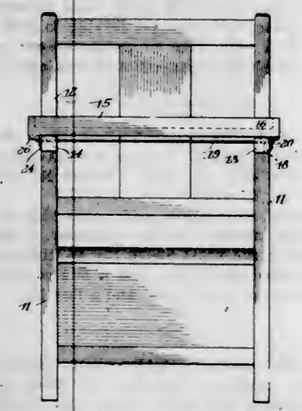
1. In a scale, a base, a reverse compound beam mounted pivotally on said base, a weight receiver carried by said beam, an indicating drum rotatably mounted in connection with said base, a pivoted arm carried by said base, means formed with the outer end of said arm for rotating said indicating drum, a thermostatic element carried by said arm, and a yoke pivotally connecting said thermostatic element with said beam, said thermostatic element upon atmospheric changes serving to shift its pivotal connection with said yoke to points nearer and further away from the pivotal connection of said arm to said base.

1,804,054. METHOD OF TREATING MATERIALS CONTAINING LEAD. CARLE R. HAYWARD, Quincy, Mass. Filed Mar. 29, 1929. Serial No. 351,128. 17 Claims. (Cl. 75—15.)

1. A method of treating lead containing an oxide or oxides of lead, arsenic, tin or antimony, comprising the step of heating the same above the melting point in the presence of a reducing agent and a flux containing stable oxygen salts of an alkali metal and a fluoride.

1,804,055. EPICYCLIC GEAR. EMIL HERRMANN, Mulheim-Ruhr, Germany, assignor to Paul Piepenstock, Muhlheim-Ruhr, Germany. Filed July 28, 1930, Serial No. 471,145, and in Germany Jan. 12, 1929. 1 Claim. (Cl. 74—34.)

An epicyclic gear especially for motor vehicles, comprising in combination a carrier having flat surfaces, spur

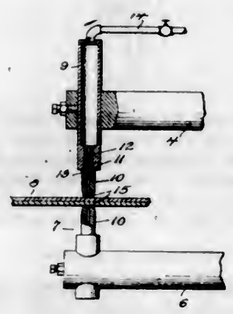


pinions in said carrier, shafts for said spur pinions, shiftable axially limited flat discs on the ends of said shaft on both sides of said carrier, a brake disc rotatably mounted and axially shiftable on one of said shafts the flat discs on one side of said carrier adapted to be brought into contact with said brake and the flat discs on the other side of said carrier adapted to engage with the surfaces on said carrier through the axial displacement caused by said brake disc.

1,804,056. RAIL JOINT CONNECTION. FRIEDRICH KÖTTERITZSCH, Breddin, near Wittenberge, Germany. Filed Nov. 13, 1929, Serial No. 406,902, and in Germany Aug. 21, 1929. 3 Claims. (Cl. 238—219.)

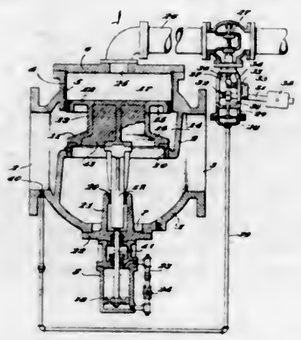
1. A rail joint connection, comprising in combination with the rail web, two junction pieces having play in longitudinal direction of the rail due to the expansion of the rails, straight outer faces and bevelled inner faces adapted to grip around said rail web at the lower and upper portions, a wedge shaped body adapted to engage with the inner bevelled surface of said two junction pieces, and a screw adapted to tighten said wedge.

1,804,057. TRAY FOR NURSERY CHAIRS. HARRY E. MCCANDLESS, Rochester, N. Y., assignor to Kennedy-McCandless Corporation, Rochester, N. Y., a Corporation of New York. Filed Oct. 7, 1927. Serial No. 224,726. 5 Claims. (Cl. 155—127.)



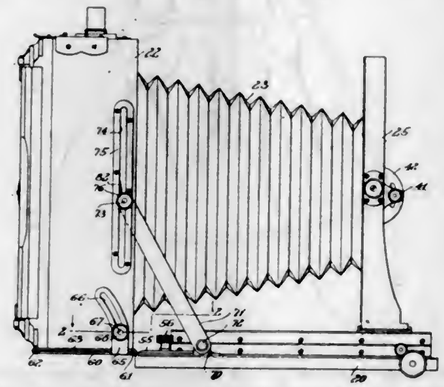
1. In a chair having arms, the combination of a tray, alined slots in said arms, a guiding member fixed to the underside of said tray and extending into said slots, means for permanently securing said guiding member to one of said arms, and releasable means for securing it in the slot of the other of said arms.

1,804,058. SCREW NUT. LÉON MICHA, Antwerp, Belgium. Filed Sept. 16, 1930, Serial No. 482,288, and in Belgium Sept. 25, 1929. 3 Claims. (Cl. 151—21.)



3. A screw-nut having in combination a bearing surface inclined with respect to the axis of the thread and a slot cut in the base opposite the elevated point of same, and a slot cut in the opposite face of the nut, both slots being parallel to each other and substantially tangent to the thread of the nut.

1,804,059. APPARATUS FOR ELECTRIC WELDING. WILLIAM J. MILLER, Columbus, Ohio, assignor of one-half to William E. Ranney, Columbus, Ohio. Filed July 6, 1928. Serial No. 290,765. 4 Claims. (Cl. 219—4.)



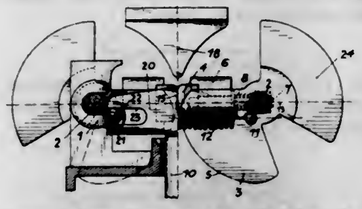
1. In a welding machine, an electrode structure comprising a substantial hollow body having a socket in one end thereof, an electrode point having a reduced portion arranged within said socket, means for circulating fluid into said body, and a passage provided axially in said point and adapted to admit of fluid flow from said body to the work engaging end of said point.

1,804,060. SAFETY RELIEF VALVE. HERBERT B. MORRILL, Salem, Mass., assignor to Atwood & Morrill Co., Salem, Mass., a Corporation of Massachusetts. Filed Dec. 17, 1928. Serial No. 326,695. 2 Claims. (Cl. 137—53.)

1. A relief valve assemblage comprising a casing having an inlet for attachment to a pressure system and an outlet for discharge from the system, a relief valve in the casing between said inlet and outlet, a differential-pressure actuator for said valve, the actuator being adapted to be exposed to pressure on one side to open the valve and on the other side to a chamber having restricted leakage connection with said system, a pilot valve connected on one side to said chamber and on the other side to a discharge outlet, pressure responsive means for opening the pilot valve in response to increase of pressure in the system on the inlet side of the main valve including a connection between said means and said system, leakage from the system to said chamber closing the main valve when the pilot valve is closed and the release of pressure in the chamber when the pilot valve is open permitting pressure on the first side of said actuator to open the relief valve, said means including a diaphragm interconnected with the pilot valve through mechanism comprising a lever carrying an adjustable weight.

1,804,061. CAMERA. CHARLES H. ROTH, Rochester, N. Y., assignor to The Folmer Graflex Corporation, Rochester, N. Y., a Corporation of Delaware. Filed Feb. 9, 1929. Serial No. 338,785. 11 Claims. (Cl. 95—50.)

1. A camera comprising a base element, a body element, a connecting member, a pivotal connection between said base element and one end of said connecting member, a second pivotal connection between said body element and the other end of said connecting member, a lug on said connecting member, and clamping means for holding said lug in predetermined relationship to said body element to clamp said connecting member relative to said body element.

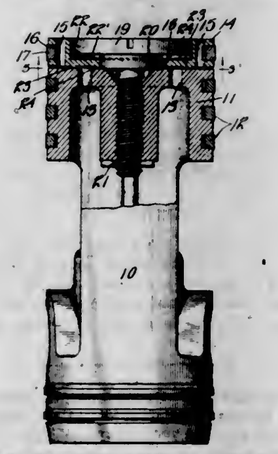


1,804,062. GASEOUS TUBE LAMP SIGN. FRANK SCHAEFER, Kalamazoo, Mich., assignor of one-half to American Signs Corporation, Kalamazoo, Mich. Filed Aug. 17, 1928. Serial No. 300,341. 7 Claims. (Cl. 176—14.)

1. A structure of the class described comprising a tubular body member having reduced electrode chambers at its ends and a central partition providing a pair of gas chambers, tubular arms adjacent the ends of said body communicating with said gas chambers, a tubular indicia element connected at its ends to the upper ends of said arms and opening thereto, electrodes disposed in said electrode chambers and provided with external contacts, tubular housings of a diameter corresponding to that of said body member arranged to embrace said electrode chambers, lugs on said body member and housings, coiled springs engaging said lugs whereby said housings are supported on the ends of said body member, spring circuit connectors arranged in said housings to coact with said circuit contacts when the housings are mounted on said body member, and binding posts on the outer ends of said housings electrically connected to said connectors.

1,804,063. ELECTRIC SWITCHING APPARATUS. WILHELM SCHWEITZER, Duisburg, Germany. Filed Oct. 29, 1928, Serial No. 315,832, and in Germany Oct. 22, 1927. 5 Claims. (Cl. 200—151.)

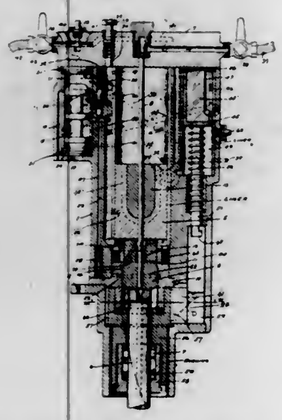
1. An electric switching apparatus, comprising in combination two rotary axles spaced from each other and movable towards each other, two contact elements rolling on each other, contact surfaces in said contact elements eccentric to said axle, springs adapted to press said contact surfaces against each other for producing the required contact pressure independently of the bearing point said



movable contacts breaking energetically after the manner of the action of horns the interrupting spark produced when said axles are horizontal, and a refractory partition arranged between the contact paths to accelerate the cutting out and to subdivide and instantaneously break off the switching spark.

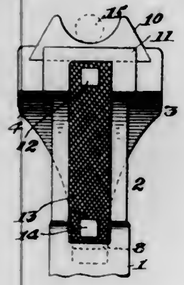
1,804,064. SAGITTAL PELVIMETER. HONORIA ACOSTA SISON, Manila, P. I. Filed July 14, 1928. Serial No. 292,846. 4 Claims. (Cl. 33—148.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. A sagittal pelvimeter comprising a calibrated rule member, the calibrations of the rule advancing numerically on either side of a point located midway of its extremities, a pelvimeter comprising a pair of legs pivotally connected at one end for relative adjustment, a calibrated quadrant carried by one of the legs and cooperating with the other for measurement purposes, and means effecting a universal connection between the free end of one of the pelvimeter legs and the rule member at said midpoint of the latter.



1,804,065. VALVE. NORMAN M. SMALL, Waynesboro, Pa., assignor to Frick Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed June 21, 1928. Serial No. 287,284. 3 Claims. (Cl. 230—221.)

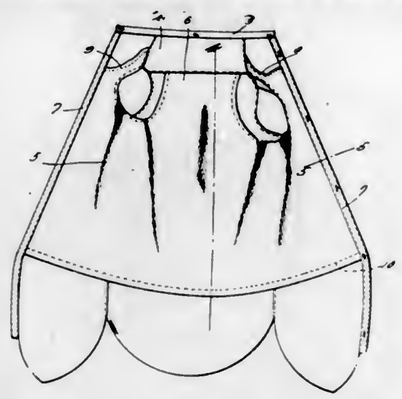
1. A valved piston comprising a piston head having a series of axial perforations therein, a valve having a



series of axial perforations arranged in a circle of larger diameter than the perforations in the piston head, an annular depending ridge on said valve between the perforations in the valve and those in the piston head, and means for securing the valve upon the piston to allow a slight axial movement of the valve with respect to the piston, substantially as set forth.

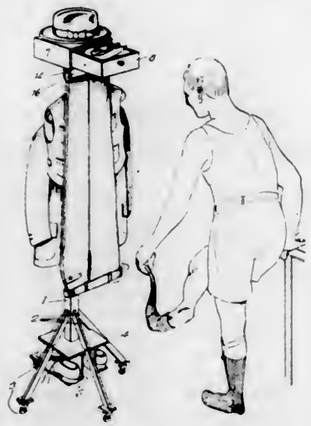
1,804,066. PNEUMATIC ROCK DRILL. MICHAEL SMITH, Modesto, Calif. Filed Aug. 14, 1924. Serial No. 732,123. 5 Claims. (Cl. 121—12.)

1. In a pneumatic rock drill, a cylinder, a piston movable therein, means for automatically admitting fluid under pressure into the ends of said cylinder for reciprocating the piston, auxiliary means for reversing the movement of the piston when the latter has covered only a portion of its stroke, and tool controlled means for making operative said auxiliary means upon excessive outward movement of the tool.



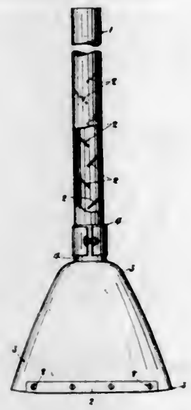
1,804,067. TROLLEY POLE HEAD-STRUCTURE. ALBERT L. SOMMERS and THOMAS B. RUSSELL, Chicago, Ill. Filed Feb. 19, 1930. Serial No. 429,740. 7 Claims. (Cl. 191—59.1.)

1. In a device of the class described, the combination with a harp, of a head mounted on said harp, said head provided with a groove, a contact shoe in said groove, a fastening plate against said head and one end of said contact shoe, and detachable means fastening said plate to said head.



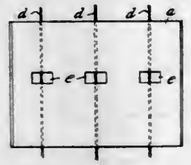
1,804,068. COMBINED OUTER AND UNDER SHIRT. BEATRICE SPIERS, Philadelphia, Pa. Filed May 28, 1930. Serial No. 456,730. 1 Claim. (Cl. 2—115.)

A garment of the character described comprising an outer shirt open at its front and including sleeves, a neck band and a yoke depending from the neck band, the sides of the yoke being spaced inwardly from the sides of the shirt, an undershirt disposed on the inner side of the outer shirt and having its side edges stitched throughout their length to the marginal side portions of the outer shirt, the upper end of the undershirt being spaced below the upper end of the outer shirt, an integral back extension extending upwardly from the undershirt between the sleeve open-



ings of the outer shirt and having its free end portion stitched beneath the lower end portion of the yoke, the remaining portion of the extension being free of the outer shirt, and integral shoulder straps extending upwardly and inwardly from the marginal side portions of the undershirt and having their free end portions stitched beneath the side portions of the yoke, the remaining portions of the shoulder straps being free of the outer shirt and extending over the sleeve openings in the outer shirt.

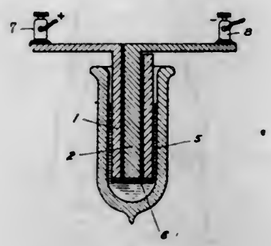
1,804,069. CLOTHES STAND. JOHN W. STOVER, Pittsburgh, Pa. Filed Dec. 20, 1929. Serial No. 415,446. 3 Claims. (Cl. 211—154.)



2. A clothes stand of the character described comprising a standard, supporting legs for said standard, a case mounted on the upper end of the standard, a drawer slidable in the case, a trousers' supporting clamp mounted on the bottom of the case forwardly of the standard, a horizontally disposed vest supporting bar mounted on the standard and disposed in a vertical plane intermediate the vertical planes of the trousers' clamp and said standard and a coat supporting bar mounted on the standard beneath the vest supporting bar and disposed in a vertical plane intermediate the vertical plane of the vest supporting bar and the standard.

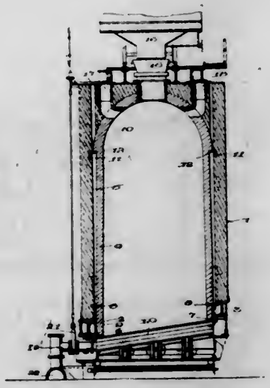
1,804,070. EXHAUST SILENCER. JOHN EDWARD SYKES, Harehills, Leeds, England. Filed July 7, 1930, Serial No. 466,235, and in Great Britain Apr. 16, 1929. 1 Claim. (Cl. 137—160.)

An exhaust silencer comprising a pipe adapted to be connected at one end to the exhaust manifold of an engine, an enlarged substantially oyster-shaped receptacle connected to the opposite end of the pipe, said pipe having a series of staggered baffle plates disposed alternately on opposite sides thereof and inclined relative to the axis of the pipe, said baffles having their inner or leading edges directed toward the outlet so as to cause the exhaust gases to take a sinuous course through the pipe, said receptacle having a restricted outlet to allow of a sudden expansion of the gases on leaving the pipe and prior to passing out by way of said restricted outlet, said outlet being in substantial alignment with the pipe to provide a through passage for the exhaust gases, the outer edge of said outlet being substantially flat to form a narrow slit for the escape of the exhaust gases, and means connected to said outer edge for preventing outward movement thereof.



1,804,071. DEVICE FOR APPLYING HOOKED CLASPS. SERGE TCHAYEFF, Paris, France. Filed Dec. 13, 1928, Serial No. 325,889, and in France Oct. 3, 1928. 6 Claims. (Cl. 140—93.)

1. A device for applying hooked clasps upon parallel wires including a movable clasp carrier having a slot at one end to receive the parallel wires during forward movement of the carrier, and means on said carrier to releasably hold the clasp during application of the latter to the parallel wires, said holding means including a yieldable member permitting lateral displacement of the clasp during application to the parallel wires.

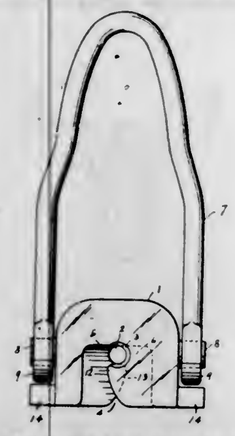


1,804,072. APPARATUS FOR ELECTRIC COOLING. HORACE FRANÇOIS ADOLPHE TURRETTINI, Geneva, Switzerland. Filed Sept. 28, 1926, Serial No. 138,227, and in Germany Oct. 8, 1925. 8 Claims. (Cl. 62—170.)

1. Apparatus for electric cooling by the utilization of the phenomenon known as the Peltier effect which comprises a thermo-couple constituted of two different metallic parts, the cross section of said two metallic parts being substantially in the same ratio as their resistances, an electrical connection for joining the two metallic parts

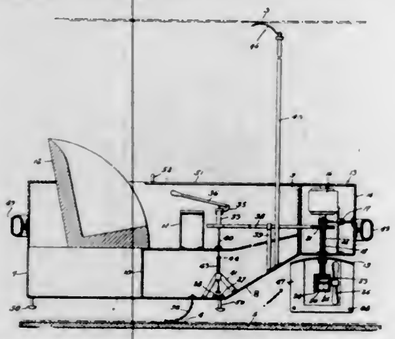
at their cold joint, and a connector secured to the free end of each of the two metallic parts whereby an external source of electricity can be connected to said thermo-couple for the production of a cooling effect.

1,804,073. CARBONIZING APPARATUS. GEORGE W. WALLACE, San Francisco, Calif., assignor to The S. E. Company, a Corporation of Delaware. Filed Mar. 15, 1927. Serial No. 175,600. 5 Claims. (Cl. 202—214.)



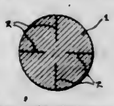
5. In an internally fired down draft carbonizing apparatus of the shaft kiln type for carbonizing coal and the like, a vertical outer shell and a vertical internal shaft formed of refractory material and having an integral closed top, said internal shaft being spaced away from the outer shell and supported thereby, support being afforded at points somewhat below the closed top and also at points somewhat above the bottom of the shaft.

1,804,074. ROD ELEVATOR. CHARLES A. ADAMS, Humble, Tex. Filed Oct. 26, 1929. Serial No. 402,564. 1 Claim. (Cl. 294—91.)



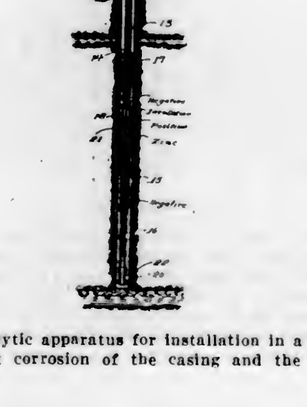
A rod elevator including an elevator body having a vertical bearing adapted to receive a rod, said body having a diagonal side slot extending from said bearing through one side of the body and through which the rod may be inserted into said bearing, an uppper and lower abutment

carried by the body and overlapping and forming retaining means to retain the rod against displacement from said



bearing, a bail having side arms pivotally connected to the body and a stop on the slotted side of the body engageable with one of said arms.

1,804,075. AQUATIC AMUSEMENT APPARATUS. FRANK V. ANDRE, Sewickley, and HARRY A. DAVIS, New Brighton, Pa. Filed May 8, 1930. Serial No. 450,791. 3 Claims. (Cl. 104—73.)



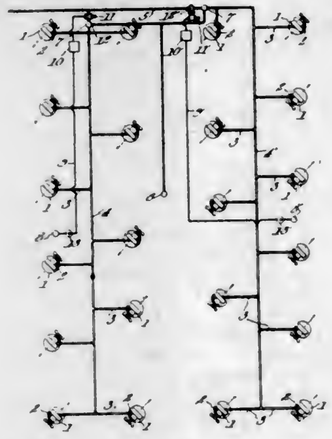
1. An aquatic amusement apparatus of the character described comprising, in combination, a tank adapted to contain water, an electric current conducting supply screen disposed above the tank, an electric current ground screen disposed over the bottom of the tank, a boat disposed for travel in the water in the tank, an electric motor mounted in the boat, a propeller operatively connected to the motor for actuation thereby, means for electrically connecting the motor with the current supply screen, means for electrically connecting said electric motor with the ground screen, the last named means comprising a chain suspended from the boat and engaged with the screen, a conductor wire connecting the chain to the motor and a manually operable control switch interposed in the conductor wire.

1,804,076. WIRE FOR WINDING MOTORS, ETC. ARMAIS ARUTUNOFF, Bartlesville, Okla. Filed Sept. 8, 1928. Serial No. 304,820. 4 Claims. (Cl. 173—264.)

1. Wire for winding electric motors and apparatus, comprising a longitudinal core, a body portion surrounding said core and integral therewith, said body being provided with a series of longitudinally extending, substantially closed slits, radiating from the boundaries of said core, whereby flexibility of the wire is facilitated.

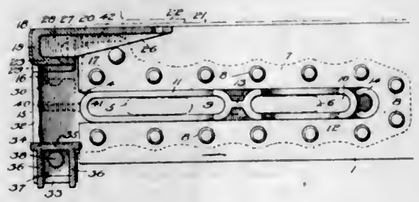
1,804,077. WELL PUMP APPARATUS. CLARENCE E. BACKUS and DOUGLAS G. WILLIAMSON, Parkersburg, W. Va. Filed Mar. 11, 1929. Serial No. 346,218. 2 Claims. (Cl. 255—11.)

1. In well drilling apparatus a base, a mast thereon, a member secured within the mast at a point over the base, a yoke mounted for rotation upon said member about an upwardly extending axis, a walking beam mounted for up and down swinging movement within the yoke, an actuated member pivotally connected to and extending from one end of the walking beam, a pitman connected to the walking beam adjacent to its other end, a member pivotally connected to the walking beam adjacent to the pitman, a link connection between said member and the pitman for holding them constantly parallel, and a counter-balancing weight carried by said member, said walking beam being movable about the axis of the yoke to shift the pitman and the weight-carrying member laterally relative to the base.



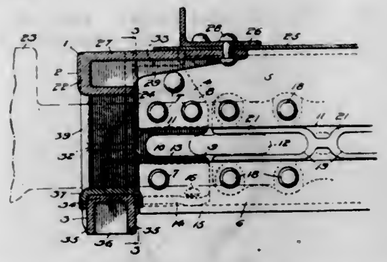
1,804,078. MEANS FOR PREVENTING CORROSION IN PIPES. MARTIN WILLIAM BADEN, Winfield, Kans. Filed Nov. 26, 1928. Serial No. 322,017. 2 Claims. (Cl. 204—1.)

1. Electrolytic apparatus for installation in a well casing to resist corrosion of the casing and the pumping



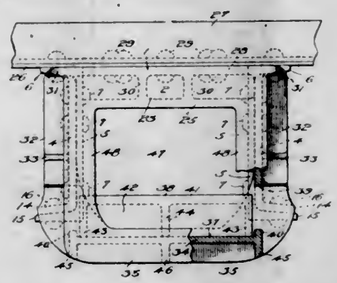
equipment operating therein, said apparatus comprising a tube consisting of tubular sections of metals of different polarity, a connecting unit for the ends of the sections comprising a tubular body of insulating material, metallic sleeves embedded in the said body with their relatively adjacent ends concentrically arranged one within the other and in mutually spaced relation, the said sleeves being provided with thickened relatively remote ends abutting the tubular body of insulating material and threaded to provide for their connection with the tubular sections of the said tube, and radially disposed shoes at the lower end of the lower tubular section for spacing the tube from the casing and establishing electrical connection between the casing and the said tubular section.

1,804,079. AIR CONDITIONING APPARATUS. FREDERIC F. BAHNSON, Winston-Salem, N. C., assignor to The Bahnson Company, Winston-Salem, N. C., a Corporation of North Carolina. Filed Oct. 13, 1928. Serial No. 312,287. 17 Claims. (Cl. 236—44.)



1. In air conditioning apparatus, the combination with a plurality of humidifying units and means for supplying water thereto, each of said units provided with a humidity-responsive member for controlling its individual water supply, and means responsive to temperature changes in the air conditioned by said units for regulating the rate at which water is supplied to said units, of a master control apparatus for controlling the supply of water to all of said units irrespective of the operation of said individual control members and said temperature responsive member.

1,804,080. STRIKING CASTING. DONALD S. BARROWS, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Nov. 14, 1925. Serial No. 69,092. 9 Claims. (Cl. 213—50.)



5. In combination with the center sills of a car, said center sills being formed with slots extending to the ends thereof, cheek plates connected on the outside thereof and provided with slots registering with the center sill slots and flanges bordering said slots and engaging the center sill slots, portions of said cheek plates extending beyond the ends of the sills and a striking casting connected to said extensions.

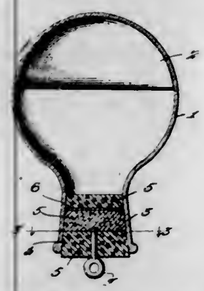
1,804,081. STRIKING CASTING. DONALD S. BARROWS, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Nov. 14, 1925. Serial No. 69,093. 7 Claims. (Cl. 213—50.)

1. In combination with the center sills, cover plate therefor, and end sill of a car, an integral casting comprising portions serving, respectively, as a striking casting and coupler carrier iron, and provided with rearwardly extending ears connected with the webs of said center sills, and a substantially horizontal shelf portion extending rearwardly from over the carrier iron portion beyond said ears, the adjacent ends of the center sills at their upper portions being coped for the reception of portions of said shelf extending transversely beyond said sills, and a portion of said shelf extending rearwardly between the sills and connected with the cover plate and end sill.

1,804,082. STRIKING CASTING. DONALD S. BARROWS, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Jan. 20, 1926. Serial No. 82,499. 20 Claims. (Cl. 213—50.)

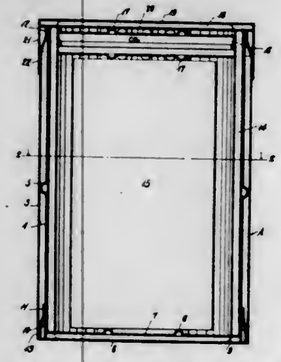
2. A combined casting formed with portions serving, respectively, as a striking casting and coupler carrier iron, said carrier iron portion being formed with flanges along its upper surface and said casting being provided with a transverse aperture therein, said aperture being adapted for receiving a carrier block and the flanges serving to provide a pocket for receiving said block on the carrier iron portion.

1,804,083. HEAT EXCHANGE DEVICE. DAVID WERNER BERLIN, Rasunda, Sweden. Filed July 5, 1927, Serial No. 203,592, and in Sweden Aug. 17, 1926. 12 Claims. (Cl. 257—255.)



1. In a heat exchange device, a pair of longitudinally corrugated plates arranged with the corrugations of one

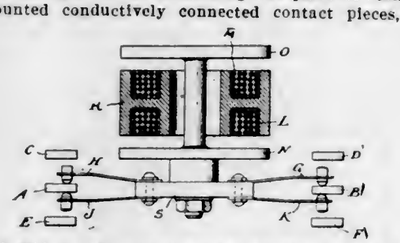
plate extending into the corrugations of the other plate, said plates being transversely corrugated along a plu-



rality of longitudinally disposed lines to bring portions of the plates into interlocking engagement to prevent relative lateral movement of the plates.

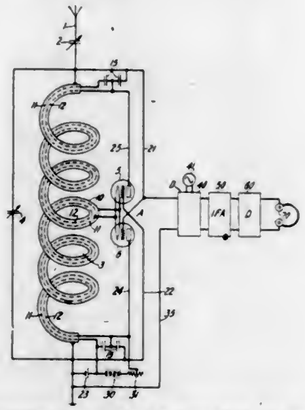
1,804,084. FISHING LINE FLOAT. LOUIS H. BLAKE, Altus, Okla. Filed Mar. 14, 1930. Serial No. 435,867. 2 Claims. (Cl. 43—49.)

1. A float for fishing lines, comprising a hollow substantially pear-shaped body whose outer rounded end is luminous and whose mouth portion is formed with an inwardly extending bead, a compressible stopper closing the mouth and an eye having a shank embedded in the stopper.



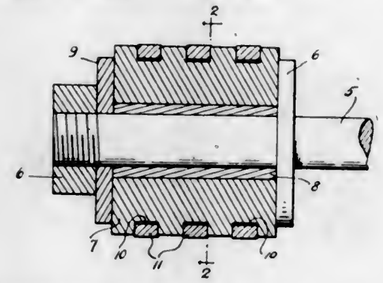
1,804,085. CONTAINER. ARTHUR H. BORDEN, North Dartmouth, Mass. Filed Apr. 16, 1929. Serial No. 355,548. 2 Claims. (Cl. 62—91.5.)

1. In a container of the class described, a bottom wall provided with internal corrugations, a refrigerant container positioned within said container, said refrigerant container being provided with protuberance on its upper and lower surfaces, and a package mounted within said container and resting on said corrugations.



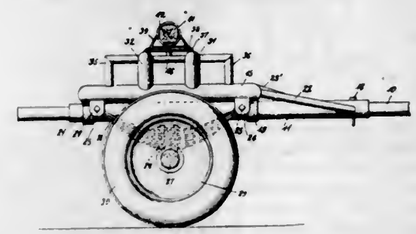
1,804,086. REVERSING SWITCH. HEKTOR BRODT, Zuchwil, near Solothurn, Switzerland, assignor to Scintilla Aktiengesellschaft, Solothurn, Switzerland. Filed Feb. 20, 1929, Serial No. 341,526, and in Germany, Mar. 1, 1928. 2 Claims. (Cl. 200—16.)

1. A switch for reversing the direction of the current in electric installations, including a pair of contacts for the incoming current, two pairs of contacts for the outgoing current, each of said first-named contacts being located between a pair of the said second-named contacts and switching members comprising two pairs of resiliently mounted conductively connected contact pieces, one



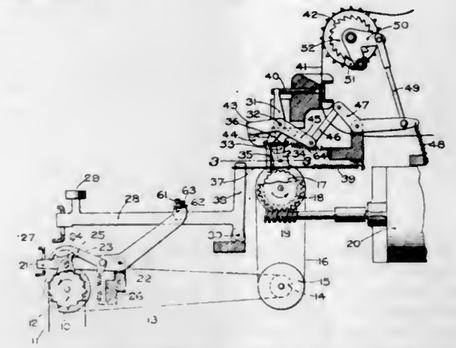
pair of said contact pieces embracing each of said first-named contacts, substantially as and for the purposes described.

1,804,087. WAVE AMPLIFYING SYSTEM. EDMOND BRUCE and HARALD T. FRIIS, Red Bank, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1926. Serial No. 158,170. 8 Claims. (Cl. 250—20.)



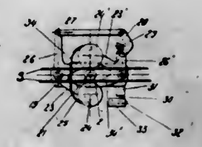
1. An amplifier comprising a plurality of electric space discharge devices connected in balanced relation to operate without frequency translation, each of said devices having a cathode, an anode and a grid, a common input circuit and a common output circuit for said devices, said common input circuit being connected to ground, means for impressing signal variations upon said common input circuit, and means for connecting said cathodes to a point on said input circuit electrically remote from said ground connection.

1,804,088. PACKING STRUCTURE. NOAH D. CLARK, Cincinnati, Ohio, assignor of one-half to George Struble, Cincinnati, Ohio. Filed Sept. 10, 1929. Serial No. 391,551. 1 Claim. (Cl. 74—109.)



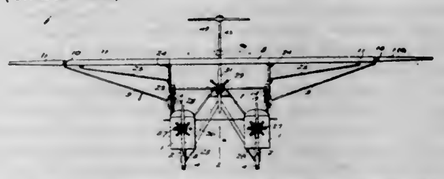
In combination, a piston rod, an annular collar formed on said rod, a bearing sleeve mounted on said rod and having one end thereof abutting said collar, a follower sleeve mounted on said bearing sleeve and having one end abutting said collar, a follower plate on said rod abutting the opposite end of said bearing sleeve and follower sleeve, a nut threaded on the rod and bearing against said follower plate, said follower sleeve being of a greater diameter than the diameters of the collar and follower plate respectively, and having a plurality of circumferentially extending spaced grooves formed on the outer periphery thereof, and piston rings in said grooves, said piston rings being of the split type having their adjacent ends arranged in stepped relation.

1,804,089. TRAILER. BEN L. COCHRAN, Duncan, Okla., assignor to Magnolia Petroleum Company, Dallas, Tex., a Corporation of Texas. Filed Dec. 8, 1928. Serial No. 324,717. 7 Claims. (Cl. 280—33.1.)



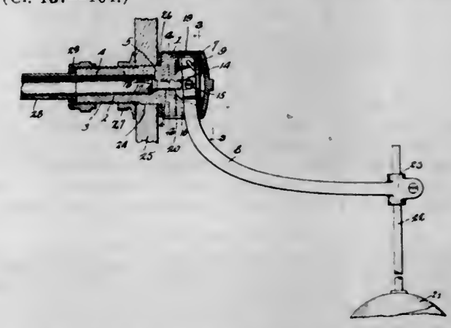
2. A trailer of the character described, comprising in combination, an elongated pipe section adapted to telescopically receive a draft pole, a rectangular frame secured to said pipe section and including side and end members constructed entirely of pipe sections and welded together at their ends by beveled joints, a superstructure mounted above said frame also constructed of pipe sections welded together, a bunker mounted on said superstructure, and a bolster mounted on said bunker.

1,804,090. POWER MECHANISM FOR SHEET PUNCHING MACHINES. CHESTER W. CRUMRINE, Rochester, N. Y., assignor to Electromatic Typewriters, Inc., Rochester, N. Y., a Corporation of New York. Filed Oct. 7, 1927. Serial No. 224,750. 21 Claims. (Cl. 164—115.)



1. In power mechanism for sheet punching machines or the like, the combination with a plurality of perforating devices, of means for selectively actuating said devices comprising a longitudinally grooved roller, power means for rotating said roller, a perforated strip supported on and fed by said roller and having perforations arranged to register with the grooves in the roller, an actuator movably mounted near the roller, a star wheel rotatably mounted thereon, means for resiliently moving the actuator toward the roller so that two arms of the star wheel normally engage the perforated sheet thereon, whereby, upon encountering a perforation in the strip, one arm of the star wheel is engaged with a groove of the roller and moved thereby so as to positively move the actuator by reason of its radial thrust against its bearing on the actuator.

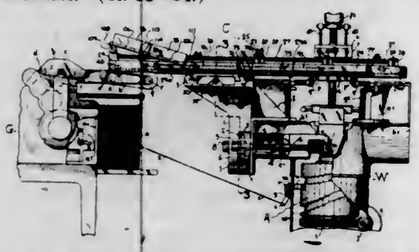
1,804,091. SPINDLE DRIVE. MARCEL PAUL DURAND, St. Germain-en-Laye, France. Filed June 26, 1929, Serial No. 373,826, and in France Aug. 17, 1928. 4 Claims. (Cl. 118—8.)



1. A spindle drive constituted by a pulley member on the spindle, a belt engaging said pulley at two diametrically opposite points, a pair of pressure rollers acting radially of the pulley at diametrically opposite points, and means for pressing said rollers on said belt.

1,804,092. AIRPLANE. JACQUES ECK, Los Angeles, Calif. Filed Dec. 2, 1929. Serial No. 411,079. 2 Claims. (Cl. 244—14.)

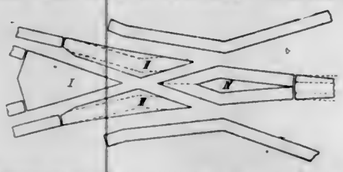
1. A flying machine having a two-part fuselage, and an inverted V-shaped fuel tank extended parallel to the line of flight between the constituent members of the fuselage and comprising downwardly diverging, liquid-holding parts which communicate at their upper ends.



1,804,093. FLOAT CONTROLLED VALVE. WILLIAM G. ESTEP, Duquesne, Pa., assignor of one-third to Robert Hawk and one-third to Joseph Conlin, Duquesne, Pa. Filed Jan. 15, 1930. Serial No. 421,004. 4 Claims. (Cl. 137—104.)

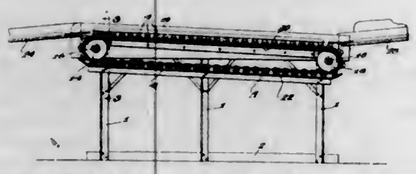
1. A device of the class described including a body portion having a tubular stem opening therethrough; there being a tapered seat in the stem, diametrically opposed pairs of pivot studs and guide ears integral with the body portion, a float-actuated lever pivotally mounted between the lugs and slidable between the ears, a valve adapted to fit snugly upon the seat, a stem projecting therefrom through the body and pivotally connected to the lever at a point between the lugs and ears, and a protecting cap engaging the body portion and housing the lugs and ears

and a portion of the lever, there being a slot in the cap in which the lever is movably mounted, said slot constituting a liquid outlet.



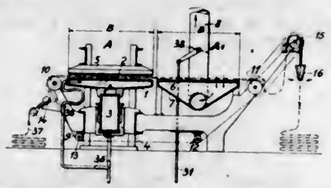
1,804,094. SYSTEM FOR APPLYING WRAPPERS. THEODORE A. FEDERWITZ and WALTER T. BAILEY, Philadelphia, Pa., assignors to Stokes and Smith Company, Summerdale, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 13, 1924. Serial No. 698,841. 23 Claims. (Cl. 93—54.)

1. The combination with a machine for delivering wrapper sheets in succession and comprising a sheet-conveying belt and rollers over which said belt travels, of a support carried by said machine, a roller carried by said support, a second belt passing over said roller and whose delivery end extends beyond the delivery end of said first named belt, and wrapper sheet-guiding means extending longitudinally of and inclined upwardly with respect to said second named belt and in the direction of movement of said wrappers for guiding wrapper sheets therefrom.



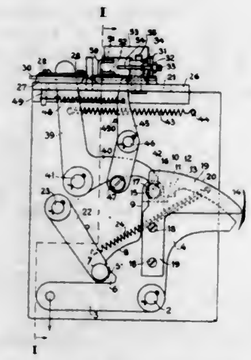
8. Box- and wrapper sheet-conveyer mechanism comprising a box-conveying chain, a wrapper sheet-conveying chain, a support common to said chains, and means for adjusting said support to different positions simultaneously to adjust the position of said conveyor chains.

1,804,095. DOUBLE SLIP POINT WITH TONGUES DISPOSED OUTSIDE THE DIAMOND. WILHELM GERMANN, Dortmund, Germany, assignor to the Firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany. Filed Oct. 13, 1930, Serial No. 488,481, and in Germany Sept. 2, 1929. 2 Claims. (Cl. 246—416.)



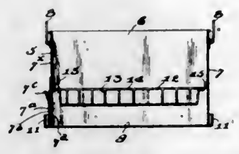
1. A double slip point comprising a center piece of rail-like cross section, the sides of the center piece having concavities therein extending throughout their respective lengths, and a split outwardly bent end at each end of the center piece, said bent ends having concavities in their sides extending longitudinally throughout their length.

1,804,096. SORTING APPARATUS. JOHN D. GRABILL, Woodstock, Va. Filed Feb. 5, 1929. Serial No. 337,689. 5 Claims. (Cl. 209—125.)



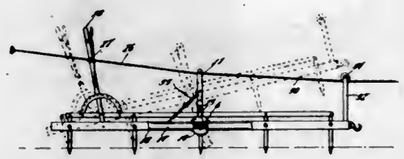
1. A sorting apparatus of the class set forth including an endless conveyor comprising a plurality of rotatable rollers arranged in parallel relation, each of said rollers being cylindrical and provided in its outer face with a plurality of relatively narrow longitudinal grooves spaced substantial distances from each other, the distance between successive grooves, in each instance, being considerably greater than the width of each of said grooves, means for supporting and imparting travel to the endless conveyor, and means for rotating the rollers.

1,804,097. DECATIZING OF TEXTILE FABRICS. MATHIAS HAHN, Aachen, Germany, assignor to Hubert Krantz, Aachen, Germany. Filed Oct. 12, 1929, Serial No. 399,336, and in Germany Oct. 20, 1928. 5 Claims. (Cl. 26—45.)



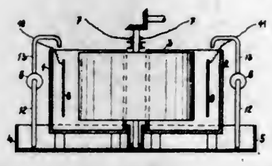
3. An apparatus for decatizing fabrics, comprising a decatizing press having a fixed top plate and a vertically movable hollow bottom plate with a perforated top wall, a power cylinder for reciprocating the hollow press plate, means for simultaneously supplying steam to the power cylinder and to the hollow press plate, a cooling surface behind the press, and conveying means for intermittently moving the fabric through the press and over the cooling surface.

1,804,098. RELEASING MECHANISM FOR AUTOMATIC VENDING MACHINES. HANS CHRISTIAN HANSEN, Frederiksberg, Denmark, assignor to Soren Wistoft & Co.'s Fabriker, Akts., Copenhagen, Denmark. Filed Feb. 14, 1929, Serial No. 339,986, and in Great Britain Feb. 23, 1928. 11 Claims. (Cl. 194—92.)



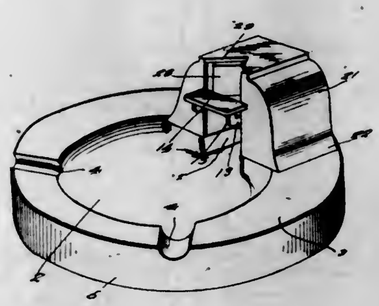
1. Releasing mechanism for automatic vending machines, including a displaceable slide, a pocket in said slide for receiving an inserted coin, a pair of coin feelers for controlling the displacement of said slide, a detent for controlling the operation of the vending machine, mechanism including a plurality of levers, one of said levers being connected to said slide, a lug on said lever for cooperating with said detent, another of said levers forming the bottom of said coin receiving pocket, and means to cause the feelers to engage and arrest a proper coin moving with said slide, the arrest of movement of the slide and coin permitting the lever mechanism to be moved to effect operation of the machine, said feelers permitting free passage of an improper coin, said lever mechanism acting on introduction of an improper coin to prevent operation of the machine.

1,804,099. KITCHEN UTENSIL. LILLIE HAZY, New York, N. Y. Filed Mar. 1, 1929. Serial No. 343,729. 4 Claims. (Cl. 146—200.)



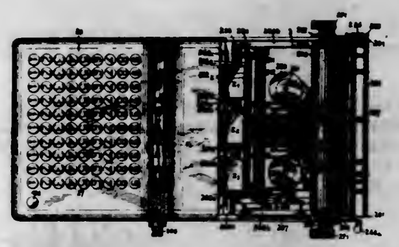
1. A vegetable or fruit washer, including a bottom having an upstanding endless wall, a tubular container having its lower edge resting on the bottom and its wall arranged within and spaced from the upstanding wall, to permit the tubular container to readily detach itself from the bottom when the container is lifted, an open-work tray arranged in the tubular container, and means for supporting the tray above the lower end of the container.

1,804,100. DRAG HARROW CLEANER. WILLIAM J. HURST, Maquoketa, Iowa. Filed Sept. 5, 1929. Serial No. 390,530. 3 Claims. (Cl. 55—34.)



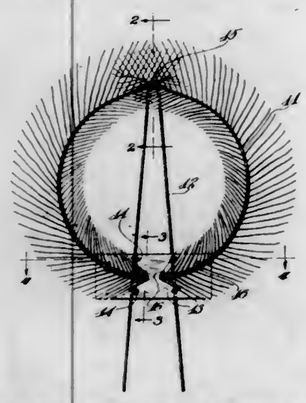
1. In a drag harrow of the class described including a shaft, a hub rockable on the shaft, arms extending from the hub, a ratchet on the hub, a lever, means for rockably mounting the lever, a spring pressed pawl in the lever engageable with the ratchet, said arms terminating in ground engaging teeth, a spring for holding the lever in a normal predetermined position.

1,804,101. APPARATUS FOR ELECTROLYTICALLY PRODUCING METAL ALLOYS. ERNST KELSEN, Vienna, Austria. Filed Aug. 22, 1928, Serial No. 301,339, and in Austria Aug. 24, 1927. 4 Claims. (Cl. 204—2.)



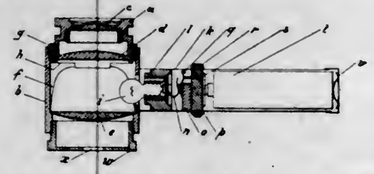
1. An apparatus for electrolytically producing metal alloys, which apparatus comprises a rotary cathode, a plurality of tanks containing different electrolytic baths, which tanks are arranged around the cathode in such manner, that the cathode will be successively put into contact with each of the said different baths and that between the rotary cathode and the edges of the tank walls formed by said arrangement there remain clearances, receptacles placed underneath the tanks for collecting the electrolytes escaping by leakage through said clearances and means for leading back the collected electrolytes into the respective electrolytic tanks.

1,804,102. CIGARETTE EXTINGUISHER. HENRY KERSHAW, Jersey City, N. J. Filed Sept. 17, 1929. Serial No. 393,192. 5 Claims. (Cl. 131—51.)



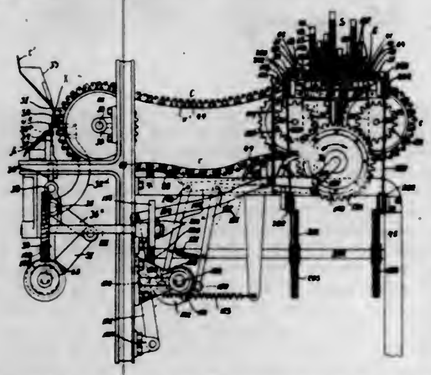
1. A cigarette extinguisher of the character described comprising an ash receiving receptacle, a base bracket mounted on said receptacle, a pair of normally open jaws pivotally mounted on said base bracket, a depressible platform pivotally mounted on the bracket and extending forwardly of the jaws, and means carried by said depressible platform for engagement with the jaws for shifting the same together in a manner to extinguish a cigarette placed therebetween.

1,804,103. CALCULATING MACHINE. HANS KNOLL, Munich, Germany, assignor to Mercedes Buromaschinenwerke Aktiengesellschaft, Benshausen, Germany. Filed May 6, 1930. Serial No. 450,286, and in Germany Jan. 15, 1927. 1 Claim. (Cl. 235—60.)



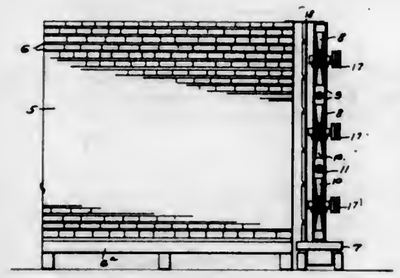
In a machine of the class described, the combination with visible main accumulator dials incapable of endwise travel, and a visible printing mechanism including a traveling paper carriage, a platen thereon and type carriers; of a plurality of sets of subaccumulator dials disposed between the platen and the main accumulator dials and so situated that the numerals on the dials, and the printed numerals, may be simultaneously visible from one point during the normal operation of the machine, said subaccumulator dials being connected to travel with the paper carriage relatively to the main accumulator dials to enable simultaneous accumulation and reading from all the accumulator dials and printing mechanism, and a single set of actuators for the sets of subaccumulator dials, said actuators being located in front of and connected with the type carriers.

1,804,104. FLORAL SPRAY. LEOPOLD KOROPP, Chicago, Ill. Filed Apr. 9, 1929. Serial No. 353,803. 8 Claims. (Cl. 41—12.)



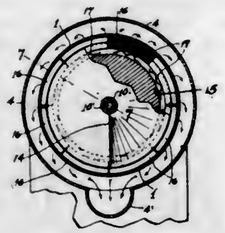
1. A floral wreath comprised of a pair of arcuate sprays with the ends thereof curved toward each other, fasteners securing together one set of spray end portions, a backing element for the other set of spray end portions, and fasteners securing the latter set to the backing element.

1,804,105. MAGNIFYING GLASS. WILHELM MÄRTENS, Bremen, Germany. Filed Apr. 3, 1928, Serial No. 267,020, and in Germany Apr. 5, 1927. 2 Claims. (Cl. 88—39.)



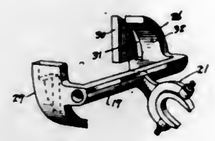
1. A magnifying glass having two lenses spaced apart, a conical annular reflector arranged between the lenses and having an opening in one side, and an electric lamp having a bulb projecting partly into the reflector through said opening so that the rays of light from the lamp are projected through the lenses onto the article to be viewed.

1,804,106. MANUFACTURE OF CHENILLE AND OTHER FABRICS. JAMES MORTON, West Lothian, Scotland. Filed Sept. 9, 1929, Serial No. 391,369, and in Great Britain Sept. 26, 1928. 24 Claims. (Cl. 66—85.)



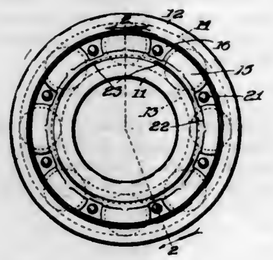
1. Apparatus comprising the combination of independent selectors, guiding means on each selector for leading in a number of threads and holding the end thereof projecting, means controlling said selectors, said controlling means being adapted to move said selectors relatively to one another so as to bring selected guiding means with their projecting thread ends into alignment, a conveyor arranged adjacent said selectors, a gripper adapted to seize the aligned projecting thread ends and pull them across the conveyor, means for forcing the pulled threads into engagement with the conveyor, cutting means for severing said pulled threads, needle means located adjacent said conveyor for binding said threads together, means for operating said conveyor so as to move the severed threads successively into the proximity of said binding means, and movable sinkers for transferring said threads from said conveyor to said binding means.

1,804,107. LUMBER-DRYING APPARATUS FOR YARD USE. MORITZ L. MUELLER, Seattle, Wash. Filed Sept. 16, 1929. Serial No. 392,940. 4 Claims. (Cl. 34—18.)



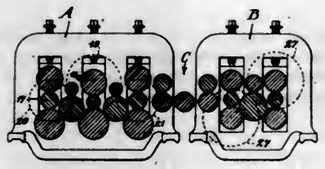
4. The combination with a portable building having blast controlling doors in its walls, of a bodily removable side wall for said building carrying a battery of blast producing fans, as and for the purposes set forth, said battery of fans being of such number and size as to cover substantially the entire side of a pile of lumber to be dried.

1,804,108. CENTRIFUGAL SEPARATOR. OSCAR GARCIA PARDO and SEGUNDO DIAZ FERNANDEZ, Habana, Cuba. Filed Mar. 6, 1929. Serial No. 344,847, and in Cuba May 15, 1928. 1 Claim. (Cl. 210—69.)



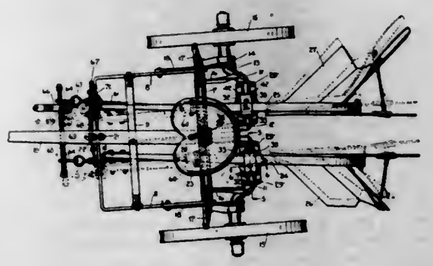
In a separator, a revolving drum, a spiral conveyor rotatable in said drum and having a circumferentially channelled rim portion, scraper sections engaging the interior of the drum arranged end to end extending throughout the length of the edge of the conveyor and having reduced portions slidably mounted in the channel of the conveyor, the side faces of the conveyor and sections presenting substantially continuous surfaces, and a flat bow spring for each scraper section confined between the latter and the base of said channel and normally tending to force the scraper against the interior of the drum.

1,804,109. SAFETY GEAR SHIFT. FREDERICK WILLIAM PARKER, Gerlach, Nev. Filed Sept. 22, 1930. Serial No. 483,644. 3 Claims. (Cl. 74—58.)



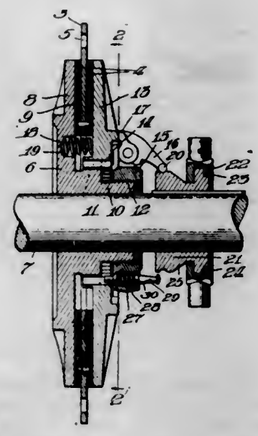
1. A cam-operated shifter of the character described comprising a sleeve adapted for mounting with freedom of endwise motion, two arms extending from the sleeve in spaced and parallel relation, the arms having registering concave faces adapted for engagement by a centrally mounted cam for shifting the sleeve into a central position and each arm having a projecting face allowing the cam to move the sleeve into an end position, each of said projecting faces being opposed by a blank on the other arm.

1,804,110. BALL BEARING. HARRY N. PARSONS, Chicago, Ill., assignor to Marlin-Rockwell Corporation, a Corporation of New York. Filed Mar. 6, 1929. Serial No. 344,799. 5 Claims. (Cl. 308—201.)



1. In a ball bearing, the combination of inner and outer race-ways, and a ball retainer for said balls piloted on one of said race-ways and containing vents in the surface of said ball retainer which opposes the one of the race-ways on which said ball retainer is piloted and opening laterally of said retainer and also opening into said last-referred-to race-way at all of the spaces between adjacent balls, the radial depth of said vents being appreciably less than the radial thickness of said retainer.

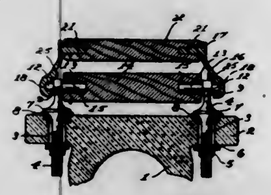
1,804,111. BREAKDOWN MILL. ALEXANDER PATERSON, Buffalo, N. Y. Filed Sept. 7, 1929. Serial No. 391,045. 7 Claims. (Cl. 80—35.)



7. A sheet bar breakdown mill including a unit comprising opposed integral housings, each having more than one window, the windows of one housing registering with the windows of the other, a stand of rolls fitted in each pair of registering windows and consisting of upper and lower working rolls and a reinforcing roll below the lower working roll, and work feeding means between the roll stands for transferring the piece from the stand behind to the stand in front, said feeding means including a feed roll engaging with and driven by one of the reinforcing rolls and a weighting roller co-operating with said feed roll whereby the piece is engaged before it leaves the stand behind and for a while after it enters the stand in front.

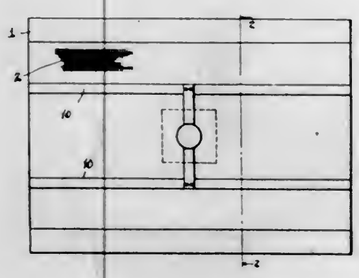
1,804,112. PLOW. WILLIAM L. PAUL, Berkeley, Calif., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Feb. 13, 1929. Serial No. 339,549. 20 Claims. (Cl. 97—29.)

1. In a plow adapted to be propelled by draft means, the combination with a frame, wheels supporting said frame, lifting means on said frame, and means operable to angle the frame with respect to the line of draft, of a plow comprising a beam having a swivel connection with said frame to rock laterally with respect thereto, and connected with said lifting means to be raised or lowered by the operation thereof, and draft connections on said beam.



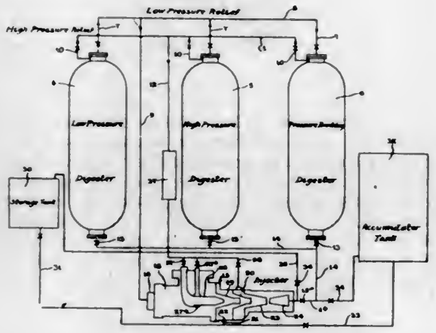
1,804,113. CLUTCH. WILLIAM J. PEARMAIN, Racine, Wis., assignor to Twin Disc Clutch Company, Racine, Wis., a Corporation of Wisconsin. Filed Jan. 6, 1930. Serial No. 418,697. 1 Claim. (Cl. 192—68.)

In a clutch of the class described a relatively fixed clamping plate comprising a hub having peripheral teeth



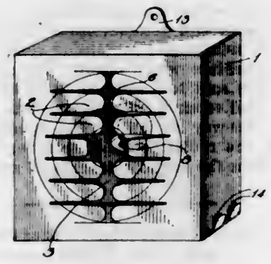
thereon and a threaded end, a floating clamping plate having internal teeth engaging the teeth of the fixed plate, an interiorly threaded ring on the threaded end of the hub, levers on the ring engaging the floating plate, means for actuating the levers and a locking pin on the ring adapted to engage between the teeth on the floating plate.

1,804,114. HINGE FOR TOILET SEATS AND COVERS. JOHN PUDLEINER, Allentown, Pa. Filed Mar. 3, 1930. Serial No. 432,856. 5 Claims. (Cl. 4—236.)



1. In combination with the seat and cover of a toilet bowl, a pair of posts adapted to be secured to the toilet bowl having horizontal pintles extending into recesses on the side edges of said seat and free to rotate in said recesses to pivotally support said seat, said posts having outwardly extending pintles on the same axis as said first pintles, two hinge members shaped to provide a concealed journaled bearing for the outwardly extending pintles, and means rigidly connecting said hinge members to the edges of said cover to pivot said cover on said pintles whereby said posts and hinge members are securely connected to the cover and seat.

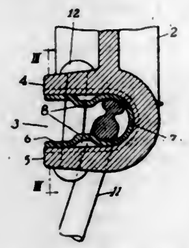
1,804,115. SCREENING APPARATUS. MORLEY PUNSHON REYNOLDS, Cleveland Heights, Ohio, assignor to The W. S. Tyler Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 21, 1927. Serial No. 220,960. 9 Claims. (Cl. 209—347.)



1. In screening apparatus, the combination of a frame, a woven wire screen mounted therein, means engaging two opposite edges of said screen and tensioning the same, two distributing strips secured to said screen in spaced relation, and a single vibrating means secured to said strips, said strips being of sufficient length and distributed resilience as to vibrate in wave-like form.

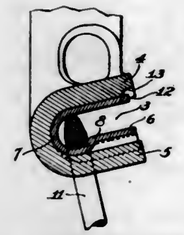
1,804,116. DIGESTING SYSTEM. AUGUST F. RICHTER, Watertown, N. Y., assignor to Stebbins Engineering & Manufacturing Company, a Corporation of New York. Filed Dec. 12, 1929. Serial No. 413,558. 21 Claims. (Cl. 92—7.)

1. In the digestion of fibrous material, utilizing gases and vapors flowing from a digester to induce the flow of chemical liquor and to force such liquor into another digester against super-atmospheric pressure existing in the latter digester.



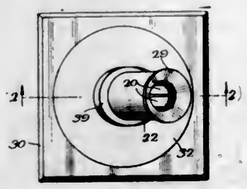
1,804,117. TARGET. FREDERICK T. RUSSELL, Utica, N. Y., assignor, by mesne assignments, to Fox Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 15, 1928. Serial No. 319,473. 7 Claims. (Cl. 124—15.)

7. A target comprising a face of sheet material cut to provide two series of flexible finger members, the fingers of one series pointing toward the fingers of the other series, for the purpose described.



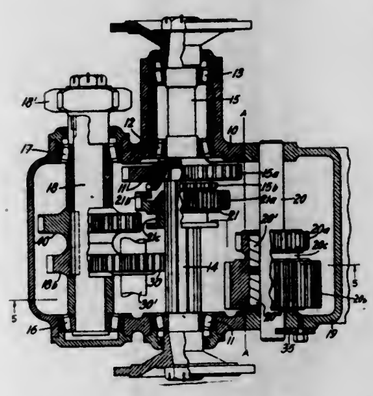
1,804,118. BRAKE HANGER SUPPORT. FREDERIC SCHAEFER, Pittsburgh, Pa. Filed Jan. 5, 1927. Serial No. 159,075. 10 Claims. (Cl. 188—207.)

8. In a brake beam hanger bracket, members forming an open-ended and open-sided recess, a renewable bushing seated in said recess, movable through the open side thereof and having flanged ends engaging the outer faces of said



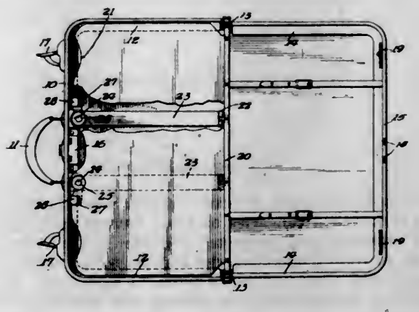
members at the ends of said recess, and means for preventing movement of said bushing through the open side of said recess.

1,804,119. BRAKE HANGER SUPPORT. FREDERIC SCHAEFER, Pittsburgh, Pa. Filed Nov. 12, 1928. Serial No. 318,890. 1 Claim. (Cl. 188—209.)



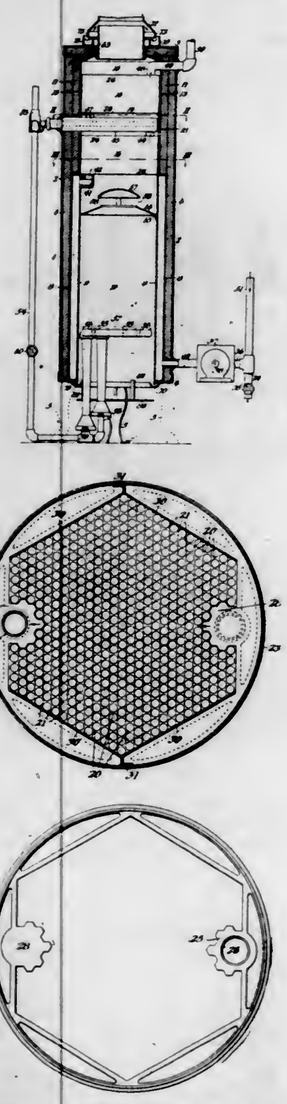
The combination of a truck frame for railway cars provided with a bracket having an open ended slot for receiving a brake hanger, and a substantially U-shaped bushing of resilient wear-resisting metal adapted to be fitted in said slot with its sides pressing yieldingly against the walls of the slot and forming a bearing for a brake hanger, a portion of said bracket extending inwardly into said slot for engaging said bushing to hold it in place, and a recess formed in said bracket adjacent said inwardly extending portion and into which a tool may be inserted for removing the bushing.

1,804,120. PENHOLDER SOCKET. GUSTAV J. SENGBUSCH, Milwaukee, Wis. Filed Jan. 29, 1927. Serial No. 164,411. 10 Claims. (Cl. 120—108.)



1. In a device of the class described, the combination of a base having an opening therein, a cover mounted on said base over said opening, and a socket for receiving a pen, said socket being mounted on said cover and having a portion extending therethrough into said opening, said socket comprising a tubular member, a cap member removably mounted on the lower end of said tubular member and serving as a closure therefor, and means inside said tubular member for limiting inward movement of the pen, said means being effective to engage a portion of the pen above the writing point thereof so as to provide a substantially sealed chamber enclosing the writing point, whereby evaporation of writing fluid on said point is retarded, and whereby said point is prevented from engaging said closure cap.

1,804,121. MOTOR VEHICLE. GEORGE D. SIMONDS, Newark, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1927. Serial No. 234,744. 3 Claims. (Cl. 74—58.)

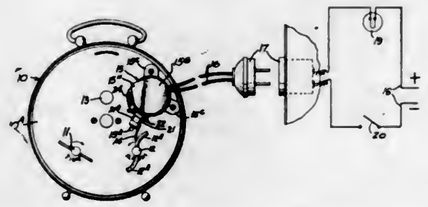


1. In a gearing, a casing, aligned driving and driven shafts supported by said casing, a power take-off shaft, a countershaft mounted in said casing, a duplex gear unit carried by said countershaft and means including said unit for selectively driving said power take-off shaft either independently of or in conjunction with movement of said driven shaft, the movement of the driving and driven shafts being normally ineffective with respect to said power take-off shaft and said countershaft.

1,804,122. TRAVELING BAG. OSCAR I. SINGER, Chicago, Ill., assignor to Singer Bros. Company, Chicago, Ill., a Copartnership. Filed May 23, 1928. Serial No. 280,028. 7 Claims. (Cl. 190—50.)

4. A bag of the character described embodying co-operating frames connected together along one edge for hinged movement one with relation to the other, a member extending along said edge, a brace pivotally connected by one end to said member and extending across said frames, and interengaging means between the said brace and the edges of both of said frames opposite the said member whereby the free edge of both of said frames will be directly braced from said member.

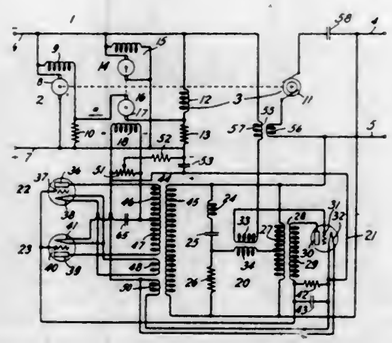
1,804,123. GAS WATER HEATER. ALOYSIUS T. SPONAR, Conshohocken, Pa., assignor to John Wood Manufacturing Company, Conshohocken, Pa., a Corporation of Pennsylvania. Filed June 18, 1928. Serial No. 286,373. 11 Claims. (Cl. 122—210.)



9. The combination with two cellular water heater units each including a congeries of tubes having their opposite ends expanded and connected together and a cylindrical casing encircling said congeries and inclosing a water space around said tubes; of water ports in said units, at diametrically opposite portions thereof, but within the outer circumference thereof; and means connecting the ports in the adjacent faces of said units, including a fitting extending transversely with respect to the common axis of said units and having branches respectively fitted to said ports; wherein the cellular water heater units are held in axially spaced relation by means independent of the fitting connecting their adjacent ports, and including a circumferential band encircling said units and having means whereby it may be constricted thereon.

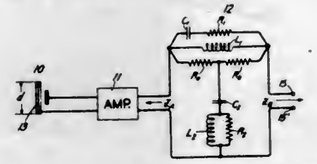
11. A gas water heater having an annular candensate pan at the bottom thereof, and an axially adjustable closure for the central opening in said pan, comprising a disk having spring fingers engaging said pin; whereby the admission of secondary air to said heater may be controlled, and said closure forms a safety blow-out valve for exploded gases.

1,804,124. LUBRICATING COMPOUND. GEORGE L. SOUTHARD, Franklin, Pa. Filed Nov. 24, 1926. Serial No. 150,621. 6 Claims. (Cl. 87—9.)



1. A lubricating compound consisting of a petroleum oil having a flash test ranging between 300° F. and 650° F. derived from crude petroleum which latter consists of approximately 33% of aromatic and unsaturated hydrocarbons, and a naphthene-paraffin base with the naphthenes predominating, and an admixture of five per cent to twenty per cent aluminium stearate.

1,804,125. CLOCK CONTROLLED SWITCH. JOSEPH STEINHAUSER, Chicago, Ill. Filed May 18, 1928. Serial No. 278,712. 3 Claims. (Cl. 200—36.)

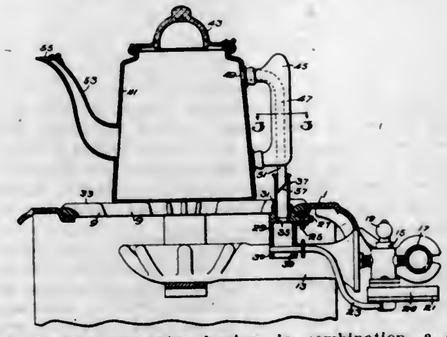


1. A circuit closing or opening mechanism comprising a time controlled rotatable member, a housing having an electric switch therein adapted to close or open an electric circuit, movable means positioned outside of said housing and operatively connected to said switch and adapted upon displacement to operate said switch, a pivotally mounted arm, and a spring for said arm, said spring being adapted to cause a movement of said arm into position against said movable means upon displacement of said movable means by said rotatable member to thereby retain said movable means in displaced position whereby the switch in said housing will be retained in either closed or open circuit pposition.

1,804,126. REGULATOR SYSTEM. HUGH M. STOLLER, Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 19, 1929. Serial No. 341,233. 17 Claims. (Cl. 171—119.)

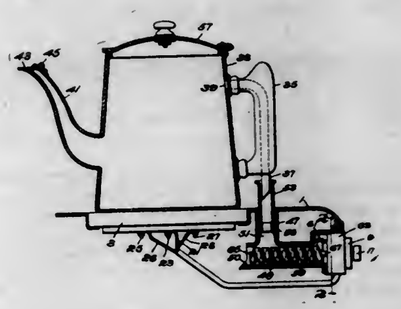
1. In a regulator system for a generator, a Wheatstone bridge circuit connected to the generator circuit, a thermionic tube operated by said bridge circuit in accordance with a characteristic of the generator, means controlled by the tube for governing said generator to maintain the characteristic thereof constant, and a feedback circuit for impressing a potential on the grid of the tube which varies according to the load on the generator.

1,804,127. SPEECH TRANSMISSION SYSTEM. NORMAN R. STRYKER, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 4, 1928. Serial No. 275,069. 6 Claims. (Cl. 179—1.)



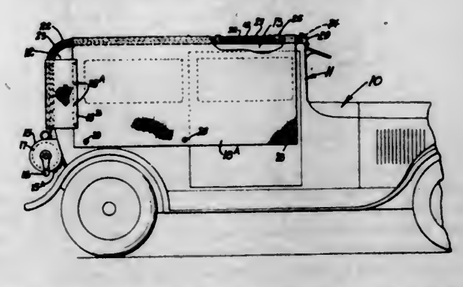
1. In a speech-wave translation system, in combination, an acoustical wave energy translating device, and means for compensating the irregularities of the speech transmission due to non-uniform reflection of acoustical waves by said translating device, said compensating means comprising a combination of wave conducting elements proportioned in accordance with a pre-assigned attenuation characteristic determined by the surface area opposed by said translating device to sound waves incident thereon.

1,804,128. DRUM PEDAL. CECIL H. STRUPE, Indianapolis, Ind., assignor to Leedy Manufacturing Company, a Corporation of Indiana. Filed July 7, 1928. Serial No. 290,918. 7 Claims. (Cl. 84—422.)



1. A drum pedal comprising a base, a shaft journalled thereon, a beater head carried by said shaft, a foot plate connected to the shaft to rock the same, a spring, and a connection between said spring and shaft to bias the shaft in opposition to the foot plates, said connection being of such character that the effectiveness of the spring upon the shaft may be varied in both force and amplitude.

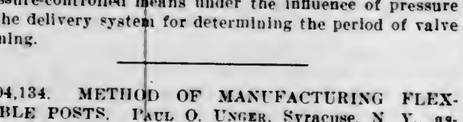
1,804,129. COOKING APPARATUS. CLARENCE D. STARR, Barrington, R. I., assignor to Barstow Stove Company, Providence, R. I., a Corporation of Rhode Island. Original application filed Oct. 1, 1927, Serial No. 223,361. Divided and this application filed Oct. 27, 1928. Serial No. 315,551. 2 Claims. (Cl. 126—42.)



1. Cooking apparatus having, in combination, a support for a cooking vessel, a heater below the plane of said support, said vessel having a conduit for establishing communication between the interior of said vessel adjacent its top and the exterior thereof at a point spaced from its side walls above its bottom, a thermostatically governed controller for said heater having a heat sensitive element, a flue below the plane of said support for directing currents of air and steam against said heat sensitive element, and a readily removable tube for extending said flue to above the plane of said support for connecting said flue to said conduit.

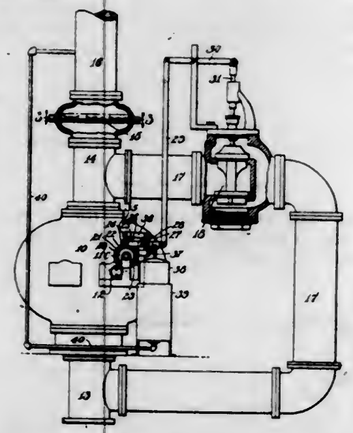
1,804,130. ELECTRIC RANGE. CLARENCE D. STARR, Barrington, R. I., assignor to Barstow Stove Company, Providence, R. I., a Corporation of Rhode Island. Filed Nov. 14, 1928. Serial No. 319,359. 4 Claims. (Cl. 219—20.)

3. An electric range for cooking vessels having, in combination, a frame, an electric heating element at the upper side of said frame, a vertically directed flue for connection to a cooking vessel, said flue having open ends and being carried by said frame, the lower end of said flue being at the under side of said frame below said heating element, a thermostatic switch for controlling current flow through said heating element, said switch having a heat sensitive element in said flue, and connections between said switch and said heating element for causing ascending air currents through said flue to increase the heating effect of said heating element and descending steam currents to decrease the heating effect of said heating element.



1,804,131. AUTOMOBILE COVER. HENRY SVIHLA, Chicago, Ill. Filed Sept. 21, 1929. Serial No. 394,358. 1 Claim. (Cl. 296—98.)

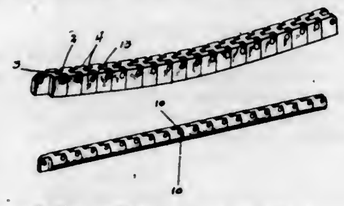
The combination with an automobile of a housing mounted on said automobile, a roller rotatably mounted in said housing, said roller having a sheave fixed thereto at each end thereof, a crank for rotating said roller and sheaves, a pair of guides extending upwardly from said housing and over the top of said automobile, each pair of said guides comprising a pair of spaced tubular members, a flexible cover normally wound on said roller between said sheaves, said cover having a plurality of



spaced stiffening crossbars, one end of said cover being attached to said roller, a pair of flexible cables attached at one end respectively to said sheaves and being adapted to be wound on said sheaves as the cover is unwound from said roller upon the rotation of said crank, the ends of said stiffening cross-bars being disposed between said spaced tubular members, one of each of said pairs of spaced tubular members being slotted longitudinally thereof, and a clip slidably mounted in each of said slotted tubular members, both of said clips being rigidly connected to the cross-bar at the free end of said cover and one end of each cable being fixed to one of said clips, said flexible cables being movable within said tubular guide members.

1,804,132. CONSTRUCTION UNIT. EDWARD H. TASHJIAN, New York, N. Y. Filed Sept. 17, 1928. Serial No. 306,365. 5 Claims. (Cl. 72—110.)

1. A construction unit comprising an upper member, a tension member, and a web consisting of a pair of rods bent to zig-zag shape each secured to said members and each having anchoring extensions beyond the outer edge of said upper member, the extensions of one rod alternating with successive extensions of the other rod along the length of the unit.

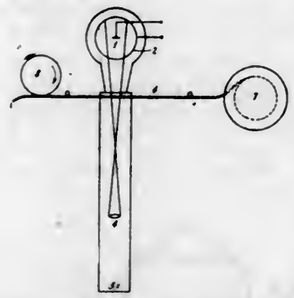


1,804,133. UNLOADING VALVE. WILLIAM TOWNSEND, Chicago, Ill., assignor to The Connersville Blower Company, Inc., Connersville, Ind., a Corporation of Indiana. Filed Oct. 27, 1927. Serial No. 229,089. 6 Claims. (Cl. 230—22.)

1. The combination of a fluid-pressure producer for a delivery system supplied thereby, a valved by-pass for the discharge of said producer, means synchronized with said producer for opening and closing said valve, and pressure-controlled means under the influence of pressure in the delivery system for determining the period of valve opening.

1,804,134. METHOD OF MANUFACTURING FLEXIBLE POSTS. PAUL O. UNGER, Syracuse, N. Y., assignor to McMillan Book Company, Syracuse, N. Y., a Corporation of New York. Filed Dec. 27, 1927. Serial No. 242,742. 4 Claims. (Cl. 59—35.)

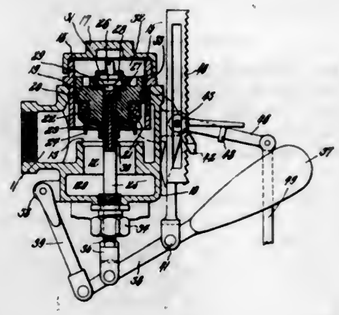
3. The method of making flexible parts comprising forming a plurality of tongued and grooved links substantially rectangular in cross section, assembling the links with the tongues and grooves of adjacent links in registration, providing a plurality of pintles having a portion of one end less in diameter than the remaining portion of the pintle, fastening the links by means of said pintles



passed through the registering tongues and grooves, and altering the shape of the pivotally connected links transversely of the lengths of the tongues and grooves to form a flexible post approximately cylindrical in cross section and uniform throughout its length.

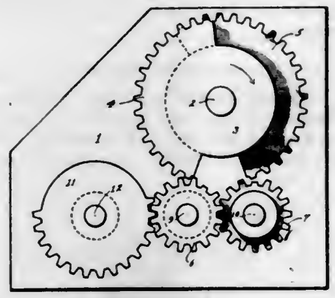
1,804,135. PREPARATION CONTAINING MEDICINAL OIL. FRANK R. VALENTINE, Belle Center, Ohio. Filed Dec. 16, 1927. Serial No. 240,614. 1 Claim. (Cl. 167—56.)

A solid stable medicinal preparation containing castor oil obtained by dissolving 1½ parts of isinglass in 180 parts of water, adding with agitation 120 parts of castor oil to said isinglass solution while gently boiling same and continuing the boiling until a white creamy emulsion is formed, cooling the emulsion while agitating same, adding 100 parts of sugar to said emulsion and heating same until the sugar has dissolved and the emulsion begins to stiffen, then intermittently heating the mass to increasing and decreasing temperatures not exceeding the boiling point until the mass begins to stiffen and appears as if it were about to sugar, and allowing the mass to cool and harden sufficiently to be formed into pieces.



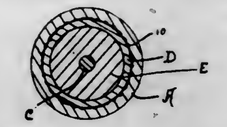
1,804,136. SIGNAL TRANSMITTING SYSTEM. GEORGE MAURICE WRIGHT, Chesterfield, and SIDNEY BERTRAM SMITH, Chelmsford, England, assignors to Radio Corporation of America, a Corporation of Delaware. Filed Mar. 5, 1926, Serial No. 92,382, and in Great Britain Mar. 6, 1925. Renewed May 6, 1929. 20 Claims. (Cl. 178—51.)

1. The method of transmitting signals at high speed which consists in perforating a tape in accordance with the desired signals, causing said tape to interrupt a beam of light, incident upon a light sensitive cell, in accordance with said signals, and causing alternating current pulses from said cell to control a signal transmitter.



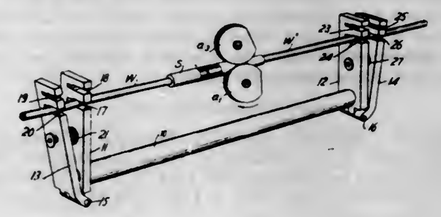
1,804,137. AUTOMATIC VALVE. THOMAS J. YATES, Salem, Mass., assignor to Yates Machine Company, Salem, Mass., a Corporation of Massachusetts. Filed May 4, 1928. Serial No. 275,230. 9 Claims. (Cl. 137—68.)

1. An automatic valve comprising a fluid inlet and outlet, a valve chamber intermediate thereof, a piston fitted to enter said chamber and to seat in said outlet, a valve stem connected to said piston, a weight connected to the valve stem to close the valve, means for retaining the weight in elevated position, means for releasing the weight to close the valve, means for preventing abrupt stoppage of flow through the valve comprising a rim on said piston having a serrated edge and adapted to enter said outlet, means for retarding the closing motion of the



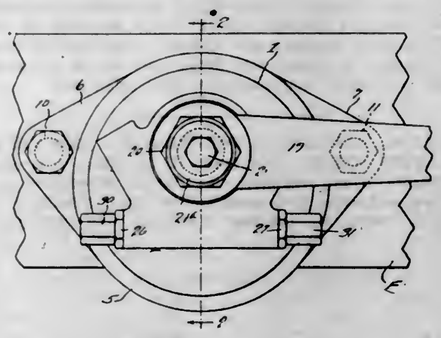
valve, said retarding means comprising a hollow cylinder closed at one end and open at its opposite end into said valve chamber, said cylinder having a longitudinal groove in the wall thereof and being adapted to receive the piston for sliding motion therein, and a ring on said piston and adapted to provide a substantially fluid-tight fit in the cylinder, said groove being terminated short of the closed-valve position of said ring in said cylinder.

1,804,138. REVERSING GEAR MECHANISM. HARRY A. YEIDER, Grand Rapids, Mich., assignor to Automatic Musical Instrument Company, Grand Rapids, Mich., a Corporation of Delaware. Filed Mar. 27, 1929. Serial No. 350,168. 4 Claims. (Cl. 74—14.)



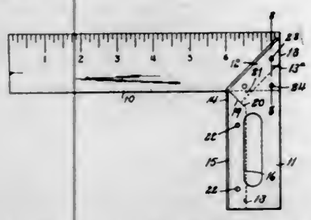
1. A gear train comprising a driving gear wheel continuously rotating in one direction, said driving gear having two segments of teeth thereon spaced apart axially of the gear and each segment located on circumferentially different peripheral portions of the gear wheel with respect to each other, a pair of gears having intermeshing teeth located in the axial space between said segment, one of said pair of gears being arranged to mesh with one of said segments and the other one of said pair of gears being arranged to mesh with the other of said segments.

1,804,139. PRINTING BLANKET FOR OFFSET WORK. FRANK W. ADSIT and THOMAS W. HICKS, Minneapolis, Minn. Filed Jan. 16, 1926. Serial No. 81,685. 4 Claims. (Cl. 101—217.)



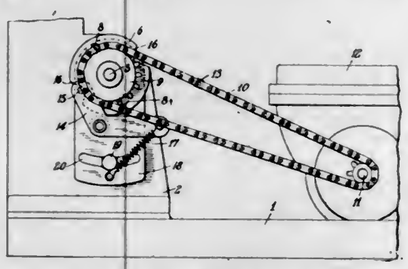
1. A printing cylinder including, a removable cylindrical shell portion and a printing film deposited around the same to provide a covering of ink receiving composition adaptable of transferring the ink in an offset manner.

1,804,140. CLAMPING DEVICE. JOSEPH F. BARRY, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 14, 1930. Serial No. 452,167. 3 Claims. (Cl. 24—132.)



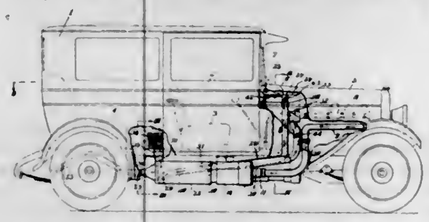
3. In a wire clamping device, a supporting rod, a pair of plates mounted on the ends of said rod, registering means carried by the plates in each pair for receiving the wires, and means for moving the plates out of registry with respect to the other plates for gripping and holding the wires.

1,804,141. HYDRAULIC SHOCK ABSORBER. ELLIOTT W. BEIDLER, Elyria, and AMANDUS C. ROESSLER, Lakewood, Ohio, assignors to Romec Corporation, Elyria, Ohio, a Corporation of Ohio. Filed Mar. 24, 1930. Serial No. 438,310. 7 Claims. (Cl. 188—89.)



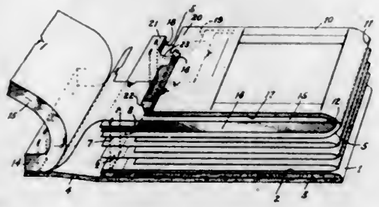
1. In a hydraulic shock absorber, the combination of a pressure chamber having a peripheral wall shaped to conform to a limacon curve, a rotor mounted in said chamber with its axis of rotation passing through the chordal center of the limacon and parallel to the principal axis of the chamber, a piston blade extending through said rotor transversely of its axis, said blade being shorter than the chordal length of the limacon.

1,804,142. TRY- AND MITER-SQUARE. SAMUEL BILLINGTON, Southington, Conn., assignor to The Southington Hardware Company, Southington, Conn., a Corporation. Filed July 23, 1930. Serial No. 470,127. 1 Claim. (Cl. 33—112.)



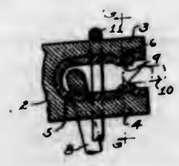
A try- and miter-square comprising a blade and a handle-portion including a beveled end, the inside edge of the handle and the edge of the beveled-portion thereof each being formed with a longitudinally-arranged groove, a plate T-shaped in cross-section having its web notched whereby the plate may be bent at the desired angle, the bent portion of the plate being formed with a slot extending centrally through the web, the web of said strip being entered into the grooves in the handle and bevcled-portion, the blade being entered through the slot in the bent-portion of the plate, and fastening means extending through the handle and through the said web, whereby the plate and blade are secured to the handle.

1,804,143. FEEDING DEVICE. WILFRED T. BIRDSALL, Montclair, N. J., assignor to Trans-Lux Daylight Picture Screen Corporation, New York, N. Y., a Corporation of Delaware. Filed June 8, 1926. Serial No. 114,407. 9 Claims. (Cl. 74—14.)



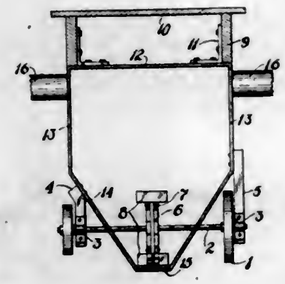
1. In combination, a shaft, a member secured to said shaft and carrying a plurality of projections concentric to the shaft, a sprocket wheel loosely mounted on said shaft, a chain engaging said sprocket wheel and having a dog adapted to engage said projections one at a time to rotate said shaft, and means to drive said chain.

1,804,144. APPARATUS FOR HEATING AND VENTILATING CARS. RICHARD E. BISSELL, Cleveland Heights, Ohio, assignor to Thomas Products, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 11, 1926. Serial No. 154,298. 3 Claims. (Cl. 237—12.3.)



2. Apparatus for heating and ventilating closed-body passenger cars driven by internal combustion engines, comprising a heater connected in the engine exhaust duct and into which said duct discharges, a chamber surrounding said heater but out of communication therewith adapted to be heated by said exhaust gases, a fresh air collector, a conduit connecting said collector with said heating chamber, an air intake in the interior of said car, a conduit extending from said air intake into said first-named conduit with its outer wall spaced from the inner wall of said first conduit to provide a suction tending to draw the air from the interior of the car body, a delivery outlet opening into the car body and a discharge conduit connecting the heating chamber with said delivery outlet.

1,804,145. MANIFOLDING BOOK. EDWARD KIRBY BOTTLE, Elmira, N. Y., assignor to American Sales Book Company, Limited, Toronto, Canada, a Corporation of Ontario, Canada. Filed Nov. 15, 1927. Serial No. 233,346. 10 Claims. (Cl. 282—14.)

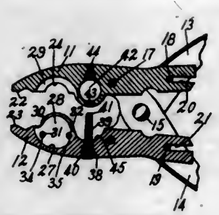


1. A device of the character described comprising a plurality of sets of leaves bound into a pad, each set comprising a bound leaf and a free leaf, said bound leaf being attached to said free leaf at the end opposite the binding, a weakened line between said bound leaf and said binding, a transfer strip bound within said pad in position to extend between the leaves of each set in succession, a blocking strip bound within said pad above said transfer slip, said free leaves terminating at their upper ends below said binding and said blocking strip terminating at its lower end below the upper end of said free leaf, and a cut-out notch through said carbon strip and through said blocking strip in juxtaposition to said weakened line and in position to expose a corner of the free leaf of each of said sets in succession.

1,804,146. BRAKE BEAM HANGER BRACKET. EDWIN G. BUSSE, Chicago, Ill., assignor, by mesne assignments, to Frederic Schaefer, Pittsburgh, Pa. Filed May 4, 1927. Serial No. 188,685. 13 Claims. (Cl. 188—209.)

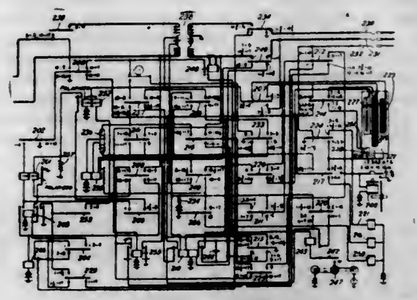
1. In a brake beam hanger bracket, members forming an open-ended and open-sided recess, and an open-ended bushing in said recess with an open side and formed of spring material, the elasticity of said bushing retaining it in said recess.

1,804,147. CONDUIT FOR DUST COLLECTING SYSTEMS. RAYMOND E. CALLER, New York, N. Y. Filed May 31, 1929. Serial No. 367,274. 2 Claims. (Cl. 302—11.)



1. In a dust collecting system a main conduit having a top, and having an upper relatively wide portion with spaced parallel straight walls and a lower portion having converging sides, and branch conduits communicating with the said main conduit through the straight walls thereof, and at the upper part of the walls.

1,804,148. CABLE TRACTOR. JAMES S. CHURCH, Brookline, Mass. Filed Mar. 30, 1925. Serial No. 19,546. 5 Claims. (Cl. 175—377.)



3. A conduit tractor adapted to be operated by electric power comprising a centrally disposed power shaft, a worm gear at each end thereof and ratchet and pawl clutches actuated by each of said worm gears enclosed within a sealed casing adapted to bring said power shaft into operative relation with traction members external to said casing when the power shaft is rotated, said clutches being provided with means for throwing oil over the gears within said casing.

1,804,149. HAND TOOL. FRED J. CLEMENS, East Haven, Conn., assignor to The William Schollhorn Company, New Haven, Conn. Filed Feb. 7, 1930. Serial No. 426,588. 5 Claims. (Cl. 164—81.)

1. In a belt plier, a pair of cooperating jaws, a relatively narrow slot in one of said jaws, said slot having a semi-cylindrical bottom edge portion, a cutter mounted in said slot and having an edge portion shaped to fit the bottom edge of the slot, a convex cutting edge on said cutter extending towards the other jaw, and an opening in the other jaw in which the cutter is received when the jaws are closed.

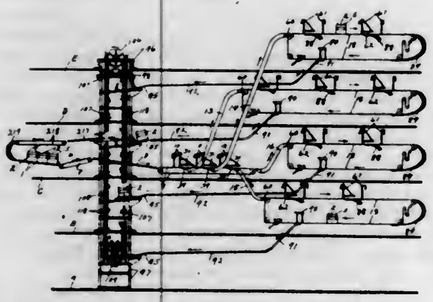
1,804,150. TELEPHONE EXCHANGE SYSTEM. RAYMOND E. COLLIS, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 4, 1929. Serial No. 330,350. 15 Claims. (Cl. 179—18.)

1. In a signaling system, a control device, a responsive device remote therefrom, a control circuit extending between said devices, a control relay in said responsive device in said control circuit and operable thereover, and a second relay in said responsive device in said control circuit and operable from said control device thereover for disassociating said control relay from said circuit.

1,804,151. RETINOSCOPE. JACOB COPELAND, Chicago, Ill., assignor to Riggs Optical Company-Consolidated, a Corporation. Filed June 9. 1927. Serial No. 197,576. 8 Claims. (Cl. 88—20.)

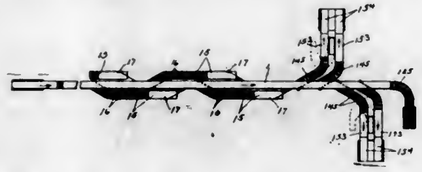
1. In a device of the class described, the combination of a hollow member providing a handle having a housing mounted at one end thereof, said housing having sight openings, a reflector located in the housing, a tubular element connected with and mounted for rotation and reciprocation within said hollow handle, a lamp mounted in one end of the tubular element, connections for said lamp also arranged in the tubular reciprocable element, said connections including a reciprocable element having a flexible conductor connected therewith, a support for said reciprocable element located in said tubular element between the ends thereof, and means located in said reciprocable element for frictionally holding said flexible conductor with relation to said tubular element.

6. In a device of the character described having a tubular handle, a housing secured to the handle, a reflector located in said housing, said housing and reflector having sight openings, in combination with an element having a



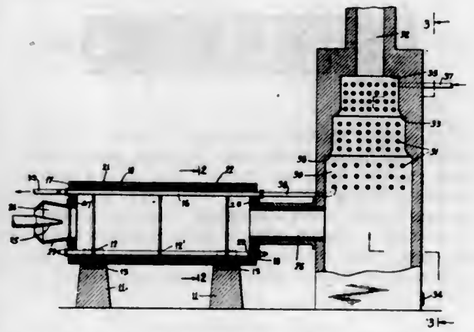
lamp socket, flexible conductors one of which has an end thereof connected with said socket, a yieldable contact, one of said conductors being connected with said yieldable contact, a support for the yieldable contact, said flexible conductors being extended through and beyond one end of said element, means for engaging said flexible conductors between the ends thereof to thereby hold said conductors relatively to the tubular element, said element being insertable into said tubular handle through an end of said handle with a portion of the flexible conductors extending from said handle, and means carried by said handle connected with said element for moving said element with respect to said handle, said handle having an opening whereby said element may be rotated and reciprocated within said handle.

1,804,152. DISPLAY PACKAGE. JAMES L. COWAN, Pittsburgh, Pa., assignor to Italo-French Produce Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 15, 1929. Serial No. 378,349. 2 Claims. (Cl. 206—44.)



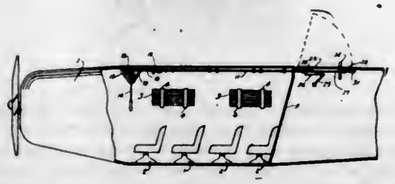
1. A display package comprising a box-like container consisting of a middle body portion formed of a rectangular piece of pasteboard or like material creased and folded to form the bottom and sides of the container but open at one side and at the two ends, and caps fitted over the ends of said body member to complete the box except for the top side, and a transparent moisture-proof cover wrapped around said container and sealed thereon, said wrapper holding said end caps in place on the body portion as well as the contents of the package therein while permitting an unobstructed view of the contents of the package through the open side of the container.

1,804,153. CONVEYING APPARATUS. JAMES T. COWLEY and LAVONT C. ALLEN, Syracuse, N. Y., assignors to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Oct. 17, 1927. Serial No. 226,659. 35 Claims. (Cl. 186—20.)



1. In a conveying apparatus, a conveyor, a branch conveyor leading therefrom, a pilot car adapted for convoying one or more containers along said conveyor, a deflector, and means actuated by the pilot car after the pilot car has passed the deflector for closing the deflector.

1,804,154. CONVEYER SYSTEM. JAMES T. COWLEY and LAVONT C. ALLEN, Syracuse, N. Y., assignors to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Mar. 5, 1928. Serial No. 259,236. 37 Claims. (Cl. 186—20.)

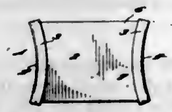


2. In a conveyer system, a conveyer, a branch conveyer comprising a dwell station leading therefrom, a pilot carrier adapted to carry one or more articles, a deflector, means carried by the pilot carrier to actuate the deflector to divert said pilot carrier from the main conveyer into the dwell station having a second conveyer by which the carrier is returned to the main conveyer.

1,804,155. FURNACE. LUIS DE FLOREZ, Pomfret, Conn., assignor to The Texas Company, a Corporation of Delaware. Filed Dec. 28, 1927. Serial No. 242,986. 3 Claims. (Cl. 122—356.)

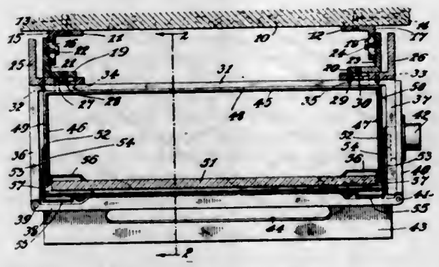
1. In a furnace, a horizontally arranged cylindrical metal shell having a refractory lining, a plurality of horizontally disposed heating tubes annularly arranged within said shell adjacent said lining, and annular tube plates having their outer edges abutting the inner walls of said shell and constructed and arranged to support said tubes and to define dead air spaces about said tubes.

1,804,156. SAFETY DEVICE FOR AEROPLANES. MIKULAS DABUL, Chicago, Ill. Filed May 1, 1930. Serial No. 448,934. 7 Claims. (Cl. 244—30.)



1. In an aeroplane, doors hingedly attached thereto and normally forming the cabin ceiling; said doors having their adjacent edges overlapping each other, springs on said doors imparting an opening stress thereto; eyelets in the lower of said overlapping doors; a slidable rod on the upper door having hooks adapted to engage said eyelets and having an extended forward end terminating in a hook, a lever pivoted in said cabin ceiling; a rod releasably connecting said lever and the door locking rod, and a spring normally pressing said connecting rod against said block, said spring being adapted to push said connecting rod against said block, said spring being adapted to push said connecting rod out of engagement with said door locking rod when said connecting rod reaches a predetermined point in its forward movement.

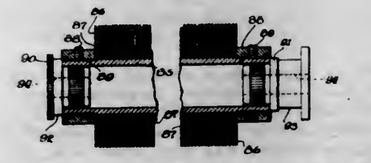
1,804,157. PROCESSING OF LATEX. ROBERT F. ELDER, Portland, Me., and ROGER B. HILL, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Aug. 5, 1929. Serial No. 383,771. 6 Claims. (Cl. 18—50.)



6. A process which comprises adding creaming and vulcanizing agents to latex, heating the latex to effect vulcanization while creaming is taking place, allowing the vulcanized latex to stand until substantially maximum creaming has been effected, and recovering the vulcanized, creamed portion of the latex.

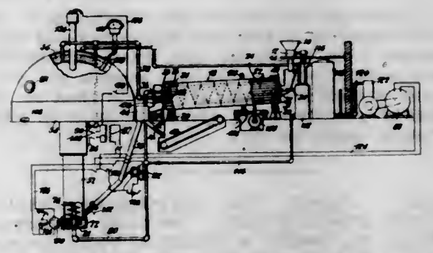
1,804,158. HOLDER OF STRAPS OF SUSPENDERS AND SIMILAR ARTICLES. GOTTLIEB F. ESSIG, Philadelphia, Pa. Filed Oct. 6, 1930. Serial No. 486,672. 2 Claims. (Cl. 24—73.)

2. A holder for retaining in position on the shoulder of the wearer straps of apparel comprising a strip of sheet material having opposite sides inwardly curved and having its marginal edges deflected inwardly to form retaining means for the straps, one of said sides having openings adapted to receive a fastening device.



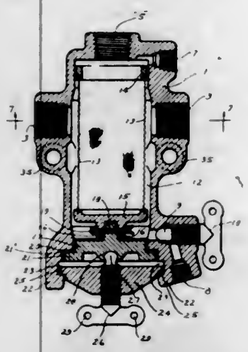
1,804,159. MAIL CHUTE. RUTH FELLS, Brooklyn, N. Y., assignor to United States Mail Chute Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 7, 1929. Serial No. 390,873. 9 Claims. (Cl. 193—8.)

1. In a mail chute, a conduit, sets of angle irons for connecting the conduit to a wall, each set of angle irons comprising a member connected to the wall, a member connected to the chute, and an intermediate member adjustably secured to the member connected to the wall in order to insure the position of the chute being vertical irrespective of irregularities in the surface of the wall.



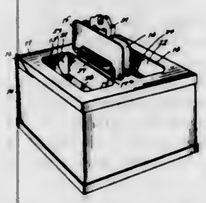
5. In a device of the class described, a channel member having back and side portions, and a panel member comprising a glass plate and resilient frames therefor extending along the sides thereof, the free edges of said resilient frames being adapted to embrace the opposite faces adjacent the edges of the sides of said glass plate, there being formed along the length of the resilient frames intermediate the edges thereof, resilient walled sockets adapted to receive the edges of the respective side portions of said channel member, the walls of said sockets being spaced apart a distance equal to the thickness of the side portions of the channel member, whereby, upon pressing the panel member against the channel member, the edges of the side portions of said channel member may be guided into and become operably retained within the sockets of the resilient frames.

1,804,160. PRINTING MECHANISM. ARTHUR B. FROEHLICH, Chicago, Ill. Filed July 12, 1928. Serial No. 292,267. 13 Claims. (Cl. 197—6.)



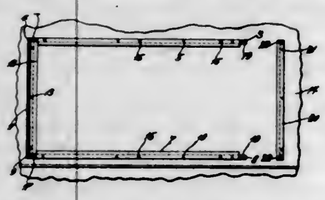
12. In a printing machine, a cylindrical platen having peripherally extending, spaced ribs, means for mounting said platen for rotation about its longitudinal axis, a type bar mounted for movement into contact with the convex periphery of said platen and having concave type fitting the convexity of said platen, the type having projections which interfit with the ribs of said platen during contact.

1,804,161. METHOD OF AND MEANS FOR PRODUCING MOLTEN AND REFINED METAL FROM CRUDE ORES. WINDER B. GOLDSBOROUGH, South Norwalk, Conn., JOHN D. MORGAN, South Orange, and GEORGE HAMPTON WYCKOFF, Mountain Lakes, N. J., assignors to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 17, 1927, Serial No. 213,482. Renewed Sept. 20, 1930. 20 Claims. (Cl. 75—22.5.)



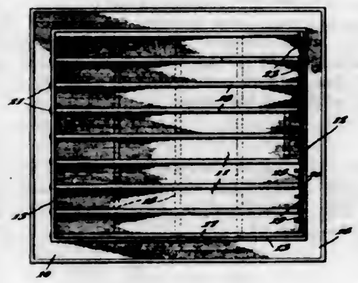
1. A process for producing refined metal from crude iron ore comprising intimately mixing a charge of the finely ground ore with a carbonaceous fuel, heating said mixture in a reducing atmosphere to a temperature at which sponge iron is formed, separating the sponge iron thus formed from the non-ferrous impurities, continuously feeding the purified sponge iron in a charge column upwardly toward the hearth of an electrically heated refining furnace, heating the upwardly moving charge column by resistance to an electric current passed therethrough, exposing the top of the charge column to a refining temperature above its melting point by casting an electric arc between the top of the charge and an electrode of opposite polarity spaced from the top of the charge in the refining furnace, and collecting and further heat treating the molten metal formed at the top of the charge in the hearth of said furnace.

1,804,162. STRAINER. FREDERICK H. HEHEMANN, Cincinnati, Ohio, assignor to The Lunkenheimer Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 1, 1930. Serial No. 448,879. 4 Claims. (Cl. 210—165.)



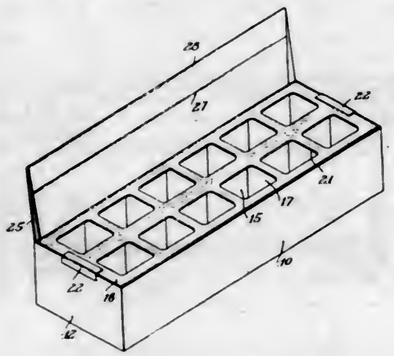
1. In an apparatus, a strainer therefor consisting of a cylindrical gauze member supported at one end by a disc in which one end of said gauze member is embedded and strengthened at its other end by a ring fitting within said gauze member and spun over to engage the end and the outside of said gauze member and a carrier for the strainer pivoted to said disc.

1,804,163. RECEPTACLE FOR CIGARETTE ASHES AND THE LIKE. WALTER F. HEROLD, Upper Montclair, N. J. Filed May 24, 1928. Serial No. 280,182. 14 Claims. (Cl. 131—51.)



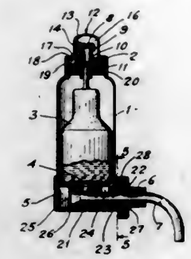
1. A receptacle for ashes or the like, having an ash receiving space, a movable ash support for said space, a movable cover for closing said space, and operating means movable relatively to said support and cover, adapted to effect the closing of either of them and the opening of the other, and adapted to maintain either of them in closed position.

1,804,164. FRAME FOR SUPPORTING DISPLAY CARDS AND THE LIKE. DENNIS L. HOLLENBECK, Chicago, Ill., assignor to Litho-Paint Poster Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 13, 1929. Serial No. 413,765. 2 Claims. (Cl. 40—152.)



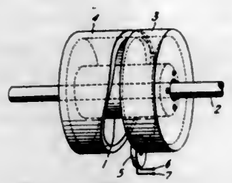
1. A poster display frame, in combination with a support, comprising a pair of longitudinal side members and a transverse end member, each of said members including a portion seated against said support and a portion extending inwardly beyond said first portion, elements attaching the ends of said end member to the ends of said side members and attaching both said end member and said side members rigidly in connection with said support, a detachable end member at the opposite ends of said side members from said first end member and including a portion seating against said support and a portion extending inwardly beyond said first portion, and elements attaching said second end member to said side members and permitting detachment of said second end member from both of said side members.

1,804,165. FURNACE REGISTER. CHARLES J. HOLUB, Columbus, Ohio, assignor to The W. E. Lamneck Company, Columbus, Ohio, a Corporation of Ohio. Filed May 7, 1929. Serial No. 361,168. 2 Claims. (Cl. 98—110.)



1. A device of the class described, comprising, a grille frame, a series of valve shutters pivoted to said frame, each of said shutters having its axis disposed along its upper edge, a slide bar mounted in said frame for operating the series simultaneously, the operative connection between said slide bar and shutters comprising pins on the bar and the shutters having slots below their pivotal connections traversed by said pins, and the slots formed for permitting the pins to impart a camming action to the shutters.

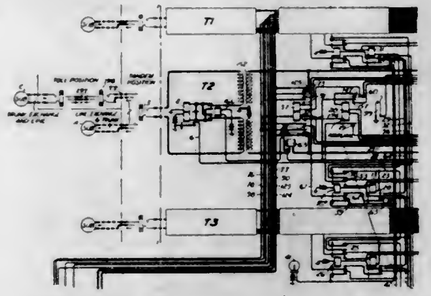
1,804,166. EGG CARTON. HARRY A. INMAN, Newark, N. Y. Filed Dec. 12, 1929. Serial No. 413,642. 3 Claims. (Cl. 229—28.)



1. An egg carton comprising, in combination, a box body having one open side, partition members extending substantially perpendicular to the plane of said open side for subdividing said body into a plurality of egg receiving compartments, an egg retaining member substantially in the plane of said open side, said retaining member overlying and hiding the edges of said partition members and having a perforation of smaller size than an egg in alinement with each compartment, so that eggs in said compartments may be observed through said perforations but may not be removed therethrough, sealing means for holding said retaining member in place, and a movable closure member overlying said retaining member.

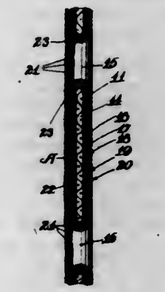
1,804,167. VALVE. WILLIAM A. KEENEY, Wethersfield, Conn., assignor to The Keeney Manufacturing Company, a Corporation of Connecticut. Filed Sept. 10, 1929. Serial No. 391,662. 14 Claims. (Cl. 236—63.)

1. In a radiator valve, a valve casing having an air escape valve therein and an outlet, and liquid absorbing means in said casing having communication with said outlet and receiving through said communication liquid escaping through said outlet.



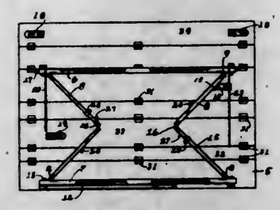
1,804,168. METHOD OF AND MEANS FOR DETERMINING CYCLIC VARIATIONS IN A ROTATING MEMBER. ARTHUR C. KELLER, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 10, 1928. Serial No. 253,251. 5 Claims. (Cl. 175—183.)

1. Apparatus for determining variations in the cyclic rotation of a rotating member comprising a magnet structure to be attached to the rotating member, an electrical pick-up coil and apparatus brought into circuit connection therewith for visibly indicating the voltage waves induced in the electrical pick-up coil, the said magnet structure being so formed that for an unvarying cyclic rotation of the magnet structure a voltage wave of approximately pure sinusoidal form will be generated.



1,804,169. TELEPHONE EXCHANGE SYSTEM. ALFRED D. KNOWLTON and SAMUEL H. EVERETT, New York, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1928. Serial No. 320,784. 2 Claims. (Cl. 179—6.3.)

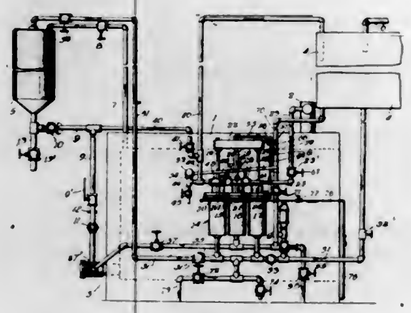
1. In a telephone system, an operator's position, a subscriber's line outgoing therefrom, a plurality of link circuits at said position adapted to connect with said line, a toll device associated with said line, said device being arranged to operate in any one of a plurality of manners, operator controlled switching means at said position common to and associated with said link circuits for selectively controlling the operation of said device, and means



comprising a listening key individual to each of said link circuits for individually associating said common means therewith.

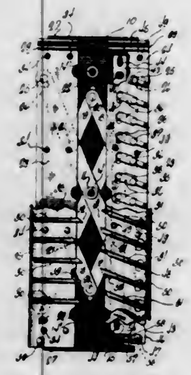
1,804,170. METHOD OF MAKING MOTION PICTURE SCREENS. WALDEMAR H. C. LASSEN, St. Paul, Minn. Filed Jan. 12, 1929. Serial No. 332,001. 6 Claims. (Cl. 88—24.)

1. The method of making a motion picture screen consisting, in impregnating a perforated sheet with highly elastic and pliable material, flowing the openings in said sheet clean of impregnating material, and covering the surface between the openings with a layer of small fluorized glass globules.



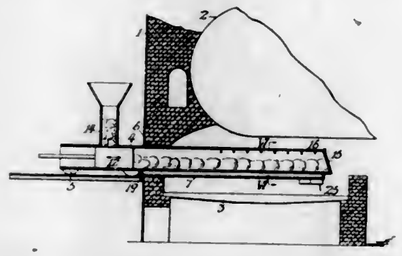
1,804,171. FOLD-TYPE TABLE. GEORGE A. LEWIS, Cleveland, Ohio. Filed Aug. 12, 1927. Serial No. 212,470. 1 Claim. (Cl. 45—116.)

A table comprising a top consisting of a plurality of members laterally movable one upon another, a supporting frame comprising side bars one of which is secured to the under surface of one of said members and sectional end bars hinged to the side bars so that the frame may be collapsed in compact relation with the side bar which is secured to the member, and a hinged latch mounted upon the other side member for detachably securing the outermost member to said side bar, and a pair of legs



hinged to the outer lateral surface of each of said side bars, so that the legs may be folded down upon the outer surface of said side bars, the frame then folded compactly over one of the outermost members of the top, and the entire top collapsed into a bundle enclosing the said frame therein.

1,804,172. SYSTEM AND MEANS FOR FEEDING WATER TO STEAM BOILERS. ISAAC D. LOOKINGLAND, Chicago, Ill. Filed Oct. 6, 1927. Serial No. 224,351. 5 Claims. (Cl. 122—451.)



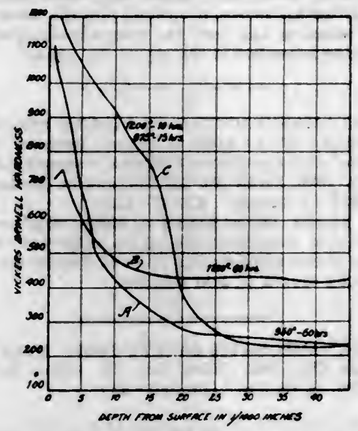
3. In a system of the kind described, a boiler, a multi-cylinder pump, a hot water tank, a receiver connected to the boiler to receive steam therefrom and having a second connection with the boiler for feeding water thereto, connection between the boiler and the similar ends of the several cylinders to supply steam to the cylinders, the opposite end of at least one of the cylinders connected to a source of supply of fluid under a pressure less than the normal steam pressure in the boiler, the remaining opposite ends of the cylinders having an aggregate area greater than the one connected to the source of fluid pressure and connected to the hot water tank to receive hot water therefrom and to the receiver to deliver the hot water thereto.

1,804,173. LOOSE LEAF BINDER. ADOLPH G. LOTTER, Milwaukee, Wis., assignor to Stationers Loose Leaf Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 7, 1929. Serial No. 412,342. 12 Claims. (Cl. 129—9.)

1. In a loose leaf binder adapted to contain record leaves, two series of impaling prongs with their ends normally engaging to form binding rings, means for mounting and guiding the series of impaling prongs for movement away from each other to permit removal or addition of record leaves, means mounting the impaling prongs of one series for angular movement to stagger their ends with respect to the impaling prongs of the other series to effect longitudinal shifting of said leaves with respect to each other, and totally enclosed means for simultaneously moving the prongs of said first series.

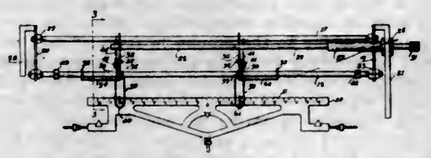
1,804,174. FRACTIONAL COMBUSTION APPARATUS. PROSPER JEAN AUGUSTE MAIGNEN, Philadelphia, Pa. Filed Dec. 30, 1925. Serial No. 78,292. 2 Claims. (Cl. 110—24.)

1. In fractional combustion apparatus; the combination with a furnace casing provided with a chimney vent; of a support for a base fire in said casing; a hollow fuel container, including a jacket, movable in and out of said casing to a variable extent, a valve controlling the admission of air between said jacket and container; closure means, carried by said container, normally secluding fuel in said container and movable to permit discharge of the fuel from said container; fuel feeder piston valve means for the introduction of raw fuel to said container, and for the discharge of carbonized matter from said container; and means for the escape of volatile matter from said container.



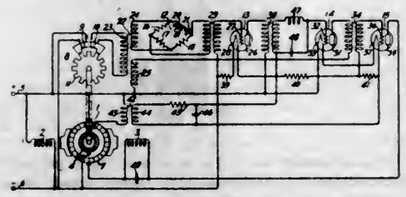
1,804,175. TOWER EXCAVATOR. GEORGE B. MASSEY, Chicago, Ill. Filed Nov. 5, 1930. Serial No. 493,578. 4 Claims. (Cl. 37—117.)

1. In a tower excavator, head and tail towers, a pair of horizontally spaced track cables extending between said towers, supporting means on the head and tail towers for the track cables, said supporting means being more widely spaced on the head tower than on the tail tower, a pair of trolleys arranged to run upon said track cables, a drag bucket suspended from said trolleys, a drag line attached to the drag bucket and extending to winding means on the head tower, and means on one of said towers for simultaneously tensioning the track cables.



1,804,176. PROCESS OF SURFACE-HARDENING STEEL. HARRY W. MCQUAID, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed June 10, 1929. Serial No. 369,562. 8 Claims. (Cl. 148—16.)

1. The improvement in the process of nitriding steel which consists in heat treating same in two stages in an atmosphere of circulating ammonia, the temperature of the steel in the first stage being approximately 1200° Fahrenheit and the temperature of the second stage be-

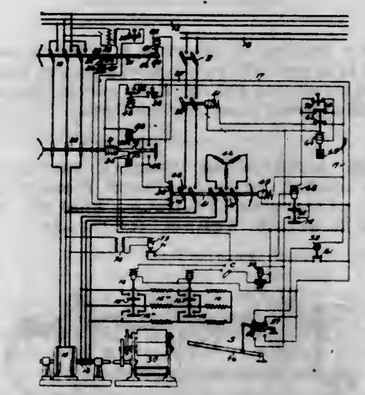


ing approximately 1000° Fahrenheit, said first stage lasting about five to ten hours and the second stage lasting about ten to forty hours.

1,804,177. POISE AND MANIPULATING DEVICE FOR SAME ON BALANCE BEAMS. JOHN P. MÜLLER, New Rochelle, N. Y. Filed Nov. 13, 1929. Serial No. 406,802. 6 Claims. (Cl. 265—54.)

1. A manipulator for the riders or poises of balance beams comprising a plurality of rider manipulators adapted to engage the riders, lift the same from the beam at one point thereof, transferring the riders, and depositing the same at another point of the beam, means for securing the riders against loss, rods for guiding said manipulators, means for limiting their outward movements and means for positively operating said manipulators.

1,804,178. REGULATOR SYSTEM. EDMUND R. MORTON, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 19, 1929. Serial No. 341,229. 12 Claims. (Cl. 171—119.)

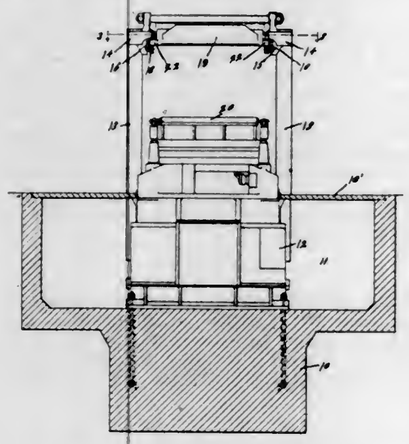


1. In a regulator system, a dynamo-electric machine having an armature and a field winding, control means comprising a space discharge device for varying the excitation of said field winding according to a characteristic of said machine to maintain the machine characteristic constant, and means controlled by the machine armature current for varying the operation of said device to prevent hunting action.

1,804,179. BRAKE OPERATING MECHANISM. CHARLES J. NASH and HERBERT E. BARTSCH, Chicago, Ill., assignors to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed May 11, 1927. Serial No. 190,441. 11 Claims. (Cl. 254—149.)

1. A brake operating mechanism attachment comprising a casing, winding mechanism within said casing, means extending to the exterior of said casing for manually operating said winding mechanism, a conduit extension on said casing, means for attaching said casing to the end wall of a car, a housing provided with a cable guide therein, means for attaching said housing to a railway car, a conduit extension on said housing, a conduit having its ends removably mounted in said extensions, and a cable secured to said drum and extending through said conduit and about said guide.

1,804,180. MOTOR CONTROL SYSTEM. HENRY V. NYE, West Allis, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 18, 1925, Serial No. 22,616. Renewed Nov. 29, 1929. 11 Claims. (Cl. 172—274.)



1. In combination, a motor comprising stator and rotor windings and operative to drive a load, circuit-controlling means between said motor and a supply line, means for holding said circuit-controlling means in operative position, an electrical load element, a switching device for connecting one of said motor windings to said electrical load element for braking purposes and capable of operation under certain conditions independently of said circuit-

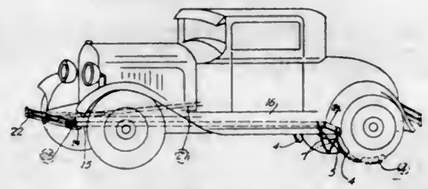
controlling means, means for maintaining said circuit-controlling means in inoperative position while said motor winding is connected to said electrical load, and means for causing the actuation of said switching device to inoperative position and the release of said maintaining means.

2. In combination, a motor comprising stator and rotor elements and operative to drive a load, circuit-controlling means between one of said elements of the motor and a supply line, an electrical load element, a switching device for connecting one of said elements of the motor to said electrical load element for braking purposes, means for causing actuation of said switching device, means for preventing operation of said circuit-controlling means to closed position while said switching device is in position to connect said latter element of the motor to said electrical load element, and means operable from a point removed from said circuit-controlling means for rendering said preventing means inoperative.

1,804,181. MOLD MACHINE. EARL F. OYSTER, Shaker Heights, Ohio, assignor to The Osborn Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 11, 1928. Serial No. 305,246. 9 Claims. (Cl. 27—42.)

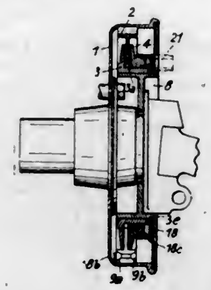
1. In a machine of the class described, a mold bed adapted to be vertically reciprocated, a squeeze head adapted to be moved into and out of the path of said bed, and anti-friction means supporting said head.

1,804,182. LUBRICATOR. GUSTAV C. PEARSON, Denver, Colo., assignor to Gardner-Denver Company, Denver, Colo., a Corporation of Delaware. Filed Feb. 16, 1929. Serial No. 340,388. 5 Claims. (Cl. 184—55.)



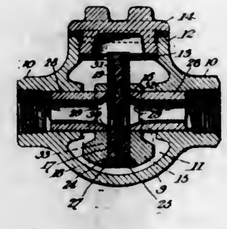
4. In a lubricator, the combination with a casing having an internal chamber forming a lubricant reservoir, of a manifold formed in the upper portion of the casing and including a main supply conduit and oppositely extending branches leading therefrom and opening at opposite sides of the casing, said branches extending over different portions of the reservoir and being transversely pierced, and stems mounted on the transverse perforations and depending below the branches into the lower portion of the reservoir at different points, said stems having passageways for the lubricant opening into the lower portion of the reservoir and into the branch passageways, the stems being accessible at the top of the casing.

1,804,183. MANUFACTURE OF HIGHLY SULPHONATED OILS. WILLY SECK, Augsburg, Germany, assignor to Erba Aktiengesellschaft, Zurich, Switzerland. Filed Feb. 3, 1928, Serial No. 251,738, and in Germany June 23, 1927. 5 Claims. (Cl. 87—12.)



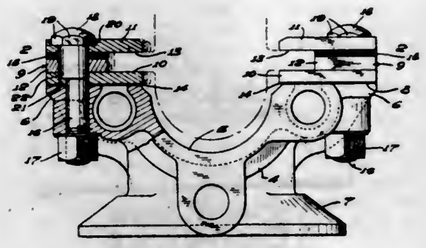
1. A process for preparing a highly sulphonated oil consisting of subjecting the oil to sulphonation in the presence of free sulphonating acid and a substance capable of evolving oxygen in acid solution.

1,804,184. AUTOMATIC SAFETY STOP. HYMAN SEGAL, Kansas City, Mo. Filed Dec. 18, 1929. Serial No. 414,999. 6 Claims. (Cl. 180—83.)



1. A vehicle stop construction comprising, in combination with the traction wheels of the vehicle, shoes releasable for dropping to the ground in front of said wheels, means for normally retaining said shoes suspended off the ground in inoperative position comprising fixed pins releasably engaging said shoes and movable detent and releasing elements operating in one direction to engage and retain said shoes on said pins and also operative by movement in the opposite direction to disengage and release said shoes from the pins, and manually controlled means for actuating said elements for releasing said shoes.

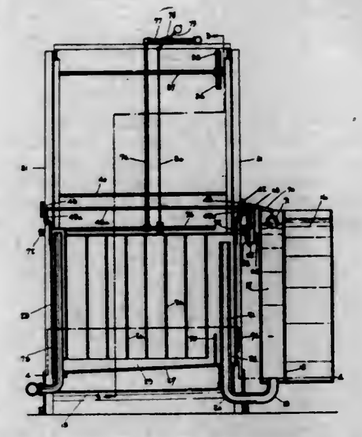
1,804,185. BRAKE. OSKAR LUDWIG SKOPIK, Berlin, Germany. Filed Sept. 26, 1927, Serial No. 221,910, and in Germany Apr. 8, 1927. 5 Claims. (Cl. 188—72.)



3. In an internal brake for a wheel, the combination of an intermediate ring and two outer rings, all said rings having a common axis, the intermediate ring being connected to the wheel structure to turn therewith, means adapted to prevent the outer rings from turning with the wheel, a cylinder structure connected to one of said outer rings to move in unison therewith, the other of said outer rings having a piston-like extension fiting within said cylinder structure, and means adapted to force fluid under pressure into said cylinder structure to cause said outer rings to be simultaneously actuated towards the intermediate ring.

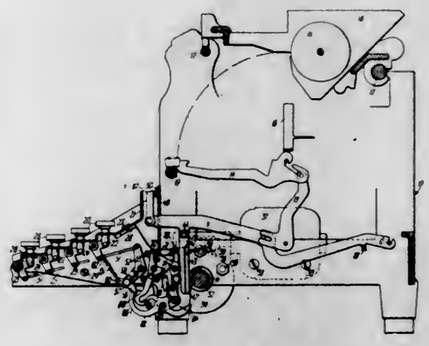
1,804,186. LUBRICATOR. EDWARD F. TERRY, Jr., Denver, Colo., assignor, by mesne assignments, to The Gardner-Denver Company, Quincy, Ill., a Corporation of Delaware. Filed June 13, 1927. Serial No. 198,577. 9 Claims. (Cl. 184—55.)

7. A lubricator comprising a casing forming a lubricant reservoir and having a side filling opening and a closure for the opening, a pendulum swung within the casing and having a fluid passageway therethrough, a stem rotatably mounted on the pendulum and having one end accessible through the filling opening, said stem having means for directing lubricant from the reservoir into the passageway, a key that detachably engages the stem for rotating the same, said key constituting a pointer, and a scale formed on the casing and with which the pointer coacts to determine the position of the stem.



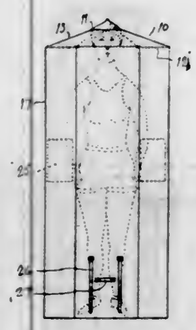
1,804,187. DRILL MOUNTING SHELL. EDWARD F. TERRY, Jr., Denver, Colo., assignor to Gardner-Denver Company, Denver, Colo., a Corporation of Delaware. Filed Apr. 16, 1928. Serial No. 270,550. 2 Claims. (Cl. 308—3.)

1. A shell for rock drills comprising a body, a guideway comprising bottom, top and intermediate plates forming a groove in which the flange of the drill body slides, and a bolt holding the guideway and the body together and holding the plates of the guideway together, said bolt having a cam portion engaged with all of said plates to cause them as a unit to be adjusted when the bolt is rotated.



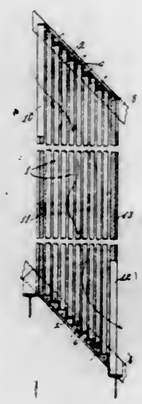
1,804,188. MEANS FOR SEPARATING PARTICLES FROM FREE WATER. CARL BUSCH THORNE, Hawkesbury, Ontario, Canada. Filed Oct. 6, 1928. Serial No. 310,871. 11 Claims. (Cl. 210—152.)

1. In means for separating particles from free water, a receptacle forming the discharge for the free water, a screen in said receptacle for collecting the particles, and an outlet for the waste water and reciprocally operating to



and from said receptacle, recovery troughs forming primary discharge passages and means for feeding liquid containing particles to said screen.

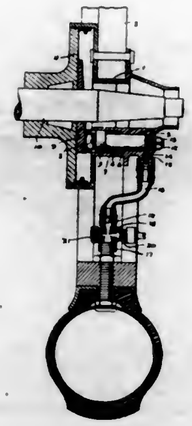
1,804,189. TYPEWRITING MACHINE. RICHARD VON REPPERT, Hartford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 18, 1928. Serial No. 306,698. 22 Claims. (Cl. 197—17.)



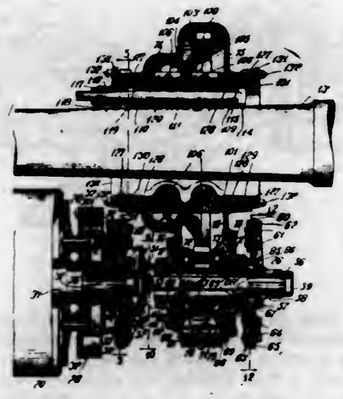
1. In a machine of the character described, the combination of a constantly-rotating power-roller, a typing mechanism comprising a friction pendant adapted to be operatively connected to the power-roller for actuation thereby, a pressure lever, a pressure roller pivoted on the pressure lever and adapted to be pressed against the pendant to establish operative connection between the pendant and the power-roller, a set lever adapted to be set in effective position to induce typing operation, a spring connected to the set lever tending to hold it in normal position, a lock to lock the set lever in effective position, a spring connecting the set lever to the pressure lever to actuate the pressure lever through the medium of the spring whenever the set lever is set in effective position, and a key-operated mechanism to set the set lever in effective position and induce actuation of the typing devices.

1,804,190. PORTABLE DRESSING SHIELD. OSWALD WENDEL, Bayonne, N. J. Filed Oct. 30, 1929. Serial No. 403,400. 8 Claims. (Cl. 135—5.)

2. In a dressing shield, a ring, a foldable frame attached to said ring, and a curtain suspended from and supported by said ring and adapted to enclose the body of the user.



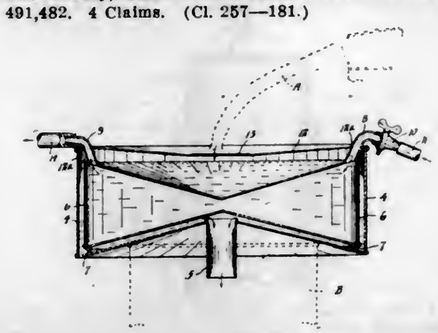
1,804,191. AIR HEATER. BENJAMIN B. WHITTAM, Elizabeth, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Oct. 19, 1927. Serial No. 227,080. 11 Claims. (Cl. 257—251.)



1. In an air heater, straight parallel tubes and a tube plate to which one end of said tubes are connected, said tube plate having flanges thereon at an acute angle to said tubes.

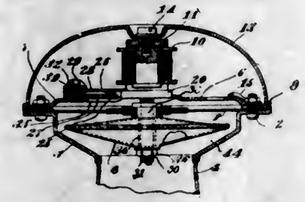
1,804,192. AUTOMATIC PUMP. ARCHIBALD EDGAR WILSON, Toronto, Ontario, Canada, assignor of one-half to Howard C. Hoops, Toronto, Canada. Filed Dec. 5, 1927. Serial No. 237,812. 2 Claims. (Cl. 152—11.)

1. In an automobile, the combination with a wheel thereof having a brake drum and a disc closing the open side of said brake drum, of a pump cylinder carried by said wheel opening into said brake drum, a cam ring encircling the wheel axis within said brake drum and fixed to said disc and presenting its cam face toward said drum, and a piston reciprocably mounted in said cylinder and operatively engaging said cam ring, said drum and disc forming a protective enclosure for said cam ring and the engaging portion of said piston.



1,804,193. GENERATOR AXLE-DRIVE. MARTIN P. WINTHER, Waukegan, Ill., assignor to Pullman Car & Manufacturing Corporation, Chicago, Ill., a Corporation of Illinois. Filed Oct. 7, 1929. Serial No. 398,080. 9 Claims. (Cl. 105—113.)

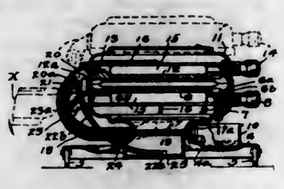
1. In a generator drive including a vehicle axle and a driving gear fixed to the axle, a generator having its longitudinal axis parallel therewith, pinion mechanism intermediate said gear and generator having a fixed orbit about said axle, clutch mechanism on said generator, and resilient transmission mechanism axially connecting said pinion and clutch mechanism.



CARNEGIE LIBRARY OF ATLANTA

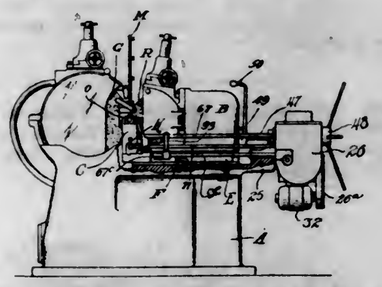
1,804,194. CREAM COOLER. JOHN J. AGRIMSON, Rushford County, Minn. Filed Oct. 27, 1930. Serial No. 491,482. 4 Claims. (Cl. 257—181.)

1. A cream cooler comprising, a pan, a drum disposed within said pan, inlet and outlet water connections for said drum, said drum having a centrally depressed top surface, and a discharge conduit extending downwardly from the bottom of said pan.



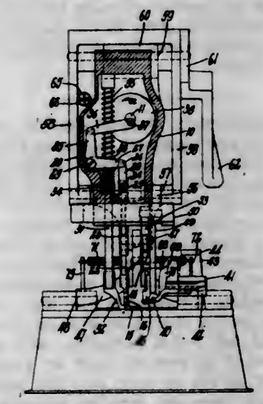
1,804,195. ELECTRIC SIGNALING APPARATUS. BUTLER AMES, Lowell, Mass. Filed Aug. 25, 1926. Serial No. 131,380. 10 Claims. (Cl. 177—7.)

1. Electric signaling apparatus comprising a vibrating member, mechanism for vibrating the member at one side thereof, a horn element at the other side thereof, a sounding box at the end of the horn element adjoining the member, and a hollow metal baffle plate therein rigidly secured to the member and adapted to vibrate therewith, said baffle plate comprising a pair of sheet metal members with marginal portions joined and central portions maintained in rigid spaced relation by a connecting element.



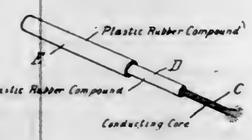
3. Electrical signaling apparatus comprising a casing, a diaphragm mounted in the casing, means for vibrating the diaphragm including a member extending through an opening therein, and a disk clamped against the diaphragm around said opening, the disk being curved toward the diaphragm at its outer margin so that the diaphragm is firmly engaged at the peripheral edge of the disk.

1,804,196. ELECTRICAL COOKING APPLIANCE. WILLIAM A. BARNES, Minneapolis, Minn., assignor to Dominion Electrical Mfg. Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Nov. 11, 1929. Serial No. 406,402. 4 Claims. (Cl. 53—5.)



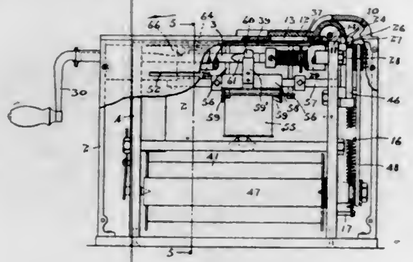
1. In a cooking appliance, a base, a lower grid section secured to said base, an upper grid section, connections between said sections including a U-shaped member having spaced upwardly extending arms, pivotal connections between the upper ends of said arms and said upper section and guide elements in said lower section in which said arms are slidably disposed, said arms being so curved and arranged in said guide elements that said upper grid section will always be disposed vertically above said lower grid section when in horizontal position.

1,804,197. CENTERLESS GRINDING. GEORGE W. BINNS, WALTER D. ARCHEA, and LESTER F. NENNINGER, Cincinnati, Ohio, assignors, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 17, 1926, Serial No. 102,762. Renewed Aug. 15, 1929. 37 Claims. (Cl. 51—103.)



1. The combination with a centerless grinder, including opposed grinding and regulating wheels forming a work-receiving throat, a work-support within the throat, and means for causing a relative movement of one of said wheels to vary the width of the throat, said means including a driven cam, a rock lever, operated by the cam, and means for varying the amplitude of the grinding throat variation for the same arc of movement of the rock lever.

1,804,198. TAPE ATTACHING MACHINE. STEPHEN G. BLESSINGTON, Claremont, N. H. Filed May 1, 1928. Serial No. 274,290. 2 Claims. (Cl. 154—42.)

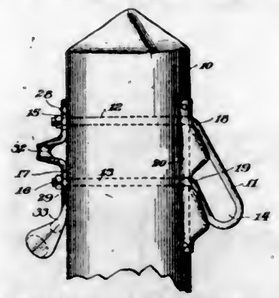


1. A tape attaching and severing machine having, in combination, mechanism for attaching a strip of adhesive tape to a piece of sheet material, mechanism to intermittently feed said sheet material with a tape attached thereto, a tape guide, a rocker arm, a cutter fast thereto and positioned above the tape, a rocker frame, a second cutter fast to said rocker frame and positioned beneath the tape and connected to said rocker arm, said rocker arm and rocker frame being relatively so pivotally mounted that downward movement of the upper cutter will cause the lower cutter to be moved beneath the tape and the tape to be severed by said cutters.

1,804,199. RUBBER COMPOUND AND ARTICLES. CHARLES R. BOGGS, Waban, and JOHN T. BLAKE, Boston, Mass., assignors to Simplex Wire & Cable Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 6, 1926. Serial No. 100,195. 6 Claims. (Cl. 154—2.6.)

1. An improved composite product adapted to resist ozone comprising a body portion containing vulcanized gum and a covering therefor containing unvulcanized gum of rubber character.

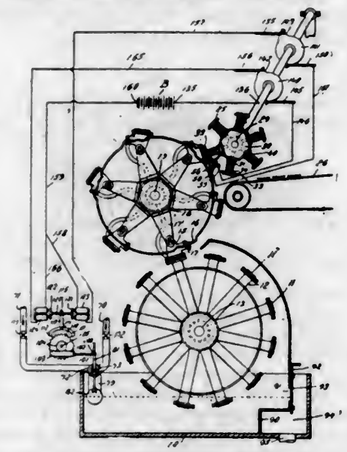
1,804,200. AUTOMATIC DOCUMENT VENDING MACHINE. WILLIAM HENRY DAVENPORT BROUSE, Toronto, Ontario, Canada. Filed June 12, 1926. Serial No. 115,605. 21 Claims. (Cl. 101—19.)



1. In a form vending machine, means for delivering a form sheet from the machine, means for retaining a record portion of said form sheet in the machine and means controlled by the form sheet for controlling the operation of the delivery means.

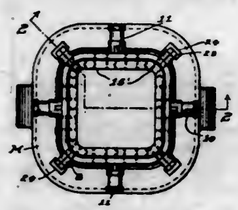
1,804,201. REDUCING ZINCIFEROUS MATERIAL. EARL H. BUNCE and GEORGE T. MAHLER, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a Corporation of New Jersey. Filed July 13, 1927. Serial No. 205,527. 1 Claim. (Cl. 75—28.)

The method of reducing zinciferous material which comprises heating a porous charge composed of agglomerates of zinciferous material and agglomerates of carbonaceous material in a reducing chamber to a sufficiently high temperature to reduce compounds of zinc, maintaining throughout the porous charge of agglomerates a flow of hot gases containing carbon monoxide, said carbon monoxide being formed in part at least by permitting controlled amounts of air to seep into the heated charge, and withdrawing from the reducing chamber a gaseous product containing metallic zinc vapor.



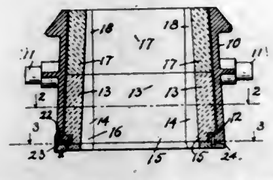
1,804,202. POLE GUY FIXTURE. ALBERT B. CHANCE, Centralia, Mo. Filed Apr. 26, 1928. Serial No. 272,901. 14 Claims. (Cl. 24—115.)

1. A pole guy fixture comprising a saddle member having a curved bearing surface adapted to fit against a pole, said saddle having an aperture and an outwardly inclined rod supporting surface leading to said aperture, and a guy securing fixture comprising a rod adapted to pass through an aperture in said pole and through said aperture in said saddle, said rod having a laterally bent portion formed



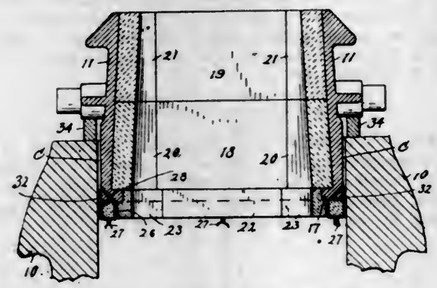
with a cable engaging loop, said laterally bent portion engaging said saddle, and means carried by the end of said rod for securing said saddle and said rod on said pole.

1,804,203. PULP MOLDING MACHINE. MEBLE P. CHAPLIN, Waterville, Me., assignor, by mesne assignments, to Fidelity Trust Company, trustee, Portland, Me., a Corporation of Maine. Filed Mar. 29, 1928. Serial No. 265,550. 35 Claims. (Cl. 92—56.)



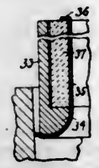
1. In a pulp molding machine, a supply of pulp solution, a pair of coacting dies, one of said dies being adapted to receive a deposit of pulp thereon, and means controlled by the relative positions of said dies when the dies are in coacting relation for regulating the consistency of the pulp solution.

1,804,204. HOT TOP FOR INGOT MOLDS. WALTER M. CHARMAN and HARRY J. DARLINGTON, Youngstown, Ohio; said Darlington assignor to said Charman. Filed Dec. 31, 1928. Serial No. 329,486. 23 Claims. (Cl. 22—147.)



1. A hot top adapted to extend within the end of an ingot mold, and to rest upon the top of the ingot when poured, means for supporting the hot top temporarily during the pouring operation, and parting means protecting the end of the hot top and facilitating stripping of the hot top from the ingot.

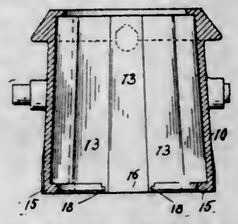
1,804,205. LINING FOR HOT TOPS. WALTER M. CHARMAN, Youngstown, Ohio. Filed Dec. 21, 1929. Serial No. 415,646. 11 Claims. (Cl. 22—147.)



1. In a hot top, a metal casing having a flat lower surface, a lining for said surface, means for detachably securing said lining to said casing, and projection and socket connections between the lining and the casing for holding the lining against lateral movement.

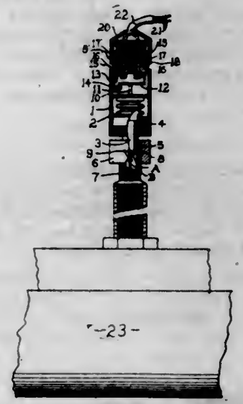
1,804,206. HOT TOP. WALTER M. CHARMAN and HARRY J. DARLINGTON, Youngstown, Ohio; said Darlington assignor to said Charman. Filed Dec. 30, 1929. Serial No. 417,326. 14 Claims. (Cl. 22—147.)

1. In a hot top, a casing, a lining therefor of refractory material, said lining comprising alternate elements having parallel side edges, and intermediate elements tapered toward one end thereof.



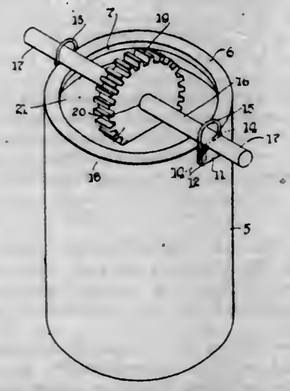
1,804,207. MOLD WIPER FOR HOT TOPS. WALTER M. CHARMAN and HARRY J. DARLINGTON, Youngstown, Ohio; said Darlington assignor to said Charman. Filed Feb. 24, 1930. Serial No. 430,663. 23 Claims. (Cl. 22—147.)

1. In a hot top for ingot molds, sheet material mounted on the hot top protruding outwardly therefrom near the bottom thereof, said material being shaped at its outer edge to conform with and wipe the mold wall as the hot top is lowered into the mold.



1,804,208. HOT TOP. WALTER M. CHARMAN, Youngstown, Ohio. Filed Mar. 29, 1930. Serial No. 440,127. 9 Claims. (Cl. 22—147.)

1. In a hot top, a metallic casing having an inner surface tapered toward the top thereof, and having an inwardly directed ledge at the bottom thereof, said ledge being provided with a removable section, and a lining com-



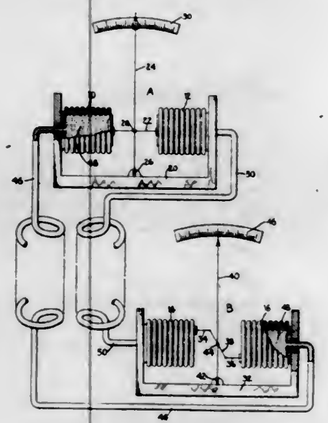
prising tapered blocks, one of said blocks having a maximum width less than the length of the lining removable section.

1,804,209. ELECTRIC ANNUNCIATOR FOR AUTOMOBILE TIRES. NORMAN R. COWPERTHWAIT, Silver Lake, Kans. Filed May 18, 1928. Serial No. 278,868. 2 Claims. (Cl. 200—58.)

1. In a mechanism of the kind described, the combination of a housing containing a bellows, a tube, and a switch, the housing being in threaded engagement with the tube, and the said tube being in threaded engagement with a valve stem, the threaded engagement between the housing and the tube providing a means of adjustment for the switch.

1,804,210. LUBRICANT-DEMONSTRATING CAN. HENRY H. CROSS and GEORGE F. FOX, Chicago, Ill. Filed Sept. 4, 1928. Serial No. 308,763. 1 Claim. (Cl. 35—16.)

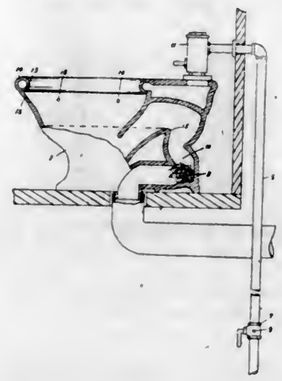
In a structure of the character described, the combination with a receptacle having an opening at one end and



adapted to contain lubricant, a pair of hinged loop members mounted on opposite sides of the receptacle adjacent the end and adapted to be swung to a position above the end of the receptacle to form bearings for a shaft inserted loosely through said loop members and projecting beyond the same, whereby said shaft may be rotated by manipulating the ends thereof with the fingers; and a gear mounted on said shaft between said bearings and detachable when said shaft is removed, said gear being rotatable with said shaft, supported by said shaft in position to project through the opening and into the lubricant in said container.

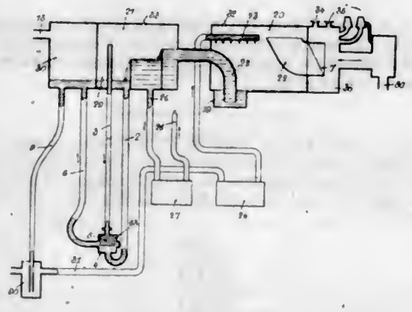
1,804,211. SHOE LACING. NATHAN DANIELS, Malden, and JOHN M. PERO, Randolph, Mass. Filed Aug. 30, 1930. Serial No. 479,029. 3 Claims. (Cl. 24—143.)

3. As an improved article of manufacture, a ribbonlike fabric of gros-grained weave, of suitable length and width for use as a shoe lacing, provided with lacing tips at each end, and with the gros-grained weave construction of sufficient proportion to produce a non-slipping effect when tied in a shoe lace knot.



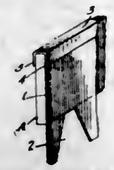
1,804,212. MOVEMENT TRANSMITTING SYSTEM. CLARENCE A. DE GIERS, Forest Hills, N. Y., assignor to The Liquidometer Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Jan. 16, 1930. Serial No. 421,325. 8 Claims. (Cl. 116—21.)

1. A movement transmitting apparatus comprising in combination, a pair of movable members remote from each other, and an hydraulic device effective when one of said members is moved for moving the other of said members a corresponding amount in synchronism with said first member.



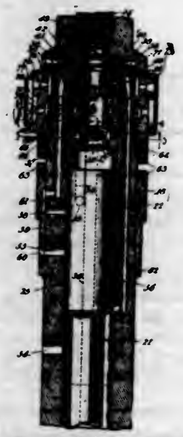
1,804,213. WASTE RECEPTACLE. JOHN DOUGLAS, Pensacola, Fla., assignor to The John Douglas Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 29, 1930. Serial No. 424,263. 7 Claims. (Cl. 4—70.)

5. The combination of a receptacle comprising a perforate wall and an inlet discharging into the receptacle, a discharge duct including means for establishing a normal fluid level in the receptacle for sealing the discharge duct, a water line discharging into the inlet of the receptacle, a shut-off valve in the water line located below the receptacle said valve having a means for draining the water line to the receptacle inlet, and a flush valve in the water line between the inlet and the shut-off valve, the perforate portion of the receptacle wall being disposed at such elevation relative to the normal fluid level and the receptacle



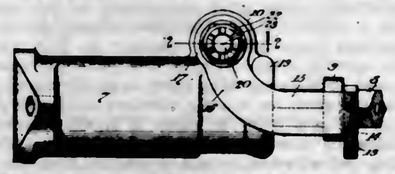
inlet that under normal conditions there will be no overflow through the perforation in the wall of the receptacle, but under abnormal conditions the rise of the water level causes the water to flow through the receptacle perforation to the exterior of the receptacle rather than to the level of the fluid inlet.

1,804,214. FEED WATER HEATER. SÉBASTIEN OTTO ALFRED FIEDLER, Paris, France, assignor to L'Auxiliaire des Chemins de Fer et de l'Industrie, Paris, France. Filed July 27, 1928, Serial No. 295,724, and in France June 12, 1928. 9 Claims. (Cl. 261—1.)



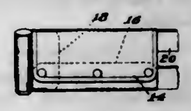
1. A feed water heater for boilers comprising a substantially closed mixing chamber adapted to be supplied with heating steam, means for supplying said mixing chamber with feed water to be heated, a substantially closed distribution chamber, a hydraulic joint between said chambers, the weight of the water column forming said joint being adapted to be overcome by the pressure of the heating steam, whereby water and steam are caused to flow from said mixing chamber into said distribution chamber, said mixing chamber containing substantially no water, means for delivering hot water from said distribution chamber to the boiler feeding means, and steam trap means for discharging any excess of water from said distribution chamber and preventing the escape of steam therefrom.

1,804,215. EXPANSION JOINT INSTALLING DEVICE. ALBERT C. FISCHER, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed Dec. 23, 1926. Serial No. 156,698. 5 Claims. (Cl. 94—51.)



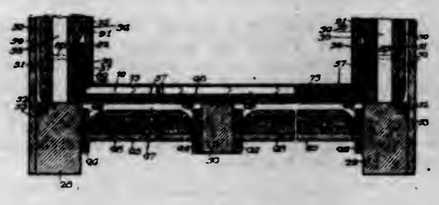
5. Means for installing preformed expansion joint strips in pavements, comprising a backing member, a projection rigidly attached to and extending from one edge of said member to overlie one edge of an expansion joint strip, and impaling means for engaging said strip.

1,804,216. VARIABLE STROKE TOOL. HJALMER C. GUSTAFSON, Denver, Colo., assignor to Gardner-Denver Company, Denver, Colo., a Corporation of Delaware. Filed May 21, 1928. Serial No. 279,370. 10 Claims. (Cl. 121—12.)



1. In a variable stroke fluid operated tool, the combination with a cylinder having a piston chamber and a piston operating in the chamber, of means for causing the piston to have strokes of different lengths including exhaust ports for the piston chamber opening from the piston chamber at different distances from the valve and covered and uncovered by the piston, an automatic distributing valve, a plurality of trip passageways leading from the piston chamber at different distances from the valve and extending to the valve and covered and uncovered by the piston, and means for closing and opening the exhaust port and the trip passageway that are closer to the valve.

1,804,217. TOOL RETAINER. HJALMER C. GUSTAFSON, Denver, Colo., assignor to Gardner-Denver Company, Denver, Colo., a Corporation of Delaware. Filed June 14, 1928. Serial No. 285,342. 8 Claims. (Cl. 121—82.)

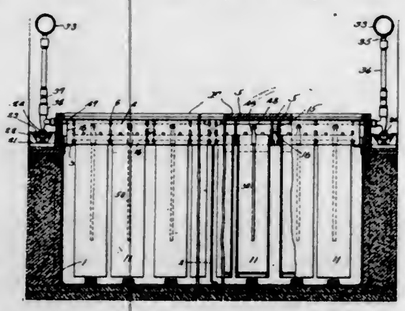


1. The combination with a tool holder, of a tool retainer including a collar engaging yoke portion having an open side, a substantially straight arm carrying said yoke portion and having an offset rear terminal extending laterally on the open side of the yoke portion, and pivoted to one side of the holder, and a stop lug on the tool holder adjacent the pivot mounting and against the rear side of which the offset terminal abuts to limit the swinging movement of the arm and collar engaging yoke portion when embracing a tool and act as an abutment to receive pulling strain on the retainer, said arm being located longitudinally of and in the same plane with the tool when the offset terminal abuts the stop lug.

1,804,218. BUMPER BOOT. ALBERT L. HOWARD, Brockton, Mass., assignor to Hamilton-Wade Company, Brockton, Mass., a Corporation of Massachusetts. Filed Sept. 9, 1930. Serial No. 480,641. 17 Claims. (Cl. 293—55.)

1. A boot for protecting the end portions of automobile bumpers, comprising a non-rigid body portion for enclosing the end portion of a bumper and an attached and flexible flap portion adapted to fold around and protect the end of the bumper.

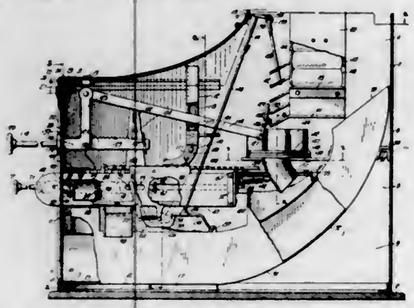
1,804,219. REFRIGERATOR CAR. GEORGE A. HULL, Chicago, Ill., assignor to Equipment Specialties Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 5, 1927. Serial No. 237,638. 15 Claims. (Cl. 105—422.)



1. In a refrigerator car, the combination of a supporting frame with a layer of heat insulating material carried by said frame, a waterproof layer supported above said insulating material, channeled guides carried by said supporting frame, and a plurality of sections of flooring in said guides, said sections comprising a plurality of strips of lumber secured together at their edges.

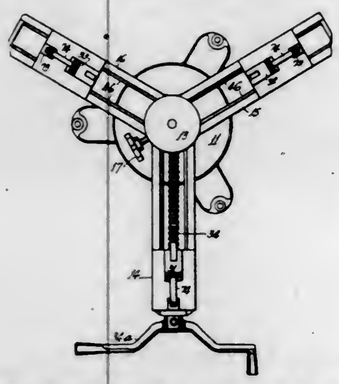
2. In a refrigerator car floor, the combination of a plurality of strips of flooring with a pair of channeled guide members for supporting said flooring, a supporting frame for said car, and upwardly extending metal straps on said channeled members for securing the same to said car frame.

1,804,220. ICE MANUFACTURING APPARATUS. GEORGE LANGE, New York, N. Y., assignor to American Ice Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 10, 1928. Serial No. 298,784. 8 Claims. (Cl. 62—159.)



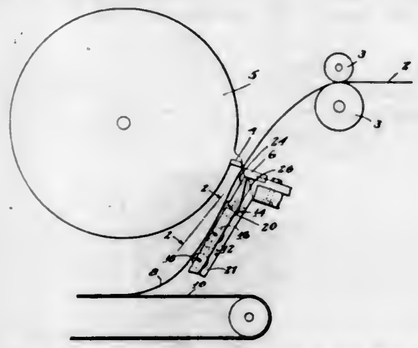
1. In apparatus of the class described the combination with a plurality of cans and means for supporting the cans in a row, of a header mounted for back and forth rotation above the row of cans, drop pipes, flexible

connections between said pipes and the header for yieldingly oscillating the pipes with the header, one of said



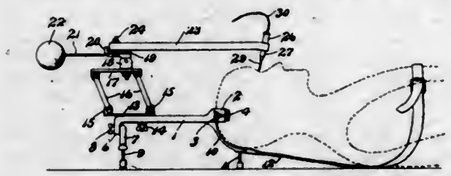
pipes being supported within each can, means for actuating the header, and means for supplying air under low pressure to the header.

1,804,221. VENDING MACHINE. MARTIN J. MADISON, Tulsa, Okla. Filed June 19, 1929. Serial No. 371,974. 15 Claims. (Cl. 194—91.)



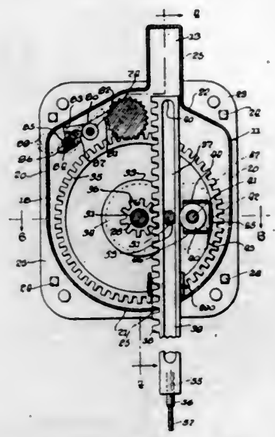
1. In a vending machine, a housing, horizontally spaced article containers within the housing, ejector mechanism operable exteriorly of the housing and including a coin controlled ejector bar normally spaced vertically from the containers and selectively alignable with the containers for ejecting the articles therefrom, and a chute cooperating with the containers for receiving and delivering the ejected articles.

1,804,222. TIRE REPLACING MACHINE. JOSEPH J. MASCUCH, Newark, N. J. Filed May 31, 1929. Serial No. 367,299. 2 Claims. (Cl. 157—6.)



1. A tire changing machine comprising a frame having channel shaped arms with a pair of racks formed on inwardly projecting, parallel ledges in each of said channels, vise heads slidable on each of said arms, a jaw depending from each vise head in said channels between said racks, a rack plate for each jaw having teeth arranged to engage said racks and having apertures for the members of said jaw whereby it may be moved vertically on said jaw to engage said racks and thereby hold the vise head in position and a weighted arm pivoted to each jaw having a cam engaging said plate for raising and lowering said plate.

1,804,223. SHEET CUTTING AND FEEDING MACHINE. CHARLES BENJAMIN MAXSON, Westerly, R. I., assignor of one-half to Julian W. Maxson, Westerly, R. I. Filed Dec. 10, 1929. Serial No. 413,008. 3 Claims. (Cl. 164—68.)

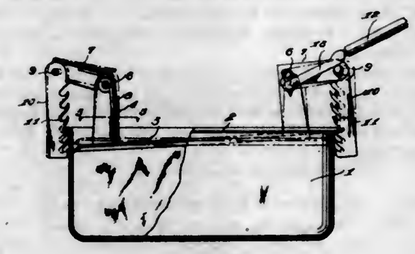


1. A machine for cutting sheets from a web and feeding the cut sheets having, in combination, a cutter, means for feeding the web at a downward incline to the cutter, means for feeding the sheets after they are cut by the cutter from the web in a direction at an angle to the said incline, a member in the path of feeding movement of the sheets from the cutter to the sheet-feeding means, and freely rotatable anti-friction rolls carried by the member and adapted to be engaged by the sheets during their travel from the cutter to the sheet-feeding means.

1,804,224. PLASTIC MODELING MACHINE. JAY H. METCALF, Grand Rapids, Mich. Filed Nov. 19, 1928. Serial No. 320,372. 11 Claims. (Cl. 41—25.)

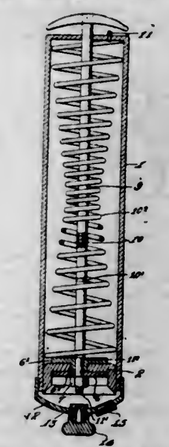
1. In a machine of the class described, a substantially horizontal bar, a plate mounted for adjustment above and lengthwise of said bar, parallel links pivoted to and extending upwardly from the plate, a second slotted bar pivotally connected to the upper end of the links, means for securing the links, bar and plate in fixed relation to each other after adjustment to any desired position, a member slidably mounted on said second bar, a supporting plate pivotally mounted on said member to turn about a horizontal axis, arms pivotally mounted at one end on the supporting plate, operative connections between the arms for causing simultaneous equal movement of one arm with the other, a stylus attached to and depending from the free end of one of the arms, a modeling tool attached to and depending from the free end of the other arm, and means on the first bar for holding the head of a body in secure relation thereto.

1,804,225. HAND BRAKE. ARTHUR F. O'CONNOR, Chicago, Ill., assignor to Union Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed May 14, 1928. Serial No. 277,606. 6 Claims. (Cl. 74—112.)



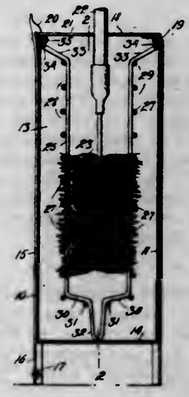
1. In a hand brake mechanism of the character described, the combination with a supporting housing; of a rack bar adapted to reciprocate in said housing; a gear meshing with the teeth of the rack bar at one side of the same, and a roller carried by the suppporting housing at the opposite side of said rack bar and bearing thereon, said gear and roller serving as guide means for said rack bar, and a second gear mounted to rotate about an axis common with the axis of said first gear, said second gear being of larger diameter and provided with an offset portion against which said rack member may bear; and means adapted to bear upon said rack bar at the side opposite to said offset portion.

1,804,226. VULCANIZATION ACCELERATOR AND MANUFACTURE THEREOF. JULIUS A. NIEUWLAND, Notre Dame, Ind., assignor to Canadian Electro Products Company, Limited, Montreal, Canada. Filed Jan. 10, 1927. Serial No. 160,309. 8 Claims. (Cl. 260—1.)



1. A process which comprises reacting together acetylene and an amine in presence of cuprous chloride as catalyst.

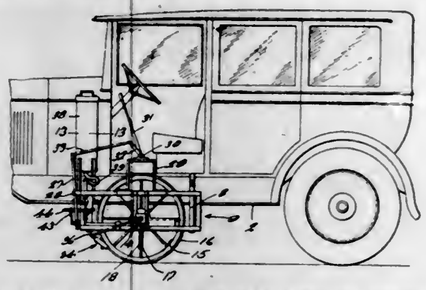
1,804,227. APPARATUS FOR PRESSING AND COOKING MEATS. ARTHUR E. OZOUF, Chicago, Ill., assignor to The Allbright-Nell Company, Chicago, Ill., a Corporation of Illinois. Original application filed Sept. 3, 1925, Serial No. 54,293. Divided and this application filed Apr. 21, 1928. Serial No. 271,776. 5 Claims. (Cl. 100—57.)



4. In an apparatus of the class described, a receptacle, a cover slidably mounted in said receptacle, standards rising adjacent the ends of said cover, members pivoted to the upper ends of said standards, pawls carried by said members adapted for engaging the ends of said receptacle, coil springs supported by said standards, each coil spring having extended ends reacting against said standard and exercising a yielding leverage action between its respective standard and member.

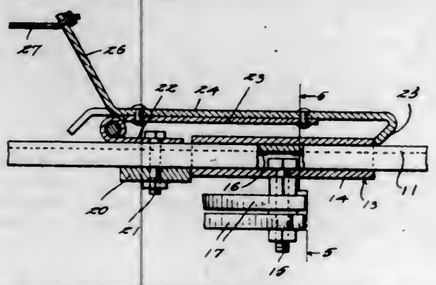
1,804,228. FIRE EXTINGUISHER. EUGENE PAQUETTE, Willimansett, Mass. Filed Sept. 10, 1927. Serial No. 218,667. 1 Claim. (Cl. 299—92.)

In a fire extinguisher, a cylindrical container, a normally closed discharge port at one end thereof, a normally closed filling opening for the container adjacent said end of the container, a piston operating within the container, a sectional rod having one end secured to the piston and its opposite end extending through the other end of the container and comprising an inner piston carried section and an outer detachable section, said inner section having a notch therein, a spring surrounding the rod and bearing against the piston and the second named end of the cylinder, a handle carried by the outer detachable section of the rod, and a latch pivoted upon the second named end of the container to engage within the notch of the rod and hold the spring under compression.



1,804,229. MOP CLEANING DEVICE. ALFRED S. POWELL, Floral Park, N. Y., assignor to Stransky Products Corporation, New York, N. Y., a Corporation of New York. Filed June 29, 1929. Serial No. 374,823. 5 Claims. (Cl. 15—142.)

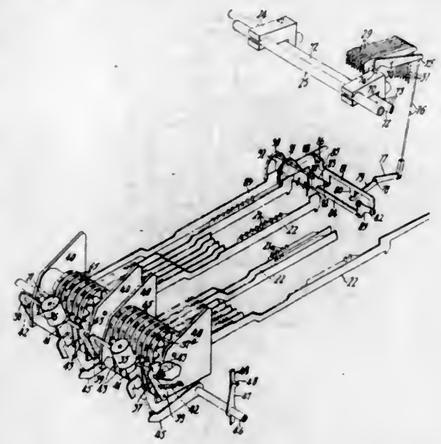
5. A mop cleaner, comprising a casing having an open top for receiving the head of a mop, a shoulder adjacent



the top opening, and a cleaning device including a spring metal frame sprung into engagement with the bottom of the casing and the shoulder.

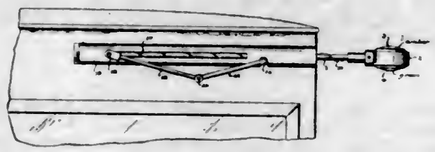
1,804,230. ROAD MARKER. HARRY E. RAIFE, Wilkes-Barre, Pa. Filed Apr. 15, 1930. Serial No. 444,504. 3 Claims. (Cl. 91—49.)

3. A road marker of the character described comprising a frame, means for mounting the frame on the running board of a vehicle for vertical and lateral adjustment relative to said running board, a marking wheel rotatably mounted for vertical sliding movement in the frame, a marking fluid supply tank, a distributing pan operatively engaged with the periphery of the marking wheel and mounted for vertical movement therewith, valve controlled means connected with the supply tank for discharging fluid therefrom into the distributing pan, manually operable means for shifting the marking wheel to inoperative position and means operatively connecting the valved means with said wheel shifting means for actuation thereby in a manner to control the passage of fluid from the supply tank to the distributing pan.



1,804,231. GARAGE DOOR. FRANK A. RANTZ, St. Petersburg, Fla. Filed July 5, 1927. Serial No. 203,576. 1 Claim. (Cl. 292—298.)

The combination with a horizontal support and a yoke slidable thereupon, of latch means adjustably mounted on said support and adapted for engagement with said yoke, said latch comprising a fixed leaf adjustably mounted on said horizontal support, a rockable leaf pivotally mounted on said fixed leaf, and yoke engaging means mounted on said pivoted leaf, said yoke engaging means comprising an elongated plate having a reverted forward end portion adapted for engagement with one end of said yoke, an angularly inclined rear portion adapted for engagement with an operating element.



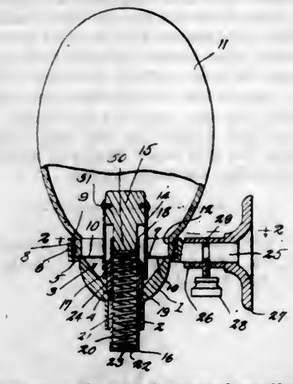
1,804,232. COMBINED TYPEWRITING AND COMPUTING MACHINE. HENRY REICH, Bayonne, N. J., assignor, by mesne assignments, to Elliott-Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 27, 1926. Serial No. 91,030. 16 Claims. (Cl. 235—60.)

1. In a computing machine having numeral-keys, a traveling carriage, a plurality of registers, each having a series of computing wheels, a special clearance-sign type-bar, and a plurality of independently-operable special clearance-sign keys, one for each register, all of the clearance-sign keys being effective to operate the clearance-sign

type-bar; means controlled by the carriage at a predetermined position thereof for locking the clearance-sign key of the register adjacent the register in which computations are made.

1,804,233. SIGNAL. HENRY G. RUNNE, Rochester, N. Y. Filed Aug. 10, 1927. Serial No. 212,098. 5 Claims. (Cl. 116—46.)

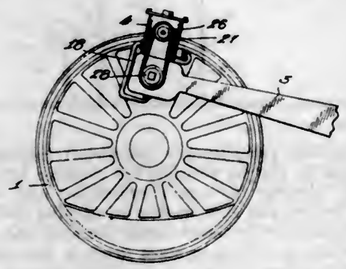
1. A signal comprising a signalling element having a plurality of separate illuminated portions, a rod by which said signalling element is supported to move axially with the rod, and means for moving said rod axially and also rotating said rod while the signals are illuminated and during such axial movement a number of complete rotations to successively present said illuminated portions to view.



1,804,234. WOOD OIL FEEDER AND METHOD OF PRODUCING THE SAME. JOHN CESSNA SHARP, Chattanooga, Tenn., assignor to Nathan Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Dec. 11, 1922. Serial No. 606,332. 9 Claims. (Cl. 308—243.)

1. The method of treating wood preliminarily to the use thereof in the feeding of lubricating oil comprising the subjection of the wood to a bath of heated oil to expel natural pore filling substances and increase its ability to attract and feed oil.

1,804,235. GRAVITY FEED POWDERED SOAP DISPENSER. ARTHUR W. SMITH, Bemidji, Minn. Filed Apr. 7, 1930. Serial No. 442,305. 5 Claims. (Cl. 221—61.)



1. A gravity feed soap powder dispenser, comprising a base having a chamber provided with an outlet, a container connected to the base, a partition separating the

container from the chamber and having a hole establishing communication between the container and the cham-

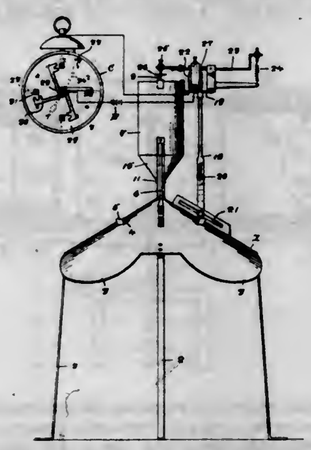
ber, a valve seated on the base to close the outlet, a tubular guide mounted in the partition, and a removable stopper in the guide, the valve being slidable on the stopper.

1,804,236. AUTOMATIC CRANK PIN OILER. MELVIN SORENSON, Reynolds, N. Dak. Filed Jan. 27, 1930. Serial No. 423,849. 1 Claim. (Cl. 184—27.)

A means for lubricating the crank pin of a locomotive or the like, in which said pin is journaled in a connecting rod, said means comprising a lubricant receptacle which is fixed on the connecting rod, an inverted substantially T-shaped pipe member in the receptacle, a spring influenced plunger in the vertical branch of the pipe member, a cam engaging the plunger and having a shaft, a wheel on the outer end of the shaft, a wheel on the outer end of the crank pin, an endless element trained around the wheels, one of the longitudinal branches of the said pipe member extending to one side of the receptacle and being enlarged to provide a seat for a ball valve, a pin for limiting the unseating of the valve, a pipe connection between said branch and the top of the connecting rod and communicating with the crank pin, the second branch of the pipe member having its end affording a seat for a ball valve, a pin for limiting the unseating of the valve and a pipe member connected with the receptacle and with the lower portion of the connecting rod and communicating with the crank pin.

1,804,237. COMPOSITE METAL AND BRAZING PROCESS THEREFOR. CHRISTIAN STEENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 16, 1925. Serial No. 62,928. 7 Claims. (Cl. 113—112.)

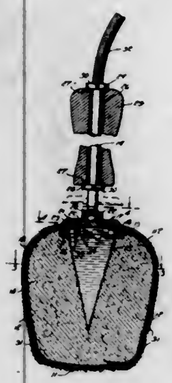
1. The method of preparing a metal structure for copper brazing, said structure being adapted to modify or prevent the action of brazing copper thereon, which comprisea inserting the structure in a steel casing, welding said casing to the structure, and forming the structuer into a relatively thin ribbon.



3. A composite metal, comprising an alloy, one of the ingredients of which is readily dissolved out by molten copper, and a ferrous coating on the alloy, said coating substantially surrounding the alloy and being welded thereto.

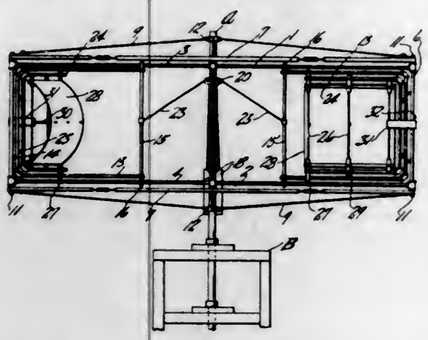
1,804,238. SAFETY WARDROBE TICKET-SET. ERNST TENSFELDT, Berlin-Charlottenburg, Germany. Filed Dec. 26, 1929, Serial No. 416,598, and in Germany June 26, 1929. 3 Claims. (Cl. 283—9.)

1. A check set comprising a plurality of consecutively numbered checks, the consecutive checks each consisting of two parts having the same number, and a figure characterisation provided on both parts of each check, the figure of each check being distinct from those of each of a plurality of both the preceding and subsequent checks.



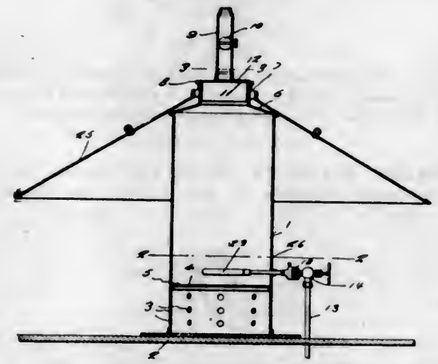
1,804,239. AUTOMATIC POULTRY FEEDING DEVICE. MICHAEL J. WAREK, Plains, Pa. Filed Nov. 2, 1927. Serial No. 230,616. 1 Claim. (Cl. 119—56.)

A poultry feeding device comprising a hopper having a discharge opening therein, a valve for controlling the opening and including a stem extending through the hopper, a bracket arm supported by the upper end of the



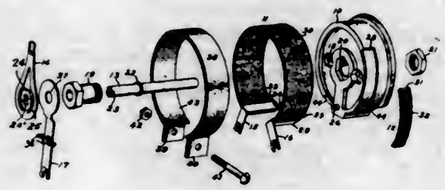
hopper and projecting horizontally therefrom, a support arranged beneath the hopper, a post including relatively adjustable sections connecting the bracket arm with the support, a magnet mounted upon the bracket arm, an armature arm therefor mounted for pivotal movement on said bracket arm, a spring connecting one end of the armature arm with the adjacent end of said bracket arm and normally maintaining one end of the armature spaced above the valve stem, and a circuit for the magnet, whereby movement of the armature arm will cause an opening and closing movement of the valve.

1,804,240. POT AND PAN CLEANER. ULYSSES S. G. WELSH, New York, N. Y. Filed Aug. 16, 1928. Serial No. 300,069. 2 Claims. (Cl. 15—230.)



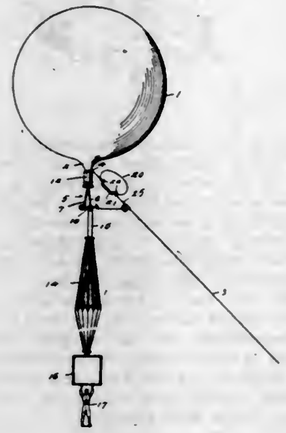
1. A pot and pan cleaner, including a substantially rigid perforated shell, separate abrasive material removably carried upon the surface of said shell, a pervious detergent holder arranged within and spaced from said shell and coaxial therewith, absorbent material between said shell and detergent holder; and means for rotating said shell and detergent holder.

1,804,241. WIND MOTOR. JOHN WILLIAM WHIPP, Eureka Springs, Ark., assignor of one-half to W. J. Lloyd, Eureka Springs, Ark. Filed Sept. 9, 1929. Serial No. 391,179. 1 Claim. (Cl. 170—26.)



In a wind motor, a rotatable motor frame including radially extended pairs of vertically spaced spokes and vertical end bars connecting the spokes at their outer ends, other frames hinged on the end bars of alternate pairs of spokes, catches upon the said outer frames and adapted to engage the said spokes, slide rods mounted on the pairs of spokes intervening between those carrying the outer frames, weights slidably mounted on the said slide rods, pulleys mounted on the slide rods, cables trained over the pulleys and connected at their ends to the weights and the inner ends of the outer frames, inner sail frames hinged to the outer ends of the said outer frames, sails mounted in the said inner sail frames, the said sails being bowed outward from top to bottom, catches upon the inner ends of the inner sail frames and adapted to engage the outer frames upon the side opposite to which the said outer frame catches are disposed, and leaf springs secured to the said frame end bars and engaging the said inner frames to normally hold the same swung within the outer frames.

1,804,242. BROODER. CHARLES L. ANDERSON, Ravenswood, W. Va. Filed Apr. 23, 1928. Serial No. 272,289. 1 Claim. (Cl. 126—119.)

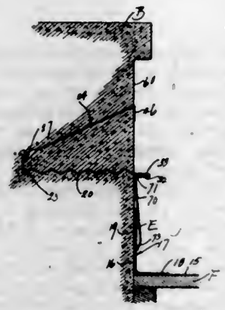


A brooder comprising a cylindrical heating chamber arranged in upright position, the chamber having an upwardly tapering top and a cylindrical neck upstanding from the top and surrounding an opening therein, a cap of cylindrical form seated within the neck, the cap having an opening in its top, a stack fitted in said opening and upstanding from the cap, a manually operable damper in said stack, a partition within the chamber above the bottom thereof and formed with openings, a burner within the chamber and arranged above and in spaced relation to the partition, the wall of the chamber below the partition being formed with openings for the admission of warmed air into the portion of the chamber below the partition and the circulation of the air currents up through the openings in the partition and finally through the stack, the cap having an opening therein at one side of the stack whereby the flame of the burner may be viewed and a closure plate swivelled upon the top of the cap and movable into and out of position to close said last named opening.

1,804,243. CURRENT REGULATING DEVICE. WILLIAM L. BOND, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 20, 1928. Serial No. 294,251. 10 Claims. (Cl. 201—55.)

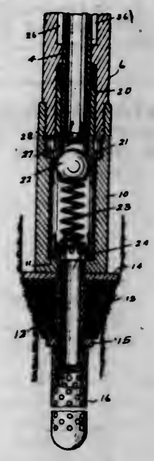
1. A rheostat comprising a main resistance element, a movable contact member cooperating therewith, and an auxiliary resistance element electrically connected substantially throughout its length in parallel with a portion of said main resistance element so as to vary the ratio of the change of resistance upon corresponding movement of said contact member over the different portions of said main resistance element.

1,804,244. AERIAL TOY. VINCENT BRADY, New York, N. Y. Filed Mar. 8, 1930. Serial No. 434,407. 6 Claims. (Cl. 46—52.)



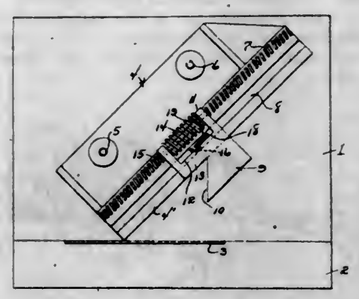
5. A toy, comprising a balloon, a flexible member for holding the balloon captive, an aeronautical device, a catch releasably suspending the aeronautical device from the balloon, and means connecting the catch to said flexible member to permit it to be operated by a pull on said member to effect the release of the aeronautical device.

1,804,245. COMPOSITION OF MATTER. DANIEL C. BRUCE, Nashville, Tenn. Filed Apr. 26, 1927. Serial No. 186,818. 2 Claims. (Cl. 106—39.)



1. A filling composition for fibre board surfaces comprising an admixture of water, flour, whiting, a substance from the group comprising a glucose and dextrin, borax, soap, glycerine, a volatile hydrocarbon, and comminuted fibrous materials, in the proportions specified.

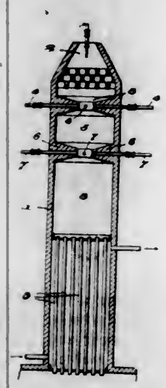
1,804,246. ROOF FLASHING. WALTER P. BUDD, Durham, N. C. Filed May 5, 1928. Serial No. 275,500. 3 Claims. (Cl. 108—26.)



1. As an article of manufacture a sheet metal strip for use in flashing constructions comprising a body provided with corrugated grooves extending longitudinally thereof, an upturned flange at one longitudinal edge thereof, an inverted U-shaped attaching flange at the opposite longitudinal edge thereof, and brace arms struck from the material of the first mentioned flange and of a nature to be twisted at one end thereof from the flange in a transversely extending relation therefrom to provide a brace arm extending transversely across said body.

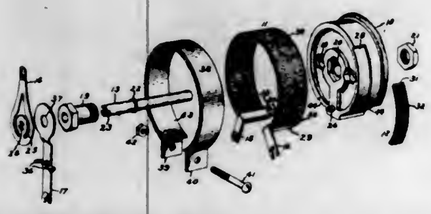
1,804,247. FLOW TESTER. JULIAN B. CONNER, Humble, Tex. Filed Jan. 3, 1928. Serial No. 244,203. 8 Claims. (Cl. 166—1.)

1. Apparatus for testing a formation in a well bore including a string of pipe to be let down into the bore and having an inlet at its lower end, a packer carried by the pipe above said inlet, a valve for controlling the inlet, means operatively connected with the string and adapted to be actuated, by the rotation of the pipe, against the valve to open the valve, and to be released from said valve by a continued rotation of the string in the same direction, to permit the valve to close.



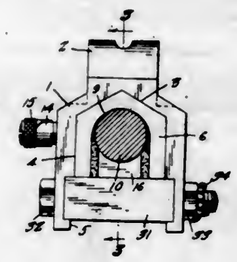
1,804,248. MITERING GAUGE. WILLIAM O. CROSSLEY, Toledo, Ohio. Filed Nov. 27, 1929. Serial No. 410,181. 1 Claim. (Cl. 29—69.)

A mitering gauge comprising an elongated base pivoted adjacent one end to the movable table of a sawing machine with one end arranged adjacent the saw of the machine, means to hold the base in adjusted positions on the table, said base having a thickened portion at one side providing a plane work face against which the material to be mitered may be placed and having a groove extending parallel and in spaced relation to said face, feed



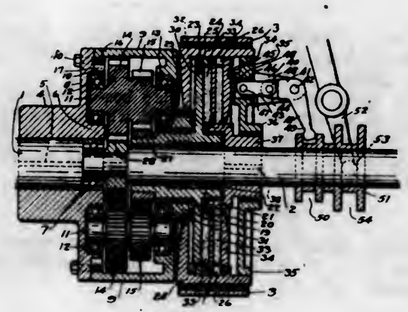
teeth formed on the thickened portion of the base adjacent the groove, a gauge body of trapezoidal shape having one side inclined and disposed at an acute angle to said work face of the thickened portion of the base and providing a narrow side to the body, a bifurcated portion formed on the narrow side of the body and providing spaced arms traversing the groove and feed teeth and resting on the upper face of said thickened portion of the base, a feed nut journalled to the arms and meshing with the teeth to permit adjustment of the body along the work face and toward and from the saw, a boss on the bifurcated portion and extending into the groove, a headed set bolt threaded to said boss and located between the opposing walls of the groove, and a handle secured to the headed set bolt for turning the latter against the wall of the groove lying adjacent the work face of the base to clamp the body in various adjusted positions.

1,804,249. **PROCESS OF PRODUCING CARBON BLACK AND APPARATUS THEREFOR.** ROLAND B. DAY, New York, N. Y. Filed Dec. 21, 1926. Serial No. 156,167. 13 Claims. (Cl. 134—60.)



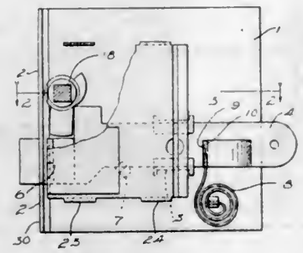
1. The method of producing carbon black which method comprises mixing hot gases of combustion with cooler gases free from oxygen to obtain a cooler mixture substantially free from oxygen, and then causing it to mix with carbonaceous particles at a temperature sufficiently high to yield carbon black but not sufficiently high to cause overheating of the carbon black when formed.

1,804,250. **CURRENT REGULATING DEVICE.** DONALD R. DE TAR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 20, 1928. Serial No. 294,277. 10 Claims. (Cl. 201—55.)



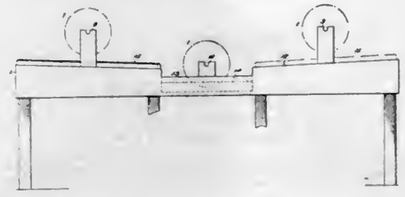
1. In a current regulating device, a base, a resistance element disposed around the periphery thereof, contractable clamping means surrounding said base with said resistance element interposed between the base and the clamping means, and means for contracting said clamping means to secure said resistance element in position on the periphery of said base.

1,804,251. **BEARING.** JOSEPH D. DINES, Tempe, Ariz. Filed Mar. 24, 1930. Serial No. 438,559. 3 Claims. (Cl. 308—68.)



1. A bearing for journals comprising a fixed bearing member having a longitudinal opening entering from its lower end, its top struck at a curvature to afford a rest for a journal and the said curved top being at a greater curvature than the cross sectional contour of the bearing, an outer bearing having a longitudinal opening therethrough whose inner wall is round and arranged at the same curvature as the cross sectional contour of the bearing, said outer bearing having its sides provided with equidistantly spaced fingers and the fixed bearing having openings therethrough for the reception of the fingers, said bearings having a cotton waste therebetween, means for feeding lubricant to the waste and means for adjusting the outer bearing with respect to the journal and with respect to the fixed bearing.

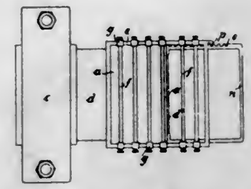
1,804,252. **REVERSE GEARING.** THOMAS S. EWART, Raymond, Wash., by judicial decree transferred to Laura V. Ewart. Filed May 31, 1928, Serial No. 281,658. Renewed Oct. 6, 1930. 1 Claim. (Cl. 74—34.)



In a reverse gear, a drive shaft, a hub at the end of the said drive shaft, a driven shaft with the end journaled in the hub at the end of the said drive shaft, a gear adjacent the end of the said driven shaft, planetary gears meshing with the said gear on the driven shaft, stub shafts upon which the said planetary gears are mounted, other planetary gears on the said stub shafts, a housing in which the said stub shafts are rotatably mounted, means for rigidly attaching the housing to the hub on the said drive shaft, a sleeve having an outwardly extending flange rotatably mounted on the said driven shaft, a gear on the said sleeve meshing with the planetary gears on the said stub shafts specified as other planetary gears, a clutch housing into which the outwardly extending flange of the sleeve extends, a disc rigidly attached to the gear housing and positioned between the end of the clutch housing and flange, a plurality of fibre and metal discs in the said clutch housing forming the friction members, keys in the said clutch housing engaging slots in the outer edges of the said outwardly extending flange and metal discs, a head in the said clutch housing, suitable locking members in the said head for frictionally holding the members within the said clutch housing, and a suitable brake on the outer surface of the said clutch housing by which the said clutch and gear housing may be held stationary.

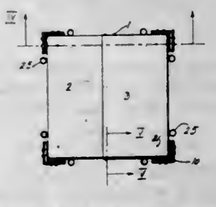
1,804,253. **DOORLOCK.** JOHN B. FLYNN, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 12, 1929. Serial No. 399,118. 2 Claims. (Cl. 292—337.)

1. In a lock having a reciprocating bolt, the combination with a lock frame having a pillar face flange with an opening therethrough, of a roll-back for said bolt mounted on the lock frame and having a portion projecting in the said opening a distance substantially equal to the thickness of the metal of the flange and entirely within the face of said flange, and means operatively associated with said rollback for turning the same to retract the bolt.



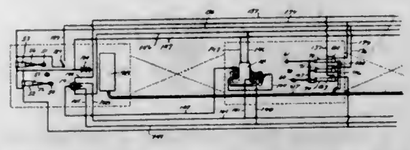
1,804,254. **METHOD OF MAKING GLASS WOOL SHEETS.** PAUL O. E. FRIEDRICH, Millville, N. J., assignor, by mesne assignments, to Gould Storage Battery Corporation, Depew, N. Y., a Corporation of Delaware. Filed Jan. 25, 1927. Serial No. 163,387. 5 Claims. (Cl. 49—79.)

4. The method of making a matted sheet of vitreous material comprising heating the vitreous filaments to reduce the cohesion thereof, feeding the filaments onto a moving surface having a direction of movement transverse with respect to the filaments whereby the filaments will individually adhere to the moving surface and be pulled out from bundled relation to arrange themselves in haphazard interlaced fashion upon the surface, impregnating the mass of interlaced filaments with a binder to effect permanent union, applying pressure to the mass to compress it to the desired thickness and density, and drying the same.



1,804,255. **TYPE CARRIER FOR STAMPING PRESSES.** AUGUST HEINRICH GERMER, Hamburg, Germany. Filed Oct. 15, 1926, Serial No. 141,782, and in Germany Dec. 10, 1925. 14 Claims. (Cl. 101—3.)

1. A type carrier in stamping-presses for punching embossing or impressing letters or the like in cardboard and arrangement of same in the stamping-press comprising a rectangular frame which is adapted to be removably mounted on the stamping-plate which supports the work

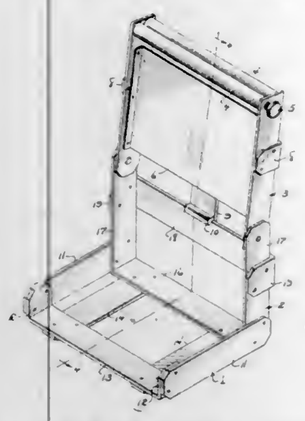


piece and means forming straight edges serving for setting the types adapted to be removably mounted on the setting-frame.

1,804,256. **OBSTETRICAL BED.** LEVI L. GILBERT, Mesquite, Nev. Filed Sept. 9, 1925. Serial No. 55,330. 13 Claims. (Cl. 45—50.)

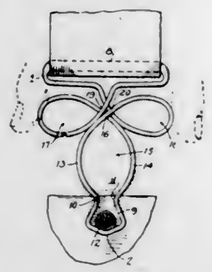
11. A surgical or obstetrical table including a pair of uprights adapted to support the limbs of a patient on the table, said table having spaced engaging portions adjacent to each edge thereof for interchangeably receiving said uprights in different positions on said table.

1,804,257. **AUTOMATIC CONTROL SYSTEM FOR VEHICLES.** JAY H. GREENLEY, Strongsville, Ohio. Filed Jan. 28, 1925, Serial No. 5,291. Renewed Aug. 20, 1929. 23 Claims. (Cl. 180—14.)



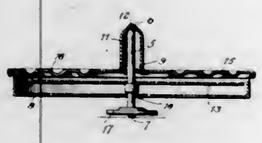
5. The combination with a train of stock vehicles comprising a leading vehicle and one or more trailers, of pneumatically operated, electrically controlled mechanism detachably connected with the change speed levers of each trailer for changing the speed of each trailer, of motor operated means detachably connected with the throttle of each trailer for changing the speed of the engine thereof, control means associated with the change speed lever of the leading vehicle and connected with the change speed lever of each trailer for regulating the speed of each trailer in synchronism with the speed of the leading vehicle and control means associated with the throttle of the leading vehicle and connected with the throttle operating means of each trailer for moving the throttle of each trailer in synchronism with the throttle of the leading vehicle.

1,804,258. **MANUSCRIPT HOLDER FOR TYPEWRITERS.** LAWRENCE JONES, Beards Fork, W. Va. Filed Apr. 23, 1930. Serial No. 446,729. 1 Claim. (Cl. 120—30.)



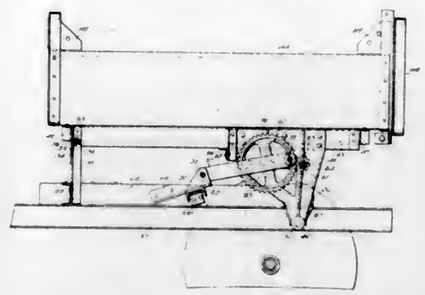
A device of the character set forth comprising a base, cushion feet carried by said base, a vertical support se-

cured to said base, a brace carried by said support, a manuscript holder pivoted to said support, a resilient member secured to said holder and having its free end bent



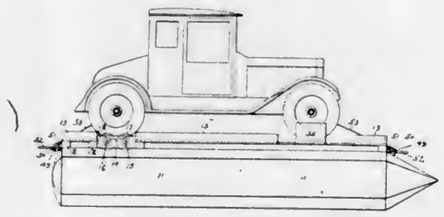
to form a hook-shaped portion adapted to engage the brace for supporting the holder in a vertical position and to permit the holder to be swung into a horizontal position.

1,804,259. RESILIENT METALLIC SUSPENDER LOOP. LYNDON WALKER JOYCE, Greensboro, N. C., assignor to Joyce-Venning Manufacturing Co., Inc., Greensboro, N. C., a Corporation of Delaware. Filed Nov. 6, 1929. Serial No. 405,152. 3 Claims. (Cl. 24—224.)



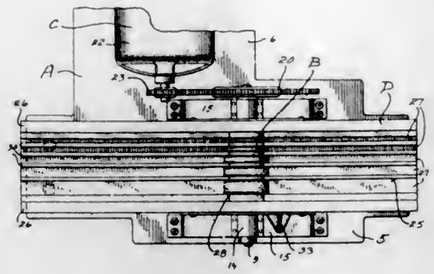
3. A suspender loop comprising a resilient wire bent to form a button retaining loop, a narrow neck at the top of said loop, a larger loop on the opposite side of said neck from said button retaining loop, means for securing said suspender loop to a suspender, beyond said larger loop, and means intermediate said suspender securing means and said larger loop and acting through the latter to expand said neck when said button retaining loop is tensioned at its bottom end and to contract said neck when said tension is relieved.

1,804,260. SPINNING TOY. WILLIAM J. KERR, Smethport, Pa. Filed Oct. 4, 1929. Serial No. 397,323. 4 Claims. (Cl. 46—32.)



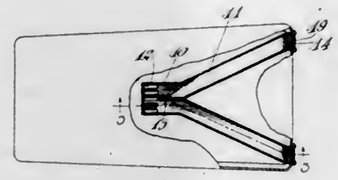
1. In a spinning toy, a lower horizontal disk having items of interest upon its upper face, an upper disk having openings over said items, means for rotatably mounting the two disks coaxially but allowing relative rotation thereof, said means being adapted to effect unitary rotation of the disks upon initial spinning of the toy, whereby said items will not then be individually visible, and means for retarding the rotation of said lower disk to render said items individually visible through the openings of said upper disk while the latter continues to spin.

1,804,261. SEMIAUTOMATIC DUMPING BODY. ALBERT P. LEE, Chicago, Ill., assignor to Lee Trailer & Body Co., Chicago, Ill., a Corporation of Illinois. Filed May 1, 1924. Serial No. 710,291. 12 Claims. (Cl. 298—19.)



1. A dumping vehicle of the character described comprising a framework, a body swingable on a horizontal axis on said framework and means for swinging said body on its axis in either direction, comprising members mounted to pivot on a fixed axis on said framework and on a shiftable axis relative to said body and rotatable means on said body for shifting said last mentioned axis, said rotatable means being rotatable in the same direction, to move said body in either direction.

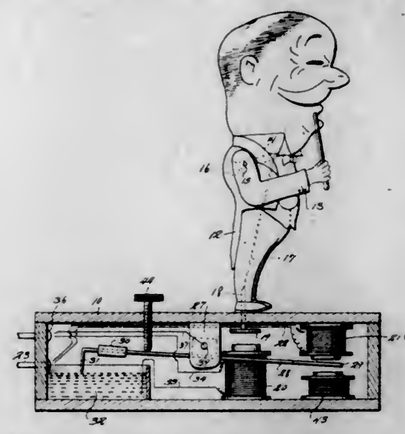
1,804,262. AUTOMOBILE BOAT. WALTER C. LEWIS and HOWARD T. POWERS, Corpus Christi, Tex. Filed June 20, 1930. Serial No. 462,574. 1 Claim. (Cl. 115—0.5.)



In a boat for automobiles, a pair of spaced pontoons, means connecting the pontoons to hold them in spaced parallel relation, a trackway extending longitudinally of the pontoons upon the connecting means to receive and guide the wheels of an automobile, pairs of parallel rollers rotatably mounted in said trackway for engagement by the wheels of the automobile, a propeller, means operated by one of the rollers of each pair and connected with the propeller to drive the latter, a rudder, a pair of shoes located in the trackway for engagement by the front wheels of the automobile, means to pivotally and slidingly mount said shoes to adjust the latter in accordance with the wheel base of the automobile, means connecting the shoes, and adjustable means connecting the shoe connecting means with the rudder to operate the latter when the steering mechanism of the automobile is operated.

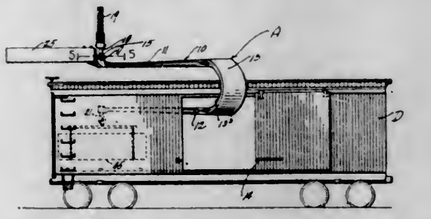
1,804,263. GLASS EDGING MACHINE. COLLIS S. MAYFLOWER, Flagstaff, Ariz. Filed Apr. 26, 1926. Serial No. 104,812. 1 Claim. (Cl. 51—72.)

In a glass edging machine including a bed plate, a grinding element rotatably mounted upon said plate, and an edging table disposed transversely above the grinding element, means for adjustably supporting the table above the grinding element comprising a pair of vertically adjustable uprights supporting one end of the table upon the bed plate and each having a hinged joint the axes of which align transversely of the table, and a vertically adjustable support for the opposite end of the table comprising an adjusting screw rotatably connected at its upper end to the under side of the edging table at the longitudinal center thereof and having a screw threaded lower end, and a block rigidly carried by the bed plate and having a vertically extending threaded bore for receiving the lower threaded end of the adjusting screw.



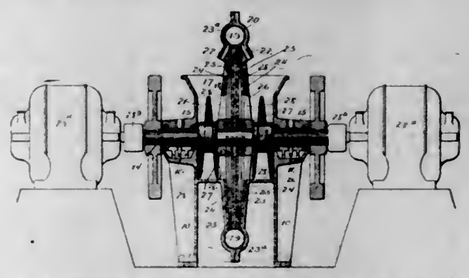
1,804,264. AUTOMOBILE VENTILATOR. JAMES B. MCDEVITT, Chicago, Ill. Filed June 25, 1929. Serial No. 373,604. 4 Claims. (Cl. 98—2.)

1. An automobile ventilator comprising a chamber with the fore part of its floor perforated to communicate with the body interior, a partition in the chamber to the rear of its perforated portion, and conduits diverging rearwardly from the divided sections of the chamber, the outlets of the conduits being through the rear wall of the automobile body.



1,804,265. ELECTRICAL TOY. WILLIAM L. MINICK, Jr., Waynesboro, Pa. Filed Aug. 3, 1929. Serial No. 383,198. 3 Claims. (Cl. 46—49.)

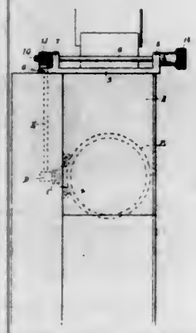
1. A toy of the character described, including a figure having a movable part, an armature operatively connected to said movable part to oscillate the latter as the armature is oscillated, an electro-magnet associated with the armature, a pivoted switch adapted when shifted in one direction to close a circuit and when shifted in the other direction to open the circuit, means urging the switch to a position where the circuit is open, a second electro-magnet for which the switch constitutes an armature, the last named magnet having current conducting means adapted to be connected in circuit with a radio receiving set and



a loud speaker, a shiftable weight mounted upon one end of the switch, and means limiting the movement of that end of the switch adjacent the electro-magnet coacting therewith away from said electro-magnet.

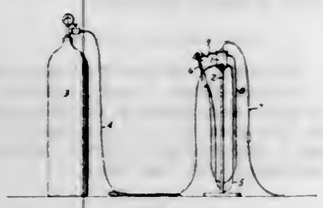
1,804,266. LOADING AND UNLOADING DEVICE. BRUCE A. MOORE, Blawnox, Pa. Filed Feb. 20, 1930. Serial No. 429,991. 5 Claims. (Cl. 294—67.)

1. In a load transfer device the combination of upper and lower spaced beams having a connecting bight portion offset from the plane in which said beams lie transversely to one side of said plane, said connecting means having a recess therein facing the plane in which said beams lie and open to the space between said beams.



1,804,267. SHEARING OR DISINTEGRATING SUGAR CANE. WILLIAM HENRY MORGAN, Alliance, Ohio, assignor, by mesne assignments, to The Morgan Hurrycane Company, New York, N. Y., a Corporation of Florida. Filed May 5, 1925, Serial No. 28,266. Renewed Feb. 8, 1929. 20 Claims. (Cl. 146—106.)

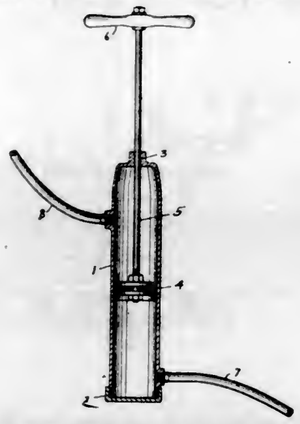
11. A machine for disintegrating cane stalks having in combination relatively movable cane cutting devices, rela-



tively movable supports for said devices having surfaces for directing and positioning the cane with relation to said devices to cause said devices to cut or split the cane repeatedly in general directions lengthwise of the stalks, means for relatively moving said supports to actuate relatively said cutting devices, and means for feeding the cane to be disintegrated into position to engage said surfaces.

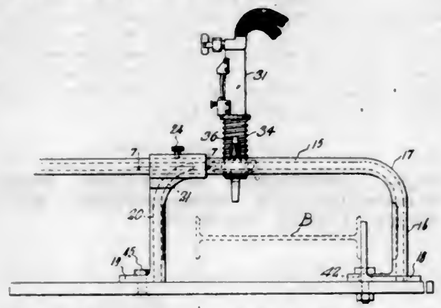
1,804,268. MANIPULATING ATTACHMENT FOR THE LENS FOCUSING MECHANISM OF MOVING PICTURE PROJECTING MACHINES. NORFLEET J. NORTHINGTON, St. Albans, N. Y. Filed Oct. 2, 1928. Serial No. 309,841. 2 Claims. (Cl. 88—24.)

1. The combination with a moving picture projecting machine having a lens focusing mechanism including a rack, a pinion and an upwardly extending pinion shaft projecting through the lens housing, of a manipulating attachment therefor comprising a bracket arranged transversely upon the housing having a horizontally disposed apertured portion through which the projecting end of the pinion shaft extends, a worm gear secured to the end of said pinion shaft, a manipulator shaft journaled in bearings in the bracket, a worm wheel secured to said manipulator shaft and meshing with the worm gear and a manipulator head at the end of the manipulator shaft.



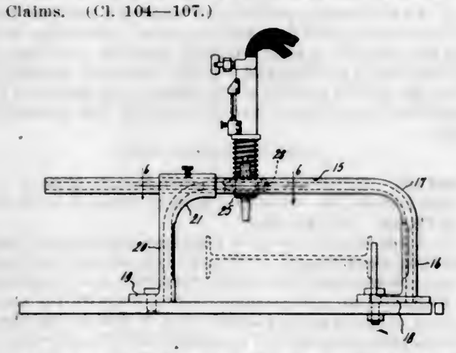
1,804,269. WELDING APPARATUS. EDWARD J. O'CONNELL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 23, 1929. Serial No. 394,464. 5 Claims. (Cl. 219—8.)

1. In combination with a fluid supply line and an electric circuit, means in said fluid supply line for opening and closing the passage through said line, means in said electric circuit for opening and closing said electric circuit and an article supporting means operated by the weight of said article lying thereon for closing said passage through said line and for opening said electric circuit.



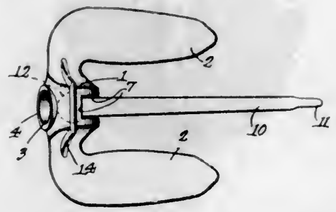
1,804,270. SIPHON. MARTIN B. PALICH, Houston, Tex., assignor of one-fourth to B. W. Brenneman, Dallas County, Tex. Filed Feb. 12, 1929. Serial No. 339,441. 2 Claims. (Cl. 137—20.)

1. A device of the character described including a barrel one end of which has a flat supporting base, a reciprocable plunger therein, means for reciprocating the plunger and a tube leading out from the barrel near each end thereof,



the other end of said barrel beyond the corresponding tube being tapered to fit tightly about the plunger when the plunger is moved into said tapered portion.

1,804,271. TORCH CUTTING DEVICE. WAYNE F. PALMER, Holyoke, Mass. Filed July 8, 1930. Serial No. 466,471. 11 Claims. (Cl. 320—23.)

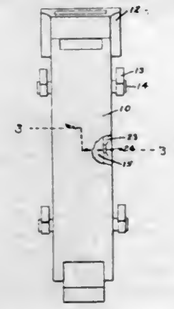


1. A cutting device comprising a trackway passing around three sides of a structural steel member comprising re-entrant parts, a torch carriage movable in the trackway to carry a torch around the external boundaries of the member, and a torch shiftably mounted in the carriage so that it may be moved substantially parallel with and adjacent the re-entrant parts of the member.

1,804,272. TRACKWAY. WAYNE F. PALMER, Holyoke, Mass. Filed July 8, 1930. Serial No. 466,472. 4 Claims. (Cl. 104—107.)

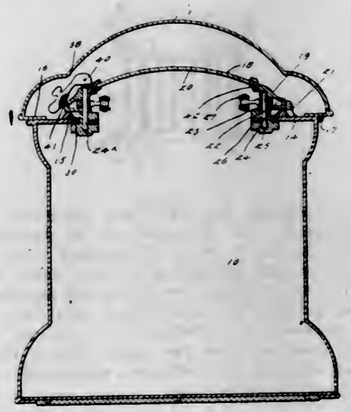
1. A device of the class described, comprising channeled tracks having opposed straight runs and angular portions, a pair of shiftable channeled tracks extending angularly from the straight run of the tracks and having tongues fitting into the channels in said straight runs, said shiftable tracks having the bottoms of their channels merging into the bottoms of the channels of the straight runs, and a carriage slidable in the channels and contractible transversely so as to pass from the straight runs to said shiftable tracks.

1,804,273. ANCHOR. FRANK T. PELKEY, Marine City, Mich. Filed June 26, 1929. Serial No. 373,792. 2 Claims. (Cl. 114—208.)



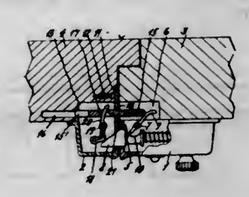
1. An anchor including a head having an opening, the head being provided with forwardly extended flukes and a stock extended between the flukes and having an enlargement mounted to rock in the openings, (he cross-sectional area of the opening) the opening being unemcumbered, to the rear of the enlargement, and being large enough at its rear end to permit the passage of the enlargement, whereby the stock can be slid freely in a backward direction, when the anchor is in use, thereby disposing the rear end of the stock behind, and in spaced relation to, the head, thereby to change the direction of the leverage of the stock on the head, and to give the rear end of the stock a direct fulcrum bearing on the sea floor.

1,804,274. PROTECTIVE LINING FOR TANKS. JACQUES POBEREJSKY, Bois-Colombes, France. Filed Mar. 31, 1927, Serial No. 180,082, and in Belgium Dec. 31, 1926. 4 Claims. (Cl. 154—46.)



2. A petroleum tank lined with a composition containing guayule.

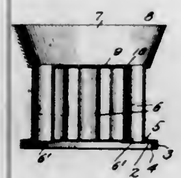
1,804,275. INGOT MOLD CONSTRUCTION. ROBERT G. REDMANN, Bristol, Conn. Filed Apr. 1, 1930. Serial No. 440,842. 1 Claim. (Cl. 22—146.)



In ingot mold construction two mating parts enclosing mold cavity side walls of said cavity being integral with one of said parts and extending beyond the said cavity, the other of said parts comprising a body part that fits between said side walls and lateral extensions that are opposed to the end faces of said side walls, said end faces and lateral extensions comprising relatively diminutive finished cooperating spot-like lug structures that make face to face contact in the closed position of the mold for limiting such closure, and all other portions of said end faces and lateral extensions that are generally opposed one to the other being gouged out or cut away so as to prevent contact in such closed position of the mold.

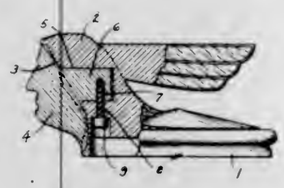
1,804,276. BURIAL CASKET. JOHN D. RENSHLER, Findlay, Ohio. Filed June 28, 1930. Serial No. 464,592. 4 Claims. (Cl. 27—6.)

1. A burial casket comprising a body formed with an inwardly extending flange, a main lid operatively hinged to the body, a supplementary lid operatively hinged to the main lid including a rim and a transparent pane, a gasket mounted upon the flange of the body and against which the rim is adapted to bear when the supplementary lid is closed, and means for drawing the supplementary lid against said gasket including a plurality of rotatable locking dogs disposed at intervals around said rim and adapted when turned into one position to engage beneath the flange of the casket body, each locking dog having a straight side face tangential to a circle concentric to the shaft and concentric to the axis of the dog, and a curved flange, the upper face of which is inclined; an oscillatable handle mounted upon the rim at one point and operative connections between said locking dogs and the handle whereby the dogs shall be turned as the handle is oscillated in one direction to shift the dogs beneath the flange and turned to retract said dogs from beneath said flange when the handle is turned in the opposite direction.



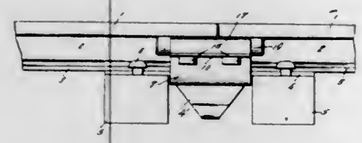
1,804,277. SAFETY LOCK FOR DOORS. MARIO F. RUIZ, Guanabacoa, Cuba. Filed Mar. 20, 1930. Serial No. 437,440. 3 Claims. (Cl. 292—346.)

1. In a lock of the character described, the combination with a locking mechanism including a bolt having a beveled face and in its stem a cam groove, of a lever pivoted in the bolt casing and engaging at one end the cam groove of the bolt, a metal plate or shield slidable in the keeper, and a lever pivoted in the keeper and connected to the



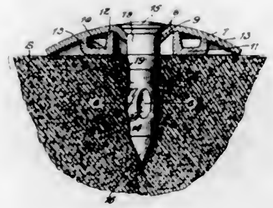
shield, so that the bolt in its forward movement engages the second lever which causes the plate or shield to slide out of the keeper into the bolt casing, thus protecting the bolt from any object placed between the door and door jamb from the outside.

1,804,278. MULTIPLE DRIP COFFEE URN. LEWIS A. SCHERCK, New Orleans, La. Filed May 24, 1930. Serial No. 455,394. 1 Claim. (Cl. 53—3.)



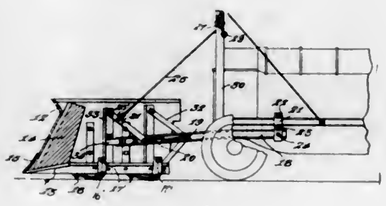
A drip attachment for coffee urns comprising a cap member adapted to fit upon the top of the urn, said cap member having a series of openings with screens disposed across said openings, a series of tubes mounted upon the cap member and surrounding said openings, said tubes being arranged in circular form with their centers at equal distances from the center of the cap member and a pan mounted upon the upper ends of the tubes and having openings at its bottom registering with the upper ends of the tubes.

1,804,279. RADIATOR CAP. WILLIAM SCHNELL and FRANK M. EDGAR, Detroit, Mich., assignors to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 1, 1929. Serial No. 336,895. 2 Claims. (Cl. 41—10.)



1. An ornamental radiator cap comprising in combination of a head portion and a face portion, the said head portion being recessed to receive the said face portion with the locks of hair of the head portion overlapping the joint between the face and head portions to conceal the same.

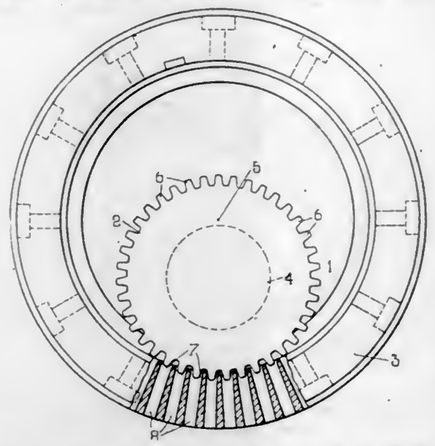
1,804,280. RAIL JOINT. LUIGI M. SERRA, Rome, Italy. Filed Oct. 18, 1930. Serial No. 489,638. 4 Claims. (Cl. 238—190.)



1. A rail joint comprising in combination a joint plate adapted to be disposed parallel to the rail webs and spanning directly across the abutting ends of the rails, bolts passing through the joint plate and the rail webs, an expansible and contractable tubular member interposed between said joint plate and the webs of the rails and spanning directly across the abutting ends of the rails, and said joint plate and bolts provided with cooperating means for retaining the bolts against casual rotation.

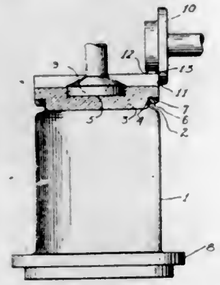
1,804,281. STREET MARKER. JOHN Q. SHUNK, Bucyrus, Ohio. Filed Dec. 12, 1929. Serial No. 413,560. 3 Claims. (Cl. 94—1.5.)

1. A street marker comprising a concavo-convex disk having a depressed central portion and a central spike-receiving opening in said portion, and an annular support under said disk of considerably less diameter than the latter, said support comprising a flat base portion for contact with the street, and inner and outer concentric flanges rising from said base portion and contacting with the lower side of the disk, said inner flange surrounding said depressed disk portion to relatively center the disk and support, said disk being sufficiently stiff to prevent depression between its supported portions under the weight of heavy vehicles.



1,804,282. SNOWPLOW. GILBERT SICKLER, Assaria, Kans. Filed July 6, 1929. Serial No. 376,307. 1 Claim. (Cl. 37—44.)

A plow comprising a pair of side elements connected at their forward ends and diverging towards their rear ends and having the upper edges inclined outwardly and upwardly, a block at the connected ends of said side elements, lower flange plates at the lower edges of said elements and extending from beneath the block and upwardly and secured to the side elements to form blades curved runners secured to said plates, vertical braces between said side elements and the plates, and a tractor connecting means secured to said braces.



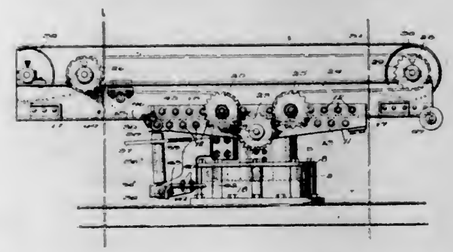
1,804,283. MOLDING MACHINE. ALBERT WILLIAM SIZER, Hessle, England. Filed Sept. 29, 1930. Serial No. 485,237. 2 Claims. (Cl. 107—8.)

2. A machine for molding plastic substances comprising in combination an annular ring having spaced radial passages therein, a solid toothed molding wheel having teeth of equal pitch to the pitch of said passages and engaging with said passages on the inner periphery of said ring, said molding wheel being provided with a

number of peripheral grooves, and a number of peripheral upstanding flanges on the interior of said ring adapted to engage within the grooves of the molding wheel.

1,804,284. METHOD OF FORMING A DISPLAY PACKER'S CONTAINER. WILLIAM B. SMITH, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 5, 1929. Serial No. 344,458. 1 Claim. (Cl. 153—1.)

The method of forming a display packer's container having an inwardly projecting seat and a glass panel end having a depending shoulder portion the diameter of which is substantially the same as the seat, consisting in placing the panel with an elastic packing on the seat and subjecting the edge portion of the wall of the body of the container to a curling pressure in a direction lengthwise of the wall for curling said edge portion inwardly to form a flange, and gradually shifting the said curl and flange into contact with the glass panel and forcing and securing said glass panel in sealing contact with the elastic gasket and said seat, whereby the shoulder on said panel will contact with said inward projecting seat portion and prevent collapsing of the same during rolling of the flange into contact with the panel.

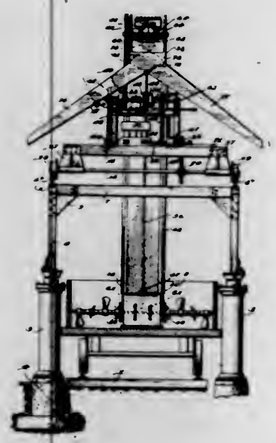


1,804,285. SAWDUST BURNER. VERNE C. SNYDER, Portland, Oreg. Filed Sept. 4, 1928. Serial No. 303,749. 2 Claims. (Cl. 110—29.)

1. A sawdust burner having in combination a pair of side walls having air spaces formed therein and having same partially divided with a horizontal partition extending to the forward end of the walls having an air inlet opening in the top side of said partition communicating with the outer air and having an opening formed on the lowermost side of said partition passing through the wall, a pair of tracks mounted between said walls, a frame mounted on each track, grate bars mounted across said frame, a stop for limiting the rear movement of said frames with relation to said tracks, a latching grate for holding said frames against their stops, a fuel magazine over said

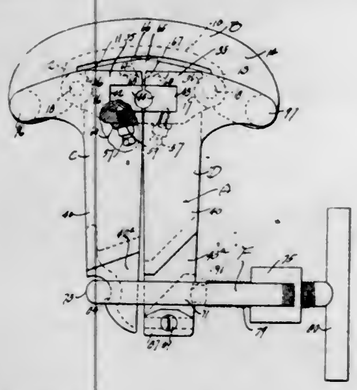
grate bars having a deflector plate therein and a means for adjusting the angular position of said deflector plate for the purpose of projecting fuel against the uppermost portion of said grate bars in a manner that the weight of the fuel in the magazine shall not rest upon the lowermost grate bars.

1,804,286. CONVEYER. FRANK SPENO, Ithaca, N. Y. Filed June 7, 1928. Serial No. 283,670. 10 Claims. (Cl. 198—118.)



1. In a conveyer, the combination of a supporting structure, plates pivotally supported thereby about a horizontal axis and in spaced relation, a plurality of guiding rollers carried by said plates, said rollers being arranged in a plurality of rows on each of the plates, and conveying structures having portions thereof slidably received between the rows of rollers on each of the plates.

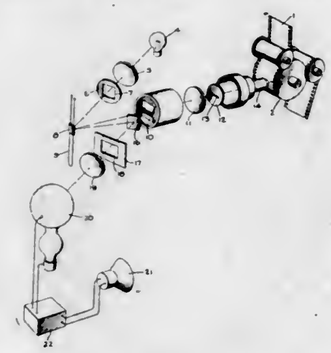
1,804,287. MATERIAL HANDLING APPARATUS. JOHN W. SPRY, Dallas, Tex. Filed July 25, 1929. Serial No. 380,937. 2 Claims. (Cl. 214—44.)



1. In material handling apparatus, an elevated supporting frame, an endless conveyer depending from said frame to contact material to be elevated, with its lower end and mounting a rotating conveyer operating shaft at its lower end, and a plurality of axially alined material gathering and feeding units secured to the opposite ends of said conveyer shaft and extending axially outward from the ends of said shaft, said units comprising hubs having interthreading male and female joints, and having

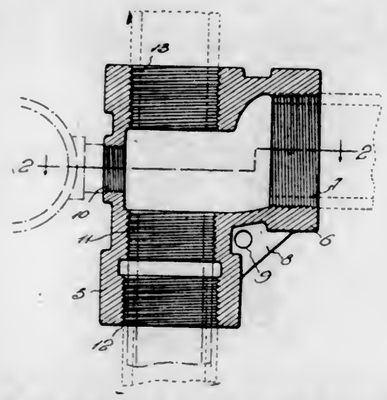
material engaging wings extending outwardly therefrom and formed to feed the material engaged laterally inward

to said conveyer the threads of said hub joints being inclined to tighten by the thrust of material against said wings.



1,804,288. CABLE CLAMP. JAMES S. TAYLOR, Tulsa, Okla., assignor of one-half to Lory J. Mildren, Ponca City, Okla. Filed Jan. 14, 1930. Serial No. 420,757. 9 Claims. (Cl. 24—135.)

4. In a cable clamp a body, a pair of jaws pivoted on the body, the jaws in facing relation having recesses the bottoms of which are relatively convergent in a line transverse to the plane of movement of the jaws, the bottoms of said recesses having a series of sockets therealong, liners having surfaces in abutment with the converging surfaces in the recesses of said jaws, the liners having extensions thereon adapted for selected fitting in the series of sockets of their respective jaw recesses for adjustment of the liners in a predetermined relation along their respective jaw recesses, and set screw means for holding the liners in a predetermined clamped relation in their recesses.

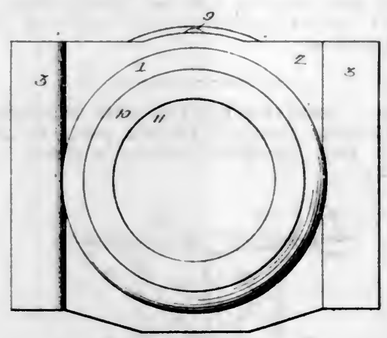


1,804,289. SOUND RECORDING. LAURENS A. TAYLOR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 31, 1930. Serial No. 424,992. 6 Claims. (Cl. 179—100.3.)

1. Apparatus for recording sound on a moving light sensitive member comprising a light source, means for laterally vibrating a beam of light from said source in accordance with sound waves, means whereby the light comprising one portion of said beam may expose said member, monitoring means, and means arranged to direct

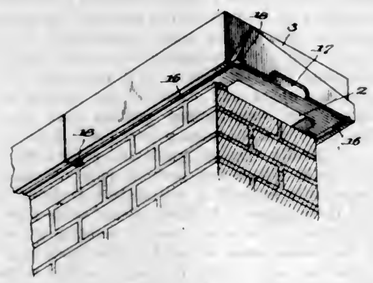
the light comprising another portion of said beam toward said monitoring means and to cause a magnification of the movement thereof.

1,804,290. COUPLING OR T FOR USE IN CONNECTION WITH OIL WELL TUBING. SHERIDAN P. TSCHAPPAT, Tulsa, Okla. Filed May 19, 1930. Serial No. 453,562. 1 Claim. (Cl. 285—203.)



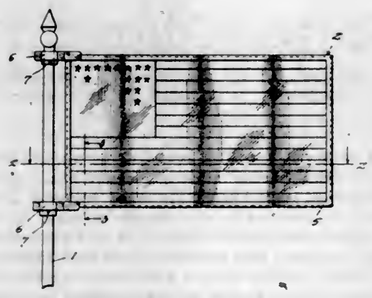
A coupling to be mounted upon a tubing having regular threads or upset threads, said coupling comprising an upstanding tubular body portion having a lateral tubular extension which is threaded for connection with a pipe, said tubular body portion being provided near its upper end with a threaded portion to engage with a tubing, said tubular body portion being provided in its lower portion with means for connection with tubing having regular or upset threaded portions of different diameters, said means comprising upper and lower internal screw threaded portions, the lower screw threaded portion having a larger diameter than the upper screw threaded portion, the arrangement being such that the lower screw threaded portion is adapted to engage upon a tubing having upset threads while the upper screw threaded portion is adapted to engage upon a tubing having regular threads.

1,804,291. PROCESS OF MAKING AXLE BOXES. CHARLES PARRY VAUCLAIN, Drexel Hill, and FRANK E. MERKLINGER, Philadelphia, Pa. Filed Aug. 5, 1929. Serial No. 383,531. 4 Claims. (Cl. 29—166.)



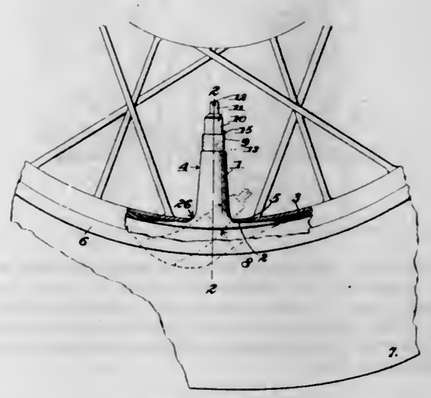
3. The process herein described of making axle boxes, said process consisting first of heating a wrought metal

tube and shaping the ends of the tube to form the front and rear ends of the box; and securing to said tubular



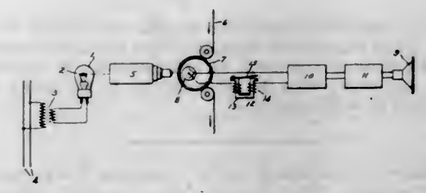
body portion thus formed, two pedestal guides, said guides being spaced apart and secured to the body portion by welding.

1,804,292. BUILDING UNIT. JOHN WRIGHT WARREN, Knoxville, Tenn. Filed May 23, 1930. Serial No. 455,089. 6 Claims. (Cl. 72—86.)



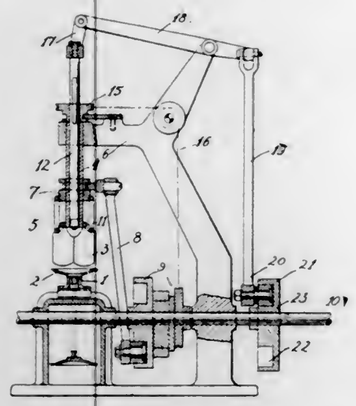
1. A building unit comprising a body portion, an extension at one end thereof of smaller area than the end of the body portion adapted to fit in a complementary recess in another unit, having a pair of downwardly inclined upper surfaces and a channel in each of the upper surfaces of the extension.

1,804,293. FLAG DISPLAY DEVICE. STEPHEN WARZOHA, Port Chester, N. Y. Filed Oct. 16, 1930. Serial No. 489,143. 3 Claims. (Cl. 116—173.)



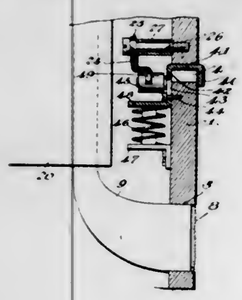
1. A device of the character described, comprising an elongated longitudinally undulated casing designed to conform in contour to a flag and adapted to have a flag compressed between side walls thereof, said side walls being of a transparent material, a supporting staff, and means for attaching the casing to said staff.

1,804,294. PNEUMATIC INNER TUBE AND VALVE STEM. FRANK H. WATSON, Jonesboro, Ark. Filed Oct. 23, 1930. Serial No. 490,805. 6 Claims. (Cl. 152—12.)



1. A valve stem of yieldable material, a cap, and means on which the cap is fitted, being carried by the stem and having a relatively short extension beyond the end of the stem to enable utilization of said end of the stem as a seat for the rim of the cap.

1,804,295. SOUND REPRODUCING APPARATUS. DOW O. WHELAN, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 28, 1929. Serial No. 417,248. 6 Claims. (Cl. 179—100.3.)

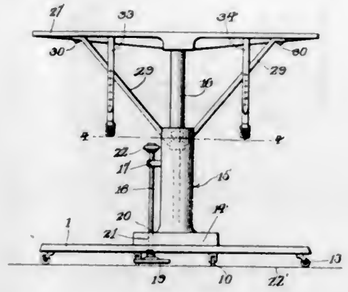


2. Sound reproducing apparatus comprising a light source adapted to be energized by an alternating current, means for passing a sound record through a narrow beam of light from said source, a photo-electric device arranged to receive the light beam modulated by the sound record, a translating device connected with the output circuit of said photo-electric device, and a mechanically resonant filter connected with said output circuit tuned to the alternation frequency of said current.

1,804,296. PROCESS AND APPARATUS FOR THE SHAPING OF LUMPS OF DOUGH. FRIDOLIN WINKLER, Villingen, Germany. Filed Mar. 1, 1929. Serial No. 343,696, and in Germany Mar. 1, 1928. 11 Claims. (Cl. 107—8.)

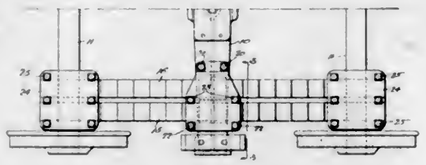
1. A process for shaping lumps of dough and like articles, comprising the cutting of a lump of dough and forming it into a substantially conical shape, the lines of the cuts extending helically from the apex of the shape, and thereafter compressing the cone of dough in the direction of its axis.

1,804,297. TALKING BILLBOARD. GEORGE E. WINTZ New York, N. Y. Filed Sept. 11, 1929. Serial No. 391,952. 10 Claims. (Cl. 40—139.)



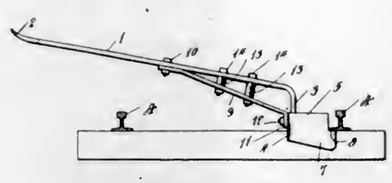
4. An apparatus comprising movable eye and lip members, sound reproducing apparatus, and means to produce irregularities of movement of said members in approximate agreement with the irregularities of the sound reproduced by said apparatus.

1,804,298. SEALING DEVICE. JACQUES WOLF, Basel, Switzerland. Filed July 17, 1929, Serial No. 379,043, and in Germany July 30, 1928. 2 Claims. (Cl. 219—21.)



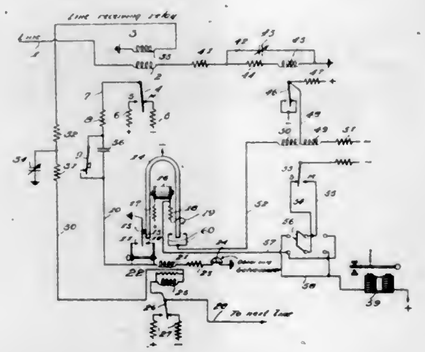
1. A sealing device comprising a heating head and a drip scoop for the sealing wax in combination with tilting means for said drip scoop, said drip scoop being so arranged as to be capable of being applied to the heating head when pressing the wax stick thereon and sliding same down along the scoop and of automatically returning to normal position when the wax stick slides right off the scoop.

1,804,299. COMBINED LIFTING AND TRANSPORTING DEVICE. WILLIAM C. YENTSCH, Peoria, Ill. Filed Aug. 5, 1929. Serial No. 383,589. 6 Claims. (Cl. 254—2.)



1. In a combined lifting and transporting device, the combination of a carriage, a table arranged in superposed spaced relation with respect to the carriage, an elevating and lowering means for the table including a vertically movable part and an upstanding stationary part, the former extending into the latter, said vertically movable part having its upper end fixed to the bottom of the table between the longitudinal median and the rear edge of the table, said stationary part being fixed to said carriage, a vertically disposed guide rod connected to and spaced from said stationary part, a pair of oppositely disposed, upwardly extending, rearwardly inclined holder rods having their upper ends fixed to said table forwardly of the rear edge of the-latter, and a coupling piece integral with the lower ends of said holder rods and slidably mounted on said guide rod and coating with the said guide and holder rods to maintain the table in parallelism with respect to the carriage.

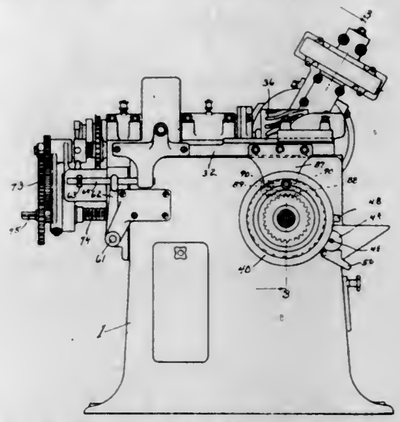
1,804,300. GRADUATED SEMIELLIPTIC SPRING. WALTER S. ADAMS, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 20, 1930. Serial No. 437,502. 5 Claims. (Cl. 105—182.)



1. In a car truck, spaced axles and an intermediate bolster, the axles having aligned journal boxes providing relatively wide seats upon their upper surfaces, a pair of leaf springs arranged in side to side relation secured at their ends to said journal boxes and at their centers operatively engaging said bolster, one of said springs being rigidly fixed to said bolster and means carried by the bolster and co-acting with the other spring to engage and flex the said other spring when the bolster has been depressed to a predetermined extent against the action of the first-named spring.

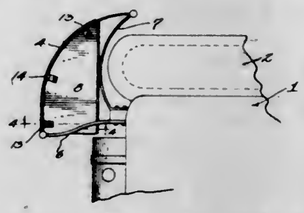
1,804,301. COMBINED RAIL LIFTER AND SPIKE PULLER. JOHN ANDREWS, Jr., Kerrobert, Saskatchewan, Canada. Filed Sept. 25, 1929. Serial No. 395,132. 2 Claims. (Cl. 254—121.)

1. A tool of the class described, comprising a handle having a downturned end, a U-shaped member secured to said down-turned end and adapted to rest on a railroad tie, a brace secured to said handle and to said member, spacing means secured between said handle and brace, and the ends of said member provided with shoulders adapted to engage under the base of a railroad rail to lift the rail relatively to the tie.



1,804,302. HIGH SPEED FORK REGENERATING REPEATER FOR TELEGRAPH SYSTEMS. HERBERT ANGEL and JAMES W. ROBINSON, Brooklyn, N. Y., assignors to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Aug. 30, 1929. Serial No. 389,568. 17 Claims. (Cl. 178—70.)

1. In a signaling system, a first signaling line, a second signaling line, a tuning fork operating between contacts and means controlled by said tuning fork for repeating that portion of said signaling impulses received while said tuning fork is in non-contacting position between said contacts.

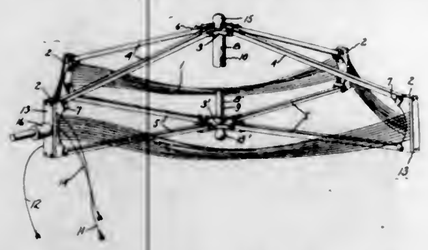


1,804,303. FEEDING MECHANISM FOR HOBBING MACHINES. EDWARD A. BAYTON, Detroit, Mich., assignor to The Lees-Bradner Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 22, 1926. Serial No. 156,488. Renewed Mar. 23, 1931. 29 Claims. (Cl. 90—4.)

1. In a machine of the class described, a stationary main frame, a movable support mounted on the frame and adapted to support a work piece, a tool carriage movable on the frame, a rotatable tool on the carriage, a movable carriage operating element mounted on the main frame, mechanical connections between the operating element and the carriage, means whereby movement of the operating element in one direction is adapted to move the tool carriage to position the tool adjacent to the work piece, and means responsive to movement of the work support whereby movement of the operating element in another direction is effected to feed the tool into the work piece.

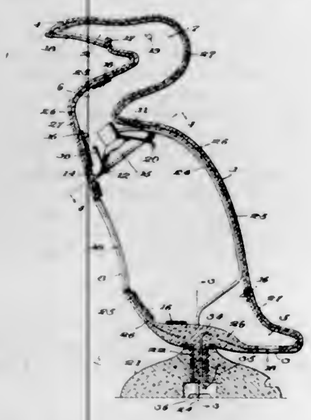
29. In a machine of the class described, a stationary main frame, a tool carriage movable on the frame, a work carriage movable on the frame and adapted to support a work piece, a threaded push and pull rod connected to the tool carriage for moving it, a nut element threaded on the rod, and mounted on the frame for rotary and axial movement, means for turning the nut element to propel the rod to move the tool carriage into a predetermined position relative to the work carriage, and means for moving the nut element axially to propel the rod with a tool carriage feed movement, said means including a cam on the main frame, an annular cam follower surrounding the nut element and rotatable thereon on the axis thereof, gear teeth on the cam follower and a rack on the work carriage engaging the gear teeth for rotating the cam follower.

1,804,304. COMBINED BUMPER AND MUD GUARD. HELLA BEANE, Alpena, Mich. Filed Aug. 17, 1928. Serial No. 300,160. Renewed Oct. 2, 1930. 9 Claims. (Cl. 293—55.)



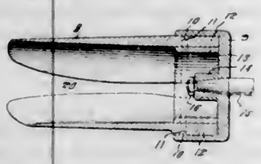
9. The combination with a vehicle having rear quarter bumpers, of a deflector plate positioned substantially within the contour of each bumper and serving to reinforce the same, said deflector plate also extending laterally to the line of projection of the chassis channel frame member and a sufficient distance from the bumper bars toward the rear wheel and being so positioned above the ground as to deflect or stop mud or other foreign material as it is initially thrown from the rear wheels and prevent the same from being thrown onto the rear portion of the vehicle body.

1,804,305. FOLDING LOOP ANTENNA. LLOYD S. BEEBE, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 11, 1929. Serial No. 354,385. 5 Claims. (Cl. 250—33.)



1. A folding antenna structure, comprising a pair of central members arranged side by side, a plurality of con-

ductor carrying members, means attached to the central members for supporting said conductor carrying members about the central members in parallel relation, a loop conductor wound upon said carrying members to form a

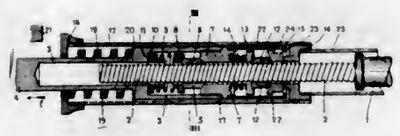


solenoid, and means cooperating with the central members to cause the supporting means to fall into a column extending from the carrying members outward in opposite directions toward the central members when the central members are separated.

1,804,306. ACOUSTIC DEVICE. RAYMOND CECIL BENDER, West Palm Beach, Fla. Filed Mar. 4, 1930. Serial No. 433,077. 12 Claims. (Cl. 181—27.)

1. A loud speaker comprising a sound amplifying chamber of general tapered form having a pair of sound openings one near the larger end and one near the smaller end, and a conical diaphragm sound emitting element mounted within the amplifying chamber between the openings with the concave side of the diaphragm facing in the general direction of the larger end of the chamber and the convex side facing in the general direction of the smaller end.

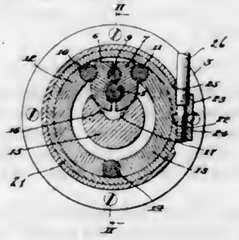
1,804,307. METHOD AND APPARATUS FOR INCREASING THE LIFT OF AIRPLANES. TRIAN BERBECK, Baltimore, Md. Filed June 25, 1930. Serial No. 463,802. 11 Claims. (Cl. 244—14.)



7. An impeller for an airplane adapted to increase the lift thereof, said impeller comprising a cylindrical-like hub having a closed end, a plurality of blade elements having an airfoil section mounted upon said hub in spaced apart relationship with respect to each other, said elements being so positioned that the leading and trailing edges of any two of them are adjacent each other, said hub adapted to be mounted upon a rotatable shaft so that the blade elements may be rotated about a horizontal axis.

1,804,308. SLEEVE HOLDER. JOHN C. HOLLINGER, Olympia, Wash. Filed Dec. 4, 1930. Serial No. 500,070. 5 Claims. (Cl. 24—251.)

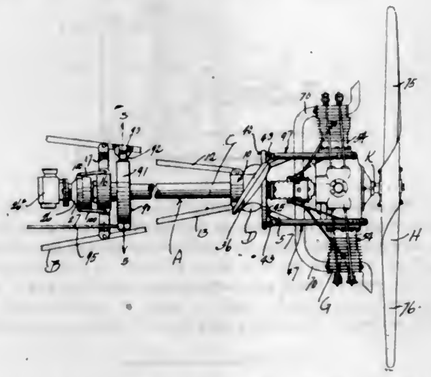
1. A grip for a sleeve holder comprising companion jaws, one jaw having its inner end portion thickened to form a shoulder and the other jaw fitting against the inner face of the first jaw with its inner end abutting the shoulder, a flexible strip straddling the thickened inner end portion of the first jaw and having arms secured against opposed faces thereof with one arm overlapping the outer face of the second jaw and secured thereto to hingedly mount the second jaw, and means to move the second jaw towards the first jaw and secure the jaws in a gripping position.



1,804,309. AUTOMATIC BRAKE ADJUSTING MECHANISM. OLIVIER BOURBEAU, Paris, France. Filed May 31, 1930. Serial No. 458,514, and in France Apr. 10, 1930. 14 Claims. (Cl. 188—200.)

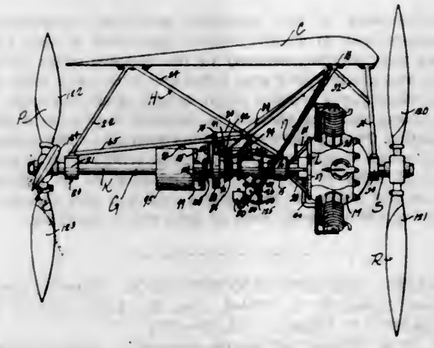
1. Mechanism for automatically adjusting the rods of brake mechanism comprising a rod provided at one end with a worm, a plurality of toothed jaws engaging with said worm, a sleeve arranged in alignment with said rod, said sleeve being adapted to hold said jaws in engagement with said worm, and means for limiting the relative movement between said rod and said sleeve

---



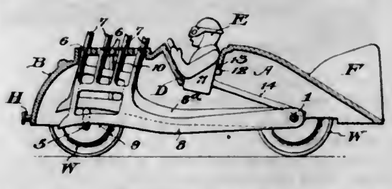
1,804,310. IRREVERSIBLE ROTARY POWER TRANSMISSION SYSTEM. ROGER BRICARD, Paris, France, assignor to Société Anonyme Française Dite: Bricard, Ancienne Maison Sterlin, Paris, France. Filed Jan. 22, 1929, Serial No. 334,309, and in France Oct. 31, 1928. 1 Claim. (Cl. 192—8.)

Irreversible bi-directional transmission mechanism including a fixed clutch element comprising an expansible annulus of variable diameter, free clutch shoes adapted to bind against said annulus in the irreversing function of



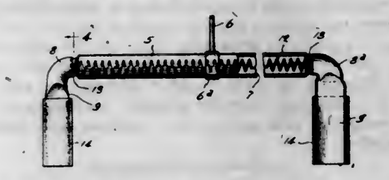
said mechanism, means forming a free toggle joint interposed between said clutch shoes for actuating the same and free levers for operating said toggle joint, a driving and a driven shaft, said free elements being rotatable as a body with said driving and driven shafts when said toggle joint is in loose position, means connected to said driving and driven shafts respectively acting upon opposite sides of said lever, and means for expanding said annulus to a diameter beyond the reach of said clutch shoes for inhibiting the irreversing function of said mechanism.

1,804,311. AIRCRAFT MOTOR AND MOUNTING. CHARLEY L. BROWN, Rushville, Mo. Filed Aug. 9, 1929. Serial No. 384,778. 4 Claims. (Cl. 244—31.)



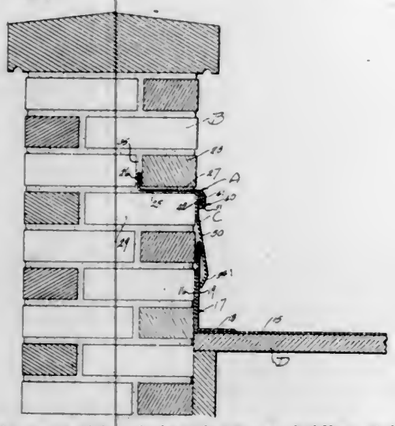
1. In a motor mounting for aircraft the combination of a stationary frame attachable to the aircraft, a motor including a housing, a crank shaft, and main propeller thereon, a motor mounting rotatably carried by said frame and having the motor housing rigidly connected therewith, an auxiliary propeller connected with the motor mounting for rotation therewith, said main and auxiliary propellers being driven in opposite directions, the main propeller being driven incident to normal crank shaft operation and the auxiliary propeller being driven incident to drive of the motor mounting thru back pressure from the motor operation, said propellers having the blades thereof oppositely inclined so that they will produce a propelling effect upon the aircraft in the same direction, the inclination of the auxiliary propeller being greater than the pitch inclination of the oppositely inclined main propeller, and the auxiliary propeller being of appreciably greater effective length than the main propeller.

1,804,312. AIRCRAFT MOTOR AND MOUNTING. CHARLEY L. BROWN, Rushville, Mo. Filed Apr. 29, 1930. Serial No. 448,364. 5 Claims. (Cl. 244—14.)



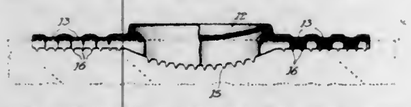
1. In aircraft of the class described the combination of a fuselage having supporting wing surfaces extending laterally therefrom, an out-board motor mounting frame connected with a wing laterally of the fuselage, a shaft rotatably supported by said frame laterally of the fuselage, an internal combustion engine including a casing, a crank shaft and main propeller keyed with the crank shaft and disposed for operation in a plane forwardly of the wing, means fixedly connecting the casing of the internal combustion engine with said first mentioned shaft so that the latter may rotate with the engine casing, an auxiliary propeller keyed with said first mentioned shaft and disposed for operation in a plane rearwardly of the wing, said main and auxiliary propellers having the blades thereof pitched in opposed relation, said auxiliary propeller having number of blades greater than the number of blades of the main propeller.

1,804,313. TOY. JACOB E. BRUBAKER, Lancaster, Pa., assignor to The Hubley Manufacturing Co., Lancaster, Pa., a Corporation of Pennsylvania. Filed May 26, 1930. Serial No. 455,782. 5 Claims. (Cl. 46—45.)



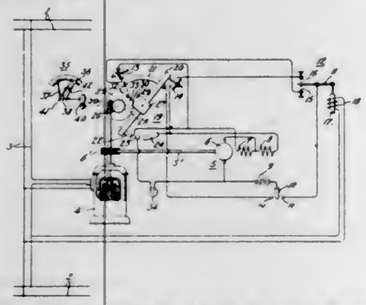
1. A pull toy comprising a body having a plurality of openings, a rear axle, wheels for the rear axle, levers pivotally mounted on said rear axle and having elements thereon adapted to be projected through said openings, a front axle provided with cranks on which the levers rest, and wheels for said front axle whereby the operation thereof will cause the end of said levers opposite their point of pivotal support to cause the reciprocation of said elements through said openings.

1,804,314. TROUSER HANGER. CHARLES BRUN, Roosevelt, N. Y. Filed Feb. 5, 1930. Serial No. 426,109. 2 Claims. (Cl. 223—67.)



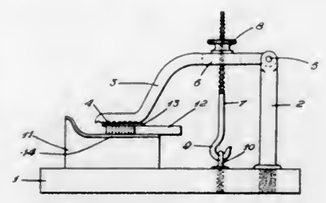
1. A garment hanger including a pair of frames each defining substantially the bar and the lower leg halves of the letter H; and suspending means for said hanger including depending flexible elements the lower ends of which are looped, one of such loops sleeving the bar of one of the frames intermediate the ends of said bar and the other of such loops similarly sleeving the bar of the other frame, thereby to suspend said frames in parallel and laterally separable relation; each of said frames including a tube open at opposite ends, and a pair of elbow elements, each of said elbow elements having a horizontal limb and an integral, depending, vertical limb, each such horizontal limb being tubular and fitted slidably within an end portion of one of said tubes and each such vertical limb being flattened parallel to the plane of its frame; in each frame each such horizontal limb being shaped to present an internal annular bead at a point more removed from the free end of said limb than from the other end thereof, and an expansile coil spring in the tube projecting at opposite ends into the two horizontal limbs fitted into the tube, said spring having terminal convolutions which are enlarged in diameter and which engage the beads in the limbs last-mentioned.

1,804,315. ROOF FLASHING. WALTER P. BUDD, Durham, N. C. Original application filed May 5, 1928, Serial No. 275,500. Divided and this application filed Feb. 7, 1929. Serial No. 338,273. 3 Claims. (Cl. 108—26.)



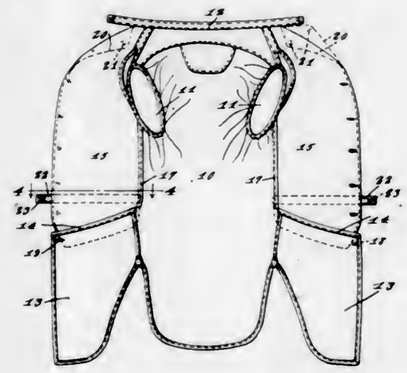
1. As an article of manufacture a holding strip for flashing constructions comprising a body having a transverse attaching flange along one longitudinal margin thereof and being provided with a crimped guide rib in parallelism with said attaching flange and in projecting relation to the same side of the plane of said body portion as said attaching flange.

1,804,316. HAND POSITIONER FOR GOLF CLUBS. FRANK O. BUTLER, Chicago, Ill. Filed Dec. 9, 1929. Serial No. 412,868. 3 Claims. (Cl. 273—81.)



1. In a device of the class described, the combination with a club handle having a non-metallic grip covering, of a relatively rigid member having a depression adapted to receive the end of a digit of a user of the club, said member having portions projecting from opposite ends of said depressed portion and provided with transverse grooves, teeth provided on said member adapted to enter said grip covering, and threads wrapped around said handle and occupying said grooves for securing said member to the handle.

1,804,317. SYSTEM OF ELECTRIC MOTOR CONTROL. FRANKLIN J. CHAMPLIN, Dalton, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 16, 1928. Serial No. 319,907. 10 Claims. (Cl. 171—119.)

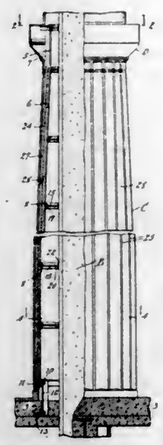


1. In a control system, an electric motor, means for operating said motor to a position of rest at any point within predetermined limits of travel, and selective means for causing operation of said motor only to a position of rest at a predetermined point intermediate said predetermined limits irrespectively of the direction and extent of its movement from said intermediate position.

1,804,318. APPARATUS FOR SWAGING DENTAL PLATES. MAURICE CHARLIER, Brussels, Belgium. Original application filed June 21, 1928, Serial No. 287,219, and in Belgium June 25, 1927. Divided and this application filed July 29, 1929. Serial No. 381,877. 2 Claims. (Cl. 32—5.)

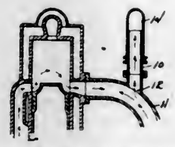
1. An apparatus for swaging dental plates of high resistance metal comprising, in combination, a base, a metal die secured to said base and adapted to receive the plate, a standard on said base, a lever pivoted to said standard, the free end of said lever extending above said die, said lever being adapted to hold the work in position, and adjustable means for locking said lever in operative position.

1,804,319. SHIRT. PATRICK B. COLLINS, Dorchester, Mass. Filed Sept. 4, 1929. Serial No. 390,327. 1 Claim. (Cl. 2—103.)



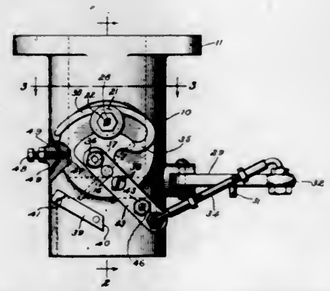
A garment of the character described comprising a one-piece back of a shirt having arm holes, a neck band front vest portions secured to the opposed sides of said back and around said arm holes and connected with said neck band for a portion of its length, and free from the remaining portion thereof to provide lapels, said shirt including front lower end portions secured to the adjacent lower edges of said vest portions, and straps secured to the opposed sides of the back and adapted to be extended across the latter in overlapped relation, and means for securing the adjacent ends of said straps together.

1,804,320. COLUMN CONSTRUCTION. JOHN W. CROSS, New York, N. Y. Filed Apr. 18, 1929. Serial No. 356,149. 11 Claims. (Cl. 72—72.)



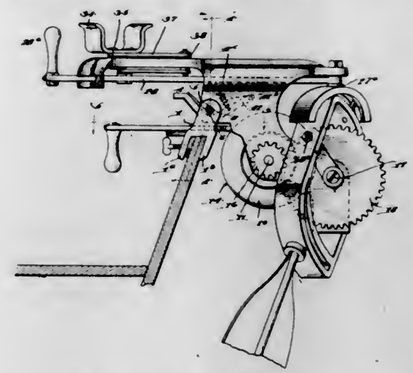
1. In a tubular fabricated decorative column adapted to surround and conceal a structural column, a framework including a plurality of vertical annularly arranged

elements and a plurality of horizontal vertically spaced bands secured thereto, plastic supporting material carried



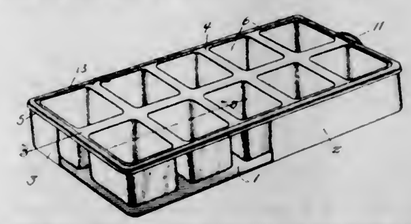
by the framework, a cementitious covering applied to said supporting material and a surface finishing coating applied over said covering.

1,804,321. PULSATION CONTROL. LLOYD L. E. CROWE, Milwaukee, Wis. Filed June 22, 1928. Serial No. 287,473. 1 Claim. (Cl. 123—65.)



In an internal combustion engine, a cylinder having inlet and exhaust ports, an exhaust pipe leading from the exhaust port, a vacuum chamber within the exhaust pipe and having communication with the exhaust port, and adjustable means providing communication between the exhaust port and pipe and the vacuum chamber and pipe to control the direction of travel of the exhaust gases.

1,804,322. CARBURETOR. JAMES SYLVESTER CUFF, New London, Conn. Filed Jan. 30, 1929. Serial No. 336,075. 2 Claims. (Cl. 261—50.)

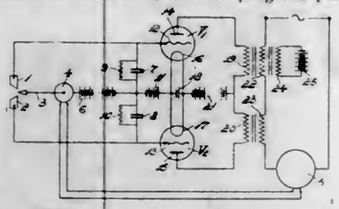


1. In a carburetor, a casing forming an air inlet and a mixing chamber, a choke valve controlling said air inlet, a liquid fuel inlet between the air inlet and the mixing chamber, a valve controlling said liquid fuel inlet, said valve including a valve member, a seat with which said valve member coacts; an adjustable nut on said valve member, a cam supported for movement to coact with said nut, means for effecting the movement of the cam in one direction to move the valve member off of its seat, means constantly acting on said valve member to move it to closed position on its seat and to yieldably hold the valve member on its seat, and means connected directly with said valve member to move it off of its seat.

1,804,323. PROPULSION MEANS FOR BOATS. HARRY G. DAVIDSON, Ortega, Fla. Filed Oct. 4, 1929. Serial No. 397,304. 14 Claims. (Cl. 115—29.)

1. In a boat propulsion means, a propeller member, and means for actuating said propeller member, comprising an oscillating lever adapted for manual operation, an operating lever oscillated by said oscillating lever, a yoke member fixedly related to said propeller member and slidably related to said operating lever, crank means in offset relation, engaging the opposite sides of said yoke member, and a stationary pivot member slidably related to said yoke member, whereby a sculling or figure eight motion is imparted to said propeller member.

1,804,324. ICE CUBE PAN FOR REFRIGERATORS. ANDRÉ G. DE WEAL, Chicago, Ill. Filed May 16, 1929. Serial No. 363,498. 5 Claims. (Cl. 62—108.5.)

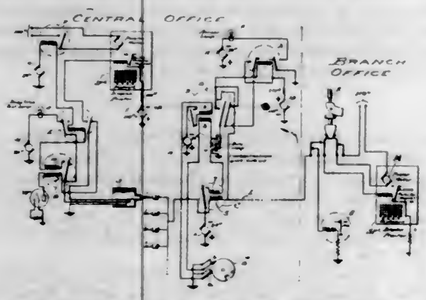


1. A water freezing utensil for use in a refrigerator, comprising a pan member, and a form member including a peripheral flange seated upon and hooked over the said upper edge to support and center the form member on the pan; the form member having a plurality of depending and cup-like formations arranged in rows and freely spaced both from each other and from the pan.

1,804,325. CONSTANT MAGNITUDE CONTROL SYSTEM. POPKO REINDER DIJKSTERHUIS, Eindhoven, Netherlands, assignor to N. V. Philips Gloeilampenfabrieken, Eindhoven, Netherlands, a Limited Liability Company of the Netherlands. Filed Aug. 12, 1929, Serial No. 385,429, and in the Netherlands Oct. 24, 1928. 3 Claims. (Cl. 219—20.)

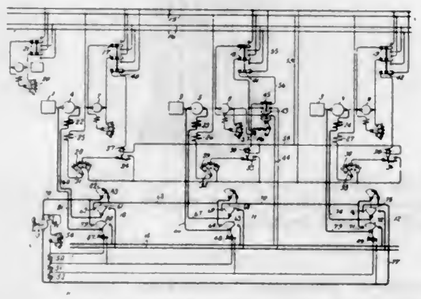
3. A temperature regulator, comprising a movable conductor, stationary conductors between which the movable conductor is placed, the instantaneous position of the said movable conductor being controlled by the temperature to

be regulated, the stationary conductors being arranged at some distance apart, two thermionic valves having control grids, cathodes and plates, two resistance-shunted condensers, one cooperating with each of the thermionic valves, the said stationary conductors each being connected to the control grid of the corresponding valve and to one of the electrodes of the corresponding condenser, a source of potential to which the said movable conductor is connected, the other electrodes of each of the condensers being connected to the other side of the said potential source and to the cathodes of the said valves, a plate circuit for each of the valves, an inductive winding in the plate circuit of each of the valves, and carrying the plate current



thereof, a separate core for each of the said windings, each winding being connected in the plate circuit of the corresponding valve and carrying the plate current, a supply circuit carrying the heating current, a winding in the said supply circuit on each of the said cores, each of the first-mentioned windings being adapted to vary the magnetization of the corresponding core in senses opposite to each other, an auxiliary winding on one of the said core wound in a direction opposite to that of the corresponding plate-circuit winding, and a direct current magnetization source for the said auxiliary winding, whereby the effects of the two windings on the core neutralize each other and permit increase of the reactance of the corresponding supply circuit winding.

1,804,326. FLY CHASER. ANTON DOKKEN, Brookings, S. Dak. Filed June 17, 1929. Serial No. 371,566. 2 Claims. (Cl. 156—14.)

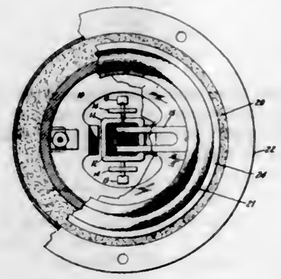


1. In a fly chaser for doors, a rod supported in a position offset with relation to the side of a door but on a plane above the door, means for stationarily attaching the rod in place, and a flexible device supported from the rod and having its free end extending below the path of movement of the upper edge of the door when opening and closing.

1,804,327. CONCENTRATION CIRCUIT FOR SIMPLEX PRINTERS. HERBERT W. DRAKE, East Orange, N. J., and WILLIAM B. BLANTON, Brooklyn, N. Y., assignors to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Jan. 31, 1929. Serial No. 336,617. 16 Claims. (Cl. 178—2.)

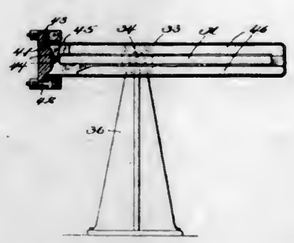
1. In combination, a plurality of transmitting and receiving telegraph apparatus at branch offices with lines terminating in multiple single-contact line plugs at a central station, means for normally applying signal battery to each line, means responsive to interruption of the line at a branch office to display a call signal at the central station, transmitting and recording telegraph apparatus at the central station including a source of operating battery, and a cord circuit for the central station apparatus including means responsive to signal battery for connecting said apparatus and operating battery to the line.

1,804,328. SHIP PROPULSION. ROY O. DUNHAM, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 31, 1927. Serial No. 216,670. 8 Claims. (Cl. 172—8.)



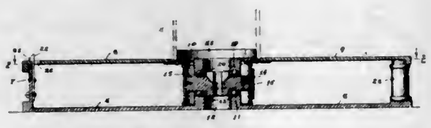
1. An electric power system comprising a motor, electric generating means driven by said motor, a plurality of load circuits, means for connecting said load circuits to said generating means, means responsive to the operation of one of said connecting means for increasing the excitation of said generating means when one of said load circuits is disconnected from said generating means and means responsive to another of said connecting means for rendering said last mentioned means inoperative when another of said load circuits is connected to said generating means.

1,804,329. DOOR. ALFRED C. FARR, Upland, Ind., assignor to Carrie Horner, Upland, Ind. Filed Dec. 31, 1930. Serial No. 505,869. 5 Claims. (Cl. 20—20.)



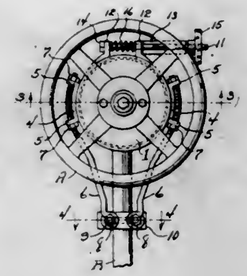
4. The combination with a folding door, of guide rails on each side of the door adapted to receive guide plates on the door, said guide rails having a relatively wide flange at one side to receive the cooperating edge of the door and having a cam portion formed to fit a cooperating notched portion in the edge of the door as the door is closed, said cam portion serving as weather stripping means when the door is closed, substantially as set forth.

1,804,330. ELECTRIC MEASURING INSTRUMENT. HAROLD T. FAUS, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 6, 1929. Serial No. 390,826. 8 Claims. (Cl. 171—95.)



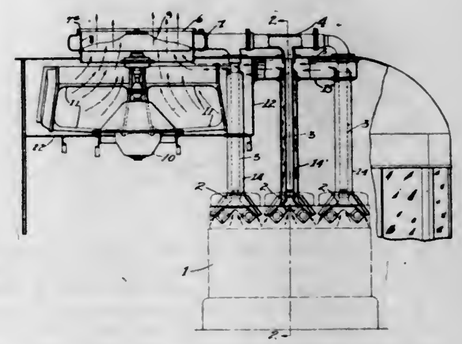
3. An electric measuring instrument of the D'Arsonval type comprising an annular permanent magnet with a pair of inwardly projecting pole pieces on one diameter of the magnet and a moving coil armature pivotally mounted within said magnet with its axis of rotation on a diameter of the magnet at right angles to the first mentioned diameter.

1,804,331. METHOD OF CLEANING MAGAZINES AND MATRICES. HERMAN R. FREUND, Brooklyn, N. Y., assignor to Intertype Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 22, 1928. Serial No. 321,146. 3 Claims. (Cl. 141—1.)



1. The method of cleaning the magazine and matrices of a line casting machine which comprises immersing the magazine while containing the matrices belonging thereto in a cleaning liquid, and causing the matrices to shift their positions relatively to the magazine while in the presence of the cleaning liquid.

1,804,332. FIREPROOF FILM REEL. ALEXANDER GENTILUOMO, Grantwood, N. J. Filed Aug. 18, 1928. Serial No. 300,522. 3 Claims. (Cl. 242—70.)

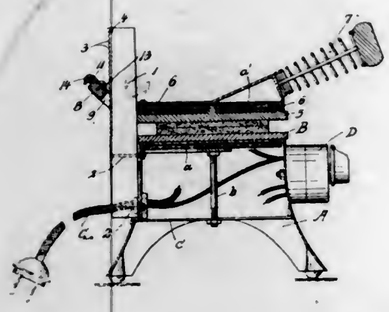


1. A fireproof film reel, including a casing formed with an upstanding wall and a hinged cover, said wall being broken away at one point and provided with a groove, said cover being provided with an extension acting as a continuation of said wall and positioned to fit into said groove when the cover is closed, a rotatable hub provided with a clamp arranged in said casing, and means for guiding the film into and out of the casing.

1,804,333. STEERING WHEEL BRAKE FOR TRACTORS. VICTOR GREGOIRE, Lake Andes, S. Dak. Filed Sept. 13, 1929. Serial No. 392,329. 2 Claims. (Cl. 74—39.)

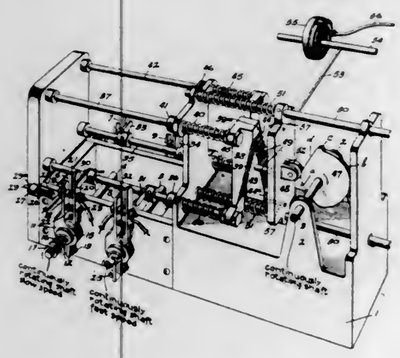
1. In combination with a vehicle and its steering mechanism, a brake drum connected with the steering wheel, a band for the drum having ears thereon, adjustable means for supporting the band from the steering column, a rod passing through the ears of the band, a spring on the rod and arranged between the ears for holding the band expanded, a member on the rod having one end bearing against one of the ears, the outer end of the rod being threaded and a hand wheel on said threaded end and engaging the opposite end of said member.

1,804,334. VENTILATING SYSTEM. CHARLES O. GUERNSEY, Philadelphia, Pa. Filed Aug. 28, 1928. Serial No. 302,583. 5 Claims. (Cl. 123—171.)



1. In a motor-driven car having a radiator for cooling the engine of the car, an exhaust manifold for the engine, exhaust means leading from said manifold to a connection with a muffler, means spaced from the radiator coils for drawing air through them from the exterior, a closure about said exhaust means and discharging into a passageway between the radiator and the last mentioned means, air being drawn through the closure to cool the exhaust pipes, as an incident to cooling the radiator.

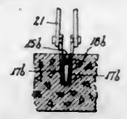
1,804,335. SANDWICH BAKER. WILLIS W. HALE, Cleveland, Ohio. Filed Apr. 1, 1929. Serial No. 351,707. 12 Claims. (Cl. 53—5.)



1. In a sandwich baker, in combination, a base comprising a fixed baking plate, an upper baking plate for cooperation with said fixed baking plate, and means intermediate the base and upper baking plate for supporting the latter in adjusted positions vertically spaced

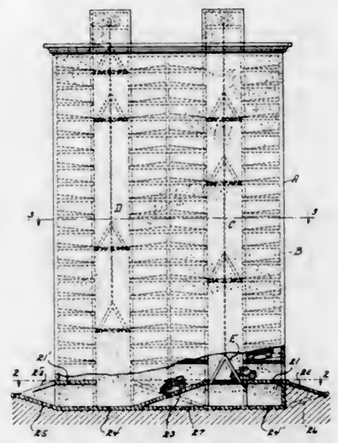
from the lower baking plate to contact with an article of food on the latter, and comprising a standard having

teeth, the upper baking plate having a loop embracing the standard and having a hardened metal plate providing a tooth to engage the teeth of the standard.



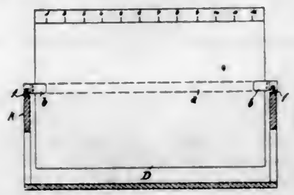
1,804,336. AUTOMATIC CONTROL SYSTEM. RALPH M. HARDGROVE, Bethlehem, Pa., assignor to Bailey Meter Company, a Corporation of Delaware. Filed Dec. 10, 1927. Serial No. 239,201. 18 Claims. (Cl. 236—78.)

1. A control system for use with heating apparatus having a factor appurtenant to the heating apparatus which, during operation of the apparatus, tends to vary from a predetermined value for maintaining said factor at the predetermined value, comprising means positioned in accordance with variations of said factor from the predetermined value, means which when operated tends to restore said factor to its predetermined value, and control means through which said first-named means effects operation of said second-named means, said control means comprising mechanism for effecting movements of said second-named means in each direction, means whereby as said factor approaches its predetermined value after having departed from such value, said mechanism will be operated to effect movement of said second-named means in a direction tending to cause departure of said factor from its predetermined value and in amounts depending upon the rate at which such factor is approaching its predetermined value whereby as the factor approaches its predetermined value its rate of approach will be decreased.



1,804,337. ROAD BUILDING APPARATUS. JOSEPH WILLIAM HELTZEL, Warren, Ohio. Filed Feb. 24, 1928. Serial No. 256,729. 6 Claims. (Cl. 94—51.)

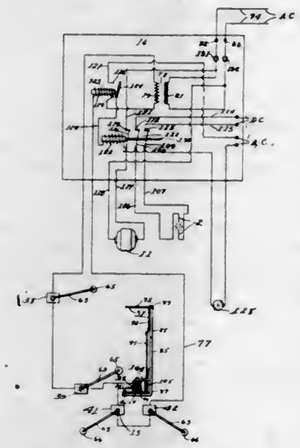
1. A frame movable on the side forms of a concrete road under construction, said frame being open for the depositing and finishing of concrete within the outline of the frame, and a pair of spaced longitudinal plates supported from said frame to receive a joint strip or ma-



terial between them and their upper edges being arranged to be substantially flush with the finished surface of the concrete, the space between said plates being open at the upper edges of said plates.

1,804,338. STORAGE GARAGE. JAMES W. HENDERSON, Niagara Falls, N. Y. Filed Dec. 21, 1929. Serial No. 415,808. 6 Claims. (Cl. 214—16.1.)

1. A garage of the class described comprising a plurality of stalls arranged in vertical rows, elevators for conveying the cars to and from the stalls, said elevators being arranged in a number of sets, a loading floor for one set of elevators, upwardly sloping ramps for said floor, downwardly sloping ramps for leading the cars from the elevators of said set, an elevator unloading floor for the other set of elevators, downwardly sloping ramps for said unloading floor, passages under the second set of elevators and the unloading floor through which the cars coming from the first set of elevators pass, upwardly sloping ramps for the cars leaving the passages, passages under the first set of elevators and the loading floor, downwardly sloping ramps for said passages, and upwardly sloping ramps for leading the cars from the last mentioned passages to the second set of elevators.

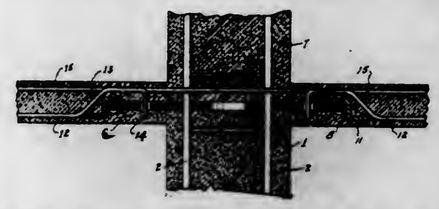


1,804,339. CARD-CARRIER FOR CARD-FILES. HANS HENSCHEL, Dresden-Loschwitz, Germany. Filed Feb. 27, 1928, Serial No. 257,446, and in Germany Mar. 7, 1927. 2 Claims. (Cl. 129—16.)

1. A card-carrier for card-files, comprising in combination with a file-box having a guide-bar with a vertical

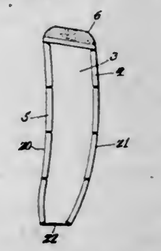
flange on the top-edge of each long side-wall, narrow card carrier bars having each near each end a slot upwardly extending from the lower edge designed to be placed on the flange of the corresponding guide-bar, means located within said slots for causing said card-carrier, bars to tilt under the influence of gravity, a clamp fixed on one of the surfaces of each carrier bar, and a second clamp mounted on each carrier bar in spaced relation to and so that it faces said first-mentioned clamp.

1,804,340. MOTION PICTURE APPARATUS. HARRY HOFFMAN, Philadelphia, and PAUL F. KARST, Highland Park, Pa., assignors of one-third to Louis Hoffman, Philadelphia, Pa. Filed Sept. 10, 1928. Serial No. 304,930. 11 Claims. (Cl. 88—17.)



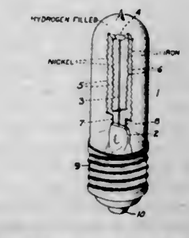
10. In a mechanism for projecting a film upon a screen, a motor for passing a film before an arc, a switch connected in series with said motor and adapted to operatively connect it with a source of current, a relay and a circuit for the electric arc controlled by said relay, and means operatively responsive to the failure of said source of current to effect de-energization of said relay, said arc circuit being broken upon the de-energization of said relay.

1,804,341. ACOUSTICAL DEVICE. JOSEPH HUTT, Coventry, England, assignor to General Electric Company, a Corporation of New York. Filed Aug. 23, 1927, Serial No. 214,970, and in Great Britain Feb. 23, 1927. 2 Claims. (Cl. 181—27.)



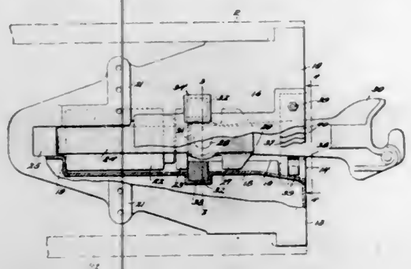
1. An acoustical device comprising a hollow cylindrical casing including closed and open ends, a flaring member extending between said ends and attached to said closed end, and a partition arranged to form between said member and said casing a helical passageway which opens into the smaller end of said member.

1,804,342. STRUCTURAL HEAD FOR REENFORCED CONCRETE CONSTRUCTION. EDWARD W. HYDE, Jr., Philadelphia, Pa.; Catherine E. Hyde executrix of said Edward W. Hyde, jr., deceased. Filed Feb. 13, 1929. Serial No. 339,722. 9 Claims. (Cl. 72—15.)



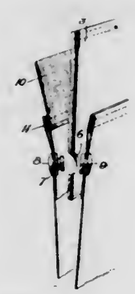
8. The combination with concrete slabs and directly supporting columns, rigid head members consisting each of a single steel plate having lateral flanges embedded in the slabs and columns at the junction thereof and reinforcing rods embedded in columns and slabs having a connection with said heads.

1,804,343. SEALABLE CONTAINER. MAX HYTKEN, Ruleville, Miss. Filed Apr. 5, 1930. Serial No. 441,927. 3 Claims. (Cl. 229—53.)



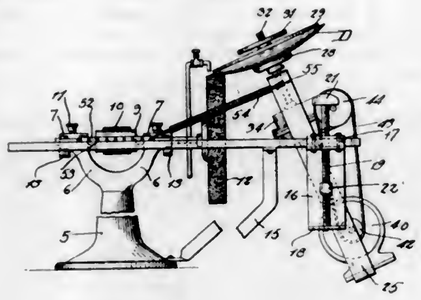
1. A bag blank comprising a front wall forming part, a rear wall forming part extending from the inner end of said front wall forming part, a foldable flap portion projecting from the outer end of the front wall forming part, a set of spaced folds projecting from each side of said front wall forming part, said blank being lengthwise scored at the points of mergence of said sets with said front wall forming part, one of said scores being of arcuate curvature and the other of said scores being of ogee curvature, said rear wall forming part having its lengthwise edges conforming in contour to said scores, said blank being further scored transversely at the point of mergence of said parts and at the point of mergence of said portion with said front wall forming part.

1,804,344. BALLAST RESISTOR. HOWARD A. JONES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 20, 1927. Serial No. 185,316. 4 Claims. (Cl. 201—76.)



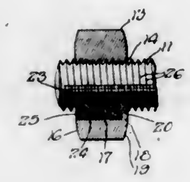
2. In combination, a receptacle filled with an inert gas at a relatively low pressure, and a ballast device mounted therein, said ballast device comprising a pair of series connected nickel and iron resistors.

1,804,345. RAILWAY DRAFT GEAR. WILLIAM F. KIESEL, Jr., Altoona, Pa. Filed Sept. 9, 1926. Serial No. 134,527. 6 Claims. (Cl. 213—6.)



1. In a device of the class described, in combination, a complete draft assembly including a single draft gear, front and rear followers, a draft yoke and a coupler including shank and butt, a pocket casting adapted to be attached to a vehicle and having an open end larger than said coupler shank, said draft assembly being adapted to be placed in said pocket through said open end while completely assembled, means pivotally securing said yoke to said coupler butt near the front end of said yoke and ahead of said draft gear, keys passing through the top and bottom of said pocket casting and positioned to engage the front follower to retain the draft assembly in said pocket and to take the coupler pull, said keys being substantially adjacent the connecting means for said yoke and coupler butt, and an adjustable coupler shank carrier secured to said casting at the mouth of said pocket.

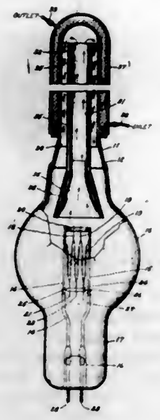
1,804,346. COAT. ISAAC KIRSCHENBAUM, Middletown, Pa. Filed Oct. 5, 1929. Serial No. 397,693. 1 Claim. (Cl. 2—98.)



A coat of the character described comprising a body having a lining separate from the outer portions of the body at the collar opening, said lining having a turned over finished edge at said collar opening, a permanent collar secured to the body adjacent the collar opening, a plurality of snap fasteners for securing said lining to said outer portion adjacent the collar opening so as to hold said finished edge of said lining so that it will slightly overlap said permanent collar to give a finished appearance to the garment at the edge of the permanent collar, and a removable collar larger than said permanent collar formed with openings near one edge, said removable collar being adapted to be positioned with the openings therein in line with said snap fasteners, whereby when the snap fasteners are unlocked they will extend through said openings in said removable collar, said removable collar being positioned with one edge extending between said body and said lining and arranged to overlie and hide said permanent collar while said finished edge of the lining will overlie the lower part of the removable collar to give a finished appearance thereto.

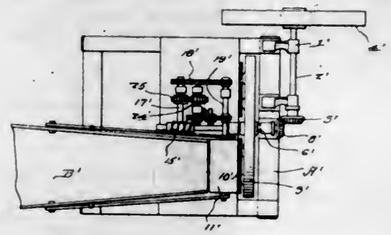
1,804,347. AUTOMATIC DISK SHARPENER. PHILIP KRUG, Hoisington, Kans. Filed May 10, 1929. Serial No. 362,033. 1 Claim. (Cl. 51—106.)

A grinding machine of the character described, a pedestal support, a shaft journalled in the support, an abrasive wheel mounted on the shaft, a pulley mounted on the shaft for causing rotation thereof, side bars secured to the pedestal support, brackets mounted on the end of each side bar for horizontal adjustment, a rectangular frame pivoted to said adjustable brackets, means for raising or lowering the rectangular frame relative to the brackets, a rotary work support mounted in the upper portion of rectangular frame, an electric motor carried by the lowermost portion of the rectangular frame, drive means associated with the electric motor and rotary work holder, and resilient means for holding the rectangular frame presented to the abrasive wheel.



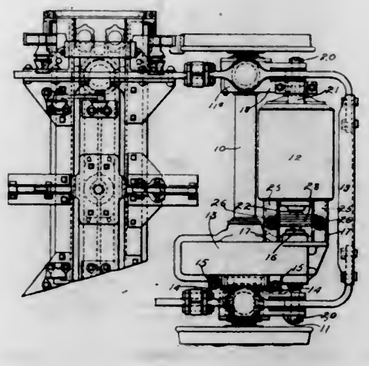
1,804,348. NUT LOCK. JOHN S. KUBACKI, Chicago, Ill. Filed Sept. 20, 1929. Serial No. 393,997. 2 Claims. (Cl. 151—7.)

2. Means for retaining a nut upon a threaded member comprising a nut provided with a bore directed through the routes of the threads of said member whereby to provide lateral openings opening into said bore, a spring member confined in said bore with portions thereof exposed through said lateral openings between the apexes of the threads of said nut for yieldable and resistable bearing against the threads of said threaded member when said nut is assembled upon said threaded member, and a plug for the open end of said bore.



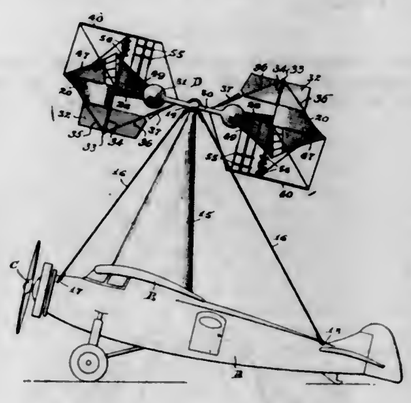
1,804,349. INCANDESCENT LAMP. IRVING LANGMUIR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 10, 1928. Serial No. 291,677. 10 Claims. (Cl. 176—16.)

10. A radiant energy device comprising an envelope, a metal dome joined to said envelope, a radiator operating at incandescence in said envelope, a gas filling for said device, and a duct within said dome communicating with said envelope having an inlet opening in immediate communication with the space adjacent said radiator, and



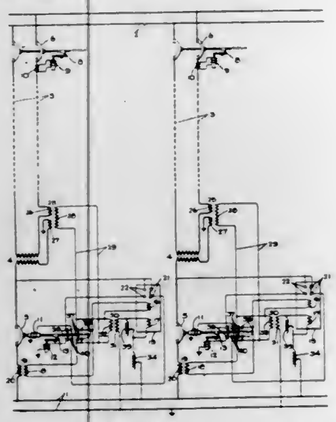
an outlet opening spaced more remote from said radiator for the passage through said dome of heated gas arising from said radiator.

1,804,350. FEED CUTTER. THOMAS F. LANNON, Van Nuys, Calif. Filed Dec. 31, 1928. Serial No. 329,379. 1 Claim. (Cl. 146—112.)



A feed cutter comprising a frame, a feed trough on the frame, a drive shaft carried by the frame at one end of the feed trough and extending transversely of the frame and feed trough, a fly wheel on one end of the shaft, and a beveled gear on the opposite end of the shaft, a stub shaft arranged at right angles to the drive shaft rotatably mounted on the frame at one side of the fed trough, a beveled gear on said stub shaft meshing with the beveled gear on the drive shaft, a feed cutter wheel secured to the stub shaft, a pair of superposed feed roller shafts arranged between the trough and feed cutter wheel, means for driving one of the feed roller shafts from the stub shaft, and means for driving the other feed roller shaft including a sprocket wheel on said last mentioned feed roller shaft, an idle sprocket wheel at one side of the first mentioned sprocket wheel, a lower drive sprocket wheel, a sprocket chain trained about all of said sprocket wheels.

1,804,351. MOTOR MOUNTING FOR CAR TRUCKS. ELMER LATSHAW, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 6, 1930. Serial No. 433,686. 13 Claims. (Cl. 105—133.)

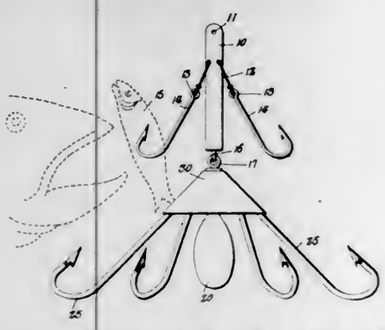


3. In a car truck, the combination with a drive axle of journal boxes therefor, a transmission upon the axle including a housing carried by the axle, a drive motor having its shaft paralleling the axle, and means supporting the drive motor from said transmission and one of said journal boxes.

1,804,352. SAFETY LIFTING AND DESCENDING ACCESSORY FOR AIRCRAFT. THOMAS M. LEKA, Englewood, N. J. Filed May 23, 1930. Serial No. 455,073. 13 Claims. (Cl. 244—19.)

1. An accessory for lifting aircraft vertically and for controlling the vertical descent thereof, including a rotary member mounted on a transverse horizontal axis to turn in a vertical plane, said member including a pair of radially projecting blades having air scoops at the outer end of the forward or leading surface thereof.

1,804,353. SYSTEM OF ELECTRIC DISTRIBUTION. THOMAS C. LENNOX, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 29, 1929. Serial No. 410,440. 16 Claims. (Cl. 175—294.)



1. In combination, an electric circuit, a power transformer, a circuit breaker for connecting the secondary of said transformer to said circuit, and means energized in accordance with the magnitude of the magnetizing current of said transformer for controlling said circuit breaker.

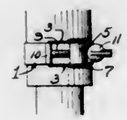
1,804,354. CELLULOSE CONVERSION PRODUCTS AND PROCESS OF MAKING. LEON LILIENFELD, Vienna, Austria. Filed May 10, 1924, Serial No. 712,477, and in Austria June 6, 1923. 15 Claims. (Cl. 260—10.)

1. Process for making cellulose conversion products, which may be worked up into technical products by dissolution in aqueous alkali solution and precipitation from the solution, which process comprises treating a cellulosic body with strong sulphuric acid of at least about 60° Baumé at a temperature between about minus 5° C. and plus 6° C. and continuing such treatment until a conversion product of cellulose soluble in aqueous caustic alkali solution is obtained.

1,804,355. FISH HOOK AND TRAP. HENRY CLINTON LIPTHROTT, New Orleans, La. Filed Sept. 25, 1929. Serial No. 395,143. 2 Claims. (Cl. 43—36.)

1. A device for mounting a plurality of fish hooks, comprising a central body and radially extending arms, diverging and extending downwardly, the arms being channeled longitudinally, and hooks having their shanks within the channels, with portions passing thru the arms, the ends of the shanks being turned to position approximately parallel with the main portions of said shanks.

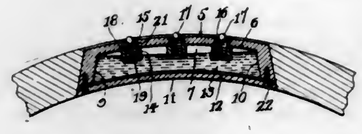
1,804,356. HEADWEAR. ARTHUR M. LOWENTHAL, Rochester, N. Y., assignor to Max Lowenthal & Sons, a Copartnership composed of Harry M. Lowenthal, Eugene M. Lowenthal, and Arthur M. Lowenthal. Filed Aug. 9, 1927. Serial No. 211,822. 6 Claims. (Cl. 2—172.)



1. Headwear comprising a crown member, and a hinged rear-neck member having a central portion stitched to the rear portion of the crown member along the lower edge of said crown member and having end portions, also stitched to the lower edge of the crown, the inner or stitched edges of the end portions being at slight angles to the seamed edge of the central portion, so as to place the free edge of the rear-neck member under tension when in its upper or lower position.

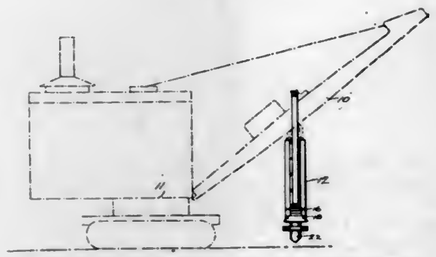
1,804,357. PRODUCTION OF METALDEHYDE. EMIL LÜSCHER and HEINRICH STEIGER, Basel, Switzerland, assignors to the Firm: Elektrizitatswerk Lonza, Gampel and Basel, Switzerland. Original application filed June 10, 1925, Serial No. 36,278, and in Germany June 23, 1924. Divided and this application filed July 22, 1926. Serial No. 124,287. 1 Claim. (Cl. 260—140.)

A process for the production of metaldehyde which burns practically free from soot and ash, consisting in treating acetaldehyde with oxonium halogenates of aldehydes and ketones as catalysts.



1,804,358. ADJUSTABLE HOSE CLAMP. JOHN F. LYONS and MELVIN S. PERKINS, Keene, N. H. Filed Apr. 26, 1930. Serial No. 447,682. 2 Claims. (Cl. 24—19.)

2. A hose clamp comprising a band member in the form of a strip of resilient sheet metal, the strip being provided in one end portion with a longitudinal series of openings, ears outstanding from the sides of the strip at the other end thereof and each formed with a substantially semi-circular notch, a cylindrical fulcrum element, having circumscribing grooves at its ends, disposed between the ears with its grooved ends seating in the notches in the ears, the said fulcrum element having a diametric opening therein, and a bolt fitting the openings in the strip and fulcrum element and adjustable to clamp the strip about a hose.

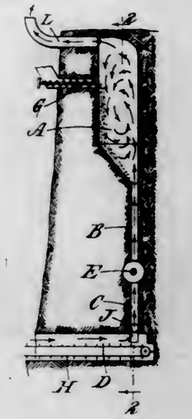


1,804,359. COMBINED PRINTING AND COLOR-APPLYING ELEMENT AND METHOD OF MANUFACTURING THE SAME. WILLIAM MACDONALD, Dennison, Ohio. Filed Apr. 17, 1929. Serial No. 355,821. 7 Claims. (Cl. 101—115.)

1. A method of manufacturing a combined printing form and color applying element consisting in casting a printing form around a removable bevelled end dummy corresponding in contour to that of a color applying device, removing said dummy to provide a color applying

device receiving opening, and then securing in said opening a color liquid reservoir having valve controlled outlet means projecting beyond the outer face of the form.

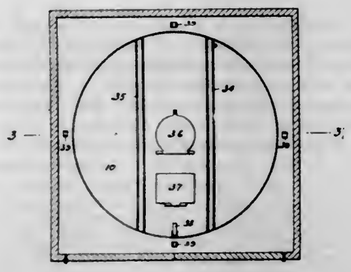
1,804,360. ROAD-BREAKING APPARATUS. JOHN J. MAGEE, Woodbury, N. J. Filed Jan. 27, 1930. Serial No. 423,874. 10 Claims. (Cl. 262—13.)



2. In road-breaking apparatus, a road-breaking chisel, a cushion guide for the chisel having means limiting downward movement of the chisel and means supporting the guide and mounting an element for applying successive blows to the head of the chisel, said element engaging the guide and being supported thereby when the chisel is in its lowermost position.

1,804,361. PROCESS OF TREATING CARBONACEOUS ARTICLES. MICHAEL J. MARCIN, Trenton, N. J., assignor of one-half to Duncan MacKenzie, Trenton, N. J. Filed Aug. 29, 1930. Serial No. 478,799. 3 Claims. (Cl. 204—61.)

3. Process of treating carbonaceous articles comprising embedding same in a mixture of 63 parts by weight of flint to 26 parts by weight finely divided coke, placing the the mass in an induction furnace, and passing a current through said furnace to raise the temperature sufficiently above the vaporization point of flint and below the vaporization point of carbon to form an adherent surface layer of uniform, homogeneous and hard silicon carbide.

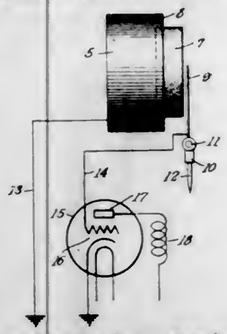


1,804,362. KILN FOR MANUFACTURING LIME OR THE LIKE. GEOFFREY MARTIN, Wembley, England. Filed Apr. 28, 1927, Serial No. 187,332, and in Great Britain May 17, 1926. 6 Claims. (Cl. 222—3.)

1. A shaft kiln for heat treating lime, cement and the like in powdered form comprising a preheating chamber of elongated cross-section having its wider side walls relatively close together, a sintering shaft of relatively smaller cross-section disposed below the preheating chamber and communicating asymmetrically therewith through the bottom, and means for introducing heated fluid into the lower portion of the sintering shaft, said chamber having

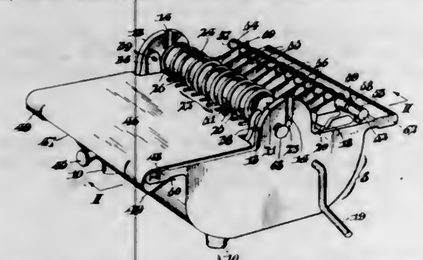
an inlet for powdered raw material and a gas outlet both located at the upper end of the preheating chamber at the side remote from the upper end of the sintering shaft.

1,804,363. AUTO TABLE FOR SAFEWAY GARAGES. JOHN W. MAYDEN, Weleetka, Okla. Filed Aug. 11, 1930. Serial No. 474,629. 2 Claims. (Cl. 104—44.)



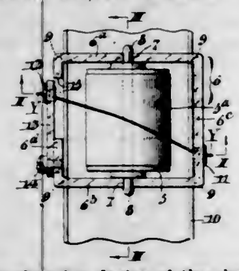
1. A turn table construction comprising a platform supported by beams intersecting in rightangularly disposed relation and defining a square centrally beneath the platform, a hub for the turn table, spokes radially disposed within the square and abutting said hub, a standard journally associated with said hub, disk members arranged upon the ends of the hub and abutting the opposed side edges of the spokes, disks carried by the standard journally associated with the first mentioned disks, and an auxiliary bearing structure cooperatively associated with the first mentioned bearing structures to alleviate tilting of the table.

1,804,364. PICKUP. OLIVER B. PARKER, Brooklyn, N. Y., assignor to Pacent Electric Company, Inc., New York, N. Y., a Corporation of New York. Filed July 12, 1930. Serial No. 467,453. 18 Claims. (Cl. 179—100.41.)



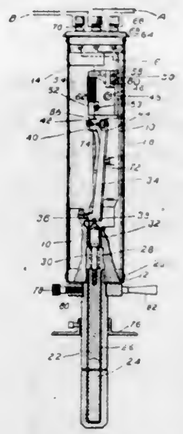
18. An electrical device of the general character disclosed comprising a member of a material capable of permanently retaining an electrostatic charge and having

an electrostatic charge permanently incorporated therein, a companion member associated in electrically coupled



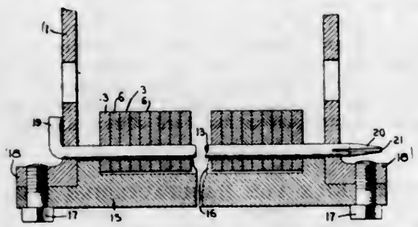
relation with the first member, means for supporting said members in relatively movable relation and circuit establishing connections for said members.

1,804,365. GLUING MACHINE. CHARLES S. PRICE, Bethlehem, Pa., assignor to L. F. Grammes & Sons, Inc., Allentown, Pa., a Corporation of Maryland. Filed Sept. 14, 1928. Serial No. 306,085. 8 Claims. (Cl. 91—51.)



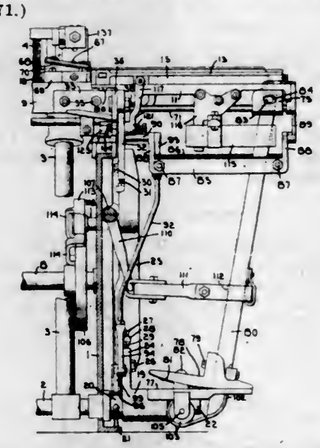
8. The combination in a machine of the type described of a container for adhesive and embodying a partitioned-off pocket; a manually-rotatable drum journaled in the container with a drive gear located in the pocket; adjustable means adapted to regulate the thickness of adhesive applied by said drum; a feeding-in plate having tongues projecting into proximity with said drum, and a non-contacting co-operative circumferentially-ribbed feed roll driven by the applicator gear; slightly vibratory stripper means—removable as a unit—engaging the applicator drum to separate material therefrom as rapidly as it is coated with adhesive; a removable arcuate section cover mounted over the feed device aforesaid; and means whereby the machine may be operated and restrained against back motion.

1,804,366. YARN MOISTENING DEVICE. EMIL J. BERGER, Hatfield, and ABRAHAM W. SWARTZ, Norristown, Pa., assignors to The Dexdale Hosiery Mills, Lansdale, Pa., a Corporation of Pennsylvania. Filed Mar. 21, 1929. Serial No. 348,705. 8 Claims. (Cl. 91—51.)



1. A yarn moistening device of the character described comprising a freely revolving horizontally supported hard-surfaced roller having a soft bibulous covering and running with its lower portion immersed in the moistening liquid; and a stationary guide, and a movable guide adapted for adjustment in a plane paralleling the roller, said guide serving to vary the extent of circumferential contact of the yarn angularly over the top of the roller.

1,804,367. THERMOSTAT. NELSON T. BRANCHE, Toledo, Ohio, assignor to Surface Combustion Corporation, Toledo, Ohio, a Corporation of New York. Filed May 9, 1928. Serial No. 276,301. 3 Claims. (Cl. 200—137.)

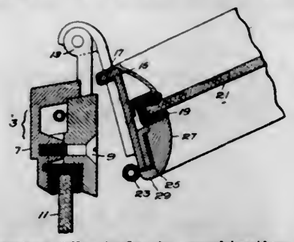


1. In a thermostat, the combination of a tubular casing, an elongated member removably positioned within said casing, a bell crank lever pivoted on said member and having arms of unequal length, the longer arm of said lever extending longitudinally in said casing and the shorter arm of said lever extending transversely in said casing, a pair of contacts, one of said contacts being held by the elongated member, the other of said contacts attached to the longer arm of said lever for movement to and from its fellow contact by said lever, thermally controlled means carried by said elongated member and extending from one end of said casing for actuating said lever, said means being longitudinally adjustable with respect to said member, and means inserted between said lever and said thermally controlled means for absorbing the differential of the movement of said lever and said thermally controlled means.

1,804,368. LOOM DOBBY. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 29, 1927. Serial No. 243,348. 2 Claims. (Cl. 139—331.)

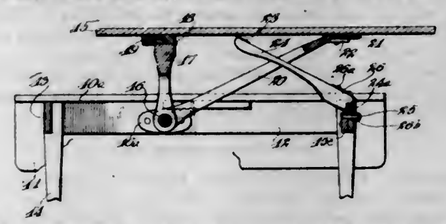
1. In a loom dobby the combination of a frame, a fulcrum shaft pointed at one end, mounted in fixed bearings in the frame and endwise removable therefrom, a series of indicating fingers having bearing openings fitting said shaft acting to permit the fingers to rock on the shaft but to prevent the fingers rising bodily on the shaft, a supporting bar extending parallel with the shaft beneath the fingers and spaced therefrom a distance less than half the diameter of the shaft whereby, when the shaft is removed, the fingers will be supported on the bar in position to permit the shaft readily to be reinserted through the bearing openings and into its bearings and whereby, when the fingers are in position on the shaft, the bar will not interfere with their normal rocking movement and cooperating means on the fingers and on the bar acting when the fingers are supported on the bar to retain the fingers longitudinally in position to be threaded by the shaft when it is replaced in its bearings.

1,804,369. SHIFTING SHUTTLE BOX LOOM. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 6, 1928. Serial No. 297,685. 40 Claims. (Cl. 139—171.)



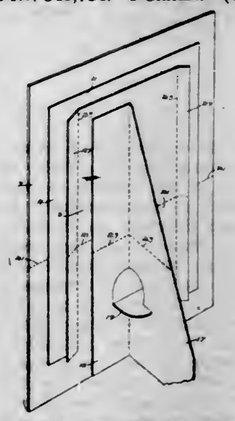
1. A loom comprising a lay having a main section with a raceway and a transversely shiftable box section, a plurality of shuttle boxes on the box lay section, any one of which may be aligned with the raceway by shifting the said section, a picker rod for each box mounted upon the box lay section in parallelism with the raceway, a picker slidable on each picker rod, and means for effecting the picking movement of each picker when its shuttle box is aligned with the raceway, whereby under all conditions the active shuttle is projected in a straight line parallel with the raceway.

1,804,370. SEPARABLE FASTENER. GUSTAV JOHNSON, West Roxbury, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed Apr. 29, 1929. Serial No. 359,039. 5 Claims. (Cl. 24—75.)



1. A snap fastener device comprising, in combination, a one-piece plate member formed from sheet metal and having a hook portion and yieldable finger means normally pressing toward said hook portion, said hook portion and said yieldable finger means being formed from the material of said plate member and located substantially centrally of said plate member, and a second plate member having an apertured portion at one edge engaged with said hook portion to secure the two plate members together and said yieldable finger means pressing against said apertured portion to hold it in engagement with the hook portion to prevent accidental disengagement while being adapted to be separated by a pull exerted at a predetermined edge of one of the plate members.

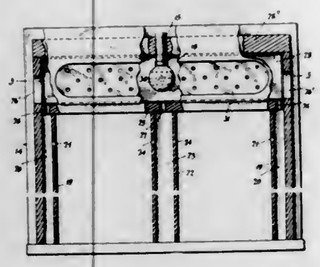
1,804,371. WINDLACE CONSTRUCTION FOR VEHICLES. FREDERICK J. KUBLER, New York, N. Y., assignor to A. S. Campbell Company, East Boston, Mass., a Corporation of Massachusetts. Filed July 24, 1928. Serial No. 294,988. 2 Claims. (Cl. 296—44.)



1. In an automobile body in combination with the body hinge pillar, a door of the type having a window therein, the hinge pillar of said door being hung on the body hinge pillar and having at one side thereof a glass channel, a garnish molding carried by said pillar at the inner side of said channel and provided with a flange overlying the inner face of the door pillar, and a windlace having a compressible body lying at the jamb face of said door pillar and a securing flap received between said pillar and molding.

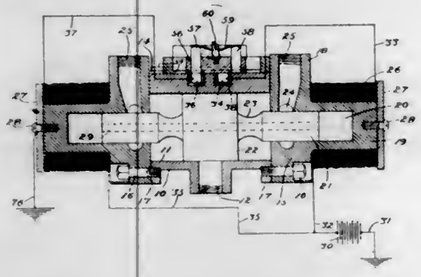
1,804,372. COMBINATION TABLE AND IRONING BOARD. PETER E. LARSON, Chicago, Ill. Filed Jan. 7, 1930. Serial No. 419,144. 12 Claims. (Cl. 68—10.)

1. A combination table and ironing board comprising a shaft journaled in the table sides, an arch erected upon the shaft and having a flat top, an ironing board hinged to said arch at one edge thereof and seating on said flat top, and crossed braces supporting the ironing board on the table.



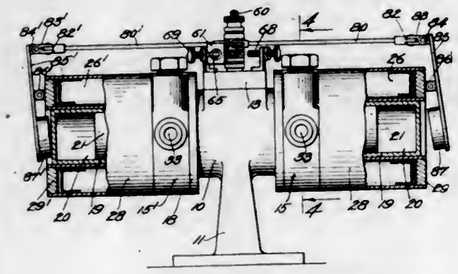
1,804,373. DISPLAY FRAME. PAUL F. PAIGE, Detroit, Mich., and GEORGE H. BLOOD, Lynn, Mass., assignors to Forbes Lithograph Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 1, 1929. Serial No. 343,784. 4 Claims. (Cl. 40—150.)

1. A display device comprising a frame-like member having a tongue carried by an inner edge thereof to lie in



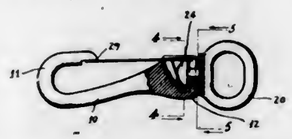
the opening of the frame, said parts adapted to receive between them a sheet to be displayed, said member having a fold line about which it may be folded rearwardly and a collapsible support secured to the back of the tongue and adapted when erected to support the same and through the displayed sheet to maintain erect the frame-like member.

1,804,374. SPRINKLER FIRE-PROTECTION APPARATUS. JOHN P. THURELL, Fort Myers, Fla. Filed Feb. 20, 1929. Serial No. 341,474. 4 Claims. (Cl. 169—16.)



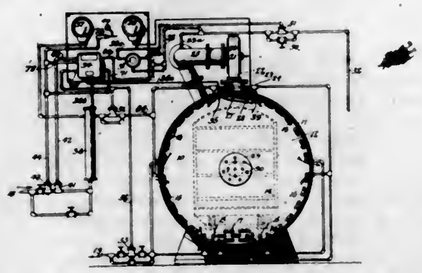
1. In a building having door and window openings in its walls and door openings in its partitions, frames in said door and window openings each having a chamber at its upper portion, a sprinkler head of the heat responsive type in each of said chambers, means for supplying a fire-extinguishing agent to said sprinkler heads, and panels closing the sides of said chambers, one of the panels of each of said chambers being formed of inflammable material and being so positioned relatively to said sprinkler heads that their burning will release said heads.

1,804,375. ELECTRIC PUMP. HARRY H. COBE, Chelsea, Mass., assignor, by direct and mesne assignments, to Cobe Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 16, 1927. Serial No. 168,630. 9 Claims. (Cl. 230—55.)



1. In a pump, in combination, a pump cylinder having an inlet and an outlet port, a cylinder head entirely enclosing each end of the cylinder, a piston reciprocable within the cylinder, an electro-magnetic device for moving the piston in each direction, an electrical supply source, a pair of spaced contact posts each electrically connected with one of the electro-magnetic devices, a pair of reciprocable slides actuated in response to the action of the electro-magnetic devices, one of said slides carrying a pair of contacts adapted to engage said posts alternately to complete the circuit from said supply source through the electro magnetic devices, and means for holding said contact carrying slide to complete the circuit through one electromagnetic device until the piston has completed its stroke and then permit it to move to complete the circuit through the other.

1,804,376. ELECTROMAGNETIC RECIPROCATING MECHANISM. HARRY H. COBE, Chelsea, Mass., assignor to Cobe Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed May 18, 1929. Serial No. 364,050. 13 Claims. (Cl. 230—55.)

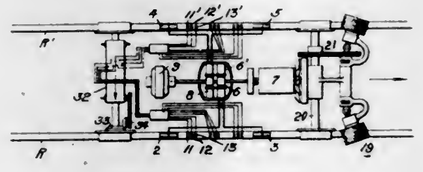


1. In an electro-magnetic reciprocating mechanism, in combination, a magnetic plunger, two solenoid windings for reciprocating said plunger, a switch mechanically separate from said plunger for directing the flow of electric current to said solenoids alternately, and means actuated by the magnetic attraction of said plunger for operating said switch.

1,804,377. SNAP HOOK WITH SWIVEL. JOHN B. FREYSINGER, New Britain, Conn., assignor to North & Judd Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed Feb. 18, 1930. Serial No. 429,409. 2 Claims. (Cl. 24—236.)

1. In a fastening device of the character described, a hook member formed with a recess at one end having an end wall and side walls, the end wall having a notch therein, flanges at the upper ends of the side walls and shoulders at the bases of said flanges, an eye member having a shank extending through the notch and a head engaging in said recess, and a spring snap operatively assembled with respect to the hook member and having a portion resting on said shoulders and engaging said end wall, said flanges being inturned over the side edges of said spring snap whereby the same is held between the flanges and said shoulders.

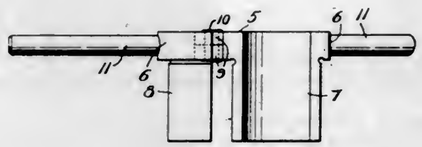
1,804,378. APPARATUS FOR THE CONTROL OF INDUSTRIAL HEAT-TREATMENT PROCESSES. THEODORE C. HAZARD, Rochester, N. Y. Filed May 16, 1928. Serial No. 278,218. 13 Claims. (Cl. 236—46.)



8. In apparatus of the character described, the combination with a heat-treating chamber, steam-heating means for heating the material to be treated and a steam supply, of a steam reservoir between the steam-heating means and the steam supply and means responsive to pressure conditions within the reservoir for controlling the flow of steam from the supply to the reservoir.

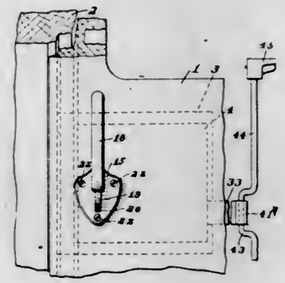
1,804,379. PLASTIC FROM NATURAL RESIN, PHENOL, ALDEHYDE, AND ALKALI. ISADORE SIDNEY MELLANOFF, Philadelphia, Pa., assignor to Kemikal, Inc., a Corporation of Delaware. Filed July 3, 1928. Serial No. 290,267. 8 Claims. (Cl. 260—4.)

3. A soluble, fusible plastic substance formed by reacting about two parts of rosin, about twenty parts of aldehyde, about twenty parts of phenol and about two parts of alkali at a temperature of about 70° C. which on further heating becomes insoluble and infusible.



5. The process of producing a plastic substance comprising treating natural resin with ammonium hydroxide and reacting about two parts of the resultant mass with about twenty parts of phenol, twenty parts of aldehyde and two parts of alkali.

1,804,380. FISSURE DECTECTOR FOR STEEL RAILS. ELMER A. SPERRY, Brooklyn, N. Y., assignor, by mesne assignments, to Sperry Products, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 27, 1927, Serial No. 215,980, and in Great Britain July 22, 1927. 29 Claims. (Cl. 234—1.5.)

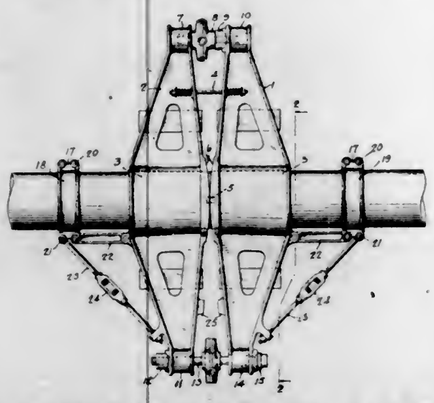


25. In a flaw detector for metallic bars, rails and the like, means for passing a current between spaced points of said bar, means movable relatively to said bar for detecting variations in the current flow from point to point, and flaw-indicating means actuated by said detecting means.

1,804,381. JIG BUSHING. AUGUSTUS B. BOLENDER, Muncie, Ind., assignor to Warner Gear Company, Muncie, Ind., a Corporation of Indiana. Filed Nov. 19, 1927. Serial No. 234,344. 5 Claims. (Cl. 77—62.)

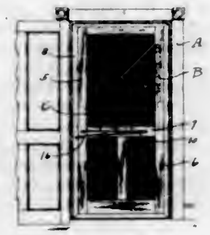
1. The combination with a drill jig having a guide opening, of a guide bushing fitting said opening for free axial movement therein, said bushing being axially split to form a plurality of separable sections, means hingedly connecting said sections, said sections being held in assembled relation by the side walls of the jig opening when the bushing is placed in position.

1,804,382. LATCH. MINAS H. KASHIAN, Boston, Mass., assignor of one-fourth to William H. Sellars, East Milton, Mass. Filed June 7, 1927. Serial No. 197,032. 16 Claims. (Cl. 292—64.)



7. Latch mechanism of the kind described, comprising a bolt disposed at one side of a door, a handle disposed on the opposite side of said door, a lever pivoted between its ends, an arm on one end of said lever engaging said bolt, a projection on the opposite end of said lever engaging said handle, and a bar operable from the bolt side of the door to engage the arm of said lever to prevent movement thereof.

1,804,383. CYLINDER GAUGE. CAESAR B. LITTERIO, Providence, R. I., assignor to Federal Products Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Dec. 27, 1928. Serial No. 328,733. 2 Claims. (Cl. 33—178.)



1. In a cylinder gauge, a base, a contact adjustable in said base, means to secure said contact in adjusted position, a movable feeler co-axially arranged with respect to said contact, indicator actuating means, a pivoted rocker in said base interposed between said feeler and said actuating means for transmitting movement from said feeler to said actuating means, said base having an aperture at one side thereof through which said rocker may be inserted, and a plug for said aperture, the pivot for said rocker bearing in said plug and said base.

1,804,384. TOOL FOR BENDING TUBULAR ARTICLES. HENRY MILLER, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed June 3, 1929. Serial No. 368,065. 7 Claims. (Cl. 153—32.)

1. An apparatus for bending articles of substantial length comprising a pair of juxtaposed arms in abutting relation at their centers and diverging outwardly therefrom, said arms having aligned openings therein adapted to receive the article to be bent, and means for relatively moving said diverging arms to apply bending pressures to the article.

1,804,385. DOOR OR GATE CLOSER. ARTHUR M. FERRIN, Red Rock, Mont. Filed Sept. 11, 1929. Serial No. 391,866. 2 Claims. (Cl. 16—78.)

1. The combination with a door and its casing, of a coil spring having one end attached to the door adjacent the free edge of the door, a sheave carried by the free end of the spring, and a flexible pull cord trained over the sheave with one end attached to the door and having its opposite end connected with a jamb piece of said casing.

CARNEGIE LIBRARY OF ATLANTA

Patents Nos. 1,804,386 to 1,805,463

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 406—No. 2 TUESDAY, MAY 12, 1931 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual index, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adjudicated Patents

(D. C. and C. C. A. N. Y.) Kelley patent, No. 1,132,186, for traffic-signaling system, claim 1, if valid, *Held* not infringed. *Kelley* v. *City of Syracuse*, 47 F.(2d) 347 and 349.

(D. C. and C. C. A. N. Y.) Huether patent, No. 1,235,319, for taping machine, claim 5 *Held* not infringed. *Corrugating Machinery Corporation* v. *Progressive Corrugated Paper Machinery Co.*, 47 F.(2d) 273 and 276.

(C. C. A. Del.) Smith patent, No. 1,340,423, for parachute, claims 1, 2, 3, 4, and 10 *Held* valid and infringed. *Irving Air Chute Co.* v. *Russell Parachute Co.*, 47 F.(2d) 130.

(C. C. A. Del.) Smith patent, No. 1,403,983, for parachute pack, claims 5 and 8 *Held* valid and infringed. *Id.*

(C. C. A. Del.) Smith patent, No. 1,462,456, for parachute pack and harness, claims 1, 11, 12, 15, and 18 *Held* valid and infringed. *Id.*

(D. C. Conn.) Parks patent, No. 1,507,891, for composition of matter for carroting fur and the like, *Held* valid and infringed. *American Hatters & Furriers Co.* v. *Danbury & Bethel Fur Co.*, 47 F.(2d) 268.

(D. C. Conn.) Parks patent, No. 1,507,892, for treated fur and art of treating the same, *Held* valid and infringed. *Id.*

(D. C. Ohio.) Short patent, No. 1,588,303, for transmission belt, *Held* valid and infringed. *Dayton Rubber Mfg. Co.* v. *Dorman Automotive Parts Co.*, 47 F.(2d) 350.

(C. C. A. Del.) Smith patent, No. 1,558,644, for scale, claims 4 and 5, if valid, *Held* not infringed. *International Ticket Scale Corporation* v. *Rhodes-Hoehriem Mfg. Co.*, 47 F.(2d) 134.

(C. C. A. N. Y.) Grubman patent, No. 1,571,916, for method and means for applying eye mountings in doll heads, claims 7–11, 13–20, *Held* not infringed. *Grubman Engineering & Mfg. Co.* v. *Goldberger*, 47 F.(2d) 151.

(C. C. A. N. Y.) Jones patent, No. 1,658,804, for capacitative-coupling control system, claims 1, 2, 4–11 *Held* invalid. *Jones* v. *Freed-Eisemann Radio Corporation*, 47 F.(2d) 174.

(C. C. A. N. Y.) Jones patent, No. 1,658,805, for capacitative-coupling control system, claims 1–16 *Held* invalid. *Id.*

(D. C. N. Y.) Costello patent, No. 1,753,310, for exercising ball and support therefor, claims 1, 5, and 7 *Held* valid and infringed. *Costello* v. *I. Revich & Sons*, 47 F.(2d) 259.

(C. C. A. N. Y.) Grubman reissue patent, No. 16,483, for eye mounting for dolls, claims 10, 26, 30–36 *Held* not infringed. *Grubman Engineering & Mfg. Co.* v. *Goldberger*, 47 F.(2d) 151.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,537,921, R. D. Malley, Mercury switch, decided April 18, 1921, claims 1, 2, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 17, 19, and 20.

Pat. 1,638,131, W. R. Walker, Electric switch, decided April 18, 1931, claims 1, 2, 3, 4, 5, 6, 10, and 11.

Pat. 1,670,898, S. P. Levenberg, Electrical system, decided March 31, 1931, claim 1.

Pat. 1,680,956, E. H. Simonsen, Wrench, decided April 21, 1931, claim 8.

Pat. 1,721,732, C. A. Hawkins, Vehicle suspension, decided March 20, 1931, claims 7, 8, 9, 10, 11, and 34.

Pat. 1,734,681, M. Lapham, Method of interlocking bolts and nuts, decided March 18, 1931, claim 1.

Pat. 1,743,196, P. J. Dugan, Solenoid construction, decided April 25, 1931, claim 1.

Pat. 1,760,382, C. H. Teesdale, Controlling means for electric switches, decided April 21, 1931, claims 8, 9, 10 and 11.

Condition of Applications Under Examination at Close of Business April 25, 1931

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 96,576; Trade-Mark Division, 1,292. Oldest new case, July 28, 1930: oldest amended, July 28, 1930. The dates given are 1930 except where † indicates 1931.) DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE EINSTEIN

No. 2,573. Decided February 3, 1931

1. PATENTABILITY—GRINDER-WHEEL OSCILLATOR.
Certain claims for a grinder wheel oscillator *Held* unpatentable over the prior art.

2. SAME—COMPACTNESS.
Compactness or size alone does not constitute invention. There must be some new device or some new and useful purpose accomplished.

3. SAME—SUBSTANTIALLY DUPLICATE CLAIMS.
"Two distinct claims for the same substantial matter, differing only in non-essentials, cannot both be sustained."

APPEAL from the Patent Office. Affirmed.

Mr. Elmer R. Helferich, Messrs. Nathan & Bowman, Mr. Albert F. Nathan, and *Mr. Border Bowman* for Einstein.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.:*

The appellant made application to the Patent Office in Serial No. 673,547, on November 8, 1923, for what he claimed was a new and improved grinder-wheel oscillator. As finally amended, 14 claims were attached to his application, claims 3, 6, 10, 11, and 12 being allowed, and claims 1, 2, 4, 5, 7, 8, 9, 13, and 14 being rejected by both tribunals in the Patent Office. The appellant has assigned error on the refusal of the rejected claims.

Claims 1, 7, and 9 were rejected on the ground that it did not involve invention to substitute gear wheels and a gear unit, such as is shown by the reference Linton, 840,072, January 1, 1907, for the pulleys and belts shown by the reference, Gordon, 1,103,957, July 21, 1914. Claims 2, 4, 13, and 14 were rejected on the said patent to Gordon on the ground that there is no patentable novelty in broadly interchanging the two sleeves of Gordon, as to which one may drive the spindle and which carries the roller and the cam groove. Claims 5 and 8 were rejected as defining nothing patentably different from what is covered by allowed claim No. 3.

Appellant's device is for use in connection with grinding machines for imparting a slight to and fro shifting of the grinding wheel in an axial direction, while the wheel is continuously rotating, and is of particular advantage in truing grinding wheels or in grinding surfaces where it is necessary, or advisable, to shift the grinding wheel forward and backward in doing the work desired. The appellant accomplishes the purposes he has in mind by using a conventional grinding-wheel spindle appropriately housed in bushings, the attachment for oscillating or shifting the shaft forward and backward being located at the end of the spindle opposite to the grinding wheel. Appellant's spindle is operated by a pulley attached thereto, and in an intermediate position thereof, upon which pulley a belt of the ordinary type operates. The spindle is caused to move forward and backward through its bushings by two elements connected with the rear portion of the spindle, which portion has been turned down for the purpose of fitting said elements thereto. One of these elements is a sleeve connected with the spindle and rotating at the same rate as the spindle. The other element is in the form of a ring which surrounds one end of the sleeve element, and which contains a cam follower which fits into a cam groove which surrounds the sleeve element in such a way as to cause, when the ring element is firmly held in one position, the sleeve element and the spindle to move forward and backward as the cam follower passes through the cam groove. The sleeve element and the ring element are caused to move in the same direction but at different rates of speed by a cog wheel having two sets of teeth, the two parts of said cog wheels being of different diameters; thus the spindle and sleeve element will rotate more rapidly than the ring element with its cam follower and, by this means, the spindle will be slowly moved backward and forward as the cam follower goes through the groove. This entire device is mounted in the ordinary housings and with the necessary mountings.

[1] In our opinion the Linton and Gordon references fully anticipate rejected claims 1, 2, 4, 7, 9, 13, and 14. Linton shows a spindle and grinding wheel which is caused to move forward and backward axially by cogwheels, and which is automatically reciprocating. It is true Linton shows a different device for accomplishing the reciprocating movement, his means being a screw shaft which is caused to function by means of gears which operate, in effect, the same as those of the appellant here. Gordon shows a spindle operated by pulleys and belts, and has a cam follower and a cam groove which operate in a like manner to those of the appellant, namely, to move the spindle backward and forward. The elements, however, are arranged opposite to those of the appellant, that is, the outer element bearing the cam follower is attached to the spindle and moves with it, while the inner sleeve bearing the cam groove is stationary. The Patent Office holds that the transposition of these elements is obvious and does not constitute invention. In this we agree. *In re McNeil*, 28 App. D. C. 461, 126 O. G. 3425 is a case in point. There it was held by the court of appeals that a mere reversal of the essential working parts of a previously patented device, did not constitute invention.

[2] Appellant contends his device is compact and occupies much less space than either the Linton or

Gordon devices; that it does away with the cumbersome pulleys of Gordon and the equally cumbersome cogs of Linton. This may be true, but we do not think this element of compactness or size alone, constitutes invention. *Wappler Electric Co.* v. *Bronx Hops, etc.*, 28 F.(2d) 419; *Grinnell Wash, Machine Co.* v. *Johnson*, 247 U. S. 426, 254 O. G. 225. There must be some new device or some new and useful purpose accomplished. There is nothing here, in our judgment, which is not anticipated by Linton and Gordon.

Claims 5 and 8 were rejected, as showing nothing patentable over allowed claim 3. These claims follow:

3. A grinding-machine comprising an axially shiftable spindle; a first member having a circumferential cam-groove mounted on said spindle; means for prohibiting shifting of said member relative to said spindle; a second member loosely journaled coaxial with said spindle and indirectly deriving rotation therefrom, said second member having a part engaging said cam-groove; a removable stop adapted to prevent reciprocation of said second member; and means to adjust said stop from its effective position to permit said second member to shift idly under the action of said cam and thereby to discontinue reciprocation of said spindle.

5. In a grinding machine, a support; a spindle rotatably and translatably journaled therein; a grinding wheel carried by said spindle; means to rotate said spindle; means to translate said spindle in its bearings, said translating means comprising a first member fixed to said spindle; a second member rotatably journaled with its axis coincident with the axis of said first member; means connecting said members to rotate the second member from the first member at an unequal rate; means to cause the relative rotation of said members to translate one of said members and said spindle, said means comprising a cam on one of said members, a follower carried by the other member and co-operating with said cam; abutments engaging one of said members to restrain it against the translatory action of said cam; and means permitting the removal of one of said abutments to permit said restrained member to be translated by the action of said cam.

8. A grinding-machine comprising an axially shiftable spindle; a member keyed on said spindle and having a circumferential cam-groove; a normally shiftable means deriving rotation from said spindle and having a part engaging said cam-groove; means including a stationary abutment and a movable abutment engaging opposite sides of said shiftable means for prohibiting shifting of said shiftable means relative to said spindle to accomplish a reciprocation of said member and spindle, and means to withdraw said movable abutment away from said shiftable means to permit said means to shift idly and not effect a reciprocation of said spindle.

[3] We are not advised from the record why claim 3 was allowed, nor is it particularly material. Two distinct claims for the same substantial matter, differing only in non-essentials, cannot both be sustained. *Decco Co.* v. *Gilchrist Co.*, 125 Fed. 293. *In re Prescott*, 51 App. D. C. 281,301 O. G. 389, 278 Fed. 590; *In re McConnell*, 17 C. C. P. A. (Patents) 1139, 399 O. G. 419, 40 F.(2d) 567. While counsel for appellant contend in their argument that the above quoted claims do differ in essential elements, they do not point out to us what such essential elements are. The only difference apparent, on careful reading, between claims 5 and 3, is that claim 5 refers to "abutments" and claim 3 to a "stop". Certainly, in this device, this would not be a patentable distinction. The same comment may be made on claim 8. The other features of the refused claims, such as "a member keyed on said spindle", as found in claim 8, and members rotating "at an unequal rate", constitute nothing patentable over the prior art, and hence constitute no patentable distinction between these claims and claim 3.

The decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

WHITE *v.* SYVERTSEN

No. 2,514. Decided February 3, 1931

INTERFERENCE—PRIORITY—DILIGENCE.

Evidence reviewed and *Held* to establish that priority was properly awarded to S. on the ground that assuming that W. was the first to reduce to practice S. was the first to conceive the invention and was not lacking in diligence in filing his application for patent.

LENROOT, *J.*, concurring specially.

BLAND, *J.*, dissenting.

APPEAL from the Patent Office. Affirmed.

Mr. G. F. Dewein for White.

Mr. James L. Norris and *Mr. Clarence A. Bateman* for Syvertsen.

HATFIELD, *J.*:

This is an appeal in an interference proceeding from the decision of the Board of Appeals affirming the decision of the Examiner of Interferences awarding priority of invention to appellee, Harald Syvertsen.

The invention relates to an improvement in hydraulic turbines "of the type wherein water is delivered to the runner past an annular series of guide vanes * * * simultaneously adjustable about parallel axes * * * adapted to direct the water tangentially toward the runner blades." It involves the idea of arranging stop pins so that they project into cored-out or open spaces in the guide vanes, in such position as to permit free motion of the guide vanes during normal operation, and, in the event of accidental breakage of the conpection between the guide vanes and the shifting ring—the means connecting the guide vanes to the operating mechanism—prevent them moving beyond a predetermined position and striking the vanes of the runner.

We quote counts 1 and 2 of the five counts involved in the issue:

Count 1. The combination with a turbine and runner, of gate means mounted to have pivotal swinging operation and provided with an open space therein with opposite wall portions, and stop means secured to a part of the turbine and projecting into the open space of the gate means and concealed within the latter and operative with relation to said wall portions to limit the movement of the gate means in the event of breakage of the operating devices therefor.

Count 2. The combination with a turbine installation including a runner and pivoted gates having an end portion with walls of stop pin means extending into the gates between the said walls without interfering with the normal opening and closing movements of the latter but preventing abnormal free movement thereof relatively to the runner.

Appellee, Syvertsen, the senior party, filed his application on February 20, 1925, and a patent, No. 1,570,536, was issued to him on January 19, 1926.

Appellant, White, the junior party, filed his application on May 27, 1926, more than four months after a patent had been issued to appellee. Accordingly, appellant had the burden of establishing priority of invention beyond a reasonable doubt.

Considerable testimony was introduced by the parties.

The tribunals below, in exhaustive opinions, in which the testimony is carefully analyzed and considered, concurred in holding that appellee conceived and disclosed the invention in 1919; that appellant conceived and disclosed the invention in September, 1924; that the evidence submitted by appellant was not sufficient to establish reduction to practice prior to appellee's filing date; and that, as appellee was the first to conceive and reduce the invention to practice, he was entitled to an award of priority.

With reference to appellant's claim that he reduced the invention to practice, prior to appellee's filing date, the Examiner of Interferences said:

During the latter part of 1924 two large units for the Copco Plant of the California-Oregon Power Company were built in the Allis-Chalmers Plant which units were assembled and inspected for shipment as early as the early part of February.

During the process of construction of these gates the turbine units were subjected to the certain shop tests consisting of manually swinging the gates from open to closed position very violently. This swinging was done beyond the normal open and closed position in order that the pins could be brought into action. There were no other tests of the invention within the knowledge of Gross who testified to the above-mentioned tests.

There appears to be considerable diversity of opinion between the parties in interference as to the effectiveness of these shop tests, it being the view of White that such tests constitute a reduction to practice of the invention, while such a contention is opposed by Syvertsen, on the ground that such a test is not an approximation to the action of the forces operating against these gates under normal working conditions.

It will be noted at this point that after the Copco units were installed no difficulties were experienced from the same. Whether this satisfactory operation on the part of the turbine shipped by the Allis-Chalmers Company was due to the fact that the gates had never been moved to a position where the stops came into play or not is not clear.

It is believed by this tribunal that such shop tests do not constitute a reduction to practice of the invention. While the invention on its face may be considered simple in structure, the action of these gates when under the extreme hydraulic pressures and currents to which they are subjected is rather complex, and to violently swing the gates against the pins does not appear sufficient to approximation to the normal working conditions to which these gates would be subjected as to constitute a reduction to practice. Theoretically calculating the water pressures and using a safety factor upon which factor the size of the stop is based cannot be considered a reduction to practice.

However, the Examiner of Interferences did not base his decision entirely upon his holding that appellant had failed to reduce the invention to practice until after appellee's filing date. But, assuming, as he did for the purposes of his decision, that appellant had successfully reduced the invention to practice, he held, after stating and analyzing the testimony pertaining thereto, that appellee was diligent from the time appellant entered the field—September, 1924—until he reduced the invention to practice by filing his application on February 20, 1925.

The Board of Appeals rested its decision squarely upon the proposition that appellant's shop tests were not sufficient to demonstrate that the invention would function properly in actual use, and that he had not reduced the invention to practice prior to appellee's filing date.

Counsel for appellant contends that the invention had been completed by an actual reduction to practice for the following reasons: First, the invention in issue was actually constructed and made a part of a hydraulic turbine, the stop pins being so arranged as to permit free motion of the guide vanes during normal operation; second, the stop pins, it is claimed, were designed by competent hydraulic engineers to withstand the strain of the forces produced by the great pressure and velocity of the water rushing past the guide vanes in actual use, although these forces could not be calculated with assured accuracy; third, the stop pins were tested in the shop by swinging the guide vanes violently against them.

It is conceded that the invention was not tested in actual operation of the turbines. In this connection, appellant testified as follows:

X Q. The stop pins, to be practically operative and useful for their intended purpose, would therefore need sufficient strength in the pins themselves and also in the securing of these pins in their sockets, would they not?

A. Yes.

* * * * * * *

X Q. Your position, as I understand it, is that the ability of the stop pins to withstand the stresses which would be imposed upon them in case of breakage of the controlling connections of the respective vanes during actual running of the turbine could be determined with certainty by calculation. Do I correctly understand your position?

A. *The stresses cannot be determined accurately because the force is not definitely known.* It was a feature of the design of the stop pins that they should stop the vanes under all emergencies, conditions, such as we assume, but undoubtedly a condition could arise under which the guide vanes might be broken just as the condition could arise by which the casing of the turbine would be exploded or the shaft of the turbine twisted in two. The pins were designed and will be found of sufficient size for limiting the motion of the guide vanes under the worst assumed conditions with which we were familiar. [Italics ours.]

Appellant's views regarding the necessity of tests to reduce the invention to practice are concisely stated in his testimony. We quote:

* * * No, the invention is simple and covers a stop or limit device for the motion of the guide vane and when the stop has been installed and the guide vane once adjusted to it, the device is complete and the invention an accomplished fact.

The witness, Emil Gross, was the only one who testified that the stop pins were tested by having the guide vanes swung violently against them.

In view of the fact that the tribunals below have stated the evidence in considerable detail and have analyzed it in their opinions, we deem it unnecessary to extend this opinion by an exhaustive discussion of the testimony. We think it is evident that a mere swinging of the guide vanes against the stop pins by two men, violently or otherwise, would prove nothing more than that the stop pins were in proper position. Such a test would certainly not be of great importance, if its purpose was to determine whether the stop pins were of sufficient strength to withstand the incalculable forces to which they would be subjected in actual operation. Accordingly, one of the questions presented is whether or not the actual construction of the involved invention as a part of a hydraulic turbine is sufficient, as stated by appellant in his testimony, to establish reduction to practice.

Surely, in order to reduce the invention to practice, more would be required than the mere placing of the stop pins in proper position so that they would not interfere with the free motion of the guide vanes during normal operation. The precise purpose of the invention was not merely to permit free motion of the guide vanes during normal operation, but to prevent them, in the event of accidental breakage of their connections with the shifting ring, moving beyond a predetermined position and striking the vanes of the runner. Obviously, the desired results would

not be obtained, unless the stop pins were of sufficient strength to accomplish their intended purposes.

It is conceded by appellant that the stresses or forces to which the pins might be subjected in actual operation could not be accurately calculated. There is some evidence to the effect that such forces could be determined with some reasonable degree of accuracy. However, the evidence submitted by appellant to establish that such forces were so ascertained and that the pins were designed to withstand them is not very satisfactory.

The witness, Gross, testifying for appellant, said that, while he could not be positive, he thought the pins were installed in a turbine in the early part of December, 1924.

Appellant's witness, Henry Walters, stated that he was an inspector in the hydraulic department of the Allis-Chalmers Manufacturing Company, appellant's assignee; that the stop pins were not installed in a hydraulic turbine prior to January, 1925; and that the records of his company indicated that the stop pins were installed in hydraulic turbines some time later than January 3, 1925, and prior to February 10, 1925.

We think that it has been clearly established by appellee that he conceived the invention early in 1919; that he, and some of his associates in the employ of the S. Morgan Smith Company, had discussed the question of the installation of the invention in hydraulic turbines from time to time, especially on July 29, and August 28, 1924, and thereafter; that, due to the fact that the vanes in turbines theretofore constructed by appellee's company were too narrow, or otherwise unsuitable to be used with inside stop pins, it was impossible, on August 28, 1924, for appellee to make practical use of the invention; that, on August 28, 1924, it was understood by appellee and the witness, Jessop, chief engineer of appellee's assignee, that the invention would be utilized as soon as an order was received for the construction of a turbine; that, early in October, 1924, an order for a turbine was received and immediately thereafter and until January, 1925, the use of the invention, as a part of the turbine to be constructed, was many times considered and discussed by appellee and others in the employ of the S. Morgan Smith Company; that drawings for the vanes of this turbine were prepared in October, 1924, pencil drawings of the invention being added thereto shortly thereafter and prior to November 26, 1924; and that the invention was actually installed in this turbine early in the year 1925.

It appears from the record that as early as November, 1924, appellee was making preparation for the filing of an application for a patent; and that, in December, 1924, the matter was in the hands of his patent attorney.

In view of the activities of appellee during July, the latter part of August, October, November, and December, 1924, and January and February, 1925, prior to the filing of his application, it is evident that he was not lacking in diligence. The installation of the invention in hydraulic turbines was a matter of importance and required considerable time for discussion and consideration by those charged with the responsibility. That appellant, White, recognized the truth of this assertion, clearly appears from his testimony, in which he stated that even the preparation of preliminary drawings might be subjected to considerable delay. In this connection, he said:

> The actual work of putting the change on the drawing would, of course, not require very much time, but the discussion leading up to the actual change might take some little time. In other words, I would not go to the draftsman and say "Put this in here at once". I would tell my engineer in charge of design or the chief draftsman to make a preliminary drawing of such change for examination and discussion. A considerable time might well elapse between the request to make the change and the making of the actual change. Again, the conditions of the work in the shop might be such as to not require this change at once and press of other work frequently operates to delay such things. I am not prepared to say how long it would take or did take to make the change from the time it was suggested until the date was placed on the drawing.

Accordingly, we are of opinion that appellee was diligent from the time appellant entered the field—September 10, 1924—until appellee filed his application—February 20, 1925. Assuming, therefore, but not deciding, that appellant reduced the invention to practice shortly before appellee filed his application, nevertheless, appellee was the first to conceive the invention and, as he was not lacking in diligence, the tribunals below were right in holding that he was entitled to an award of priority.

The decision of the Board of Appeals is affirmed.

Affirmed.

LENROOT, *J.* (specially concurring):

I can not agree with the conclusion of the majority of the court that there was no lack of diligence upon the part of appellee in reducing his invention to practice.

The rule is so well settled that it scarcely needs the citation of authority, that the reasonable diligence required of the first inventor, where another has entered the field and has reduced an invention to practice prior to the first inventor's reduction to practice, is diligence in perfecting and adapting his invention. *Automatic Weighing Mach. Co.* v. *Pneumatic Scale Corp.*, 166 F. 288. The rule is also well established that in such cases the first inventof, to be entitled to an award of priority, has the burden of showing that immediately before his rival entered the field, and at that time, he was exercising due diligence in perfecting his invention and attempting to reduce it to actual practice. *Martocello* v. *Kobash*, 17 C. C. P. A. (Patents) 1095, 397 O. G. 169, 39 F.(2d) 677.

Applying these two principles to the case at bar, I think the record shows that appellee did nothing from the date of his conception in 1919 until some time between October 29 and November 26, 1924 to reduce his invention to practice. Appellant entered the field on September 10, 1924, and the majority opinion rests its finding of diligence upon the following statement contained therein:

> We think that it has been clearly established by appellee that he conceived the invention early in 1919; that he, and some of his associates in the employ of the S. Morgan Smith Company, had discussed the question of the installation of the invention in hydraulic turbines from time to time, especially on July 29, and August 28, 1924, and thereafter; that, due to the fact that the vanes in turbines theretofore constructed by appellee's company were too narrow, or otherwise unsuitable to be used with inside stop pins, it was impossible, on August 28, 1924, for appellee to make practical use of the invention; that, on August 28, 1924, it was understood by appellee and the witness, Jessop, chief engineer of appellee's assignee, that the invention would be utilized as soon as an order was received for the construction of a turbine; that, early in October, 1924, an order for a turbine was received and immediately thereafter and until January, 1925, the use of the invention, as a part of the turbine to be constructed, was many times considered and discussed by appellee and others in the employ of the S. Morgan Smith Company; that drawings for the vanes of this turbine were prepared in October, 1924, pencil drawings of the invention being added thereto shortly thereafter and prior to November 26, 1924; and that the invention was actually installed in this turbine early in the year 1925.

I had not supposed that discussion of an invention involving only the question of its use at some time in the future was any evidence of diligence in reducing it to practice. The record does show that appellee discussed with his fellow employees and officers of the company by which he was employed the question of whether his invention should be installed at some time in the future in a turbine. Appellee testified that in August, 1924, in conversation with George A. Jessop, chief engineer of appellee's employers, "it was decided to put in inside gate stops on the first available order received after August, 1924." The record shows that the first "available order" was received in October, 1924, but that it was not decided until January, 1925, that the gate stops embodying the invention in issue should be installed in the turbine covered by that order.

In the case of *Seeberger* v. *Dodge*, 24 App. D. C. 476, 114 O. G. 2382, one of the questions there under consideration was very similar to the question here under discussion. In that case the court said, p. 4895:

> Granting the contention that actual reduction to practice is preferable to that which is constructive, merely, as more to the interest of the public, and that reasonable indulgence ought to be extended to one pursuing that course in good faith, yet, when the construction of an experimental device involves so great cost and risk that an inventor, though possessed of sufficient means, may well hesitate to undertake the same entirely at his own expense, due diligence requires that he should then attempt to secure his right and promote the public interest by filing an application for a patent.

So here, if the invention could not be reduced to practice except by installation of the same in a very large and costly machine, instead of waiting for some indefinite time in the future to embody the invention in such machine, due diligence required that appellee file his application for a patent upon it and thus secure a constructive reduction to practice of the same. This he did not do before appellant's alleged reduction to practice.

It seems to me that the majority opinion modifies the rule as to what constitutes diligence in reducing an invention to practice. If mere discussion of whether a proposed invention should be used commercially in the future, or even a tentative understanding that it shall be so used, is evidence of diligence in reducing an invention to practice, then I think that we have so broadly extended the rule of diligence as to destroy, in many cases, its proper application.

On the other hand, if it be conceded that mere discussion of the future use of an invention is not evidence of diligence, then it seems to me that the conclusion of the majority upon the question of diligence can not be sustained unless it be held that diligence by the first inventor, beginning more than a month after the second inventor had entered the field, is in this case sufficient to entitle him to an award of priority. It seems to me that the reason for the rule that diligence upon the part of the first inventor must exist immediately prior to the time the second inventor enters the field is that any diligence of the first inventor first arising *after* the second inventor enters the field might be the result of his gaining some information concerning the activities of the second inventor. I believe that it is a wise and salutary rule that diligence must be shown immediately before and at the time that the second inventor enters the field, and that any diligence exercised by the first inventor only after the second inventor enters the field can not avail the first inventor as against the claim of the second inventor, who has reduced his invention to practice before the reduction to practice by the first inventor. In the case at bar, there was at the very least a period of more than one month after the second inventor entered the field during which appellee exercised no diligence in reducing his invention to practice, according to the evidence in the record, and there is no evidence that he was exercising such diligence before appellant entered the field. For the reasons stated, assuming that the second inventor was the first to reduce to practice, I can not agree with my brethren that appellee was in the exercise of such diligence in reducing his invention to practice as to entitle him to an award of priority.

Upon the question of reduction to practice, appellee's patent having been issued more than four months prior to the filing of the application of appellant, the burden was upon appellant to establish priority of invention beyond a reasonable doubt. I am frank to say that were this a case where preponderance of evidence only was required, I should be of the opinion that appellant had sufficiently established reduction to practice of his invention prior to appellee's filing date, but I do agree with the statement in the majority opinion that the evidence is somewhat unsatisfactory in this respect. The record clearly shows that it was practical to determine the necessary size of the gate stops by certain mathematical computations, without resorting to an actual test. While it may be found from the testimony that such computations were made and relied upon, there is no direct evidence in the record that the party who made such computations was qualified to do so, and there is no direct evidence that any person qualified to pass upon and determine the strength of the pins actually did so. For this reason, I can not say that appellant has established priority of invention be-

yond a reasonable doubt, and I therefore concur in the conclusion of the majority that the decision of the Board of Appeals should be affirmed.

BLAND, *J.* (dissenting):

I regret that I find myself totally out of harmony with the majority in the conclusion reached, and in that portion of the opinion having reference to reduction to practice. While the conclusion is said to be reached on the issue of the diligence of the appellee, the reduction to practice of appellant is discussed in such a manner as to leave the definite impression that the majority, at least, has very grave doubts as to whether or not appellant reduced his invention to practice.

This court usually follows the commendable practice of not discussing or intimating its views upon questions which it does not care to decide and which are not essential to the decision of the case. The reduction to practice of appellant is not in this case according to the views of the majority, and yet the question is discussed. A conclusion that there was no reduction to practice on the part of appellant adds no strength to nor sheds any light upon the very unsatisfactory testimony as to appellee's diligence. I fail to find any relevancy between the two issues. Appellee either was or was not diligent, without regard to appellant's acts. In my judgement the concurring opinion of my associate, Judge Lenroot, conclusively shows the lack of diligence on the part of appellee.

To my way of thinking, this is one of the peculiar kinds of inventions which does not require such a reduction to practice as that it be installed and operated until the contingency happens which is to call into operation the patented device. Following the logic of the opinion of the majority, it would not have been sufficient to constitute reduction to practice to have put the completed device in actual operation under normal conditions because the invention was not designed to operate under normal conditions, but to operate under abnormal conditions. The chain held the vane in normal conditions, but broke and permitted the stop-pins to stop the vane when a log or some obstruction came against it with greater force than the normal flow of water. Putting the vane in normal operation would not test the strength of the pins until the chain broke. To hold that a reduction to practice of this kind of device requires that it must be tested under abnormal conditions would, under the circumstances, I think, be unreasonable. No such requirement was made of appellee, because of the rule that filing of the application constitutes reduction to practice. The courts should not make a rule in a case of this character which puts the parties, while in the Patent Office, upon such an unequal basis. The practical result, in this kind of case, is that the first one to the Patent Office is declared to be entitled to the invention.

There is ample supporting authority for my views on this question, although none of the cases contains a statement of facts identical with those at bar. The peculiar nature of the device in question would, to me, seem to warrant the application of the rule laid down in *Mason* v. *Hepburn*, 13 App. D. C. 86, 1898 C. D. 510, in which a clip or attachment to a gun was held to have been reduced to practice when it was completely finished and ready for sale and use and was demonstrably capable of producing the result.

The entire record before us unquestionably shows that at the time appellant claims his invention had been reduced to practice, it had been fully ascertained that it was capable of producing the result for which it was invented and that it was completely finished and ready for sale and use. See also *Rolfe* v. *Hoffman*, 26 App. D. C. 336, 121 O. G. 1350.

U. S. Court of Customs and Patent Appeals

IN RE BENNER

No. 2,590. Decided February 3, 1931

PATENTABILITY—STORAGE BATTERIES.

Claims for a storage battery *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. George H. Souther and *Mr. J. E. Hutchinson, jr.*, for Benner.

Mr. T. A. Hostetler for the Commissioner of Patents.

GARRETT, *J.*:

This is an appeal from a decision of the Board of Patent Appeals affirming the prior decision of the Examiner rejecting claims 5 and 6 of appellant's application for patent for claimed "improvements in armored storage battery electrodes and processes of making same."

The appealed claims read:

5. A storage battery comprising a container and a component assembly of electrodes and separators, the electrodes comprising a reticulated grid and an active material, of insufficient density to be self-retaining during the action of the battery, on the grid; the separators being pervious to electrolyte but substantially impervious to the active material and of a material which will expand when electrolyte is added whereby the assembly is placed under pressure.

6. A storage battery comprising a container and a component assembly of electrodes and separators, the electrodes comprising a frame and a grid, the grid being of less thickness than the frame, an active material on the grid and flush with the frame, said active material being of insufficient density to be self-retaining during the action of the battery; the separators being pervious to the electrolyte but substantially impervious to the active material and of a material which will expand when electrolyte is added whereby the assembly is placed under pressure.

The claims were rejected upon the following references: Usher, 509,271, November 21, 1893; Hutchinson, 1,159,035. November 2, 1915; Cogan, British 9,048, May 20, 1891; Pumpelly et al., British, 19,883, December 10, 1889.

The Cogan and Hutchinson patents are cited merely to show the specific form of grid in appellant's claim 6 and it is virtually conceded that they do so, but appellant states that "this feature is merely a detail of claim 6." His claim is for the combination of the elements recited in Nos. 5 and 6.

If we disregard the grid feature, claims 5 and 6 are practically identical, and Pumpelly and Usher are relied upon as the primary references against them.

In the brief in behalf of appellant it is said:

Briefly, the combination in its essential details comprises a container 1, which the specification states "should be of sufficient strength to withstand considerable outward force" for reasons hereinafter pointed out; electrodes 2 and 3 having highly porous non-coherent active material of insufficient density to be self-retaining in the grid during the action of the battery; and separators 4 capable of expanding when the electrolyte is added to the battery.

And the brief then points out claimed advantages, and says:

The separators are of selected material having the property of expanding when the electrolyte of the battery is introduced.

The specification says:

The separators used in the present invention are preferably formed of woven or unwoven fibrous material impregnated and aggregated by a suitable bonding agent.

The claims, however, do not claim any specific material, but say "of a material which will expand when electrolyte is added whereby the assembly is placed under pressure."

The Board of Appeals points out that in Pumpelly, while "perhaps the pressure between the assembled parts is not materially increased by the swelling of the separators", still, since the separators hold the active material in place, "there is the necessary pressure for this purpose between the separators and the plates".

Usher states that he may use separators of wood, earthenware or an equivalent substance, and the Board says "expansive action is necessarily inherent" in such wooden separators.

Both Hutchinson and Cogan teach the use of active material on the grid, "flush with the frame."

Careful study of appellant's application has been made by us in the light of the prior art cited, and we fail to see where by his combination of elements disclosed in this prior art, and such substitutions as he suggests, he has produced an article possessing the qualities of novelty essential to entitle him to patent upon the claims made, although he may have made useful improvements. Patentable novelty—invention—is lacking.

The decision of the Board of Appeals is affirmed.

Affirmed.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

Interference Notices

U. S. PATENT OFFICE, *Washington, Apr. 14, 1931.*

George F. Colley, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications for patent of George F. Colley, 1284 Union Avenue, Los Angeles, Calif., and of Stephen Seth, 882 Park Avenue, Baltimore, Md., and counsel for Colley having stated that they do not know the present whereabouts of said Colley, notice is hereby given that unless said George F. Colley, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

U. S. PATENT OFFICE, *Washington, Apr. 18, 1931.*

Loughlin & Company, their assigns or legal representatives, take notice:

An interference having been declared by this office between the application of M. M. Fleron & Son, Inc., 113 North Broad Street, Trenton, N. J., for registration of a trade-mark and trade-mark registered May 13, 1930, No. 270,829, to Loughlin & Company, 703 Mount Vernon Place, Washington, D. C., and a notice of such declaration sent by registered mail to said Loughlin & Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Loughlin & Company, their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Apr. 22, 1931.*

H. H. Palmer & Co., their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of John F. Jelke Company, Hillsboro and Northeastern R. R. Track, Hillsboro, Wisconsin, for registration of a trade-mark and trade-mark registered April 24, 1917, No. 116,354, to H. H. Palmer & Co., 45 Harrison Street, New York, N. Y., and the Office having failed to secure satisfactory service upon said H. H. Palmer & Co. at the said address, notice is hereby given that unless said H. H. Palmer & Co., their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 12, 1931

[VOL. 406. No. 2]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 300,464. CALIFORNIA ART SUPPLY CO., Palo Alto, Calif. Filed May 14, 1930.

DU-O

For Art and Modeling Clay.
Claims use since May 1, 1928.

Ser. No. 311,418. BRITISH ENKA ARTIFICIAL SILK COMPANY LIMITED, London, England. Filed Feb. 25, 1931.

FIDUCIA

For Imitation Straw and Imitation Horsehair Made of Cellulose.
Claims use since Aug. 17, 1929.

CLASS 2

Receptacles

Ser. No. 308,150. ELMER ABRAMSON, St. Louis, Mo. Filed Nov. 21, 1930.

PRO_TEK_EGG

The word "Egg" is hereby disclaimed apart from the mark as shown.

For Bags Made of Reinforced, Water-Proof Paper, Consisting of Two Sheets of Kraft Paper Cemented Together with Asphalt, Which Bags Have Been Specially Devised to Fit Inside of Each Half of an Egg Case as a Means of Protecting the Eggs in the Case from Evaporation, Shrinkage, Leakage, Foul Odors, Freezing, Extreme Heat, Water, and Air.
Claims use since Oct. 1, 1930.

Ser. No. 312,472. BLOOMER BROS. COMPANY, Newark, N. Y. Filed Mar. 24, 1931.

TU-CO

For Containers for Food Products—Namely, Ice Cream Pails Made of Cardboard, Oyster Pails Made of Cardboard, and Cardboard Cartons for Packing Ice Cream.
Claims use since Feb. 1, 1931.

Ser. No. 312,541. BEACH & ARTHUR, INC., Indianapolis, Ind. Filed Mar. 26, 1931.

SMART-SET

For Paper Plates.
Claims use since June 11, 1930.

Ser. No. 312,829. ALUMINUM COMPANY OF AMERICA, Pittsburgh, Pa. Filed Apr. 2, 1931.

ALCOA

For Collapsible Tubes.
Claims use since May 12, 1930.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 296,480. CHARLOTTE CHEMICAL LABORATORIES, INC., Charlotte, N. C. Filed Feb. 25, 1930.

CHARLITE

For a General Cleaning Powder for Floors, Windows, Cooking Utensils, Dairy Equipment, Hospitals, Bottles; a Detergent for Use as a Soap Assistant in Washing Clothes, a Grease and Oil Remover, a Cleaning Preparation for Removing Heavy Deposits of Carbonized Grease and Oil from Metal and Other Objects.
Claims use since Sept. 29, 1926.

Ser. No. 296,481. CHEMISCHE FABRIK EISENDRATH GESELLSCHAFT MIT BESCHRÄNKTER HAFTUNG, Mettmann/Rhld, Germany. Filed Feb. 25, 1930.

IMMALIN

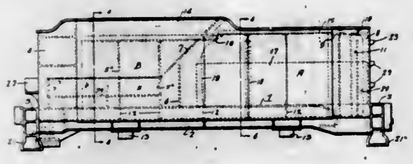
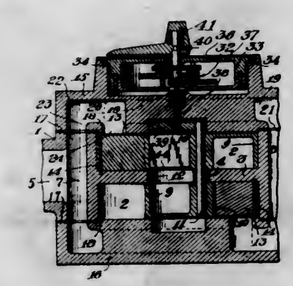
REISSUES



MAY 12, 1931

18,065. WATER CLOSET BOWL. BERT O. TILDEN, Trenton, N. J., assignor to B. O. T. Mfg. Co., Trenton, N. J., a Corporation of New Jersey. Original No. 1,748,197, dated Feb. 25, 1930, Serial No. 399,836, filed Oct. 15, 1929. Application for reissue filed Sept. 30, 1930. Serial No. 485,541. 12 Claims. (Cl. 4—73.)



1. A siphon jet water closet bowl having a flushing rim and up and down legs to discharge the contents of the bowl, a hollow rib molded to a lateral wall common to said legs, said wall having a jet opening within the up-leg above the plane of the well of the bowl, and a rib of smaller caliber disposed within the larger rib adapted to discharge the water received from the larger rib through said opening and towards the top of the up-leg to initiate the siphon action of the bowl.

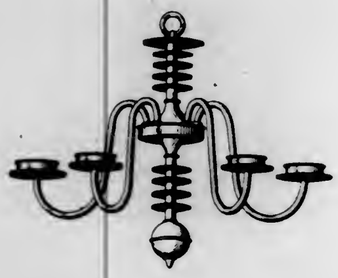
18,066. TENDER. ELMER E. HICKEN, Collingswood, N. J. Original No. 1,734,808, dated Nov. 5, 1929, Serial No. 336,167, filed Jan. 30, 1929. Application for reissue filed Mar. 25, 1931. Serial No. 525,284. 17 Claims. (Cl. 105—231.)

14. A locomotive tender underframe, including a stoker conveyor trough integral therewith.

18,067. METER. MEAD CORNELL, San Francisco, Calif., assignor, by mesne assignments, to The Merrill Company, San Francisco, Calif., a Corporation of California. Original No. 1,753,552, dated Apr. 8, 1930, Serial No. 363,016, filed May 14, 1929. Application for reissue filed June 10, 1930. Serial No. 460,241. 11 Claims. (Cl. 73—37.)

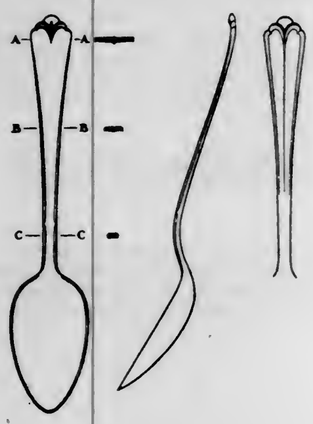
1. A meter for measuring fluids passing therethrough under pressure comprising a meter casing provided with a circular piston chamber, a piston within the chamber and of a diameter less than that of the chamber to permit a gyrating of the piston within said chamber, a ring bearing mounted for rotation centrally of said chamber, a connection between said ring and said piston, said connection being eccentric of the ring and axially of the piston, said piston being radially slotted, a bridge plate disposed vertically within the chamber and extending into said slot, said plate at its outer end fulcrumed to swing on a vertical axis, indicator mechanism operated by the movement of said piston, said casing provided with fluid inlet and outlet ports communicating with said chamber, one at each side of said bridge, said piston affording a valve for controlling the opening and closing of said ports.

18,068. METHOD OF ORNAMENTING TOY BALLOONS. ARTHUR P. WITTEN, Akron, Ohio, assignor to George E. Hall and himself, Akron, Ohio. Original No. 1,762,603, dated June 10, 1930, Serial No. 346,835, filed Mar. 14, 1929. Application for reissue filed Dec. 31, 1930. Serial No. 505,918. 8 Claims. (Cl. 8—5.)



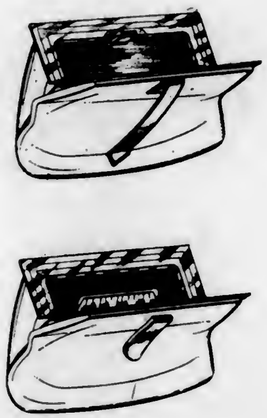
1. That method of ornamenting thin rubber articles which comprises haphazardly gathering a plurality of the articles, packing the same in an enclosed space, and subjecting the same while so confined to a bath of colored solution.

DESIGNS



MAY 12, 1931

84,126. CHANDELIER FRAME. HARRY AGLOW, Philadelphia, Pa., assignor to Gill Glass & Fixture Company, a Corporation of Delaware. Filed Jan. 19, 1931. Serial No. 38,383. Term of patent 3½ years.

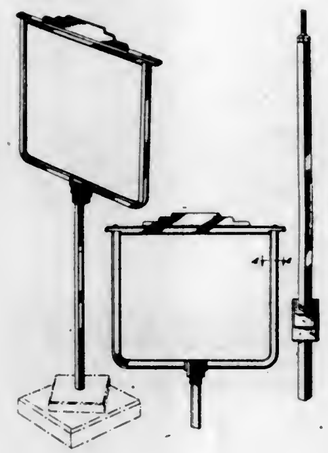


The ornamental design for a chandelier frame substantially as shown.

84,127. SPOON OR SIMILAR ARTICLE. PERCY B. BALL, Attleboro, Mass., assignor to The Watson Company, Attleboro, Mass. Filed Jan. 24, 1931. Serial No. 38,437. Term of patent 7 years.

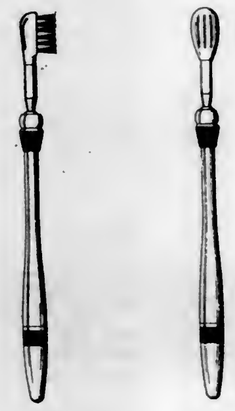
The ornamental design for a spoon or similar article, substantially as shown.

84,128. LADY'S HAND BAG. MAX BERKOWITZ, Richmond Hill, N. Y. Filed Feb. 2, 1931. Serial No. 38,524. Term of patent 7 years.



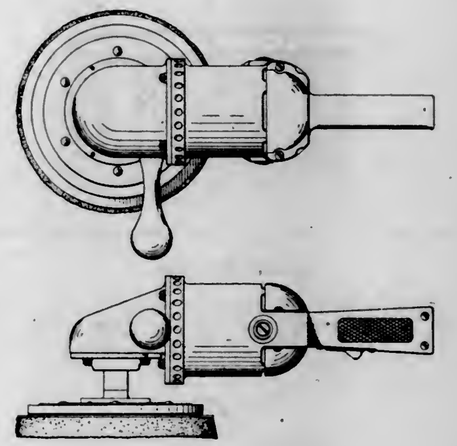
The ornamental design for a lady's handbag substantially as shown.

84,129. STORE FRONT OR THE LIKE. TRUMAN B. BUCHANAN, Denver, Colo. Filed Nov. 20, 1930. Serial No. 37,735. Term of patent 14 years.



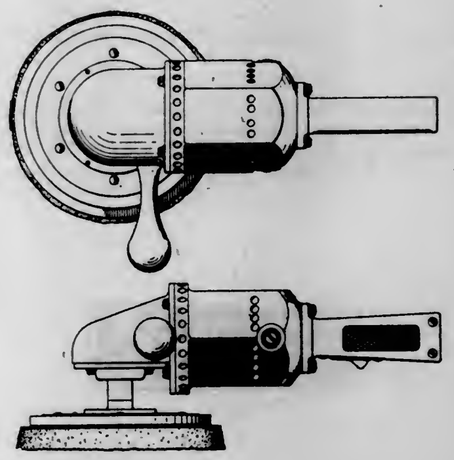
The ornamental design for a store front or the like, as shown.

84,130. SIGN DISPLAY STAND. FREDERIC D. COURTENAY, Short Hills, N. J., assignor to Embosograf Corporation of America, New York, N. Y., a Corporation of New York. Filed Nov. 22, 1930. Serial No. 37,759. Term of patent 7 years.



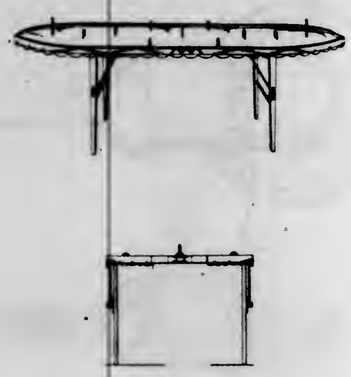
The ornamental design for a sign display stand substantially as shown.

84,131. ASEPTIC TOOTHBRUSH. ALBERT D'AYRENX, CASIMIR CÈPÈDE, and LOUIS RATORÉ, Paris, France. Filed July 12, 1930. Serial No. 36,340. Term of patent 3½ years.



The ornamental design for an aseptic tooth brush, as shown.

84,132. CASING FOR A PORTABLE ELECTRIC POLISHER. ALONZO G. DECKER, Towson Heights, Md., assignor to The Van Dorn Electric Tool Company, Towson, Md., a Corporation of Ohio. Filed June 26, 1930. Serial No. 36,182. Term of patent 7 years.



The ornamental design for a casing for a portable electric polisher as shown.

84,133. CASING FOR A PORTABLE ELECTRIC POLISHER. ALONZO GALLOWAY DECKER, Towson Heights, Md., assignor to The Black & Decker Manufacturing Company, Towson, Md., a Corporation of Maryland. Filed June 26, 1930. Serial No. 36,183. Term of patent 7 years.

The ornamental design for a casing for a portable electric polisher, as shown.

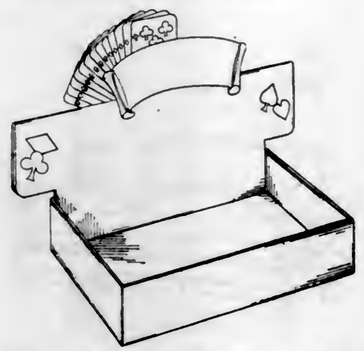
84,134. CROQUET TABLE. LESLIE L. DICKERMAN, East Granville, Vt. Filed Feb. 7, 1931. Serial No. 38,585. Term of patent 7 years.

The ornamental design for a croquet table, as shown.

84,135. SWEATER OR ARTICLE OF SIMILAR NATURE. AUGUST EGERER, Great Neck, N. Y. Filed May 13, 1930. Serial No. 35,633. Term of patent 3½ years.

The ornamental design for a sweater or article of similar nature, substantially as shown.

84,136. SWEATER OR ARTICLE OF SIMILAR NATURE. AUGUST EGERER, Great Neck, N. Y. Filed May 13, 1930. Serial No. 35,634. Term of patent 3½ years.

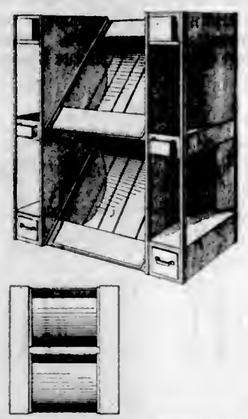


The ornamental design for a sweater or article of similar nature, substantially as shown.

84,137. SWEATER OR ARTICLE OF SIMILAR NATURE. AUGUST EGERER, Great Neck, N. Y. Filed May 13, 1930. Serial No. 35,635. Term of patent 3½ years.

The ornamental design for a sweater or article of similar nature, substantially as shown.

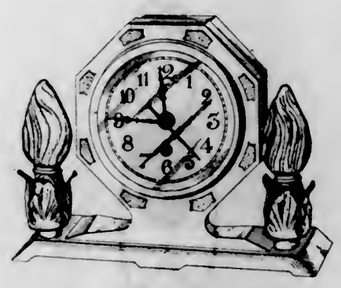
84,138. CARTON. ARTHUR EHRENFELD, New York, N. Y., assignor to Francis H. Leggett and Company, Inc., a Corporation of New York. Filed Feb. 11, 1931. Serial No. 38,619. Term of patent 14 years.



The ornamental design for a carton, as shown and described.

84,139. CLIP FOR A FOUNTAIN PEN OR SIMILAR ARTICLE. MONROE GOLD, Brooklyn, N. Y. Filed Dec. 12, 1930. Serial No. 37,951. Term of patent 7 years.

The ornamental design for a clip for a fountain pen or similar article substantially as shown.



84,140. DISPLAY CABINET. CHESTER A. GRAINGER, Cynwyd, Pa., assignor to Allbestos Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 19, 1931. Serial No. 39,141. Term of patent 7 years.

The ornamental design for a display cabinet, substantially as shown.

406 O. G.—22

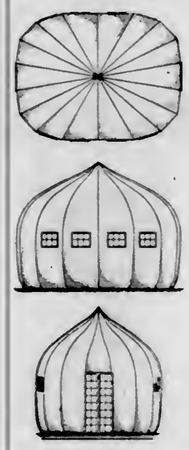
84,141. CLOCK LAMP. STANLEY M. HALLAM, Milwaukee, Wis. Filed Oct. 4, 1930. Serial No. 37,135. Term of patent 3½ years.

The ornamental design for a clock lamp, as shown and described.

84,142. CLOCK LAMP. STANLEY M. HALLAM, Milwaukee, Wis. Filed Oct. 4, 1930. Serial No. 37,136. Term of patent 3½ years.

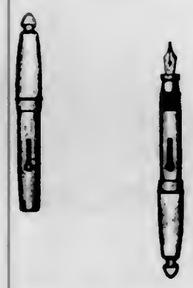
The ornamental design for a clock lamp, as shown and described.

84,143. CHAIR. GEORGE H. HAMILTON, East Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a Corporation of New Jersey. Filed Mar. 19, 1931. Serial No. 39,145. Term of patent 3½ years.



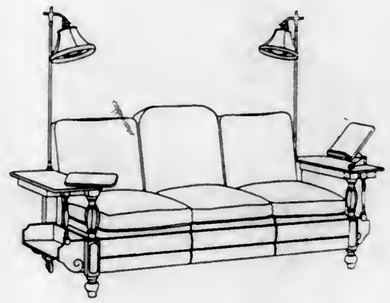
The ornamental design for a chair, substantially as shown.

84,144. SHOE. WILLIAM OSCAR JOHNSON, Denver, Colo. Filed Oct. 7, 1929. Serial No. 32,962. Term of patent 7 years.



The ornamental design for a shoe, as shown and described.

84,145. BUILDING. ERNEST JOHNSTON, Loveland, Colo. Filed Mar. 16, 1931. Serial No. 39,101. Term of patent 14 years.

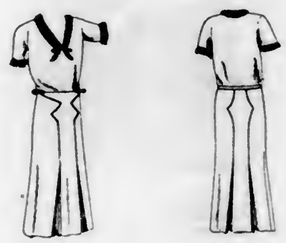


The ornamental design for a building substantially as shown.

84,146. FOUNTAIN PEN. DAVID KAHN, Woodcliff, N. J. Filed Aug. 20, 1930. Serial No. 36,707. Term of patent 14 years.

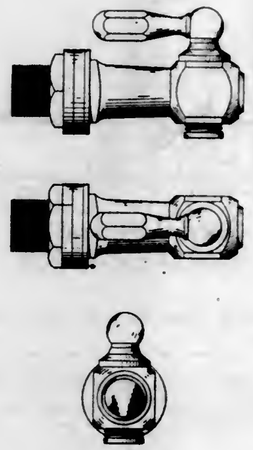
The ornamental design for a fountain pen, substantially as shown.

84,147. SETTEE WITH READING AND WRITING ATTACHMENTS. EDWIN O. KLEMM, Saginaw, Mich. Filed Jan. 20, 1931. Serial No. 38,397. Term of patent 14 years.



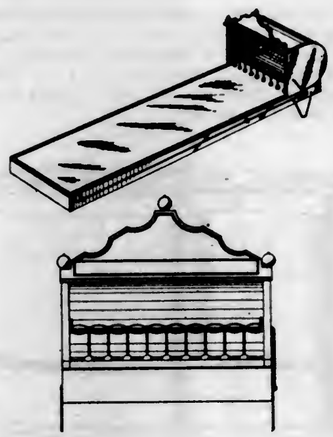
The ornamental design for a settee with reading and writing attachments, substantially as shown.

84,148. DRESS. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 24, 1931. Serial No. 38,806. Term of patent 3½ years.



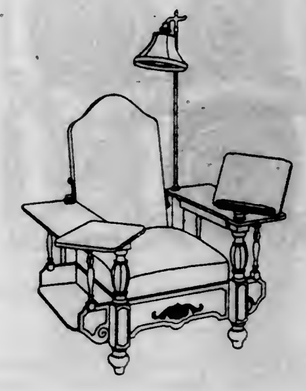
The ornamental design for a dress substantially as shown.

84,149. DRESS. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 24, 1931. Serial No. 38,807. Term of patent 3½ years.



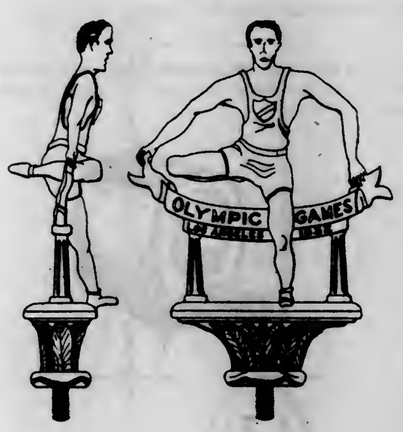
The ornamental design for a dress substantially as shown.

84,150. BEVERAGE FAUCET. CARROL A. LOOK, Los Angeles, Calif. Filed Feb. 13, 1931. Serial No. 38,647. Term of patent 3½ years.



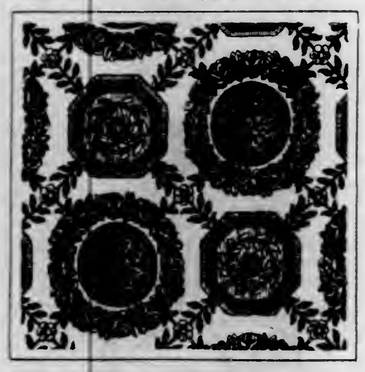
The ornamental design for a beverage faucet, as shown.

84,151. GAME BOARD. HILDEBURN MARTIN, Circleville, Ohio. Filed Feb. 11, 1931. Serial No. 38,612. Term of patent 3½ years.



The ornamental design for a game board, as shown.

84,152. READING CHAIR. EDWIN O. KLEMM and KARL R. OTTO, Saginaw, Mich. Filed Jan. 19, 1931. Serial No. 38,351. Term of patent 14 years.



The ornamental design for a reading chair, substantially as shown.

84,153. AUTOMOBILE RADIATOR CAP. ABRAHAM KUPLAN, Los Angeles, Calif., assignor of one-half to Abraham W. Klachko, Los Angeles, Calif. Filed Mar. 14, 1931. Serial No. 39,082. Term of patent 3½ years.

The ornamental design for an automobile radiator cap, as shown.

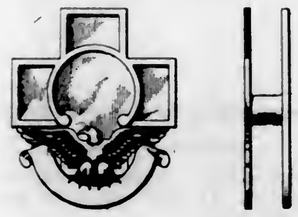
84,154. CARPET. HENRY C. LA COUTURE, Hudson County, N. J., assignor to Bigelow Sanford Carpet Co., Inc., a Corporation of Massachusetts. Filed Feb. 18, 1931. Serial No. 38,718. Term of patent 7 years.

The ornamental design for a carpet substantially as shown.

84,155. BOOK END. ALLINE M. LYNCH, Bloomfield, N. J. Filed Mar. 10, 1931. Serial No. 39,013. Term of patent 7 years.

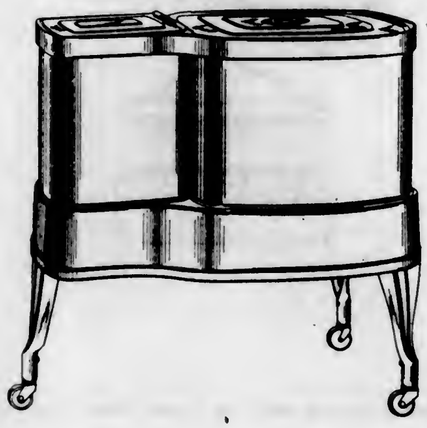
The ornamental design for a book end as shown.

84,156. OVEN. JOHN MCCARTHY, Hollywood, Calif. Filed Mar. 24, 1930. Serial No. 35,013. Term of patent 14 years.



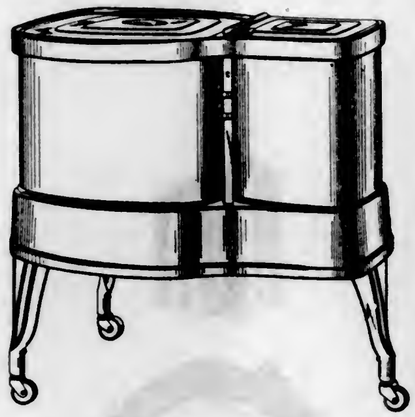
The ornamental design for an oven as shown.

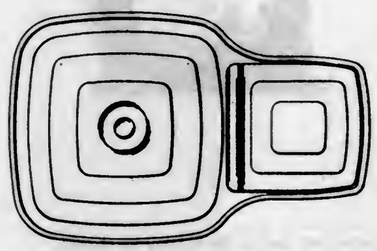
84,157. STATUETTE. IRENE MCHUGH, Seattle, Wash. Filed Mar. 14, 1931. Serial No. 39,084. Term of patent 3½ years.



The ornamental design for a statuette, as shown.

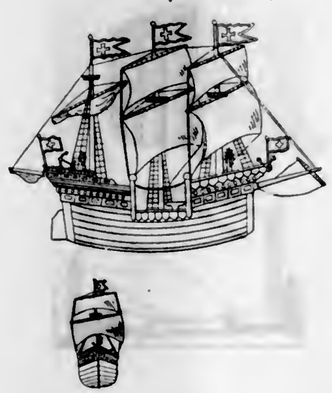
84,158. FRATERNAL LAPEL BUTTON. JAMES J. MURPHY, Washington, D. C. Filed Oct. 11, 1930. Serial No. 37,227. Term of patent 14 years.





The ornamental design for a fraternal lapel button, as shown and described.

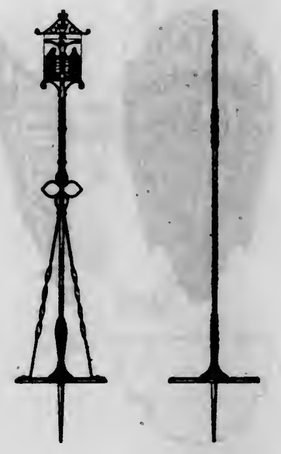
84,159. CASING FOR A COMBINED CLOTHES WASHER AND DRIER. JABEZ C. NELSON and WALTER A. PAPWORTH, Syracuse, N. Y., assignors to Syracuse Washing Machine Corporation, Syracuse, N. Y., a Corporation of Delaware. Filed Feb. 6, 1931. Serial No. 38,576. Term of patent 14 years.



84,159—Continued.

The ornamental design for a casing for a combined clothes washer and drier substantially as shown.

84,160. ORNAMENTAL SHIP. JOHN NOWAKOWSKI, Detroit, Mich. Filed Feb. 10, 1931. Serial No. 38,604. Term of patent 3½ years.

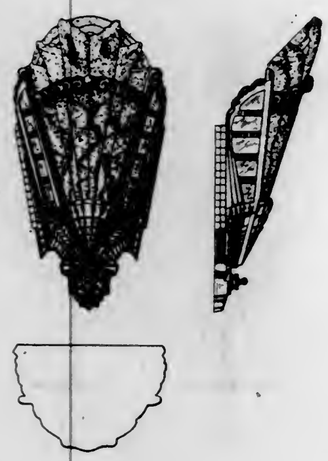


The ornamental design for an ornamental ship as shown.

84,161. BOTTLE OR SIMILAR CONTAINER. FRANK B. PUTT, Meadowbrook, Pa., assignor to Brandle & Smith Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar 12, 1931. Serial No. 39,049. Term of patent 14 years.

The ornamental design for a bottle or similar container, as shown.

84,162. DEVICE FOR DESIGNATING A PLACE OF WORSHIP. JOHN E. RIGALI, Chicago, Ill., assignor to Daprato Statuary Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 13, 1931. Serial No. 38,643. Term of patent 14 years.

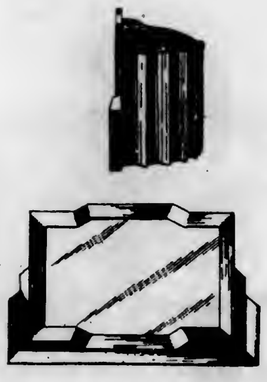


The ornamental design for a device for designating a place of worship substantially as shown.

84,163. BOTTLE. BENJAMIN T. ROBERTS, Chicago, Ill., assignor to Illinois Cosmetics Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 30, 1930. Serial No. 36,829. Term of patent 3½ years.

The ornamental design for a bottle, as shown.

84,164. LIGHTING FIXTURE BRACKET OR ARTICLE OF SIMILAR NATURE. FREDERICK W. ROETTGES, New York, N. Y., assignor to Lighting Appliance Company, Inc., New York, N. Y. Filed Aug. 8, 1930. Serial No. 36,610. Term of patent 3½ years.



The ornamental design for a lighting fixture bracket, or article of similar nature, as shown.

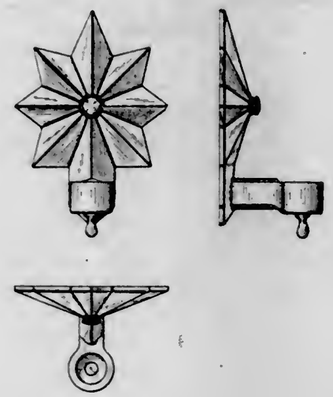
84,165. LAMP. ALBERT SABATH, Chicago, Ill., assignor to Scene-in-Action Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 2, 1931. Serial No. 38,897. Term of patent 7 years.

The ornamental design for a lamp as shown.

84,166. LAMP. ALBERT SABATH, Chicago, Ill., assignor to Scene-in-Action Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 2, 1931. Serial No. 38,898. Term of patent 7 years.

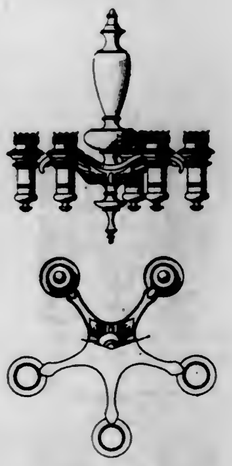
The ornamental design for a lamp as shown.

84,167. LAMP. ALBERT SABATH, Chicago, Ill., assignor to Scene-in-Action Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 2, 1931. Serial No. 38,899. Term of patent 7 years.



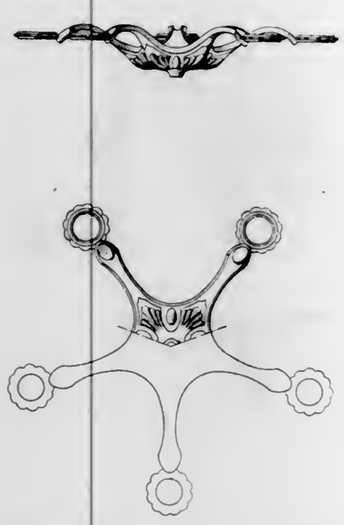
The ornamental design for a lamp, as shown.

84,168. CANOPY FOR FUNERALS. EDWARD F. SCHULTZ, Chicago, Ill. Filed Dec. 15, 1930. Serial No. 38,003. Term of patent 14 years.



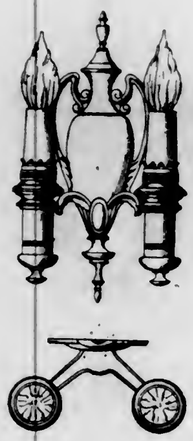
The ornamental design for a canopy for funerals as shown.

84,169. LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. WALTER VON NESSEN, New York, N. Y., assignor to Efcolite Corporation, Trenton, N. J. Filed Mar. 21, 1931. Serial No. 39,190. Term of patent 7 years.



The ornamental design for a lighting fixture, or article of similar nature, as shown.

84,170. CHANDELIER. ERNEST A. WALKER, Newark, N. J., assignor to David Tunick, Newark, N. J., and Benjamin M. Reznik, Caldwell, N. J. Filed Mar. 23, 1931. Serial No. 39,212. Term of patent 7 years.

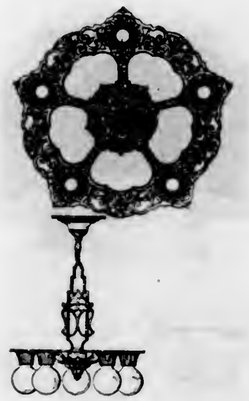


The ornamental design for a chandelier substantially as shown and described.

84,171. LIGHTING FIXTURE BODY OR ARTICLE OF ANALOGOUS NATURE. ERNEST A. WALKER, Newark, N. J., assignor to David Tunick, Newark, N. J., and Benjamin M. Reznik, Caldwell, N. J. Filed Mar. 23, 1931. Serial No. 39,213. Term of patent 7 years.

The ornamental design for a lighting fixture body or article of analogous nature substantially as shown and described.

84,172. WALL BRACKET OR ARTICLE OF ANALOGOUS NATURE. ERNEST A. WALKER, Newark, N. J., assignor to David Tunick, Newark, N. J., and Benjamin M. Reznik, Caldwell, N. J. Filed Mar. 23, 1931. Serial No. 39,214. Term of patent 7 years.

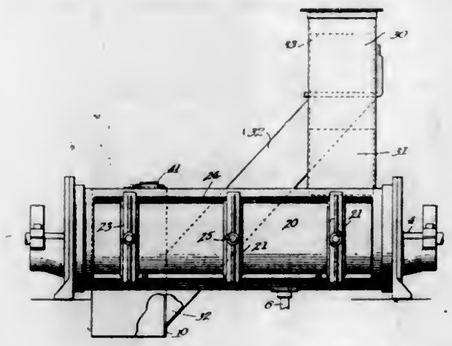


The ornamental design for a wall bracket or article of analogous nature substantially as shown.

84,173. BACK PLATE FOR WALL BRACKETS OR ARTICLES OF ANALOGOUS NATURE. ERNEST A. WALKER, Newark, N. J., assignor to David Tunick, Newark, N. J., and Benjamin M. Reznik, Caldwell, N. J. Filed Mar. 23, 1931. Serial No. 39,215. Term of patent 7 years.

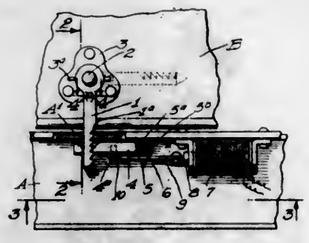
The ornamental design for a back plate for wall brackets or articles of analogous nature substantially as shown.

84,174. LIGHTING FIXTURE. CLARENCE G. WING, Cleveland, Ohio, assignor to John C. Virden Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 19, 1931. Serial No. 38,731. Term of patent 3½ years.



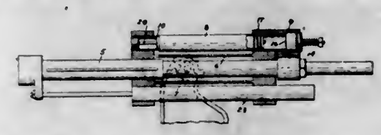
The ornamental design for a lighting fixture, as shown.

PATENTS



GRANTED MAY 12, 1931

1,804,386. FEED MIXER. GEORGE M. AGEE, Des Moines, Iowa. Filed July 11, 1929. Serial No. 377,466. 5 Claims. (Cl. 259—9.)

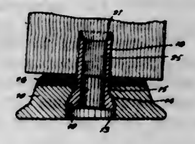


1. An apparatus for preparing feed for live stock comprising an elongated receptacle, of substantially cylindrical form in cross section and having a grain inlet and a mixture outlet, located respectively adjacent opposite ends, an aperture being provided in the side of the receptacle and extending throughout the major portion of the length thereof, a detachable closure plate positioned over said aperture, and adjustable means engaging the receptacle at opposite sides of the aperture and the plate between the edges of the aperture for holding said plate in position.

1,804,387. AUTOMOBILE HOOD LOCK. BENJAMIN L. DORSEY and THOMAS S. INGERSOLL, Los Angeles, Calif., assignors, by direct and mesne assignments, to Ingersoll Magnetic Lock Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 11, 1928. Serial No. 298,936. 7 Claims. (Cl. 70—50.)

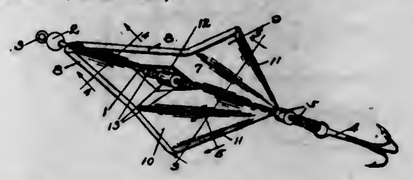
1. In a means of the class described, the combination with the main frame of an automobile, having a vertical hole therein, and an engine hood of the automobile, of a locking member mounted on said hood immediately at the inner side thereof and substantially parallel thereto and extending through the hole in said frame and provided with a plurality of longitudinally spaced notches, and a latch member shiftably mounted against the under side of said frame at one side of the opening, adapted to engage said locking member in one of said notches.

1,804,388. VARIABLE RECOIL MECHANISM FOR GUNS. THOMAS A. CONLON, Silver Spring, Md. Filed Oct. 28, 1929. Serial No. 403,077. 4 Claims. (Cl. 89—43.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



4. A cradle, a gun reciprocally mounted thereon, a recoil mechanism embodying relatively movable parts, means for admitting gases of discharge to said mechanism to check recoil and restore the gun to battery, and means for regulating the volume of the utilized gases.

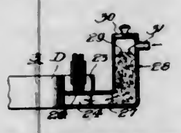
1,804,389. DELINEATED AREA. CARLETON ELLIS, Montclair, N. J., assignor to Chadeloid Chemical Company, New York, N. Y., a Corporation of West Virginia. Filed Oct. 15, 1924, Serial No. 743,782. Renewed July 24, 1929. 3 Claims. (Cl. 94—1.5.)



3. A delineated area of the highway having cavities filled with an oxychloride cement.

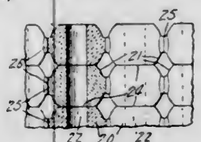
1,804,390. FURNITURE REST OR SHOE. WALTER F. HEROLD, Upper Montclair, N. J., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 19, 1929. Serial No. 333,581. 3 Claims. (Cl. 16—42.)

1. A furniture rest, comprising a floor engaging base having an opening extending therethrough from top to bottom, resilient means disposed at the upper side of said base having a central aperture in line with the opening of said base adapted to be interposed between the furniture leg and the base to permit relative tilting movement between them, and attaching means comprising a lower portion loosely engaged in said opening of the base, an intermediate portion having means interlockingly secured in said aperture of the resilient means, and an upper portion adapted to be driven into the furniture leg by blows directly applied to said lower portion.



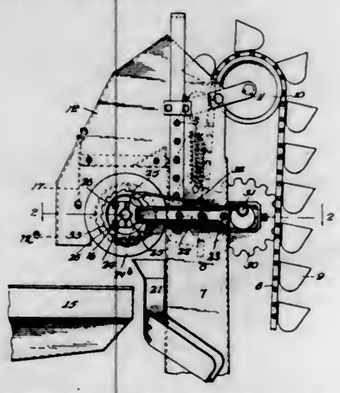
1,804,391. FISH LURE. ALBIN ABRAHAMS, Spokane, Wash. Filed Aug. 26, 1929. Serial No. 388,298. 2 Claims. (Cl. 43—45.)

2. In a fish lure the combination with a stem, of a substantially diamond shaped spinner fashioned from two flat



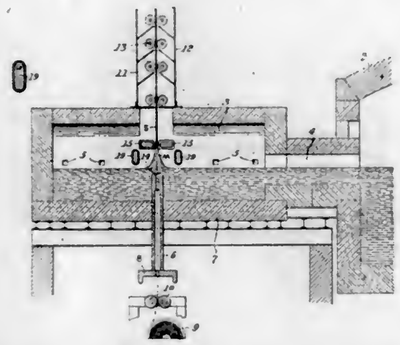
plates of material having contrasting colors, one of the plates having edge flanges to overlap the other plate, a pair of opposed, perpendicular screw-blades fashioned at the rear portion of the spinner, the edges of the blades being disposed at angles to the axis of the spinner, and the front edges of the blades forming substantial continuations of the front edges of the spinner.

1,804,392. METHOD OF BINDING BOOKS. HARLEY C. ALGER and PHILIP A. FRAZIER, Chicago, Ill., assignors to R. R. Donnelley & Sons Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 26, 1928. Serial No. 321,818. 12 Claims. (Cl. 11—1.)



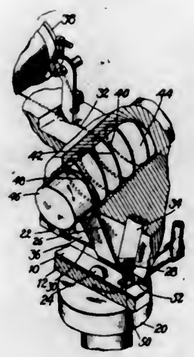
1. The method of binding books comprising applying a relatively thin glue to the back of the book, chilling said back and glue, and applying a coating of heavier glue to the back after the first glue is chilled.

1,804,393. HEAT RECUPERATOR OR REGENERATOR STRUCTURE. VERNE W. AUBEL, Buffalo, N. Y., and JOHN B. FITZ-GIBBON, Bridgeburg, Ontario, Canada. Filed Mar. 23, 1927. Serial No. 177,586. 11 Claims. (Cl. 72—15.5.)



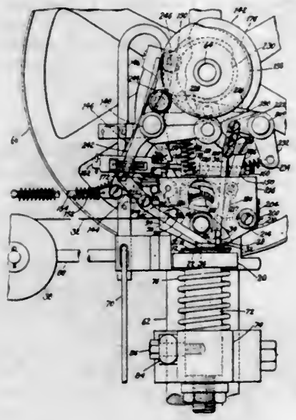
1. A unit for use in the construction of heat interchange structures for recuperative and regenerative ovens, said unit having a series of faces formed to engage with corresponding faces of adjacent units to form a column of units, said faces being joined by outwardly extending portions adapted to contact with corresponding portions of units in adjacent columns at portions only of their lengths to permit gases to flow both lengthwise and crosswise of said columns.

1,804,394. MACHINE FOR HANDLING MOLDING SAND. ELMER O. BEARDSLEY, Chicago, Ill., assignor to The Beardsley & Piper Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 8, 1928. Serial No. 311,115. 6 Claims. (Cl. 209—215.)



1. In a machine for handling molding sand, the combination of a conveyor comprising an endless chain and buckets, a magnetic separator comprising a rotatable drum to which the sand is delivered by the buckets, and a stationary magnet in the drum, and mechanism for intermittently operating the drum to discharge separately scrap or metal mixed with the sand, comprising a sprocket-wheel engaging and driven by the chain.

1,804,395. MANUFACTURE OF REENFORCED GLASS. WALTER J. BLENKO, Pittsburgh, Pa., assignor to Clarence P. Byrnes, Sewickley, Pa., as trustee. Filed July 3, 1929. Serial No. 375,803. 5 Claims. (Cl. 49—17.)

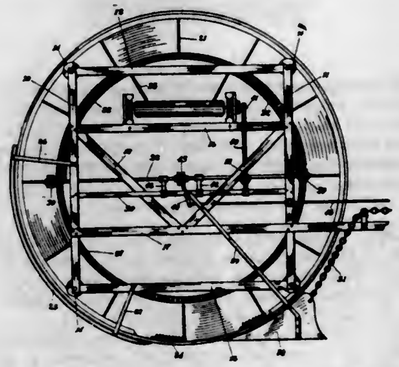


5. Apparatus for making reenforced glass comprising a bath of molten glass, a guide extending upwardly through the bath and adapted for the feeding of a reinforcing material therethrough, the guide terminating below the surface of the glass whereby as the reinforcement rises upwardly glass adheres thereto and forms a meniscus, means for drawing the formed glass upwardly, shaping dies having initial sliding contact with the meniscus, and means for cooling the dies.

1,804,396. METHOD OF INSERTING FASTENINGS. MICHAEL F. BROGAN, Lawrence, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 3, 1929. Serial No. 368,059. 17 Claims. (Cl. 1—1.)

1. That improvement in methods of inserting fastenings which comprises forcing a piece of wire into a piece of stock without previously forming a fastening-receiving hole and deflecting the wire as it enters the stock thereby causing it to emerge from the stock upon the side from which it entered.

1,804,397. FASTENING INSERTING MACHINE. MICHAEL F. BROGAN, Lawrence, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 3, 1929. Serial No. 368,060. 36 Claims. (Cl. 1—1.)

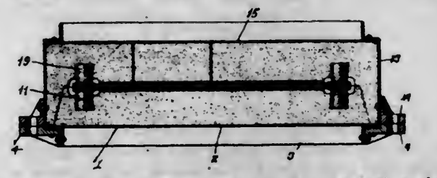


1. A fastening inserting machine having, in combination, means for driving a single piece of wire into a piece of stock, and means for deflecting the wire as it enters the stock formed and arranged to cause the wire to emerge from the stock upon the side from which it entered.

1,804,398. ALDEHYDE-AMINE CONDENSATION PRODUCTS AND PROCESS OF PREPARING SAME. SIDNEY M. CADWELL, Leonia, N. J., and ALEXANDER THEODOROVICH MAXIMOFF, New York, N. Y., assignors to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Oct. 15, 1925. Serial No. 62,655. 42 Claims. (Cl. 260—130.)

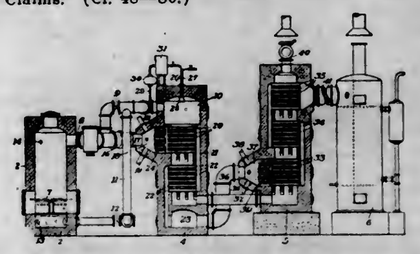
2. A method of making condensation products for the acceleration of vulcanization in rubber, which comprises causing an aldehyde and a basic nitrogenous material to substantially initially and continuously react with each other at temperatures between 100° C. and 200° C., one of said ingredients being gradually added to the other.

1,804,399. ELEVATING GRADER. PERRY C. COLE, Clay Center, Kans. Filed Oct. 7, 1929. Serial No. 398,079½. 2 Claims. (Cl. 37—112.)



1. An elevating grader comprising a drum, a ring gear carried by said drum, a shaft having two spaced-apart pinions adapted to mesh with said ring gear at different times, a transverse conveyor slidably mounted in the upper portion of the drum, means operably connecting said shaft and said conveyor for driving the latter, and means carried by said shaft for moving said pinions selectively into and out of mesh with said ring gear.

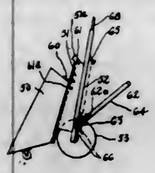
1,804,400. METHOD OF MOLDING. VERNON J. DAVIS, Buffalo, N. Y. Filed Aug. 19, 1927, Serial No. 214,057. Renewed May 17, 1930. 11 Claims. (Cl. 22—193.)



1. The method of preparing a mold for the casting of hollow bodies in which patterns are used for the formation of the mold sections and which consists in suitably positioning structurally independent baked end cores composed of core sand upon said patterns, forming the cope and drag sections of the mold by packing the mold sand upon the respective patterns and about the end cores whereby when the mold sections are removed from the patterns they will carry said end cores in projecting relation to the mold surfaces, removing the mold sections from the patterns, placing a baked body core composed of core sand upon the end cores of the drag section, and fitting the cope section upon the drag section with the end cores of the cope section engaging the body core.

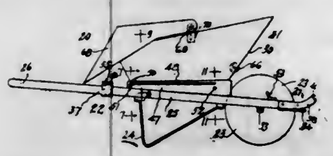
1,804,401. MOLDING APPARATUS AND EQUIPMENT FOR FORMING THE SAME. VERNON J. DAVIS, Buffalo, N. Y. Filed Jan. 11, 1928. Serial No. 245,977. 15 Claims. (Cl. 22—131.)

10. A mold including a cope section, a cope flask enclosing said section, the parting face being formed to provide a chamber the horizontal face of which is formed to provide a molding surface, a drag section having a cooperating molding surface and adapted to fit closely within the scope section when the two sections are assembled thereby to provide a casting space outlined entirely within the cope section and substantially displaced from the plane of the joint line of the cope and drag sections, and a drag plate supporting the drag section and upon which the cope flask rests.



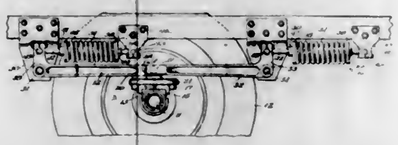
1,804,402. ENRICHING GAS. EDWARD A. DIETERLE, Glenellyn, Ill. Filed Jan. 19, 1924. Serial No. 687,221. 3 Claims. (Cl. 48—80.)

2. Apparatus for enriching a gas, comprising a carbureting chamber, a metallic heater in the carbureting



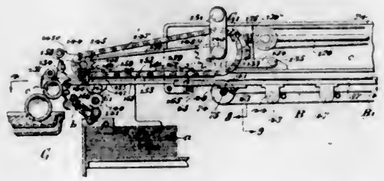
chamber, a combustion chamber for the heater, and a flame shielding means between the combustion chamber and heater, substantially as described.

1,804,403. LOADING WHEELBARROW. FRANCIS J. DOWLING, New York, N. Y. Filed Mar. 5, 1928. Serial No. 259,178. 23 Claims. (Cl. 37—130.)



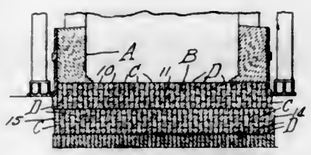
1. A wheelbarrow including a body normally disposed in substantially horizontal position, supporting means for the body having a wheel at the forward end thereof, and guide means co-acting with the body and the supporting means for forward movement of the body at an angle to the supporting means and away therefrom to cause the body to pass in the same general direction over the said wheel, for a digging position of the body when the wheelbarrow is upturned on its forward end, said body moving backward with the aid of gravity on bringing the wheelbarrow back to substantially horizontal position.

1,804,404. WHEELED CARRIER. FRANCIS J. DOWLING, New York, N. Y. Filed Apr. 13, 1929. Serial No. 354,783. 31 Claims. (Cl. 37—130.)



16. A carrier including a frame having a wheel adjacent to the front end thereof and manually manipulated at the rear end thereof, said frame being approximately horizontal, and means on the frame supporting the trough for forward movement therealong, said trough having an oblique front digging wall, said means having pivotal engagement with the frame to swing frontward and bring the front end of the trough in front of the wheel, whereby, in the pivotally upturned position of the trough, the said front digging wall approaches a position of approximate parallelism to the ground and in relatively close proximity thereto, means to releasably lock the trough in digging position with the frame, and the frame including means extending rearward of the trough to cause the said digging wall to be driven into a pile.

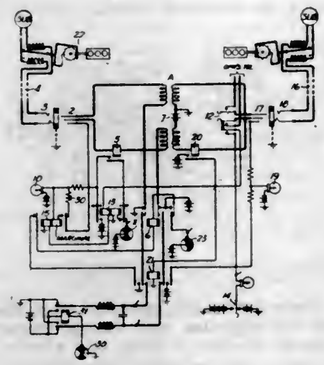
1,804,405. SPRING SUSPENSION FOR VEHICLES. WILLIAM C. DUNN, Chicago, Ill. Filed Nov. 16, 1928. Serial No. 319,772. 13 Claims. (Cl. 267—20.)



1. In a suspension for vehicles, the combination of a bracket supported by the vehicle, a bell crank lever fulcrumed at its elbow on said bracket and having an upwardly extending arm and a horizontally extending arm, resiliently yielding means disposed between the first recited arm and the vehicle frame for yieldingly resisting the movement of said lever, the forward end of said horizontal arm being disposed adjacent an axle of the vehicle, a member connected with said axle for movement on a vertical axis, and means connecting the end of said horizontal arm with the said member at a point laterally spaced with respect to the axis of said member for movement on an axis intersecting the last said axis.

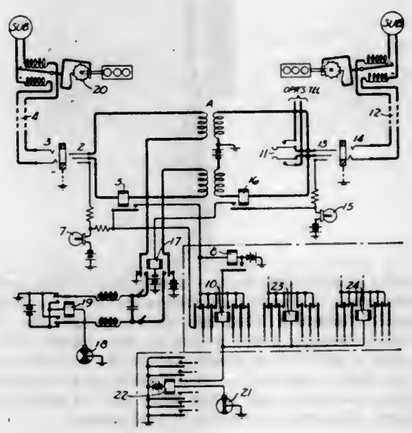
1,804,406. CONVEYING SYSTEM. THEODORE A. FEDERWITZ and WALTER T. BAILEY, Philadelphia, Pa., assignors to Stokes and Smith Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 21, 1925. Serial No. 70,462. 39 Claims. (Cl. 271—12.)

1. Sheet conveying mechanism comprising sheet gripping mechanism for transporting sheets in succession to one region, and other sheet conveying mechanism timed therewith for effecting sheet delivery from said region to another region comprising structure for pneumatically retaining individual sheets in engagement therewith, one of said conveying mechanisms effecting sheet transportation at a higher velocity than does said other conveying mechanism.



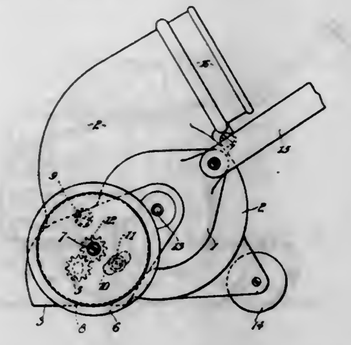
1,804,407. BASE FOR FURNACES, TANKS AND THE LIKE. JOHN B. FITZ-GIBBON, Bridgeburg, Ontario, Canada, assignor of one-half to Drew M. Thorpe, Buffalo, N. Y. Filed Dec. 22, 1927. Serial No. 241,934. 4 Claims. (Cl. 263—46.)

1. A bottom for containers of molten materials, including blocks arranged in series of superposed horizontal courses and said blocks having their sides formed to cooperate with the sides of blocks of an adjacent course for interlocking the blocks of one course with those of another course.



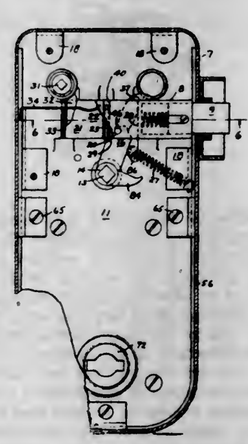
1,804,408. TELEPHONE EXCHANGE SYSTEM. CLARENCE B. FOWLER, Queens Village, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 12, 1930. Serial No. 427,676. 8 Claims. (Cl. 179—12.)

5. In a telephone system, calling lines, called lines, a plurality of connecting circuits for connecting calling lines with called lines, a key in each connecting circuit, meters for said calling lines, means for operating calling line meters while a connection is established, a marginal relay in each connecting circuit, a key common to a plurality of connecting circuits, and means responsive to the



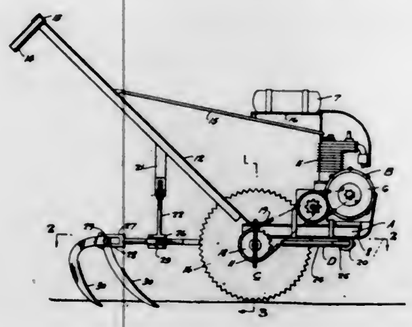
operation of the individual key and the common key for actuating said marginal relay to disable said meter operating means.

1,804,409. TELEPHONE EXCHANGE SYSTEM. CLARENCE B. FOWLER, Queens Village, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 12, 1930. Serial No. 427,677. 7 Claims. (Cl. 179—11.)



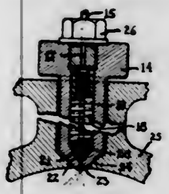
6. In a telephone system, calling lines, called lines, meters for said lines, connecting circuits for connecting a calling line with a called line, a supervisory relay and a signal for each connecting circuit, an interrupter, a battery supply, means controlled by said interrupter for alternately reversing connections from said battery supply to said calling line to operate the meter thereof, means for maintaining said supervisory relay operated in response to the connection from said battery supply when applied to the calling line in one direction or the other, means for maintaining said signal in a non-operated condition in response to the operation of the supervisory relay, another interrupter common to a plurality of connecting circuits for maintaining said signal in non-operated condition, and means for synchronizing said interrupters so that the period of maintaining said signal in non-operated condition by said second interrupter overlaps the period of reversal of current from said battery to the line.

1,804,410. VACUUM CLEANER. WILLIAM JOHNSTON FRAME, London, England. Filed Jan. 14, 1929, Serial No. 332,432, and in Great Britain Feb. 11, 1928. 2 Claims. (Cl. 15—8.)



1. A hand operated suction sweeper comprising a fan, a fan casing, a fan spindle whose ends project through the sides of said casing, a pair of floor wheels adapted to drive said spindle by frictional engagement, a pair of plates mounted on the sides of said fan casing and capable of limited pivotal movement, spindles for said floor wheels carried by said plates, a suction floor nozzle, a brush rotatably mounted in said nozzle, said plates constituting bearing supports for the ends of the brush spindle, and gears carried by said floor wheels and meshing continuously with gears mounted at the ends of said brush.

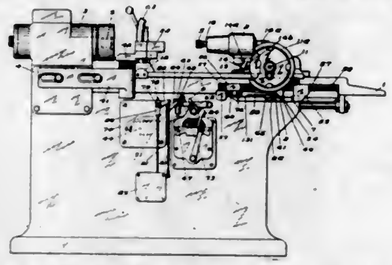
1,804,411. COIN CONTROLLED LOCK. ALPHONSE GABRIEL, Oakland, Calif. Filed May 3, 1927. Serial No. 188,472. 2 Claims. (Cl. 194—74.)



2. In a door lock mechanism, a movable latchplate having a slot therein arranged to receive a coin, means operative to support the coin in its slot and to act through the coin in said slot to retract the bolt, a casing providing an opening for the insertion of said coin into said slot, a normally inoperative closure for said opening arranged to move in the direction of movement of and alongside the latch plate, means on said latchplate for operating said closure for completely closing said opening upon a displacement of said latch plate, detent means for holding the closure in operative position and means operative independently of said first means for effecting a return of said closure means to its inoperative position.

1,804,412. TRACTION FRAME. HAROLD H. GLASIER, Los Angeles, Calif. Filed Mar. 1, 1930. Serial No. 432,410. 10 Claims. (Cl. 97—48.)

1. An agricultural implement having a tractor frame adapted to support the power plant and including guide handles, a tractor wheel carrying said tractor frame; a trailer frame having trace bars connected by a yoke at the front, said yoke having a swinging connection to the front of said tractor frame, and ground working tools at the rear of said trailer frame.

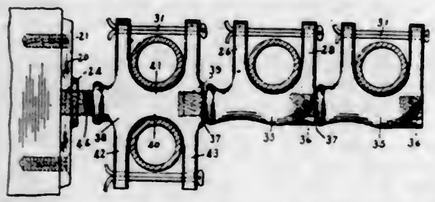


1,804,413. METHOD FOR CONVERTING THE HEAT ENERGY OF FUEL INTO USEFUL WORKING ENERGY. JOSEPH C. GROFF, New York, N. Y. Filed Apr. 26, 1927. Serial No. 186,642. 13 Claims. (Cl. 123—32.)

1. The method of converting heat energy of fuel into useful working energy which consists in compressing a gas or vapor which includes a medium supporting combustion, then gradually introducing the fuel to said compressed gas and in effecting temperature elevation of the fuel by the frictional effect imposed upon the fuel and attendant upon and by this introduction so that the fuel is raised to a temperature of such extent that the fuel will, on account of its own temperature and contained heat and irrespective of the degree of compression of the gas, ignite, and of continuing admission of said fuel while expansion of the burning gases occurs, then discontinuing said admission and further expanding the resultant products of combustion while recovering useful power from said expanding gases.

1,804,414. GRINDING MACHINE. WALDO J. GUILD, Worcester, Mass., assignor to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 15, 1927. Serial No. 206,085. 12 Claims. (Cl. 51—50.)

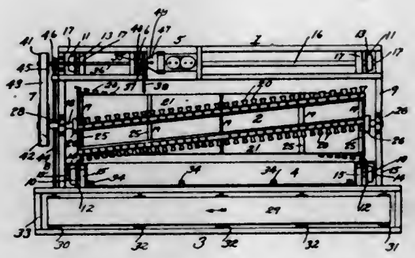
1. In an internal grinding machine, the combination with a grinding wheel, a work holding device, and means for reciprocating one of said parts relative to the other, of a wheel dressing device having a plurality of operative portions in the path of said grinding wheel, means supporting said dressing device which, when actuated, shifts said dressing device from a condition in which it will assume one operative position to a condition in which it will assume another operative position, and automatic means for extending the amplitude of said reciprocation a plurality of times during the operation on a single workpiece, and for actuating said dresser supporting and shifting means, whereby to dress said wheel a plurality of times during said operation from distinctly different positions of said dressing device.



1,804,415. BRUSH. LEONARD LESLIE HALES, Winnipeg, Manitoba, Canada. Filed Sept. 27, 1929, Serial No. 395,555, and in Canada June 14, 1929. 3 Claims. (Cl. 306—20.)

5. In a device for supporting a rod-like article, a member having a stud extending therefrom and adapted to be secured to a support, said member having a pair of spaced apart arms extending laterally from one side thereof in substantially parallel relation and adapted to receive the rod-like member therebetween and support said member on one of said arms, said arms being provided adjacent their free ends with aligned openings and a pin-like member passed through said openings and releasably secured therein to hold the rod-like member in place.

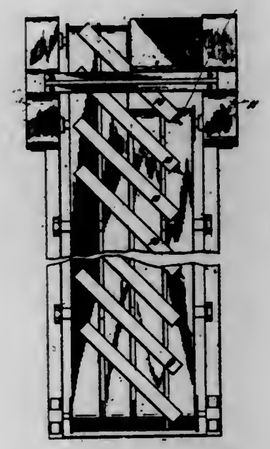
1,804,416. PIPE HANGER FOR ELECTRICAL CONDUITS AND THE LIKE. WILLIAM R. HATHAWAY, New Haven, Conn., assignor to United Advertising Corporation, New Haven, Conn. Filed July 9, 1927. Serial No. 204,578. 5 Claims. (Cl. 248—34.)



1,804,417. COMPOSITION FOR AND METHOD OF HEAT AND FIRE PROOFING PAPER, CRAFT BOARD, AND THE LIKE. OTTO HERTING, Philadelphia, Pa., assignor to Sani Paper Products Co. Inc., Philadelphia, Pa., a Corporation of Delaware. Filed June 15, 1926. Serial No. 116,238. 27 Claims. (Cl. 91—70.)

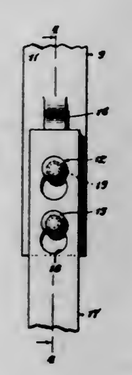
1. A heat resisting material comprising a fibrous material impregnated with titanium silicate.

14. The method of treating fibrous material to render it resistant to heat including impregnating the material with products resulting from the interaction in the presence of water of sodium silicate, sodium borate, aluminium sulphate and titanium sulphate.



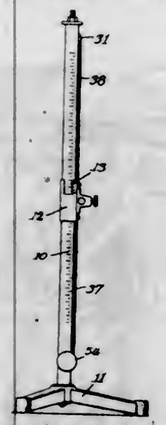
1,804,418. ROAD SUBGRADING MACHINE. VIRGIL R. HUGHES, Belvedere Gardens, Calif. Filed Feb. 13, 1929. Serial No. 339,541. 2 Claims. (Cl. 37—108.)

1. A road sub-grading machine comprising a truck with wheels arranged to travel on the header boards of a roughly graded road, a motor mounted on said truck, a drum extending transversely of and journaled on said truck, cutting teeth on said drum, means to enable said motor to drive the wheels of said truck to cause the truck to travel forwardly on said header boards, means to enable said motor to rotate said drum in the reverse direction to the rotation of the truck wheels, so that the dirt cut by the drum teeth will be thrown forwardly of the truck from the road bed and a conveyor on the truck for receiving said cut dirt and conveying the same to one side of the road, and an apron on the truck extending between the lower part of said drum to said conveyor for directing the dirt cut by the drum teeth to the conveyor.



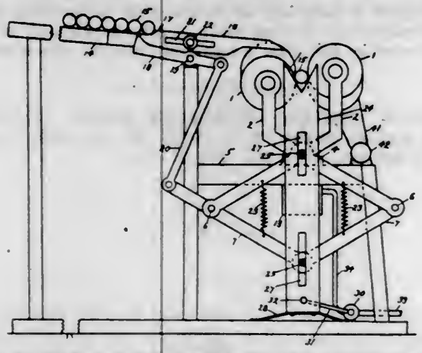
1,804,419. MACHINE AND METHOD FOR REMOVING VALVE STEMS FROM INNER TUBES. EDWARD HUTCHENS, Cudahy, Wis., assignor, by mesne assignments, to H. Muehlstein & Co. Inc., New York, N. Y., a Corporation of New York. Filed Oct. 18, 1926. Serial No. 142,508. 26 Claims. (Cl. 29—84.)

1. In a machine of the class described, a pair of standards, a lower roll supported in both standards, a shorter upper roll supported in one standard, the other end being free, means for preventing distortion of the free end of said shorter roll, a plurality of endless feeder belts of an aggregate width approximating the width of said lower roll, the belts adjacent the length of the shorter upper roll ending clear of said rolls and the remaining belts passing over said lower roll.



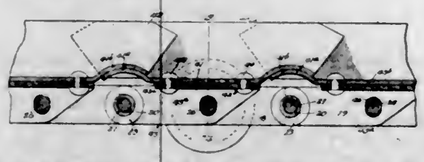
24. The method of removing a valve stem from a tube which consists in creating a relative movement between the tube and a deborning position and utilizing said movement to force any air in said tube to the valve stem end thereof and to thus break or stretch said end of the tube whereby said stem is separated from the tube thereby.

1,804,420. CEILING SUPPORTING STRAP. RAYMOND E. KELLEY, Buffalo, N. Y. Filed Jan. 13, 1930. Serial No. 420,385. 7 Claims. (Cl. 72—118.)



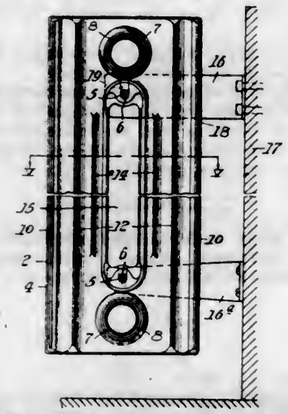
1. A strap for supporting ceilings or the like, comprising an anchoring strap, a supported strap, means for suspending said supported strap at one side and from the lower end of said anchoring strap, and a lip formed to extend outwardly from the side of said anchoring strap, said lip being adapted to be bent to a position across the upper end of said supported strap to prevent displacement thereof.

1,804,421. COMPARATOR. PAUL E. KLOPSTEG, Chicago, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed May 11, 1929. Serial No. 362,344. 11 Claims. (Cl. 33—169.)



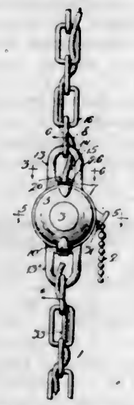
3. In a device of the class described, a pillar having a scale upon the face thereof, a carriage provided with an index readable in cooperation with said scale mounted to travel along the pillar and having two bores at right angles to one another to receive supports for pointers.

1,804,422. AUTOMATIC FEEDER FOR CENTERLESS GRINDERS. JOHN M. KOCH, Reading, Pa. Filed Mar. 14, 1930. Serial No. 435,820. 6 Claims. (Cl. 15—215.)



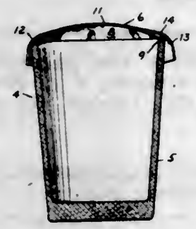
1. In an automatic feeding device for centerless grinding machines, the combination with feed rolls, of means to deliver rods to be ground to said rolls, means to control said delivering means by the movement of said rods through said grinding machine, said feed rolls being adapted to move said rods into engagement with said grinding machine, and means to render said feed rolls inoperative when said rods become engaged by said grinding machine.

1,804,423. APRON CONVEYER. PAUL F. KRENZKE, Chicago, Ill. Filed Nov. 21, 1928. Serial No. 320,793. 8 Claims. (Cl. 198—196.)



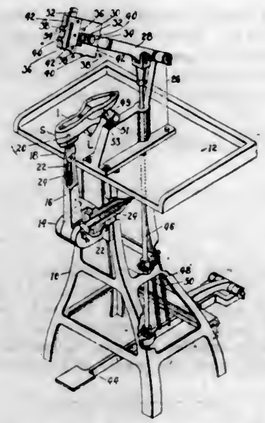
1. In an apron conveyer, the combination of an endless chain, sprocket wheels for supporting and driving the chain, a series of pans having lapped ends, links secured fixedly to the inner faces of the pans, and connected movably to the pivot pins of the chain so that the overlapping end of each pan is free to move transversely to and from the underlying end of the adjoining pan during travel between the sprocket wheels, and means comprising members connected to the chain for limiting the outward movement of the pans.

1,804,424. RADIATOR. THOMAS E. LANDVOIGT, Westmont, Pa., assignor to National Radiator Corporation, Johnstown, Pa., a Corporation of Delaware. Filed Sept. 25, 1928. Serial No. 308,274. 2 Claims. (Cl. 257—151.)



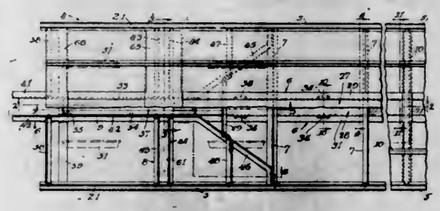
2. In a radiator, a plurality of matched sections joined together, the sections having oppositely directed vertical flanges thereon at the outer edges thereof which contact with the flanges of adjacent sections whereby the front and rear faces present a substantially continuous surface, said flanges terminating at the top and bottom of the sections whereby a plurality of open vertical flues are provided between the sections, radiating fins on the sections of less width than the flanges projecting into the flues, said sections having central vertically elongated openings therethrough between the top and bottom thereof, some of the fins extending throughout the length of the column, and other of the fins at each side of the opening being of less height than the height of the openings.

1,804,425. LINK SWITCH. CHARLES M. LEFKOWITZ, New York, N. Y. Filed Aug. 9, 1928. Serial No. 298,429. 8 Claims. (Cl. 200—168.)



1. A switch adapted to be supported in the form of a link, including a switch mechanism and means for enclosing the same, comprising a shell member having oppositely extending yokes projecting therefrom to be engaged by chain links or other supporting members, said shell member having openings adjacent said yokes for the passage of feed wires in the switch mechanism, and a second shell member co-operating with said first shell member to enclose the switch mechanism, and means for detachably securing said second shell member to said first shell member to permit the shell to be opened while said first shell member remains supported as a link.

1,804,426. ANT POISON FEEDER. LEO A. MATTES, Berkeley, Calif. Filed Aug. 9, 1926. Serial No. 128,028. 2 Claims. (Cl. 43—131.)

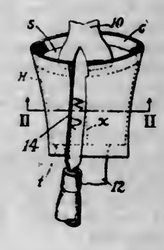


1. An insect-poison feeder comprising a container having an open upper end provided with an annular rim located in its entirety in a common plane and a flanged resilient cover fitted over and holdingly engaged with the open end of the container, said cover having indentations at spaced points arranged to engage said rim and to define insect entrance openings between said indentations and said rim and cover, the flange of said cover being spaced outwardly from said container to permit of access to said insect entrance openings.

1,804,427. METHOD OF AND APPARATUS FOR LOCATING ELEMENTS UPON SHOE-BOTTOMS. FRED L. MOONEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 10, 1929. Serial No. 377,166. 26 Claims. (Cl. 1—19.)

1. The method of locating elements upon shoe-bottoms, which consists in bringing together a shoe-bottom and a gaging member to form a recess, and inserting an end of an element in the recess to locate it.

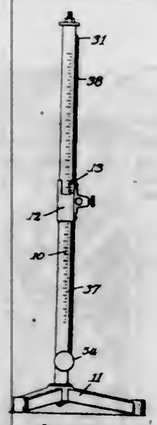
1,804,428. CAR UNDERFRAME CONSTRUCTION. WILLIAM H. MUSSEY, Chicago, Ill., assignor to Pullman Car and Manufacturing Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 18, 1929. Serial No. 356,077. 14 Claims. (Cl. 105—414.)



1. In a railway car, a pair of side sills, a center sill construction between said side sills, said construction comprising an upper chord member and a lower chord member spaced apart vertically, said members being in the form of channels arranged back to back, each having its side edges turned outwardly to form horizontal flanges, tie members extending between said chords and having their ends rigidly connected to said side sills.

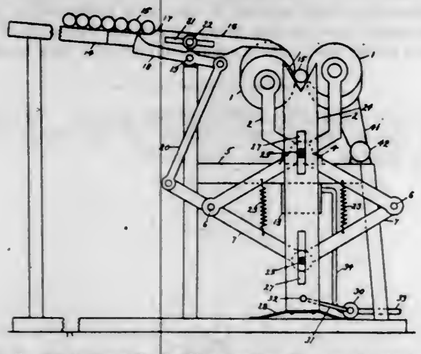
2. In an underframing construction for railway cars, a pair of side sills, a center sill construction comprising an upper and a lower channel-shape chord member, said members being turned back to back and spaced apart vertically and having their longitudinal edges extending horizontally outwardly, a plurality of tie members extending between said chord members, and means for rigidly connecting said tie members to said side sills and chord members.

1,804,429. PRODUCTION OF CONCENTRATES OF RHENIUM. WALTER NODDACK and IDA NODDACK, Berlin-Grunewald, Germany, assignors to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Mar. 13, 1929, Serial No. 346,765, and in Germany Nov. 22, 1928. 2 Claims. (Cl. 23—19.)



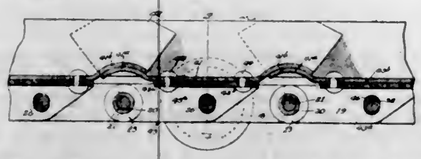
1. The process of producing concentrates of rhenium, which consists in directly dissolving rhenium containing raw materials and precipitating the rhenium from the solution as sulphide.

1,804,430. METHOD OF COVERING HEELS. WILLIAM H. NUTT, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 24, 1929. Serial No. 334,716. 16 Claims. (Cl. 12—147.)



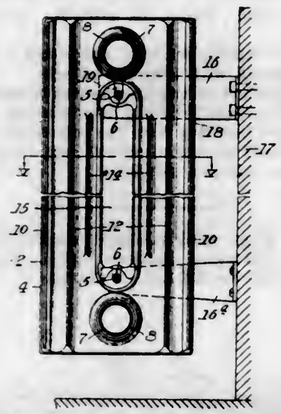
1. That improvement in methods of covering heels which consists in overlapping two portions of a heel covering upon a heel surface to be covered thereby, and cutting diagonally through both of said cover portions while they remain overlapped to form on said cover portions beveled edge faces transversely disposed at the same inclination to the adjacent portion of the heel cover surface.

1,804,421. COMPARATOR. PAUL E. KLOPSTEG, Chicago, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed May 11, 1929. Serial No. 362,344. 11 Claims. (Cl. 33—169.)



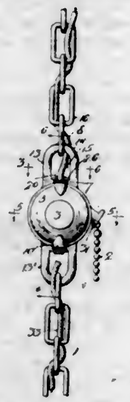
2. In a device of the class described, a pillar having a scale upon the face thereof, a carriage provided with an index readable in cooperation with said scale mounted to travel along the pillar and having two bores at right angles to one another to receive supports for pointers.

1,804,422. AUTOMATIC FEEDER FOR CENTERLESS GRINDERS. JOHN M. KOCH, Reading, Pa. Filed Mar. 14, 1930. Serial No. 435,820. 6 Claims. (Cl. 15—215.)



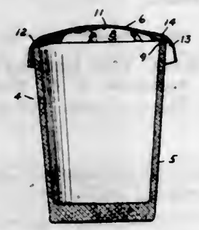
1. In an automatic feeding device for centerless grinding machines, the combination with feed rolls, of means to deliver rods to be ground to said rolls, means to control said delivering means by the movement of said rods through said grinding machine, said feed rolls being adapted to move said rods into engagement with said grinding machine, and means to render said feed rolls inoperative when said rods become engaged by said grinding machine.

1,804,423. APRON CONVEYER. PAUL F. KRENZKE, Chicago, Ill. Filed Nov. 21, 1928. Serial No. 320,793. 8 Claims. (Cl. 198—196.)



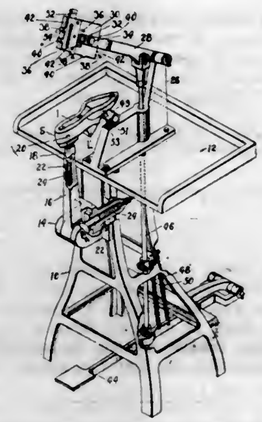
1. In an apron conveyer, the combination of an endless chain, sprocket wheels for supporting and driving the chain, a series of pans having lapped ends, links secured fixedly to the inner faces of the pans, and connected movably to the pivot pins of the chain so that the overlapping end of each pan is free to move transversely to and from the underlying end of the adjoining pan during travel between the sprocket wheels, and means comprising members connected to the chain for limiting the outward movement of the pans.

1,804,424. RADIATOR. THOMAS E. LANDVOIGT, Westmont, Pa., assignor to National Radiator Corporation, Johnstown, Pa., a Corporation of Delaware. Filed Sept. 25, 1928. Serial No. 308,274. 2 Claims. (Cl. 257—151.)



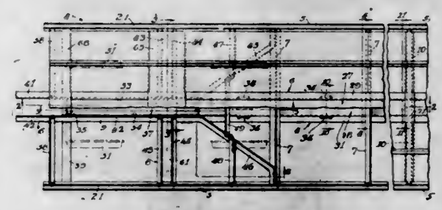
2. In a radiator, a plurality of matched sections joined together, the sections having oppositely directed vertical flanges thereon at the outer edges thereof which contact with the flanges of adjacent sections whereby the front and rear faces present a substantially continuous surface, said flanges terminating at the top and bottom of the sections whereby a plurality of open vertical flues are provided between the sections, radiating fins on the sections of less width than the flanges projecting into the flues, said sections having central vertically elongated openings therethrough between the top and bottom thereof, some of the fins extending throughout the length of the column, and other of the fins at each side of the opening being of less height than the height of the openings.

1,804,425. LINK SWITCH. CHARLES M. LEFKOWITZ, New York, N. Y. Filed Aug. 9, 1928. Serial No. 298,429. 8 Claims. (Cl. 200—168.)



1. A switch adapted to be supported in the form of a link, including a switch mechanism and means for enclosing the same, comprising a shell member having oppositely extending yokes projecting therefrom to be engaged by chain links or other supporting members, said shell member having openings adjacent said yokes for the passage of feed wires in the switch mechanism, and a second shell member co-operating with said first shell member to enclose the switch mechanism, and means for detachably securing said second shell member to said first shell member to permit the shell to be opened while said first shell member remains supported as a link.

1,804,426. ANT POISON FEEDER. LEO A. MATTES, Berkeley, Calif. Filed Aug. 9, 1926. Serial No. 128,028. 2 Claims. (Cl. 43—131.)

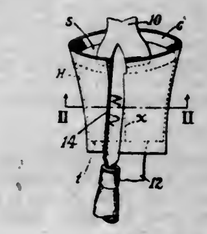


1. An insect-poison feeder comprising a container having an open upper end provided with an annular rim located in its entirety in a common plane and a flanged resilient cover fitted over and holdingly engaged with the open end of the container, said cover having indentations at spaced points arranged to engage said rim and to define insect entrance openings between said indentations and said rim and cover, the flange of said cover being spaced outwardly from said container to permit of access to said insect entrance openings.

1,804,427. METHOD OF AND APPARATUS FOR LOCATING ELEMENTS UPON SHOE-BOTTOMS. FRED L. MOONEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 10, 1929. Serial No. 377,166. 26 Claims. (Cl. 1—19.)

1. The method of locating elements upon shoe-bottoms, which consists in bringing together a shoe-bottom and a gaging member to form a recess, and inserting an end of an element in the recess to locate it.

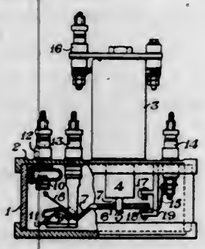
1,804,428. CAR UNDERFRAME CONSTRUCTION. WILLIAM H. MUSSEY, Chicago, Ill., assignor to Pullman Car and Manufacturing Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 18, 1929. Serial No. 356,077. 14 Claims. (Cl. 105—414.)



1. In a railway car, a pair of side sills, a center sill construction between said side sills, said construction comprising an upper chord member and a lower chord member spaced apart vertically, said members being in the form of channels arranged back to back, each having its side edges turned outwardly to form horizontal flanges, tie members extending between said chords and having their ends rigidly connected to said side sills.

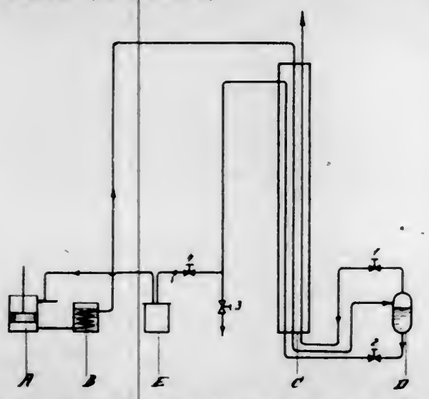
2. In an underframing construction for railway cars, a pair of side sills, a center sill construction comprising an upper and a lower channel-shape chord member, said members being turned back to back and spaced apart vertically and having their longitudinal edges extending horizontally outwardly, a plurality of tie members extending between said chord members, and means for rigidly connecting said tie members to said side sills and chord members.

1,804,429. PRODUCTION OF CONCENTRATES OF RHENIUM. WALTER NODDACK and IDA NODDACK, Berlin-Grunewald, Germany, assignors to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Mar. 13, 1929, Serial No. 346,765, and in Germany Nov. 22, 1928. 2 Claims. (Cl. 23—19.)



1. The process of producing concentrates of rhenium, which consists in directly dissolving rhenium containing raw materials and precipitating the rhenium from the solution as sulphide.

1,804,430. METHOD OF COVERING HEELS. WILLIAM H. NUTT, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 24, 1929. Serial No. 334,716. 16 Claims. (Cl. 12—147.)



1. That improvement in methods of covering heels which consists in overlapping two portions of a heel covering upon a heel surface to be covered thereby, and cutting diagonally through both of said cover portions while they remain overlapped to form on said cover portions beveled edge faces transversely disposed at the same inclination to the adjacent portion of the heel cover surface.

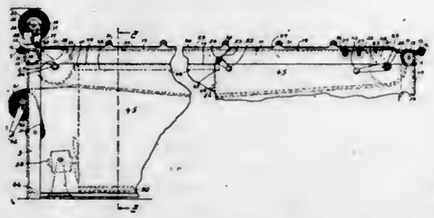
1,804,431. ELECTRIC RELAY. LESLIE H. PETER, ERIC W. CHALLANS, and RODERICK M. MACGREGOR, London, England, assignors, by mesne assignments, to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1930, Serial No. 440,218, and in Great Britain Apr. 16, 1929. 1 Claim. (Cl. 175—336.)

A relay comprising an electromagnet, pins projecting vertically downward from the pole pieces of said magnet, an armature apertured to receive said pins with clearance and mounted to slide thereon toward and away from said pole pieces, and fixed abutments for limiting the movements of said armature.

1,804,432. PROCESS OF FRACTIONATING, COOLING, AND CONDENSING GAS MIXTURES. FRANZ POLITZER, Solln, by Munich, Germany. Filed May 10, 1924, Serial No. 712,452, and in Germany May 31, 1923. 5 Claims. (Cl. 183—115.)

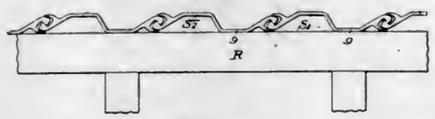
2. A method of cooling gaseous mixtures containing carbon-dioxide below the solidification temperature of the latter, consisting in adding to this mixture hydrocarbons, compressing the mixture, cooling the gas and choosing the total pressure so as to cause the hydrocarbons of the gaseous mixture to liquefy in the same range of temperatures in which the carbon-dioxide, at its partial pressure in the gaseous mixture, might solidify, using the liquid hydrocarbons as a solvent for the carbon-dioxide and preventing thus the solidification of the latter.

1,804,433. AERONAUTICAL PROPELLER. SYLVANUS ALBERT REED, New York, N. Y., assignor to The Reed Propeller Co. Inc., New York, N. Y., a Corporation of New York. Filed Dec. 3, 1928. Serial No. 323,480. 12 Claims. (Cl. 170—173.)



1. A metal aeronautical propeller whose blades are hollow in the immediate vicinity of the hub, are composite for a substantial part of the blade length, and are integral and solid from thence to the tips.

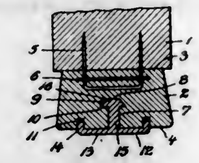
1,804,434. AERONAUTICAL PROPELLER AND METHOD OF MAKING THE SAME. SYLVANUS A. REED, New York, N. Y., assignor to The Reed Propeller Co. Inc., New York, N. Y., a Corporation of New York. Filed Dec. 28, 1928. Serial No. 328,992. 9 Claims. (Cl. 170—165.)



1. An aeronautical solid forged metal propeller blade, divided into a plurality of blades by longitudinal slits of progressively increasing length from the edges inwardly toward the longitudinal center of the blade, the slits, in each instance extending from the blade tip only part way to the blade root and through from one face of the blade to the other.

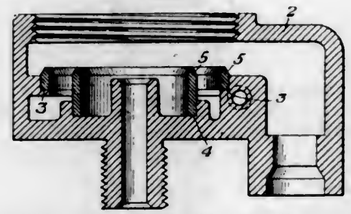
1,804,435. MACHINE FOR DECORATING FABRICS. RYAH REISLEY, Sunnyside, N. Y. Filed June 25, 1929. Serial No. 373,575. 3 Claims. (Cl. 41—1.)

1. In a machine for decorative work on fabrics, a frame, two substantially parallel endless conveyor belts movably arranged upon the surface of said frame, means for adjusting said belts towards and away from each other, a plurality of pins protruding from said belts, said pins allowing said fabric to be stretched thereon between said belts, a curtain substantially parallel to the surface of said frame and partitioning off a section of said fabric stretched between said belts, a partition extending from the end of said curtain to the lower side of said fabrics stretched across said belts, means for swinging said partition around an axis parallel to said fabrics stretched across said belts and means for moving said belts in coextensive unison along the surface of said frame.



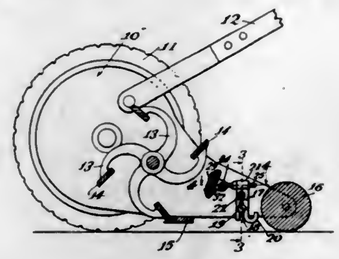
1,804,436. INTERLOCKING SHEET PILING. NORMAN C. RENDLEMAN, Pittsburgh, Pa., assignor to Jones & Loughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 8, 1927. Serial No. 231,843. 2 Claims. (Cl. 61—60.)

1. A sheet piling section comprising a web having interlocks on the edges thereof adapted to engage like interlocks of an adjacent section, the web having generally flat portions lying at opposite sides of the section, and an intermediate angular portion, the section being radially symmetrical about the center of gravity of the section.



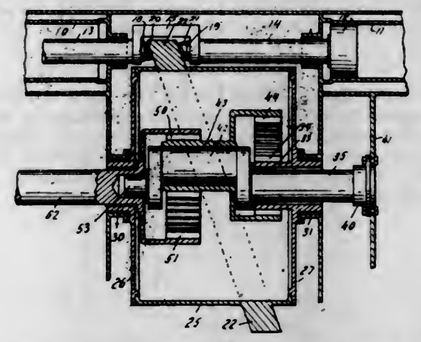
1,804,437. COMBINATION SHOE AND GLIDE FOR FURNITURE. BRANCH C. RICE, Cleveland, Ohio. Filed Aug. 16, 1929. Serial No. 386,327. 4 Claims. (Cl. 16—42.)

3. In a combination shoe and glide for furniture, the combination of a shoe constructed of resilient material, the shoe having a base, the shoe being provided with a recess extending upwardly from the base, the shoe having a



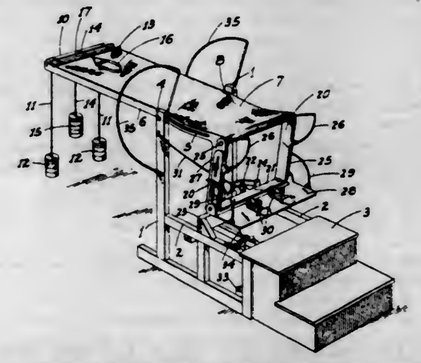
groove in its base, a glide, the glide having a flange adapted to enter said groove, and the glide having means adapted to enter said recess for securing said glide to said shoe.

1,804,438. VALVE. GEORGE A. ROBERTSHAW, Greensburg, Pa. Filed July 13, 1927. Serial No. 205,481. 5 Claims. (Cl. 251—158.)



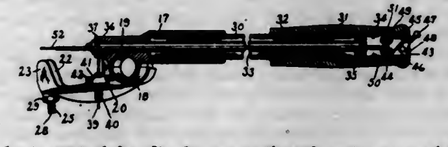
1. As an article of manufacture, a brass valve body having a brass seat therein, the materials of said valve body and seat both containing copper but in different proportions, the proportion of copper in the valve body being greater than the proportion of copper in the valve seat.

1,804,439. LAWN MOWER SHARPENER ATTACHMENT. IRA A. SHANTON, St. Petersburg, Fla. Filed Aug. 8, 1928. Serial No. 298,289. 4 Claims. (Cl. 76—82.1.)



1. The combination with a lawn mower of clamping plates adjustably mounted on the inner faces of the side frames of the lawn mower, angle brackets having their outer legs composed of parallel members, the outer members of each pair of parallel members being seated in said clamping plates, means adjustably mounted on the inner members of each pair of parallel members for engaging the clamping plates for limiting the rearward movement of said angle brackets the inwardly projecting legs of said angle brackets being threaded, a channel shaped sharpening element carrier positioned directly in front of the threaded inwardly projecting legs of said angle brackets, slotted ears projecting rearwardly from said channel-shaped carrier, which slotted ears receive the threaded ends of the angle brackets, nuts mounted on the threaded legs of said angle brackets on opposite sides of said ears and a sharpening element arranged within said channel-shaped carrier.

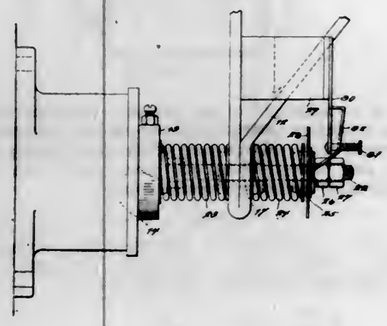
1,804,440. CRANKLESS ENGINE. THOMAS L. SHERMAN, New York, N. Y., assignor to Michell-Crankless Engines Corporation, New York, N. Y., a Corporation of New York. Filed July 30, 1929. Serial No. 382,105. 18 Claims. (Cl. 74—14.)



1. In a mechanism of the character described, a swash plate, a housing associated therewith and rotatable with the swash plate, and gearing within said housing including a gear element operatively connected to the housing and elements operatively driven thereby.

1,804,441. VERTEBRÆ STRETCHER. ANTONE J. SILVA, Milton, Calif. Filed Nov. 24, 1930. Serial No. 497,645. 6 Claims. (Cl. 128—75.)

5. A vertebræ and body stretching apparatus comprising a normally horizontal body supporting structure, a platform mounted in connection with said structure at one end substantially parallel thereto but below the same a distance approximately that between the knee and foot of a person, foot securing means on said platform, means pivotally supporting said structure to enable the same to be tilted to a vertical position with the platform uppermost, and releasable catch means normally holding the structure against tilting movement.



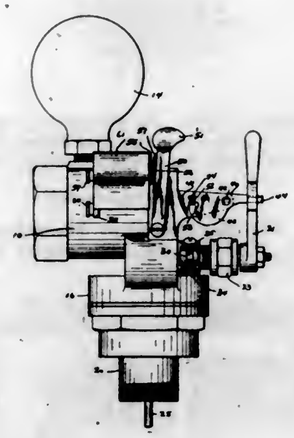
1,804,442. CONTROL HANDLE FOR MOTOR BOAT ENGINES. WOODRUFF R. SMITH, West Haven, Conn., assignor to Malleable Iron Fittings Company, Branford, Conn. Filed Oct. 18, 1928. Serial No. 313,292. 10 Claims. (Cl. 115—18.)

1. A control handle for an outboard motor comprising a hollow arm, means at one end of said arm for attaching

the arm to a motor, a grip rotatably mounted on the other end of said arm, a tube connected to said grip and extending through the hollow arm and adapted to control the operation of a part of said motor, and a switch on the outer end of said grip, said switch being connectible to the ignition system of the motor through said tube and adapted to interrupt the operation of the latter.

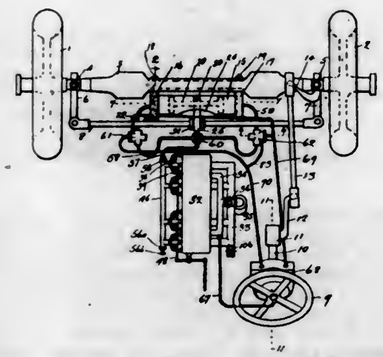
1,804,443. DOOR-HOLDING MEANS AND RELEASE. WALTER H. SMITH, Philadelphia, Pa., assignor, by mesne assignments, to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 6, 1929. Serial No. 412,196. 14 Claims. (Cl. 105—395.)

1. In combination, a vehicle having a door, closing means associated with the door, electromagnetic means for maintaining the door in open position against the action of the closing means, a circuit for said electromagnetic means, and means opening the circuit of the electromagnetic means when the car is in motion.



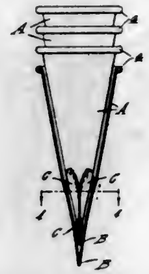
2. In combination, a vehicle having a door, closing means associated with the door, means for holding the door in open position against the action of the closing means, and means rendering said holding means inoperative when the vehicle is in motion.

1,804,444. AIR HEATER. CYRIL A. SOANS, Wheaton, Ill. Filed Mar. 11, 1929. Serial No. 346,128. 12 Claims. (Cl. 257—139.)



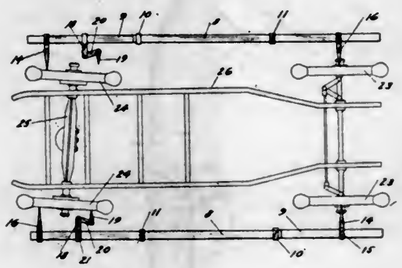
4. In an air heater, the combination of a tubular body provided with a series of extruded parts spaced apart along the body and forming grooves in the exterior of the latter, and a series of spaced fins fitting between said extrusions, the fins being arranged in pairs with an integral flange-like connecting-and-spacing part between the fins of the pair tending to exert opposed forces on the fins in the direction of the spacing and thereby to change said spacing so as to cause said fins to maintain resilient contact with the side walls of the grooves.

1,804,445. FILLING DEVICE. ARTHUR STEVENS, Buffalo, N. Y., assignor to The Vol-U-Meter Co., Inc., Buffalo, N. Y., a Corporation of New York. Filed Oct. 20, 1927. Serial No. 227,566. 9 Claims. (Cl. 249—63.)



1. A liquid filling device comprising a normally open filling valve, mechanically operated trigger means for retaining the valve in its open position, a normally closed electric circuit, electromagnetic means associated with the electric circuit for causing the release of said trigger means, and cut-off means connected in the electric circuit and controlled by the liquid when a predetermined amount has flowed through the device.

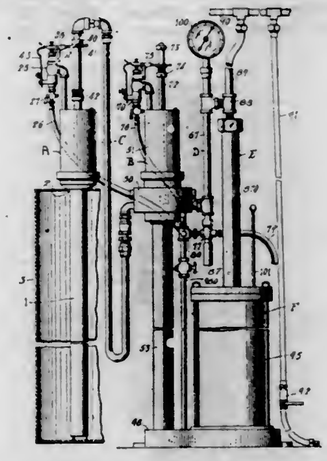
1,804,446. MEANS FOR APPLYING ENGINE EXPLOSION PRESSURE. CHARLES LAWRENCE STOKES, Los Angeles, Calif. Filed Aug. 2, 1924. Serial No. 729,849. 5 Claims. (Cl. 180—79.2.)



1. In combination, a vehicle, an internal combustion engine for propelling said vehicle, a reservoir, means for storing the exhaust gases of said engine under pressure developed in said cylinder prior to the opening of the exhaust valve thereof, means for steering said vehicle, and mechanism for utilizing the pressure of said gases for operating said steering means.

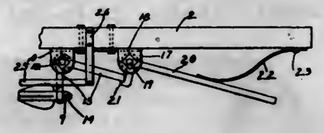
1,804,447. FLOWER VASE. DWIGHT H. WAGNER, Wheeling, W. Va., assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of West Virginia. Filed Oct. 4, 1930. Serial No. 486,350. 4 Claims. (Cl. 47—41.)

1. A vase of substantially conical form having indentations therein adjacent to the apex to reduce the cross sectional area of the base portion of the vase to facilitate the insertion of the same into the ground.



1,804,448. TRACKING GAUGE FOR AUTOMOBILES. HENRY WOCHNER, Rock Island, Ill., assignor to Bear Manufacturing Company, Rock Island, Ill. Filed July 5, 1929. Serial No. 376,051. 3 Claims. (Cl. 33—203.)

1. In a device of the class described, an extensible gauge bar, a pair of supports therefor, including members capable of adjustment vertically, and indicating devices on said bar and capable of adjustment longitudinally of the bar and means whereby said devices are capable of being held in adjusted positions.



1,804,449. HIGH PRESSURE LUBRICATING APPARATUS. JOSEPH W. WOODRUFF, Elizabeth, N. J. Filed June 15, 1929. Serial No. 371,110. 8 Claims. (Cl. 221—47.1.)

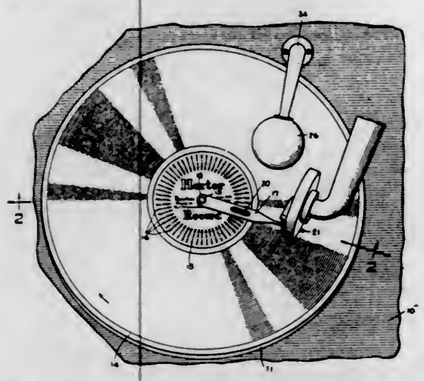
7. Pressure grease distributing apparatus comprising a conduit for supplying grease from a source to a remote point, a plurality of devices connected in said conduit, one having an inlet connected to said source and an outlet, and another device having an inlet connected to said outlet of the first device and an outlet connected to the inlet of the next successive device, each device being constructed to raise the pressure of the grease received from the next preceding device and force it through said conduit to the next succeeding device, a motor for operating each of said

devices, and means controlling all of said motors and actuated by the pressure of the grease at the outlet of the last device.

1,804,450. ARROW TESTING DEVICE. SAMUEL C. ALLEN, Montgomery County, near Dayton, Ohio, assignor, by mesne assignments, to Dayton Racquet Company, Inc., Dayton, Ohio, a Corporation of Ohio. Filed Apr. 19, 1928. Serial No. 271,318. 2 Claims. (Cl. 273—107.5.)

1. An arrow flight-testing device comprising a horizontal fixed member, a bow, means for securing the middle portion of the bow to said member, a string connected at the ends of the bow, a bell crank lever pivoted to said member, one end of said lever being bifurcated to receive an arrow and to engage the string when drawn back by the latter, and a trigger lever also pivoted to said member, the front end of said trigger member formed to hook shape to engage the free end of the bell crank level for the purpose specified.

1,804,451. PROCESS OF TREATING PETROLEUM. TROY M. ANDREWS and CARL E. LAUER, Port Arthur, Tex., assignors, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed June 6, 1925. Serial No. 35,476. 3 Claims. (Cl. 87—5.)

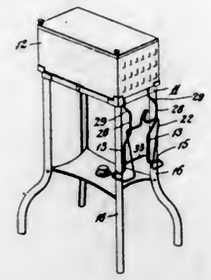


1. A method of treating naphthenic base crude petroleums for the recovery of naphthenic acids therefrom, which comprises, separating the crude oil by distillation into three major portions, consisting essentially of a light oil distillate, an intermediate lubricating oil distillate containing a substantial quantity of naphthenic acids and a heavy still residue, redistilling the lubricating oil distillate in the presence of alkali to produce redistilled lubricating oils substantially free from naphthenic acids and a small still residue containing in concentrated condition the alkali salts of the naphthenic acid content of the original lubricating oil distillate, treating this still residue with alcohol to dissolve the alkali salts, and separating the alcoholic solution of the alkali salts from the residual hydrocarbon oil.

1,804,452. METALLIC STRUCTURAL MEMBER. FRANCIS M. BARTON, Chicago, Ill., assignor, by mesne assignments, to Scott-Weiss Steel Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 7, 1928. Serial No. 245,083. 4 Claims. (Cl. 72—115.)

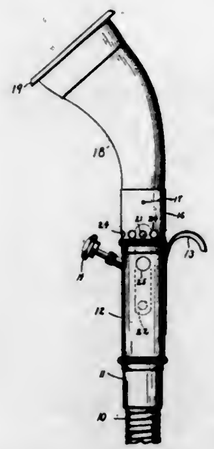
1. A structural member formed of metal and comprising a pair of oppositely facing side walls having integral ribs operative to form a row of sockets for receiving attaching devices, the parts of the ribs adjacent to the ends of the sockets entered by the attaching devices being beveled to form guide surfaces for directing said devices into the sockets.

1,804,453. RECORD READING DEVICE. JACOB T. BASSECHES, New York, N. Y. Filed June 14, 1928. Serial No. 285,313. 17 Claims. (Cl. 40—130.)



1. The method of obtaining visual readings from a moving sound record to identify the record which comprises presenting a plurality of markings associated therewith, within a zone of predetermined observation in numbers within a period of time to give persistence of vision and simulate a substantially stationary visual representation of a graphic outline.

1,804,454. PROCESS FOR HARDENING ARTICLES MADE OF IRON OR STEEL. WALTER BECK, Frankfort-on-the-Main, Germany, assignor to Deutsche Gold & Silber Scheideanstalt, vormals Roessler, Frankfort-on-the-Main, Germany, a Corporation. Filed Sept. 1, 1927, Serial No. 217,010, and in Germany Sept. 6, 1926. 3 Claims. (Cl. 148—15.)

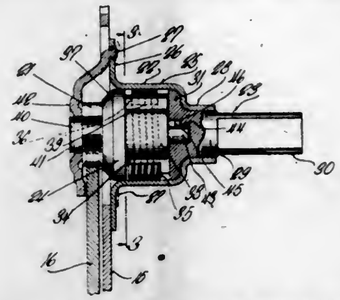


1. A hardening mixture for hardening iron and steel containing sodium cyanide, sodium cyanamide and about 8% of finely divided charcoal distributed therethrough.

1,804,455. DOCUMENT HOLDER. ALFRED V. BODINE and JOSEPH M. LUCARELLE, Bridgeport, Conn., assignors to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Filed July 7, 1926. Serial No. 120,960. 5 Claims. (Cl. 211—51.)

3. A file rack comprising a frame having a pair of depending members and made of wire bent to form a pocket and having means for suspending the pocket from a bar connecting a pair of legs of a stand, means adapted to rest against the front of the legs of the stand, and means secured to one of said depending members adapted to engage the rear of said legs and the other depending member for holding the frame securely against said stand.

1,804,456. ACOUSTIC DEVICE. ALFRED V. BODINE, Bridgeport, Conn., assignor to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Filed Nov. 30, 1926. Serial No. 151,647. 11 Claims. (Cl. 181—21.)

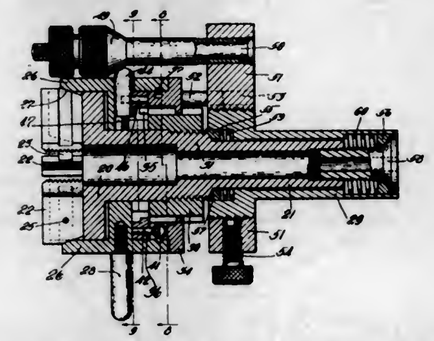


1. In combination, a hand-held part; a mouthpiece slidably connected to the hand-held part and freely removable therefrom; and a spring catch comprising means mounted on the hand-held part, cooperating means on the mouthpiece, and mannally operable releasing means to permit the easy removal of the mouthpiece from the hand-held part.

1,804,457. CLUTCH MECHANISM. STEPHEN F. BRIGGS, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed May 14, 1926, Serial No. 109,090. Renewed Dec. 19, 1927. 15 Claims. (Cl. 192—8.)

1. In a device of the character described, a normally stationary housing, a rotatable driving member having one end located within the housing, a rotatable driven

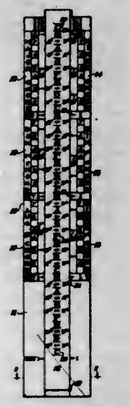
member having one end located within the housing, a pair of spaced lugs carried by the end of the driving member within the housing, a spring coiled about the lugs of the driving member with its ends directed inwardly over adjacent ends of the lugs, the peripheral surface of the spring normally frictionally gripping the wall of the housing to resist rotation of the driving member therein, and a driving key carried by the driven member and



engageable between the inturned ends of the spring and the adjacent lug ends, whereby rotational stress applied to the driving member draws the spring ends together to reduce the frictional contact between the spring and housing and rotates the driven member, and a rotational stress applied to the driven member tends to spread the inturned ends of the spring to increase its frictional contact with the housing and prevent rotation of the member.

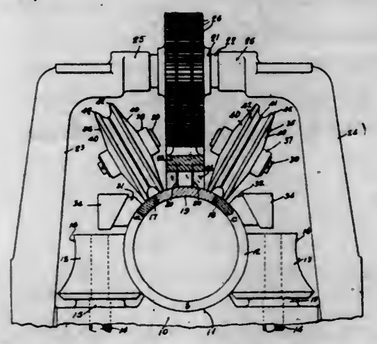
1,804,458. PURIFICATION OF HALOGENATED HYDROCARBONS. EDGAR C. BAITON, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Oct. 12, 1928. Serial No. 312,216. 8 Claims. (Cl. 260—160.)

1. The method of treating the reaction product resulting from the direct action of a halogen upon toluene in the presence of a halogenating catalyst wherein side-chainhalogenation chiefly occurs, which comprises washing such product with an aqueous medium to remove inorganic impurities, drying and then distilling the so purified product in contact with metallic surfaces.



1,804,459. SCREW-CUTTING DIE. ERNEST T. BYSSHE and ROBERT R. FINN, Springfield, Vt., assignors to Jones & Lamson Machine Company, Springfield, Vt., a Corporation of Vermont. Filed Apr. 5, 1927. Serial No. 181,068. 14 Claims. (Cl. 10—95.)

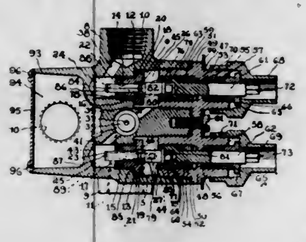
1. In combination, a screw-cutting die having a shank with a pair of oppositely inclined frusto-conical faces coaxial therewith, a supporting member, and means providing a floating connection between said die and member, said means comprising a pair of cone washers having inclined frusto-conical faces engaging the frusto-conical faces of said die, and means for pressing said mutually engaging faces together.



6. In a screw-cutting die, a body portion, radially slidable chasers carried by said portion having cam faces on their outer ends, means for moving said chasers inwardly comprising a cam member mounted for limited camming movement on said cam faces whereby the chasers are moved inwardly to closed position, means for moving said cam member, and means for locking said cam member in its limiting position of camming engagement with said chasers, said locking means comprising an annular member having end faces, one of which engages said cam member when the annular member is in locking position, the other of which engages the body portion of the die, said locking member having locking engagements with both the cam member and body portion distributed around its entire periphery.

1,804,460. CHORD FINDER. RAYMOND CORDIER, Canton, Ohio. Filed May 25, 1928. Serial No. 280,529. 2 Claims. (Cl. 84—474.)

1. A chord finder including an indicator member and a designator member movable with respect to each other, a plurality of tone designators on the designator member, and a plurality of means on the indicator member for visually indicating the tones of chords on the designator member and for covering from view all the other tone designators on the designator member.

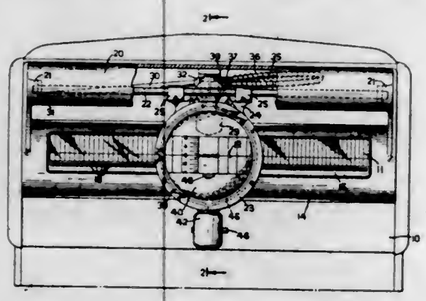


1,804,461. METHOD OF AND MEANS FOR WELDING WITHOUT ELECTRICAL LEAKAGE. WILLIAM E. CRAWFORD, Wauwatosa, and REIMAR C. F. KURTZE, Milwaukee, Wis., assignors to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Mar. 12, 1928. Serial No. 261,025. 9 Claims. (Cl. 219—6.)

1. The combination with supporting means to guide an article along a predetermined path, of means for feeding

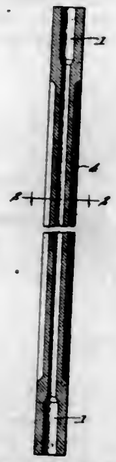
said article along said path, idler rollers in the path of the article to create circumferential stresses therein, a rotatable electrode having laminations on the periphery thereof adapted to contact with the article, and another electrode to effect the passage of heating currents through a portion of the article.

1,804,462. VALVE. LEWIS W. EGGLESTON, Detroit, Mich., assignor to American Radiator Company, New York, N. Y., a Corporation of New Jersey. Filed June 16, 1928. Serial No. 285,803. 11 Claims. (Cl. 137—139.)



2. A valve of the character described, comprising a casing having an inlet and an outlet connected by a passage through said casing, valve seat means in said passage, a valve operative to seat under force of gravity on said means to close said passage, said valve having a stem comprising a solenoid core, a solenoid winding in said casing around said core whereby energization of said solenoid opens said valve, a metering valve in said passage between said inlet and said first valve, said casing having a by-pass leading from said passage between said valves to said outlet, and a metering valve in said by-pass.

1,804,463. FREEZING POINT LOWERING COMPOSITION. ALBERT N. ERICKSON, Elmhurst, N. Y. Filed Nov. 7, 1925. Serial No. 67,697. 7 Claims. (Cl. 252—5.)

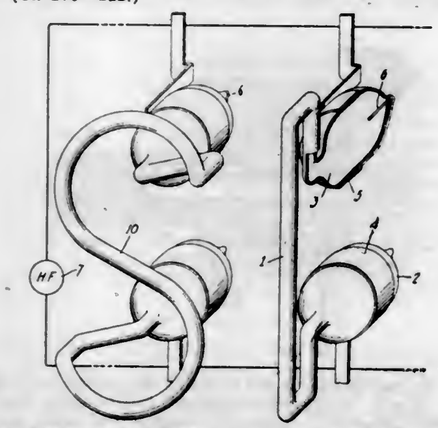


1. A freezing point lowering composition for automobile cooling systems, consisting of non-corrosive nitrate and a colloid.

1,804,464. MAGNIFYING DEVICE. FREDERICK L. FULLER, Trenton, N. J., assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed June 27, 1928. Serial No. 288,603. 12 Claims. (Cl. 88—39.)

1. Apparatus comprising a scale chart and a magnifying device therefor, said device comprising a magnifying lens, a frame for said lens, means for movably supporting said frame, an illuminating device carried by said frame, a cable carrying wire connections for said illuminating device, and means for holding the cable out of the path of said frame.

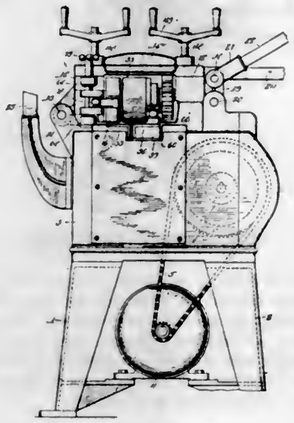
1,804,465. HEAT TRANSFER TUBE. FRANCIS X. GOVERS, Lawrenceville, Ill., assignor to Indian Refining Company, Lawrenceville, Ill., a Corporation of Maine. Filed Nov. 5, 1928. Serial No. 317,300. 3 Claims. (Cl. 257—262.)



1. A heat-transfer tube having an overall peripherally uniform diameter, a bore of circular cross-section throughout its length, and longitudinally extending exterior ribs whose outer ends are within said periphery, said ribs being of less length than the tube.

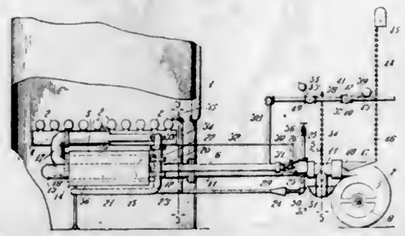
1,804,466. PROCESS OF MAKING DIARYLAMINES. WILLIAM J. HALE, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Aug. 28, 1926. Serial No. 132,822. 14 Claims. (Cl. 260—128.)

1. A process of making diarylamines, which comprises reacting between a nuclear mono-halogenated aromatic compound and ammonia in proportion not exceeding three moles of the latter to one of the former, in the presence of a copper compound as catalyst.



1,804,467. ELECTRIC DISCHARGE DEVICE. WILLIAM F. HENDRY, Ossining, N. Y., assignor, by mesne assignments, to Manhattan Electrical Supply Company, Inc., Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 9, 1926. Serial No. 147,298. 4 Claims. (Cl. 176—122.)

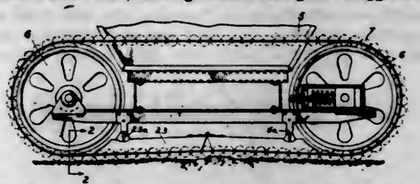
2. The method of making and operating gas filled luminous signs which comprises providing an external and an internal electrode, bridging a source of current across said electrodes until the sign is "cured", then connecting



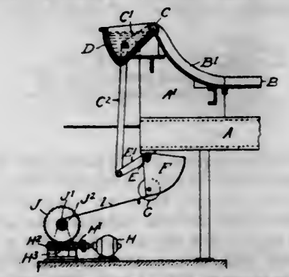
said internal electrode with a second external electrode, and bridging a current source across said external electrodes.

1,804,468. ANGLE BAR BENDING MACHINE. JOHN JENSEN, Rockford, Ill., assignor to Whitney Metal Tool Company, Rockford, Ill., a Corporation of Illinois. Filed Aug. 25, 1927. Serial No. 215,331. 19 Claims. (Cl. 153—57.)

1. In an angle bar bending machine, a bar supporting table, a pair of driving rolls in tangential relation to the plane of said table and to each other, a bending roll positioned oppositely of said table and traversing the plane thereof and a rear guide roll coacting with said bending roll at a point adjacent the point of contact between said bending roll and a bar to be operated upon.



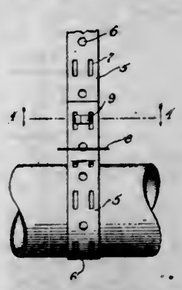
1,804,469. HYDROCARBON BURNER. GEORGE B. JOHNSON, Evanston, Ill. Filed Sept. 6, 1927. Serial No. 217,685. 6 Claims. (Cl. 158—62.)



1. In a fuel oil burner, a main burner, a retort, means for feeding oil directly into the retort, means distinct from the main burner for heating the retort, means for forcing air under pressure into one end portion of the retort through the retort and from the other end portion of the retort to the main burner and means controlled by the temperature in the retort for regulating the amount of heat applied to the retort.

1,804,470. ENDLESS BAND TRACK FOR VEHICLES. HARRY A. KNOX, Davenport, Iowa. Filed May 18, 1929. Serial No. 364,257. 10 Claims. (Cl. 305—8.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. The combination with a vehicle provided with wheels having spaced resilient rims and central spaced flanges, of an endless track tensioned by the wheels and comprising a pair of bands, transverse grousers on the outer tread of each band, said grousers being in staggered relation, and a lug secured at each end of the grousers, the inside lugs enterable between the spaced flanges of the wheels.



1,804,471. LADLE ACTUATING MECHANISM. JAMES B. LADD, Ardmore, Pa., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Jan. 14, 1928. Serial No. 246,681. 3 Claims. (Cl. 221—65.)

1. The combination of a segmental casting ladle pivotally supported at its pouring lip having vertical side walls and a rear wall having the conformation of a segment of a cylinder concentric with the pivot of the ladle, of a constant speed motor and mechanism actuated by said motor for tilting the ladle adapted to tilt the ladle with constant angular velocity.

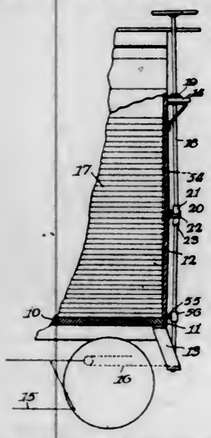
1,804,472. PIPE HANGER. JOHN W. LESLIE, Evanston, Ill., assignor, by mesne assignments, to Signode Steel Strapping Company, a Corporation of Delaware. Filed Aug. 16, 1926. Serial No. 129,332. 8 Claims. (Cl. 248—41.)

3. A hanger comprising a slotted metallic strip adapted to be passed around a pipe or the like and means independent of said strip for joining portions of said strip comprising a collar adapted to fit over said portions having a lug formed integral therewith, said lug being adapted to pass through the slots in said strip portions and be bent over to fasten the portions together.

1,804,473. VALVE FOR GAS BURNERS. CHARLES V. LINDBLOOM, Cranford, N. J., assignor, by mesne assignments, to Hi-Heat Gas Co. Inc., New York, N. Y., a Corporation of New York. Filed May 28, 1928. Serial No. 280,078. 2 Claims. (Cl. 299—136.)

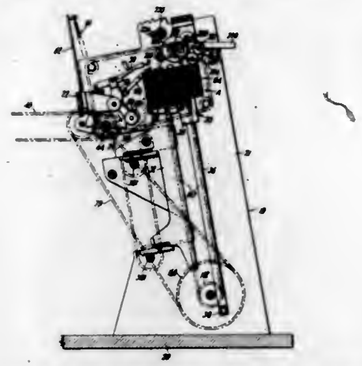
2. A valve for atomizing fuel, including a tube through which the fuel passes, a cap for said tube having an end

wall provided with an outlet orifice and having an expansion chamber adjacent said orifice, said cap having a threaded bore adapted to be threaded into said tube, a filling member insertible into said cap and having a lateral flange and a tubular projection, said tubular extension



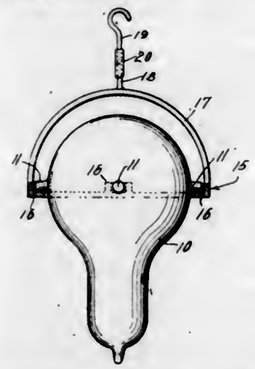
being adapted to fit the bore of said tube, said lateral flange being adapted to be clamped between the end of said tube and the end wall of said cap, said filling member having an orifice communicating with said expansion chamber, and a needle for regulating the flow of fluid through said orifices.

1,804,474. PLUG FOR ELECTRIC CIRCUITS. LUCILLE MARTIN, Long Beach, Calif. Filed June 4, 1928. Serial No, 282,842. 1 Claim. (Cl. 173—361.)



In a plug for an electric circuit socket, the combination of a cylindrical body having a recessed end, a soft rubber beaded jacket on said body, an elongated rectangular hollow handle having one end integral with said body, an annular bead on the free end of said handle, a soft rubber cushion on said bead, spring contact points having flanges seated on the recessed end of said body, wires extended through said hollow handle, screws for securing the ends of said wires and flanges of said contacts to said body, bosses integral with said handle and body, and other screws extended through said bosses so as to pinchingly engage the wires extended through said handle, said screws and spring contacts arranged so that they are accessible from the exterior of said body and handle so the parts can be easily assembled, replaced or repaired.

1,804,475. RAILWAY BRAKE. CHARLES J. NASH, Chicago, Ill., assignor to Universal Draft Gear Attachment Co., A Corporation of Illinois. Filed Aug. 31, 1928. Serial No. 303,221. 12 Claims. (Cl. 74—112.)

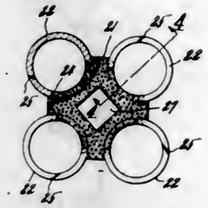


1. In a car, a car end adapted to be deflected by the lading within the car, a brake shaft, extending along the car end and journaled in upper and lower bearings, said shaft including two sections and an intermediate universal joint and a third bearing connecting the universal joint and the car.

1,804,476. ENVELOPE FEED MECHANISM. ABRAHAM NOVICK, Flushing, N. Y., assignor to F. L. Smithe Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 21, 1926. Serial No. 143,047. 7 Claims. (Cl. 271—1.)

1. In a blank feeding machine, means for holding a stack of blanks, means for elevating an end of the topmost blank, means for blowing the released portion of the blank against a conveying element, means for gripping the blank against said element comprising a roller cooperating with said element and means to move same back and forth along the periphery of said element.

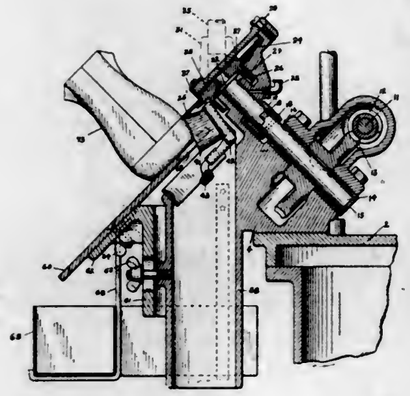
1,804,477. FIRE EXTINGUISHER. CLAYTON W. OLD, Montclair, N. J., assignor to International Fire Equipment Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 7, 1926. Serial No. 153,072. 9 Claims. (Cl. 169—26.)



1. A fire extinguisher and support therefor comprising in combination, a frangible fire extinguisher container having projections formed thereon extending laterally from the outer surface thereof, and a frame encircling said container and having sockets adapted to receive said projections, said container having an elongated portion extending downwardly through said support.

4. In combination, a frangible container having laterally offset portions, a frame having portions adapted to engage and support said offset portions and having other portions adapted to permit the passage therethrough of said offset portions.

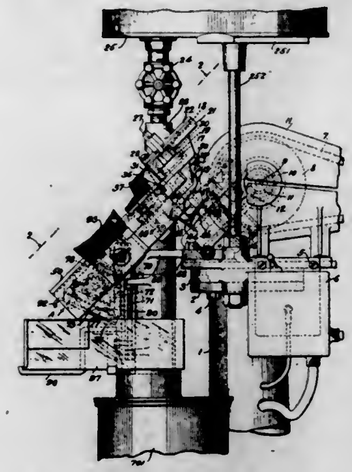
1,804,478. MULTIPLE CONDUIT AND SPACING SUPPORTS THEREFOR. HOWARD PARKER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Mar. 9, 1928. Serial No. 260,452. 11 Claims. (Cl. 247—34.)



1. An article of manufacture, comprising a plurality of water proofed fiber conduit sections in side-by-side

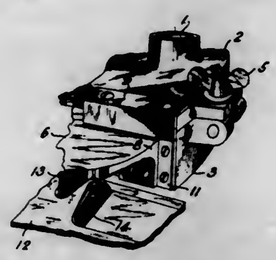
relation, and spaced members at intervals along the sections for holding the sections in predetermined relative positions, said members each consisting of a collar extend-

ing around each section and a molded core interlocking with said collars and anchoring them in predetermined relative position.



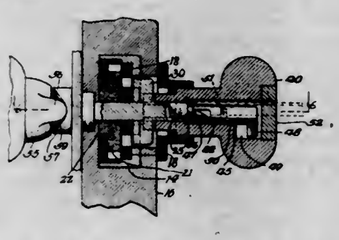
1,804,479. COATING AND MARKING MACHINE. HERBERT R. POLLEYS, New Haven, Conn., assignor to National India Rubber Company, Bristol, R. I., a Corporation of Rhode Island. Filed Mar. 31, 1927. Serial No. 179,772. 9 Claims. (Cl. 91—40.)

1. In a cementing machine, a flat support upon which the sole portion of a footwear article may be moved while resting thereon, yieldably mounted means extending above the support and yieldably mounted for movement in one plane only whereby a coat of cement can be applied to the lower portion of the upper of the article as the latter is moved on the support, and means for supplying cement to said last means.



1,804,480. CEMENT APPLYING MACHINE. HERBERT R. POLLEYS, New Haven, Conn., assignor to National India Rubber Company, Bristol, R. I., a Corporation of Rhode Island. Filed May 19, 1928. Serial No. 279,040. 9 Claims. (Cl. 12—80.)

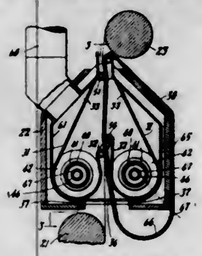
9. In a cementing machine in combination, means for supplying cement, a rotating disk for conducting the cement to the surface of a juxtaposed article, said disk acting to mark off the area to which the cement is supplied, a brush for spreading a cement over the surface to



which it is supplied, and resilient means for urging the brush into contact with the surface to which the cement is supplied.

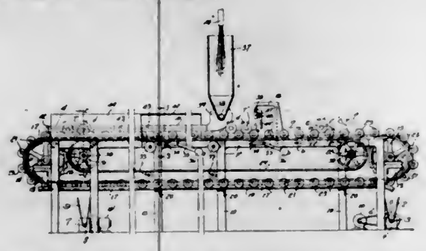
1,804,481. LATEX APPLYING MACHINE. HERBERT R. POLLEYS, New Haven, Conn., assignor to National India Rubber Company, Bristol, R. I., a Corporation of Connecticut. Filed Sept. 14, 1928. Serial No. 305,998. 4 Claims. (Cl. 12—80.)

1. In a machine for applying a liquid material to footwear in combination, a rotatable disc for applying a bead of liquid material to a shoe upper, and means for supplying such liquid material to the disc and the shoe upper at a point adjacent the point of application.



1,804,482. DOORLOCK. JOSEPH REIF, Hebron, Ind., assignor of one-half to Francis E. Ling, Hebron, Ind. Filed Apr. 4, 1928. Serial No. 267,181. 9 Claims. (Cl. 70—91.)

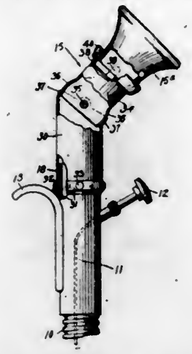
1. In a door lock, the combination of a case, a lock-bolt movable in the case, inner and outer handles, bolt-



shifting means comprising a rotatable and longitudinally slidable stem, one of the handles being connected to said stem so that the latter is rotatable and slidable thereby, means operable upon slide movement of the stem in one direction to render the bolt inoperable by the shifting-means, and key operable means adjacent the other handle for slidably shifting the stem in the opposite direction to render the shifting-means operable to shift the bolt.

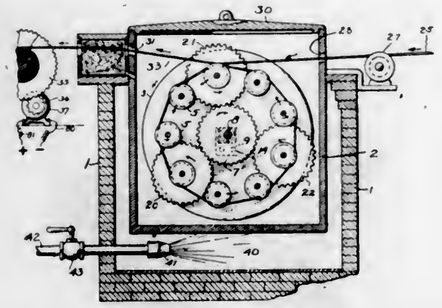
1,804,483. APPARATUS FOR USE IN FINISHING PAPER. STUART W. WEBB, Brookline, JOHN G. CALLAN, Cambridge, and ALBERT ALLEN, Winchester, Mass., assignors, by mesne assignments, to Eastern Manufacturing Company, Boston, Mass., a Corporation of Maine. Original application filed Mar. 22, 1926, Serial No. 96,507. Divided and this application filed July 2, 1927. Serial No. 203,085. 9 Claims. (Cl. 92—76.)

1. A steam box comprising a receptacle having openings through which a continuous web of paper may be passed into and out of said receptacle, sealing elements positioned in pairs on opposite faces of the web at said openings, the elements of each pair being relatively offset lengthwise of the web, and means for directing steam into said casing.



1,804,484. BOTTLE-SILVERING MACHINE. MINER P. WETMORE, Norwich, Conn., assignor to The American Thermos Bottle Company, Norwich, Conn., a Corporation of Ohio. Filed July 30, 1927. Serial No. 209,605. 20 Claims. (Cl. 91—12.2.)

1. In a machine of the class described, a movable carrier comprising spaced rollers for supporting cylindrical bodies, means for mounting said rollers to rotate about their axes, and rotary means engaging said rollers at the bottom to rotate the same independently of the forward movement of said carrier, whereby the cylindrical bodies supported on said rollers are rotated without being engaged by said rotating means.



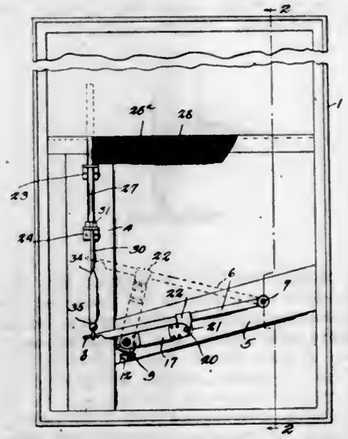
1,804,485. SOUND COLLECTING AND TRANSMITTING MEANS. CHARLES K. WOODBRIDGE, New York, N. Y., assignor to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Original application filed May 29, 1924, Serial No. 716,626, and in Great Britain Apr. 20, 1925. Divided and this application filed Nov. 24, 1926. Serial No. 150,578. 6 Claims. (Cl. 181—21.)

1. In combination, a sound-collector comprising a hand-held part; a mouthpiece; means for suppporting the mouthpiece; pivotal means between the hand-held part and the last-named means, to allow adjustment of the mouthpiece with relation to the hand-held part; and means whereby

the mouthpiece and its supporting means may be rotated about the axis of the hand-held part to adjust the former with relation to the latter.

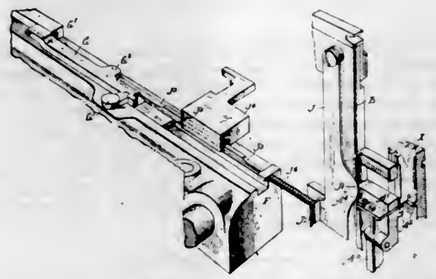
1,804,486. APPARATUS FOR TREATING WIRES. PARVIN WRIGHT, Seattle, Wash. Filed Aug. 18, 1928. Serial No. 300,490. 18 Claims. (Cl. 204—5.)

15. In an apparatus for treating wire in combination with a tank, a rotatable drum therein for receiving and supporting said wire said drum comprising heads and a plurality of threaded rollers supported therebetween, said rollers geared for planetary movement.



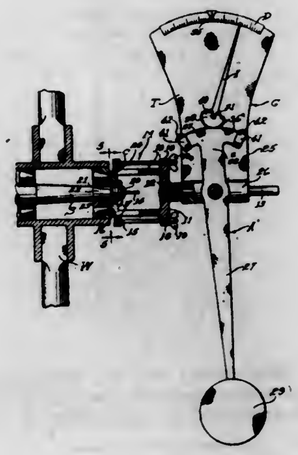
1,804,487. BOOK MIRROR. SHOJIRO YOSHIOKA, New York, N. Y., assignor to Rinkichi Doi, Sendai, Japan. Filed Oct. 27, 1927. Serial No. 229,145. 1 Claim. (Cl. 45—18.)

A mirror mounting comprising a flat surface, a substantially U-shaped member applied to said surface, the sides and bight portion of said U-shaped member inclined with respect to the surface to form therewith a triangular groove, a mirror provided with inclined edges received in said guides and slidable through the open end of said member to a position in said bight portion, a curved re-



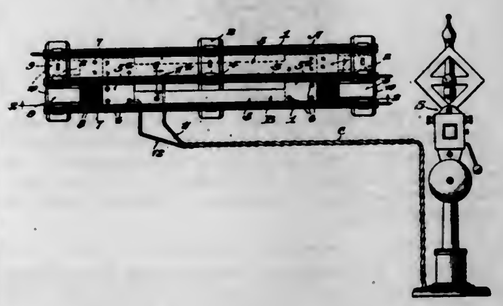
silient member mounted in a recess of said surface adjacent to said bight portion to engage the under side of said mirror, a strip extending diametrically of said mirror and projecting beyond an edge thereof.

1,804,488. MECHANICAL MOVEMENT. LEE H. ADAMSON, Beverly Hills, Calif. Filed July 30, 1929. Serial No. 382,224. 8 Claims. (Cl. 74—14.)



1. In a mechanical movement, upper and lower bearings, a staff mounted to rotate and to slide longitudinally in the uper bearing, a strip mounted to slide longitudinally in the lower bearing, the strip and the lower bearing having elements which cooperate to impart rotation to the strip when the strip is moved longitudinally, means under the control of an operator for moving the strip longitudinally, and a nut threaded on the staff and having seats in its edge, the staff being provided in its end with a slot receiving one terminal of the strip, the strip having fingers received in the seat of the nut.

1,804,489. TYPOGRAPHICAL COMPOSING AND CASTING MACHINE. EDGAR H. ATKINS, Richmond, Va., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Jan. 13, 1926. Serial No. 80,876. 7 Claims. (Cl. 199—52.)

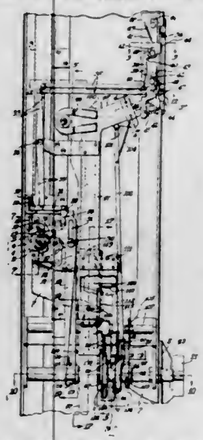


1. In a typographical composing and casting machine, the combination of an assembling elevator provided with a retractible rail for supporting composed matrices in an upper position therein, a stop member adjustable to active or inactive position to determine the level at which the composed matrices are presented to the mold, and a safety device operative in the active position of said stop member and elevator rail to engage the latter directly and lock the elevator.

1,804,490. WHEEL GAUGE. WALTER BAGGE, Los Angeles, Calif., assignor of one-third to Ernest Bagge and one-third to Arthur B. Imhoff, Los Angeles, Calif. Filed Aug. 23, 1927. Serial No. 214,974. 18 Claims. (Cl. 33—203.)

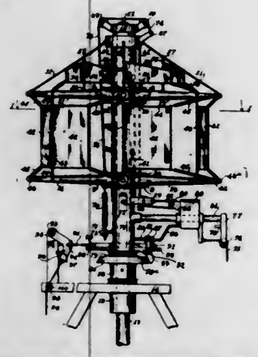
8. In a device of the character described, a mounting comprising a head having an extension upon which a gauge is adapted to be supported, and means by which the head is adapted to be detachably secured to the spindle of a vehicle wheel with the longitudinal axis of said extension disposed in alinement with the longitudinal axis of the spindle.

1,804,491. EQUIPMENT CONTROLLING UNIT. HARRY S. BECKER, River Forest, Ill., assignor to American Flyer Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 8, 1930. Serial No. 487,855. 18 Claims. (Cl. 246—255.)



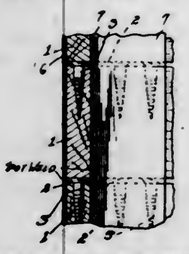
1. An attachment for standard railway track sections including a contact plate, insulated bases for mounting the plate at its ends, and spring clips carried by said insulating bases adapted for engagement with the ties of said track section.

1,804,492. VENDING MACHINE. HARRY S. BENJAMIN, Detroit, Mich. Filed May 11, 1928. Serial No. 276,829. 9 Claims. (Cl. 194—91.)



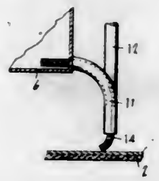
1. In a vending machine, the combination of a rotary member, a manually operated operating member rotatable independently of said rotary member, means for

connecting and disconnecting said members, a lever for controlling the operation of said connecting means and provided with means for engaging one of said members,



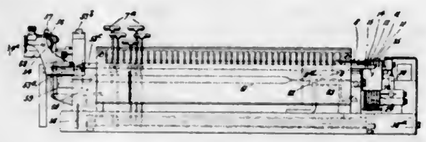
said member being formed with two paths of travel for said means, and means whereby the path of travel taken by said means is determined by the insertion of a coin.

1,804,493. FLUID MOTOR. ISRAEL BENJAMINS, Brooklyn, N. Y., assignor to Rose Benjamins, Brooklyn, N. Y. Filed June 7, 1928. Serial No. 283,511. 12 Claims. (Cl. 170—21.)



1. In a fluid motor a power wheel, a load shaft loaded for relatively high winds, a means for operatively connecting said wheel to said shaft, an automatic means for disconnecting the same at low speeds of said wheel and a means for varying and adjusting the action of said disconnecting means.

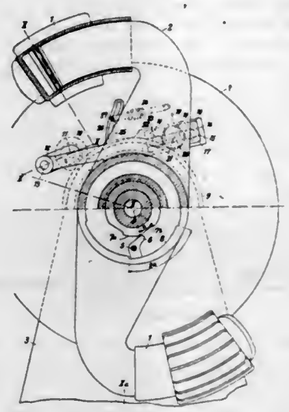
1,804,494. REENFORCED WOOD BOX OR CRATE. WALTER O. BROWN, Detroit, Mich. Filed Jan. 18, 1930. Serial No. 421,633. 8 Claims. (Cl. 217—65.)



1. In a box or crate, a series of panels forming the side walls of the box, each consisting of a series of slats in spaced relation arranged in the same plane, a corner fastening means for the panels consisting of an inner and an outer sheet metal angle member and metal spacers between the angle members and positioned in the spaces between the slats of the respective panels, the angle members both being welded to the spacers.

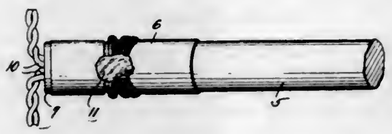
1,804,495. APPARATUS AND METHOD OF ORNAMENTING PAPER. FRANK G. CRANE and JOSEPH M. WARD, Detroit, Mich. Filed July 3, 1929. Serial No. 375,817. 9 Claims. (Cl. 92—40.)

1. The combination with a forming web of a paper making machine and a suction box operatively associated therewith, of a plurality of color troughs disposed transversely above said forming web in superimposed relation in advance of said suction box, a plurality of conduits leading from the several troughs and having their lower ends arranged in alinement and adjacent to but spaced from the forming web, the conduits of the several troughs being arranged in alternating relation, and wicks in said conduits having their lower ends projecting therefrom into coacting relation to the pulp or web of paper on the forming web.



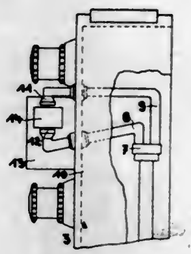
1,804,496. TELEGRAPHIC TRANSMITTING AND TAPE PERFORATING APPARATUS. FREDERICK GEORGE CREED and REGINALD DENNIS SALMON, Croydon, England, assignors, by mesne assignments, to Creed & Company Limited, Croydon, England, a Company of Great Britain. Filed Aug. 16, 1926, Serial No. 129,441, and in Great Britain Oct. 22, 1925. Renewed Mar. 19, 1931. 27 Claims. (Cl. 178—17.)

1. A telegraphic keyboard, comprising a single electric signalling switch, a tape perforating punch arrangement and a single series of longitudinally movable combination bars mechanically associated with both the switch and punch arrangement aforesaid, whereby electric signal combinations can be transmitted simultaneously with the mechanical production of a record of such signal combinations, or whereby either signal combinations alone, or punched tape alone, can be respectively transmitted or mechanically produced.



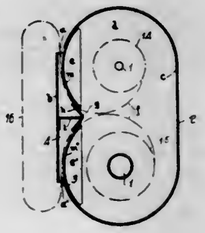
1,804,497. ROTARY ENGINE AND PUMP. JEAN DAP, Puteaux, France, assignor to Dap-Motor-Patent-Gesellschaft m. b. H., Cologne-Holweide, Germany. Filed May 26, 1927, Serial No. 194,460, and in Germany July 3, 1926. 8 Claims. (Cl. 123—43.)

1. In a machine of the class described, means for locking the intermittently rotating group both ways during its stationary period to the stationary part of the machine, and positively controlled mechanism separate from the mechanism transmitting the power forces connecting the two groups adapted to hold said intermittently rotating group still during its stationary period and to forward said intermittently rotating group with a mean



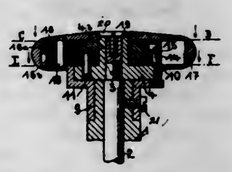
speed of twice the machine speed without shocks at the commencement and finish during the moving periods of said group.

1,804,498. MOP HANDLE FASTENER. JOHN W. DOTY, Olney, Ill., assignor to Community Construction Co., Olney, Ill., a Corporation. Filed July 19, 1928. Serial No. 293,925. 2 Claims. (Cl. 306—1.)



1. A connector for mop heads and handles, comprising a tubular body portion bent and crimped at a point intermediate its ends, soldering material positioned on the crimped portion to hold the body portion in its bent condition, one end of the body portion adopted to receive a mop handle, the opposite end of the body portion adapted to receive a plug forming a part of a mop head.

1,804,499. CINEMATOGRAPHIC PROJECTION APPARATUS. MAX ENGELMANN, Lausa, Germany. Filed Oct. 4, 1927, Serial No. 223,977, and in Germany Oct. 29, 1926. 1 Claim. (Cl. 88—17.)

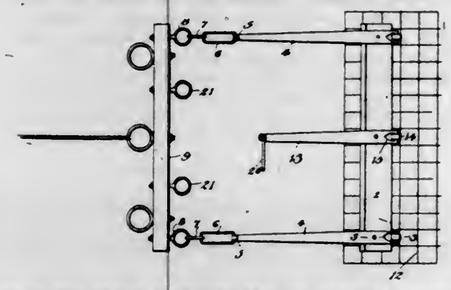


The combination with a cinematographic projection head and a film gate supported by said head and disposed outwardly thereof, of a vertically extending pipe arranged within said head, a coupling arranged upon the upper end of said pipe, branch pipes each having one end connected to said coupling and its opposite end extended exteriorly of the head and projecting near the film gate on the latter, a nozzle secured and connected to each of said projecting ends of the branch pipes extended exteriorly of the head, said nozzles being disposed adjacent the film gate on each side thereof, and a main coupling arranged exteriorly of the head and connected to the lower end of the vertically extending pipe within the head, whereby an air supply conduit may be directly connected to said coupling for the purpose specified.

1,804,500. FILM BOX. EMANUEL GOLDBERG and OTTO FISCHER, Dresden, Germany. Filed Dec. 1, 1927, Serial No. 237,085, and in Germany Apr. 21, 1927. 4 Claims. (Cl. 242—71.)

1. A film box comprising a casing having compartments therein for receiving exposed and unexposed films, an extension formed with said casing, said casing having a film opening therein communicating with said extension, a ledge arranged within said extension for dividing the same into oppositely extended elongated passageways whereby the film passing through said opening may travel to and from said casing, and a lightproof shutter arranged within said passageways.

1,804,501. ADJUSTING KNOB FOR FRAMING DEVICES. KURT HOFFMANN, Dresden, Germany. Filed Jan. 25, 1927, Serial No. 163,471, and in Germany and France Mar. 23, 1926. 8 Claims. (Cl. 88—17.)

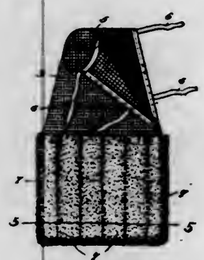


1. The combination with a moving picture machine having a rotatable shaft of the framing mechanism therefor, an adjusting mechanism for said shaft, releasable means for retaining said shaft against accidental movement and means for operatively connecting said adjusting mechanism with said retaining means to release the latter when said adjusting mechanism is operated.

1,804,502. WIRE STRETCHER. PERRY G. JARVIS, Minnora, W. Va. Filed June 5, 1928. Serial No. 283,023. 1 Claim. (Cl. 254—83.)

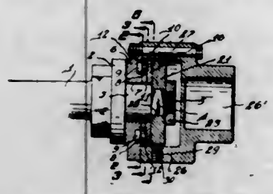
A wire stretcher comprising clamping jaws, upper, lower and intermediate pairs of horizontally extending bars fixed to the jaws, one bar of each pair of bars terminating in a hook and the other bar terminating in an eye engaging said hook whereby said jaws are pivotally connected together, the bars of each pair of bars diverging outwardly from said jaws, a crank handle having a collar journaled in a bearing formed in the free end of one of the bars of

said intermediate pair of bars, a clamping rod secured terminally to the other bar of said intermediate pair of bars and having the free end threaded into said collar, rota-



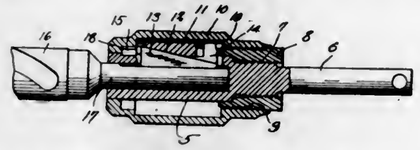
tion of said handle advancing said rod through said collar to clamp said jaws together, and means on the free ends of the upper and lower pairs of bars for exerting strain thereon to perform the stretching operation.

1,804,503. NITROCELLULOSE COMPOSITION. JOHN HALL GARDNER, College Park, Md. Filed Oct. 15, 1925. Serial No. 62,651. 3 Claims. (Cl. 134—79.)



2. A composition of matter comprising nitrocellulose and phenoxy ethyl acetate.

1,804,504. MOP ATTACHMENT FOR BROOMS. FRED A. HENDERSON, Creston, Iowa. Filed Oct. 15, 1929. Serial No. 399,811. 2 Claims. (Cl. 15—247.)

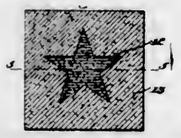


1. A mop attachment for brooms of the character described, comprising a fabric upper member formed with an opening at its top and at one side extending to its lower end with fastening tapes secured thereto, a lower fabric member fixedly secured to the lower end of said upper member, and a series of rows of yarn fibres fixedly secured to the outer face of the lower member, said lower member and fibres entirely surrounding the broom, said fibres being fixedly secured to said lower member by vertical lines of stitching.

1,804,505. DRIVER FOR REAMERS AND THE LIKE. ALBERT C. HOEH, Royal Oak, Mich. Filed Jan. 6, 1930. Serial No. 418,690. 5 Claims. (Cl. 279—16.)

1. A tool driver comrising a shank, a floating disk mounted on said shank, a fixed disk mounted on said shank, a plurality of disks loosely mounted between said fixed disk and said floating disk, inter-engaging lugs and perforations on all of said disks, a tool holder having a portion adapted to receive a tool and a portion adapted to surround certain of said disks and to be secured to said first named floating disk, and resilient means mounted in said tool holder to act upon said fixed disk for normally preventing floating movement of said floating disk.

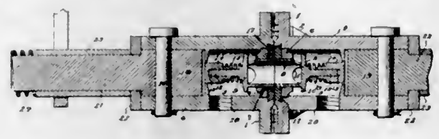
1,804,506. DRILL CHUCK. HARDY LINDBLAD, Frederic, Wis. Filed Sept. 17, 1928. Serial No. 306,413. 1 Claim. (Cl. 279—87.)



A drill chuck comprising a body portion having a hollow end formed with an elongated offset portion and having openings at the ends of the elongated offset portions, the inner surface of the offset portion being inclined, a key having an inclined surface engaging the inclined surface of the offset portion, and having enlargements at the ends of the key extended through the openings of the body portion, said key adapted to engage the shank of a drill positioned in the hollow end of the body portion to secure the drill against movement, a shell surrounding the hollow end of the body portion and engaging one of the enlargements of the key to force the key longitudinally of the body portion, and a nut on the body portion for moving the shell into engagement with the key.

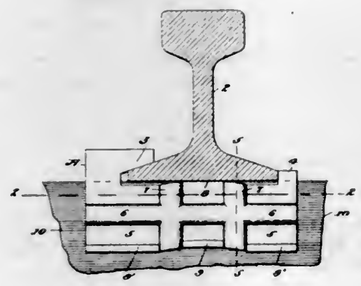
1,804,507. WOODWORKING BENCH PLANE. JOHN MANNING, Baine Harbor, Newfoundland. Filed Feb. 5, 1930, Serial No. 426,124, and in Canada Feb. 7, 1929. 1 Claim. (Cl. 145—18.)

In combination with a plane having a threaded bore in the forward part thereof, a body mounting having an exteriorly threaded stem adapted to seat in said threaded bore, an enlarged plate with an upstanding peripherial flange and a large vertical grease cup socket exteriorly threaded, a central perforation extending through said stem from said grease cup socket and a globular knurled cap for said grease cup socket, interiorly threaded for engagement therewith and exteriorly flared at the bottom to seat snugly with the peripherial flange of said body mounting.



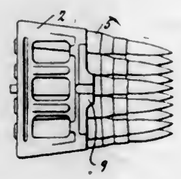
1,804,508. TRANSPARENT TILE AND METHOD OF MAKING SAME. JOHN T. NICHOLSON, Laramie, Wyo. Filed Oct. 11, 1926. Serial No. 140,989. 18 Claims. (Cl. 41—36.)

13. A paneling unit including a transparent sheet whose inner surface is provided with an ornamenting layer of



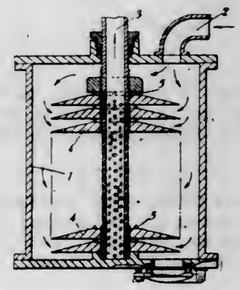
granular material secured thereto and which material is distributed on said surface in accordance with a predetermined design, a fabric layer covering the granular material, and a base member covering the fabric layer and separated from the granular material by said layer.

1,804,509. AUTOMATIC COUPLER FOR AIR LINE HOSE OF RAILWAY CARS. JOHN NOFFSINGER, Jewell, Ohio. Filed June 5, 1929. Serial No. 368,578. 1 Claim. (Cl. 284—5.)



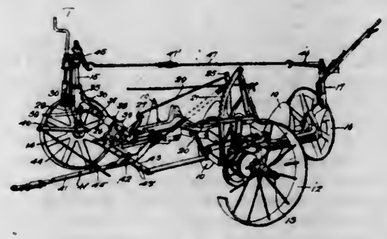
A train line coupler comprising a plate having a centrally disposed valve mechanism, and having an opening at one side of the valve mechanism and a horn at the opposite side of the valve mechanism constituting a guide, the inner end of the guide being cylindrical and provided exteriorly with longitudinal ribs, a plurality of lugs being provided upon the outer face of the plate about the opening and guide and together with the ribs of the guide serving to remove ice when companion couplers are brought together and the guide of each plate engaged through the opening of the other plate.

1,804,510. RAILWAY RAIL ANCHOR. HARRY G. NORWOOD, Washington, D. C., assignor to Theodore F. von Dorn, New York, N. Y. Filed May 21, 1930. Serial No. 454,495. 7 Claims. (Cl. 238—330.)



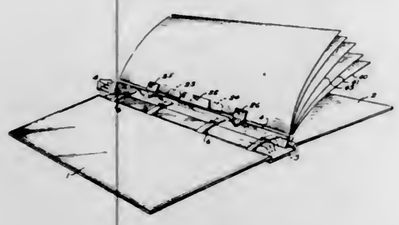
1. A one-piece track rail anchor adapted to be secured to the rail base, comprising a body portion formed with a longitudinal depression intermediate its height and a plurality of vertical depressions intermediate its length.

1,804,511. COMBINATION OF CARTRIDGE CLIP AND FOLLOWER. JOHN D. PEDERSEN, Jackson, Wyo. Filed Feb. 14, 1929. Serial No. 339,916. 6 Claims. (Cl. 42—88.)



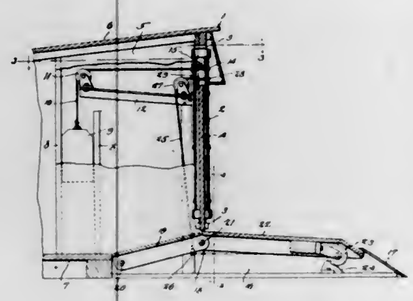
1. In a magazine rifle in combination, a cartridge clip containing a double row stack of cartridges in staggered relation and adapted to be introduced with said cartridges into the magazine chamber of the rifle, and a follower provided with means for presenting in the alternative a right or left handed stepped surface for engaging both rows of cartridges at the bottom of said stack.

1,804,512. FILTER. JOSEPH ALLEN PICKARD, Acton, London, England, assignor to Metafilters Limited, London, England, a British Company. Filed Nov. 12, 1928, Serial No. 318,854, and in Great Britain Dec. 2, 1927. 3 Claims. (Cl. 210—178.)



1. A filter of the multi-plate type comprising a vessel, an inlet thereto, an outlet therefrom, a pile of plates having substantially impermeable surfaces, each plate comprising a flat-faced central portion having a central aperture therethrough, a tapering edge portion extending from said central portion, and spaced protuberances of predetermined size on the flat-faced central portion adjacent the central aperture whereby the distance apart of the adjacent faces of the adjacent plates is predetermined, and means for retaining the plates assembled with their central apertures aligned, said aligned apertures being in communication with the vessel outlet.

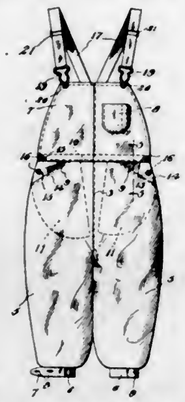
1,804,513. TILLAGE IMPLEMENT. CHARLES T. RAY, Louisville, Ky. Original application filed Sept. 6, 1921, Serial No. 498,695. Patent No. 1,643,519, dated Sept. 27, 1927. Divided and this application filed Sept. 10, 1926. Serial No. 134,641. 6 Claims. (Cl. 97—181.)



1. A tillage implement having a frame and land and furrow wheels, the furrow wheels having mountings provided with upright shafts connected to permit simultaneous steering movement thereof, a draft bar having a transversely variable pivotal connection at its rear end with the frame, the front furrow wheel shaft having a radial arm, a connecting rod having one end pivoted to said arm and a connection between the other end of the connecting rod and the draft bar, said connection comprising an element having pivotal movement on a vertical axis relatively to and adjustable longitudinally of, said bar.

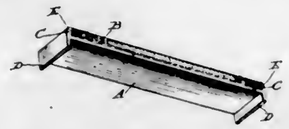
1,804,514. BINDER. CHARLES E. RIDDIFORD, Washington, D. C. Filed Feb. 24, 1930. Serial No. 430,989. 18 Claims. (Cl. 129—19.)

12. In a binder, a stub having oppositely directed holding prongs, and a leaf-securing member having pockets adapted to flexibly engage with said prongs.



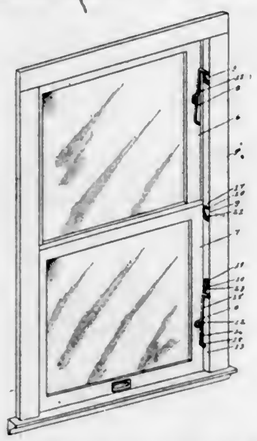
1,804,515. DOOR OPERATING MECHANISM. IVY B. ROBERTSON, Charlotte, N. C., assignor of one-third to Floyd M. Gresham, Charlotte, N. C. Filed Oct. 22, 1929. Serial No. 401,533. 4 Claims. (Cl. 268—35.)

1. In a device of the class described, a building having a doorway, a vertical shaft journaled on the building adjacent to the doorway, a door carried by the shaft, a box-like housing mounted on the building to the rear of the shaft, vertical guides located within the housing, a substantially horizontal bracket supported within the housing, pulleys within the housing and mounted on the ends of the bracket, a weight located within the housing and slidable in the guides, a flexible element wound in one direction about the shaft above the door and located in the housing, the flexible element extending in a substantially horizontal direction over one pulley and downward to connection with the weight, a platform supported below the door for vertical movement, a second flexible element wound in an opposite direction about the shaft above the door and located in the housing, the second flexible element extending in a substantially horizontal direction over the other pulley and downwardly to connection with the platform.



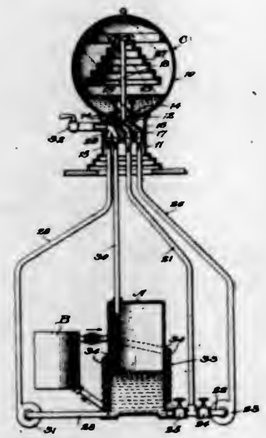
1,804,516. KNICKERALLS. LUTHER C. ROBERTSON, Cordova, Ala. Filed June 7, 1928. Serial No. 283,529. 1 Claim. (Cl. 2—227.)

A garment of the character specified comprising a front portion having a bib thereon and having side portions cut diagonally, a waistband reinforcing the bib at its juncture with the front portion and extending over the diagonal edges, side pockets including front and rear walls, the front walls being attached at their top edges to the diagonal edges of the front portion and the rear walls extending above the front walls and the diagonal



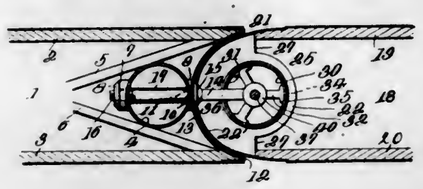
edges and attached to the waistband and side portions of the bib, and facing covering the exposed portions of the rear walls.

1,804,517. SLUG CASTING MACHINE AND TYPE BARS CAST THEREBY. JOHN R. ROGERS and EDWARD A. SYTZ, Brooklyn, N. Y., assignors to Mergenthaler Linotype Company, a Corporation of New York. Filed Sept. 25, 1928. Serial No. 308,197. 19 Claims. (Cl. 199—55.)



1. A type bar or slug bearing on one edge a line of printing characters and formed at its opposite ends only with transverse spacing ribs projecting laterally therefrom, said ribs being located beyond the ends of the line of printing characters and adapted to contact with the side face of an adjoining slug.

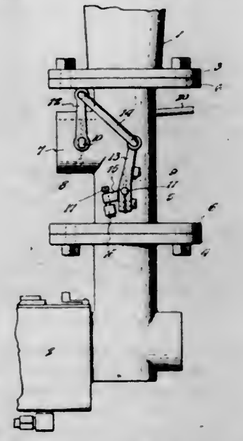
1,804,518. AUTOMATIC WINDOW LOCK. GEORGE D. SHINN, Russellville, Ark. Filed July 10, 1928. Serial No. 291,592. 4 Claims. (Cl. 292—202.)



1. A window sash lock comprising catches attached to the window frame each consisting of a plate having a vertical flange extending at right angles thereto, the outermost edge of said flange being inclined towards the window frame, and a pivoted latch member attached to the sash having angularly bent ends adapted to automatically engage over the flanges of the catches.

1,804,519. DISPENSING AND DISPLAY DEVICE. HARRY C. SMITH and DANIEL ROLAND VANNEMAN, New York, N. Y., assignors to The Autodrink Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 2, 1929. Serial No. 344,028. 6 Claims. (Cl. 40—126.)

1. In a beverage dispensing and display device, a beverage storage receptacle, a beverage display container, and means connected with said storage receptacle operable to take a predetermined quantity of beverage therefrom and to circulate it through said display container independently of the beverage contained in said storage receptacle.

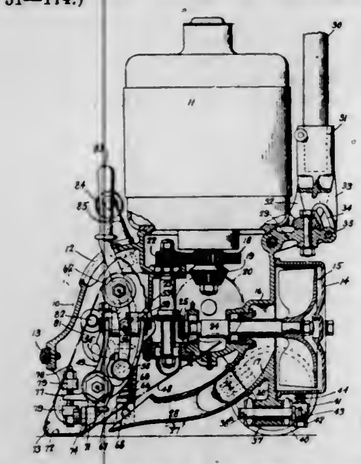


1,804,520. CONCENTRIC HINGE CONNECTION FOR AIRPLANE CONTROL SURFACES. BAYARD S. STEWART, Hazleton, Pa., assignor of four-fifths to General Aircraft Corporation, Hazleton, Pa., a Corporation of Delaware. Filed Mar. 30, 1928. Serial No. 265,944. 16 Claims. (Cl. 244—29.)

1. In an airplane, the combination with the primary structure, of a control surface, pivot eye bolts secured within either the primary structure or control surface and having their eyes pivotally mounted in the spar of the other surface.

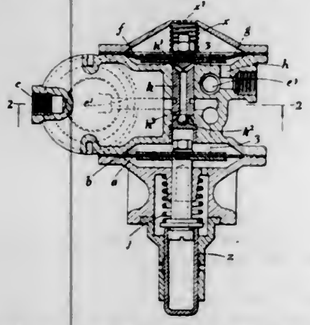
1,804,521. INTERNAL COMBUSTION ENGINE. ARCHIBALD SWINGLE, Roundup, Mont. Filed Feb. 23, 1928. Serial No. 256,426. 1 Claim. (Cl. 123—97.)

A device of the character described comprising a tubular body adapted to be secured in the path between the carbureter and intake manifold of an internal combustion engine and having attaching means at its ends, a tubular side arm leading from said body intermediate its ends and open to atmosphere, upper and lower butterfly valves located respectively in said arm and in the body below the arm, pivot rods for said valves journaled in walls of the arm and body with their ends projecting outwardly therefrom, a lever fixed upon one end of the rod for the upper valve, a lever clamped about the corresponding end of the rod for the lower valve and adjustable circumferentially thereof, means to limit swinging movements of the



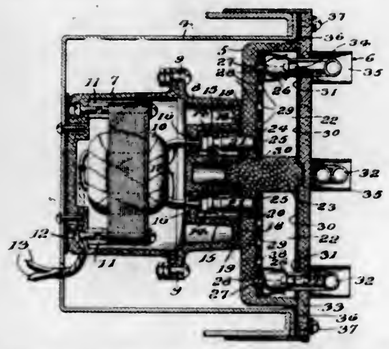
last-mentioned lever when secured in a set position upon its rod, a pitman link having its ends pivotally engaged with free ends of said levers and causing simultaneous movements of the levers and valves, an actuating lever engaged about the other end of the lower rod, a pin projecting transversely from the corresponding end of the upper rod, and a spring having one end engaged about the last-mentioned end of the lower rod and other end engaged with said pin and exerting pull thereon to yieldably retain the valves in a normal position of adjustment with one valve open and the other closed.

1,804,522. FOUNTAIN PEN. FRANK T. WALSH, Springfield, Mass., assignor to Leboeuf Fountain Pen Co., Inc., Springfield, Mass., a Corporation of Massachusetts. Filed July 8, 1929. Serial No. 375,764. 2 Claims. (Cl. 120—46.)



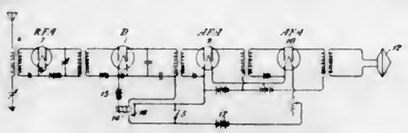
1. In a fountain pen, a tube having a finger opening in its wall, a collapsible reservoir within the tube, a single presser bar bearing against one side of the reservoir within the tube and extending past the finger opening, said presser bar having a transverse slot adjacent one end, a tongue struck up integrally from the material of the tube and extending part way only across the interior of the tube, said tongue passing through the slot in the presser bar so as to form the sole guiding connection between the tube and the presser bar.

1,804,523. EDGING MACHINE. HARRY H. WOLFE and HARRY L. MYERS, Toledo, Ohio, assignors to The American Floor Surfacing Machine Company, Toledo, Ohio. Filed Dec. 17, 1927. Serial No. 240,837. 8 Claims. (Cl. 51—174.)



1. In an edging machine of the class described, a body comprising a longitudinally elongated gear casing provided with outwardly extending side flanges defining open-sided belt compartments, the forward side of said body including an outwardly and downwardly inclining portion terminating in spaced relation to the floor, a horizontal bumper carried by the lower end portion thereof, adjustably mounted resilient shoes supported in the forward and lower portions of said compartments, substantially beneath said buffer, a driving pulley located in each compartment, operating means for the pulley including a prime mover supported on said body, endless abrasive belts located in the compartments, and trained over the pulleys and shoes, an operating handle connected to the body, the dust collecting means including outwardly directed branches having their intake ends located beneath the bottom flights of said abrasive belts, together with spring pressed belt tensioning means located in each compartment, and cooperable with the complemental bearings, and a manually operable means for acting upon the tensioning means for moving it in a direction to release the belts to facilitate replacement.

1,804,524. LIQUID PUMP. CLEMENT BROWN, Perry Barr, Birmingham, England, assignor to Amalgamated Carburetters Limited, Perry Barr, Birmingham, England. Filed Nov. 1, 1930, Serial No. 492,775, and in Great Britain Oct. 31, 1929. 1 Claim. (Cl. 103—40.)

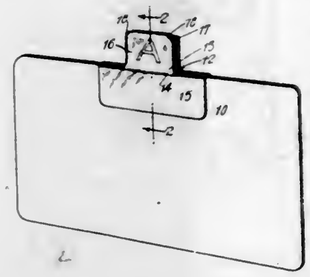


Apparatus for pumping liquids, comprehending in combination a casing providing a pump chamber, a pumping diaphragm in said chamber, a supply conduit leading to said pumping chamber, a discharge line leading from said chamber, a control chamber in said pump casing communicating with said discharge line, a control diaphragm in said control chamber subjected to pressure of liquid in the discharge line, a slide valve connected to said control diaphragm, a supply port in said slide valve normally open to said supply line and allowing flow therefrom to the pump chamber, a pump inlet valve between said supply port and the pump chamber, a pump discharge valve in the discharge line between the pump and the control chamber, and a by-pass port in said slide valve communicating between the control chamber and the supply line and normally closed, whereby excessive pressure in the discharge line will move the control diaphragm and slide valve to first move the supply port out of register with the supply line, and increased excessive pressure moves the slide valve further to open the by-pass port.

1,804,525. GAS LAMP SOCKET AND TRANSFORMER. JOSEPH O. CADIEUX, Meriden, Conn. Filed Apr. 16, 1930. Serial No. 444,729. 12 Claims. (Cl. 40—130.)

1. A tube base having bus bars movable thereon, spaced terminals connected therewith, means for isolating said bus bars and clips positioned on said bus bars and adjustable thereon.

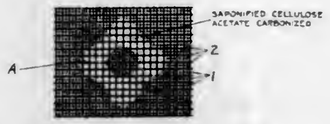
1,804,526. RADIO RECEIVING CIRCUIT. HARRY B. COXHEAD, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 1, 1926. Serial No. 133,035. 7 Claims. (Cl. 250—27.)



1. In a high frequency signaling system, a transmitting station and a receiving station, a detecting device and amplifying device in the receiver circuit, a relay in the circuit of said detecting device adapted to close the power circuits for the amplifying device during recpetion of the desired radio carrier wave and to open said power circuits when no such carrier wave is being received.

1,804,527. AROMATIC SULFONIC ACIDS AND PROCESS OF PREPARING THE SAME. KARL DACHLAUER and EMIL THIEL, Hochst-on-the-Main, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed May 27, 1926, Serial No. 112,131, and in Germany June 2, 1925. 17 Claims. (Cl. 260—159.)

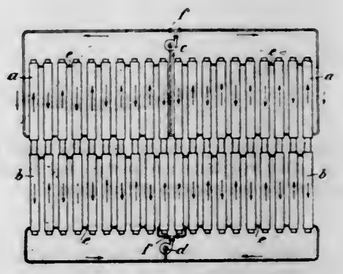
1. The process which comprises causing a strong sulfonating agent to act at a temperature of about 50° C. to 140° C. upon a mixture comprising an aromatic hydrocarbon and a compound of the group including methyl alcohol and ethyl alcohol.



17. As new products ethyl-isopropyl-naphthalene sulfonic acids.

1,804,528. INDEX OR FILING CARD. HAROLD W. DONNELL, New York, N. Y. Filed Mar. 10, 1930. Serial No. 434,753. 2 Claims. (Cl. 129—16.8.)

1. In combination with an index card having a finger tab extending from one of the edges thereof, a protector member constructed of a single piece of bendable transparent material and being of substantially inverted U-shape in cross-section fitting over said finger tab and down against opposite sides of said index card, the opposed side walls of said protector member being outwardly offset on a plane above the adjacent edge of said index card and adhesively secured thereto below said edge, while the portions of the opposed side walls and bight portion of the said member above the adjacent edge of said card are disposed in spaced relation with respect to the opposite sides of said finger tab to facilitate the free insertion of a double index tab therebetween.

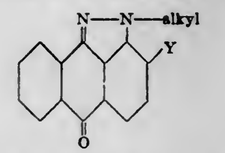


1,804,529. ORNAMENTAL FABRIC CONTAINING DERIVATIVES OF CELLULOSE AND METHOD OF PRODUCING THE SAME. CAMILLE DREYFUS, New York, N. Y. Filed Dec. 16, 1927. Serial No. 240,616. 14 Claims. (Cl. 41—41.)

1. Process of treating fabrics containing organic substitution derivatives of cellulose comprising applying a saponifying material locally to said fabric to convert at least part of said organic substitution derivative of cellulose into a saponification product and then removing said converted cellulose derivative by carbonization.

1,804,530. HEATING DEVICE FOR THE DRY SPINNING METHOD OF PRODUCING ARTIFICIAL THREADS. ALFRED FRIEDERICH, Berlin, Germany, assignor to Aceta G. m. b. H., Berlin-Lichtenberg, Germany, a Corporation of Germany. Filed June 7, 1929, Serial No. 369,219, and in Germany June 9, 1928. 1 Claim. (Cl. 18—8.)

An apparatus for spinning artificial threads according to the dry spinning method comprising in operative combination at least two spinning cells, the upper part as well as the lower part of each spinning cell, being provided each with a water jacket, means for connecting the upper jackets successively, means for connecting the lower jackets successively, means for circulating a heating medium through the upper jackets and means for circulating the heating medium through the lower jackets in opposite direction to that of the upper jackets.

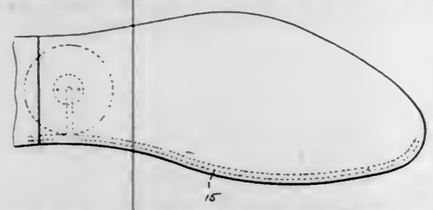


1,804,531. NEW VAT DYESTUFFS OF THE DIPYRAZOLANTHRONE SERIES AND PROCESS OF MAKING SAME. RUDOLF HEIL, Offenbach-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 5, 1927, Serial No. 224,283, and in Germany Oct. 9, 1926. 2 Claims. (Cl. 260—45.)

2. As a new compound the vat dyestuff of the dipyrazolanthrone series, containing a benzylidene group being when dry a golden yellow powder, crystallizing from organic solvent of a higher boiling point in the scales of golden lustre, soluble in concentrated sulfric acid with a bluish red color, dyeing cotton from a bluish green colored hydrosulfite vat blue shades turning to a pure yellow when exposed to the air, which compound is substantially identical with a product obtainable by heating to about 100–150° dipyrazolanthrone with benzaldehyde in presence of an acid chloride as condensing agent.

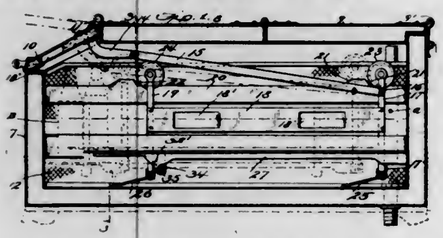
1,804,532. PROCESS FOR MANUFACTURING VAT DYESTUFFS OF THE ANTHRAQUINONE SERIES. ALFRED HOLL, Offenbach-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Aug. 16, 1928. Serial No. 300,146, and in Germany Sept. 10, 1927. 11 Claims. (Cl. 8—6.)

1. The process which comprises treating a substituted alkylpyrazolanthrone of the probable general formula:



wherein Y means a halogen, a sulfonic, a mercapto or an alkylated mercapto group with a reducing agent and converting the leuco compound thus obtained into the dimolecular dyestuff by means of an oxidizing agent.

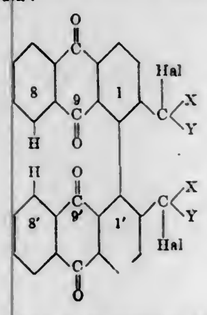
1,804,533. VENTILATED SHOE. ANTONIO JANDOC and BEN A. LAGMAY, Wilmette, Ill. Filed Sept. 26, 1929. Serial No. 395,340. 2 Claims. (Cl. 36—3.)



1. A ventilating device for shoes comprising a compressible bulb for disposition within the shoe above the heel portion thereof, a conduit extending from the central

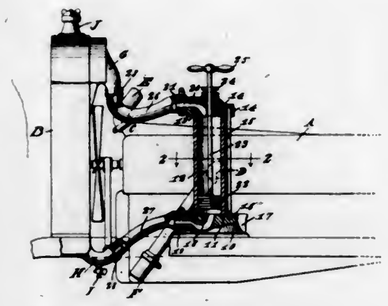
portion of the bulb toward one side of the shoe, a hollow cross member at the free end of the conduit, inlet and

outlet valves at opposite ends of the said cross member, and a tube extending from the outlet end of the cross member toward the toe portion of the shoe.



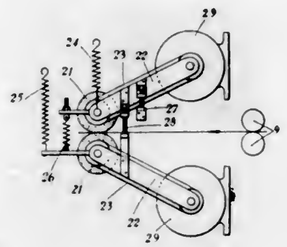
1,804,534. PACKAGE DISPENSING APPARATUS. ELMER M. JONES, Atlanta, Ga. Filed Jan. 7, 1929. Serial No. 330,844. 18 Claims. (Cl. 312—36.)

1. A package dispensing apparatus including a container, a movable exit closure for said container, a guideway for the packages mounted in said container, a receptacle for one package independent of the guideway and adjacent the exit of the container, and means operative by the opening movement of the closure to engage and move all of the packages on the guideway towar said receptacle, deliver one of them to said receptacle and deposit the remaining packages on the guideway, said means being restored to normal position by the closing movement of said closure.



1,804,535. VAT DYESTUFFS. MAX ALBERT KUNZ, Mannheim, and KARL KORBERLE, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 14, 1929, Serial No. 414,244, and in Germany Dec. 15, 1928. 6 Claims. (Cl. 260—61.)

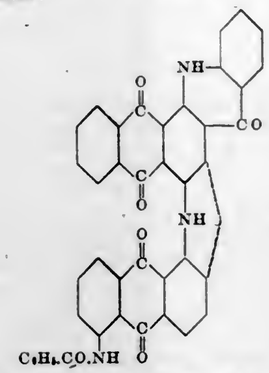
8. A process for the manufacture of vat dyestuffs which comprises treating with a weak alkaline condensing agent having a reducing action 1.1'-dianthraquinonyls of the general formula:



in which X and Y may be hydrogen or halogen, the oxygen atoms in the 9 and 9' positions and the hydrogen atoms in the 8 and 8' positions may be replaced by linkages connecting the said positions with each other and in which the anthraquinonyl radicles may be substituted.

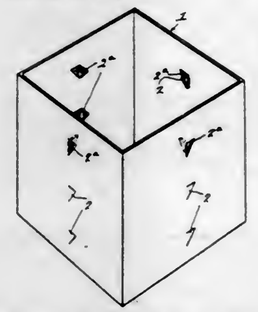
1,804,536. ENGINE COOLING SYSTEM CLEANER. JOHN J. LUDWIG, Carpenter, S. Dak. Filed June 1, 1929. Serial No. 367,767. 1 Claim. (Cl. 141—1.)

An apparatus for cleansing an automobile radiator of accumulations by a repeated flow of cleansing fluid alternately in opposite directions in the radiator, which apparatus comprises a pump embodying a cylinder, a base supporting the cylinder in upright position and closing the lower end of the cylinder, a cap closing the upper end of the cylinder, a reciprocatory piston fitting in the cylinder, a stem extending from the head of the piston through the cap and provided with a hand grip whereby the piston may be manually reciprocated, fluid conduits leading from the said base and the cap, a flexible hose connected at one end with each conduit, and means at the outer ends of the two hose for connection with the inlet and outlet connections of the radiator.



1,804,537. MACHINE FOR REMOVING THE SURFACE SCALE FROM METAL PLATES. WYATT MEACHER, London, England. Filed Sept. 15, 1928, Serial No. 306,198, and in Great Britain Sept. 23, 1927. 7 Claims. (Cl. 51—80.)

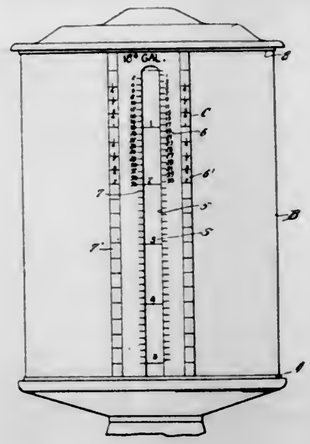
1. In a machine for grinding simultaneously the upper and lower surfaces of metal plates adjacent the edges thereof, the combination of independently driven grinding wheels engaging the plates on opposite sides thereof, means for clamping the plates opposite the point of engagement of the grinding wheels with the plates, means for moving the plates relatively to the grinding wheels and tangentially thereto, pivoted arms carrying said grinding wheels and spring means for maintaining said pivoted arms in floating condition.



1,804,538. VAT DYESTUFFS. WALTER MIEG, Vohwinkel, near Elberfeld, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 27, 1927, Serial No. 229,274, and in Germany Nov. 4, 1926. 4 Claims. (Cl. 260—37.)

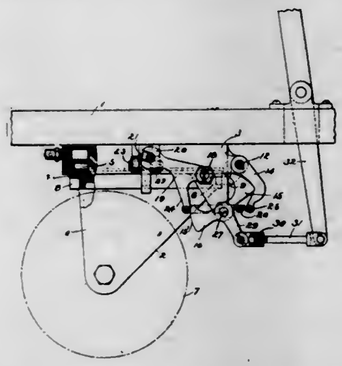
1. As a new product a vat dyestuff having most probably the formula:

being a dark powder soluble in concentrated sulfuric acid with a deep blue coloration soluble in boiling nitrobenzene with an olive coloration; dyeing cotton from the vat fast olive tinged brown shades.



1,804,539. CONTAINER. WALTER MINECK, Cedar Rapids, Iowa. Filed June 5, 1930. Serial No. 459,278 2 Claims. (Cl. 206—56.)

1. In a container of the character described, embodying a permanent bottom having a central aperture, and a false bottom to support the goods and adapted to be adjusted by hand within the container by passing the hand through the aperture in the bottom, a plurality of angular tongues struck out of each wall of the container and adapted to be bent inwardly to form substantially triangular rests constituting substantially straight supporting edges, at substantially right angles to the walls of the container and arranged to support the said false bottom at various heights within the container.

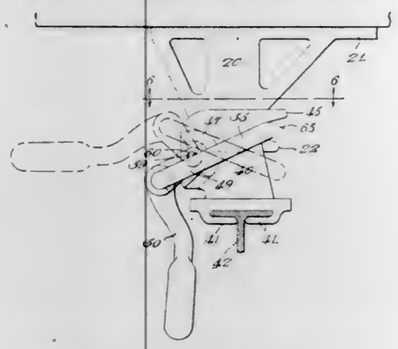


1,804,540. PRICE CHART FOR GASOLINE PUMP BOWLS. JOSEPH MORASKY, Brodhead, Colo. Filed Apr. 12, 1930. Serial No. 443,766. 1 Claim. (Cl. 40—125.)

In combination with a gasoline pump having a visible dispensing cylinder upon which indicia are placed indicating a number of gallons of liquid in the dispensing cylinder, a price gage placed in contact with the cylinder and comprising an elongated strip provided with a longitudinal sight slot, through which the indicia are visible, said strip on each side of said sight slot and adjacent to the side walls thereof provided with scales including a series of indications representing cents, the strip being provided adjacent to its side edges with a second series of indications representing fractions of a gallon, and an-

nular clamping bands placed about the cylinders and the opposite ends of the strips for holding the same in place on the cylinder.

1,804,541. CONTAINER HAVING SWIVEL CASTERS. DONALD W. PERIN, Brookline, Mass., assignor to Perin-Walsh Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 6, 1925. Serial No. 60,900. 7 Claims. (Cl. 280—49.)

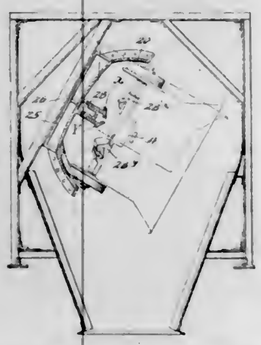


1. In a container having a plurality of swivel casters, independently operable locking means for each caster, said locking means comprising a locking lug, a spring tending at all times to force said lug into locking engagement with said caster, and an actuator having a sliding engagement with said lug and acting in one position to hold said lug against the tension of the spring, out of locking engagement with said caster, the actuator coacting directly with the lug independently of the spring.

1,804,542. LOCKING MEANS. DONALD W. PERIN, Brookline, Mass., assignor to American Freight Service, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 11, 1927. Serial No. 232,589. 12 Claims. (Cl. 296—35.)

1. Means for locking a removable container upon a platform including a slotted member fixed upon said platform, a second member fixed upon said container

and adapted, when said container is in the desired position upon said platform, to enter the slot in said platform member, a tongue on said container member and a ball carried by said platform member which engages

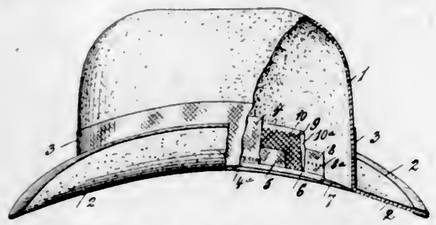


said tongue and prevents any upward movement of said container relative to said platform or any movement of translation of the container over the platform in one direction.

1,804,543. CAR DUMPING APPARATUS. JOHN D. PUGH, Baltimore, Md. Filed Apr. 15, 1927, Serial No. 184,155. Renewed Jan. 23, 1930. 15 Claims. (Cl. 214—62.)

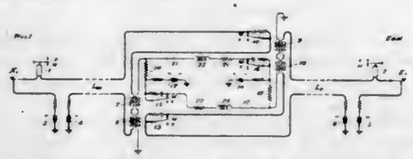
1. Dumping apparatus for mine cars and the like comprising a flanged beam disposed in the form of a helix about a substantially horizontal axis, said beam being formed with two cut away portions intermediate its ends for the passage of beam engaging members.

1,804,544. CAR DUMPING APPARATUS. JOHN D. PUGH, Baltimore, Md. Filed Sept. 22, 1928. Serial No. 307,560. 30 Claims. (Cl. 214—62.)



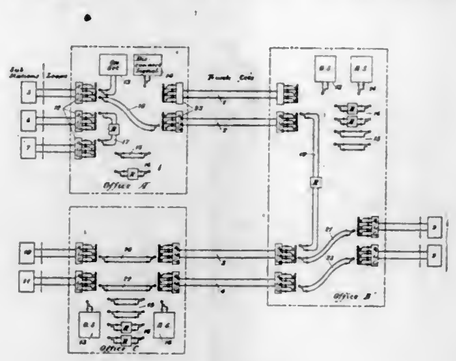
1. Apparatus for dumping cars or the like comprising, in combination, a helical guide, a dump car adapted to be inverted and emptied as it is moved axially of said guide, two guide engaging members carried by said car, one in advance of the other, and both engaging said guide and supporting the car therefrom, the arrangement being such that the center of gravity of the loaded car lies in or close to the axis of the helical guide.

1,804,545. BOOT, SHOE AND SIMILAR FOOTWEAR, JOHN WILLIAM RADBURNE, Rushden, England, assignor to Barrow, Hepburn & Gale, Limited, London, England, a British Company. Filed Jan. 26, 1929, Serial No. 335,232, and in Great Britain Jan. 27, 1928. 2 Claims. (Cl. 12—142.)



1. A method of resoling shoes, consisting in removing the worn part of the old sole from the insole of a shoe, loosening a portion of the waist of the old sole, skiving a long bevel on the inner surface of the loosened portion of the waist of the old sole, skiving a similar bevel on the outer surface of a new sole, applying a coating of an adhesive solution to the inner surface of the loosened waist portion of the old sole, to the inner surface of the new sole and to the bevelled portions of each part, arranging the new sole in position relatively to the shoe with the skived waist end of the new sole between the free loosened edge of the waist of the old sole and the insole of the shoe, pressing the bevelled portions together and the loosened waist portion of the old sole and the new sole on to the insole, and allowing the solution to set with the parts in contact with each other so that the new sole is attached without stitching and without tacks.

1,804,546. SWEATBAND FOR HATS. BRUNO REICHELT, Nutley, N. J. Filed Oct. 4, 1928. Serial No. 310,378. 2 Claims. (Cl. 2—181.)



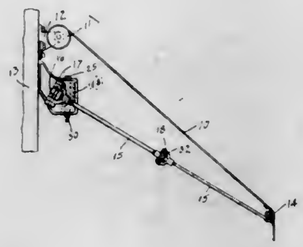
1. A device for use with hats comprising a member adapted to be disposed between the hat and the sweat band thereof, said member having a looped portion one side of which is waterproof and the other absorbent of moisture, a wing formed on said member on one side of the loop and adapted to be attached to the hat, and another wing formed on the other side of the loop and adapted to be attached to the sweat band for supporting the same, and means for carrying a fibre cord.

1,804,547. TELEGRAPH REPEATER ARRANGEMENT. ROY B. SHANCK, Flushing, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 30, 1929. Serial No. 351,136. 10 Claims. (Cl. 178—71.)

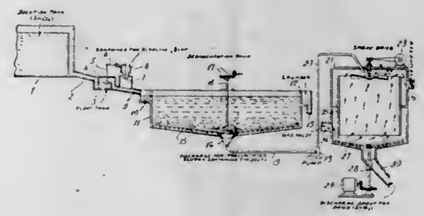
1. A telegraph repeater comprising relay means controlled jointly by a line circuit and an auxiliary circuit, and impedance means associated with said auxiliary circuit for causing the rate at which the current therein builds up to be slower than the rate at which said current dies down.

1,804,548. TELEGRAPH EXCHANGE SYSTEM. GILBERT S. VERNAM, River Edge, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 3, 1929. Serial No. 352,136. 33 Claims. (Cl. 178—69.6.)

1. A telegraph exchange system comprising in combination, a plurality of central offices, loop circuits extending from each office to a plurality of subscribers' telegraph stations individual to such office, telegraph trunk circuits interconnecting said offices, link circuits at each office for interconnecting the loop circuits terminating thereat, or for connecting a loop circuit to a trunk circuit for communication purposes, operators' telegraph sets at the central offices with means independent of said link circuits for operatively associating the same with a loop or trunk circuit.



1,804,549. ARCH SUPPORT FOR SHOES. FRIEDRICH TEMLER, Cologne-Nippes, Germany. Filed Apr. 24, 1929, Serial No. 357,663, and in Germany Nov. 8, 1928. 7 Claims. (Cl. 36—71.)

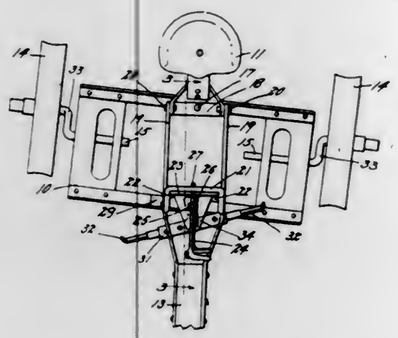


1. In an arch support for shoes the combination of a substantially flat retaining spring, two sockets fixed to said spring, one at each end thereof, one of said sockets having a slot at the top, an arched foot supporting spring having at one end thereof a lug adapted to enter the slotted socket by passing through said slot, the other end being adapted to engage into the other socket, and a bar fulcrumed on said lug, adapted to engage under the edges of said slot.

1,804,550. ADJUSTING DEVICE FOR AWNING ARMS. HARRY BRANCH, Terra Haute, Ind. Filed Mar. 1, 1930. Serial No. 432,362. 6 Claims. (Cl. 156—44.)

4. In combination with a jointed awning arm adapted to support the outer edge of an awning in fixed position when said awning is lowered and adapted to fold to permit raising of said awning, an adjusting device for adjusting the fixed position of said awning, including a stationary member, a member mounted thereon free for movement about a substantially horizontal axis and adapted to be connected to the inner end of said awning arm, a worm gear associated with said last-mentioned member and adapted to move the same about said axis for adjusting the angle of said arm, and a worm engaging said worm gear for rotating the same and for locking the same in a desired position.

1,804,551. RECOVERY OF TIN COMPOUNDS. GIBSON BUTTFIELD, Rockview Heights, North Plainfield, N. J., assignor to The Vulcan Detinning Company, Sewaren, N. J., a Corporation of New Jersey. Filed Apr. 28, 1927. Serial No. 187,164. 12 Claims. (Cl. 23—144.)



7. The process of recovering a tin compound from a tin-bearing acid liquor from which a tin compound is precipitated upon neutralization, which consists in continuously adding to a flowing stream of said liquor an alkaline agent in amount proportional to the degree of acidity and the volume of flowing liquor, collecting the resulting tin bearing precipitate by sedimentation and removing the supernatant liquor by decantation.

11. The process of recovering a tin compound from a tin-bearing acid liquor which comprises sedimenting the tin bearing precipitate in the form of stannic hydroxide produced by neutralizing the acid liquor, and subjecting the resulting sediment to spraying and concurrent drying.

1,804,552. FOOT GUIDING MECHANISM. THADDEUS E. CLINE and RAY E. TIPTON, Denver, Colo. Filed Feb. 28, 1930. Serial No. 432,019. 4 Claims. (Cl. 280—97.)

1. A guide mechanism for farm implements of the type having a frame and a tongue, comprising: a tongue member pivoted to said frame adjacent its rear; tongue supporting members secured to said tongue member at their one extremity and to said tongue at their other extremity; a bracket member supported intermediate

said tongue supporting members; a T-shaped lever pivoted to said bracket member; a stem on said lever arranged to

engage projections supported from said frame so as to swing the latter about its pivot; and foot rests extending from the extremities of said T-shaped lever.

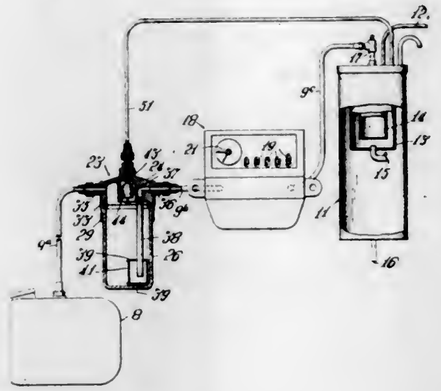
1,804,553. APPARATUS FOR FRACTIONATION OF HYDROCARBONS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Jan. 14, 1926. Serial No. 81,157. 3 Claims. (Cl. 196—139.)

1. Apparatus for rectifying hydrocarbon oil vapors, comprising in combination a vertical cylindrical shell, means near the bottom thereof for admitting vapors to be rectified, means near the top thereof for withdrawing uncondensed vapors and gases, means also near the top thereof for discharging a cooling liquid into said shell, a baffle in said shell comprising a thin strip of metal of corrugated cross section, a central vertical core rod for supporting said baffle, the inner edge of said baffle being wrapped or wound around said core rod forming a series of spaced convolutions, the spacing of said convolutions being decreased toward the top of said rod, and the strip extending radially from said rod at all points of contact therewith, the outer edge of said strip being in contact with said shell, the corrugations of said strip being parallel and concentric and extending substantially the full length of said strip.

1,804,554. METHOD AND APPARATUS FOR FRACTIONATION OF HYDROCARBONS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Nov. 12, 1926. Serial No. 147,890. 3 Claims. (Cl. 196—139.)

1. An apparatus for rectifying hydrocarbon oil vapors comprising an elongated vertical shell, a vapor inlet adjacent the lower portion of said shell, a vapor outlet adjacent the upper portion of said shell, a continuous helical baffle within said shell, radial corrugations in said baffle, and perforations in the crests of said corrugations.

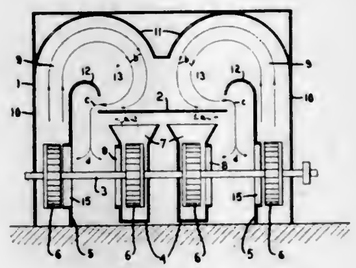
1,804,555. PAPER PULP CONTAINER. MARINO GENTILE, Chicago, Ill., assignor of one-half to Samuel W. Weis, Chicago, Ill. Filed Oct. 20, 1928. Serial No. 313,952. 2 Claims. (Cl. 91—68.)



1. A paper pulp receptacle impervious to hot and cold substances that contain water, oil or grease, the said receptacle having a coating of gelatin applied to the paper and over the gelatin having a coating of cellulose ester containing a modifying agent to render the said coating layers strongly adherent to each other.

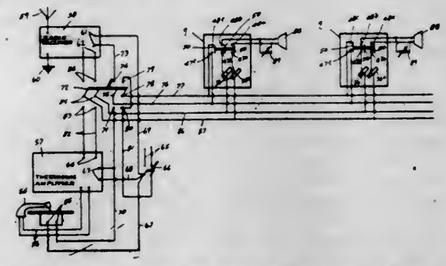
1,804,556. COMPOSITE COVERING MATERIAL. MARINO GENTILE, Chicago, Ill., assignor of one-half to Samuel W. Weis, and one-fourth to George Pick, Chicago, Ill. Filed June 26, 1929. Serial No. 373,952. 3 Claims. (Cl. 91—68.)

1. An integral transparent wrapping sheet of the character described consisting of a thin film of a protein substance as a base, a coating of cellulose nitrate applied to each face of said film and having incorporated therein a non-hygroscopic bonding agent (other than castor oil) in such a quantity as to cause the cellulose nitrate coating to become integrally united with the protein film on each side thereof, the thickness of the said film and coating respectively being such as that said resultant wrapping sheet will be tough, pliable, transparent, moisture, grease and water proof and adapted to readily conform to the shape of packages and the like without cracking or separating.



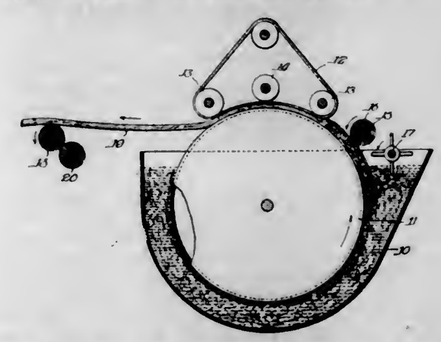
1,804,557. FUEL METERING APPARATUS. LAWRENCE E. GOULD, Chicago, and JARRETT T. LAKE, Wilmette, Ill., assignors to Economy Electric Devices Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 29, 1928. Serial No. 309,234. 4 Claims. (Cl. 137—78.)

3. In a liquid fuel supply system, the combination with a supply tank, a vacuum feed tank adapted to receive the fuel, and a flow meter connected with said vacuum feed tank for measuring and indicating the quantity of fuel conveyed to said latter tank, of means for conveying the fuel from said supply tank to said flow meter, said means affording a duct between said supply tank and the flow



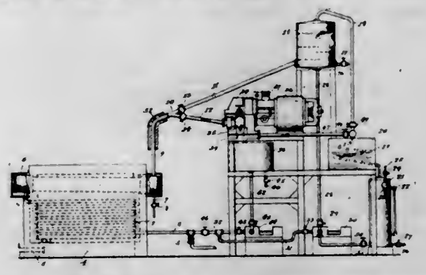
responsive element of said meter which is permanently open under all operating conditions of the system, means for by-passing air and vapor around the flow responsive element of the meter, and a float controlled valve for controlling said by-pass means.

1,804,558. AIR CIRCULATING DEVICE FOR DRYING FLAT FABRICS. HERMANN HAAS, Lennep, Germany. Filed Jan. 31, 1930, Serial No. 424,962, and in Germany Feb. 11, 1929. 2 Claims. (Cl. 34—48.)



2. In a drying apparatus for drying sheet material, the combination with a drying chamber to receive said sheet material, of a plurality of axially-aligned centrifugal fans situated on one side of the sheet material, a common drive shaft for the rotors of said fans, the central fans having discharge openings to deliver air against that side of the sheet material which faces the said shaft, the fans at the ends of the shaft having associated therewith discharge ducts which lead to the other side of the sheet material and terminate in semi-circular baffle plates by which the air delivered from said end fans is directed against the opposite face of the sheet material.

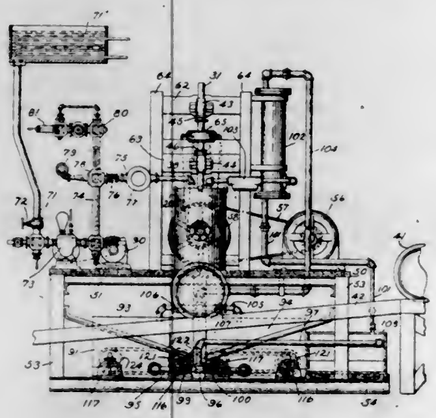
1,804,559. SIGNAL RECEIVING AND DISTRIBUTING SYSTEM. FRANK HOKE, Indianapolis, Ind., assignor to Holcomb & Hoke Manufacturing Company, a Corporation of Indiana. Filed Aug. 12, 1929. Serial No. 385,485. 4 Claims. (Cl. 179—6.3.)



4. In a signal receiving system, the combination of a main signal receiving circuit, a plurality of receiving devices and a coin control box associated with each of said devices and located adjacent thereto each box including a switch adapted to operatively connect the associated receiving device to the main receiving circuit upon the insertion of a coin, and a time controlled mechanism adapted to break said circuit at a predetermined time after the making thereof.

1,804,560. MANUFACTURE OF FIBER BOARD. ERWIN H. HUSSEY, Springfield, Ohio. Filed Mar. 31, 1930. Serial No. 440,181. 8 Claims. (Cl. 92—42.)

1. The method of forming thick fiber sheets which is characterized by forming the sheet from wet stock and while the sheet is still wet lightly engaging the surface of the sheet with a rotating brush to remove surface inequalities.

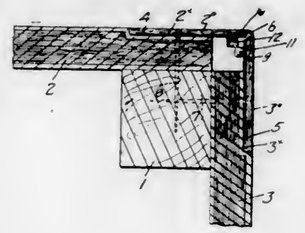


1,804,561. APPARATUS AND PROCESS OF GENERATING POWER. LESTER KIRSCHBRAUN, Chicago, Ill. Filed Dec. 29, 1919, Serial No. 347,991. Renewed Oct. 1, 1927. 2 Claims. (Cl. 196—58.)

1. A process of treating hydrocarbons, comprising passing oil in a small stream through a heating coil where it

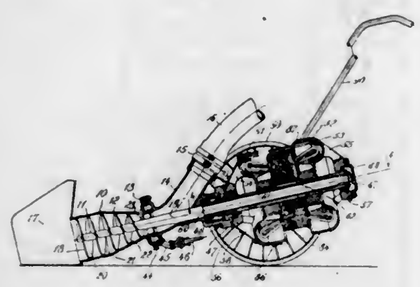
is subjected to a cracking temperature, in discharging the oil into a vapor chamber where vaporization occurs, in discharging at regulated intervals the vapors from said chamber to an engine to utilize the expansive energy of said vapors in the development of power and to effect a separation of heavier from lighter oil constituents, in discharging the heavier condensed fractions from said engine, and in discharging the uncondenser fractions for condensation and collection.

1,804,562. APPARATUS FOR MAKING AQUEOUS BITUMINOUS EMULSIONS. LESTER KIRSCHBRAUN, Leonia, N. J., and FREDERICK C. OVERBURY, Pasadena, Calif., assignors to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Continuation of application Serial No. 624,184, filed Mar. 10, 1923. This application filed Mar. 5, 1928. Serial No. 259,341. 14 Claims. (Cl. 134—1.)



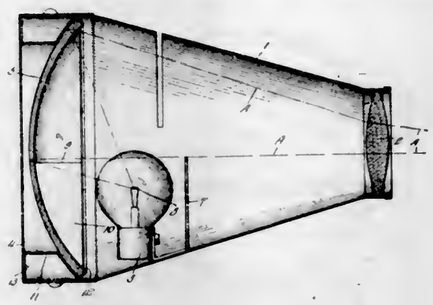
1. An apparatus for making emulsions, comprising in combination, a container for holding a pool of the end product, means including a propelling means in the container mounted axially on rotating means for forcing said product downwardly in a path adjacent the axis of rotation of the propelling means, means for heating heat liquefiable material, means for introducing said heat liquefiable material therefrom to the container, means for introducing water and dispersive media to the container, and regulatory means for containuously withdrawing quantities of the end product from the pool at substantially the rate at which the materials fed to the container are introduced.

1,804,563. VANITY CASE. MAX KLINE, Bronx, and MAX KAPLAN, New York, N. Y., assignors to Superior Products Corporation, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 15, 1930. Serial No. 420,834. 5 Claims. (Cl. 132—83.)



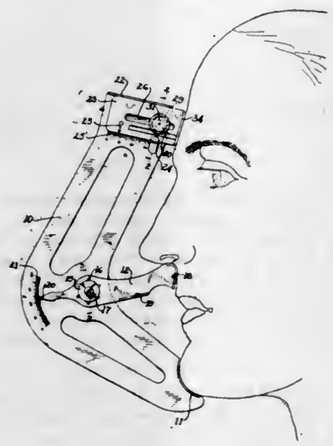
1. A container comprising an arcuate bottom plate having a recessed annular margin, a ring having a part engaged in the recess and bent re-entrantly to constitute the edge of the container, said ring having an overlying annular element constituting a fixed part of the container top, a cylindrical flange at the inner edge of the annular element extending towards said bottom plate, a cup resting on said plate and having a raised peripheral flange tightly engaged in said cylindrical flange, hinge eyes set in the overlying element of said ring, an arcuately curved cover, a hinge eye integral with the edge of said cover to engage the first named hinge eyes, a clip opposite the hinge eyes, and resilient means for detachably securing said cover when in a closed position.

1,804,564. EXTERIOR CORNER CONNECTION FOR WALL BOARDS. DAVID MCCHESNEY, Kirkland Lake, Ontario, Canada. Filed May 31, 1930. Serial No. 458,507. 2 Claims. (Cl. 72—121.)



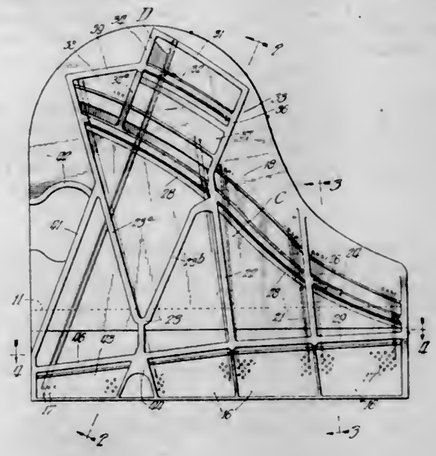
1. In a wall board corner connection, the combination with a corner post, of a wall board having a recessed outer edge placed against each outer face of a corner post, an angle plate the arms of which are counter sunk in the recesses, securing means extending through the arms of the plate, recessed portions of the wall board and into the post, and a plastic filler for the recess covering the arms of the plate.

1,804,565. PORTABLE PUMP. JOSEPH H. MORROW, Catasauqua, Pa., assignor to Fuller Company, a Corporation of Pennsylvania. Filed Aug. 15, 1928. Serial No. 299,718. 13 Claims. (Cl. 302—17.)



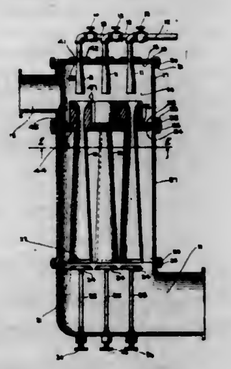
1. Apparatus for conveying pulverized material comprising a casing having an open end for the admission of material, an offset discharge elbow connected to the other end of the casing, a screw shaft within the casing and extending through a wall of the discharge elbow, a bushing surrounding the shaft and secured thereto beyond the elbow, the bushing being supported in spaced bearings and driving means secured to the bushing between the bearings.

1,804,566. LAMP CONSTRUCTION. RALPH A. MULLANEY, Chicago, Ill. Filed Mar. 19, 1931. Serial No. 524,125. 1 Claim. (Cl. 240—41.15.)



A lamp construction comprising a reflector having a reflecting surface of revolution and a light source in front of said reflector, the lower edge of the effective reflecting surface lying substantially in a horizontal plane and the light source being in front of the focal point whereby the rays from the reflector will be convergent and the upper edge of the light pattern beyond the focal point of the reflected rays from the light source will be substantially horizontal, a condensing lens in front of said light source in the path of the reflected rays, said light source being below the lowermost reflected rays whereby bulb absorption is eliminated and an undistorted light pattern is secured, and a light screen in front of said light source to prevent direct rays from the light source from striking the condensing lens.

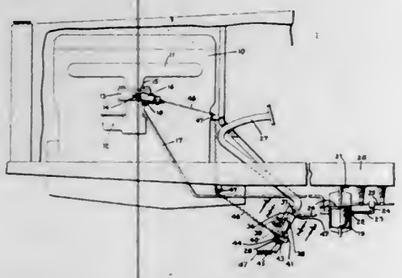
1,804,567. DENTAL GAUGE. LUCIAN A. PRAY, Racine, Wis. Filed Nov. 16, 1927, Serial No. 233,632. Renewed Jan. 19, 1931. 8 Claims. (Cl. 33—174.)



1. In a dental gauge, the combination of a support, and face-engaging means including a forehead-engaging part and an upper-lip-engaging part and a chin-engaging part, the upper-lip-engaging part being formed by a lever pivotally mounted on said support for movement in the plane of the facial profile and one of the other two parts being formed by a movable member adjustably mounted on said support for displacement toward and away from the face.

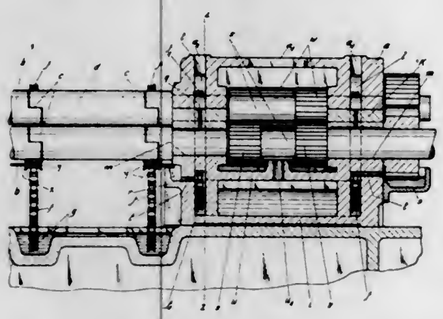
1,804,568. PIANO. ROBERT J. SCHMUDE, Chicago, Ill. Filed Feb. 27, 1930. Serial No. 431,821. 6 Claims. (Cl. 84—184.)

1. In a piano, a sounding board, a plurality of strings, a string plate including means for supporting and tensioning the strings, and a bridge over which the strings are extended supported entirely by the string plate, sounds produced by the strings being resonated by the sound board without direct contact herewith.



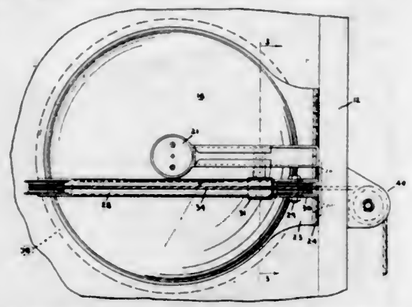
1,804,569. AIR EJECTOR. ULRICH A. TADDIKEN, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 26, 1929. Serial No. 335,318. 2 Claims. (Cl. 230—103.)

1. In vacuum-producing apparatus, the combination of an upper shell member, a lower shell member, a pair of plates secured between the upper and the lower shell members and having aligned openings therein, the lower plate having openings of sufficient size to permit of the passage of the major portion of the diffusers therethrough, said diffusers having flanges to rest upon the upper surface of the lower plate and the upper plate having the openings thereof engaging about the upper portions of the diffusers so that the lower surface of such upper plate engages the upper surfaces of the diffuser flanges, a pair of plates closing the upper end of the upper shell and the lowermost plate thereof having openings through which the motive fluid nozzles depend so that flanges provided on such nozzles may rest on the upper surface of the lowermost plate and the uppermost plate



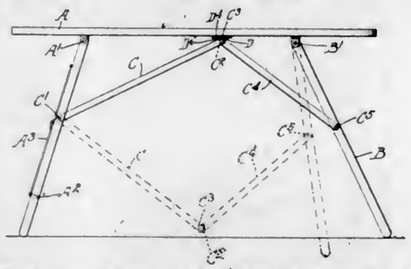
having openings therein to engage with the upper ends of the steam nozzles so as to engage the upper surfaces of said nozzle flanges, the motive fluid nozzles being aligned with the diffusers, valves for controlling the supply of motive fluid to the nozzles, and valves carried by the lowermost shell member for controlling the discharge ends of the diffusers.

1,804,570. BRAKE ACTUATING MECHANISM. WILLIAM H. TOPP, Richmond, Ind., assignor, by mesne assignments, to The Starr Piano Company, Richmond, Ind., a Corporation of Indiana. Filed Aug. 30, 1928. Serial No. 302,948. 7 Claims. (Cl. 188—152.)



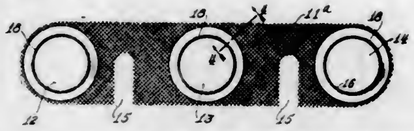
1. In combination, power operating means responsive to differences of pressure, a source of suction, valve means and conduits for controlling the operation of said power means by the suction of said source of suction, a pivotally mounted pedal, rodding operable by said power means and having connection with said pedal, said connection comprising a member carried by said pedal, an arm extending from said member and having a portion thereof overlying the pivotal axis of said pedal, and means connecting said valve means with said arm at a point coextensive with the pivotal axis of said pedal when said member and said pedal are in a definite relation to each other.

1,804,571. LUBRICATING ARRANGEMENT FOR PLATE STRAIGHTENING OR ROLLING MACHINES. FRITZ UNGERER, Pforzheim, Germany. Filed Jan. 11, 1929, Serial No. 331,908, and in Germany Jan. 16, 1928. 8 Claims. (Cl. 308—128.)



1. A lubricating arrangement for plate straightening or rolling machines, comprising in combination with the accumulated clutch points of the straightening rolls with the clutch shafts and of the driving shafts with said clutch shafts, an endless chain on each clutch point, and an oil sump under the clutch points into which the chains dip to draw oil and to supply the same to the clutch points during the operation of the machine.

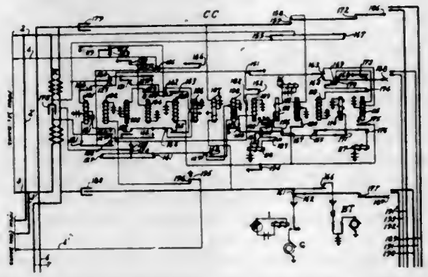
1,804,572. AEROPLANE LANDING LIGHT. EARL VAN HORN, Los Angeles, Calif., assignor to Goodyer's Inc., Los Angeles, Calif., a Corporation of Nevada. Filed Nov. 20, 1929. Serial No. 408,534. 8 Claims. (Cl. 240—7.1.)



1. A landing light comprising a pivotally mounted lamp housing having an enclosing lens, the pivotal connection being adapted for connection to a fixed part of an aeroplane, the lamp being enclosed in one position in the aeroplane passing in and out of an opening and adapted when enclosed to have the lens parallel to a lower surface, a pivotally mounted arm, a slidable connection between the arm and the housing, the arm being pivoted to a fixed part of the aeroplane, means to move the arm in an arcuate motion, the movement of the arm shifting the housing from a position enclosed in the aeroplane structure or to a position exposed with the lens in the second position substantially at right angles to that of the enclosed position.

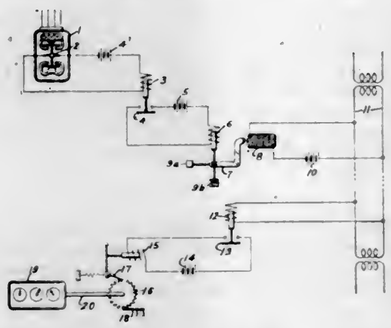
1,804,573. IRONING TABLE. BERKELEY S. VAUGHAN, Geneva, Ill., assignor to Wheeler Screen Company, Geneva, Ill., a Corporation of Illinois. Filed Apr. 27, 1928. Serial No. 278,218. 6 Claims. (Cl. 68—10.)

1. In an ironing board and collapsible support therefor, a board member, a support pivoted adjacent one end thereof, a second support pivoted adjacent the other end thereof, a brace pivoted to each of said supports, the opposite ends of said braces being permanently pivoted to each other and means directly on the board for readily removably fixing said opposite ends of said braces to the board intermediate the pivot points of said supports.



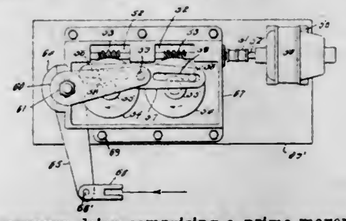
1,804,574. GASKET. JOHN H. VICTOR, Chicago, Ill., assignor to Victor Manufacturing & Gasket Co., a Corporation of Illinois. Filed Aug. 11, 1927. Serial No. 212,205. 3 Claims. (Cl. 288—1.)

1. In an article of the class described, the combination of a flexible and manually extensible supporting body,



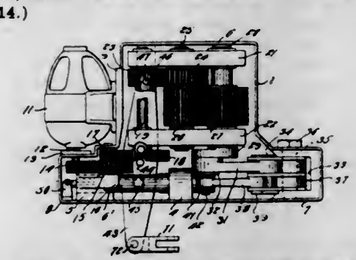
having a pair of holes adapted to substantially fit a pair of gaskets, with a pair of gaskets, said gaskets being fixedly secured to said body at the edges of said holes, and said body being formed of a material manually distortable laterally and longitudinally to locate said holes and gaskets in substantial registration with a pair of portholes.

1,804,575. TELEPHONE SYSTEM. JOHN H. VOSS, Berwyn, and THOMAS F. CROCKER, Chicago, Ill., assignors to Reserve Holding Company, Chicago, Ill., a Corporation of Delaware. Filed July 5, 1929. Serial No. 376,215. 18 Claims. (Cl. 179—27.)



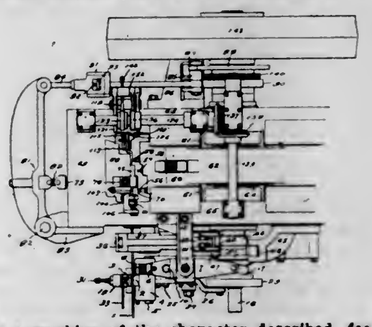
1. In a telephone system comprising a main exchange and a branch exchange, switching apparatus at the main exchange for completing connections between main exchange subscribers and branch exchange subscribers, other switching apparatus at the main exchange for completing connections between branch exchange subscribers, a branch exchange attendant's position located at a point remote from the main exchange, a main exchange trunk terminating in said first switching apparatus, and a branch of said trunk extending from said first switching apparatus to said position.

1,804,576. REMOTE METERING SYSTEM. GRIFFIN G. WAITE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 19, 1927. Serial No. 234,489. 4 Claims. (Cl. 179—2.)



1. A remote metering system comprising a watt-hour meter impulse sender, a relay responsive to the impulse sender, an adjustable resistor device connected to an energized telephone circuit, a solenoid device disposed to be controlled by the relay for periodically varying the effectiveness of the adjustable resistor device to effect the periodic generation of current impulses in the telephone circuit corresponding in number to the operations of the impulse sender, a registering device, and means responsive to the impulses transmitted over the telephone circuit for actuating the registering device.

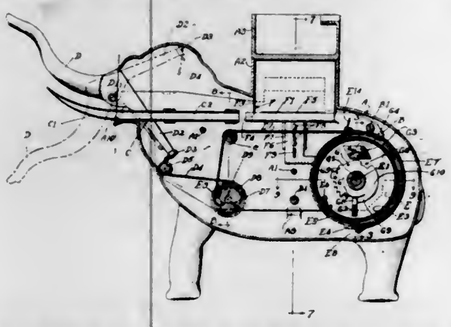
1,804,577. DRIVING MECHANISM. RAYMOND A. WALTER, New York, N. Y., assignor to Conveyor Sales Company, New York, N. Y., a Corporation of New York. Filed Mar. 5, 1927, Serial No. 173,136. Renewed Apr. 24, 1930. 10 Claims. (Cl. 74—14.)



1. A conveyor drive comprising a prime mover, a shaft coupled to the prime mover, aligned worm gears mounted on the shaft, ring gears in engagement with the worm gears, wrist pins fixed on the ring gears, a bar having slots to receive the wrist pins, sliding on the ring gears, a bell crank operated by the sliding bar, and means to attach the drive to a conveyor.

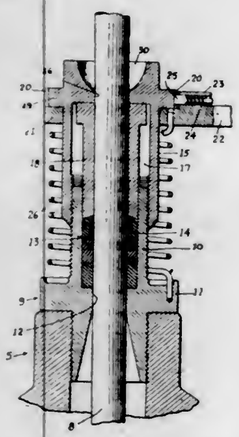
1,804,578. DRIVING MECHANISM FOR RECIPROCATING CONVEYERS. RAYMOND A. WALTER, New York, N. Y., assignor to Conveyor Sales Company, New York, N. Y., a Corporation of New York. Filed July 1, 1927. Serial No. 202,912. 10 Claims. (Cl. 74—14.)

1. A driving motor for a reciprocating conveyer embodying a motion translating mechanism comprising a connecting rod having one end eccentrically mounted on a rotary power transmitting device and the other end pivoted to a fulcrumed rocking lever, and a connecting rod having its respective ends pivotally mounted on the fulcrumed rocking lever, in offset relation with respect to the first connecting rod, and to a reciprocating member operating in a longitudinal plane, and floatable means to drive the conveyer.



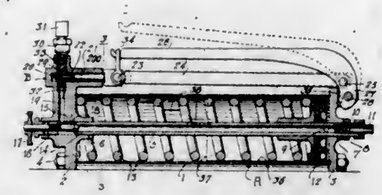
1,804,579. MANUFACTURE OF NUT BLANKS. WILLIAM L. WARD, Port Chester, N. Y., assignor to Russell, Burdsall & Ward Bolt & Nut Company; Port Chester, N. Y., a Corporation of New York. Filed Mar. 15, 1927. Serial No. 175,468. 24 Claims. (Cl. 10—76.)

1. In a machine of the character described, feed jaws, mechanism for opening and closing said jaws, mechanism



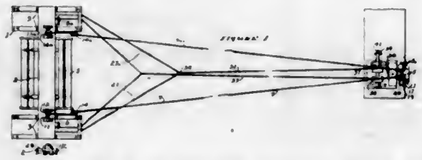
for reciprocating said jaws, and mechanism for piercing the stock, said feed jaws being closed on the stock and retracted equal to the lengthwise expansion of the stock while the stock is being pierced.

1,804,580. CIGARETTE DISPENSER. WALTER L. WHITESIDES, Long Beach, Calif. Filed Mar. 15, 1929. Serial No. 347,387. 13 Claims. (Cl. 312—75.)



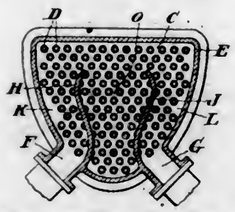
1. A cigarette dispenser comprising a hollow body including a receptacle accessible from the top for filling, an ejecting mechanism enclosed by said body, an ejector tube leading from said receptacle outwardly through said body, an operating member mounted on said body and operatively connected with said ejecting mechanism, said ejecting mechanism including a band provided with an ejector thereon movable through said receptacle into engagement with and for moving a cigarette into said tube when moved in one direction, spring means connected with said bands for moving the band and ejector rearwardly and externally of said receptacle for restoring the ejector to normal position.

1,804,581. STUFFING BOX. WILSON B. WIGLE, Compton, Calif. Filed Mar. 26, 1929. Serial No. 349,997. 2 Claims. (Cl. 286—34.)



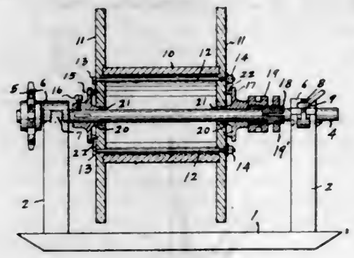
1. A stuffing box construction comprising a lower bored member for the reception of packing elements, said member having a concentric counterbore for the passage of a pump rod, a gland member engaging said packing elements, an upper bored member engaging the lower member, a coiled spring interposed between said upper and lower box members, means to wind said spring to increase its tension, and means to maintain the tension in the spring after a winding operation, whereby as the packing elements wear the spring will rotate the upper box member downwardly to compress the packing elements.

1,804,582. PRESSURE GREASING APPARATUS. JOSEPH W. WOODRUFF, Elizabeth, N. J. Filed Aug. 11, 1927. Serial No. 212,248. 3 Claims. (Cl. 221—47.3.)



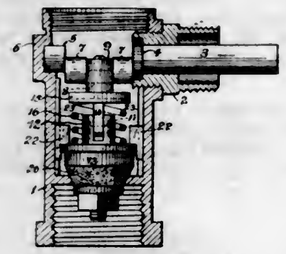
1. Apparatus of the character described, comprising a reservoir for grease including a cylinder having an outlet extending at substantially right angles to its axis at one end thereof, a mannally operable pump including a cylinder disposed axially parallel to said cylinder at one side thereof and having an inlet communicating with said outlet of the cylinder, said pump cylinder also having an outlet passage, a piston reciprocable in said pump cylinder, an operating lever having two angularly disposed arms of different lengths, means for pivotally connecting the outer end of the shorter arm to the end of said cylinder opposite said pump cylinder with the longer arm normally disposed substantially parallel to and adjacent said cylinder, and a link having one end pivotally connected to said piston and the other end articulated to the inner end of said short arm of said lever and disposed between said long arm of said lever and said cylinder.

1,804,583. WATER WHEEL. GEORGE M. ASK, Kirkwood, Calif. Filed Oct. 12, 1929. Serial No. 399,363. 3 Claims. (Cl. 170—107.)



1. A structure of the character described comprising, a supporting means adapted to float upon a stream, a water wheel mounted for vertical adjustment on the supporting means, a fixed anchorage, a pair of cables connected to the wheel and to the anchorage, means for actuating the cables to move the wheel in a vertical plane, and means for actuating the cables to swing the wheel about its vertical axis, and power transmission means connected to the wheel.

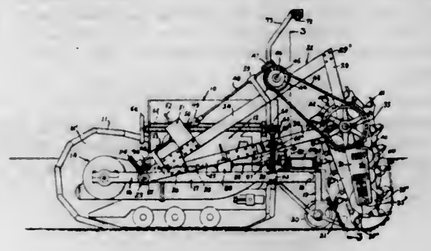
1,804,584. CONDENSER. PAUL A. BANCEL, Montclair, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 18, 1929. Serial No. 393,435. 6 Claims. (Cl. 257—43.)



1. A condenser, comprising a water box having an inlet opening, tubes communicating with the water box, and means in the water box forming a plurality of communicating passages therein to assure against a wide variation between the velocity of the water at the inlet opening and the velocity at which it flows through the water box.

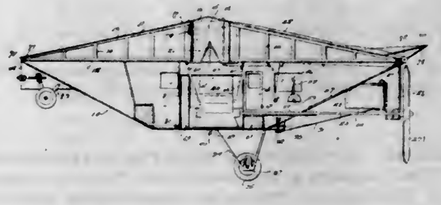
1,804,585. LINE CHANGING REEL. LAWRENCE D. BARNER and GUS OTTO SHELANDER, Beaumont, Tex. Filed Oct. 17, 1928. Serial No. 313,119. 2 Claims. (Cl. 242—117.)

1. The combination with a shaft, of a removable spool thereon, end clamps on the shaft adapted to engage the respective ends of said spool and releasable means provided to hold one of said end clamps in engaging relation with the adjacent end of said spool, said releasable means comprising a split bushing on the shaft, a lock nut on the bushing adapted to lock said bushing with the shaft and a clamp nut on the bushing adjustable into abutting relation with the adjacent clamp.



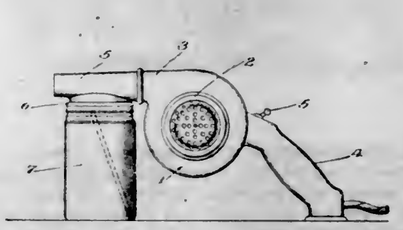
1,804,586. QUICK-OPENING VALVE. GEORGE J. BELKNAP, Bridgeport, Conn. Filed Oct. 3, 1929. Serial No. 397,135. 4 Claims. (Cl. 251—132.)

2. A quick opening valve of the character described, comprising in combination, a body having a valve seat, a crank shaft journaled in the body, a disc holder, a disc therefor, a crank connection having a head journaled on the crank shaft and a tail piece adjustably pivoted to the disc holder to permit of an independent movement of said crank connection and disc holder, a washer underlying the crank connection head, and a spring located between the washer and disc holder to seat the disc independently of the crank shaft.



1,804,587. EXCAVATOR. RUDOLPH M. BOWMAN and BRUCE L. BOWMAN, Hollywood, Calif. Filed Dec. 28, 1926. Serial No. 157,476. 7 Claims. (Cl. 37—192.)

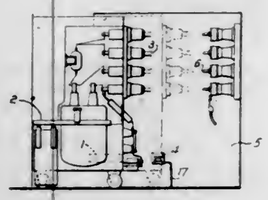
6. In a device of the class described, an endless trend tractor, a frame rigidly secured to said tractor and extending beyond the front of said tractor, a bull wheel adapted to support the front end of said frame, another frame pivotally connected adjacent the rear thereof to said first frame, means at the front of said pivoted frame



for supporting an endless digging mechanism, and means on said first frame coacting with means on said pivoted frame for raising or lowering said pivoted frame.

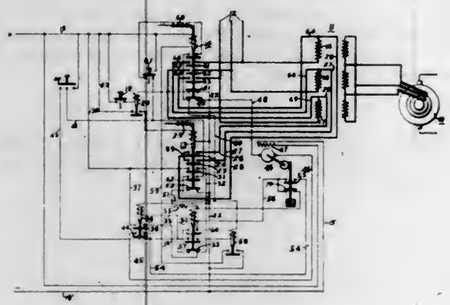
1,804,588. AIRSHIP. CLINTON D. BOWKER, Phoenix, Ariz. Filed May 1, 1930. Serial No. 449,046. 15 Claims. (Cl. 244—5.)

1. An airship having a fuselage and a circular supporting plane, the fuselage extending diametrically across the under surface of the plane and being attached thereto and having a length approximately equal to the diameter of the supporting plane, the leading edge of the supporting plane extending upward.



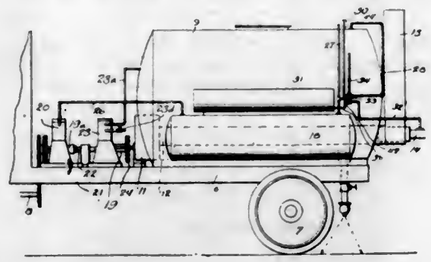
1,804,589. SPRAYING UNIT. ADAM A. BREUER, Chicago, Ill. Filed Feb. 16, 1928. Serial No. 254,717. 6 Claims. (Cl. 299—89.)

4. A spraying apparatus including a blower, an air discharge pipe leading therefrom and having an aperture

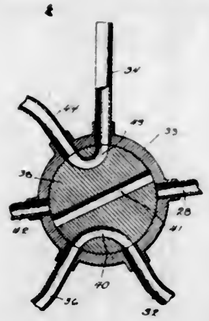


in the underside of the pipe, an open mouthed receptacle, a cap, said receptacle and cap having interfitting connections for securing the same together, said cap having an aperture adapted to register with the aperture in said discharge pipe, a disc having a portion entering said apertures and having a portion engaging the inside surface of said cap for attaching said cap to said discharge pipe with the apertures in registering position, and a pipe for liquid passing through said disc and terminating within the receptacle at a point adjacent the bottom of the same.

1,804,590. SWITCH MECHANISMS. JAMES M. BROWN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 12, 1926. Serial No. 101,356. 3 Claims. (Cl. 175—298.)

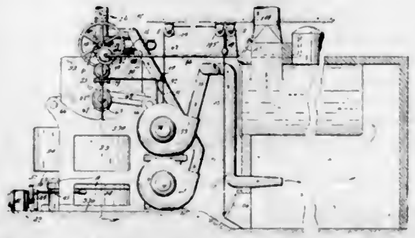


3. The combination with a truck switch and cell therefor having cooperating main contacts, of a relatively long contact plate mounted horizontally on the truck, and contact fingers mounted on the truck cell for cooperating with the contact plates to maintain a ground connection for a time after the main contacts have been disengaged during withdrawal operation of the truck from the cell.



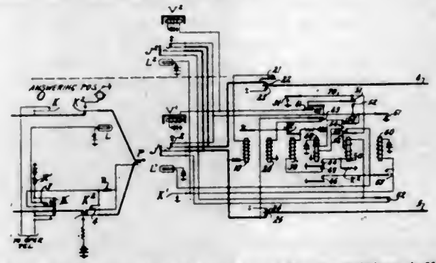
1,804,591. SYNCHRONOUS MACHINE STARTING SYSTEM. CHARLES A. BUTCHER, Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 31, 1927. Serial No. 243,881. 6 Claims. (Cl. 171—118.)

1. The combination with a source of power of a synchronous machine and a plurality of transformers having primary and secondary windings, said primary windings disposed to be connected in star relation for starting the synchronous machine, and in delta relation for the running condition of the synchronous machine, means for changing from star to delta connections and a time-element relay for causing a predetermined period of time to elapse between the interruption of the star connection and the completion of the delta connection of the transformers.



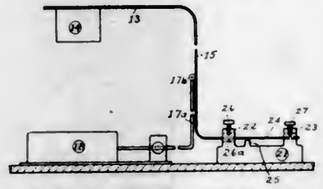
1,804,592. DISTRIBUTING TANK. CURTIS D. CHASE, Alston, Mass., assignor to Chase Holding Corporation, a Corporation of Pennsylvania. Filed Oct. 19, 1927. Serial No. 227,343. 13 Claims. (Cl. 299—35.)

1. In an apparatus of the character described, in combination, a supporting frame, a heating tank mounted thereon, a source of heat directly associated with said tank for heating the contents thereof, and means for insuring venting of the tank when the source of heat is in operation.



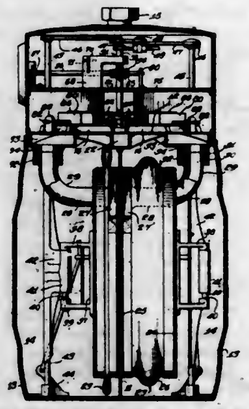
1,804,593. APPARATUS AND METHOD FOR HANDLING PULVERIZED FUEL. GEORGE A. CONRATH, Des Moines, Iowa, assignor of one-half to Charles S. Denman, Des Moines, Iowa. Filed May 10, 1926. Serial No. 107,966. 24 Claims. (Cl. 110—104.)

1. In an apparatus of the class described, a pulverizer, fuel feeding mechanism for supplying fuel thereto, means for supplying air to the feeding mechanism to be mixed with the fuel before the fuel enters the pulverizer, means for withdrawing fuel from the pulverizer, and means for simultaneously controlling the feeding mechanism, the supply of air to the feeding mechanism and the drawing of fuel from the pulverizer.



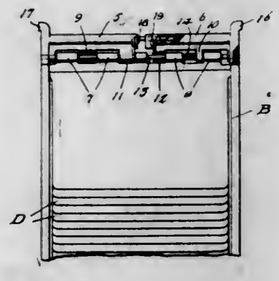
16. A method of handling coal comprising the supplying of air to the coal before it is pulverized and during the pulverizing operation, the removal of the coal from the point of pulverizing and the simultaneous cooperative controlling of the supply of coal for pulverizing, the supply of air to the coal, and the removal of the coal from the point of pulverizing.

1,804,594. TELEPHONE SYSTEM. THOMAS F. CROCKER, Chicago, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Apr. 28, 1928, Serial No. 273,544. Renewed Oct. 13, 1930. 27 Claims. (Cl. 179—41.)



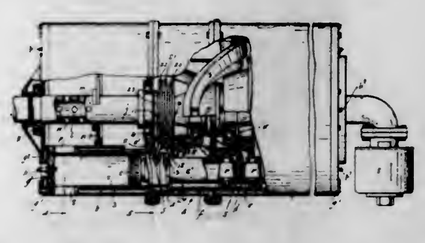
12. In a telephone system, a trunk comprising talking conductors and a sleeve conductor, a cord circuit adapted to be connected to said trunk, a key for said cord circuit, a relay for connecting ringing current to said trunk, and circuit connections including one talking conductor and the sleeve conductor of the trunk and said key for operating said relay.

1,804,595. ELECTRIC DISPLAY DEVICE. MERRITT E. CURTISS, Pittsburgh, Pa. Filed Nov. 11, 1929. Serial No. 406,230. 3 Claims. (Cl. 40—126.)



1. In a display device the combination of a translucent figure, a source of light, a resilient shade carrying arm arranged to vibrate between the translucent figure and the source of light, positively actuated means arranged to act upon said resilient arm to vibrate the same and mounting means for the resilient arm arranged to vary the effective length thereof and thereby vary the amplitude and frequency of its vibrations.

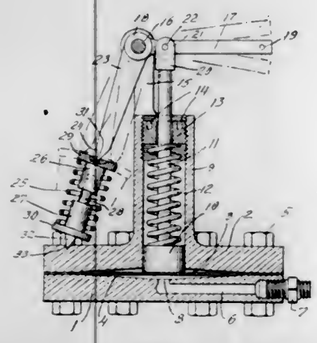
1,804,596. GAS METER. JAMES C. DICKINSON, Atlantic City, N. J., assignor of twenty-six one-hundredths to Chester Grey and twenty-six one-hundredths to Robert W. Wiederwax, Atlantic City, N. J. Filed Mar. 7, 1928. Serial No. 259,829. 4 Claims. (Cl. 73—1.)



1. In a gas meter, a diaphragm support, a diaphragm including a circular disk arranged adjacent said support, said diaphragm being provided with a gas port, a pipe rigidly connected to said disk and communicating at one end with said port, means to which the opposite end of said pipe is detachably connected and constituting an inlet and outlet conduit therefor, a socket radially disposed with respect to said disk and carried by said support remote from said pipe, and a radial projection carried by said disk and slidably fitting in said socket.

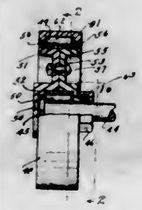
1,804,597. CARD INDEX FILE CABINET. JOHN W. DONALDSON, Irvington, N. Y., and BERNARD L. POLKOSNIK, Greenwich, Conn. Filed Oct. 22, 1927. Serial No. 227,950. 3 Claims. (Cl. 45—2.)

1. In a card index, the combination with a cabinet, of a tray slidably mounted within the cabinet, stops located at the forward end of the cabinet, an extension pivotally connected to the inner end of the tray and normally held in alignment with the longitudinal plane of the tray, and formed of a pair of normally spaced sections, one of the sections being adapted to have slidable movement on the tray, a pair of manipulating elements formed respectively transversely of the sections, and means carried by the sections and adapted to engage the stops on the cabinet, when the tray is slid outwardly, to prevent accidental detachment of the tray from the cabinet.



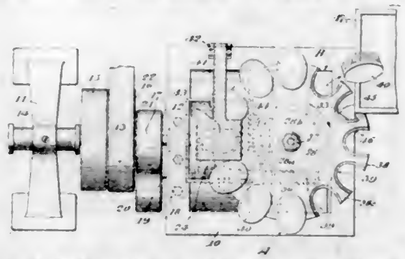
1,804,598. INTERNAL COMBUSTION ENGINE. HARRY W. EARL, Portland, Oreg., assignor to Earl Aircraft Corporation, Portland, Oreg., a Corporation of Oregon. Filed July 18, 1928. Serial No. 293,674. 5 Claims. (Cl. 123—58.)

1. In an internal combustion engine of the character described, comprising a shaft and a cylinder arranged parallel with the shaft, the combination of a sleeve valve element located within and controlling the ports of the cylinder, said sleeve valve element comprising members rotatable one within the other, a piston reciprocated within said sleeve valve element, a driving connection between the piston and the shaft, plural transverse cams carried by said shaft in parallel planes, rocker arms operated by said cams, said rocker arms having members



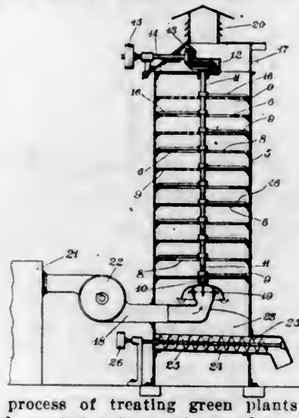
riding on said cams, respectively, means connecting the rocker arms with the members of said valve elements, respectively and the contour of said cams being adapted to impart to said rocker arms an oscillating movement, whereby to operate the members of said sleeve valve element relatively to the operation of said piston.

1,804,599. PRESSURE OPERATED CONTROL MECHANISM. WALTER L. EDEL, New Haven, Conn., assignor, by mesne assignments, to Frigidaire Corporation, a Corporation of Delaware. Filed May 19, 1927. Serial No. 192,775. 3 Claims. (Cl. 137—156.)



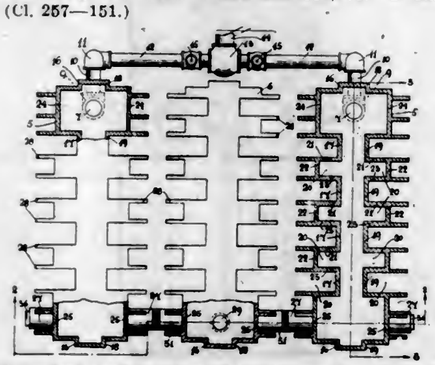
1. A pressure operated control mechanism comprising a casing, a diaphragm mounted in the casing, means permitting pressure to be exerted on one side of the diaphragm, a spring pressed rod engaging the other side of the diaphragm, a pivotally mounted control arm connected to said rod and adapted to be connected to a member to be operated, a second arm fixed to said control arm and arranged at an angle thereto, a spring operatively associated with the end of the second arm, and a pivoted support for said spring, said control arm moving as a unit with the diaphragm, rod and second arm to produce a "snap" action.

1,804,600. GUARD WHEEL FOR SAFETY RAILWAY TRUCKS. ELMER ROCKWOOD EDSON, Portland, Oreg. Filed July 12, 1928. Serial No. 292,301. 4 Claims. (Cl. 308—183.)



1. A guard wheel for high speed railways, comprising an annular member constituting a rim, said rim having a transversely flattened outer surface and an endlessly recessed inner surface, a pair of complementary webs within said rim, said webs having circumferentially an endless recess complementing the aforesaid recess in said rim, revolving bearings within said recesses, said webs having a hub provided with an endless recess, and revolving bearings within the last mentioned recess.

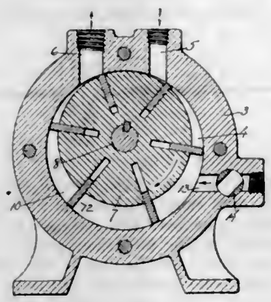
1,804,601. BRUSH CLEANING MACHINE. WILLIAM S. ELLIOT, Northampton, Mass., assignor, by mesne assignments, to Pro-phy-lac-tic Brush Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 10, 1929. Serial No. 384,852. 5 Claims. (Cl. 15—38.)



1. In a brush cleaning machine, in combination, a rotating cleaning drum, a travelling brush holder for moving the brushes to be cleaned across the periphery of said drum in a plane at right angles to the plane of rotation of the latter, and common driving means for said drum and brush holder.

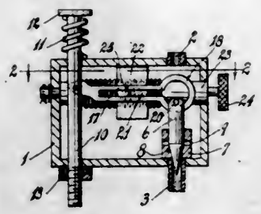
1,804,602. PROCESS OF TREATING HAY. OSCAR ERF, Columbus, Ohio. Filed July 18, 1927. Serial No. 206,555. 4 Claims. (Cl. 99—11.)

1. The process of treating green plants constituting cattle feed consisting in topping said plants, promptly subjecting the toppings to a crushing and shredding action and then promptly subjecting them to a pulverizing action together with heat and suitable gases.



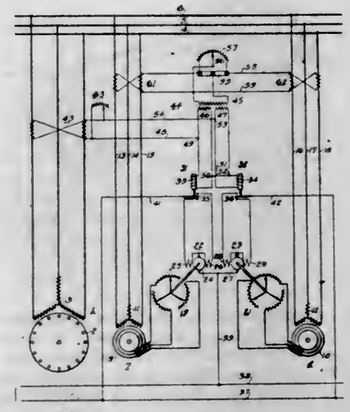
1,804,603. RADIATOR. ANDREW GEDEON, Chicago, Ill. Filed Aug. 28, 1929. Serial No. 388,978. 2 Claims. (Cl. 257—151.)

1. A device of the class described consisting of a pair of end units and an intermediate unit, each of said units



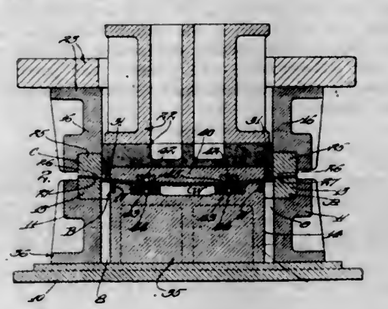
having a main inner space extending longitudinally of said unit, from which space blind channels extend sidewardly, a nipple on the bottom of each of said units adjacent one end thereof, and communicating with the interior of the corresponding unit, a pair of nipples extending laterally of each unit communicating with the interior thereof and adapted to be connected with an adjacent nipple, a pipe line connected with the nipples in the bottom of the end units and adapted to conduct a heating medium into said units, a valve interposed in said pipe line and regulating the flow of the heating medium and a clack valve arranged in each of the nipples extending laterally from the intermediate units and adapted to be closed by the pressure of the heating medium against one side of said valve.

1,804,604. PUMP. ALFRED J. GILBERT, Windsor, Conn., assignor to The Silent Glow Oil Burner Corporation, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 4, 1927. Serial No. 210,479. 8 Claims. (Cl. 103—7.)



7. A pump comprising a case, a piston rotatably mounted in the case to create a chamber of varying capacity in different parts thereof, said case having inlet ports opening to different parts of said chamber, vanes mounted in the piston and movable radially thereof, the distance between the vanes being less than the interval between said ports, and means for rotating said piston.

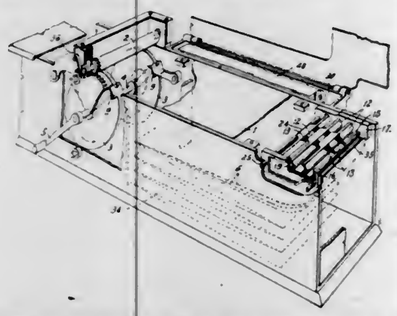
1,804,605. AIR CONTROL FOR INTERNAL COMBUSTION ENGINES. JAMES C. GORDON, Los Angeles, Calif. Filed Apr. 2, 1930. Serial No. 440,965. 4 Claims. (Cl. 137—139.)



1. An air control for internal combustion engines, comprising a case, an outlet fitting extending from the case, a valve adapted to close said outlet fitting, a rod extending into the case, a link pivotally secured to the rod, a loop on the free end of the link, a pin extending through the valve and through the loop, a block adjustably mounted in the case, said link having a slot therein, a pin extending from the block into the slot, and manual means to adjust said block relative to the link.

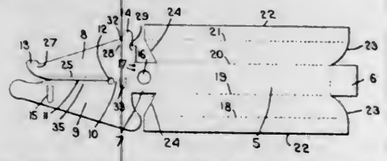
1,804,606. REGULATOR SYSTEM. ERNST GRAU, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 7, 1927, Serial No. 231,487, and in Germany Nov. 11, 1926. 4 Claims. (Cl. 172—239.)

1. In an electric feed-control system, a plurality of work devices, a common driving motor for operating said work devices, separate motors for feeding the work to said several work devices, a regulator for each of said feed motors comprising a magnet winding, a circuit for each of said windings, means for energizing said windings in accordance with the load on said driving motor, and means for introducing voltages into the circuits of said windings which vary in accordance with variations in the load distribution on said feed motors.



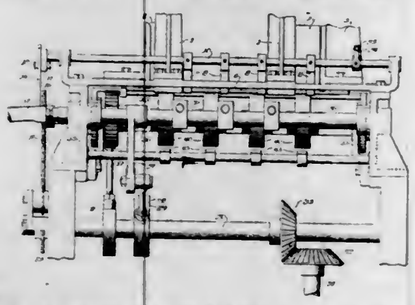
1,804,607. METHOD OF AND APPARATUS FOR MAKING AUTOMOBILE DOORS. OTTO J. GROEHN, Grosse Pointe Park, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 1, 1928. Serial No. 274,232. 9 Claims. (Cl. 113—49.)

1. In an apparatus for making metal automobile door panels, the combination of means for shaping a metal blank to the required curvature of the door, means for piercing a preliminary window opening, means for drawing the metal area around said opening to provide an offset area, and means for cutting a final window opening around said preliminary opening.



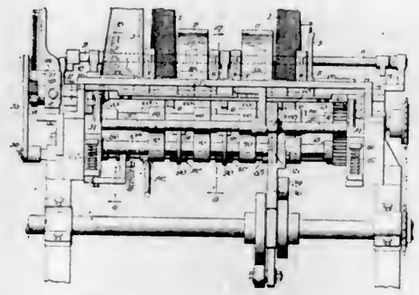
5. The method of making metal automobile door panels which comprises shaping a blank of sheet metal to the desired curvature of the door, piercing the blank to provide an opening of substantial size, drawing the metal surrounding said opening to form a pan shaped depression, trimming said opening, and turning the outer edges of the blank to form a flange.

1,804,608. STRIP ALIGNING APPARATUS FOR MANIFOLD RECORD MACHINES. LOUIS F. HAGEMANN, Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Canada, a Corporation of Ontario, Canada. Filed Oct. 5, 1926. Serial No. 139,572. 16 Claims. (Cl. 271—2.1.)



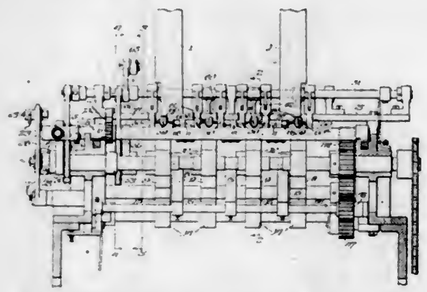
1. In an apparatus of the character described, in combination, a pair of gripper jaws adapted to cooperate to grip a record strip advancing therebetween, one of said jaws including friction filaments so disposed that their sides cooperate with the other jaw to grip said strip, and means adapted to cause said gripping with resilient effect.

1,804,609. ENVELOPE SEALER. ALFRED HALL, East Jaffrey, N. H. Filed Apr. 13, 1928. Serial No. 269,751. 1 Claim. (Cl. 120—6.)



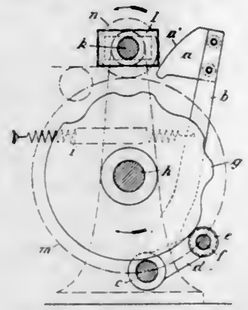
An envelope sealer comprising a hollow handle portion, a pad-receiving portion having a pad thereon and a presser foot portion, said sealer being made from a single piece of sheet material and having a body portion bent along spaced parallel lines to form the sides of the hollow handle and also having a tab at one end which is bent to form the end wall of the hollow handle at one end thereof and a neck portion connecting the body portion with the pad-receiving and presser foot portions, said neck portion being bent to form the other end wall of the hollow handle.

1,804,610. FEEDING MECHANISM. SEVERIN HALVORSEN, Chicago, Ill., assignor to The Newspaper Stuffing Machine Company, Seattle, Wash., a Corporation of Washington. Filed June 5, 1924, Serial No. 718,170. Renewed May 5, 1930. 14 Claims. (Cl. 271—29.)



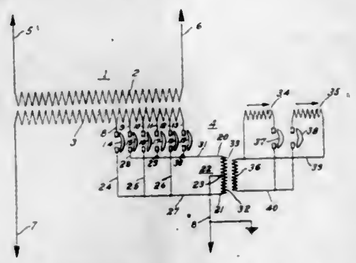
1. In a feeding machine a stack of flat articles fixed means for supporting the rear portions of said articles, movable means for supporting the front portions of said articles, said means comprising swinging fingers suspended from a rock shaft for alternately supporting and releasing said articles, an oscillatable arm having pneumatic means for engaging and flexing the lowermost of said articles, and withdrawing means comprising cooperating rotary members, one of said members having a resilient portion, the other said member having a recessed portion for engaging said articles.

1,804,611. PNEUMATIC FEED MECHANISM. SEVERIN HALVORSEN, Chicago, Ill., assignor to The Newspaper Stuffing Machine Company, Seattle, Wash., a Corporation of Washington. Filed Dec. 22, 1924. Serial No. 757,341. 36 Claims. (Cl. 271—29.)



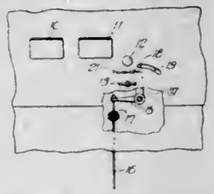
1. The combination with means for supporting a stack or pile of articles, said supporting means including movable devices, movable to support and release one edge of said articles, pneumatic means for drawing down the released edge of the lowermost article, means for operating said pneumatic means, said pneumatic means being mounted for bodily movement below the stock or pile and for rotative movement during such bodily movement, a segmental roll for acting on the released edge of said lowermost article to swing the same further downwardly and backwardly and a feed roll cooperating with the said segmental roll to engage the downwardly and backwardly swung edge of said article and feed the same.

1,804,612. PNEUMATIC FEED MECHANISM. SEVERIN HALVORSEN, Chicago, Ill., assignor to The Newspaper Stuffing Machine Company, Seattle, Wash., a Corporation of Washington. Refiled for abandoned application Serial No. 11,439, filed Feb. 25, 1925. This application filed Mar. 21, 1929. Serial No. 348,944. 4 Claims. (Cl. 271—29.)



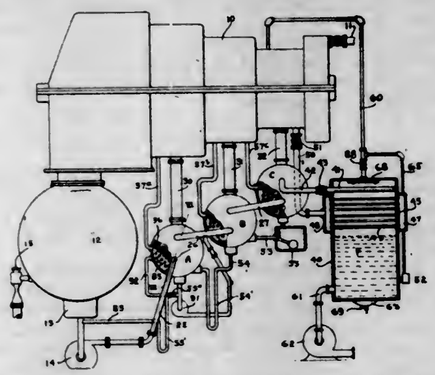
1. Feeding mechanism comprising reciprocatory pin members for engaging the pack to hold all of the same in position except one or more endmost member, means for reciprocating said pin devices and supplemental engaging members for holding the few endmost articles and permitting the same to be withdrawn, and means for reciprocating said pin engaging devices, said means comprising a rod having a head carrying said devices, a swinging arm actuating said rod, a rock shaft carrying said arm, a second arm on said rock shaft, a link connected with said second arm, a bell crank connected with said link, and a reciprocatory cam actuated device for operating said bell crank.

1,804,613. FOLDING TOOL FOR MATCH-BOX MAKING MACHINES. LUDWIG HENNINGER, Durlach, Germany, assignor to Badische Maschinenfabrik & Eisengiesserei vormals G. Sebold und Sebold & Neff, Durlach, Germany. Filed Sept. 4, 1929, Serial No. 390,229, and in Germany June 16, 1928. 2 Claims. (Cl. 93—54.)



1. In a box forming machine comprising a grooved mandrel, a rocking knife-like folding member and a cam for continuously controlling said member, the folding edge of said member being so curved and the cam faces of said cam being so shaped that the curved edge of the folder during the operation thereof forms a substantially straight line adjacent the base of the groove along the sides of the mandrel and remains along the sides of the mandrel and remains in said groove for substantially the entire time required by any one side of the mandrel to move along the folder.

1,804,614. TAP CHANGING SYSTEM. LELAND H. HILL, Collingswood, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 14, 1928. Serial No. 292,771. 5 Claims. (Cl. 171—119.)

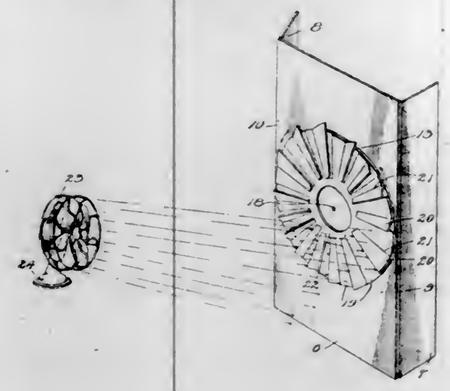


1. In combination, a main transformer having a primary and a secondary winding, one of said windings having a plurality of taps, an auxiliary transformer having a primary and a secondary winding, means for connecting said taps alternately to opposite terminals of said secondary winding of said auxiliary transformer, the midpoint of said secondary winding constituting a terminal for the tapped winding of said main transformer, and means including two windings energized by said main transformer and switches for connecting the one or the other of said windings to the primary winding of said auxiliary transformer to increase or decrease the terminal voltage of the transformer with respect to the voltage of the tapped portion of said winding.

1,804,615. FOOT CONTROLLED ACCELERATOR AND BRAKE MECHANISM. ORVILLE Q. HINDS, Chicago, Ill. Filed May 27, 1927. Serial No. 194,556. 2 Claims. (Cl .74—81.)

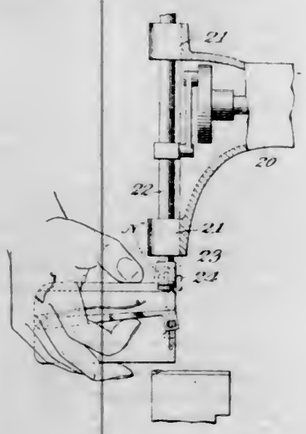
1. In a motor driven vehicle provided with fluid brake mechanism, an accelerator pedal adapted to be depressed, and a mechanism for controlling the fluid brake, said mechanism comprising a bell crank with a connection to the fluid brake on one arm thereof, and a foot engaging projection on the other arm thereof, the projection extending through the floor board adjacent the accelerator pedal, and being movable sidewise by the foot, without releasing control of said accelerator pedal.

1,804,616. MULTISTAGE FEED WATER HEATING. FRANCIS HODGKINSON, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 19, 1925. Serial No. 70,137. 1 Claim. (Cl. 60—48.)



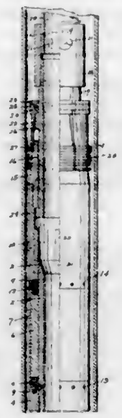
The combination with a multi-stage turbine and evacuating apparatus including a condenser connected to the exhaust opening of the turbine, of a deaerating chamber, means for supplying heated feed water to be deaerated to the deaerating chamber, and conduit means connecting the deaerating chamber with an intermediate stage of the turbine having a pressure below the saturation pressure of the feed water to be deaerated, said turbine, condenser and conduit means being arranged to draw liberated gases from the deaerating chamber and to utilize said gases as motive fluid in a relatively low pressure stage of the turbine.

1,804,617. ADVERTISING NOVELTY STAND. JULIUS HORWATH, Chicago, Ill., assignor to Newman-Rudolph Lithographing Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 17, 1929, Serial No. 393,209. Renewed Sept. 29, 1930. 4 Claims. (Cl. 40—39.)



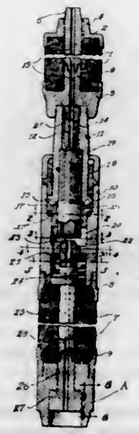
1. In a display stand, the combination of a stationary panel having suitable display matter on its front face, a stud secured to and projecting backwardly from the rear face of said panel and located exclusively to the rear of said panel, a circular panel having a central eyelet journaled upon said stud and secured in place thereon, suitable display matter on the front face of said rotary panel located in circular fashion around the same and of a nature

to harmonize with the display matter on the front face of the stationary panel, there being an aperture in the stationary panel in position to expose said matter on the rotary panel to view as the panel is rotated, a circular panel secured to the back face of the rotary panel and provided with a series of wings or blades reaching rearwardly from the rotary panel at a substantial angle and



connected to the rotary panel on substantially radial lines of fold, all of said wings or blades facing in the same direction of rotation, and means for creating a current of air against the wings or blades at one side of the device comprising a relatively small motor-driven fan located in position to create a current of air against the wings or blades substantially at one side of the center of rotation only, substantially as described.

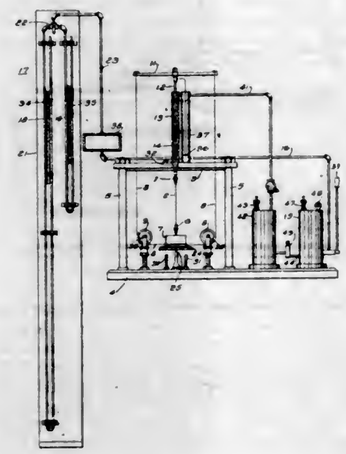
1,804,618. NEEDLE LOADER FOR SEWING MACHINES. MERTON W. HOWARD, Lynn, Mass., assignor to Howard Development Company, Lynn, Mass., a Corporation of Massachusetts. Filed Feb. 4, 1930. Serial No. 425,784. 10 Claims. (Cl. 112—225.)



1. A needle loading device for a sewing machine having a needle bar, comprising a magazine for holding a column of needles, a spring pressed follower acting against the column of needles, a feed member having means engageable beneath the point of the leading needle of the column for shifting the needle into the needle bar, and means for positioning said device relative to the needle bar.

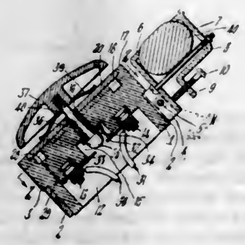
1,804,619. PACKER. GRANVILLE A. HUMASON, Houston, Tex. Filed Nov. 23, 1929. Serial No. 409,222. 8 Claims. (Cl. 166—12.)

8. A packer including a tubular packer support, an expansible packing element thereon, a tubular screen support below the packer support, a tubular section connected to the packer support and having a swiveling connection with the screen support and including a downwardly tapering lower expander, casing engaging means about said expander and having a releasable threaded connection with said tubular section, a yieldable seat supported on said screen support and whose upper end engages said casing engaging means, a setting nipple above said packing element and having an upwardly tapering upper expander, casing engaging means about said upper expander, means having a threaded connection with said setting nipple said last mentioned means and said last mentioned casing engaging means having means which interengage and through which the latter may be actuated by the former out of casing engaging position.



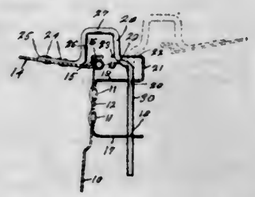
1,804,620. SAND TESTING TOOL. FRANK HUX, Bruni, Tex., assignor to Standard Drilling and Sand Testing Company, Webb County, Tex., a Corporation of Texas. Filed July 1, 1929. Serial No. 375,171. 5 Claims. (Cl. 166—1.)

1. A sand testing tool for oil wells, comprising a housing, a tubular element rotatably seated and projecting



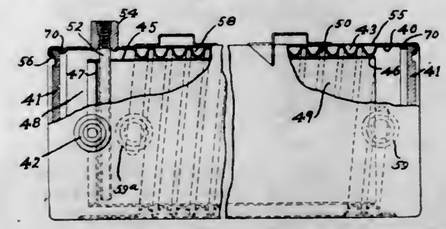
into the upper end of the housing and extending therefrom above; a tubular element seated and projecting into the lower end of the housing and depending therebelow; a valve threadedly-engaged with said upper tubular element, said valve channeled from end to end and adapted to provide open communication with and between said upper and lower tubular members when a test of the well is being had; the valve being lowered to open and closed positions before and after the test is secured by a right hand rotation of said upper projecting element; in combination with packers above and below said housing.

1,804,621. TORSION TESTING MACHINE. PAUL L. IRWIN, Pittsburgh, Pa. Filed Feb. 20, 1929. Serial No. 341,306. 10 Claims. (Cl. 265—1.)



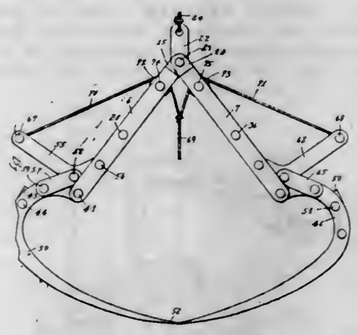
1. In a device for measuring the torsional characteristics of wires, in combination, stationary means for holding one end of the specimen, movable means for holding and exerting torque on the other end of the specimen, hydraulic means for actuating the movable holding means, and pneumatic means for measuring the torque exerted by the holding means.

1,804,622. CIRCUIT CLOSER. CHESTER W. JOHNSON, Boston, Mass., assignor to The A. L. Smith Iron Works, Chelsea, Mass., a Corporation of Massachusetts. Filed Apr. 25, 1928. Serial No. 272,678. 4 Claims. (Cl. 200—59.)



1. A switch as and for the purpose described, comprising a base of insulating material having a groove in one face, a cover overlying and closing said groove and formed of conductive material, a conductor located in said groove separated from the cover, and means for connecting the conductors of an electric circuit in connection, respectively, with said cover and said conductor.

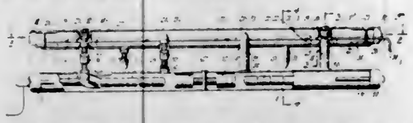
1,804,623. KITCHEN UTENSIL. LOUIS J. KAPLAN, Greenwich, Ohio, assignor, by mesne assignments, to The Kitchen Katch-all Corporation, Greenwich, Ohio, a Corporation of Ohio. Filed Sept. 6, 1928. Serial No. 304,191. 3 Claims. (Cl. 220—33.)



1. In combination with a receptacle open at its top, a cover therefor, a stud attached to said cover and having a downwardly directed end, a cam formed on said stud, and a bracket secured to said receptacle and adapted to receive said end, said bracket comprising a laterally extending portion perforated adjacent its outer end, an upwardly extending portion, and an inwardly extending portion, said last-named portion being bifurcated, and said stud end being received between the furcations of said last-named portion and in the perforation of said first-named portion.

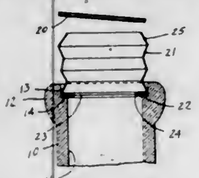
1,804,624. REFRIGERATING APPARATUS. JESSE G. KING, Dayton, Ohio, assignor to Frigidaire Corporation, Dayton, Ohio, a Corporation of Delaware. Filed July 31, 1928. Serial No. 296,475. 6 Claims. (Cl. 257—28.)

1. A refrigerant container comprising in combination a pair of sheets forming a double wall, and a boss secured to one sheet and passing through an opening in the other sheet, the opening being larger than the boss to permit relative displacement of the sheets in the direction of their surfaces.



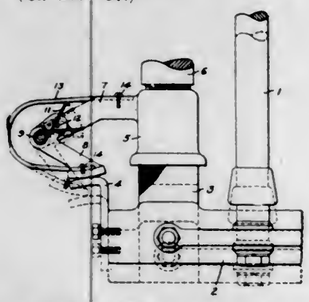
1,804,625. HAYFORK. GOTTFRED KNOTT, Davis Junction, Ill. Filed Mar. 27, 1930. Serial No. 439,321. 6 Claims. (Cl. 294—107.)

1. A hay fork comprising at least two side arms, curved tines pivotally attached to the lower end of each of said side arms to move between an open and a closed position, toggle joints connecting said tines with said side arms intermediate the ends of each, said joints being arranged



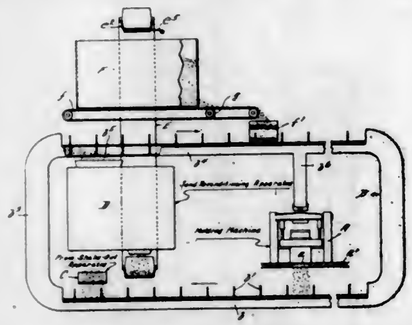
to occupy a position past the center line thereof to hold said tines in their closed position and to be drawn through center to move said tines to their open position.

1,804,626. LOOSE LEAF BINDER. ADOLPH G. LOTTER, Milwaukee, Wis., assignor, by mesne assignments, to Stationers Loose Leaf Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 4, 1928. Serial No. 282,725. 5 Claims. (Cl. 129—1.)



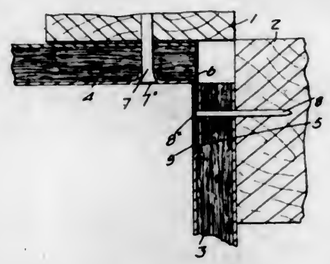
2. In a loose leaf binder, a pair of binder heads, a substantially flexible post member extensibly connected with one head and adapted to be passed into the other, means concealed within said other binder head for readily detachably connecting the same with the end of the binder post passed therein, a bridge bar adapted to engage the topmost of a body of leaves adapted to be secured between the binder heads, and a binder post rigid therewith and adapted to be passed through the leaves.

1,804,627. SANITARY POURING CAP. EMERY D. LUKENBILL, Indianapolis, Ind. Filed Feb. 16, 1929. Serial No. 340,407. 8 Claims. (Cl. 215—51.)



1. A unitary sealing and sanitary pouring cap construction of substantially standard cap dimensions for standard capping machine application to milk bottles and the like, comprising a base seatable in the cap seat of the bottle mouth and having an aperture therethrough spaced from the peripheral edge of the cap, a collapsible pouring spout secured to the base and in registration with the base aperture and having an open sterile mouth, and a cover detachably associated with the spout for maintaining the sterility of the open mouth of the spout until separated therefrom for non-contaminating pouring, said base, spout and cover being simultaneously applied to the bottle in a single capping operation.

1,804,628. CIRCUIT BREAKER. JOHN B. MACNEILL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 6, 1928. Serial No. 317,499. 10 Claims. (Cl. 200—87.)



1. The combination with a main contact for a circuit interrupter having an arcing contact associated therewith, of a spring for retaining the arcing contact in a neutral position beyond the main contact when said members are in open circuit position, and a current path so associated with the arcing contact that said contact is biased beyond its neutral position when the circuit interrupter is being actuated to open position.

1,804,629. MEANS FOR TREATING MOLDING SAND. FRANK E. MCCABE, Cleveland, Ohio, assignor to The Grabler Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 25, 1927. Serial No. 178,252. 2 Claims. (Cl. 22—89.)

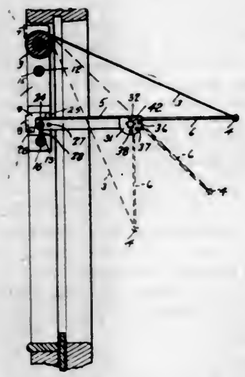
1. In foundry apparatus wherein sand is separated from castings, reconditioned and returned to a hopper at a molding station, a plurality of storage tanks adapted to hold reconditioned sand, means for selectively filling said tanks and means for selectively emptying said tanks into said hopper, said means and said tanks being so arranged that the sand delivery is substantially continuous and caking and drying of reconditioned sand is prevented.

1,804,630. INTERIOR WALL BOARD CONNECTION. DAVID MCCHESNEY, Kirkland Lake, Ontario, Canada. Filed May 19, 1930. Serial No. 453,738. 1 Claim. (Cl. 72—121.).

The combination with a supporting structure, a wall board portion provided with a recess in its inner face extending from the edge thereof and a wall board portion cut to the required length and set at right angles to the aforesaid wall board portion so that its end is opposite the the recess thereof, an angle member or plate one arm of which is counter sunk within the recess and fits the end face of the adjacent wall board portion, the other arm extending between the adjacent wall board portion and the supporting structure, a securing nail extending through each wall board portion and the angle plate into the supporting structure the heads of which are counter sunk, and a filling for the recess covering the head of one nail and for the orifice formed by the counter sinking of the head of the other nail.

1,804,631. MANUFACTURE OF SULPHATES. RALPH H. MCKEE, New York, N. Y., assignor to Tennessee Corporation, a Corporation of New York. Filed Nov. 1, 1924. Serial No. 747,391. 3 Claims. (Cl. 23—118.)

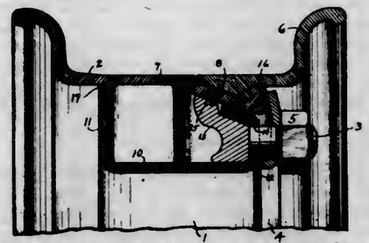
1. The process of recovering potassium sulphate and aluminum sulphate from potassium and aluminum bearing sericitic silicates which comprises treating such silicates in coarsely ground condition with sulfuric acid of from 30 to 60 per cent. strength.



1,804,632. DENATURED SPIRITS AND METHOD OF MAKING THE SAME. RALPH H. MCKEE, Leonia, N. J. Filed May 9, 1925. Serial No. 29,219. 2 Claims. (Cl. 202—77.)

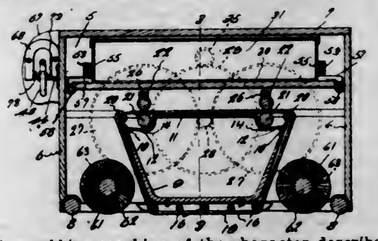
1. The process of denaturing an alcohol which comprises adding thereto a liquid fraction of shale oil freely soluble therein and having an exceedingly unpleasant taste, said fraction comprising unsaturated olefinic hydrocarbons distilling in the gasoline boiling range.

1,804,633. PROCESS OF MAKING FIREPROOFED WOOD AND LIKE CELLULAR PRODUCTS. RALPH H. MCKEE, Jersey City, N. J. Filed Jan. 9, 1928. Serial No. 245,629. 2 Claims. (Cl. 91—68.)



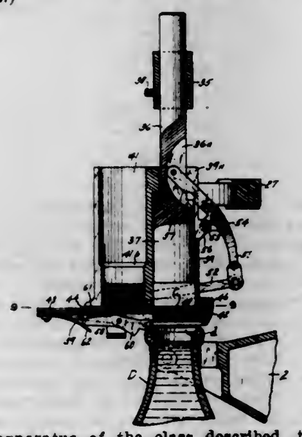
1. The process of producing fire-proofed wood and like dense cellular products which comprises treating such products with a solution of ammonium phosphate in the presence of free ammonia, such treatment being conducted at substantially atmospheric pressure, and at a temperature not materially in excess of prevailing atmospheric temperature, and drying the treated products.

1,804,634. ADJUSTABLE SHADE. ROSS M. MEUNIER, Glendale, Calif. Filed Feb. 3, 1930. Serial No. 425,456. 7 Claims. (Cl. 156—44.)



4. An adjustable shade for windows comprising a free roller shade, supporting arms, means for pivotally mounting said supporting arms on a window frame, adjustable shade holding arms pivotally mounted on the swinging ends of said supporting arms, the ends of said adjustable shade-holding arms being bent, a tubular pull rod in the end of said shade the ends of which rod receive the bent ends of said adjustable shade-holding arms, means for holding said supporting arms in vertical position, means for limiting the upward movement of said supporting arms in horizontal position and means for positively holding said adjustable shade-holding arms either in longitudinal alignment with or at an angle to said supporting arms.

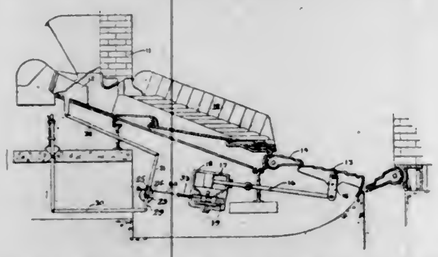
1,804,635. VEHICLE WHEEL STRUCTURE. FRANK H. MEYER, Warren, Ohio, assignor, by mesne assignments, to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 12, 1927. Serial No. 160,545. 13 Claims. (Cl. 301—19.)



12. A wheel assembly including a channel shaped felloe and a plurality of bolts carried by the felloe, each bolt having an enlarged head, formed with a tapered rim seating surface disposed within the channel of the felloe.

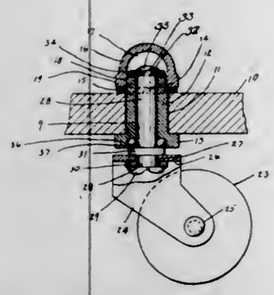
1,804,636. SCRUBBING MACHINE. JOHN MILANOVICH, Hollidays Cove, W. Va., assignor of one-third to George H. Marsh, Hollidays Cove, W. Va. Filed Apr. 21, 1930. Serial No. 446,150. 4 Claims. (Cl. 15—51.)

1. A scrubbing machine of the character described comprising a housing, a handle for manipulating the machine, a clean water receptacle in the housing, valved outlets at the front and rear ends of the clean water receptacle, a scrubbing brush mounted in the said casing underlying each valved outlet, and means for selectively opening the front or rear valve accordingly as the machine is moved forwardly or rearwardly.



1,804,637. CAPPING MECHANISM. CLIFFORD MORROW, Canton, Ohio, assignor to The H. H. Miller Industries Company, Canton, Ohio, a Corporation of Ohio. Filed May 22, 1928. Serial No. 279,699. 5 Claims. (Cl. 226—92.)

1. In apparatus of the class described, the combination of a support, a member movable upwardly and

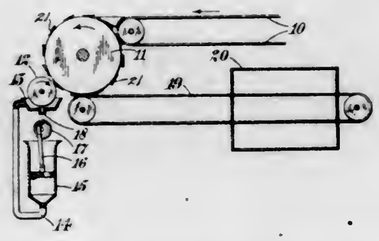


downwardly on said support and arranged to hold a bottle, a capping mechanism on said support comprising a fixed element engaging a cap to seat it in the bottle mouth in the upward movement of the bottle and an element movable on said fixed element, a reciprocating feeder carried by said movable element, a linkage connected to said elements and operated by their relative movements for reciprocating said feeder, means for locking the feeder against movement, said means including a device disposed in the path of movement of a portion of the bottle for preventing operation of said locking means.

1,804,638. ACTUATING MEANS FOR FUEL AGITATORS. DONALD J. MOSSHART, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 22, 1925. Serial No. 32,103. 9 Claims. (Cl. 110—33.)

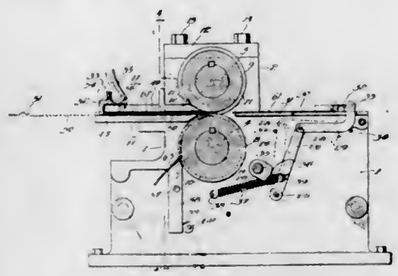
6. In a furnace, the combination with an automatic stoker including fuel feeding means and a fuel agitating grate section forming a part of the fuel supporting surface thereof, of mechanism operating in response to the operation of the fuel feeding means for intermittently operating said agitating grate section for predetermined periods of time.

1,804,639. BALL BEARING CASTER. CLARENCE B. NOELTING and WILLIAM H. NOELTING, Evansville, Ind., assignors to Faultless Caster Company, Evansville, Ind., a Corporation. Filed Apr. 20, 1928. Serial No. 271,447. 1 Claim. (Cl. 16—38.)



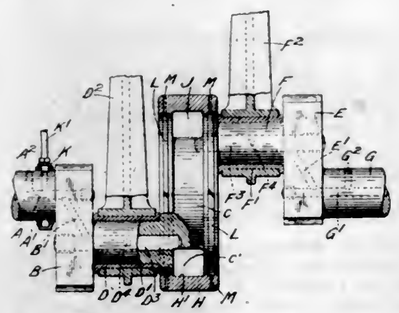
In a caster construction the combination of a caster stem receiving sleeve having an exteriorly threaded upper end and an outwardly shouldered load engaging lower end, a chambered member interiorly threaded and receivable by the end of said sleeve, a caster stem swiveled in said sleeve and having its upper end projecting into and terminating within said chamber, means interposed between the chamber projecting end of the stem and the sleeve and mounted within the chamber for permanently connecting said stem to said sleeve, said sleeve having a laterally enlarged bore at its lower end for lateral and axial thrust bearing, said stem including a laterally enlarged portion for cooperating therewith for axial and lateral thrust, anti-friction elements interposed therebetween and seatable in the bore and engaging the stem and the enlargement thereof, said stem connecting means permitting sufficient relatively axial movement for free swiveling but insufficient relative axial movement to permit anti-friction element escapement, and a horn, said laterally enlarged stem portion cooperating therewith for horn anchorage.

1,804,640. VEGETABLE PROTEIN-BASE GLUE. GEORGE H. OSGOOD, Tacoma, Wash. Filed Aug. 11, 1926. Serial No. 128,626. 1 Claim. (Cl. 87—17.)



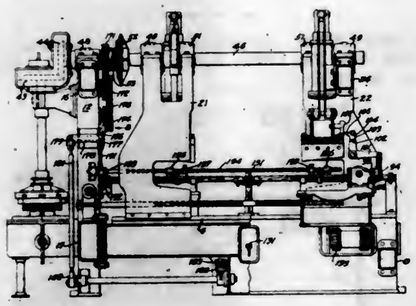
A fluid adhesive compound adapted to form a water-resistant, strong, non-abrasive glue comprising a mixture with one hundred parts of peanut meal, of about sixteen parts of hydrated lime, ten parts of sodium carbonate, thirty parts of sodium silicate, and two parts of copper sulphate, mixed with about four hundred parts of water.

1,804,641. MANUFACTURE OF GRAMOPHONE RECORDS. NOEL PEMBERTON-BILLING, Twickenham, England, assignor, by mesne assignments, to American and Dominions Unbreakable Records Limited, London, England. Filed Nov. 17, 1926, Serial No. 148,958, and in Great Britain Nov. 24, 1925. 1 Claim. (Cl. 91—55.)



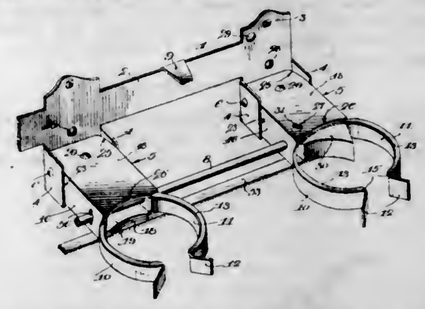
Apparatus for coating gramophone record bases with liquid record material, comprising in combination means to convey the bases separately past a coating device for applying the coating to the bases, which device is supplied with coating material in excess of that required for coating the bases, means including a pump for agitating the liquid recording material and for continually circulating it between a supply reservoir and the coating device, a heating chamber for drying the coated bases, and means for conveying said bases from the coating device through said chamber.

1,804,642. APPARATUS FOR CUTTING INDEX ELEMENTS. FRANK D. POWELL, Chicago, Ill., assignor to Acme Card System Company, Chicago, Ill., a Corporation of Illinois. Filed May 10, 1928. Serial No. 276,518. 5 Claims. (Cl. 164—61.)



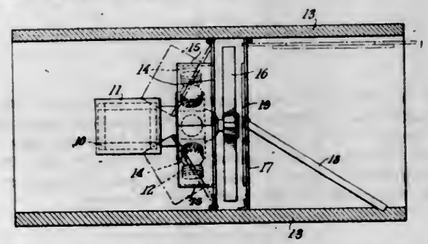
1. A machine comprising in combination, means for shearing from a sheet bearing data thereon in spaced parallel lines the portion between the lines of data to leave the data bearing strips of predetermined width each bearing a line or more of such data, means for actuating such shearing means, means for separating and removing as waste the unprinted waste strips sheared from between adjacent data bearing strips, removable means for separately collecting the data bearing strips comprising receiving means adapted to retain the strips in order relative to the data thereupon.

1,804,643. CRANKSHAFT. HARRY RALPH RICARDO, London, England. Filed Feb. 20, 1930, Serial No. 430,099, and in Great Britain Apr. 2, 1929. 2 Claims. (Cl. 184—6.)



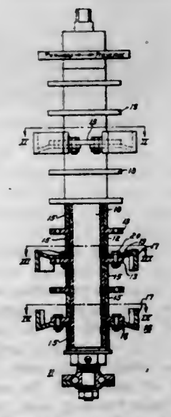
1. In a crankshaft having a passage for lubricating oil therethrough the combination of a crank web of circular cross-section in a plane at right angles to the crankshaft, an annular inertia member mounted on the web and capable of rotational movement thereon about the crankshaft axis, the inertia member and crank web having grooves so formed as to provide an annular chamber between these two parts into which chamber the lubricating oil can flow in its passage through the crankshaft whereby the apparatus acts as a centrifugal separator for the oil tending to cause impurities therein to be thrown outwards against the inner circumferential surface of the inertia member, and means for frictionally connecting the inertia member to the crank web.

1,804,644. BOX BLANK SLOTTING MACHINE. LELAND S. ROSENER, San Francisco, Calif., assignor to Fibreboard Products Inc., San Francisco, Calif., a Corporation of Delaware. Filed Apr. 3, 1929. Serial No. 352,203. 21 Claims. (Cl. 164—48.)



1. A box blank slotting machine comprising reciprocating slotting knives, an intermittently operating endless conveyor synchronized with said knives for feeding and discharging the blanks, and means for positioning the blanks with respect to the knives when the conveyor is at rest.

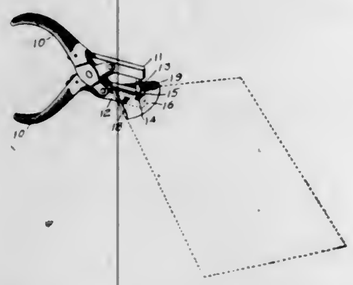
1,804,645. HOLDER FOR MILK BOTTLES AND THE LIKE. THOMAS C. ROUSE, Wilmington, Del. Filed Dec. 3, 1928, Serial No. 323,438. Renewed Sept. 30, 1930. 18 Claims. (Cl. 232—41.5.)



18. A holder comprising a holding member having relatively movable arms each with connected double jaws in confronting relationsbip.

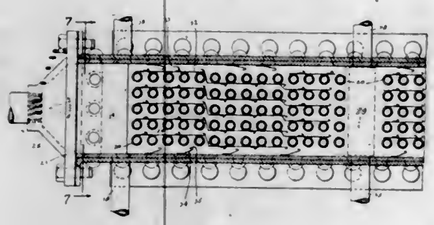
1,804,646. ENGINE TESTING APPARATUS. EARLE A. RYDER and ALEXANDER H. KING, West Hartford, Conn., assignors to The Pratt & Whitney Aircraft Co., Hartford, Conn., a Corporation of Delaware. Filed Mar. 13, 1929. Serial No. 346,778. 14 Claims. (Cl. 70—51.)

1. An air dynamometer comprising a propeller secured to an engine being tested, a cylindrical casing surrounding the engine, a baffle in front of said propeller, whereby air will be drawn past said engine and thrown radially by said impeller past said baffle.



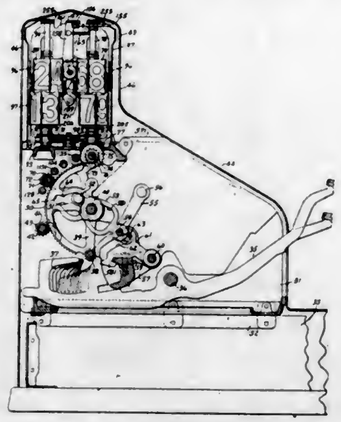
1,804,647. CONTROLLER DRUM. OTTO P. SCHUSTER, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 19, 1929. Serial No. 348,348. 5 Claims. (Cl. 200—8.)

1. In a contact drum, in combination, a shaft, an insulating sleeve mounted on the shaft, support plates



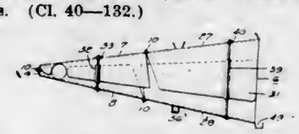
mounted on the shaft and insulated therefrom by the sleeve, spacing members interposed between the support plates, contact members having inwardly extending flanges disposed to be connected to the support members, and a contact plate extending transversely of the flanges, said contact plate being disposed symmetrically with reference to a central horizontal plane extending through the support plates.

1,804,648. LOCATING DEVICE FOR PLIER PUNCHES. HAROLD F. SCRIBNER, New York, N. Y. Filed July 12, 1928. Serial No. 292,272. 6 Claims. (Cl. 164—121.)



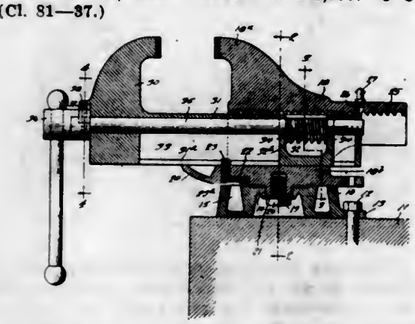
1. A material locating device for a perforating tool of the plier type combining perforating elements; and a sheet of metal having upturned material locating edge portions, disposed at an angle of substantially 90° and diverging outwardly from a point in the general plane of the jaws rearwardly of the perforating elements.

1,804,649. APPARATUS FOR CONDITIONING AIR. CLINTON F. SHADLE, Indianapolis, Ind., assignor to Air Development Company, Inc., a Corporation of New York. Filed Feb. 11, 1929. Serial No. 339,056. 7 Claims. (Cl. 183—32.)



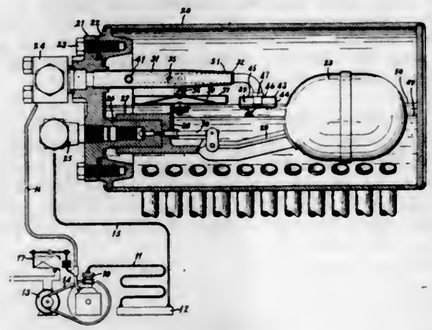
2. An air conditioner of the character described including an elongated tank through which air is adapted to pass, a plurality of tubes extending across said tank in communication with the exterior thereof, a plurality of zig-zag baffle plates mounted on the sides of said tubes for directing the air in a sinuous path past said tubes, hook shaped baffles mounted on said plates, and means mounted exteriorly of said tank in position to cause a cooling medium to pass through said tubes from one side of the tank to the other, said tubes being so positioned within said tank as to cool the air passing therethrough.

1,804,650. CASH REGISTER. BERNIS M. SHIPLEY, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Mar. 15, 1928. Serial No. 261,996. 45 Claims. (Cl. 235—23.)



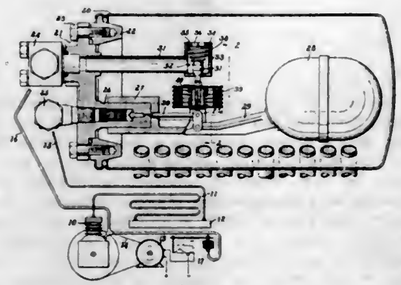
1. In an indicating mechanism, the combination of an indicator body having a plurality of plane faces arranged in a plurality of series; means to rotate the indicator body to select for display a character on one of the plane faces; and separate means to shift the indicator to expose the selected character.

1,804,651. REFLECTOR. FREDERIC SHIPMAN, San Francisco, Calif. Filed Mar. 27, 1929. Serial No. 350,222. 2 Claims. (Cl. 40—132.)



1. A light reflecting device for illuminating a sign plate comprising a plurality of reflecting surfaces extending from a common line, a plurality of reflecting surfaces connected to said first reflecting surfaces, a line source of light disposed substantially adjacent to the convergence of said first surfaces, means for adjusting the angularity of the first reflecting surfaces and means for adjusting the second plurality of reflecting surfaces in relation to the first reflecting surfaces independently of the adjustment of the first surfaces.

1,804,652. VISE. HOWARD W. STEIGER, Lakewood, Ohio. Filed June 24, 1930. Serial No. 463,399. 8 Claims. (Cl. 81—37.)



1. In a vise, a fixed base member, a movable base member rotatably connected to said fixed base member, a jaw member fixed to said movable base member, an opening between said base and jaw, a sliding jaw member having an elongated shank extending into said opening and provided with a groove in the bottom surface thereof, and a combined guide and stop member extending through said movable base member within the limits of said fixed base member and into said groove, and adapted to rest on said fixed base member.

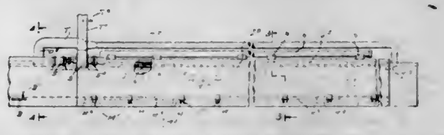
1,804,653. REFRIGERATING APPARATUS. OTTO M. SUMMERS, Dayton, Ohio, assignor to Frigidaire Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 31, 1929. Serial No. 417,703. 10 Claims. (Cl. 62—95.)

4. In refrigerating apparatus wherein is utilized a working fluid comprising a refrigerant and a liquid separable by gravity, the combination of an evaporator, means for supplying said liquid and liquid refrigerant to and for withdrawing gaseous refrigerant from said evaporator, and means responsive to pressure due to changes in temperature of said evaporator, said last named means cooperating with said vapor withdrawing means during a part only of the operation of the withdrawing means for returning liquid to said withdrawing means.

1,804,654. REFRIGERATING APPARATUS. OTTO M. SUMMERS, Dayton, Ohio, assignor to Frigidaire Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 31, 1929. Serial No. 417,705. 6 Claims. (Cl. 62—126.)

3. In refrigerating apparatus utilizing as a working fluid a refrigerant and a lubricant which separate by gravity, means for maintaining a substantially constant quantity of liquid refrigerant in the evaporator, means for removing by gravity the lubricant collecting on the surface of the liquid refrigerant in the evaporator, said means including a valve disposed at the lubricant level desired to be maintained in the evaporator, and means responsive to conditions within said evaporator for operating said valve.

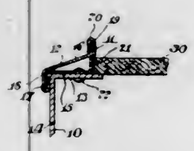
1,804,655. HALTER. KNUTE SWANJORD, Balaton, Minn., assignor of one-fourth to Ervil H. Erickson, one-fourth to Ole A. Erickson, and one-fourth to Ira Hensted, Balaton, Minn. Filed June 20, 1929. Serial No. 372,435. 4 Claims. (Cl. 54—24.)



1. A halter comprising a strand of flexible material having detachable hooks at its ends, said strand having a bight formed at its central portion comprising the head band of said halter, the portions adjacent and extending from said bight forming the sides of the halter, a nose band having detachable connections at its ends secured to said sides, the end portions of said strand beyond said nose band being crossed and said hooks at the ends thereof being connected to said strand at the sides of said bight, and a ring embracing said crossed portions to which a leading member may be connected.

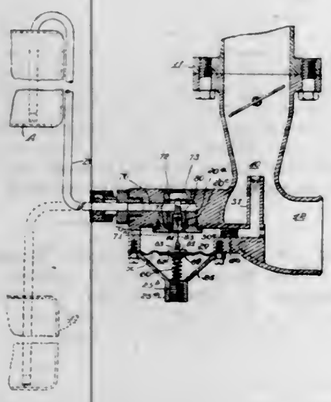
1,804,656. WAVE OPERATED PUMP. JAMES R. SWIFT, Highland, N. Y. Filed Apr. 1, 1930. Serial No. 440,669. 1 Claim. (Cl. 230—66.)

A wave operated pump, comprising in combination with a vertical tubular standard having a base and an air outlet, said standard reduced in diameter near its upper end, a tubular member mounted thereon in a freely rotatable manner, a closed head mounted thereon and rotatable therewith, a transverse shaft rotatably mounted in said head with its ends projecting therefrom, a float operated arm secured to the ends of said shaft, a pair of air compressors mounted within said head and piped to the air outlet, a compressor shaft for operating said air compressors, a gear secured thereon and a gear secured on the transverse shaft in said head and in mesh with and adapted to rotate the gear on the compressor shaft.



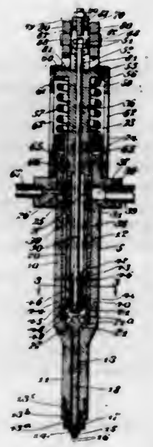
1,804,657. TUNNEL KILN. THOMAS TALBOT, Sedgley, near Dudley, Worcester, England, assignor, by mesne assignments, to Swindell-Dressler Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 22, 1929. Serial No. 379,973. 9 Claims. (Cl. 25—142.)

1. In a tunnel kiln comprising a heating zone and a cooling zone with a goods passageway therethrough, the



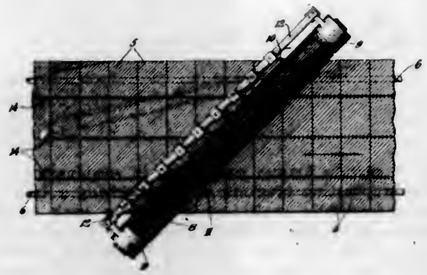
improvement which comprises a fluid channel adjacent said goods passageway in one portion of the cooling zone, a second cooling zone portion between said first mentioned portion and said heating zone and means for circulating a cooling medium through said channel in said first mentioned portion at a pressure below atmospheric and delivering said medium to said second mentioned portion at a pressure above atmospheric.

1,804,658. AUTOMOBILE BODY AND MOUNTING THEREFOR. JOHN P. TARBOX, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 16, 1927. Serial No. 213,293. 11 Claims. (Cl. 296—28.)



5. In a vehicle construction, an underframe side sill of angle section having a vertical branch and a transversely extending branch at the top of the vertical branch, and a body structure having a threshold portion, said threshold portion being generally of Z-section and seated on the transversely extending branch of the sill through the web portion of the Z, the arms of the Z forming respectively, a door overlap and an outer overlap for the sill.

1,804,659. CARBURETOR. PERCIVAL S. TICE, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Filed Feb. 16, 1927, Serial No. 168,529. Renewed May 1, 1930. 6 Claims. (Cl. 261—69.)

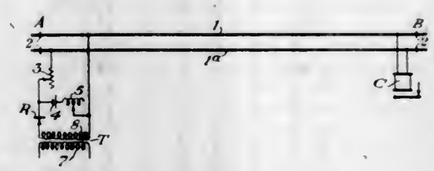


1. A carburetor for internal combustion engines comprising in combination with a fuel mixture conduit adapted for discharge connection into the intake manifold of the engine and having an air inlet; a fuel chamber having connection with a fuel source and means for maintaining predetermined pressure on the liquid in said chamber, a fuel delivery duct extending from said chamber for discharge in the fuel mixture conduit at a substantial distance above the fuel level of the fuel chamber; the means for maintaining the predetermined pressure in the fuel chamber consisting of a conduit for fuel flow from the source to said chamber, a valve in said conduit and means by which the pressure of the fuel from the source is balanced in the opposite directions for seating and unseating the valve, said chamber having a movable wall for expanding and reducing the chamber capacity, said wall being operatively connected with said balanced valve for closing it by the chamber-expanding movement of said wall, and opening it more or less by its chamber-reducing movement, yielding means acting on said moving wall for chamber-reducing movement, and means for adjusting said yielding means in predetermined relation to the pressure of a liquid column in the fuel duct leading from said chamber to the discharge of said duct in the fuel mixture conduit.

1,804,660. LIQUID FUEL FEEDING MEANS FOR INTERNAL COMBUSTION ENGINES. OTIS D. TREIBER, Narberth, Pa., assignor to Treiber Diesel Engine Corporation, Camden, N. J., a Corporation of New Jersey. Filed Mar. 31, 1927. Serial No. 179,820. 2 Claims. (Cl. 123—140.)

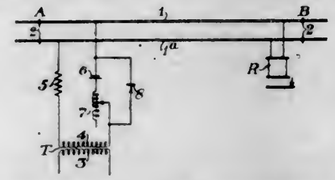
1. A device of the character described for the delivery of liquid fuel into the cylinder of an internal combustion engine, which device comprises a tubular casing having a fuel discharge opening at its inner end, a valve for closing the said discharge opening, a plunger located within the said casing which plunger includes a member the inner half part of which is provided with a relatively large axial opening into which liquid fuel is adapted to be delivered, a valve structure for controlling the discharge of fuel from the opening in said member, a rod having connection with a valve of the said valve structure and extending axially of the said member outwardly beyond the outer end thereof, yielding means tending to cause outward movement of said rod with respect to the said member, and means which is adapted to cause the said member and the said rod to move inwardly first as a unit and which thereafter causes the said rod to move inwardly more rapidly than the said member, and means whereby the unitary inward movement of the said member and the said rod operates to open the first named valve.

1,804,661. CORRUGATING MACHINE. JOSHUA WAGNER, Brooklyn, N. Y., assignor, by mesne assignments, to Diagonal Corrugated Patent Corporation, New York, N. Y., a Corporation of New York. Filed June 18, 1929. Serial No. 371,909. 7 Claims. (Cl. 154—30.)



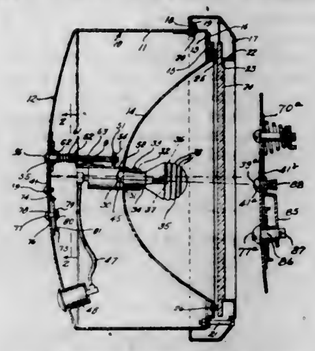
1. A machine for obliquely corrugating sheet material, having a corrugated traveling conveyor wherein the corrugations run oblique to its path of travel, a corrugating roller having longitudinal corrugations, said roller being rotatable about an axis parallel to the first mentioned corrugations.

1,804,662. DIE BLANKS AND METHOD OF MAKING DIES. FRANK O. WELLS, Greenfield, Mass. Filed Mar. 3, 1927. Serial No. 172,320. 13 Claims. (Cl. 76—101.)



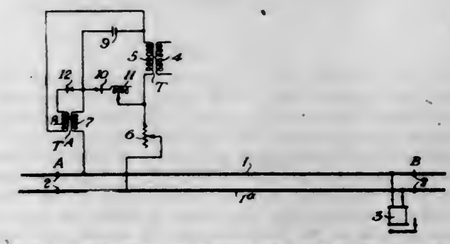
1. The method of simultaneously forming a two part die which consists in first forging a blank with an integral thin web which connects the two spaced die portions, with the lands of each die spaced and located opposite each other and having chip recesses back of the lands, next reducing the blank to the correct finished thickness, next forming an opening through the web and between the lands, next finishing the opposite edges of the lands to size, next forming threads on the lands and relieving the threads, next removing the thin web to separate the dies, then hardening and tempering.

1,804,663. ELECTRICAL APPARATUS. CONRAD H. ZIERDT, Rosedale, Penn Township, Allegheny County, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 4, 1930. Serial No. 433,081. 8 Claims. (Cl. 246—40.)



1. In combination, a direct current load, a transformer having its primary connected with a source of alternating current and its secondary connected with said load through a rectifier and a current limiting resistance, and a battery and an inductive reactor connected in series across the secondary circuit of said transformer between said rectifier and said resistance.

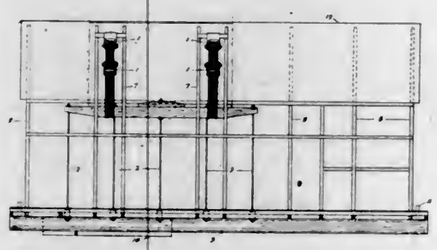
1,804,664. POWER SUPPLY SYSTEM. CONRAD H. ZIERDT, Rosedale, Penn Township, Allegheny County, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 1, 1930. Serial No. 485,703. 2 Claims. (Cl. 246—40.)



1. In combination, a source of alternating current, a load connected therewith, a battery and a reactor connected in series between one terminal of said source and said load, and a rectifier connected in multiple with said battery and said reactor and poled to prevent the flow of current from said battery through the rectifier.

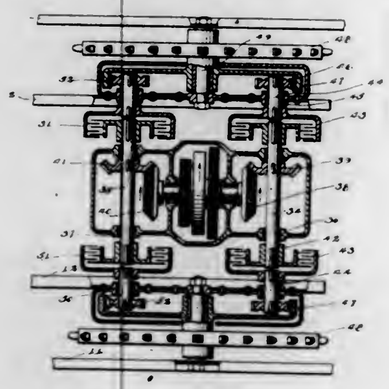
1,804,665. LAMP FOCUSING MECHANISM. SAMUEL F. ARBUCKLE, Detroit, Mich., assignor to Monogram Lens Corporation, Paterson, N. J., a Corporation of Delaware. Filed Oct. 12, 1926, Serial No. 141,054. Renewed May 17, 1930. 5 Claims. (Cl. 240—442.)

1. In a lamp adjusting mechanism, a casing, a reflector, a socket movably positioned in an aperture in said reflector, a member slidably mounted adjacent said casing, means connecting said socket and member, means to move said member with respect to said casing, an arm adjacent said member and on the opposite side thereof from said casing and means to draw said arm toward said casing whereby said member is gripped between said arm and casing.



1,804,666. RAILWAY TRACK CIRCUIT APPARATUS. DAVID C. BETTISON, Omaha, Nebr., assignor of one-half to Frank W. Pfleging. Filed Jan. 22, 1930, Serial No. 422,556. Renewed Mar. 13, 1931. 5 Claims. (Cl. 246—34.)

5. In combination, a section of railway track, a track circuit for said section including a track relay connected



across the rails at one point and a source of alternating current and a battery connected in series across the rails at another point, and means for supplying direct current to said battery from said alternating current source at a rate proportional to the amount of alternating current drawn from said source by said track circuit.

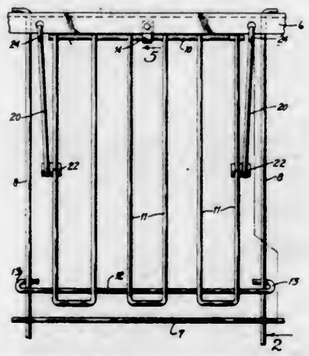
1,804,667. FLOATING MARINE WAY. FRED BITTE, Portland, Oreg. Filed May 12, 1930. Serial No. 451,620. 4 Claims. (Cl. 114—68.)

1. In a floating marine ways, a carriage consisting of the combination of two timbers, of rectangular cross section, separated by six bracing timbers, two of which run directly between the timbers and four of which run diagonally between said timbers, and from each of which five iron rods, equally spaced along the length of each of said timbers, are dropped to five timbers directly below and running at right angles to said timbers, the lower timbers being held in position by two bilge block slides and by two lengths of angle iron, each length fixed to the iron rods by means of U bolts.

1,804,668. POWER TRANSMISSION. JOHN F. BOLGIANO, Dayton, Ohio. Filed July 12, 1924. Serial No. 725,594. 13 Claims. (Cl. 180—17.)

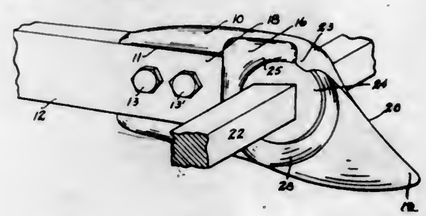
4. In a tractor, a frame, a pair of independent driver wheels at opposite sides of said frame, a power transmission mechanism between said wheels comprising continuously driven forward and reverse shafts, low speed gears in constant driving relation with said shafts through the underrunning portion of an over-running clutch, high speed gears selectively connected with the power means of the tractor having connection with said shafts through the over-running portion of the said over-running clutch, and means for selectively connecting said shafts with said driver wheels.

1,804,669. CURTAIN FIXTURE AND SUPPORTING BRACKETS THEREFOR. JAMES H. BOYE, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 16, 1929. Serial No. 332,862. 4 Claims. (Cl. 156—19.)



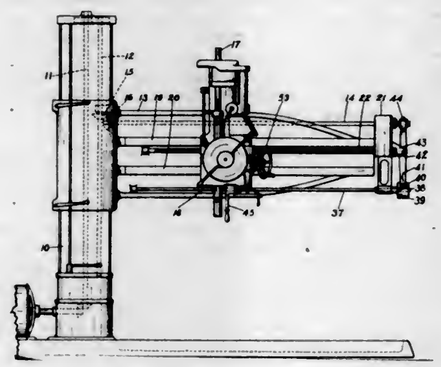
1. A curtain fixture, comprising in combination a pair of rod-supporting brackets each comprising a base plate and a forwardly projecting upstanding hook having a concave inner edge extending from the tip of the hook to said base plate, and a curtain rod having rearwardly directed end portions formed wtih apertured top walls to engage over said hooks, said apertures being spaced from the ends of said rod a distance approximately equal to the distance from the top of a hook to the lower end of its concave inner edge.

1,804,670. NASAL PELLET. EDWARD J. BRENNAN, Harrisburg, Pa., assignor to Nasalets Inc., New York, N. Y., a Corporation of New York. Filed Apr. 11, 1930. Serial No. 443,288. 4 Claims. (Cl. 128—198.)



3. A device for use in the treatment of colds and the like comprising a pellet formed of a sheet of soft absorbent fibrous material carrying a quantity of inhalant and loosely wound into a substantially cylindrical roll, the successive layers of said roll being spaced to provide a plurality of air passages extending longitudinally of the roll.

1,804,671. POULTRY COOP GATE. ERNEST R. CARR, Clinton, Iowa, assignor to The Collis Company, Clinton, Iowa, a Corporation of Iowa. Filed Sept. 22, 1930. Serial No. 483,434. 9 Claims. (Cl. 119—17.)

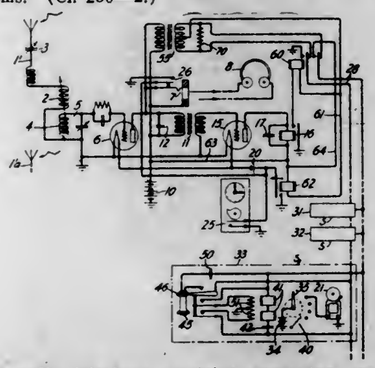


1. In combination with a coop having a frame defining an opening with guide wires at opposite sides thereof, a gate in which is comprised a bottom horizontal wire with its ends looped around the guide wires, a series of vertical wires joined at their lower ends to the horizontal wire, a top horizontal wire connected to the vertical wires, a latch with which the top wire is adapted to engage to hold the gate closed, and a pair of link arms pivotally connected to the coop structure above the gate and to the latter at a point intermediately of its upper and lower ends adapted to cause the gate to move in and swing to a substantially horizontal position while its lower horizontal wire remains looped upon the guide wires.

1,804,672. SHOE BEARING. CLAUDE C. CALKINS, Spokane, Wash. Filed Dec. 7, 1929. Serial No. 412,436. 6 Claims. (Cl. 97—42.)

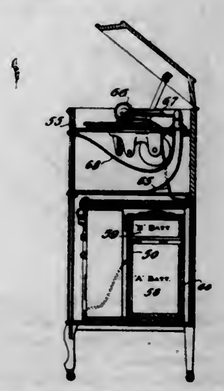
1. A shoe bearing of the character described comprising a body member having a forwardly projecting and downwardly inclined nose, a bearing formed partly integral with the body member and partly of a removable section aligned therein, a rotatable flanged journal member in said bearing, a recess on one side of the body member to receive the flange of the journal member, a lip integral with the body member to engage over the flange, and means upon the removable bearing member to prevent lateral displacement of the rotatable journal.

1,804,673. RADIAL DRILL. NORMAN B. CHACE, Cincinnati, Ohio. Filed Oct. 14, 1925. Serial No. 62,486. 5 Claims. (Cl. 77—28.)



5. A machine having in combination a supporting rail, a power means, a screw shaft extending longitudinally of the rail, reversible means for driving the screw shaft from the power means, a carriage reciprocally mounted on the rail, a worm wheel on the carriage and engaging the screw for converting rotatory motion of the screw into movement of the carriage longitudinally of the rail, a manually operable means on the carriage, gearing associated with the worm wheel and the manually operable means for transmitting motion of the manually operable means to the worm wheel, said gearing being incapable of transmitting motion of the worm wheel to the manually operable means, and means for controlling transmission of power from the power means through the reversible power transmitting means to the screw shaft.

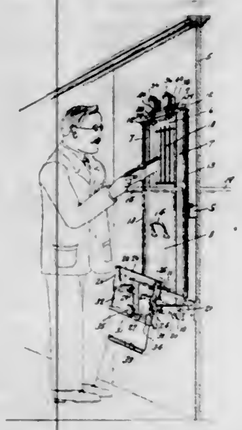
1,804,674. PHOTOGRAPHIC SENSITIZER AND PROCESS FOR MAKING IT. HANS T. CLARKE, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 2, 1926. Serial No. 85,588. 12 Claims. (Cl. 260—41.)



1. A dye effective for the sensitization of photographic emulsions to that portion of the spectrum beyond 780 μ, produced by the chemical action of a strong base upon a quaternary ammonium salt derived from lepidin, and iodoform, and the crystals of which are in the form of golden green leaflets.

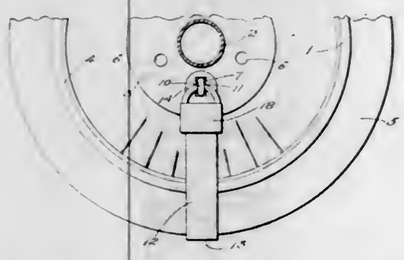
1,804,675. SIGNALING SYSTEM. HENRY P. CLAUSEN, Mamaroneck, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 2, 1927. Serial No. 171,971. 9 Claims. (Cl. 250—2.)

1. A radio telephone receiving apparatus comprising a space discharge device, a local source of power therefor, timing means for normally disassociating and for periodically associating for short periods said device and said source of power, a circuit controlling device controlled by said space discharge device and controllable through said device from a distant radio transmitting station, whereby said transmitting station may operate said circuit controlling device during said periods and means operable by a local operator for associating said device and source of power independently of said timing means whereby said receiving apparatus may be maintained energized for longer periods when desired.



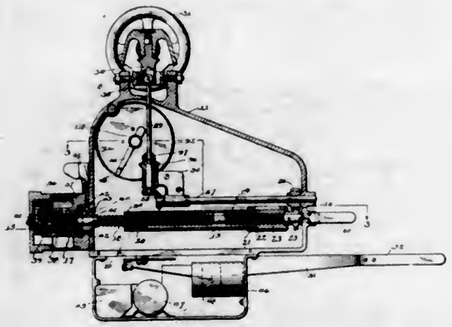
1,804,676. RADIO APPARATUS. WILLIAM J. DALTON, Bridgeport, Conn., assignor to Columbia Phonograph Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed Mar. 5, 1925. Serial No. 18,131. 4 Claims. (Cl. 250—14.)

1. In combination, a cabinet, a radio set, and an open-ended frame non-rotatably mounted within the cabinet



including a set supporting base, side walls, and a top wall, and an antenna disposed about the frame and extending substantially throughout its depth, the depth of said frame substantially approaching its other dimensions whereby the antenna is non-directional, said set being indisposed within and surrounded by said frame and antenna.

1,804,677. PROTECTIVE STRUCTURE FOR CASHIER AND TELLER WINDOWS. FRANK DAVIS, Brooklyn, N. Y. Filed Jan. 28, 1930. Serial No. 424,093. 3 Claims. (Cl. 268—2.)



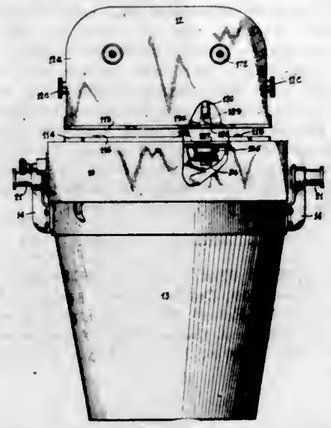
1. In means to control a self-closing protective closure for pay windows, a releaseable detent mechanism for retaining said closure in normal open position, comprising a pivoted detent lever, means on said closure engageable by said detent lever, a fixed housing adjacent to said detent lever, a spring-pressed plunger mounted in said housing to yieldably thrust said detent lever in closure engaging position, a swingable means having a laterally extending presser board engageable by the leg of a person positioned behind the window, and means carried by said swingable means to engage and turn said detent lever to closure releasing position.

1,804,678. AUTO WHEEL AND TIRE LOCK. CHARLES HUGH DUFFY, Miami, Fla. Filed Apr. 18, 1928. Serial No. 270,938. 1 Claim. (Cl. 70—90.)

A device of the character described including, in combination with a wheel and tire and a wheel-retaining nut comprising a wrench accommodating portion and having a transverse hole therethrough, a metal loop-shaped member adapted to straddle the tire, the ends of said member being adapted to extend to the said wheel-retaining nut, one of said ends being provided with means for engagement with the nut, the other of said ends being provided with means for engagement with the nut to prevent rotation of the nut relatively to the said loop-shaped member and adapted to be retained in such engagement with the nut by a padlock secured in the hole in the nut.

1,804,679. BOMB SIGHT. GEORGES ESTOPPEY, Dayton, Ohio. Filed Jan. 7, 1925. Serial No. 1,024. 33 Claims. (Cl. 33—46.5.)

1. In a sighting apparatus for use with a moving object, in combination, a sighting member, manually controlled means for moving said member to continuously follow the movement of a distant object sighted, a mechanism comprising a screw connected to said means, a device controlled by said mechanism to be moved thereby to determine the instant when a releasable object should be released from said body to fall on the object sighted, and means for lengthwise adjusting said screw and said device in correspondence with and to compensate for air lag correction.



9. In a sighting apparatus for use with a moving object, in combination, a sighting member, manually controlled means for moving said member to follow the movement of a distant object sighted, a mechanism connected to said means, a device controlled by said mechanism to be moved thereby to determine the instant when a releasable object should be released from said body to fall on the object sighted, a sighting device cooperating with said sighting member, and compensating means for laterally adjusting said sighting device for compensating for the transverse component of winds.

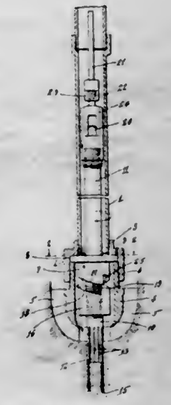
28. In a sighting apparatus for use with a moving body, in combination, an indicating needle, clock work connected to drive said needle including a main spring and an escapement, a device for starting and stopping the indicating needle, a rotatable member, a mechanism operated at a pre-determined position of said member by rotating said member in one direction to operate said device and start the needle, a manually controlled wheel for rotating said member, and a stop for said wheel to stop the same at a position immediately adjacent to the position corresponding to said predetermined position of said member.

1,804,680. FILM-CHANGING AND POSITIONING DEVICE FOR CAMERAS. SHERMAN M. FAIRCHILD, New York, N. Y. Original application filed Mar. 1, 1923, Serial No. 622,032. Divided and this application filed Dec. 23, 1926. Serial No. 156,560. 29 Claims. (Cl. 95—34.)

1. In an aerial camera having an exposure plane in which a film positioning plate is arranged, film-feeding means, film guide rollers adjacent to said plane to determine the plane of movement of the film, and a pressure-plate adapted to press the film on said film positioning plate into the exposure plane, and movable from the exposure plane through the movement plane of the film to permit feeding movement of the film without contact

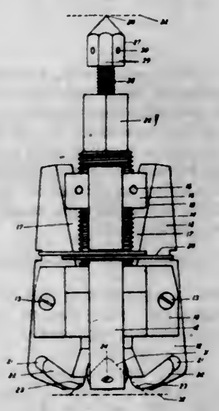
with the pressure plate, means for actuating said pressure plate comprising a plurality of elements positively actu-

ated by said feeding mechanism and directly connected to said pressure plate by pressure resisting resilient members.



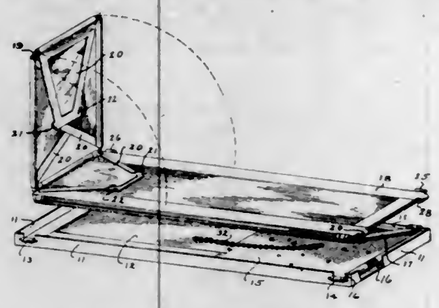
1,804,681. EXPANSIBLE BIT. GEORGE N. FITCH, Ventura, Calif. Filed May 6, 1930. Serial No. 450,168. 20 Claims. (Cl. 255—76.)

1. An expansible bit comprising a slotted body, cutter carriers fulcrumed in said slots transverse of the drilling axis of said bit so that their cutter ends may be swung outwardly to expanded position and inwardly to collapsed position, an axially movable mandrel having upper and lower heads, a cavity formed between said carriers below their fulcrums to accommodate the lower head, said heads being spaced in relation to said carriers so that with progressive advance of the mandrel towards the lower end of the body the lower head is disposed in said cavity to enable collapsion of the carrier, then the lower head is disposed between said carriers to expand said carriers, and next the lower head is cleared of said carriers and the upper head is disposed between said carriers to collapse the latter, and means to advance said mandrel.



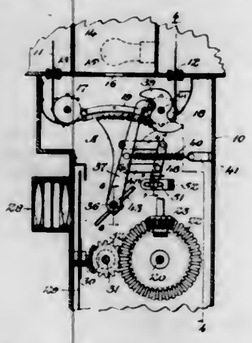
1,804,682. CORE DRILLING ATTACHMENT. GEORGE S. FOSNAUGH, Compton, and HENRY H. THRASHER, Southgate, Calif. Filed Nov. 2, 1929. Serial No. 404,288. 3 Claims. (Cl. 255—72.)

1. In a core-taking drill or reamer, the combination of rotatable drill tubing, a non-rotating core barrel passing upwardly through the tubing, a collar mounted to rotate with the tubing, a collar carried by the core-barrel, and correlated cam means on the said collars operating to



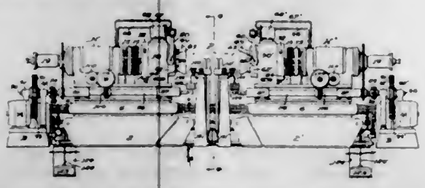
support the tubing and raise the same on the collar of the core-barrel and thereafter to permit the tubing to descend, thereby driving the core-barrel through the formation without rotation.

1,804,683. RIVET ROLLING DEVICE. JOHN GARDINER, Los Angeles, Calif. Filed Mar. 31, 1930. Serial No. 440,344. 2 Claims. (Cl. 78—47.)



1. A rivet tightening tool comprising: a body; vertical slots in said body; a plurality of arms swingingly supported in said slots; hardened steel rollers revolvably supported at the lower end of said arms; means for adjusting the inclination of said arms; means for revolving said body and means for advancing said rollers into contact with a rivet head.

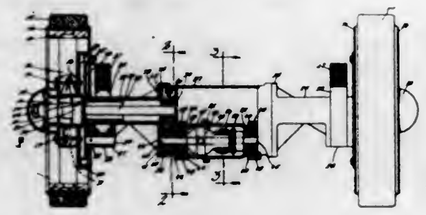
1,804,684. COLLAPSIBLE MINNOW TRAP. JAMES C. GOODLET, Indianapolis, Ind. Filed Feb. 12, 1930. Serial No. 427,765. 6 Claims. (Cl. 43—105.)



1. In a minnow trap, a base, enclosing walls hinged thereto, and an entrance funnel formed of wings detachably securable one to the other by an ear in one passed through a slot in the other, all of said parts being proportioned to permit of their being folded to form a flat compact package within the confines of the base.

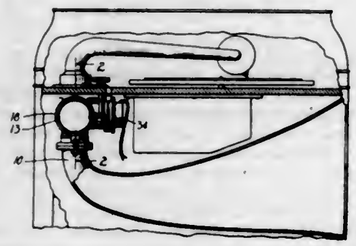
1,804,685. MOTION PICTURE APPARATUS. WILLIAM K. GRIMM, Elkhart, Ind. Filed Feb. 4, 1929. Serial No. 337,189. 4 Claims. (Cl. 88—16.8.)

1. In a motion picture apparatus, means to move a film continuously, a rotatable shaft transverse the film, an arm fixed on the shaft, means to oscillate said arm and shaft in synchronism with the movement of the film, a reflector fixed on said shaft, and a framing mask overlying the film, said framing mask being loosely mounted on the shaft and connected to said arm by an adjustable lever and linkage whereby the position of the framing mask with respect to the reflector may be altered.



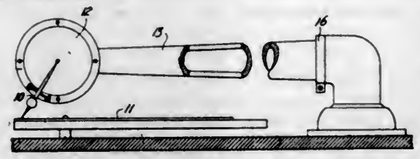
1,804,686. THREAD MILLING MACHINE. PETER P.-G. HALL, Philadelphia, Pa. Filed Nov. 10, 1922. Serial No. 600,041. 12 Claims. (Cl. 10—154.)

1. A machine of the class described comprising a supporting bed, a pair of milling heads supported in opposed relation on the bed and each adapted to cause a rotating milling cutter to move in a planetary orbit about a stationarily supported piece of work disposed between the heads, means for actuating the heads, means for simultaneously moving the heads longitudinally of the supporting bed in opposite directions, and means adjacent and longitudinally movable with each head for chucking the work in a stationary position between the heads.



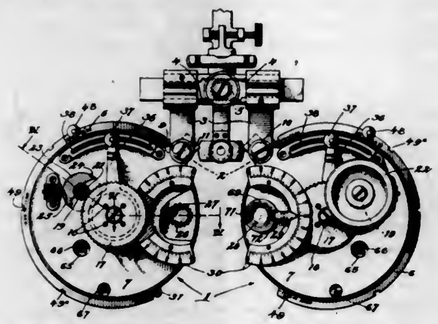
10. In a machine of the class described having a bed provided with ways and a carriage slidable on said ways, means for protecting said ways from an accumulation of chips and the like and comprising a sheave disposed adjacent each end of the ways and aligned therewith and a flexible element secured at its ends to the opposite ends of the carriage and extending over both of said sheaves and over the exposed portions of the ways.

1,804,687. MOTOR VEHICLE CONSTRUCTION. ALEXANDER C. HAMILTON, Detroit, Mich., assignor, by mesne assignments, to Relay Motor Products Corporation, Bridgeport, Conn., a Corporation of Delaware. Filed Aug. 23, 1926. Serial No. 130,829. 8 Claims. (Cl. 180—10.)



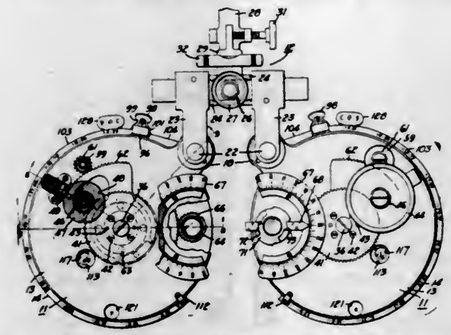
1. In a driving mechanism for a motor vehicle, in combination, a pair of aligned housing members connected together at their adjacent ends by a member bridging said ends, an axle shaft rotatably carried by each of said housings, said shafts being relatively widely spaced from each other at their adjacent ends, a wheel connected to the outer end of each of said shafts, a gear secured to the inner end of each of said shafts, a pair of aligned shafts rotatably supported eccentrically of and normally below said axle shafts, gears on the ends of the last mentioned pair of shafts meshing with the corresponding gears on said axle shafts, a differential mechanism connecting said pair of shafts, and a propeller shaft operatively connected to said differential mechanism for driving the same, said propeller shaft being supported to swing about the axis of said pair of shafts relative to said housings.

1,804,688. ACOUSTIC DEVICE. HENRY C. HARRISON, Port Washington, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 28, 1927. Serial No. 202,072. 16 Claims. (Cl. 181—27.)



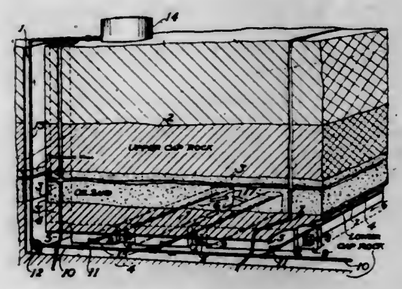
1. In an acoustic transmission line, an attenuating network of acoustic resistances comprising a section having both series of shunt resistance components.

1,804,689. ACOUSTIC DEVICE. NEWMAN H. HOLLAND, Montclair, N. J., assignor to Western Electric Company, New York, N. Y., a Corporation of New York. Filed Apr. 30, 1926. Serial No. 105,747. 7 Claims. (Cl. 274—23.)



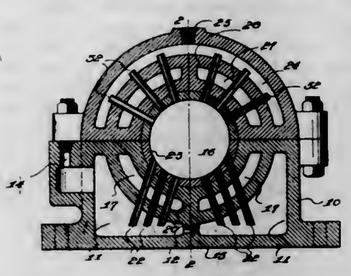
2. An acoustic element, comprising a plurality of longitudinal and co-extensive sections of resonant metallic materials which transmit sound vibrations at different velocities, means for holding said sections in longitudinal contact with each other, so that any motion of one section which is not common to all is opposed by the friction between this one section and the other sections with which it is in contact.

1,804,690. OPTOMETRIST INSTRUMENT. CLYDE L. HUNSICKER, San Francisco, Calif., assignor, by mesne assignments, of one-half to Aaron S. Green and Louis D. Green. Filed Oct. 25, 1926. Serial No. 143,853. 20 Claims. (Cl. 88—22.)



1. In an optical instrument of the character mentioned, a rotatably mounted support fitted with a series of minor lenses of graduated strength, a second rotatable support, a plurality of planetary members on said second rotatable support, each fitted with a plurality of major lenses of gradnated strength, and means for turning the planetary members one lens space upon each complete revolution of the minor lens-support.

1,804,691. OPHTHALMOLOGICAL INSTRUMENT. CLYDE L. HUNSICKER, San Francisco, Calif. Filed May 4, 1927. Serial No. 188,734. 27 Claims. (Cl. 88—22.)

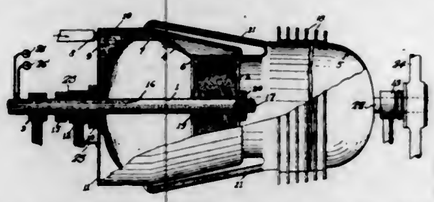


1. In a device of the class described, a movable member carrying a plurality of minor lenses, another movable member carrying a plurality of major lenses, means mechanically connecting said members whereby upon movement of one of said members, any one major lens may be superposed with any one minor lens upon movement of one of said members, and means for disengaging said mechanical connection.

1,804,692. METHOD AND APPARATUS FOR WORKING OIL SANDS. CHARLES F. JACKSON, Minneapolis, Minn., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Sept. 27, 1926. Serial No. 137,871. 2 Claims. (Cl. 262—3.)

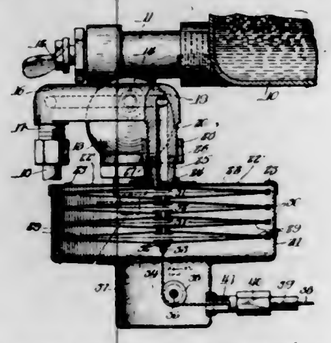
1. The method of operating an oil field, which comprises forming a main gallery with a pair of adjacent and substantially parallel branch galleries a short distance below the oil-bearing stratum, drilling holes for explosive charges in the region lying between the branch galleries, except near the main gallery, exploding charges in said holes to disrupt and weaken said region, whereby the oil-bearing stratum is caused to settle with the formation of an artificial fault therein, preventing access from said branch gallery to the main gallery, except through collecting pipes, and withdrawing oil through said pipes.

1,804,693. WATER COOLED BEARING. JOHN D. JONES, Portland, Oreg. Filed June 19, 1926, Serial No. 117,080. Renewed Sept. 24, 1930. 3 Claims. (Cl. 308—77.)



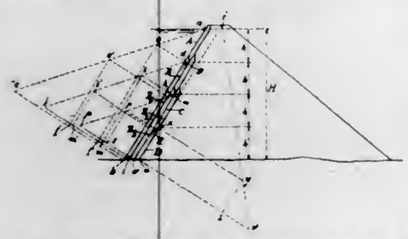
1. A bearing having a journal opening, a cooling chamber spaced about the journal opening, a lubricant supply chamber spaced about the cooling chamber, inflow and outflow conduits spaced upon opposite sides of the plane of maximum contact, said inflow and outflow conduits forming communication from the journal opening to the lubricant supply chamber and passing through the cooling chamber.

1,804,694. MERCURY VAPOR TURBINE. LLOYD T. JONES, Berkeley, Calif. Filed Apr. 28, 1924. Serial No. 709,453. 7 Claims. (Cl. 60—36.)



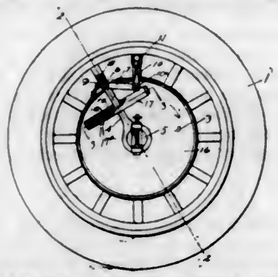
7. A rotor engine operated by mercury vapor, said engine comprising a condensation chamber and a vaporization chamber and impeller means interposed between and in

longitudinal alignment with said condensation and vaporization chamber, said impeller means and vaporization and condensation chambers being rotatable as a unit, and



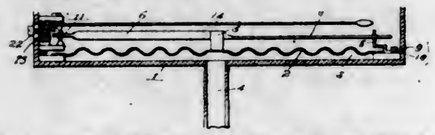
one or more passageways extending from one chamber to the other and in communication therewith whereby said mercury is returned by centrifugal force due to the rotation of said engine.

1,804,695. LIQUID LEVEL GAUGE. CARL KNOBLOCH, Middletown, Conn. Filed July 30, 1926. Serial No. 125,844. 2 Claims. (Cl. 73—54.)



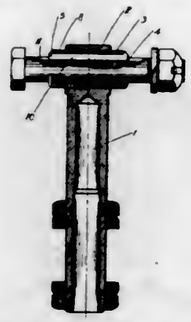
1. In a liquid level gauge, the combination of a container for liquid, a vertically disposed self-contracting bellows diaphragm subject externally to atmospheric pressure located beneath and at its upper end communicating with said container, an indicator, a mechanical connecting element between the lower end of said diaphragm and said indicator operating to transmit contracting movement of said diaphragm to said indicator, and a spring exerting a constant pull on said connecting element and actuating said indicator in the reverse direction during the expanding movement of said diaphragm.

1,804,696. DAM CONSTRUCTION. JOSEPH KRAČMER, Brno, Czechoslovakia. Filed Mar. 9, 1929. Serial No. 345,624. 8 Claims. (Cl. 61—30.)



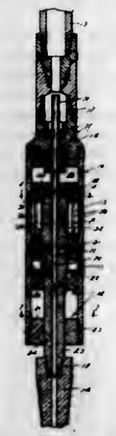
1. In a dam construction, the combination with a dam body composed of material penetrable by water, of a watertight construction which comprises a series of spaced substantially parallel walls extending across the entire width of the dam body, said walls including two upstream walls of substantially equal height, the other walls successively decreasing in height; said walls providing a set of watertight spaces adapted to be filled partially with water and partially with air to permit rise of water level in a space without overflow into adjacent spaces, means for sealing said spaces at the tops thereof, and means for establishing communication between said spaces and the atmosphere.

1,804,697. BRAKE AND METHOD OF ACTUATING THE SAME. HUGH C. LORD, Erie, Pa. Filed Jan. 26, 1925. Serial No. 4,865. 53 Claims. (Cl. 188—2.)



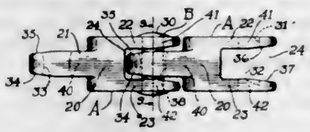
1. In a brake the combination with a rotating member and a brake member acting frictionally on the rotating member of devices comprising means setting the brake member, said devices compelling a braking effort corresponding in torque resistance to the setting of the devices.

1,804,698. PRESSURE GAUGE. GEORGE P. LUCKEY, Lancaster, Pa. Filed Feb. 18, 1928. Serial No. 255,327. 5 Claims. (Cl. 73—110.)



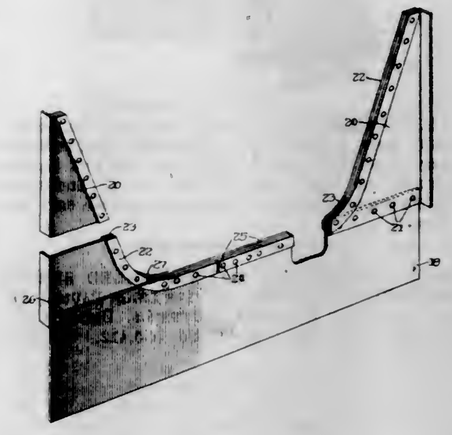
2. A device of the character described including a casing, a diaphragm fixed therein to form a chamber in the casing, an arm mounted on the diaphragm in a plane substantially parallel to the plane of the diaphragm, one portion of the arm being a spring, an adjustable clamp for holding the outer end of the spring portion of the arm relative to said casing, the other end of the arm being bifurcated to form two fingers, a pointer, means for rotatably mounting the same, said means including a spiral shaft lying in the bifurcated portion of the said arm and adapted to be snugly straddled by the said fingers thereof.

1,804,699. SHAFT KEYING DEVICE. DWIGHT C. MAIER, Bryan, Ohio. Filed Jan. 20, 1922. Serial No. 530,721. 1 Claim. (Cl. 287—52.05.)



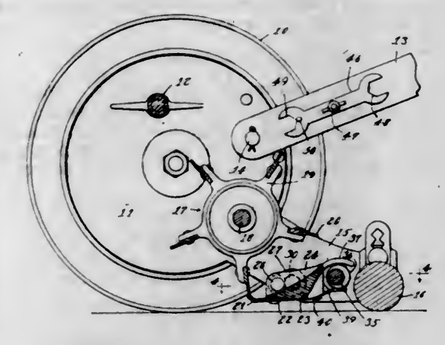
The combination with a shaft having a longitudinal recess in the surface thereof, of a sleeve mounted thereon, said sleeve having a corresponding longitudinal recess opposed to said shaft recess, a key extending throughout the length of said sleeve and engaging in both of said recesses and projecting ears integral with said key and on the ends thereof for securing said key to said sleeve, said sleeve being provided with angularly extending surfaces engaged by said projecting ears on said key ends, said angularly extending surfaces being cut at an acute angle relative to the longitudinal recess in said sleeve.

1,804,700. JARRING TOOL. WILLIAM H. MAXWELL, Los Angeles, Calif. Filed Apr. 5, 1927. Serial No. 181,060. 3 Claims. (Cl. 255—27.)



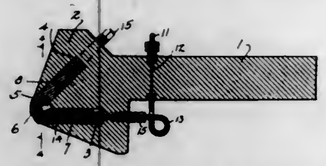
1. A well tool of the character described including two sections having co-operating parts forming a closed compression chamber and a closed receiving chamber, means for admitting fluid freely from the receiving chamber to the compression chamber, and means for freely passing fluid from the compression chamber after the fluid in the compression chamber has operated to retard movement between the sections, there being a fluid circulation opening through the tool.

1,804,701. CHAIN CONVEYER. JULIUS J. MOJONNIER, Oak Park, Ill., assignor to Mojonnier Bros. Co., a Corporation of Illinois. Filed Apr. 1, 1929. Serial No. 351,620. 8 Claims. (Cl. 198—189.)



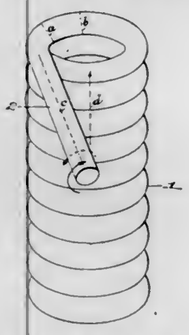
1. A conveyer chain composed of links each having a central block-like body provided with tooth-engaging surfaces, a central vertical leaf-like projection extending from one end of said body and a pair of similar outer projections extending from the other end of said body, said outer projections being spaced apart far enough to provide a slot wider than said central projections, the central projection of one link being adapted to fit loosely within the slot of the next link, thus providing for a limited lateral relative movement of the links as well as for the usual vertical movement, the upper surface of the chain being transversely crowned and the outer ends of said projections near said upper surface and the body corners in longitudinal alignment with said projections all being rounded to avoid interfering with articles being conveyed, and a transverse pivot pin for each set of interleaved projections loosely connecting the adjacent links to permit of said lateral and vertical movements.

1,804,702. CAR CONSTRUCTION. JOHN O. NEIKIRK, Chicago, Ill., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed Sept. 5, 1930. Serial No. 479,855. 4 Claims. (Cl. 105—411.)



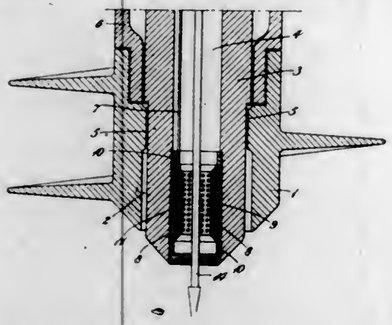
1. In combination with a railroad car having side walls, a gusset extending between and secured to said side walls comprising a lower portion and upstanding side portions secured to opposite sides of said lower portion, and reinforcing means on the upper edge thereof composed of two complementary parts having their jointure to one side of the center of said gusset.

1,804,703. LAWN MOWER. WINFIELD S. NICHOLS, Rockford, Ill. Filed Feb. 10, 1930. Serial No. 427,121. 20 Claims. (Cl. 56—294.)



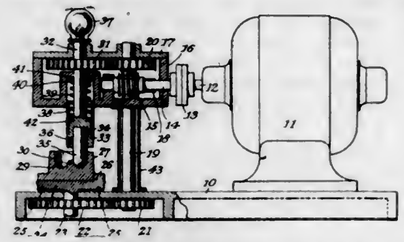
16. In a lawn mower, the combination with the frame, and a cutter bar pivotally mounted therein on the longitudinal axis parallel with the cutting edge thereof, of a longitudinal member extending rearwardly from the cutter bar and having a fork at the rear thereof, and an eccentrically mounted member received in said fork and arranged when turned to tilt the cutter bar about its longitudinal axis, one side of the fork being rigid with said member providing a bearing surface for engagement with the eccentric, and the other side of the fork being yielding and bearing against the eccentric on the opposite side thereof, whereby the eccentric is yieldingly held against turning out of adjusted position.

1,804,704. PRESSURE BAR FOR VENEER MACHINES. GEORGE H. OSGOOD, Tacoma, Wash. Filed June 7, 1930. Serial No. 459,699. 3 Claims. (Cl. 144—213.)



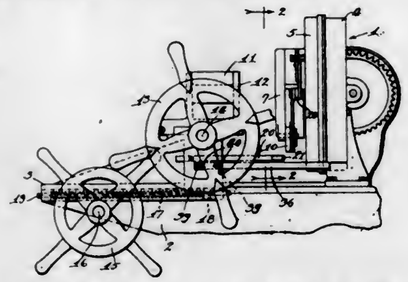
1. In a pressure bar for veneer machines, a main bar; a rotary nose; a plurality of separated complementary bearing blocks supported in said main bar and together supporting the rotary nose between them; and means for supplying a lubricant in the space between said bearing blocks.

1,804,705. METHOD OF MAKING COILED SPRINGS AND SPRING CASINGS. CHARLES LEIGH PAULUS, Dayton, Ohio, and HERBERT O. RUSSELL, Detroit, Mich. Filed Apr. 18, 1922. Serial No. 555,412. 4 Claims. (Cl. 153—64.)



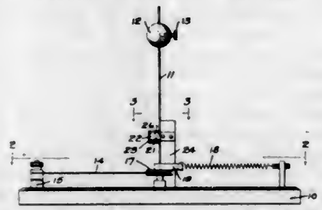
1. In the art of making coiled springs, the herein described method, consisting in winding a rod or wire into a coil and simultaneously causing the convolutions of the coil to assume a closed contactual relation by imparting an axial twist to the rod or wire.

1,804,706. PILE SCREWING APPARATUS. WILLIAM ARCHIBALD RADICE, Westminster, England, assignor to Braithwaite and Company Engineers Limited, London, England. Filed Apr. 21, 1930, Serial No. 445,941, and in Great Britain June 24, 1929. 9 Claims. (Cl. 61—80.)



1. Pile screwing apparatus comprising in combination a screw head, a tubular screwing key engaging the head, an orificed chamber near the lower end of the bore on the key and means for delivering air under pressure to the chamber.

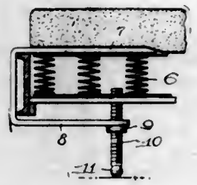
1,804,707. MIXING MACHINE. PHILIP GORDON RUDIN, Pittsburgh, Pa. Filed Nov. 18, 1929. Serial No. 407,892. 4 Claims. (Cl. 259—81.)



1. In a mixing machine, a mortar having an annular channel of symmetrical cross section in relation to the center line of said channel; a pestle shaped to operate in said channel, so that its end is adapted to completely fill out the cross section of said channel while being rotated therein; means to rotate said mortar; means to rotate said pestle, said mortar and said pestle being excentrically arranged so that said pestle may travel along said channel while said mortar is being rotated.

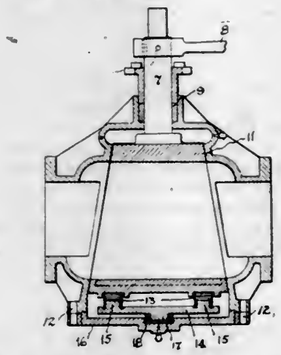
1,804,708. THREAD CUTTING MACHINE. ANTONE SCHUMACKER, Chicago, Ill. Filed June 2, 1927. Serial No. 195,998. 4 Claims. (Cl. 10—96.)

1. In a thread-cutting machine having a rotative die-supporting head, thread-cutting dies on and rotative with said head, and movable work-supporting and feeding means, the combination of die-setting and releasing lever pivotally supported on and rotative with said head, a cam mounted on and in rotative relation to said head and in engagement with said die-setting and releasing lever and dies and forming a connection between the same, means operatively connected with said work-supporting and feeding means and adapted to engage said die-setting and releasing lever on said head, for releasing the dies, and means operatively connected with and adapted to be operated by said movable work-supporting and feeding means, for automatically setting the thread-cutting dies in thread-cutting position in the rotative head.



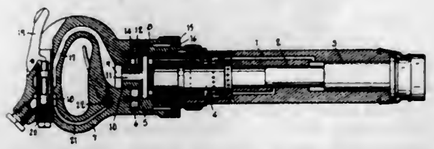
1,804,709. THERMOMOTIVE DEVICE. MILTON H. SHOENBERG, San Francisco, Calif. Filed Jan. 23, 1928. Serial No. 248,956. 6 Claims. (Cl. 200—113.)

1. In a device of the class described, a lever made of a spring strip, a support to which one end of said strip



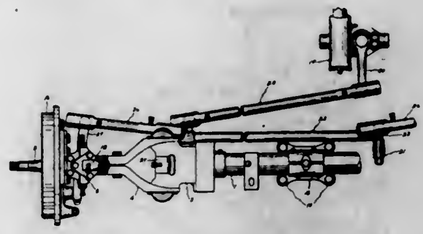
is rigidly secured, a weight carried by said strip, thermal electric means imparting a pendulum movement to said lever, and means for automatically changing the effective lever arm of said strip during each complete swing of said weight.

1,804,710. ATTACHMENT FOR BEDS. OAKLEY SMITH, Chicago, Ill. Filed Nov. 7, 1930. Serial No. 494,008. 3 Claims. (Cl. 5—226.)



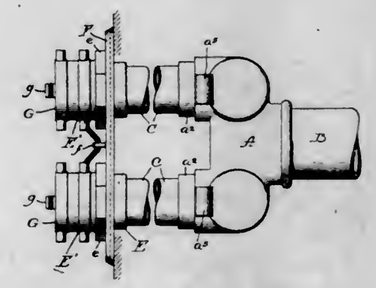
1. An attachment for a bed comprising a U-shaped structure, the unattached end of one arm whereof is provided with an adjustable leg, whereby the other arm of said U-shaped structure may be inserted transversely of the mattress of a bed and the leg adjusted to provide relative stability to the supported area of the mattress.

1,804,711. VALVE. THOMAS RUSSELL SMITH, Youngstown, Ohio. Filed Apr. 9, 1927. Serial No. 182,333. 4 Claims. (Cl. 251—112.)



1. In a valve, the combination of a valve body, a tapering valve-plug therein having an operating handle at its small end, a set of symmetrically positioned decentered springs supporting said plug, a disk engaging said springs, a closure-head secured to the valve body, and means for preventing dragging action by the springs, said means including ball bearing elements between said valve-plug and said closure-head.

1,804,712. PNEUMATIC HAMMER. HERMAN A. STEVENS, Kalamazoo, Mich. Filed Aug. 4, 1930. Serial No. 472,830. 6 Claims. (Cl. 121—36.)

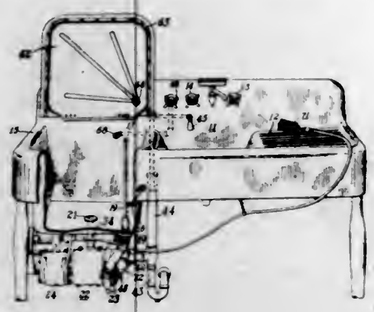


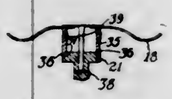
5. In a pneumatic tool, the combination of a cylinder and coacting plunger, the cylinder being provided with a head having an inlet therein, a handle provided with a cushioning chamber in which said head is reciprocatingly mounted, said cylinder inlet being in communication with said cushioning member, a control valve for said inlet passage, and a valved by-pass for said control valve.

1,804,713. STEERING CONTROL. WILLIAM S. STOCKTON, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 26, 1926. Serial No. 150,743. 2 Claims. (Cl. 280—95.)

1. In a steering control for a motor vehicle having dirigible wheels independently movable in a vertical direction, the combination with a wheel knuckle, of an arm pivotally mounted on the vehicle and having a ball joint connection with said knuckle, a spring having a ball joint connection to said knuckle and a fixed connection to the vehicle, a lever having a pivotal mounting on said vehicle concentric with the axis of said arm and extending toward said spring, a rod having ball joint connections with said lever and said knuckle for rotating the knuckle in its ball joint mountings and means for operating said lever.

1,804,714. STAND PIPE CONNECTION FOR BUILDINGS. WILLIAM H. SYMONDS, Chicago, Ill., assignor to W. D. Allen Manufacturing Company, Chicago, Ill., a Corporation. Filed Mar. 4, 1927, Serial No. 172,702. Renewed Oct. 4, 1930. 8 Claims. (Cl. 137—18.)

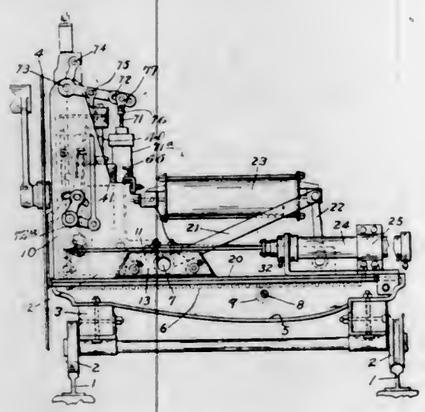




1. A stand pipe connection for buildings comprising a casing adapted to be disposed horizontally at the inside of a building wall and having an outlet on one side and a plurality of threaded inlets on another side, valves within the casing for controlling said inlets, a plurality of threaded nipples for engaging said inlets and adapted to be disposed through the wall, and hose couplings threaded to the outer ends of said nipples.

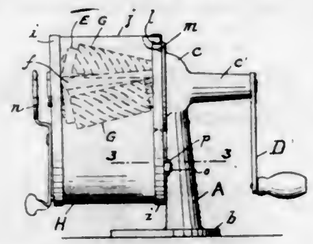
1,804,715. COMBINATION SINK AND CONVERTIBLE DISHWASHER. THEODORE TAFEL, Jr., Ben Avon, Pa., assignor to Standard Sanitary Manufacturing Co., a Corporation of Pennsylvania. Filed Mar. 31, 1928. Serial No. 266,190. 5 Claims. (Cl. 141—9.)

1. A kitchen fixture having in combination a washing compartment, a drain located in the bottom of said compartment, a water inlet located adjacent one wall of said compartment, a frusto conical shaped member on the bottom of said compartment and having an aperture in the top thereof, an article holding basket frictionally supported on said frusto conical shaped member, and a pro-



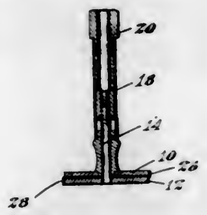
jection on said basket extending into the aperture in said frusto conical shaped member, the top of said frusto conical shaped member being substantially flush with the bottom of said compartment to permit the use of said com-

partment for washing clothes, a removable nozzle connected to said water inlet for directing water into said basket and means located outside of said compartment for rotating said frusto conical shaped member and said basket.



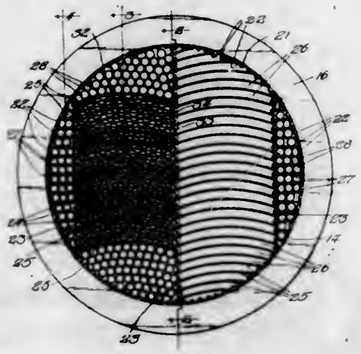
1,804,716. SAWMILL SETWORK. GEORGE TANNER, Sandpoint, Idaho. Filed Mar. 28, 1929. Serial No. 350,646. 8 Claims. (Cl. 143—124.)

1. The combination with a reciprocable knee having spaced slotted side walls, operating means therefor, and a support, a pin disposed transversely of the knee, and rollers on said pin movable in the slots of the knee, of a carriage at each side of the knee for supporting said pin, and anti-friction devices on the carriage.



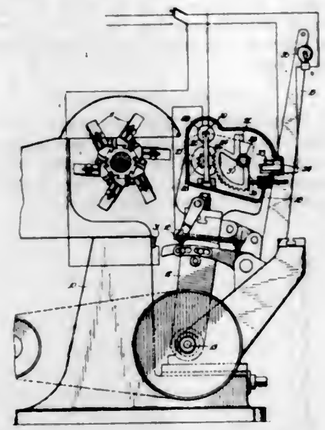
1,804,717. PENCIL SHARPENER. FRANK THOMPSON, Camden, N. J., assignor to C. Howard Hunt Pen Company, Camden, N. J., a Corporation of New Jersey. Filed May 3, 1929. Serial No. 360,142. 4 Claims. (Cl. 120—96.)

1. In a pencil sharpener, in combination, a support, a able cooperating means on the receptacle and support engaged by relative rotary movement of the receptacle and support to hold the former on the latter, and releas-



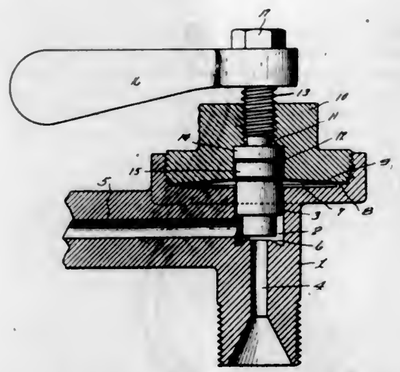
able cooperating means on the receptacle and support operative to prevent a reverse rotary movement tending to disengage the first mentioned means.

1,804,718. SAFETY RAZOR. RALPH E. THOMPSON, Brookline, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Sept. 28, 1929. Serial No. 395,852. 10 Claims. (Cl. 30—12.)



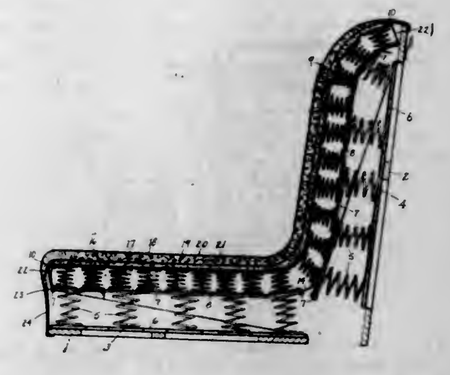
1. A safety razor having cooperating cap and guard members, means for drawing said members into clamping engagement, and an interposed blade with flanges for engaging said members and relatively positioning them both longitudinally and angularly.

1,804,719. VEHICLE LIGHT DIRECTOR. EDWIN S. TIMMONS, Chicago, Ill. Filed Oct. 17, 1929. Serial No. 400,206. 8 Claims. (Cl. 240—48.4.)



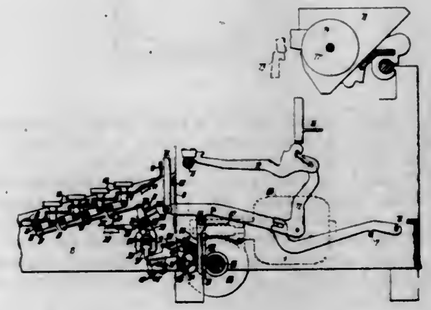
1. In a device of the character described, the combination with a casing, of vertically extending partition members in said casing, a series of plates disposed in parallelism in said casing, and plate edge receiving means on confronting surfaces of said casing and partition members to enable the deformed association of said plates therewith, said plates extending axially through said casing to direct the light rays along predetermined paths.

1,804,720. SIGNALING DEVICE FOR AN AUTOMATIC LATHE. DAVID TURCOTT, Beloit, Wis., assignor to Yates-American Machine Company, Beloit, Wis., a Corporation of Delaware. Filed June 23, 1928. Serial No. 287,854. 5 Claims. (Cl. 142—1.)



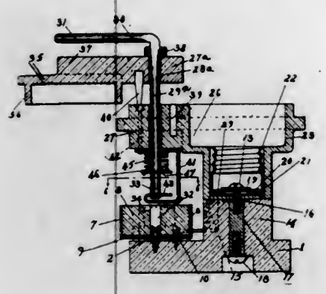
1. In a lathe, a rotating cutter head adapted to operate on a rotating piece of stock, means for rotating the stock, means for advancing the stock-rotating means, stops for determining the extent to which the stock-rotating means is advanced toward the cutter head, which stops must be maintained continuously in engagement while the piece of stock makes at least one complete revolution in order to complete the cutting operation, means for indicating when the cutting operation is finished, and means for normalizing said indicating means in case the stops are not maintained continuously in engagement during the cutting operation.

1,804,721. VALVE MECHANISM. WILLIAM S. VALMORE, Mansfield, Ohio. Filed Sept. 21, 1928. Serial No. 307,508. 3 Claims. (Cl. 251—31.)



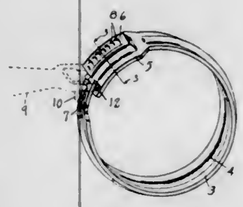
1. In a valve mechanism of the character described the combination of a valve body having a valve chamber having an inlet passageway and an outlet passageway leading therefrom, a valve disposed within said valve chamber, said valve body having an annular inclined diaphragm seat formed thereon, a diaphragm secured on said diaphragm seat, a valve bonnet secured in said valve body and holding said diaphragm against its seat and a valve actuating member carried by said valve bonnet and adapted to be actuated to flex said diaphragm to move said valve to closed position.

1,804,722. SPRING SEAT STRUCTURE. DESIRE H. VAN HOVE, Royal Oak, Mich., assignor to L. A. Young Spring and Wire Corporation, Detroit, Mich. Filed July 28, 1928. Serial No. 295,991. 5 Claims. (Cl. 155—179.)



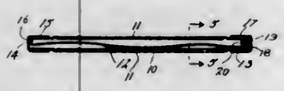
3. The combination with seat and back supports, of a seat unit and a back unit mounted on said supports in cooperating relation and each comprising body springs and a top border frame, a combined seat and back superstructure superimposed on said seat and back units and comprising body springs arranged in rows from front to rear, coiled spring top and bottom tie members arranged between said rows of springs and fixedly secured to springs of adjacent rows, an upholstery covering provided with inner flaps secured to the top border frames of said seat and back units, and an upholstery covering having a skirt portion secured to said supports.

1,804,723. TYPEWRITING MACHINE. RICHARD VON REPPERT, Hartford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 28, 1928. Serial No. 308,947. 19 Claims. (Cl. 197—17.)



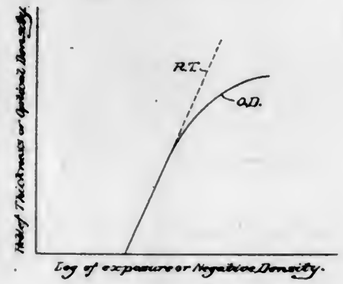
1. In a machine of the character described, a constantly-rotating power-roller, a typing mechanism, a key disconnected from said typing mechanism, a frictional pendant-member connected to the typing mechanism and connectible with the power-roller for actuation thereby, a spring-actuated pressure-lever engageable with the pendant-member, a lock for the pressure-lever arranged to be released by the key to establish operative connection between the friction pendant and the power-roller, and means mounted upon said pressure-lever, operable first to connect the pendant with the power-roller for actuation and then to reset the pressure-lever to normal position, to be relocked independently of the key.

1,804,724. FUSIBLE SWITCH MECHANISM. GEORGE E. WADSWORTH, Erlanger, Ky., assignor, by mesne assignments, to The George B. Wadsworth Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 20, 1929. Serial No. 372,509. 8 Claims. (Cl. 200—50.)



1. In a switch, a base of insulating material bearing a fuse receptacle, a rotary switch, a cover for the fuse receptacle, an operating shaft for the rotary switch, said operating shaft adapted to be brought into and out of engagement with said rotary switch and means to prevent the said shaft being disengaged from the said switch in any but the off position thereof, means to prevent the engagement of the said shaft with the said switch when the said cover is open, and to prevent the opening of said cover when said shaft is in engagement with said switch.

1,804,725. HOSE CLAMP. WARD C. WALKER, Battle Creek, Mich. Filed Feb. 27, 1930. Serial No. 431,746. 2 Claims. (Cl. 24—19.)

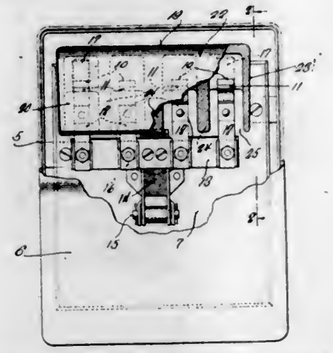


1. A hose clamp formed of a single piece of sheet metal consisting of a band portion having a longitudinal rib struck outwardly therefrom, the portion of the rib at the end of the band having a series of indentations therein providing ratchet teeth, and a head portion having a central longitudinal loop-like keeper struck outwardly therefrom and adapted to receive the end of the band, the top of said loop having a series of indentations therein providing a plurality of inwardly directed ratchet teeth on the end of said band.

1,804,726. COIN BANK. JESSE J. WARREN, Jr., Philadelphia, Pa. Filed Nov. 15, 1929. Serial No. 407,305. 1 Claim. (Cl. 232—4.)

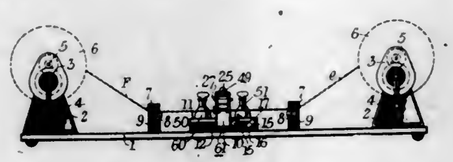
As a new article of manufacture, a coin bank consisting of a casing having its sides slotted longitudinally, a cap secured upon one end of said casing, said cap having a slot therein for the passage of the coins, a plate spring having one end thereof secured to an inner wall of the casing the opposite end terminating in a lip positioned in proximity to the coin slot in the cap, said spring being so bent as to hold coins within the bank against rattling, and a lock-up cap adapted to fit upon the opposite end of the casing, said cap having two spring actuated bolts positioned therein, and means for retracting said bolts by the use of a key.

1,804,727. PHOTOGRAPHY. EASTMAN A. WEAVER, Brookline, Mass., assignor, by mesne assignments, to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Filed Nov. 2, 1921. Serial No. 512,391. 34 Claims. (Cl. 95—5.)



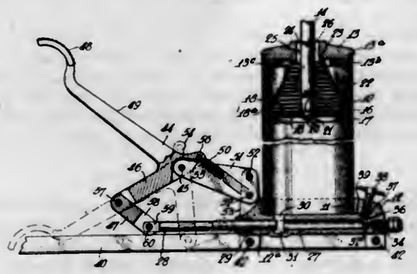
1. Picture film which is largely absorptive of light of one color and which is largely transmissive of light of another color, the absorptivity of the film being of such character and quantity as to restrict light of the first color to a shallow depth while permitting light of the other color to penetrate deeply.

1,804,728. VEHICLE ARM OR PROP. GARDNER E. WHEELER and CHARLES OPPE, New Haven, Conn. Filed Dec. 27, 1927. Serial No. 242,578. 1 Claim. (Cl. 296—120.)



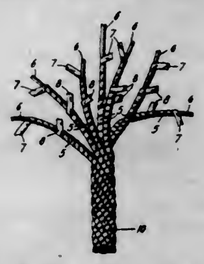
In a vehicle prop, a pair of substantially solid arms hingedly connected together, shanks on said arms, said shanks being generally elliptical in cross-section, extensions on the opposite sides of the solid portions of said arms, said extensions being parallel to the major axes of the generally elliptical shanks and spaced therefrom, and relatively thin walled tubular members shaped to fit and tightly received on said shanks, the extensions and shanks cooperating to form sockets in which the ends of the tubular members are received.

1,804,729. ELECTRICAL SWITCH. GUSTAV O. WILMS and FREDERICK F. LOOCK, Milwaukee, Wis., assignors, by mesne assignments, to The Reliance Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 17, 1927. Serial No. 226,665. 12 Claims. (Cl. 200—144.)



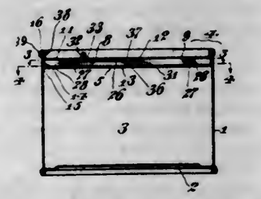
1. A device for limiting destructive arcing between the contacts of an electric switch, comprising a hood formed of insulating material closed on all sides except its bottom to form a confining chamber substantially encasing the contacts, and means readily removably mounting the hood.

1,804,730. FILM EDITING MACHINE. OTTO WITTEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 23, 1928. Serial No. 256,282. 19 Claims. (Cl. 88—14.)



1. In a film splicing block, the combination with a base, a stationary table mounted thereon, a movably mounted table, parallel links supporting the movable table on the base, a movable cutter and a pair of fixed cutting blades, the movable table being adapted to swing over the top of one cutting blade on the parallel links.

1,804,731. HIGH POWER PEDAL-OPERATED GREASE GUN. HERMAN ALBERTINE, Rutherford, N. J. Filed Jan. 7, 1929. Serial No. 330,803. 7 Claims. (Cl. 221—47.1.)



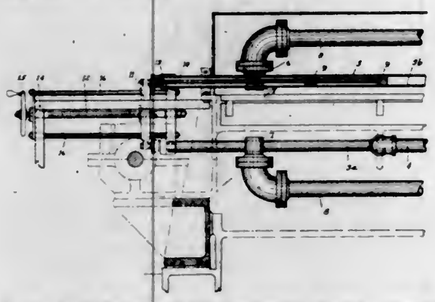
1. In a grease gun of the character which includes a base, an upright reservoir thereon, a substantially horizontal pump cylinder formed in said base having an intake receiving grease from the reservoir and a plunger working horizontally in the cylinder, foot-operated power multiplying means for actuating the plunger including an angular lever, a fulcrum for the elbow of the lever laterally offset from but fixed relatively to the base and a link connecting one end of the lever to the pump plunger, the arms of the lever being disposed at an acute angle to each other and spring means normally holding the lever with its power receiving arm disposed at approximately 45° to the horizontal.

1,804,732. FLEXIBLE CONDUCTOR. JOHN L. ALDEN, Wyncote, Pa., assignor, by mesne assignments, to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 28, 1928. Serial No. 265,243. 4 Claims. (Cl. 173—13.)

1. A flexible conductor comprising a plurality of strands, said strands consisting of a central conducting core having a plurality of metallic tapes wound thereon and said strands being twisted around a central core of conducting material.

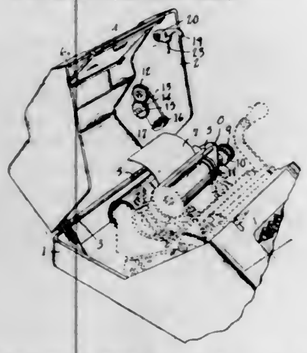
1,804,733. TOY BANK. ADRIAN C. BALSON, Philadelphia, Pa. Filed Mar. 6, 1929. Serial No. 344,682. 7 Claims. (Cl. 232—4.)

1. A toy bank comprising a pair of relatively movable members respectively provided with coin-receiving and discharge openings, and means for maintaining said members in predetermined relation, said means comprising a plurality of guiding shoulders upon one of said members in engagement with the other member.



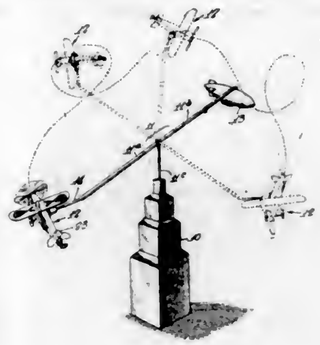
1,804,734. HINGED BEZEL FOR CLOCKS. WERNER H. BALZER, New York, N. Y., assignor, by mesne assignments, to Arthur K. Kempton, Jackson Heights, Long Island, N. Y. Filed Nov. 17, 1927. Serial No. 233,783. 2 Claims. (Cl. 58—53.)

1. A device of the class described, comprising a stationary ring having an external annular flange, a bezel



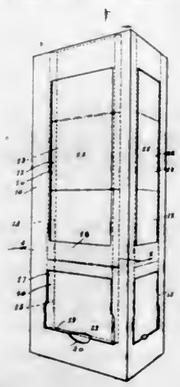
ring to hold a cover glass, said bezel ring having a rearwardly projecting annular shoulder to normally overlie and abut said flange of said stationary ring, a perforate hinge knuckle extending rearwardly from and beyond said shoulder, said flange of said stationary ring having an indented notch to receive said hinge knuckle and also having a bore aligned with the perforation of said hinge knuckle, the outer ends of said bore terminating in the circumferential face of said flange, a pintle mounted in said bore and extending through said perforate hinge knuckle, and the annular shoulder of said bezel ring adjacent each end of said hinge knuckle having inwardly beveled clearance spaces extending from the exterior periphery thereof downwardly to intersect the interior face thereof.

1,804,735. HYDRAULIC SCALER. HUGH C. BARNES and GEORGE A. DRIEST, Middletown, Ohio, assignors to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Oct. 2, 1929. Serial No. 396,839. 6 Claims. (Cl. 299—104.)



1. In a hydraulic scale removing device, perforated delivery pipes to form a spray, means for introducing fluid under pressure at the center of the said pipes, and means for adjusting the effective width of the said spray, said means comprising pistons movable in said pipes to or over said central openings and means for holding said pistons in place against hydraulic pressure.

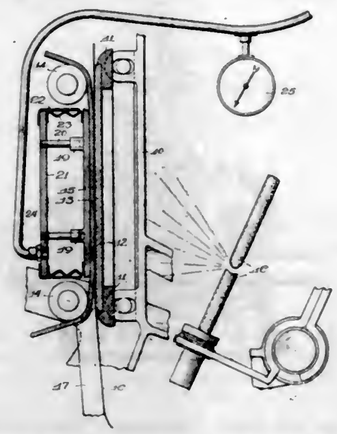
1,804,736. MANUAL PAPER FEEDING MECHANISM FOR ADDING MACHINES. GLENN J. BARRETT, Chicago, Ill., assignor to Portable Adding Machine Company, Chicago, Ill. Filed Dec. 24, 1928. Serial No. 328,257. 3 Claims. (Cl. 271—2.3.)



1. In combination with a movable case enclosing a printing platen and paper tape of an adding machine or similar device, of a disconnectible means for manually feeding said paper comprising a feeding knob or finger piece outside said case, an actuating pinion attached thereto, an adjustable idler pinion always in mesh with said actuating pinion, and a pinion connected to said printing platen normally in mesh with said idler pinion which is separable therefrom.

1,804,737. AIRPLANE TOY. SAMUEL I. BERGER, Newark, N. J. Filed Sept. 17, 1928. Serial No. 306,460. 9 Claims. (Cl. 272—31.)

1. A self-propelled air-craft toy, including a support, a beam rotatable and tiltable thereon, a toy aircraft on one end of the beam, means counter-balancing said beam, a motor operated propeller means for causing the air-craft to rise and fly in a circular path, gravitationally released means to rotate the air-craft on its transverse axis when a predetermined angularity of the beam is obtained and means preventing such rotation in other positions of the beam.



1,804,738. PAPER BOX OR THE LIKE. SAMUEL BERGSTEIN, Middletown, Ohio. Filed May 25, 1929. Serial No. 365,912. 5 Claims. (Cl. 206—44.)

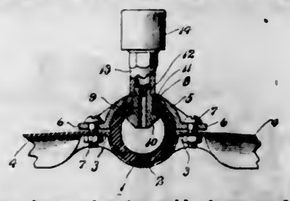
1. A box triangular in cross-section, presenting a plurality of apertures on each of its faces, in vertical alignment one aperture with another for displaying the contents of the box, opposite vertical edges of said upper apertures acting to retain said contents, the edges of said lower apertures acting to retain a unit of said contents releasably, and a plurality of channular panels retained inside the box, one adjacent each face thereof, by frictional engagement one panel with another, for supporting the contents of the box relative to said apertures.

1,804,739. MACHINE FOR MAKING BLUE PRINTS AND OTHER PHOTOPRINTS. HAROLD J. BRUNK, Chicago, Ill., assignor to C. F. Pease Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 18, 1928. Serial No. 255,481. 4 Claims. (Cl. 95—76.)

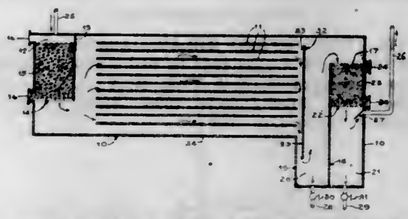
1. Photoprinting apparatus comprising a sheet of transparent material, a source of light on one side thereof, means for drawing a sheet of sensitized paper continuously past the opposite side thereof, a chamber having a rigid movable wall adjacent said sheet of sensitized paper and containing a fluid under pressure whereby said wall may press said moving paper against said transparent material, and means within said chamber for maintaining said wall parallel with said transparent material.

1,804,740. WATERPROOF AND DIELECTRIC ASBESTOS LUMBER. EDWARD J. BUCZKOWSKI, Ambler, Pa., assignor to Ambler Asbestos Shingle & Sheathing Company, Ambler, Pa., a Corporation of Pennsylvania. Filed Feb. 5, 1930. Serial No. 426,193. 5 Claims. (Cl. 92—21.)

1. A waterproof and insulating slab composed of asbestos fiber material hydraulic cement and asphalt, the asphalt being introduced prior to the formation of the slab.



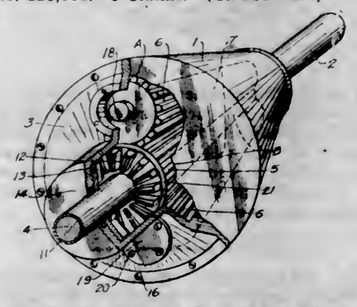
1,804,741. WINDOW CONSTRUCTION. FRED BUTZBACH, Clinton, Iowa. Filed Apr. 15, 1929. Serial No. 355,248. 8 Claims. (Cl. 20—55.)



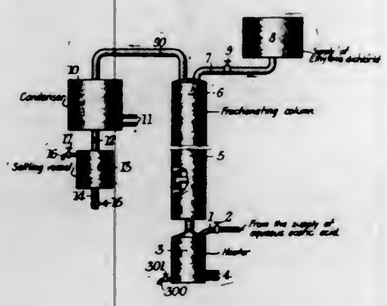
1. In a window construction, a head casing having its lower edge provided with a central longitudinal groove throughout its length.

1,804,742. SPRINKLING APPARATUS. ROBERT B. CAMPBELL, Muskegon Heights, Mich., assignor to Desmond Manufacturing Company, Muskegon Heights, Mich., a Corporation of Michigan. Filed June 21, 1929. Serial No. 372,557. 3 Claims. (Cl. 299—106.)

3. In a construction of the class described, a length of hose having an opening through its upper side, a holding bar located transversely across and under the hose, a clamp extending over the hose, means for detachably connecting the clamp to said holding bar, an outlet sleeve mounted in said opening in the hose and extending through the clamp, means for securing said sleeve in permanent relation to the hose whereby said clamp and the holding bar may be removed without affecting said outlet sleeve, and a sprinkler head detachably secured at the outer end of the outlet sleeve whereby it may be removed therefrom to permit closing said outlet sleeve to stop passage of water therethrough.

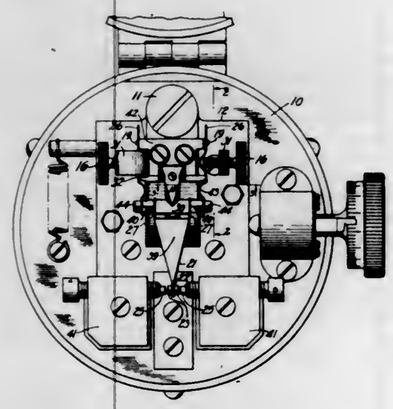


1,804,743. APPARATUS FOR DESLUDGING LIQUIDS. HUGH HARLEY CANNON, Los Angeles, Calif., assignor to Cannon-Prutzman Treating Processes, Ltd., Los Angeles, Calif., a Corporation of California. Filed Feb. 16, 1929. Serial No. 340,383. 10 Claims. (Cl. 210—43.)



1. Apparatus for separating fluent sludge from a liquid in which said sludge is suspended, comprising: a substantially closed vessel horizontally disposed; imperforate partitions of less length than that of said vessel, so placed as to divide said vessel into a number of relatively wide and shallow substantially horizontal channels and to cause said liquid to flow through said channels in parallel, and means for introducing sludge-containing liquid into one end of said vessel and for separately withdrawing liquid and sludge from the opposite end of said vessel.

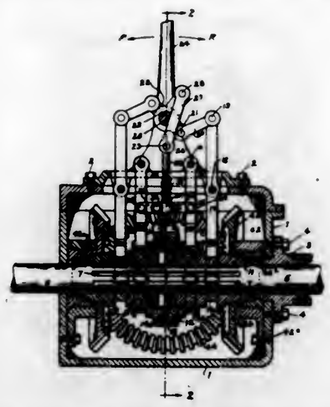
1,804,744. HYDRAULIC CLUTCH. ULYSSES G. CHARLES, Wichita, Kans., assignor of one-fourth to Darcey E. Dunne, Jr., Wichita, Kans. Filed Dec. 27, 1929. Serial No. 416,864. 6 Claims. (Cl. 192—61.)



1. In a hydraulic clutch, a drive and a driven shaft, a housing axially aligned with said shafts and being securely attached to one of the shafts, the housing having compression chambers and being filled with fluid, conical gear elements positioned in the housing, one of the gears slidably engaging on one of the shafts and rotatable therewith, and means to move the gear longitudinally to control the compression of fluid within the housing.

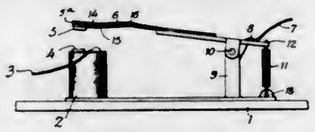
1,804,745. PROCESS OF REMOVING WATER FROM AQUEOUS ACETIC ACID. HANS T. CLARKE and DONALD F. OTHMER, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 12, 1927. Serial No. 232,916. 12 Claims. (Cl. 202—42.)

8. In the process of dehydrating aqueous acetic acid the step of mixing ethylene dichloride with the aqueous acetic acid and distilling water and ethylene dichloride from the mixture.



1,804,746. HIGH SPEED RELAY. AUSTEN M. CURTIS, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 23, 1928. Serial No. 287,714. 8 Claims. (Cl. 175—336.)

1. In an electromagnetic device, a vibrating armature, means comprising two partly arcuate contractile springs tensioned longitudinally to flex in a plane perpendicular to the axis of said vibrating armature, and adjustable means individual to each of said springs for exerting a lateral adjustable pressure upon each of said springs for varying the tension thereof.



1,804,747. GEAR SHIFT. GUSTAV E. DANIELSON, Seattle, Wash., assignor of one-fourth to Adolph Bohm, Seattle, Wash. Filed Feb. 5, 1930. Serial No. 426,154. 4 Claims. (Cl. 74—59.)

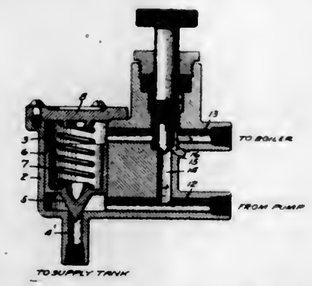
1. In a gear shift mechanism the combination of a casing, a drive shaft and a driven shaft revoluble therein, means adapted to positively connect the two shafts, means to frictionally connect them, a lever for automatically first throwing into engagement the frictional means and later to throw into engagement the positive means for rotation of the shafts in one direction, another frictional means including a pair of clutches adapted to connect the

two shafts and power transmission means between the pair of clutches for accomplishing said connection for rotation of the shafts in the opposite direction.

1,804,748. ELECTRIC SWITCH. GEORGE H. DERRICK, deceased, Oakland, Calif., by Victory A. Derrick, executrix, Oakland, Calif., assignor, by mesne assignments, to Instograph, Ltd., a Corporation. Filed Mar. 19, 1928. Serial No. 262,902. 2 Claims. (Cl. 200—87.)

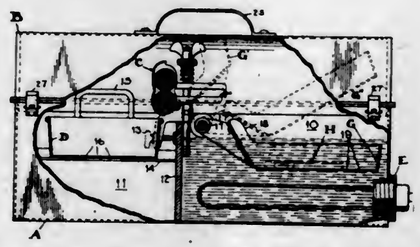
1. A relay switch comprising a base, an electromagnet supported by the base, a spring controlled armature including contiguous strips of spring metal bent upwardly from the base intermediate their ends and a spacing member interposed between the ends of the strips.

1,804,749. MEASURING DEVICE. DANIEL DESMOND, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Feb. 24, 1928. Serial No. 256,515. 1 Claim. (Cl. 33—200.)



In a device of the character described, an elongated relatively thin base member having its material disposed in a single plane and said member forming a single unitary integral structure and having a pair of separated slots, each slot extending longitudinally of the base and intermediate the center and an end thereof and said base member having scale means adjacent one edge of the slots, said slots being so arranged that the pupils of the eyes may be seen therethrough, one in each slot, and the scale being so arranged that the distance between the said pupils may be read thereon, and said base member also having a recess in one edge central of the slots and adapted to fit over the nose.

1,804,750. DISK HARROW. WILLIAM D. DEWEND, South Bend, Ind., assignor, by mesne assignments, to Oliver Farm Equipment Company, a Corporation of Delaware. Filed Feb. 16, 1929. Serial No. 340,511. 8 Claims. (Cl. 55—83.)

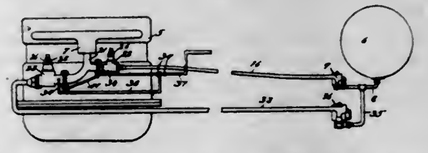


1. A harrow comprising a draft member, gangs pivotally connected to said draft members on a single pivot, and means for adjusting the angle of said gangs vertically with respect to said pivot.

1,804,751. BOILER FEED WATER CONTROL DEVICE. WARREN DOBLE, Berkeley, Calif., assignor to Doble Steam Motors Corporation, Wilmington, Del., a Corporation of Delaware. Filed Oct. 6, 1924. Serial No. 742,036. 1 Claim. (Cl. 137—153.)

The combination with a body having therein a cylinder, a pair of conduits communicating with said cylinder adjacent opposite ends thereof, a duct joining said conduits, and an outlet from said cylinder; of a cylinder head closing one end of said cylinder, a cup-shaped piston reciprocable in said cylinder, a spring within said cup-shaped piston and abutting said cylinder head for biasing said piston toward said outlet, a conical valve on said piston adapted when seated in said body to close said outlet, and an adjustable needle valve for changing the area of said duct for regulating pressures communicated to opposite sides of said piston through said conduits.

1,804,752. APPARATUS FOR HEATING AND STERILIZING TOWELS. EDWARD G. DOOLEY, Los Angeles, Calif., assignor of forty-nine per cent to Frank M. Hiyake, Los Angeles, Calif. Filed June 13, 1928. Serial No. 285,148. 2 Claims. (Cl. 167—8.)

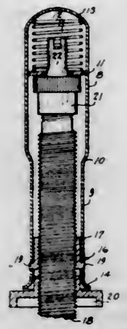


2. An apparatus of the character described, comprising a receptacle having a hot water compartment and a steam compartment, a wringer adapted to wring towels from said hot water compartment into said steam compartment, a basket detachably mounted in said steam compartment, a communicating cover for said steam compartment and said hot water compartment, and means for mechanically feeding the towels into said wringer.

1,804,753. CONSTRUCTION MATERIAL. GORDON C. DOUGLAS, Covina, Calif., assignor of one-half to David G. Small, Los Angeles, Calif. Filed June 25, 1928. Serial No. 288,064. 4 Claims. (Cl. 72—36.)

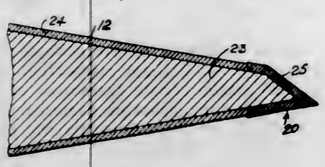
1. As an article of commerce, a preformed acoustic tile comprising, a base of plaster board, a layer of porous cementitious material having cavities exposed on its surface bonded to one side of said base during the setting of the porous cementitious material and provided with means adapted to cooperate with fastening means to attach said tile to walls and ceilings.

1,804,754. DUPLEX FUEL SUPPLYING APPARATUS FOR INTERNAL COMBUSTION ENGINES. WILLIAM A. EDWARDS, Chicago, Ill. Filed Aug. 22, 1923, Serial No. 658,689. Renewed May 5, 1930. 8 Claims. (Cl. 123—127.)



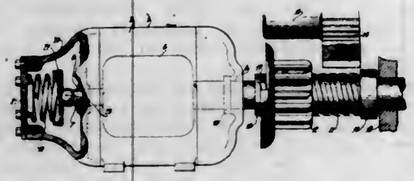
1. In a duplex apparatus of the character described, the combination of an internal combustion engine and a source of fuel supply remote therefrom, of a primary fuel mixture producing apparatus comprising a mixing device in proximity to the fuel supply for producing a preliminary mixture of air and liquid fuel, a pipe through which the said mixture is conducted, a secondary air valve interposed in said pipe in proximity to the engine, and a throttle valve interposed between said air valve and the engine, an auxiliary fuel mixture producing apparatus comprising a mixer in proximity to the fuel supply for producing a preliminary mixture of fuel and air; a pipe through which said mixture is conducted, a secondary air valve interposed in said pipe in proximity to the engine, and a throttle valve between said secondary air valve and the engine, and an operating connection between said throttle valves whereby said auxiliary air apparatus is thrown into operation upon the operation of the primary apparatus at a predetermined capacity.

1,804,755. DUST CAP FOR PNEUMATIC TIRE VALVES. EARLING W. EIDEMILLER, Medina, Wash. Filed Apr. 21, 1928. Serial No. 271,736. 1 Claim. (Cl. 152—12.)



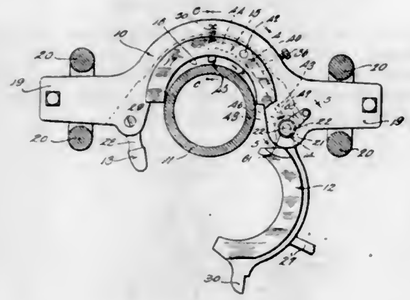
In readily removable dust cap means for a valve stem and cap of a pneumatic tire valve a tubular dust cap embodying two integral cylindrical sections of larger and smaller diameter, an inclined shoulder at the point of connection between the larger and smaller sections, the end of said larger section being closed and the end of said smaller section being open and being expanded to form a bell shaped mouth, said dust cap having L shaped bayonet slots at said open end, the longitudinal portions of said

bayonet slots being formed partly in said bell shaped mouth, longitudinally extending ribs formed on the exterior of said smaller section and extending between said inclined shoulder portion and said bell shaped mouth, a circular spring supporting washer movable within said larger section of said tubular cap and arranged to rest on said shoulder portion when the dust cap is removed from



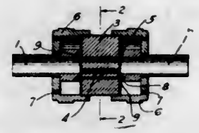
the valve stem, a spring operatively disposed within said section of larger diameter and arranged to press against said spring supporting washer and the closed end of the larger section, the spring being compressed when the dust cap is engaged with the valve stem by the valve stem cap engaging and shifting the spring supporting washer, and lugs associated with the valve stem to be received and retained in the bayonet slots.

1,804,756. SHOVEL TOOTH. FRANK ELWOOD, Carbondale, Ill., assignor of one-half to Frank A. Thompson, Carbondale, Ill. Filed Aug. 30, 1929. Serial No. 389,414. 5 Claims. (Cl. 37—142.)



4. A point for a shovel tooth including a central core of hard and tough steel, a chisel shaped tip of extremely hard material surrounding the forward end of said core and a plating of hardened steel extending rearwardly from said tip and encasing the remainder of said core.

1,804,757. ENGINE STARTER. JOHN W. FITZGERALD, Milwaukee, Wis., assignor to Briggs and Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed May 19, 1928. Serial No. 279,174. 2 Claims. (Cl. 74—7.)

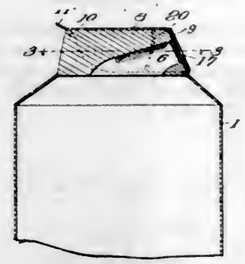


1. An engine starter, comprising the combination with a member operatively connected with an engine, of a motor including a housing, a rotor and a shaft having axial movement in the housing and projecting therebeyond, a driving member mounted to travel longitudinally of the projected end of the shaft and into engagement with the engine member and to rotate therewith, spring means engaged with the housing adjacent the opposite end of the shaft, and anti-friction means disposed between the free end of the spring means and said opposite end of the shaft, whereby the spring means yieldably resists axial movement of the motor shaft in a direction opposite to the direction of movement of the driving member to engage the engine member.

1,804,758. ELEVATOR. JOSEPH G. FITZPATRICK and ROBERT W. FLINT, Anaheim, Calif., assignors to Joseph F. Flint, Long Beach, Calif. Filed Dec. 23, 1929. Serial No. 416,112. 13 Claims. (Cl. 294—90.)

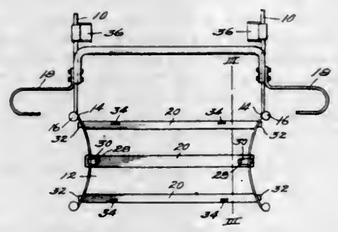
1. An elevator of the character described including, a body adapted to be arranged around an object, a gate pivotally attached to the body and adapted to retain an object in the body, a pivot pin connecting the body and gate, and means acting torsionally directly on the pivot pin for shifting the gate to the closed position.

1,804,759. ACOUSTIC DEVICE. PAUL B. FLANDERS, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 28, 1928. Serial No. 273,524. 6 Claims. (Cl. 181—27.)



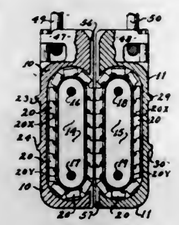
1. An acoustic attenuator comprising series and shunt impendances at least one of which is in the form of a sound passage less than 0.003 inch wide in a direction substantially perpendicular to the direction in which sound waves are transmitted therethrough.

1,804,760. DISPENSING CLOSURE FOR CONTAINERS. SUSAN E. FOX, Paris, Tenn. Substitution for abandoned application Serial No. 65,543, filed Dec. 7, 1915. This application filed Feb. 12, 1930. Serial No. 427,998. 3 Claims. (Cl. 221—60.)



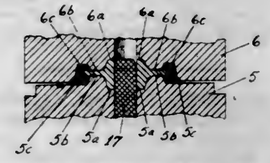
1. A container including a body portion having a substantially frusto-pyramidal spout extending longitudinally from one end thereof and provided with a discharge passage opening through one end wall of the spout, a closure corresponding in shape to the spout and pivotally mounted thereon and having an inwardly bulged portion adapted

to fit within the mouth of the discharge passage when the closure is in closed position, the ends of the side walls of the closure on opposite sides of the bulged portion being



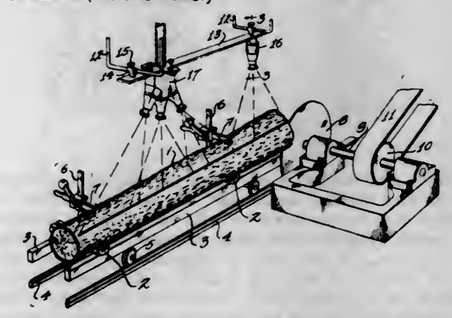
bent to form channels, and a packing strip seated in said channels and extending over the bulged portion of the closure.

1,804,761. BUMPERETTE TRUNK RACK. CHARLES B. FRITTS, Kansas City, Kans. Filed Aug. 6, 1930. Serial No. 473,316. 8 Claims. (Cl. 293—55.)



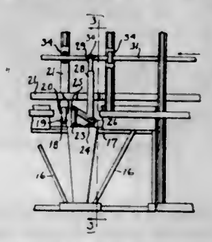
1. A rack of the character described having end members swingable to serve as bumperettes when the rack is disassembled.

1,804,762. WIRE LINE CLAMP. HENRY E. GARDEN, Augusta, Kans. Filed May 31, 1929. Serial No. 367,305. 6 Claims. (Cl. 24—125.)



1. In a device of the class described a pair of housing members arranged side by side and with hollowed out spaces for receiving endless chain elements; a block within each housing member and rigid thereto and a chain element enveloping its respective block; each chain link having its outer face hollowed as a shoe for contacting an intermediate wire cable; an extended portion for each housing member, each having a threaded block adapted to receive a threaded clamping shaft; a shaft having right hand and left hand threaded portions for cooperation with said threaded blocks; a shaft hinged to one block and passing through a hole through the second housing block as a guiding means; and a hinged latch on one housing member and a boss on the other housing member adapted for latching engagement.

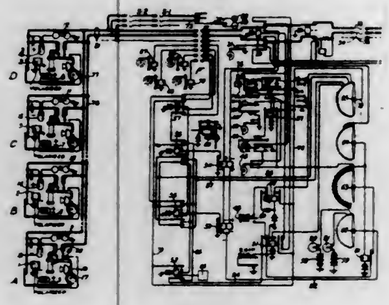
1,804,763. PROCESS OF MAKING CAR WHEELS. ROBERT C. GOOD, Edgewood, and HARRY HOLIDAY, Glenshaw, Pa., assignors, by mesne assignments, to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Jan. 9, 1928. Serial No. 245,296. 3 Claims. (Cl. 29—168.)



1. That process of forming a wheel, which consists in forming a metal block having a hard metal exterior and a tough metal interior, and forging said block in dies arranged to expand it into a wheel having a rim, plate and hub, the exterior metal of the block being insufficient to fill the rim portion defined by the pressing means.

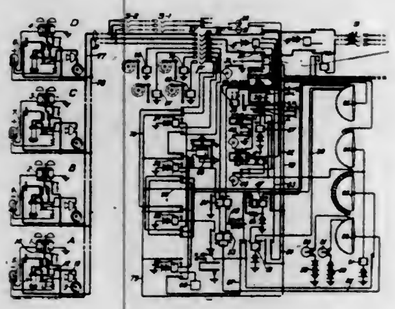
1,804,764. APPARATUS FOR AND METHOD OF CUTTING MATERIAL. EDWIN J. GRANT, Los Angeles, Calif. Filed Dec. 1, 1928. Serial No. 323,080. 4 Claims. (Cl. 143—168.)

1. A cutting apparatus comprising a cutting member operating in a fixed plane, guide means adapted to support and guide material to be cut from an exterior position into said cutting member, stop means adjustable toward and from the plane of said cutting member and adapted to cooperate with material to be cut while on said guide means, and means for projecting a plurality of lines of light upon material upon said guide means parallel to said cutting plane, while said material is in said exterior position, said lines of light projected by said means providing intangible lines which may be followed by the cutting means in any definite desired relation or position determined by the stop means.



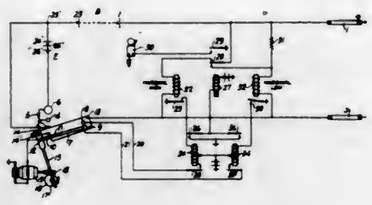
1,804,765. AIRCRAFT. JOSEPH M. GWINN, Jr., Buffalo, N. Y., assignor to Consolidated Aircraft Corporation, Buffalo, N. Y., a Corporation of Delaware. Filed Feb. 27, 1929. Serial No. 343,212. 4 Claims. (Cl. 244—29.)

1. An aileron control system comprising a control member, an aileron, a pivotal support therefor, a lever, a



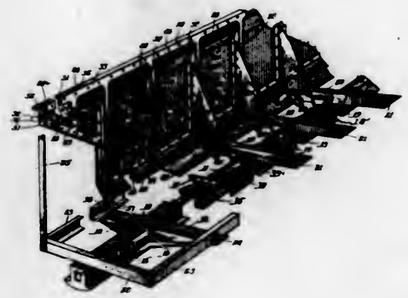
bracket fixed to said aileron and providing a pivotal support mounting one end of said lever for rocking movement about an axis inclined to planes normal to the aileron, an interconnection between the said control member and the other end of said lever, and means restraining said lever for movement in a plane substantially coinciding with the plane of the aileron, equal movements of the interconnection producing unequal angular movements of the aileron about the aileron axis from a normal position.

1,804,766. TELEPHONE SYSTEM. ALFRED E. HAGUE, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 19, 1930. Serial No. 445,552. 12 Claims. (Cl. 179—8.5.)



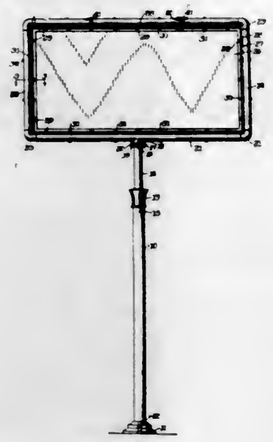
1. In combination, a telephone line having a plurality of stations thereon, signal bells, one for each station, discharge devices, one in circuit with each bell and arranged to permit current to flow when subjected to a given potential, a relay at one station responsive to current of a given polarity, a relay at another station responsive to current of opposite polarity, and other discharge devices in circuit with said relays and arranged to permit current to flow when subjected to potential of a lower value than that which causes current to flow in said first mentioned devices.

1,804,767. TELEPHONE SYSTEM. ALFRED E. HAGUE, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 19, 1930. Serial No. 445,554. 10 Claims. (Cl. 179—8.5.)



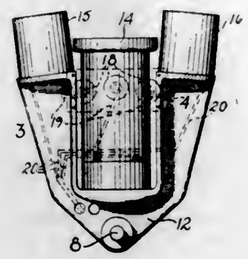
5. The combination in a telephone system of a line having a number of stations, signal devices, one at each of said stations, current-controlling devices, one in circuit with each of said signal devices, means for applying current to said line for selectively energizing said signal devices, and means responsive to the energization of said signal devices for identifying said stations.

1,804,768. VOLTAGE CONTROL SYSTEM. HERMAN HENRY HARBECKE, Chicago, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Jan. 26, 1928. Serial No. 249,622. 10 Claims. (Cl. 171—314.)



1. In a voltage regulating system, a storage battery and a discharge circuit therefor, a plurality of normally disconnected reserve cells, a first relay connected across said battery and responsive to a lowering of the voltage thereof below a predetermined limit, a second relay having an operating winding and a holding winding, means operated by said first relay for closing a circuit for said second relay over its operating winding, a third relay operated by said second relay for restoring said first relay to its original position to disconnect the operating winding of said second relay, a switching device and a circuit therefor, means operated by said second relay for closing the circuit of said switching device and for including its holding winding in said circuit, means operated by said switching device for including said reserve cells in the discharge circuit of said battery, and means then operated by said switching device for interrupting its own circuit and the circuit over the holding winding of said second relay to restore said second and third relays to original position and to maintain said reserve cells in the discharge circuit.

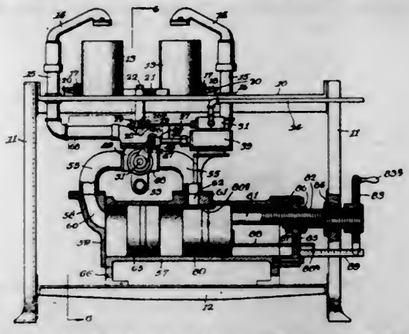
1,804,769. CAR CONSTRUCTION. HARRY S. HART and DAVID HINDAHL, Chicago, Ill. Filed Aug. 10, 1929. Serial No. 384,965. 6 Claims. (Cl. 105—249.)



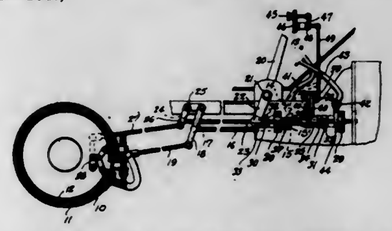
1. In a device of the character described, a center sill formed as a single integral casting and having end portions of substantially box-like beam construction and an intermediate portion of substantially inverted V cross section, providing shedding surfaces.

1,804,770. STRUCTURE FOR SIGNS. ABE HERSHFIELD, Goshen, Ind., assignor to Standard Oil Company, Chicago, Ill., a Corporation of Indiana. Filed Jan. 16, 1930. Serial No. 421,106. 2 Claims. (Cl. 40—125.)

1. In a sign structure, a sign member, a reinforcing frame secured to said member, slidable brackets on said reinforcing frame, a tubular frame, and means associated with said tubular frame for engaging said slidable brackets and thereby holding said reinforcing frame in said tubular frame.



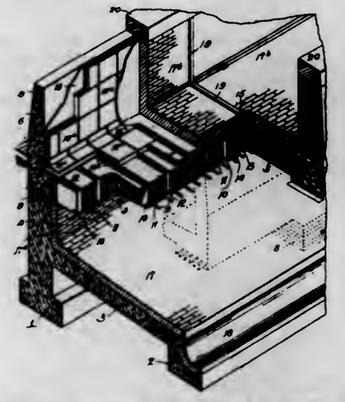
1,804,771. ADJUSTABLE LIGHT SOURCE FOR PHOTOGRAPHIC PRINTING MACHINES. ROY S. HOPKINS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 22, 1929. Serial No. 401,407. 14 Claims. (Cl. 95—73.)



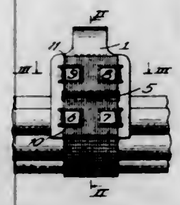
1. In a photographic printing machine the combination with a printing panel, of a source of light for said printing panel comprising a plurality of lamps and a pivotal base supporting said lamps.

1,804,772. LARD FILLING MACHINE. JAMES W. HUBBARD, Chicago, Ill., assignor to The Mechanical Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 28, 1928. Serial No. 295,876. 10 Claims. (Cl. 226—107.)

1. A machine for filling cans with a fluid, comprising a plurality of discharge conduits for said fluid, means for supporting cans in a plurality of paths of movement to said discharge conduits, and means actuated by the movement of a can along one of said paths to effect the discharge of said fluid from one of said conduits into a can positioned on another of said paths.

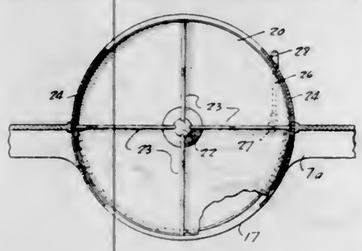


1,804,773. AUXILIARY BRAKE OPERATING MECHANISM. HARVEY HUBBELL, Jr., Bridgeport, Conn. Filed Oct. 27, 1927. Serial No. 229,039. 9 Claims. (Cl. 188—106.)



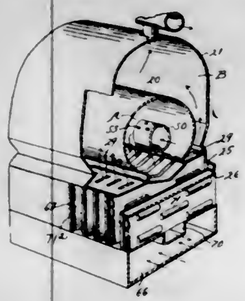
9. In a brake mechanism for motor vehicles, an emergency brake, means for applying said brake, separate power means for applying said brake, means for normally holding the power means ineffective, personally operated means for releasing the holding means, and means for resetting the power means in ineffective position.

1,804,774. PICKLING TANK CONSTRUCTION. EDWIN B. HUDSON, Butler, Pa., assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Sept. 18, 1928. Serial No. 306,688. 12 Claims. (Cl. 72—14.)



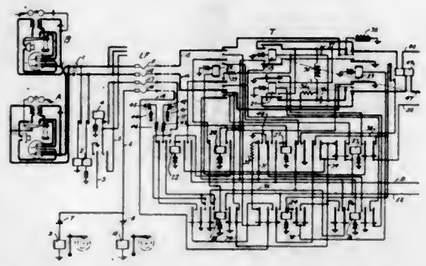
1. In a tank construction, an open cellular structure having a mastic seal on both sides thereof whereby a hydrostatic head within the tank is prevented from acting upon the outermost seal layer.

1,804,775. CABLING CLIP. SAMUEL PIERRE HULL, Yonkers, and JOHN J. CORCORAN, Albany, N. Y., and FREDERICK C. LAVARACK, Montclair, N. J. Filed Sept. 4, 1929. Serial No. 390,224. 1 Claim. (Cl. 248—33.)



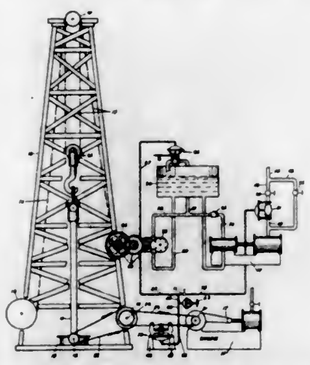
In a cabling clip, in combination: a plate formed with a hook, a slot and tabs; a textile flexible ribbon like member having both ends passing through the slot and bent back to lie in opposite directions on the plate and underneath the tabs.

1,804,776. SAFETY CAGE WINDOW. CHARLES T. JAMES, Los Angeles, Calif. Filed July 15, 1929. Serial No. 378,250. 2 Claims. (Cl. 20—1.01.)



1. In a cage, a front wall having an opening for passage of valuables, a table at the base of said opening; a turnstile rotatably disposed in said opening comprising upright walls to close said opening at all angular positions of said turnstile, and a base wall rotatable with said upright walls and serving as a rotary carrier for articles; and a housing for said turnstile disposed within said opening and comprising a circular base mounted on said table and diametrically opposed sectors including top and side walls thereby at all positions of said turnstile closing the space in front of said front wall from that behind.

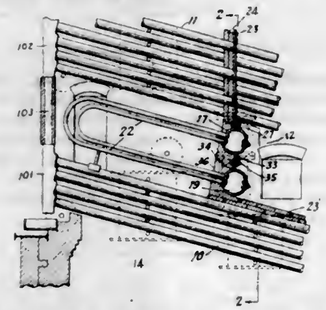
1,804,777. BOILER CONSTRUCTION. HORACE M. JEROME, Detroit, Mich., assignor, by mesne assignments, to Garfield A. Wood, Detroit, Mich. Filed Sept. 19, 1927. Serial No. 220,572. 11 Claims. (Cl. 122—115.)



1. A heat machine comprising a horizontal combustion chamber, a horizontally extending flue conduit below said combustion chamber, a series of parallel vertical flue passageways between said combustion chamber and flue passageways, a water chamber surrounding said combustion chamber, a water tank below said flue passageways and a series of water passageways connecting said water chamber and said water tank and arranged intermediate flue passageways in heat conducting relation thereto.

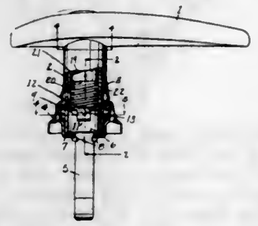
1,804,778. TELEPHONE SYSTEM. LEWIS H. JOHNSON, Madison, N. J., and RAY L. STOKELY, Floral Park, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 12, 1929. Serial No. 392,114. 10 Claims. (Cl. 179—8.5.)

2. In a telephone system, a line, a plurality of subscribers' stations permanently connected to said line, a message register individual to each of said stations, a conductor permanently connected to a plurality of said registers, a positive source of current, a negative source of current, means for connecting said positive source to said conductor to operate one of said registers, and means for connecting said negative source to said conductor to operate another of said registers.



1,804,779. MECHANICAL ROTARY DRILLING CONTROL. PHILIP JONES and PAUL W. PRUTZMAN, Los Angeles, Calif. Filed June 24, 1929. Serial No. 373,369. 8 Claims. (Cl. 255—19.)

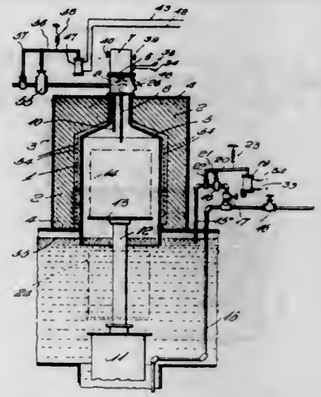
1. In an apparatus for rotary well drilling including a drill string, a rotary table for revolving said string, a drilling line for partially supporting the weight of said drill string, a secondary feeding means associated with said drilling line and operated by fluid pressure for raising and lowering said drill string, and a prime mover adapted to drive said rotary table through the medium of a flexible band of which one side is in tension; a device for controlling said secondary feeding means comprising: means for deflecting the tension side of said band from a straight line; means for transmitting the thrust of said deflecting means to a fixed collapsible



reservoir containing liquid, thereby displacing a portion of said liquid; and means for transmitting said displaced liquid to a pressure-responsive means adapted to regulate the pressure of liquid in said secondary feeding means.

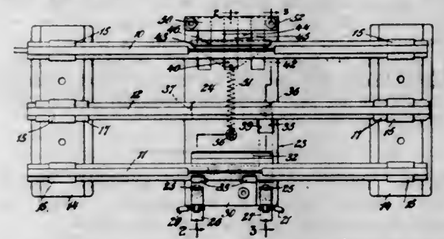
1,804,780. HEADER AND SUPPORT THEREFOR. WILLIAM A. JONES, Westerleigh, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Original application filed July 29, 1922, Serial No. 578,294. Divided and this application filed Nov. 13, 1928. Serial No. 319,152. 16 Claims. (Cl. 122—476.)

13. In a fluid heater, a pair of horizontally extending, substantially parallel headers disposed adjacent one another and one above the other, and heating tubes connecting the headers, means for supporting the upper header, and means independent of said tubes for suspending the lower header from the upper header.



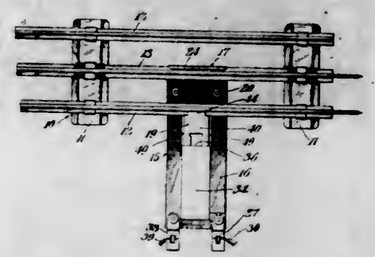
1,804,781. KNOB OR HANDLE LOCK. ISAAC S. KEELER, Grand Rapids, Mich., assignor to Keeler Brass Company, Grand Rapids, Mich. Filed June 29, 1928. Serial No. 289,117. 2 Claims. (Cl. 70—91.)

1. The combination of a rotatably supported hand piece provided with a sleeve having longitudinal slots adjacent its inner end, a locking unit having a spiral cam at its inner end, a spindle provided with a transversely slotted head rotatable within the inner end of said sleeve, a bolt having a tongue-like part engageable with the slot of said head and provided with lugs engaging said longitudinal slots in said sleeve whereby the bolt is supported for longitudinal movement within the sleeve to be moved into and out of engagement with said spindle, said bolt being chambered to receive said cam on said locking unit and provided with a lug coacting therewith, and a coiled spring arranged within said bolt to actuate the same to spindle engaging position.



1,804,782. PRESSURE CONTROL IN FURNACES. LEON C. KOENIG, Chicago, Ill., assignor to Hevi Duty Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 3, 1929. Serial No. 360,188. 12 Claims. (Cl. 266—5.)

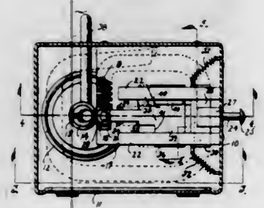
5. In an annealing furnace, a heat treatment chamber, means for introducing a charge into said furnace and removing said charge therefrom, pressure control means operative in accordance with the pressure within said furnace for regulating the pressure to which said charge is



subjected, and maintaining a non-oxidizing atmosphere within said chamber throughout the period of heat treatment of said charge with respect to said furnace.

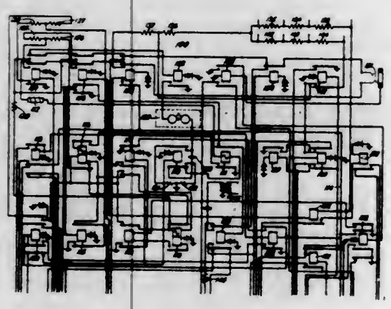
1,804,783. CLIP FOR TOY ELECTRIC RAILWAY TRACKS. JOHN C. KOERBER, South Orange, N. J. Filed Feb. 17, 1928. Serial No. 255,073. 25 Claims. (Cl. 191—29.)

1. A universal toy track clip comprising a base, a rail engaging contact mounted on said base and means for attaching the clip to toy railway tracks of different gauge, one of said contacts comprising a strip of metal mounted on said base and arranged to extend along and engage the bottom of the third rail of said tracks.



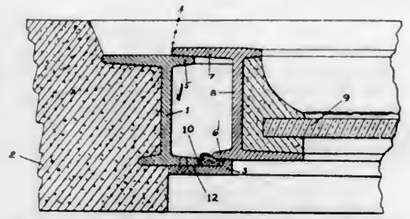
1,804,784. TOY RAILWAY TRACK CLIP. JOHN C. KOERBER, South Orange, N. J. Filed July 16, 1928. Serial No. 293,000. 13 Claims. (Cl. 191—29.)

1. The toy railway track clip comprising a base, a third rail engaging contact carried by said base, a second contact slidably mounted on said base and movable toward and away from said track, said second contact being adapted for engagement with the outside of an outside rail of said track, and said second contact having a sufficient



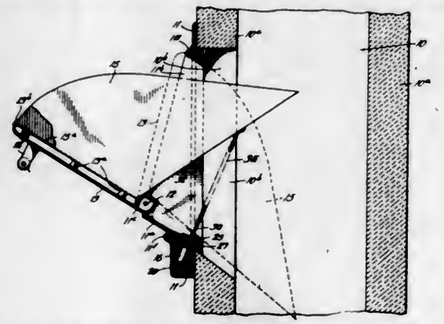
range of movement to permit of its engaging the outside rails of tracks of different gage, and a compression spring located in said second named contact and adapted to move said second named contact through said range.

1,804,785. LIQUID VENDING MACHINE. WILLIAM C. F. KRUEGER, Detroit, Mich. Filed Aug. 19, 1929. Serial No. 386,962. 1 Claim. (Cl. 194—82.)



In a vending machine, a cabinet, a platform therein, a pair of spaced guides on said platform each formed with a longitudinal slot, a projecting member mounted between said guides and formed with guide members projecting through the slots thereof for slidably supporting the projecting member above the platform, a plunger device slidably mounted on said platform between said guides and normally freely movable beneath said projecting member, said projecting member being formed with a seat to receive a separate device whereby the latter projects into the plane of the projecting member, said projecting member being formed with a lateral projection thereon, a hooked retracting member projecting forwardly from said plunger device and loosely engaging the projection on said projecting member, and a spring for retracting the plunger device.

1,804,786. TELEPHONE TESTING SYSTEM. WALTER KUHN, Staten Island, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 5, 1930. Serial No. 441,782. 8 Claims. (Cl. 179—175.)

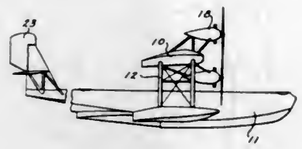


1. In a testing system, a primary testing set, a secondary testing set, means to interconnect a relay circuit therebetween, means in said secondary testing set for causing a relay in said circuit to transmit impulses of variable characteristics, electromagnetic means in said primary testing set responsive only to impulses of a particular character for testing the characteristics of said relay, and a second electromagnetic means in said primary testing set responsive only to impulses of different characteristics for associating said first electromagnetic means with the said relay circuit.

1,804,787. METAL WINDOW. FRANK KULLMER, San Francisco, Calif., assignor, by mesne assignments, to Soulé Steel Company, San Francisco, Calif., a Corporation of California. Filed June 19, 1929. Serial No. 372,194. 4 Claims. (Cl. 189—65.)

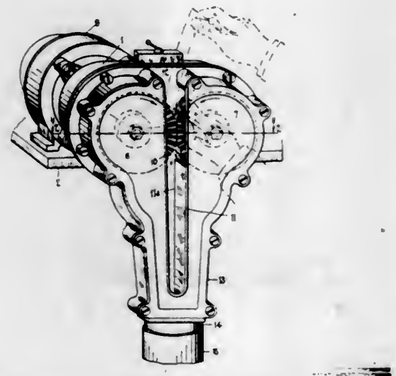
1. Metal window construction comprising a fixed frame and a swinging sash, the sash arranged with a portion to overlap and seat against the fixed frame when the sash is closed, and a strip of resilient sealing material mounted on and projecting outward from the fixed frame in a position to be partially overlapped and engaged by the extreme edge of the sash when closed and be deflected laterally away from said edge.

1,804,788. HOPPER AND CHECK. FREDERICK C. KUMMER, Milwaukee, Wis., assignor to Kerner Incinerator Company, a Corporation of Wisconsin. Filed Feb. 25, 1928. Serial No. 256,951. 9 Claims. (Cl. 193—34.)



1. In combination with a chute or the like having an opening in a wall thereof, a hopper member mounted in said opening and movable to and from open and closed positions, and yielding means connected to said hopper and a wall of said chute to check the hopper as it approaches either of said positions while permitting free movement of said hopper intermediate its terminal approaches.

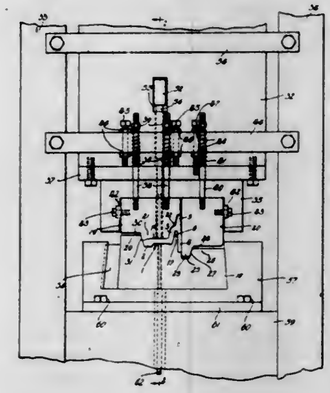
1,804,789. FOLDABLE RULE. EMIL KWARTZ, Seattle, Wash. Filed Apr. 9, 1928. Serial No. 268,624. 4 Claims. (Cl. 33—120.)



3. A foldable rule comprising a plurality of straight members pivotally connected together adjacent to their respective ends, said members being of concavo-convex form in transverse section and arranged to swing about the axes of their pivotal connections with each other, the surfaces of each member in proximity of its pivotal connections with other members being adapted to engage the surfaces of the members next above and below respectively.

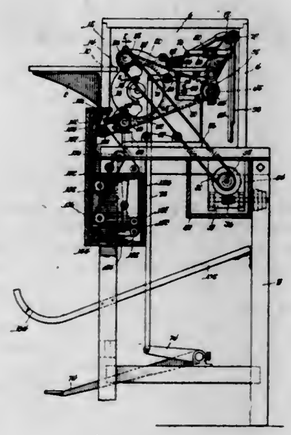
1,804,790. AIRCRAFT. ISAAC M. LADDON, Buffalo, N. Y., assignor to Consolidated Aircraft Corporation, Buffalo, N. Y., a Corporation of Delaware. Filed Sept. 5, 1928. Serial No. 303,997. 4 Claims. (Cl. 244—14.)

1. In an aircraft, in combination, a single sustaining plane, a car spaced a substantial distance from and attached centrally below said plane, a power unit at each side of said car each including a motor and having a tractor propeller operating in a plane ahead of the leading edge of the sustaining plane with the circular paths of the propeller tips extending above the edge of the said sustaining plane, and a power unit centrally positioned above said sustaining plane and including a motor and a tractor propeller operating in a plane ahead of the leading edge of the sustaining plane, all of said propellers revolving substantially in a common transverse geometric plane.



1,804,791. MACHINE FOR CLEANING TROUSER CUFFS. JOSEPH T. LA MEASURE and LAURENCE J. LA MEASURE, Detroit, Mich. Filed Dec. 5, 1927. Serial No. 237,767. 5 Claims. (Cl. 15—40.)

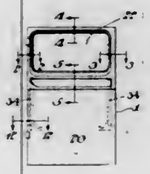
3. In a machine of the character described, the combination with a rotary brush for removing dirt from garments, of a casing enclosing said brush having a reduced hopper-forming portion below the brush, said casing having an elongated slot in one of its walls extending in a plane substantially tangential to said brush, for guiding garments past said brush.



1,804,792. DIE. GEORGE LANGFORD, Joliet, Ill., assignor to McKenna Process Company of Illinois, Joliet, Ill., a Corporation of Illinois. Filed May 16, 1929. Serial No. 363,638. 6 Claims. (Cl. 78—76.)

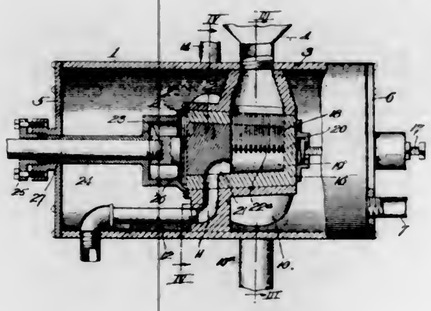
1. In combination in means for reforming rail joint angle bars of the continuous type, a press comprising a bed and a cross head, a lower die fixed to the bed and having a bar receiving cavity and an upwardly projecting blade adapted to enter between the base and the flange of the bar, an upper die holder carried by the cross head, an upper die comprising two sections mounted in the holder for relative movement toward and away from each other, means for supporting said sections in the holder for relative vertical movement therein, stops disposed to contact the sections of the upper die during upward travel thereof with the cross head, certain of the

stops contacting one of the upper die sections in advance of contact of the other stops with the other of said sections, and means for forcing the sections of the upper die toward each other as the dies are closed under pressure.



1,804,793. DEVELOPING APPARATUS WITH BLANKET ADJUSTMENT AND SPRAY APPLICATION OF LIQUID AMMONIA. ADOLPH LANGSNER, Chicago, Ill., assignor to Eugene Dietzgin Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 9, 1928. Serial No. 245,833. 6 Claims. (Cl. 95—94.)

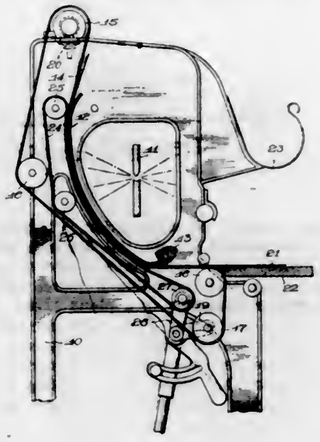
1. In a developing apparatus, the combination of an enclosing casing, carrier members mounted therein, means for driving same, means introducing light sensitive material between said carrier members, a spray nozzle in said casing, a pipe connected with said spray nozzle and connecting to a source of air pressure, a second pipe connected to said spray nozzle and connected to a source



of liquid ammonia, said spray nozzle being constructed and arranged to project the liquid ammonia, in the form of a fine breath-like mist, onto said carrier members.

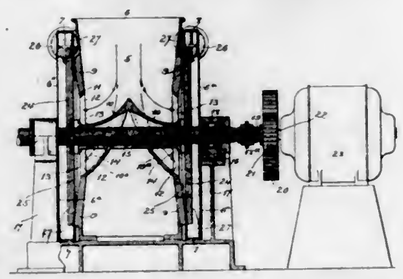
1,804,794. DOOR FOR CLOSED VEHICLE BODIES. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 3, 1927. Serial No. 230,703. 14 Claims. (Cl. 296—44.)

1. In an automobile door, a one piece window frame stamping in which is made the window opening together with a one piece glass run channel stamping embracing said opening and connected to the frame stamping.



1,804,795. BEVERAGE MAKING MACHINE. JAMES W. LEE, Kansas City, Mo. Filed Apr. 1, 1929. Serial No. 351,552. 7 Claims. (Cl. 53—3.)

1. A beverage machine comprising a casing provided with a stock-charging port, two liquid-charging ports, a beverage-discharging port and a waste port, and a movable receptacle in said casing having communicating stock-receiving and beverage-holding chambers; the stock-receiving chamber being adapted for successive registration with the stock-charging port and one of the liquid-charging ports and the waste port, and the other chamber for successive registration with the beverage-discharging port and the other liquid-charging port of the casing; the registration of the beverage chamber with the last-named port occurring during registration of the stock-receiving chamber with the waste port.

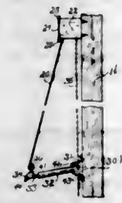


1,804,796. MACHINE FOR MAKING BLUE PRINTS AND OTHER PHOTOPRINTS. THOMAS LORD and HAROLD J. BRUNK, Chicago, Ill., assignors to C. F. Pease Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 18, 1928. Serial No. 255,459. 5 Claims. (Cl. 95—75.)

1. A blue-print machine comprising a source of light, a transparent member, a belt having means to cause it to slide over the surface of said transparent member remote from said light source and carry with it the sensitized paper and negative and a resilient belt movable

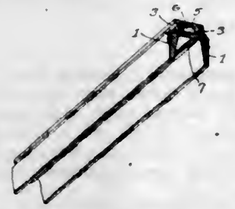
with and held against the outside of said first belt and mounted under tension to hold said paper and negative in intimate contact.

1,804,797. APPARATUS FOR DISINTEGRATING CANE STALKS PREPARATORY TO THE EXTRACTION OF THE JUICE FROM SAME. WILLIAM HENRY MORGAN, Alliance, Ohio, assignor, by mesne assignments, to The Morgan Hurrycane Company, New York, N. Y., a Corporation of Florida. Filed Feb. 28, 1925, Serial No. 12,411. Renewed July 26, 1930. 12 Claims. (Cl. 146—114.)



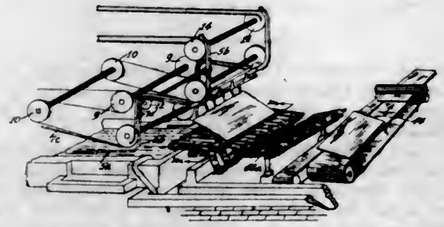
1. In a disintegrator for sugar producing material, the combination of two stationary disks, shearing knives mounted on the inner faces of said disks, a hopper formed between the upper portions of said disks, the said disks being provided with openings communicating with the hopper adjacent the centers of the disks, the bottom of the hopper being cone-shaped and extending below said openings, a rotary shaft passing through said disks, and non-adjustable disks secured to said shaft and provided on their inner faces with shearing knives which co-act with the knives on the stationary disks.

1,804,798. ROLLING AWNING. NELS H. NELSON, Des Moines, Iowa. Filed Mar. 10, 1930. Serial No. 434,661. 9 Claims. (Cl. 156—44.)



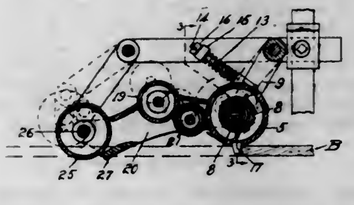
5. In a device of the class described, a hinged frame, a rotatably mounted shaft, a flexible awning element having one end secured to said shaft, a binder strip

secured to the free end of said flexible awning, a hook portion formed on said binder strip and engaging said frame, a plurality of transversely extending elongated slots in said hook portion, and a plurality of projections on the portion of the frame in said hook portion extend-



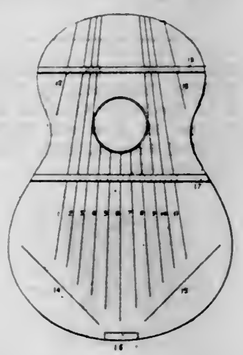
ing into and through said slots, respectively; said projections extending at approximately a forty-five degree angle from the horizontal when said awning element is rolled on said shaft and said frame is in approximately a vertical position.

1,804,799. RUBBER STRIPPING FOR DOORS OR WINDOWS. FREDERICK C. PALENSKE, St. Joseph, and WILLIAM A. ROBBINS, Benton Harbor, Mich. Filed Apr. 5, 1929. Serial No. 352,633. 6 Claims. (Cl. 296—44.5.)



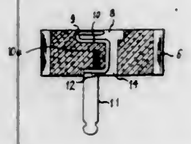
1. A rubber strip for use in forming a tight joint in any desired structure, comprising a rubber channel having an integral base portion and flexible side walls having an anchoring portion by which the strip is fastened in place on the structure, and having a flexible web disposed obliquely in the channel and integral with the base portion of the strip and adapted to engage the edge of some element of said structure, when the edge portion of said element is moved in the channel strip, said oblique web being flexed toward one side wall and toward the base, by said element, providing a tight joint between the strip and the edge of said element for the full length of said edge.

1,804,800. CONTINUOUS PICKLING MACHINE. CHARLES B. PALMER, Van Nuys, Calif., and KRISTIAN KRONBORG, Middletown, Ohio, assignors to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Original application filed Nov. 9, 1926, Serial No. 147,311. Divided and this application filed Mar. 30, 1929. Serial No. 351,273. 5 Claims. (Cl. 198—177.)



5. In a conveyor device for a continuous sheet metal pickler, carriers each having a plurality of depending arms with forwardly turned-up lower ends forming sheet-supporting abutments, said arms shaped to support a sheet in an upright position tilted backward at an angle to the vertical and carried in advance of said arms, whereby said sheet may be carried on said arms through a tank of pickle liquor, conveying means to engage and move said carriers, and sheet delivery means, operative between said arms, to raise the lower edge of said sheet above said abutments during the continuous motion of said carrier, and then move said lower edge more rapidly ahead in the direction of travel of said carrier to cause said sheet to leave said arms and fall flat on said sheet delivery means.

1,804,801. LUMBER MARKER. NEAL PANABAKER, Coeur D'Alene, Idaho. Filed June 1, 1929. Serial No. 367,697. 1 Claim. (Cl. 101—35.)

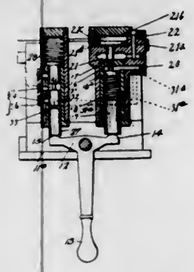


The combination with a supporting arm, a pivoted yoke, pivoted links and a roller frame pivoted in the yoke and links, of a trip arm on the frame and a supporting roller journaled in the frame, an inking roller and a transfer roller journaled in the frame, a spring returned printing roller journaled in the frame and a stop lug therefor, a trip lug on the printing roller, and a cushion spring between the yoke and arm.

1,804,802. CONSTRUCTION OF GUITARS. JUAN PASTOR, Buenos Aires, Argentina. Filed Jan. 26, 1928. Serial No. 249,704. 2 Claims. (Cl. 84—291.)

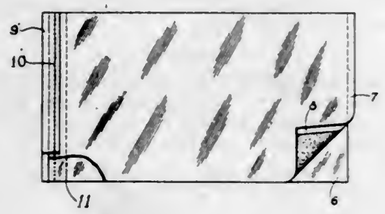
1. A guitar having a sound opening in its front wall comprising a plurality of strengthening ribs diagonally extending over the inner face of the side walls of the instrument for connecting its front and rear walls and causing a vibration of said front and rear walls in unison, a pair of cross-bars, a plate on said cross bars having a central opening of a dimension of the opening in the front wall of the instrument, a tube in said opening extending to a distance below the opening in the front wall for amplifying and syntonizing the sound, and a means for allowing an air current to pass through the instrument.

1,804,803. ELECTRIC PLUG CONNECTION. ERVIN M. PATTISON, Detroit, Mich. Filed Aug. 13, 1928. Serial No. 299,188. 2 Claims. (Cl. 173—361.)



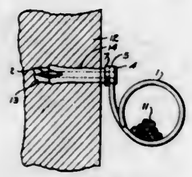
1. In an electrical connecter, the combination with a plug having an insulating body and carrying upon one end of said body a pair of contacts laterally projecting from said body, of a combined plug and socket member comprising an insulating body formed at one end with a socket for receiving the contact-mounting end of said plug, and comprising a pair of contact members seated adjacent to said socket at opposite sides thereof and engageable by the contacts of the plugs when the latter is rotated within said socket, and further comprising a pair of contact tongues projecting from the opposite end of said socket member to that formed with the socket and respectively electrically joined with said keepers.

1,804,804. REENFORCED SURFACE FLOOR. WILLIAM S. PATTISON, Kansas City, Kans. Filed Aug. 22, 1929. Serial No. 387,659. 3 Claims. (Cl. 94—8.)



1. In a re-enforced surface floor, re-enforcing bars disposed side by side with their lower edges adapted to rest upon a suitable base, adjacent bars having spacing means of less depth than the depth of said bars, separating the latter and having locking means for holding said bars spaced apart, and filling material between said bars, passages being provided between the bars past said spacing and locking means adapted to receive said material.

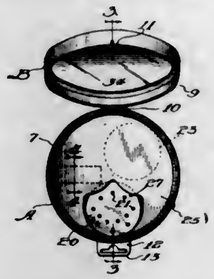
1,804,805. PNEUMATIC FEEDING MECHANISM FOR MACHINE TOOLS. FREDERICK E. PHILLIPS, Newport, Ky., assignor of one-fourth to Allen & Allen, a Firm composed of Alfred M. Allen and Marston Allen, Cincinnati, Ohio. Filed June 15, 1926. Serial No. 116,222. 2 Claims. (Cl. 121—45.)



1. In combination with a movable member in a machine tool, a cylinder having a piston operatively connected with said member, a source of air pressure and means for introducing air therefrom into said cylinder, said means comprising a valve and a control handle resiliently connected therewith, an air passage connected into said cylinder, and said valve having two heads of different surface area connected therewith, the smaller of said heads being exposed to the source of air pressure, and the larger of said heads exposed to the pressure in said air passage, the said heads so arranged that air pressure against said smaller head will move the valve to closing position, and the air pressure against said larger head will also move said valve to closing position, whereby the introduction of air into the passage is regulated by the excess of the pressure of the resilient connection over that of the smaller head, with the pressure of the larger head directed so as to compensate for excessive introduction of air into said air passage.

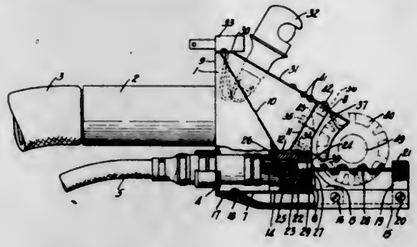
1,804,806. TABLET. LELAND A. PHILLIPS, Rochester, N. Y., assignor to The Phillips Ribbon & Carbon Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 14, 1929. Serial No. 339,865. 6 Claims. (Cl. 282—22.)

1. A tablet comprising a backing sheet, a plurality of record sheets and a carbon sheet arranged in the order named upon said backing sheet, said record sheets being longitudinally fanned at one end, a binding covering one of the ends of all the sheets, and fastening means securing the binding and said sheets together.



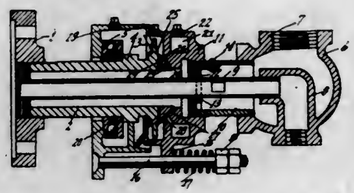
1,804,807. DRIVE RING. HENRY W. PLEISTER, Westfield, and JOHN KARITZKY, Garwood, N. J., assignors to Henry B. Newhall Corporation, Garwood, N. J., a Corporation of New Jersey. Filed Aug. 1, 1928. Serial No. 296,743. 2 Claims. (Cl. 248—36.)

1. A new article of manufacture comprising a rigid non-separable drive ring formed of a separate ring having an eye, a separate shank of hard metal having a driving head on one side of the eye and adapted to protect the eye from blows of a hammer or similar tool, and a collar mounted on the shank on the other side of the eye, and adapted to secure the shank and eye together and form a strong joint between the ring and shank.



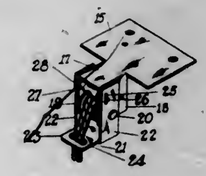
1,804,808. VANITY CASE. HARRY V. PRETOT, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a Corporation of Illinois. Filed May 3, 1929. Serial No. 360,138. 2 Claims. (Cl. 132—83.)

1. In a vanity, the combination of a case across which is extended a platform having therein three openings two of which open into a loose powder compartment and the third into a cup containing a compact, a perforated disk resiliently fitted into one of the openings communicating with the powder compartment, and a plate mounted for rotation on the platform having an opening adapted to uncover successively the three platform openings to afford access to the material therewithin, the several openings



occupying such relative positions that the loose powder compartment may be completely shut off while the compact opening is occluded in whole or in part.

1,804,809. VACUUM CLEANER APPARATUS. WILLIAM T. PRITCHARD, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 2, 1929. Serial No. 352,039. 5 Claims. (Cl. 15—158.)

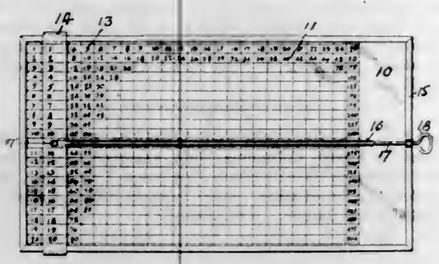


1. A vacuum cleaner nozzle comprising an upper portion having a forwardly directed inlet, and a lower portion extended beyond said upper portion, a rotatable member supported in the lower portion, said upper portion projecting over part of the rotatable member, said nozzle having an outlet for connection to a suction device, and means for connecting the rotatable member to a driving motor.

1,804,810. PACKING BOX. JOHN H. REEDY, Hamilton, Ohio, assignor of one-half to Albert O. Rolfe, Hamilton, Ohio. Filed Apr. 25, 1928. Serial No. 272,844. 1 Claim. (Cl. 285—10.)

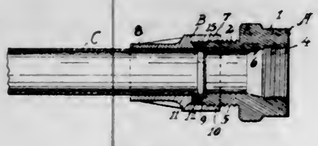
A packing box for attachment to the flange of a rotary machine element to which fluid is to be supplied and fluid syphoned away, comprising a threaded nipple having a flat flanged outer face, a shoulder on said nipple, a thrust ball bearing assembly retained by said shoulder, a housing having a shoulder for retaining the other side of said bearing assembly, a smaller pipe extending through said nipple, another nipple having a supporting flange through which said smaller pipe extends, a housing mounted on said last noted nipple, said housing having a concave bearing portion, resilient means securing said housings together, a convex composition bearing received within the concave bearing portion of said second noted housing, having a flat face engaging the flat flanged outer face of the first noted nipple, a reducing T threaded on said second noted nipple, said smaller pipe threaded into the reduced threaded portion of said T, and said second noted nipple threadably engaging an unreduced threaded portion of said T.

1,804,811. CABLE LOCK FOR WINDOW BLINDS. WILLIAM E. ROSEL, Columbus, Ohio, assignor to The Yardley Screen & Weatherstrip Company, Columbus, Ohio, a Corporation of Ohio. Filed June 25, 1929. Serial No. 373,671. 4 Claims. (Cl. 156—17.)



2. A Venetian blind having a stationary suppporting bar, a plate secured to said bar and provided with a pulley housing, a pulley journaled in said housing around which a slat operating cable is trained, a frame arranged adjacent said housing and pivoted to swing on the journal for said pulley, said frame extending above and below said pulley and formed with a lateral extension having an opening therein through which the free end of said cable projects, a cable engaging roller carried by the upper end of said frame, and means formed with said frame and housing for moving said roller towards said pulley into and out of clamping engagement with the cable passing around the pulley upon the rocking movement of said frame caused by the manipulation of said cable.

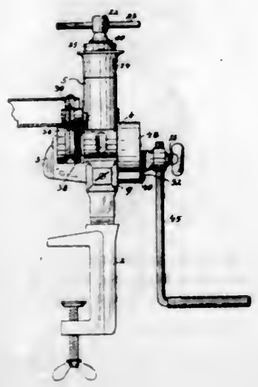
1,804,812. ARTIFICIAL DENTURE. EDWARD A. SATTLER, Buffalo, N. Y., assignor to George J. Sattler, Buffalo, N. Y. Filed Aug. 10, 1929. Serial No. 384,815. 2 Claims. (Cl. 32—9.)



1. An artificial denture mounting comprising a tooth body provided on its rear side with a tenon the upper parts of whose sides are vertical and the lower parts thereof inclined toward each other, and a backing having a socket provided with side walls the upper parts of which are vertical and engage the vertical side faces of said tenon and the lower parts of which incline toward each other and engage with the inclined lower parts of the sides of said tenon, and said body being provided on opposite sides of said tenon with recesses having inclined bottoms converging forwardly and said backing having wings on opposite sides of said socket, the front sides of which are inclined and engage with the correspondingly inclined bottoms of said recesses.

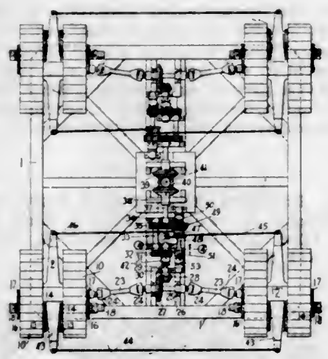
1,804,813. EDUCATIONAL DEVICE. REINHARDT SCHARF, Thiensville, Wis. Filed Jan. 31, 1928. Serial No. 250,763. 2 Claims. (Cl. 35—2.)

1. A multiplying device formed as a sheet having numbers on both sides thereof arranged in arithmetical progression in vertical columns and horizontal rows, a sliding multiplier formed as a band encircling the sheet and provided on each side with numbers arranged in arithmetical progression, a rod supported and guided for longitudinal movement at one end at the edge of the sheet and attached at its other end to the said band and spacing the latter from the surfaces of the sheet to avoid wearing such surfaces, whereby when the rod is operated longitudinally to move the band to position the movable multiplier in proximity to a selected vertical column on the sheet, the product of the multiplication of the number at the top of the column by the selected number in the selected vertical column on the movable multiplier will be indicated by a number of the sheet adjacent the selected number on the multiplier.



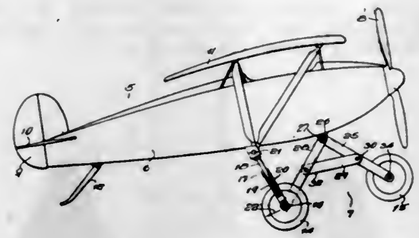
1,804,814. PIPE COUPLING AND METHOD OF FORMING THE SAME. CHARLES F. SCHULTIS, Cleveland, Ohio, assignor, by direct and mesne assignments, to The Simplex Copper Joint Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 3, 1928. Serial No. 251,521. 2 Claims. (Cl. 285—88.)

2. In a pipe connection of the class described, the combination with a coupling member having clamping means therein, of a tube having an integral flange adjacent to but not at one end thereof and at an angle to a plane perpendicular to the axis of the tube, said flange comprising a portion of the tube bent back upon itself and held in the clamping means in the coupling member, the opposite walls of the flange being pressed together to provide a substantially continuous bore.



1,804,815. MACHINE FOR DEFORMING PIPES. CHARLES F. SCHULTIS, Cleveland, Ohio, assignor, by direct and mesne assignments, to The Simplex Copper Joint Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 11, 1928. Serial No. 253,590. 5 Claims. (Cl. 153—9.)

1. A pipe deforming machine of the class described, comprising, in combination, pipe deforming instrumentalities, means for including an operating member in the machine to operate the deforming instrumentalities, and means



permitting of the rotation of the whole machine to perform the deforming functions when the operating member is not included in the machine.

1,804,816. CRAWLING TRACTION MECHANISM. DWIGHT J. SHELTON, Marion, Ohio, assignor to The Marion Steam Shovel Company, Marion, Ohio, a Corporation of Ohio. Filed Feb. 13, 1925. Serial No. 8,899. 14 Claims. (Cl. 180—9.1.)

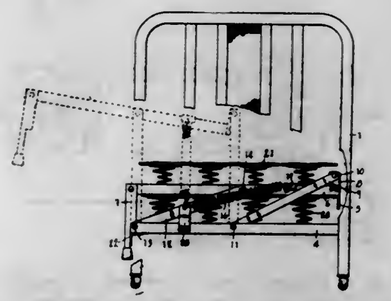
1. In a machine of the character described, a base frame, a vertical post depending from said base frame, a truck frame arranged beneath said base frame and having a socket to receive the lower end of said post, said socket having its lateral walls converging toward the bottom thereof and having its front and rear walls substantially parallel, the lower end of said post being rounded to permit said truck frame to have tilting movement about a longitudinal axis, said truck frame also having laterally extending trunnions, crawling traction devices pivotally mounted between their ends on the respective trunnions, and means for actuating said crawling traction devices.

1,804,817. LANDING GEAR FOR AEROPLANES. JOSEPH SILVERMAN, Chicago, Ill. Filed Feb. 14, 1929. Serial No. 339,775. 10 Claims. (Cl. 244—2.)

1. In an aerial craft the combination of a fuselage, a pair of arms converging toward said fuselage and having a common pivot attachment at their meeting ends thereto, a main landing wheel journaled at the opposite end of one of said arms and an auxiliary landing wheel journaled at the opposite end of the other arm and disposed forwardly and above said first wheel.

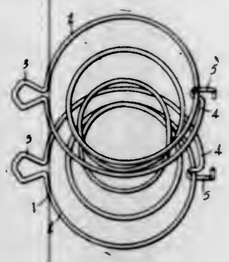
1,804,818. WELL PACKER. GEORGE A. SPANG, Butler, Pa., assignor to Spang and Company, Butler, Pa., a Corporation of Pennsylvania. Filed Mar. 11, 1929. Serial No. 345,933. 7 Claims. (Cl. 166—12.)

1. A well packer having in combination a tube, a sleeve of resilient well packing material thereon, means on said tube for expanding said sleeve into sealing engagement with the wall of the well hole, packer supporting slips adapted to engage said wall for supporting said packer in position and an actuator slidable within said tube, adapted to be operated by engagement with the bottom of the well hole for simultaneously operating said expanding means and said slips.



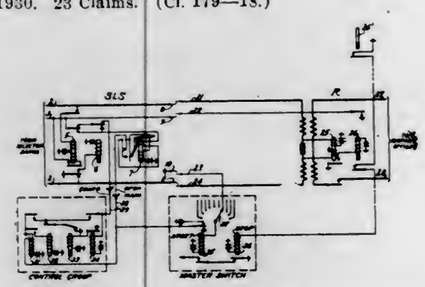
1,804,819. SIDE WALL DRILLING ORGANIZATION. EDWARD A. SPENCER, Jr., Los Angeles, and FAY OLIVER, Whittier, Calif. Filed May 2, 1928. Serial No. 274,406. 15 Claims. (Cl. 255—61.)

1. A side wall channeling organization, for use in underground bore holes, comprising: a main body member; means for suspending said body member from a drill string; a drill member adapted to be projected laterally



from said body member; and means rotatable relative to said body member for imparting rotation to said drill member from said drill string.

1,804,820. SOFA BED. GEORGE A. STACKHOUSE, Oakland, Calif., assignor to L. A. Young Spring and Wire Corporation, Detroit, Mich. Filed Apr. 12, 1929. Serial No. 354,455. 3 Claims. (Cl. 5—22.)

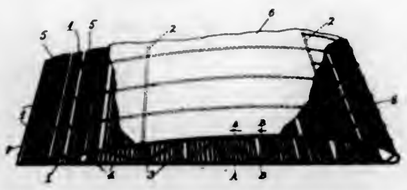


1. In a sofa bed, the combination with a main section provided with legs and comprising side rails and angle iron end members, the end members being disposed with their angles facing inwardly and upwardly, an adjustable section comprising side rails and angle iron end members, the end members being disposed with their angles facing upwardly and inwardly, said adjustable section having upwardly projecting arms at the rear corners thereof, a pair of links pivoted at their upper ends to the said arms and at their lower ends on their inner side of the upwardly projecting flanges of the main section end members and centrally thereof, said links having oppositely offset ends, a second pair of links pivoted on the inner side of the upwardly projecting flanges of the main section end members at the front ends thereof and to the outer sides of the end members of the adjustable section centrally thereof, a bed spring unit on the main section, and legs at the forward corners of the adjustable section shouldered to engage and be supported by the front rails of the main section when the adjustable section is collapsed thereon, the adjustable section resting upon and supported by said bed bottom spring unit.

1,804,821. SPRING STRUCTURE. GEORGE A. STACKHOUSE, Oakland, Calif., assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich. Filed July 5, 1929. Serial No. 376,131. 8 Claims. (Cl. 155—179.)

8. In a spring structure, the combination of body springs, the end coils of which terminate in hooks, said body springs being arranged in rows with corresponding springs of the several rows in transverse alinement, side members of flexible material provided with longitudinal pockets at their edges, cross members of flexible material arranged between the rows of springs and having longitudinal pockets at their edges, and border and cross tie members arranged in said pockets, certain of the outer body springs having their hooks clamped upon the enclosed border members, the hooks of the other body springs being clamped upon the enclosed cross tie members and adjacent springs.

1,804,822. TELEPHONE SYSTEM. JOHN I. BELLAMY, Brookfield, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed June 15, 1928. Serial No. 285,530. Renewed May 24, 1930. 23 Claims. (Cl. 179—18.)



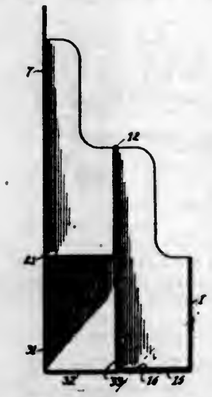
1. In a telephone trunking system, a plurality of incoming trunks each terminating in a preselecting switching mechanism, a lesser plurality of outgoing trunks accessible in common to all said mechanisms, means for making busy all idle incoming trunks when any incoming trunk is taken for use, means for thereafter operating the switching mechanism in which the seized trunk terminates, means common to all said preselecting switching mechanisms for preselecting another outgoing trunk, and means for maintaining the busy condition on the incoming trunks until said preselecting means has preselected another trunk.

1,804,823. UNI-LAYER RIGID AIRPLANE WING. JOSEPH BLONDIN, Los Angeles, Calif. Filed July 9, 1929. Serial No. 376,917. 6 Claims. (Cl. 244—31.)

1. An airplane supporting surface consisting of a thin, single layer, solid body of rigid, spar-forming character and having a series of longitudinal, ventral spars exposed to air-flow and forming longitudinal channels endwise of the surface.

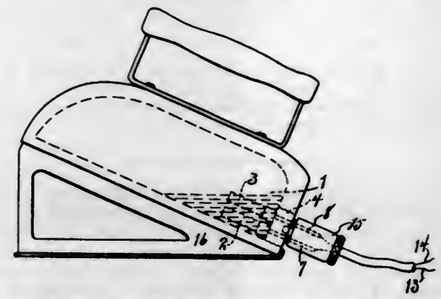
1,804,824. AEROPLANE WING. WALTER M. CROSS, Kansas City, Mo. Filed June 22, 1928. Serial No. 287,399. 4 Claims. (Cl. 244—31.)

4. Aeroplane wing construction, comprising a skeleton frame of upper and lower former members defining the contour of the wing, braces between the former members, corrugated sheets inside of the formers and extending substantially their entire length and a plain surfaced covering outside of the formers and skeleton frame.



1,804,825. MEANS ON FIREARMS FOR MEASURING ANGLES IN THE FIELD. LARS ERIC MARTIN CLEMENSSON DAHLBERG, Kristianstad, Sweden. Filed Feb. 12, 1930, Serial No. 427,907, and in Sweden July 20, 1929. 19 Claims. (Cl. 42—1.)

1. A fire-arm having a breech-block provided with a handle and means on said handle for measuring angles.

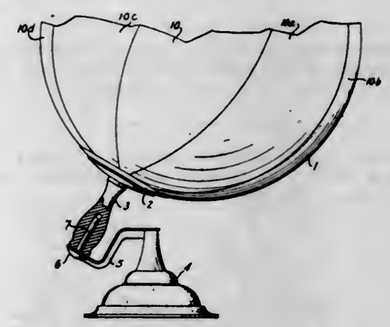


1,804,826. SHIPPING AND DISPLAY CONTAINER. MORRIS M. EINSON, Yonkers, N. Y., assignor to Einson-Freeman Co., Inc., a Corporation of New York. Filed May 5, 1928. Serial No. 275,325. 4 Claims. (Cl. 206—44.)

1. A packing and display container, cut, bent, and formed from a single blank of material transversely foldable to provide a staggered pair of open ended display racks, the back of the assembly including at one end an integrally formed, extending foldable member arranged to extend downwardly from the back to the supporting

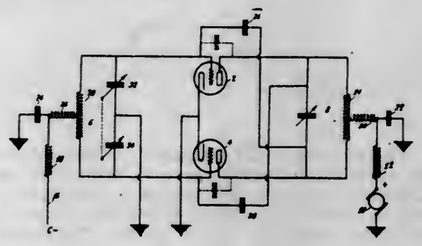
surface and forwardly on the supporting surface to the back of the lower display rack, thus to provide a supporting easel for the device when in display position.

1,804,827. SADIRON. WALTER W. EVERTS, Fort Worth, Tex., assignor to Sid Post, Fort Worth, Tex. Filed Aug. 5, 1929. Serial No. 383,680. 2 Claims. (Cl. 219—25.)



1. A sadiron comprising a casing having a relatively large interior chamber for containing water and steam, means for sealing said chamber consisting of a plug screwed into said casing and perforated for receiving electric terminals, terminals and porcelain tubes surrounding portions of said terminals, washers sealing and insulating said plug about said terminals, and conductors carried by said terminals.

1,804,828. COLLAPSIBLE GLOBE. PAUL GARRIGUE, New York, N. Y. Filed Feb. 10, 1928. Serial No. 253,283. 6 Claims. (Cl. 35—5.)

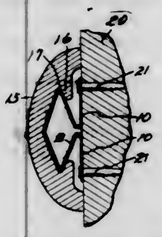


1. In a collapsible globe, in combination, a collapsible envelope having an opening therein, a ring insertable in said envelope, a base plate arranged to receive said ring and extending outwardly from the ring-receiving portion to form a support for the lower portion of said envelope, and means carried by said base plate for securing said ring and said base plate in position, said means comprising a gripping member extending over said ring at a plurality of points.

1,804,829. COLLAPSIBLE GLOBE AND MOUNTING FOR SAME. PAUL GARRIGUE, New York, N. Y. Filed June 30, 1928. Serial No. 289,411. 10 Claims. (Cl. 35—5.)

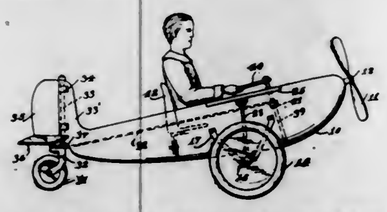
1. A support assembly for a collapsible globe having an envelope, said assembly comprising in combination, a base secured to said envelope, and a mount to which said base may be attached, said base and mount being provided within the periphery with interlocking means for detachably securing said base and mount together, said interlocking means being concealed when said plates are secured together.

1,804,830. PREVENTION OF PARASITICS IN ELECTRON EMISSION TUBE CIRCUITS. CLARENCE W. HANSELL, Port Jefferson, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Dec. 24, 1928. Serial No. 328,135. 5 Claims. (Cl. 179—171.)



1. The method of preventing pushpush parasitics in a pushpull electron emission tube stage which includes causing the pushpush parasitics to take the capacitive rather than the inductive path from the control electrodes to the cathodes of the tubes, in order to make the potential of these parasitics applied to the control electrodes degenerative in phase.

1,804,831. TWO PART FINISHING MOLDING. FRANCIS D. HARDESTY, Pleasant Ridge, Mich., assignor to Herron-Zimmers Molding Company, Detroit, Mich., a Corporation of Michigan. Filed June 29, 1929. Serial No. 374,902. 5 Claims. (Cl. 296—135.)



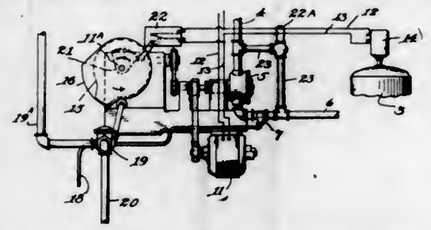
1. An elongated two part finishing molding comprising an elongated channeled molding having laterally extend-

ing recesses in its inside walls and an elongated nailing strip comprising an elongated base provided with upstanding quadrilateral loops adapted to be flattened di-

agonally, whereby, when said molding is applied, the lateral corners of said loops become projected into said recesses to thereby fix the parts together.

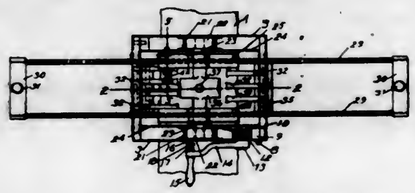
1,804,832. CHILD'S VEHICLE. JAKOB HOJNOWSKI, Nekoosa, Wis. Filed May 29, 1930. Serial No. 456,926. 2 Claims. (Cl. 208—42.)

1. A pedal operated child's vehicle comprising a body simulating the body of an aeroplane, side wings pivotally attached to said body, a crank shaft, members attached to said crank shaft, and pivoted at the underside of the wings, and pedals to rotate said shaft for flopping said wings.



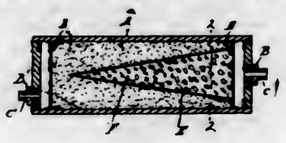
1,804,833. ORNAMENTAL ARTICLE AND METHOD OF MAKING THE SAME. WALTER C. JOHNSTON, Polk City, Fla. Filed Aug. 22, 1929. Serial No. 387,743. 4 Claims. (Cl. 63—2.)

1. The above described method of fastening a natural tooth to another element having an irregularly shaped shank which consists in first forming an undercut socket in the dentine of the root portion of said tooth to receive said shank; then softening the dentine of the tooth to render the same yielding; then forcing said shank endwise into said socket while the dentine is soft so that the latter fits itself to the irregular shape of said shank, and lastly, restoring said dentine to its original hard condition to secure said shank within the socket.



1,804,834. WATER SOFTENING APPARATUS AND METHOD OF AUTOMATICALLY CONTROLLING THE REGENERATING CYCLES IN A WATER SOFTENING SYSTEM. FRANK X. LAUTERBUR, EDWARD J. LAUTERBUR, and HOWARD L. MINTCHELL, Sidney, Ohio, assignors to The Peerless Bread Machine Company, Sidney, Ohio, a Corporation of Ohio. Filed Jan. 21, 1928. Serial No. 248,489. 16 Claims. (Cl. 210—24.)

1. Water softening apparatus comprising a tank for softening material, a tank for regenerating material, and a pressure tank for soft water, means for replenishing the supply of soft water in said pressure tank periodical-



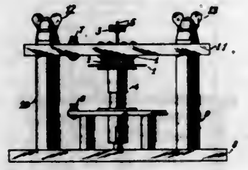
ly in accordance with variations in pressure in said pressure tank, and means for controlling cycles of regeneration by said periodically softening means.

1,804,835. GAIN MAKING DEVICE. LYLE D. LEWIS, Corwin Center, Pa. Filed Aug. 2, 1929. Serial No. 383,115. 7 Claims. (Cl. 144—133.)

1. In a gain making device, the combination of a main frame; means for securing the frame to a pole; a guide frame; and reciprocating gain side and bottom forming cutters carried by the guide frame.

1,804,836. SCRUBBER FOR REFRIGERATING APPARATUS. HUBERT R. LORANGER, Highland Park, and UBALD R. LORANGER, Detroit, Mich.; Marie F. Loranger executrix of said Ubald R. Loranger, deceased; assignors to Automatic Freezer Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 16, 1924. Serial No. 720,446. 7 Claims. (Cl. 62—115.)

1. The combination with a refrigerating system using a medium adapted to be liquefied and having acid forming properties, of a scrubber located in a position in said system where said medium is in the liquid state, said scrubber containing a substance for removing acid impurities carried by said medium.



1,804,837. ELECTRIC WELDING OF CAST IRON. ERNEST LUNN, Chicago, Ill., assignor to Pullman Car and Manufacturing Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 19, 1929. Serial No. 415,242. 2 Claims. (Cl. 219—10.)

1. The method of arc-welding cast iron which consists in forming anchorage openings in contiguous sur-

faces of the parts to be joined, pre-heating the bottom and wall bases of the respective openings and burning away portions of base adjacent wall metal and depositing molten metal to fill the cavities in the wall metal, and subsequently depositing additional metal to fill said openings and effect homogeneous union with the wall metal, and uniting the metal in the several openings by metal pads developed in areas between said openings.

1,804,838. CONVERTING ELECTRICAL OSCILLATIONS INTO MECHANICAL MOVEMENT. ALEXANDER MEISSNER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed May 26, 1927, Serial No. 194,361, and in Great Britain Apr. 7, 1927. 8 Claims. (Cl. 171—327.)

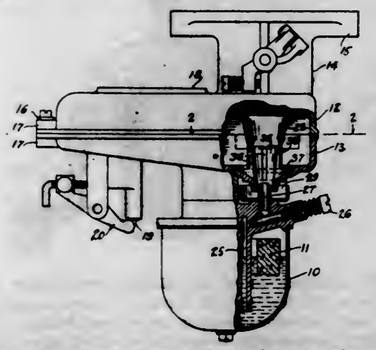
1. A device for converting electrical energy into mechanical movement which comprises, a pair of stator plates, a piezo-electric body rotatably mounted between said plates, and means to impress an alternating current upon said plates whereby to cause said body to rotate.

1,804,839. FASTENER LOCK. LYNDON F. MOTT, Houston, Tex. Filed Apr. 16, 1929. Serial No. 355,537. 3 Claims. (Cl. 292—281.)

2. A fastener for screens and the like including a screw eye attached to one of two parts to be secured together and a hook attached to the other part, and engageable in said eye, an arm attached to said eye and turnable with the eye into substantially parallel relation with the hook, to effect the movement of said eye into interlocking relation with the hook.

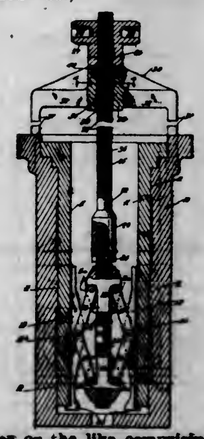
1,804,840. MANUFACTURE OF GREY TO BLACK VAT DYESTUFFS. PAUL NAWIASKY, Ludwigshafen-on-the-Rhine, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 6, 1927, Serial No. 159,502, and in Germany Jan. 12, 1926. 3 Claims. (Cl. 260—61.)

2. The process of producing new vat coloring matters which consists in treating amino-dibenzanthrone with a methyl ester of sulfuric acid in the absence of agents capable of combining with acids.



1,804,841. FABRIC PAD. JULIA B. PEDROLI, Los Angeles, Calif. Filed June 17, 1929. Serial No. 371,398. 1 Claim. (Cl. 155—188.)

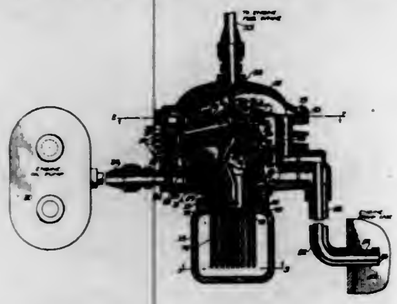
For attachment to the rungs of a chair, a spring wire frame conforming to the shape of the rung and of a size to clamp tightly around the rung, said frame being notched to clear cross braces connecting the rungs, a



suitable cover sewed around the frame, and a rubber pad fastened to the inner surface of said cover, said pad being made with lengthwise V-shaped grooves.

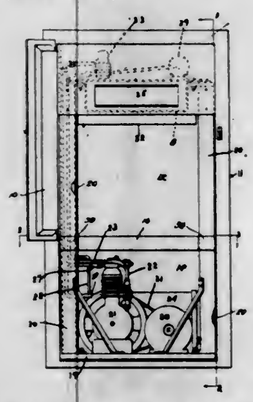
1,804,842. CARBURETOR. HARRY W. POTTER, Birmingham, Mich. Filed Sept. 17, 1928. Serial No. 306,383. 1 Claim. (Cl. 261—63.)

In a carburetor, a two part mixing chamber casing having its lower part in the shape of a shallow pan with an aperture in its bottom wall, a substantially cylindrical elongated, hollow, open ended, boss 35, in said pan and integral with the wall thereof and having slots in its side wall running to the upper edge for providing communication between the interior of said boss and the interior of the pan, and a thin walled, flared, open ended tube mounted on said boss and forming an extension thereof, said tube being so mounted on said boss as to expose a portion of each of said slots and to close the remaining portion of each slot.



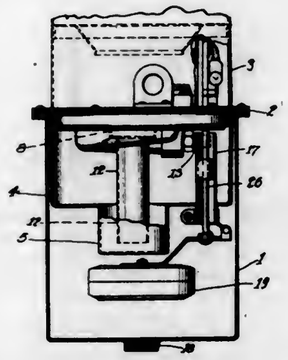
1,804,843. LINER PULLER. JAMES J. SANTIAGO, Los Angeles, Calif., assignor to John Grant, Los Angeles, Calif. Filed Dec. 14, 1929. Serial No. 414,073. 8 Claims. (Cl. 254—30.)

1. A liner puller or the like comprising a plurality of liner engaging shoes, mounting means for said shoes in-



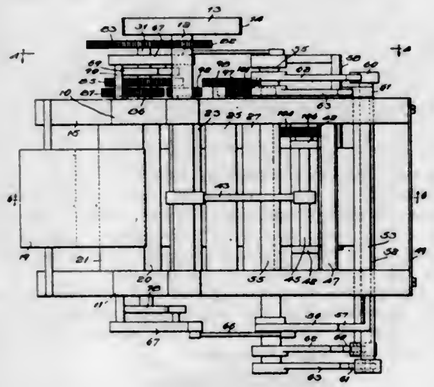
cluding a rotatable arbor and means whereby rotation of the arbor in opposite directions will contract and expand the shoes, a screw-threaded operating shaft forming an extension of said arbor, a cylinder engaging spider through which said operating shaft is slidable, and an operating nut screw-threaded on the operating shaft and bearing against the spider.

1,804,844. OIL-RECTIFYING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. RALPH L. SKINNER, Detroit, Mich., assignor, by direct and mesne assignments, of one one-hundredth to said Ralph L. Skinner and ninety-nine one-hundredths to Thomas H. West, Wilmette, Ill. Filed Mar. 22, 1928, Serial No. 263,646. Renewed Mar. 16, 1931. 29 Claims. (Cl. 123—196.)



1. The combination of an oil-container, means to admit impure lubricating oil from an internal-combustion engine into said container, a valve controlling said oil-admission, thermostatic means in the oil of said container governing the action of said valve, means to deliver the reclaimed oil from said container, means to remove the vaporized diluents freed from the oil from said container, and a plug of highly heat-conductive material in heat-transmission relation with said container and adapted to extend into the exhaust system of the engine, said plug having a cross-sectional constriction permitting a quick initial heating of the plug to the heat-transmission capacity of said constriction and thereafter restricting such heat-transmission to less than that of the heat capable of being absorbed from the exhaust gases by that part of the plug with which they come into contact.

1,804,845. REFRIGERATING MECHANISM SUPPORT AND CABINET THEREFOR. MAXWELL H. SPREEN, Detroit, Mich. Filed June 16, 1927. Serial No. 199,213. 8 Claims. (Cl. 62—116.)



1. A self contained mechanical refrigerator unit comprising a cabinet having a refrigerated compartment and a refrigerating mechanism compartment, mechanical refrigerating apparatus comprising refrigerant expansion means adapted to be disposed in said refrigerated compartment and refrigerant compressing mechanism adapted to be disposed in said mechanism compartment, a frame independent of said cabinet comprising a base on which said refrigerant compressing mechanism is assembled and uprights unitary with said base on which said refrigerating apparatus is assembled, all as a unit, said cabinet and said frame being so constructed and arranged as to permit said frame to be then inserted into said cabinet with said apparatus thereon.

1,804,846. CENTRIFUGAL PUMP. JOHN H. STEWART, Cincinnati, Ohio. Filed Mar. 24, 1926. Serial No. 97,106. 11 Claims. (Cl. 103—5.)

1. In combination with a centrifugal pump, a Venturi tube disposed at the discharge end of said pump, a sump into which said Venturi tube discharges, a suction pipe from a supply to be pumped connected with said Venturi tube, a suction passage from said sump to said pump, a reservoir below said sump, an overflow from said sump to said reservoir, and an outlet from said reservoir.

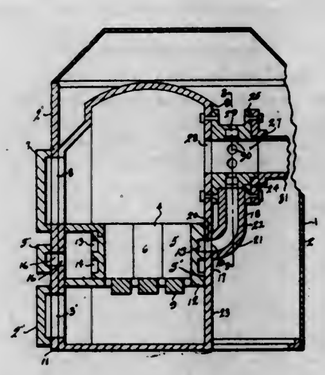
1,804,847. PAPER INTERFOLDING MACHINE. LOUIS A. STRAUBEL, Green Bay, Wis. Filed Jan. 20, 1930. Serial No. 422,031. 13 Claims. (Cl. 270—39.)

1. In an interfolding machine, the combination of means for advancing and partially cutting the work material, and a pair of oscillating rollers between which the partially cut work material is fed for completely severing same.

1,804,848. PISTON OIL SAVING RING. GUSTAF W. SUNDBERG and LEWIS J. EDMUNDS, Los Angeles, Calif. Filed July 8, 1920. Serial No. 394,798. 1 Claim. (Cl. 74—109.)

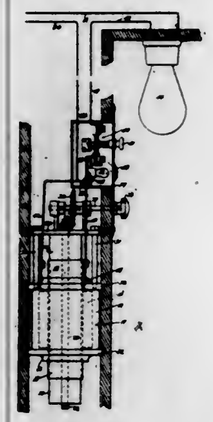
The combination with the usual cylinder, its cooperating piston, and compression packing and sealing rings, of an oil saving ring having a split, relatively resilient, non-compression, non-sealing body portion provided with a beveled upper outer edge adapted to be easily pushed over oil on the inner surface of a cylinder during the compression stroke of the piston, and two wiping edge portions adapted to bring the oil downwardly with them on the return stroke of the piston, the wiping edge portions being spaced by an upwardly and inwardly inclined wall of the lower wiping portion connecting the same with the bottom of the upper wiping portion, and the two wiping portions being normally projected to the same extent from the body portion to present the wiping edges in the same plane with reference to the surface of the cylinder so that both wiping edges operate in the same manner at all time with reference to the inner surface of the cylinder.

1,804,849. FUEL REGULATOR. ALFRED H. THOMPSON, Los Angeles, Calif. Filed Aug. 16, 1926. Serial No. 129,506. 15 Claims. (Cl. 236—102.)



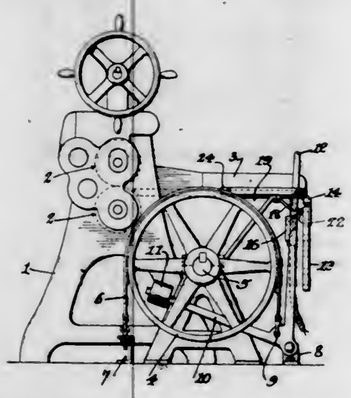
1. In a device of the character described, a valve; a valve seat for said valve; a valve stem to which said valve is fixed; another valve fixed to said valve stem and movable therewith; and a movable valve seat upon which said other valve is adapted to seat.

1,804,850. UNDERREAMER WITH AN HYDRAULIC TRIGGER. JAMES R. TRIPLETT, Whittier, Calif.; William H. Campbell, Los Angeles, Calif., and William H. Maxwell, Beverly Hills, Calif., executors of said James B. Triplett, deceased, assignors to John Grant, Los Angeles, Calif. Filed Oct. 18, 1926. Serial No. 142,277. 23 Claims. (Cl. 255—75.)



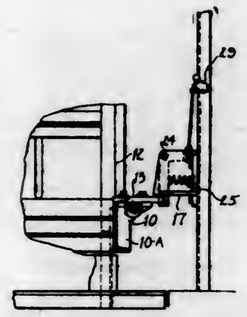
1. A well reamer including an expansible cutter, an operating member for the cutter operable to move the cutter outwardly, means normally tending to operate said member, and a fluid pressure actuated releasable control for holding said means against operation.

1,804,851. HOT AIR FURNACE. JAMES ELIPHAS WITTE, Newport, Ky. Filed Sept. 12, 1927. Serial No. 218,916. 17 Claims. (Cl. 126—99.)



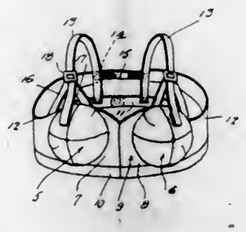
1. In a furnace, the combination with a casing, a fire drum in said casing and having a fire pot therein, an air inlet in said drum, a smoke outlet in said drum, tubular means for conducting the smoke to the flue, and means connecting said tubular means with said drum at said outlet whereby products of combustion are adapted to flow from said chamber toward said flue, of an inner lining in said drum having a circumferential groove and a vertical groove in its outer side, and means to permit air to flow from said grooves into said second mentioned means.

1,804,852. CIRCUIT CONTROLLING REACTANCE COIL. FRANK J. ZAMBONI, Hynes, Calif., assignor, by mesne assignments, to Nuway Electric Company, Los Angeles, Calif., a Corporation of Delaware. Filed May 10, 1927, Serial No. 190,150. Renewed Dec. 10, 1929. 5 Claims. (Cl. 171—242.)



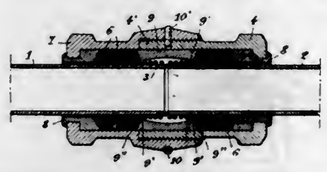
1. A reactance coil, comprising a coil winding of substantially cylindric form, a cylindric guide tube within the coil, a magnetic sheathing surrounding the coil of substantially cylindric form and symmetrical with relation to the coil axis, magnetic end pieces at the ends of the coil winding, integral with the exterior sheathing and also symmetric with relation to the coil axis, said end pieces having annularly disposed parts which reach inwardly to the inner surface of the guide tube, a pair of magnetic cores fitting within and slidable along the guide tube, said cores making a close sliding fit within the tube and being symmetric with relation to the coil axis, exterior guide tubes of non-magnetic material mounted in and extending from the end pieces, and means to move the two cores equally and oppositely including a screw shaft having right and left hand threaded portions.

1,804,853. SAFETY DEVICE FOR USE ON A DOUGH ROLLING MACHINE COMMONLY KNOWN TO THE BAKING INDUSTRY AS A DOUGH BRAKE. JOSIE C. BAREFOOT, Charlotte, N. C. Filed Apr. 17, 1930. Serial No. 445,151. 10 Claims. (Cl. 107—12.)



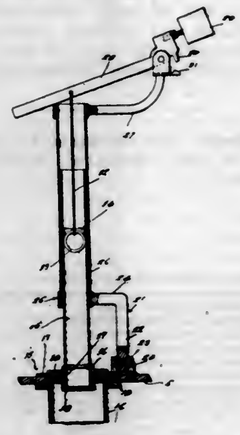
10. In a safety device for a dough rolling machine, the combination of a manually operable swinging depending apron, a latch arranged to be actuated by the apron, a push button electric switch adapted to be actuated by the latch, a latch releasing device arranged to be simultaneously actuated by the apron, a brake release lever adapted to be released by the actuation of the latch member, a brake for the operating mechanism of the dough rolling machine arranged to be applied on release of the brake releasing lever, said brake mechanism comprising a brake band clamped at one end of the floor or base of the machine, and an adjustable weighted brake-applying arm to which the other end of the brake band is attached, said brake band being positioned to engage a fly wheel of the dough rolling machine.

1,804,854. PRESS BOX LATCH. JOSEPH BEHLE, THOMAS W. AVEN and HUGO LINNARTZ, Dallas, Tex., assignors to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed Aug. 13, 1928. Serial No. 299,314. 9 Claims. (Cl. 100—19.)



1. In a press box latch device, a keeper for mounting on a press box, means for adjusting the keeper to compensate variations in the position of the box, and a latch for mounting on the press frame in the path of the keeper.

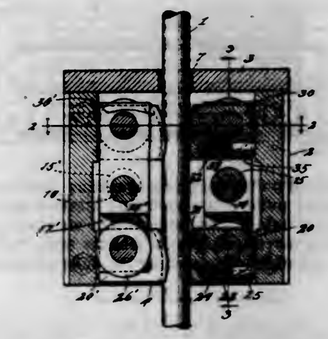
1,804,855. BRASSIÈRE. MARY A. BOLLWINE, Tampico, Mexico. Filed Nov. 8, 1929. Serial No. 405,705. 1 Claim. (Cl. 2—42.)



A brassière comprising a pair of breast pockets, a connecting web of fabric between the pockets and joining the same together in relatively spaced relation, a triangular shaped fabric extension secured at its base portion to the outer side of each pocket, shoulder straps respectively secured at one end to a pocket and at the other end to the apex of one of the said triangular extensions, a waist band co-extensive with the said web and triangular extension, and secured adjacent the lower longitudinal edges thereof with its opposite ends tapered to conform with and merge into the taper of the said triangular extensions, and an elastic strap permanently connected to the apex of one triangular extension and having separable connection with the apex of the other triangular extension.

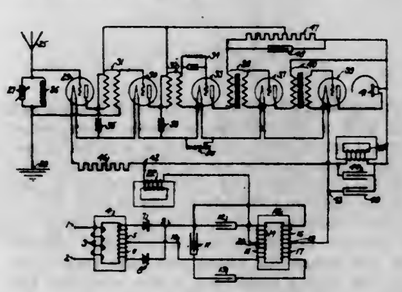
1,804,856. PIPE JOINT. CHARLES GUSTAVE BOUTRY, Meudon, France. Filed Feb. 8, 1929, Serial No. 338,495, and in France Feb. 15, 1928. 3 Claims. (Cl. 285—122.)

1. A pipe coupling for smooth pipes, comprising a helical spring secured to the opposing ends of a pair of alined pipes, a packing box made in two sections screw threaded and coupled together and enclosing at the extremity of each section a gland and a plurality of packing discs embracing each of the pipes; a collar interposed between the innermost discs of each set, and having a bore of greater diameter than the pipes and of oval shape in longitudinal section, said collar enveloping the spring and having inwardly inclined oblique edges which abut against the adjacent packing discs having corresponding oblique faces, the glands being of greater diameter interiorly than the pipes to permit limited angular displacement of the pipes without causing leakage of the joint.



1,804,857. FLUSH TANK CONTROL VALVE. HENRY C. BRENNAN, Wickford, R. I. Filed June 12, 1929. Serial No. 370,347. 5 Claims. (Cl. 4—67.)

3. In a structure of the class described, a fitting for use in association with the valve control of mechanism of a flushing tank of the class described comprising a single body including an externally screw threaded nipple, a retaining nut on said nipple, an outstanding annular flange at the top of the nipple, said nipple being provided with a bevelled valve seat, and an upstanding eccentric attaching neck, together with a substantially L-shaped one piece bracket having a screw threaded stem detachably connected with said neck and having its horizontal arm portion provided with a two-part sleeve engaging clamp disposed centrally over said nipple.

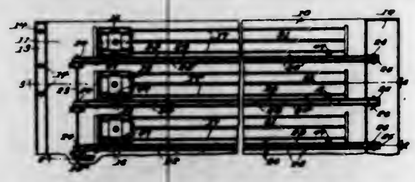


1,804,858. CLIMBING OR LIFTING JACK. GEORGE T. BURRELL and ANDREW VERNE JACKSON, Chicago, Ill., assignors to Burrell Engineering & Construction Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 29, 1927. Serial No. 164,644. 30 Claims. (Cl. 254—107.)

1. A device of the character described, comprising a casing mounted for movement on a fixed object, a shaft journaled in said casing, upper and lower yokes mounted on said shaft, jaws mounted in said yokes, said jaws being in contact with said object, and being adapted for gripping said object when moved in one direction and for

sliding over said object when moved in the opposite direction and cam portions provided on said shaft whereby thte rotation of said shaft causes a sliding movement of said jaws, in directions opposite to each other.

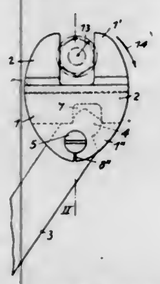
1,804,859. FILTERING ELECTRIC CURRENTS. GEORGE B. CROUSE, Stamford, Conn., assignor, by mesne assignments, to Conner Crouse Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 12, 1923. Serial No. 680,096. 21 Claims. (Cl. 250—27.)



8. In apparatus for energizing an audion circuit from a source of alternating current, a rectifier, a filter mesh for suppressing alternating components passed by said rectifier and having output terminals across which said circuit may be connected, and means between said output terminals and said circuit for suppressing residual alternating components passed by said filter mesh, said filter mesh and said means having substantially different frequency-suppression characteristics.

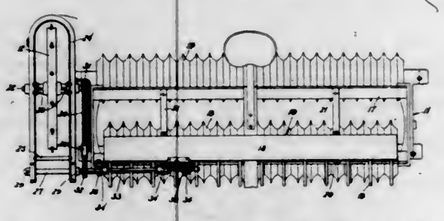
14. An electrical filter for use between an audion circuit and a source of direct current having alternating components, said filter comprising four impedances serially connected as the four balancing arms of a Wheatstone bridge, two non-adjacent arms being conductive, and the other two non-adjacent arms being substantially non-conductive for direct currents, the conjugate pairs of junction points of said arms serving as terminals for said audion circuit and said source, respectively.

1,804,860. GAME. JOHN DONLIN, Brooklyn, N. Y. Filed Mar. 15, 1929. Serial No. 347,281. 2 Claims. (Cl. 104—173.)



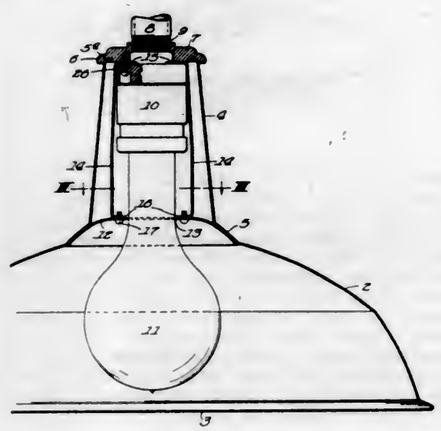
1. A game apparatus comprising a platform having levels and pits respectively at the ends thereof, track sections arranged upon the platform, vehicles mounted for oscillatory movement upon said tracks and forming the

means of communication between the levels and pits, operating shafts disposed adjacent the ends of said tracks, pulley wheels loosely and fixedly mounted upon the operating shafts respectively, clutch mechanisms for both the



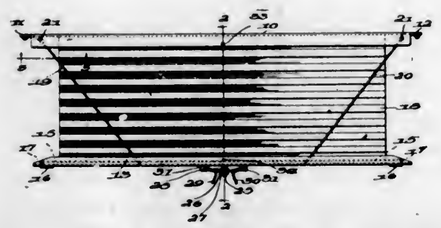
fixedly connected pulley equipped operating shaft and the loosely mounted pulleys, an operating mechanism having connection with said shafts, and switch members located in the paths of movement of said vehicles upon the tracks to stop said vehicles upon reaching the ends of the tracks.

1,804,861. ADJUSTABLE WRENCH. HANS DORN, Berlin, Germany. Filed July 18, 1927, Serial No. 206,670, and in Germany July 31, 1926. 6 Claims. (Cl. 81—127.)



1. An adjustable wrench comprising a head, a fixed jaw on said head, a movable jaw, a handle fulcrumed on said fixed jaw, a spiral spring arranged in a recess of said handle so as to surround the pin on which said handle is fulcrumed, its inner end being attached directly to said handle and its outer end directly to said head, a cam on said handle, the perimeter of said recess extending substantially through the point where said cam adjoins said handle, and means for fitting and imparting initial tension to said spring comprising a slot extending from the outer edge of said head to said recess and adapted to receive one end of said spring.

1,804,862. COMBINED SEEDER, PACKER, AND PULVERIZER. CECIL A. DUNCAN and THOMAS W. MORSFIELD, Pulaski, Va. Filed Oct. 25, 1927. Serial No. 228,657. 5 Claims. (Cl. 111—52.)

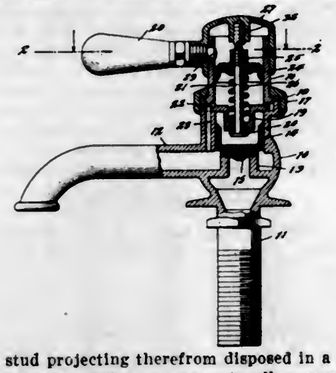


1. In combination with a combined ground roller and packer having a frame; a seed hopper supported on the frame and having feeding mechanism; a fixed shaft on the frame projecting beyond one end thereof; a U frame journaled on said shaft; a ground wheel journaled on said U shaped frame; and means connected to the wheel and to the feeding mechanism to operate the latter.

1,804,863. LAMP SUPPORT. WILLIAM A. DUNLAP, Pittsburgh, Pa. Filed June 19, 1929. Serial No. 372,071. 10 Claims. (Cl. 240—78.)

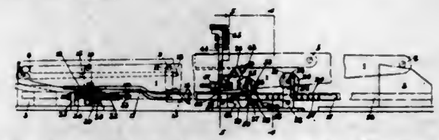
7. In combination with a reflector shell having a middle concaved portion and an upper socket holding cap and means supporting a lamp socket therefrom, a lower concaved closing disk extending across under the base of the neck engaging said concaved portion, and means having an upper connection with the socket support and attached to the disk whereby the reflector shell is carried thereby.

1,804,864. SHADE. RAY E. ELLIS, Los Angeles, Calif. Filed Mar. 19, 1930. Serial No. 437,125. 20 Claims. (Cl. 156—16.)



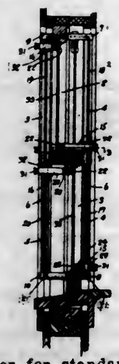
3. In a device of the class described, a pair of bars in parallel relation, an extensible web connecting said bars, an arm connecting between said bars, and spring means acting on said arm and tending to bring the bars together.

1,804,865. HYDRAULIC FAUCET. JOHN ERICKSON, Troy, N. Y., assignor of fifty-one one-hundredths to Sweet & Doyle Foundry & Machine Co., Troy, N. Y., a Corporation of New York. Filed July 10, 1926. Serial No. 121,519. 4 Claims. (Cl. 137—139.)



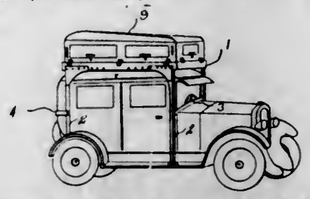
1. In a device of the class described, a body portion having an inlet and an outlet for a fluid, a plunger adapted to cover said inlet and having an aperture for the passage of fluid, means forming a closed chamber above the plunger wherein the fluid passing through the aperture is confined, a valve for controlling the flow of fluid

from the closed chamber to the outlet, and means for operating said valve, said operating means including a cap



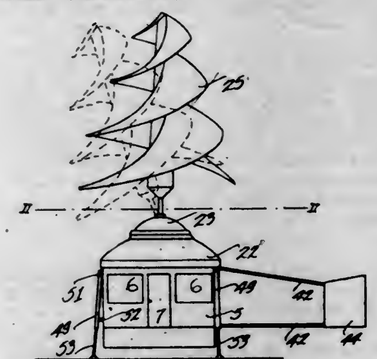
having a stud projecting therefrom disposed in a cam slot, which slot has a portion cut away to allow movement of said cap in the direction of the valve.

1,804,866. SHAPER MECHANISM FOR WINDING YARN ON WEFT BOBBINS IN SPINNING MULES. FRED CUNNINGHAM FIRTH, Upper Batley, STANLEY JESSOP, SENIOR, Batley, and CLIFFORD THORNES TATTERSFIELD, Dewsbury, England. Filed Aug. 19, 1929, Serial No. 386,883, and in Great Britain Dec. 7, 1928. 12 Claims. (Cl. 118—28.)



1. A shaper mechanism for spinning mules, comprising a main shaper rail, an auxiliary shaper rail movably connected to said main shaper rail, means for raising said auxiliary shaper rail above said main shaper rail, means for maintaining the auxiliary shaper rail in its raised position, a rack bar, means on said rack bar for lowering the auxiliary shaper rail, means operatively associated with said rails and said rack bar adapted initially to wind on the bobbins or cops a predetermined bunch of yarn of relatively short chase at the bottom thereof and thereafter a longer or normal chase whereby to provide a demarkation between the short chase and the normal chase.

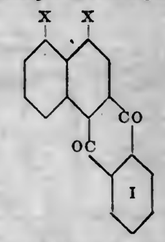
1,804,867. WINDOW CLEANER. CHARLES F. FISHER, Veteran's Home, Calif. Filed Dec. 27, 1927. Serial No. 242,810. 3 Claims. (Cl. 15—251.)



1. A window cleaner for standard two sash windows comprising four squeegees for simultaneously cleaning the inner and outer surfaces of two window panes, and means connecting said squeegees together for causing all of said squeeges to operate simultaneously.

1,804,868. LUGGAGE CARRIER. NELLIE M. GAGE, Dayton, Ohio. Filed Sept. 20, 1928. Serial No. 307,298. 3 Claims. (Cl. 224—29.)

1. The combination with a vehicle having a top and a supporting structure applied thereto and including uprights and a horizontal frame, said frame comprising L-shaped bars to provide a recess, of a receiver for the articles to be transported removably engaged in the recess and disposed above the top of the vehicle.

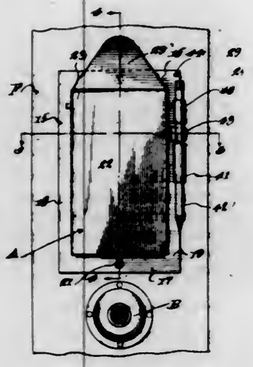


1,804,869. FLYING MACHINE. BENJAMIN GAMBARINI, Alameda, Calif. Filed Feb. 10, 1930. Serial No. 427,266. 2 Claims. (Cl. 244—19.)

1. In a device of the character described, a cabin, a rotary disc positioned on said cabin, a propeller shaft extending through said disc, a propeller secured thereto, means for rotating said disc and means for tipping said propeller with respect to the center of said disc.

1,804,870. NEW COMPOUNDS OF THE BENZANTHRAQUINONE SERIES. RUDOLF M. HEIDENREICH, Elberfeld, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 15, 1927, Serial No. 226,528, and in Germany Oct. 23, 1926. 4 Claims. (Cl. 260—61.)

3. A process for the manufacture of new compounds of the benzanthraquinone series which consists in heating to an elevated temperature in the presence of an acid condensing agent a compound of the general formula:

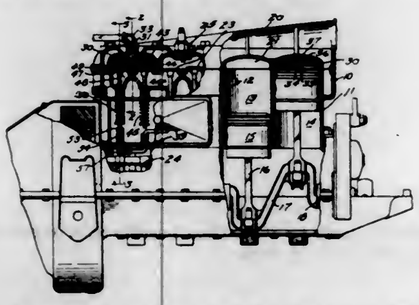


wherein X stands for the carboxylic acid group, or both X's jointly stand for the group:

and where the nucleous marked I may be substituted by halogen atoms.

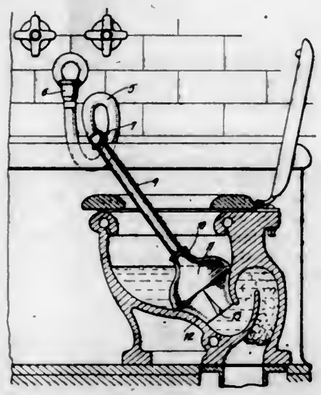
1,804,871. DOOR REGISTER. HERMAN H. HELLAND, Fargo, N. Dak. Filed Nov. 9, 1929. Serial No. 405,981. 3 Claims. (Cl. 45—58.)

1. A device for permitting callers to make notations of their unanswered visits at the place of their visits comprising a frame plate having struck out side walls, means for connecting the frame plate with a door frame, a hinge cover comprising a front wall and inwardly extending top, bottom, and side walls for receiving the struck out walls of the frame plate, a hinge pin extending through the side walls of the cover and the walls of the frame plate, a writing pad detachably connected with the inner face of the cover and arranged in the plane of the walls of said cover, and a manipulating thumb piece carried by the upper end of the cover.



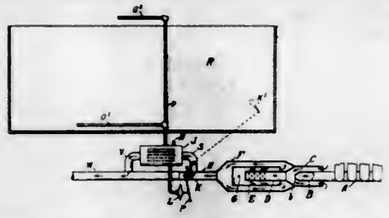
1,804,872. PROCESS OF CONVERTING ARYLCARBOXYAMINO-O-THIOGLYCOLLIC ACIDS INTO HYDROXYTHIONAPHTHENE COMPOUNDS. ERWIN HOFFA, Hochst-on-the-Main, JENS MÜLLER, Hanau-on-the-Main, and FRITZ MÜLLER, Hochst-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Aug. 9, 1927, Serial No. 211,852, and in Germany Apr. 16, 1927. 4 Claims. (Cl. 260—53.)

1. The process which comprises causing an alkaline acting agent to act upon a compound of the following general formula:



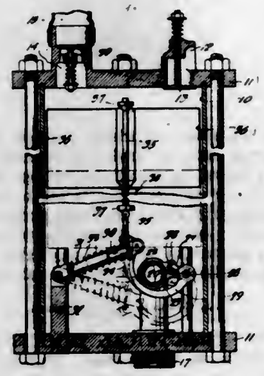
while heating the reaction mixture.

1,804,873. COMPRESSOR AND MEANS FOR CONVERTING FORD MOTORS INTO SAME. WILLIAM E. HOFFMAN, Los Angeles, Calif. Filed May 28, 1927. Serial No. 194,994. 21 Claims. (Cl. 230—41.)



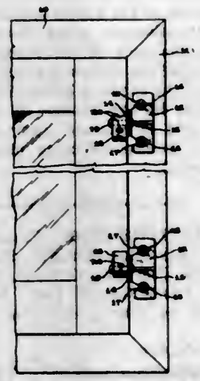
1. In combination: a motor body having a power-cylinder and a compressor-cylinder including a head part providing chambers, one chamber being disposed at the upper end of each cylinder; an insert member disposed in one of said chambers at the upper end of said compressor-cylinder; a pair of pistons, one being in each of said cylinders; a crankshaft carried by said motor body; a pair of connecting-rods, each being connected to one of said pistons and said crank-shaft intake and exhaust mechanism for said power-cylinder; an intake-valve for said compressor-cylinder; an exhaust valve in said insert-member; and an exhaust-pipe fixture connected to said head part, and communicating with a passage closed by said exhaust-valve.

1,804,874. DRAIN CLEANER. MARTIN HRIBAR, Forest Hills, N. Y. Filed Sept. 28, 1929. Serial No. 395,837. 2 Claims. (Cl. 4—256.)



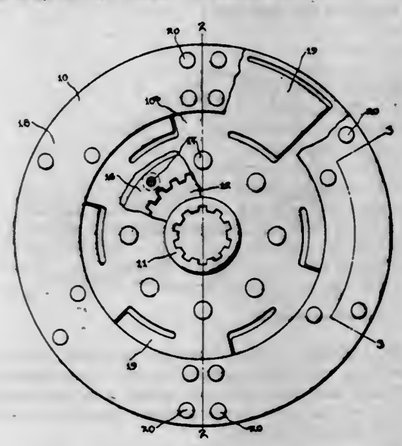
2. In a device of the class described, a resilient force cup provided with a flexible nipple adapted to be flexed within said cup or flexed to extend outwardly therefrom, depending upon the particular type of drain to be cleaned, and a V-shaped notch extending inwardly from the free edge of said nipple for facilitating free inward and outward flexing of said nipple.

1,804,875. BUS HEATING SYSTEM. LEE P. HYNES, Albany, N. Y., assignor, by mesne assignments, to Consolidated Car-Heating Company, Inc., Albany, N. Y., a Corporation of New York. Filed Feb. 2, 1926. Serial No. 85,500. 3 Claims. (Cl. 237—12.1.)



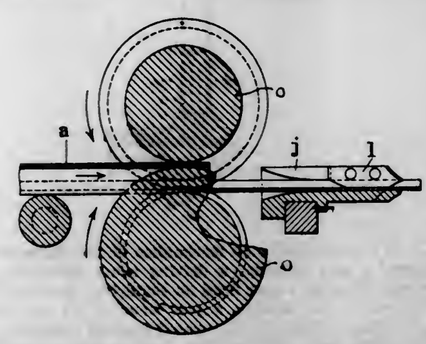
2. In a heating system, the combination with a boiler provided with a heating chamber, and a radiator located in the space to be heated and connected with said boiler, of a device for reburning exhaust gases of an internal combustion engine, an exhaust pipe for said reburned gases, a duct joining said exhaust pipe and leading to the heating chamber of said boiler, a damper located at the junction of the duct with the exhaust pipe to selectively control delivery of reburned gases to said heating chamber or to said exhaust pipe, means connected with the boiler for actuating said damper, and means for manually operating said damper independently of the first mentioned actuating means.

1,804,876. HYDRAULICALLY OPERATED AIR COMPRESSOR AND THE LIKE. AUBREY CARLYLE JAMIESON, Kew, JOHN FRANCIS GARDINER, Gardenvale, and WILLIAM JOHN MCDONALD, Preston, Australia. Filed Aug. 5, 1929, Serial No. 383,598, and in Australia Aug. 13, 1928. 7 Claims. (Cl. 230—91.)



1. A hydraulically operated air compressor comprising a chamber having inlet and discharge pipes projecting thereinto and having closed ends, a sleeve valve oscillatively mounted on the ends of the inlet and discharge pipes, ports in the inlet and discharge pipes adapted to register with co-acting ports in the sleeve valve, a float in the chamber, and mechanism controlled by the float for periodically actuating the sleeve valve to open and close the inlet and discharge ports.

1,804,877. CAM LOCK FOR SCREENS AND STORM WINDOWS. HERBERT L. JOHNSON and JAMES H. GRANT, Dexter, Me. Filed May 16, 1929. Serial No. 363,595. 4 Claims. (Cl. 292—240.)

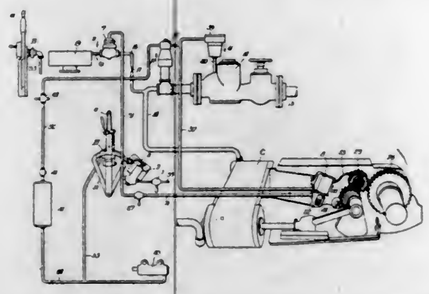


1. In combination with a window frame and covering element therefor, brackets mounted on the frame on opposite sides of the latter and embodying projecting arms acting as side guides for the covering element, and clamping members carried at the extremity of the arms and in bearing engagement with the outer face of the covering element.

1,804,878. FRICTION CLUTCH DISK. FRANK H. JONES, Upper Sandusky, Ohio. Filed Oct. 29, 1929. Serial No. 403,260. 9 Claims. (Cl. 192—107.)

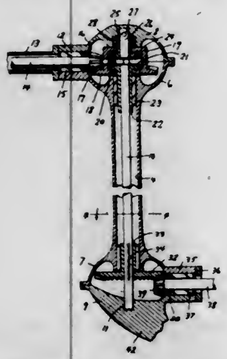
9. A friction clutch disk having a circular series of bowed spring tongues projecting from opposite faces but depressible into the plane of the disk, and friction elements spanning said tongues and secured to the disk at points between adjacent tongues to continuously tension said elements by the resilient pressure of the tongues.

1,804,879. METHOD OF ROLLING METALS AND APPARATUS THEREFOR. KARL KARIUS, Achern-in-Baden, Germany. Filed Dec. 31, 1925, Serial No. 78,613, and in Germany Jan. 7, 1925. 6 Claims. (Cl. 80—66.)



1. A method of rolling iron sections, consisting in rolling the section to approximate structural form to provide a body and a thinned portion and a thicker rim portion, drawing the section through a guide provided with a twist before the section passes through the finishing rolls to bend the rim only to overlie the thinned portion.

1,804,880. HALOGEN DERIVATIVE OF DIBENZOPYRENEQUINONES. MAX ALBERT KUNZ, Mannheim, and KARL KOEBERLE and ERICH BERTHOLD, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed July 20, 1929, Serial No. 379,868, and in Germany July 26, 1928. 2 Claims. (Cl. 260—61.)

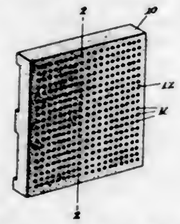


1. A process of producing halogen derivatives of dibenzopyrenequinones, which comprises heating a nitrodibenzopyrenequinone with a halogenating agent, at least until all nitro groups are eliminated.

1,804,881. SAFETY DEVICE FOR LOCOMOTIVE BOOSTERS. LE ROY R. LINN and CHARLES N. REMFRY, Proctor, Minn. Filed Apr. 9, 1927. Serial No. 182,341. 12 Claims. (Cl. 105—48.)

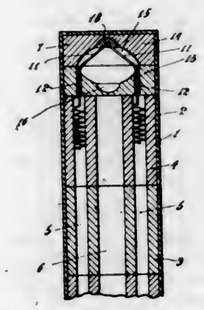
1. In a device of the character described, the combination of a reversing lever, a booster, and means associated with said lever for preventing operation thereof to reverse position until steam pressure has been exhausted from the booster cylinder.

1,804,882. BOAT PROPULSION MECHANISM. LAWRENCE C. LONGSTREET, Dunellen, N. J., assignor of one-third to George Voehl, Dunellen, N. J. Filed Mar. 6, 1930. Serial No. 433,638. 2 Claims. (Cl. 115—34.)



1. In a boat propulsion mechanism of the character described, a gear housing, a driving shaft extending into the gear housing, a gear fixed on the driven shaft and disposed within the housing, a gear mounted for rotation in the housing and disposed in spaced opposed relation to the first named gear, said driving shaft extending rotatably into the housing and having a pinion gear fixed on its inner end, a ring gear mounted for rotation in the housing in mesh with the pinion gear for actuation thereby, planetary gears rotatably mounted on the ring gear and in mesh with the first and second named gears, a propeller shaft operatively connected to the driven shaft for actuation thereby and means for releasably retaining the second named gear against rotation in the housing in a manner to operatively connect the driving shaft to the driven shaft.

1,804,883. ALLOY METAL FOR BEARINGS. WALTHER MATHESIUS and MARTIN W. NEUFELD, Berlin-Charlottenburg, Germany. Filed Feb. 24, 1927, Serial No. 170,735, and in Germany May 17, 1926. 3 Claims. (Cl. 75—1.)

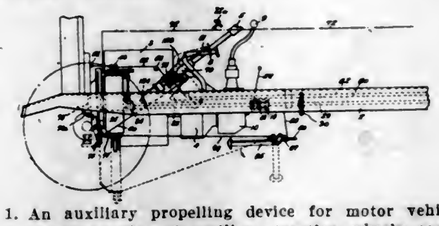


1. A bearing metal consisting of lead hardened by alkali metals and metals of the alkaline earths, containing 0.60–0.65 per cent. Na; 0.75–1. per cent. Ca; 0.20–0.25 per cent. Mg; 0.10 per cent. Al, the Pb constituting the main bulk of the alloy.

1,804,884. ACOUSTIC SLAB. MARCUS MAZER, Philadelphia, Pa. Filed Sept. 13, 1929. Serial No. 392,316. 2 Claims. (Cl. 72—18.)

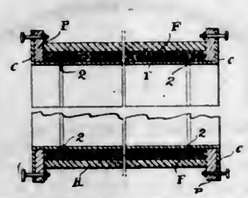
1. An acoustic slab, comprising a dense, rigid body portion of fire-proof material having substantially a minimum inherent co-efficient of sound absorption, said body portion having in its exposed face a predetermined number of indentations of a depth and size proportioned to the absorptive quality desired, whereby to produce an acoustic slab having a permanent and fixed co-efficient of absorption and which is unalterable in handling and use.

1,804,885. ELECTRICAL IMMERSION HEATER. ROBERT FAULKNER MCCARTNEY, Wellington, New Zealand. Filed Dec. 27, 1929, Serial No. 416,913, and in New Zealand Jan. 21, 1929. 3 Claims. (Cl. 219—41.)



1. An electrical immersion heater including a container, electrical heating means therein including insulating means and resistance wires arranged therethrough, means situated at one end of the heater and providing a chamber into which the resistance wires project, and a fusible metal joint for the ends of the wires normally situated at the upper end of the chamber which on excessive heating melts, breaks the contacts between the wires and flows into and collects in the bottom of the chamber from which point it will be retained ready to join the ends of the wires upon the heater being placed in the proper position and heated.

1,804,886. CARTRIDGE FUSE. CLARENCE T. MCDONALD and HERBERT RAY COOK, Chicago, Ill., assignors to Jefferson Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 3, 1927, Serial No. 230,707. Renewed Sept. 24, 1930. 16 Claims. (Cl. 200—132.)

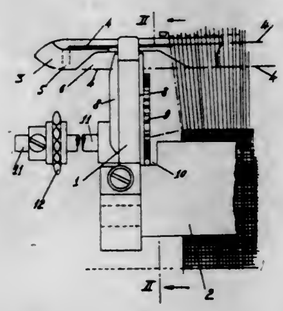


1. A renewable cartridge fuse having, in combination, a casing, a terminal blade, a plate forming an end closure slidable on said blade, and a collar carried by said casing, said collar being internally screw threaded to engage corresponding threads exteriorly formed on said plate to secure said plate and blade on said casing.

1,804,887. AUXILIARY PROPELLING MEANS FOR MOTOR VEHICLES. ARTHUR E. MILLER, Sacramento, Calif. Filed Mar. 7, 1927. Serial No. 173,559. 21 Claims. (Cl. 180—1.)

1. An auxiliary propelling device for motor vehicles comprising a series of auxiliary traction wheels, means for moving said traction wheels into contact with the ground and for driving them to support and propel the vehicle, an axle locking lever actuated by the downward movement of the traction wheels to engage beneath an axle of the vehicle, and means connected with said axle locking lever and with the steering shaft of the vehicle for connecting said steering shaft to the traction wheels when the axle locking lever is in axle engaging position whereby said steering shaft can control the direction of movement of the vehicle when being supported on or propelled by said traction wheels.

1,804,888. PIPE COILED WITH STEEL WIRE FOR PRESSURE CONDUITS AND VESSELS UNDER PRESSURE. SIMON PIERRE MONSCH, Pontezer, near Guingamp, France. Filed Nov. 25, 1927, Serial No. 235,666, and in France Dec. 2, 1926. 5 Claims. (Cl. 137—75.)



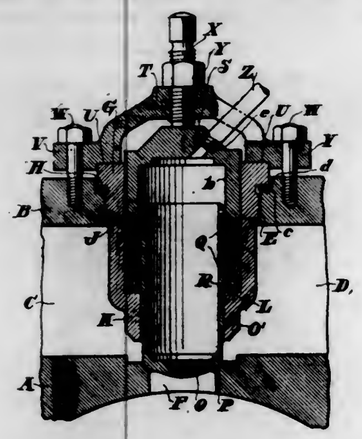
1. A pressure tube comprising a cylindrical metal member, and a plurality of continuous wires wound convolutely on said member, the tension of said wound wire varying with each successive wind.

1,804,889. LIQUID VENDER. LOUIS H. MORIN, New York, N. Y., assignor, by mesne assignments, to Doehler Vending Machines, Inc., a Corporation of New York. Filed Mar. 11, 1929. Serial No. 345,944. 11 Claims. (Cl. 221—103.)

1. In a machine for vending liquid, a container for the liquid, an open top upright cylinder fixed to the bottom of the container and provided at its open upper end with side extensions forming piston guides, a piston to reciprocate into and out of the open upper end of the cylinder, a freely open delivery tube communicating with the lower end of the cylinder below the piston and having an open upper discharge end above the top of the container, an operating link connected to the piston and extending at its upper end above the top of the container, an operating rod connected at its upper end to the upper end of the said link and extending downwardly through and beyond the bottom of the container, a liquid tight guide sleeve for the said operating rod rigidly carried by and projecting upwardly from the bottom of the container and terminating at its upper end above the top of the container, and manually operable means engaging with the lower end of the said operating rod to reciprocate the latter in a similar manner at each operation of the machine for thereby delivering a measured quantity of the liquid.

1,804,890. SHUTTLELESS LOOM. RAMON GARCIA MOYA, Cornella de Llobregat, Spain. Filed Nov. 22, 1927, Serial No. 235,088, and in Spain Nov. 24, 1926. 1 Claim. (Cl. 139—124.)

In a shuttleless loom of the type described, in which the weft is inserted by a reciprocating weft carrying arm the combination of a selvedge forming mechanism comprising a continuously rotating drum, said drum having a toothed crown, a toothed pinion, meshing with the toothed crown of said drum, a thread bobbin in said drum, a weft engaging finger on the drum projecting tangentially from the drum and adapted to catch the loop of the weft inserted by the weft carrying arm and a channel in said drum to receive this weft thread and carry said thread around the bobbin, said drum being rotated in timed relation with respect to the movement of the weft carrying arm, whereby when said weft-carrying arm reaches the end of its travel the tooth of the drum catches the weft thread carried by the arm.

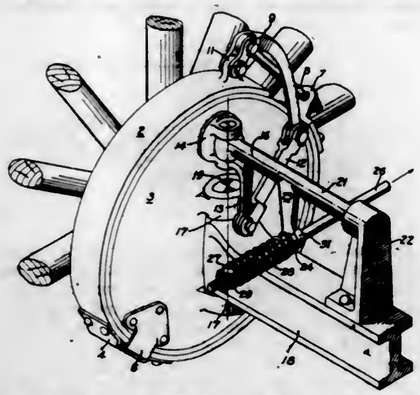


1,804,891. CONTAINER FOR INSECTICIDES, ETC. MILTON THAYER NEWMAN, Jacksonville, Fla. Filed Feb. 23, 1929. Serial No. 342,186. 4 Claims. (Cl. 43—131.)

1. In a container of the class described the combination of a body having a compartment therein and a box-like closure having a passageway for slidably receiving said

body, the said body and closure each having side walls, each having openings therein in such relation that the body and closure may be interfitted to shut off the openings of one with respect to the other to completely enclose the compartment of the body and the contents thereof, the parts being relatively reversible for interfitting to align said openings for the provision of ingress and egressways to the compartment of the body.

1,804,892. CLEARANCE VALVE ASSEMBLY. FREDERICK W. PARSONS, Elmira, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 22, 1927. Serial No. 227,971. 1 Claim. (Cl. 137—153.)



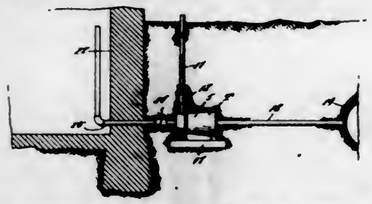
A clearance valve assembly comprising a cylindrical valve guide having a differential bore, a plug member slidable in the guide for closing said bore at its outer end and having a chamber to receive pressure fluid from a source, an aperture for the admission of pressure fluid from an external source into the chamber, a cylindrical clearance valve member of uniform diameter throughout its length reciprocable within said guide and having one unbroken guiding surfaces of uniform diameter, packing surrounding said valve member, and means cooperating with said plug for uniformly compressing said packing from the exterior of the valve assembly and comprising a stationary spider and one set screw adapted to be screwed against said plug member for compressing the packing.

1,804,893. PROCESS OF DECOMPOSING LIGNIFIED FIBERS. WALTER SEIDEL and RUDOLF FINGADO, Dormagen, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Jan. 21, 1930, Serial No. 422,481, and in Germany Jan. 25, 1929. 3 Claims. (Cl. 92—11.)

3. The process which comprises heating a mixture of chips of red pine wood and acid calcium sulfite dye to about 130–150° and then adding about 10% of oxygen, calculated on the amount of the wood, in small portions to the reaction mixture in the course of about 4 hours, thereby maintaining the temperature.

1,804,894. BRAKE MECHANISM. CHARLES E. STARR, Los Angeles, Calif. Filed Apr. 7, 1926. Serial No. 100,285. 3 Claims. (Cl. 188—194.)

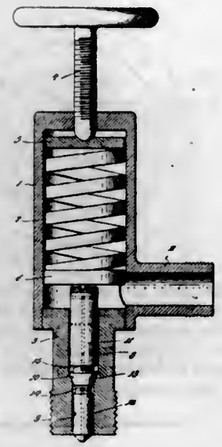
1. A brake mechanism including a brake drum backing plate, a lever arm movably mounted on said plate outside the drum and the movement of which operates the brake mechanism, a shaft fixed for movement with said arm.



an arm fixed to said shaft,. a rod for moving said arm, and means interposed between the rod and arm for limiting the stress applicable to said arm by the rod.

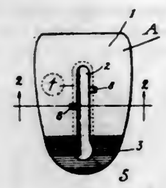
1,804,895. AUTOMOBILE HOOD LINING. ROBERT J. STEPHENSON, Auburn, N. Y., assignor to Stephenson Protectahood Corporation, Auburn, N. Y., a Corporation of New York. Filed Aug. 26, 1927. Serial No. 215,657. 2 Claims. (Cl. 154—44.)

1. An automobile hood lining of sheet-like form consisting of a sheet of double lined jute fiber, said sheet of fiber being resilient and flexible, a covering of asbestos on one side of said sheet of fiber, and a covering of felt on the opposite side of said fiber, said lining being flexible whereby it may readily conform to the shape of a hood and inherently capable of retaining the shape imparted to it when applied to said hood.



1,804,896. GAS DISTRIBUTION APPARATUS. JOSEPH F. SULLIVAN, Archibald, Pa. Filed Feb. 23, 1929. Serial No. 342,006. 1 Claim. (Cl. 48—193.)

A gas distribution system including in combination; a gas distributing main, a gas collecting member formed from a frusto-conical body having its smaller end closed by a plate and its larger end opened and flared outwardly, a foot on the periphery of the larger end of said body, a flange on the outside of said body at the smaller end thereof, said flange and said foot functioning as supporting means, a gas conduit connected to the distributing main and extending through said gas collecting member, a screen disposed at the larger end of said body and surrounding said conduit, and a vent pipe for leaking gas rising from the body in communication with the interior thereof adjacent the smaller end of said body.



CARNEGIE LIBRARY OF ATLANTA

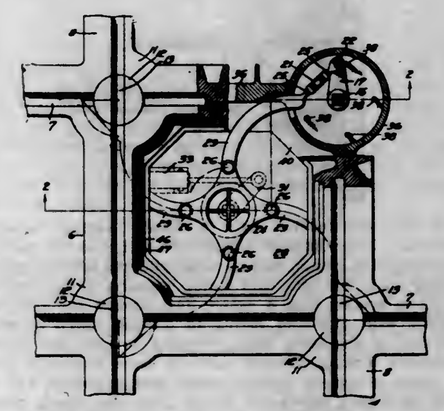
1,804,897. HIGH PRESSURE RELIEF VALVE. STANLEY P. THOMAS, Merced, Calif. Filed May 23, 1928. Serial No. 280,030. 3 Claims. (Cl. 137—53.)

1. A pressure valve including a valve body having an inlet and an outlet, said inlet embodying end portions of different diameters and an intermediate tapering portion forming a valve seat, a valve plug within the inlet and comprising an intermediate conical valve and end portions of different diameters loosely fitting the respective end portions of the said inlet to leave a small space for a pressure fluid, said valve plug having annular grooves adjacent the conical valve portion, and having radial openings and axial openings in the respective end portions, the radial openings connecting the respective annular grooves with one end of an axial opening, and the other ends of the axial openings connecting with the inlet and the outlet respectively, and means normally holding the valve seated.

1,804,898. FALSE TOOTH. GEORGE W. TOFT, Mountain View, Calif. Filed Aug. 8, 1928. Serial No. 298,327. 7 Claims. (Cl. 32—9.)

4. A porcelain false tooth having a longitudinally extending groove with thin lips projecting toward each other, and pins disposed on each side of the groove and being embedded in the tooth for reinforcing the lips.

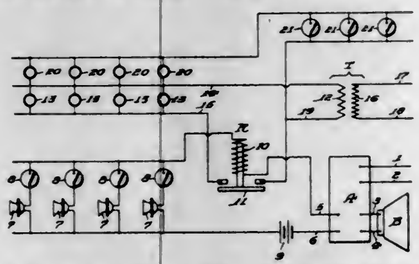
1,804,899. COMPOSITE METAL. HERMANN VON FORSTER, Niederursel, near Frankfort-on-the-Main, and EMIL LAY, Eschersheim, near Frankfort-on-the-Main, Germany, assignors to Metallgesellschaft Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Sept. 11, 1929, Serial No. 391,982, and in Germany Apr. 20, 1927. 4 Claims. (Cl. 22—219.)



1. A composite metal produced by welding a coating of copper-zinc alloy onto an iron core by the casting-on process, characterized in that the copper-zinc alloy contains over 60% of copper and less than 0.01% of lead.

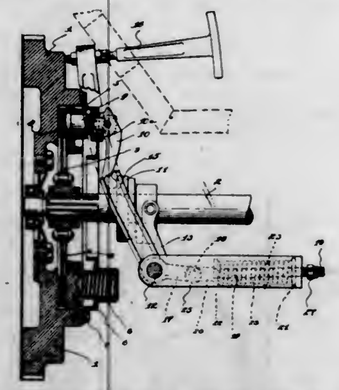
1,804,900. OIL WELL PUMP. JOHN C. VROMAN, Chelsea, Okla., assignor of one-half to Ed L. Jones, Tulsa, Okla. Filed Mar. 6, 1929. Serial No. 344,779. 5 Claims. (Cl. 74—109.)

1. In a deep well pump, a plunger consisting of a central tube having an external shoulder on one end and locking means on its other end, a ram slidably fitted about the tube and having an internal shoulder abutting the shoulder on the tube to support the tube, said ram being constructed at its upper end to be connected to a pump rod and having an externally reduced portion, balls about said reduced portion of the ram, a sleeve slidably mounted on said tube and encircling the balls and the ram, the lower end of the sleeve and the lower end of the ram defining a normally closed chamber about the tube, the reduced portion of said ram being connected with said closed chamber by means of a passageway large enough to readily allow the balls to traverse same, and packing surrounding the tube below the sleeve and held in place by the locking means on the end of the tube.



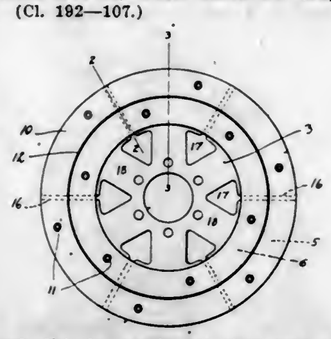
1,804,901. RAIL CROSSING. CURT USCHMANN, Glendale, Calif., assignor to Continuous Rail Crossing Corporation, Reno, Nev., a Corporation of Nevada. Filed Apr. 8, 1929. Serial No. 352,122. 5 Claims. (Cl. 246—378.)

1. A railroad crossing comprising intersecting rails, a casing at the intersection of said rails, a turntable in said casing adapted to rotate therein between two extreme positions, said turntable having a groove adapted to be



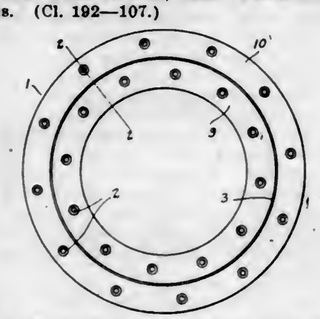
aligned in extreme position with either of said rails, an actuator centrally disposed with respect to said intersecting rails, linkage connecting said actuator with said turntable, a second actuator mounted upon said first actuator, and means attached to said second actuator for locking said turntable in either of said extreme positions.

1,804,902. ANNUNCIATOR SYSTEM. KENNETH B. WALTON, Atlantic City, N. J. Filed May 15, 1929. Serial No. 363,332. 2 Claims. (Cl. 179—1.)



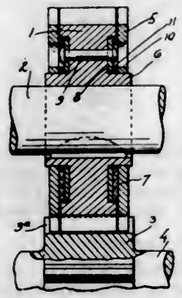
1. In an annunciator system, the combination of an amplifier, a microphone circuit interconnected with said amplifier and including a source of current, reproducing means also interconnected with said amplifier, a plurality of transmitting microphones connected in parallel across said circuit, a switch interconnected with each microphone and adapted to normally interrupt the circuit therethrough, a normally open signal circuit including a source of current, a plurality of signals connected in parallel across said signal circuit, one of said signals being associated with each of the said microphones, and means adapted to close the signal circuit when any one of said switches is closed.

1,804,903. LEVER BOOSTER. ERNEST E. WEMP, Detroit, Mich. Filed Mar. 31, 1927. Serial No. 179,824. 2 Claims. (Cl. 192—99.)



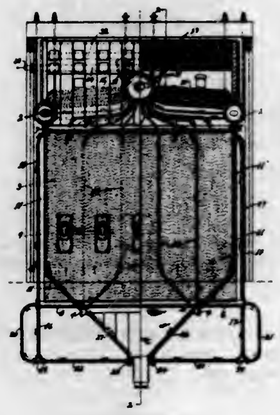
2. The combination with a clutch having packing springs, a lever operable against the action of the springs to release the clutch, an arm rigid with the lever, a spring acting upon this arm, said spring and arm being disposed so as to operate over a center line through the arm and spring, said arm and spring in normal clutch engaged position of the lever being disposed so that the spring creates a turning moment upon the lever reverse to that of lever movement during clutch disengagement and so that in initial movement of the lever for clutch disengagement the arm and spring move over said center line whereby the turning moment exerted upon the lever by the spring is in the direction of lever movement for clutch disengagement whereby to aid in the movement of the lever for clutch disengagement.

1,804,904. CLUTCH DISK. ERNEST E. WEMP, Detroit, Mich. Filed Jan. 24, 1929. Serial No. 334,621. 5 Claims. (Cl. 192—107.)



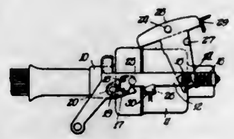
1. A clutch disk for use in the plate type of clutch comprising a distortable metal disk having an outer distorted section substantially V-shaped in cross-section taken radially thereof arranged to be flattened when the disk is engaged and designed to give a relatively large resistance to flattening.

1,804,905. CLUTCH FACING. ERNEST E. WEMP, Detroit, Mich. Filed Jan. 31, 1929. Serial No. 336,347. 7 Claims. (Cl. 192—107.)



1. For a distortable clutch disc, a circumferentially scarfed facing.

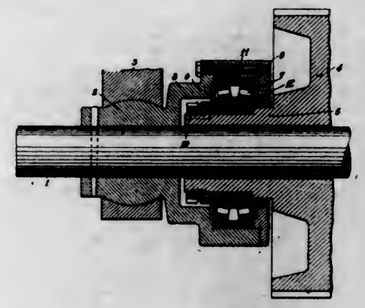
1,804,906. GEAR SILENCER CONSTRUCTION. ERNEST E. WEMP, Detroit, Mich. Filed Oct. 31, 1929. Serial No. 403,696. 10 Claims. (Cl. 74—28.)



1. The combination with mating gears, a back-lash silencer construction comprising a silencer gear disposed along side of one of the mating gears, a rubber element bonded to the silencer gear, a holding washer bounded to the rubber element, and means for securing the holding washer to the said mating gear in such manner that the teeth of the silencer are staggered and displaced angularly upon their meshing with the teeth of the other mating gear so that the rubber element is normally under tension.

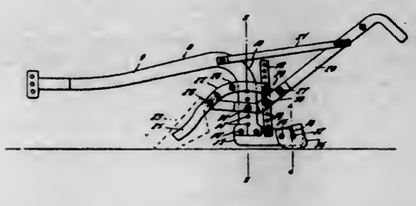
1,804,907. BOILER. BENJAMIN B. WHITTAM, Elizabeth, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Dec. 11, 1926. Serial No. 154,093. 6 Claims. (Cl. 122—235.)

1. In combination, a furnace having a vertically disposed wall with a plurality of pulverized coal burners therein adapted to project burning fuel into the furnace and lengthwise thereof, a steam and water drum extending lengthwise of the furnace, a plurality of vertically disposed rows of water tubes extending lengthwise of the furnace between the burners, and means connecting each of said rows to said drum.



1,804,908. SOCKET CONNECTION FOR ELECTRICAL CONDUCTORS. ALFRED WICHERT, Mannheim-Neuostheim, Germany, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint-Stock Company of Switzerland. Filed Apr. 23, 1927, Serial No. 186,113, and in Germany May 1, 1926. 4 Claims. (Cl. 173—332.)

1. A connecting device for electrical conductors comprising, in combination, a socket member, a movable plug member for cooperation therewith, a movable cover for the socket member, and an operating member for cooperation with the plug member to hold it in position and for cooperation with the cover member to move it to and from closed position.

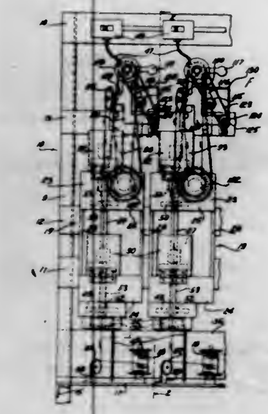


1,804,909. MOUNTING FOR NONDRIVEN ROLLS. GUNNAR WISTRAND, Berlin, Germany, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Jan. 20, 1930, Serial No. 422,013, and in Germany Mar. 12, 1929. 7 Claims. (Cl. 308—209.)

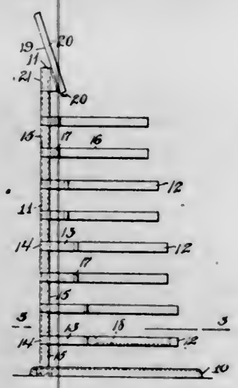
1. A mounting for non-driven rolls comprising a funnel-shaped bearing housing resting with its narrow part in a support and fixed to a stationary axle passing through the roll, and an antifriction bearing mounted

with its outer race in said housing inward of the support and having its inner race mounted on the neck on the end of the roll.

1,804,910. PLOW. SILL WOYCHESHIN, Marlin, Tex. Filed June 7, 1929. Serial No. 369,190. 2 Claims. (Cl. 97—109.)



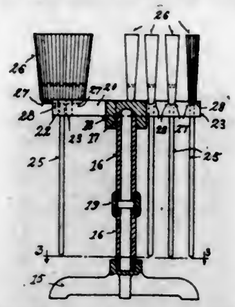
1. In a plow construction of the class described, a beam having a downturned standard at its rear end, a landslide connected to and extending rearwardly at right angles from the lower end portion of said standard, an upright connected with said landside and rising vertically therefrom in spaced parallelism to said standard, said standard and said upright having vertically spaced parallel openings, a stock constructed to accommodate a ground engaging implement, said stock having its rear end portion embracing said standard and provided with a bolt for adjustable position in the openings in said upright, a handle structure, a connecting member between the handle structure and the intermediate portion of the said stock, said connecting member having a bolt intermediate its ends for adjustable position in the openings of said standard and also provided with a bolt at its rear portion for adjustable position in the openings in said upright.



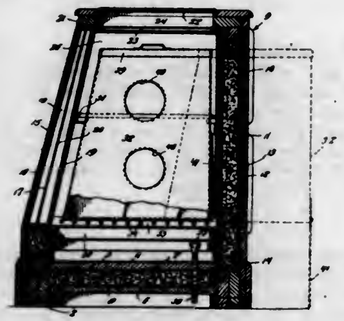
1,804,911. CORE COVERING APPARATUS. JOHN LESLIE ALDEN, La Grange, Ill., assignor, by mesne assignments, to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 24, 1929. Serial No. 357,836. 5 Claims. (Cl. 117—34.)

4. In an apparatus for covering a core, an integral framework having a plurality of housings in spaced relation, a common shaft extending through the housings, means for rotating the shaft, separate hollow shafts supported by and extending through each of the housings and in alinement with each other, material supplying and serving means supported by each of the separate

shafts, means for drawing a core through the hollow shafts in series, and means in each housing interconnecting the common and separate shafts causing material to be served upon the core in different directions by the adjacent separate shafts.



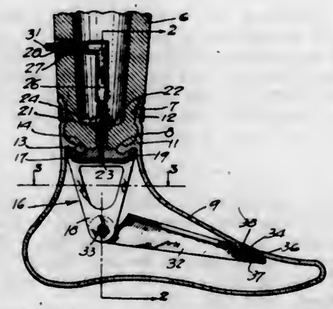
1,804,912. RACK. MARK ANTON, West Orange, N. J., assignor to Pie Bakeries of America, Inc., Newark, N. J. Filed May 1, 1929. Serial No. 359,499. 1 Claim. (Cl. 211—78.)



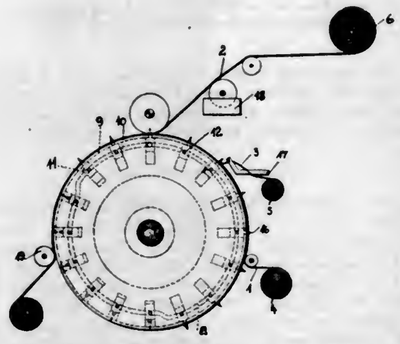
A rack comprising a base, a post extending upwardly from the base, trays made of strip metal bent to form a ring and including arms formed of strip metal bent into a closed loop at one end and having divergent ends secured to the trays, tubular spacers alternating with the closed loops of the arms and fitting on the post, and wires spanning the trays to form supports at the bottom thereof.

1,804,913. DISPLAY AND VENDING APPARATUS. EDWARD BRUNHOFF, Wyoming, Ohio. Filed Sept. 5, 1928. Serial No. 303,990. 1 Claim. (Cl. 211—70.)

A display and vending apparatus for brooms or the like comprising a base, a pedestal therefor, a rotatable head mounted upon said base, said head having a plurality of angularly extended arms, each of said arms having a pair of spaced racks extended in a horizontal plane at right angles to each respective arm and each pair of said racks having aligned notches along their upper edges for reception of a broom head when suspended therefrom.

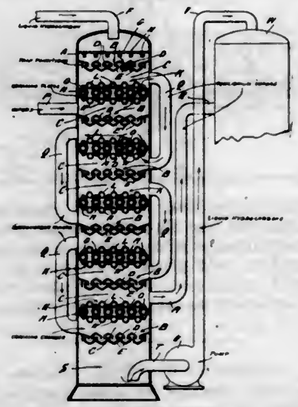


1,804,914. COMBINATION REFRIGERATOR AND SHOW CASE. PHILIP H. CHRISTOPHER, Fairmont, W. Va. Filed Mar. 25, 1929. Serial No. 349,667. 3 Claims. (Cl. 62—37.)



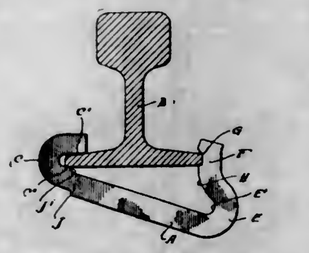
1. In a refrigerator show case of the class described, a refrigerating compartment, a food compartment having communication with the refrigerating compartment, the rear side of each compartment being provided with a doorway, a door therefor, a plurality of spaced rollers arranged horizontally in the bottom of the refrigerating compartment, and a refrigerant container mounted for movement into and out of the refrigerating compartment through the doorway on said rollers.

1,804,915. ARTIFICIAL LIMB. JOHN A. COLLINS, Oakland, Calif. Filed Jan. 7, 1929. Serial No. 330,796. 14 Claims. (Cl. 3—8.)



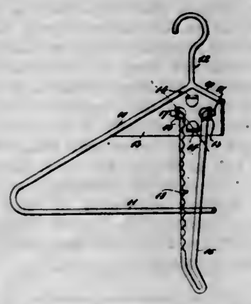
1. An artificial foot comprising an inflatable foot member, adapted to be secured over the end of a stump, clamping means within the foot member for securing said member to the stump, said clamping means having an air passage therethru, and shut off means in operative relation to the said passage to allow the inflation and the deflation of said member at will.

1,804,916. MACHINE FOR PRODUCING TAPE LOOPS. MARIE COTTE, Leipzig, Germany. Filed Feb. 21, 1930, Serial No. 430,438, and in Germany Feb. 22, 1929. 3 Claims. (Cl. 154—1.)



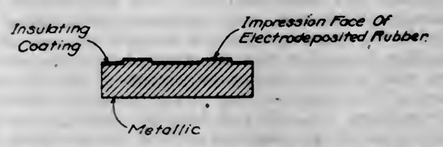
1. A machine for producing tape loops consisting of tape interposed between two strips of paper for suspending adhesive fly paper, pictures and the like, comprising a drum, two rows of radially movable and withdrawable pins arranged in the said drum, a stationary curved path adapted to move said pins outwardly over the circumference of said drum, means for feeding an endless web of paper to said drum, a thread guide adapted to be moved to and fro axially to the drum and to place an endless tape in serpentine fashion around the said pins, and means for uniting a second web with the said tape and first web, the feeding and uniting of the webs and tape taking place while the said pins are extended.

1,804,917. CRACKING PROCESS. WILLIAM P. DEPPE, Brightwaters, and LELAND L. SUMMERS, New York, N. Y.; Llewellyn L. B. Summers and Arthur Young administrators of said Leland L. Summers, deceased. Filed Feb. 8, 1924. Serial No. 691,363. 16 Claims. (Cl. 196—66.)



1. The process of cracking petroleum, which comprises introducing the liquid hydrocarbons to be cracked into a retort chamber at the upper end of a column, spreading said liquid in thin films over highly heated plates in said chamber, introducing vapors of hydrocarbons into said chamber, integrating said vapors with the liquid hydrocarbons while maintaining approximate equilibrium therebetween, then passing the liquid hydrocarbons and vapors into a second retort chamber lower down in the column, and repeating the operation.

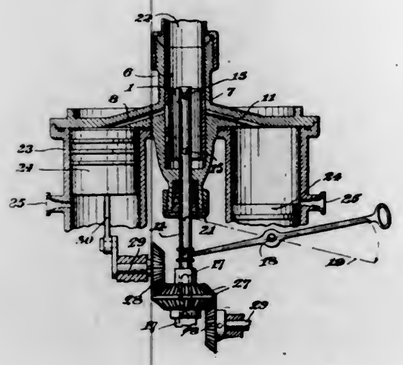
1,804,918. ANCHORING DEVICE. RAYMOND DINKLAGE, Glen Ridge, N. J. Filed Sept. 7, 1928. Serial No. 304,479. 11 Claims. (Cl. 238—330.)



1. A rail anchor for use with track rails having a hook end adapted to lock with a rail finger when the anchor is in applied position and means to hold the hook end in released position while the anchor is in applied position to permit the anchor to be freed from the rail.

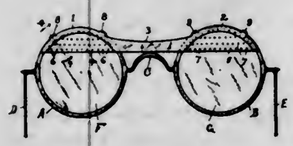
1,804,919. GARMENT HANGER. JAMES DOCKETT, Jr., Roxbury, Mass. Filed Apr. 17, 1930. Serial No. 444,992. 3 Claims. (Cl. 223—61.)

1. A garment hanger comprising in combination a pair of angularly related arms, a web connecting said arms, said web being provided with a pair of oppositely-disposed sockets and a hook of resilient material detachably secured to said web, said hook having an upper and lower arm each terminating in an end substantially at right angles to the arm of which it forms a part and each being shaped to fit into one of said socktes whereby said hook is held by the elasticity thereof to said web substantially at right angles to the plane thereof.



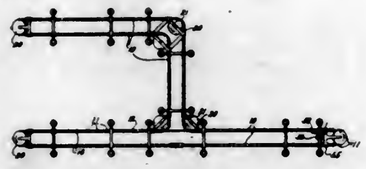
1,804,920. METHOD OF PRODUCING PRINTING PLATES. JUNIUS D. EDWARDS, Oakmont, Pa. Filed July 31, 1929. Serial No. 382,596. 3 Claims. (Cl. 101—401.1.)

1. The method of producing printing plates having impression faces of rubber which consists in preparing a



base having that portion of the surface thereof representing the design to be printed of electrical conducting material, and other portions of such surface of insulating material, and coating the first named portion with rubber by electro-deposition.

1,804,921. ROTARY VALVE GEAR. FREDERICK WASHINGTON ELLYSON, Munich, Germany. Filed Dec. 4, 1925, Serial No. 73,100, and in Germany Apr. 14, 1925. 3 Claims. (Cl. 121—122.)

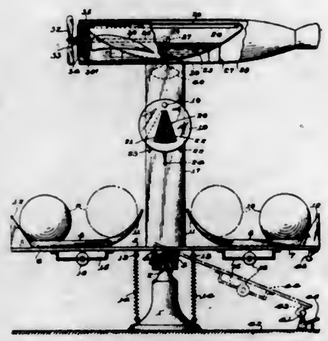


1. A rotary slide valve mechanism for a multi-cylinder engine comprising in combination a cylindrical valve seat having fluid distributing channels at circumferentially spaced intervals to the several cylinders and adapted to receive driving fluid, a slide valve body in said seat, said body consisting of an eccentrically bored hollow cylinder slit in longitudinal direction at its thinnest element, said valve body having two ports of relatively different size and shape extending for some distance circumferentially out of opposite sides of the longitudinal slit and spaced from one another longitudinally of the valve body, a valve stem at the axis of the valve body adapted to longitudinally position and to rotate the valve, means rotated by the engine for rotating the stem and other means for longitudinally shifting said stem in order to shift the valve body so as to bring the one or other of said ports during rotation of the valve into successive registry with said distributing channels.

1,804,922. GLARE ELIMINATOR. EDWARD A. FELTMAN and EZRA C. A. WICKEMEYER, Richmond, Ind. Filed Nov. 21, 1928. Serial No. 320,881. 1 Claim. (Cl. 88—41.)

In combination with spectacles, a glare eliminator consisting of a single piece of sheet metal having closely associated very small apertures formed therethrough and extending throughout, said eliminator being formed to provide two segmental portions spaced apart and corresponding in contour with the upper edges of the spectacles, with a bridge portion to correspond with the nose piece of the spectacles and connecting said segmental portions, and a plurality of tongues radiating from the upper edges of the segmental portions and bent over the upper portions of the spectacles forming clips retaining the glare eliminator in connection with the spectacles.

1,804,923. CONVEYING SYSTEM. VALENTINE WALTER FERNEKES and WILLIAM HARRY RAY, Chicago, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 1, 1928. Serial No. 282,122. 6 Claims. (Cl. 198—177.)

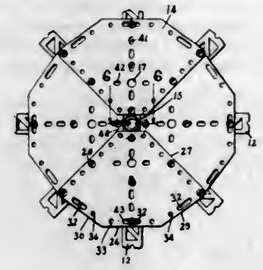


1. In a conveying system, an endless cable, a spherical self-tightening member carried thereby for supporting articles, and tubular means forming a direct bearing for the spherical member for guiding it through various angles.

1,804,924. METHOD OF PRODUCING METALLIC POWDERS. EUGENE FITZPATRICK, Woodhaven, CHARLES W. CLARK, Bellerose, and PETER A. TIERNAN, Laurel Hill, N. Y., assignors to Nichols Copper Company, New York, N. Y., a Corporation of New York. Filed June 20, 1928. Serial No. 287,033. 12 Claims. (Cl. 204—6.)

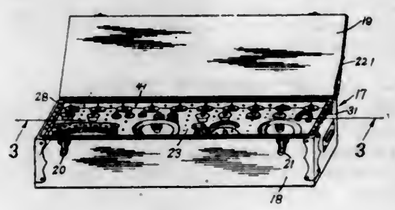
3. Method of producing copper powder, which comprises electrolytically disintegrating substantially pure metallic copper to produce relatively fine copper particles, maintaining said particles free from atmospheric contact and while so maintained washing them free from the electrolyte and submerging in water, placing said submerged particles in vacuo and evaporating said water while maintaining sufficient vacuum to rapidly remove all volatile matter and until said particles are dry, to thereby prevent oxidation of said particles.

1,804,925. TOY OR ADVERTISING DEVICE. JOHN GALLAGHER, Philadelphia, Pa. Filed Apr. 24, 1930. Serial No. 446,953. 8 Claims. (Cl. 40—51.)



1. A device of the class described, comprising a platform, a fulcrum for said platform, opposed springs to continue the oscillation of said platform when once started, guides carried by said platform provided at their opposite ends with stops, and rolling members movable with respect to said guides as said platform oscillates.

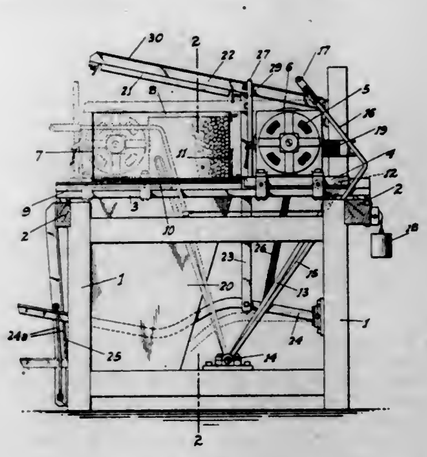
1,804,926. CONSTRUCTION TOY. ALFRED C. GILBERT, Hamden, Conn., assignor, by mesne assignments, to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Maryland. Filed May 4, 1927. Serial No. 188,779. 1 Claim. (Cl. 46—35.)



In a construction toy, the combination of a hub plate comprising a plurality of substantially sector-shaped

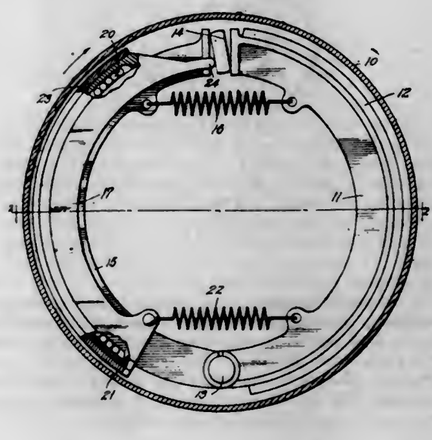
plates, each of said plates having radially disposed side edges of equal length, an inner edge portion at right angles to the line bi-secting the angle between the side edges, and an outer edge portion joining the ends of the side edges and forming three sides of a dodecagon, each of said plates having perforations equally spaced along the edge portions thereof, the radially disposed side edges of adjacent plates overlapping whereby the perforations therein coincide to receive securing means, each of the inner edge portions be-

ing spaced outwardly from the center of the hub plate, a disk-like member having a bushing extending axially outwardly through the opening formed between the inner edge portions of the plates and having a disk-like portion provided with perforations coinciding with the perforations adjacent the inner edges of the plates, and securing means passing through the coinciding perforations in the side edges of the plates and through the perforations in the disk-like member and inner edges of the plates to secure the same together.



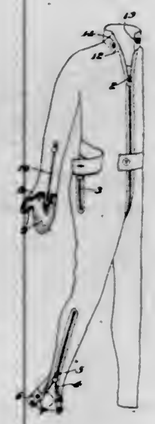
1,804,927. CONTAINER FOR CONSTRUCTION TOYS AND LIKE SETS. ALFRED C. GILBERT, Hamden, Conn., assignor, by mesne assignments, to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Maryland. Filed Mar. 8, 1928. Serial No. 260,221. 8 Claims. (Cl. 46—35.)

1. In a toy chest or the like, a chest body, a cover for said chest and a relatively flat shallow tray, said tray being made of sheet material and provided with integrally formed laterally projecting flat flanges thereon adapted to overlie a portion of said body to support said tray in the chest, said flanges being clamped between the cover and portion of the body when the cover is in closed position.



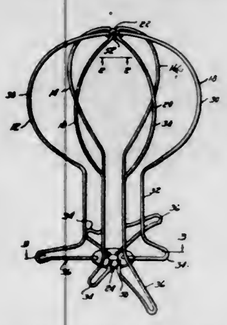
1,804,928. ASPARAGUS TRIMMING MACHINE. THOMAS GILL, Jersey, Calif. Filed May 27, 1930. Serial No. 456,051. 9 Claims. (Cl. 146—81.)

1. An asparagus trimming machine for use in connection with a double asparagus holding rack from both sides of which the butts of asparagus stalks initially project, including supporting and locating means for the rack, cutters mounted for movement in parallel planes adjacent and



along the sides of the rack, and means for moving the cutters simultaneously to cause them to be drawn through the projecting butts.

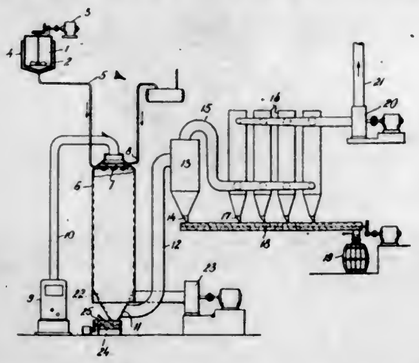
1,804,929. EXPANDING BRAKE. ALBERT HENRY GODFREY GIRLING, Harlow, England, assignor to Bendix Brake Company, South Bend, Ind. Filed June 14, 1926, Serial No. 115,970, and in Great Britain June 17, 1925. Renewed Nov. 27, 1929. 15 Claims. (Cl. 188—78.)



6. A brake lever having a brake shoe thereon adapted for installation in a vehicle braking mechanism comprising an expanding device and a rotary member to be braked, said shoe being movable relatively to the lever under the tangential drag of the rotary member, and having means for contacting with the expanding device to augment the expanding action thereof, said means comprising an extension of the shoe disposed intermediate the shoe and expanding device.

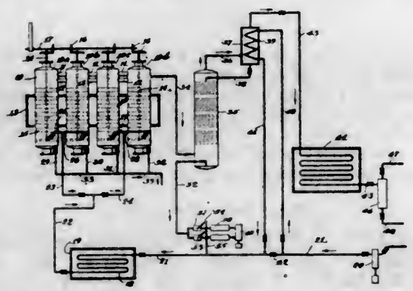
1,804,930. SPORT GARMENT. MIRIAM C. HEAD and FRANCIS HEAD, Newton, Mass. Filed May 20, 1929. Serial No. 364,479. 2 Claims. (Cl. 2—79.)

2. An over-garment including a body portion having sleeves, mittens integral with said sleeves, each sleeve having a slit from the arm portion, through the wrist portion, into the hand portion of the mitten through which the hand can be withdrawn from the garment, and a slide operated fastener for closing each slit.



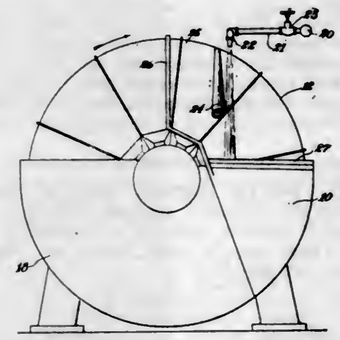
1,804,931. SUPPORT FOR HATS AND THE LIKE. FAIRFIELD W. HOBAN, New York, N. Y., assignor to Fairfield Specialties Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 1, 1929. Serial No. 403,961. 15 Claims. (Cl. 223—18.1.)

1. A support comprising end members, and a plurality of vertically extending members connected to said end members, said vertically extending members having upper portions conjointly forming a relatively enlarged support and certain of said members having angular lower portions extending below the lower end member to form feet for supporting the device upon a surface.



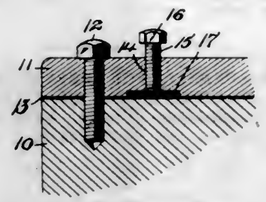
1,804,932. MANUFACTURE OF SOAP POWDER. ROBERT L. HOLLIDAY, New York, N. Y., assignor, by mesne assignments, to Colgate-Palmolive-Peet Company, Chicago, Ill., a Corporation of Delaware, and The Procter & Gamble Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 19, 1926. Serial No. 102,861. 2 Claims. (Cl. 87—16.)

1. The process of producing a dry appearing relatively high water containing soap powder product consisting mainly of soap and soda ash with the soda ash in a predominating amount, which comprises preparing a soap and soda ash mixture with an amount of water sufficient to dissolve substantially all of the soda ash ingredient, the proportion of water being substantially in excess of the amount desired in the finished product so as to render the mixture free-flowing to permit its being broken up into liquid drops by spraying and permitting its being handled through pumps and pipe lines with ordinary care without danger of solidification therein, spraying said soap powder mixture to thus subdivide it into drops, effecting removal of a portion of the moisture content of the sprayed soap powder mixture down to substantially 40% by bringing a current of heated moisture absorbing treating gas into contact with the sprayed particles of the said mixture, regulating the total moisture absorbing capacity



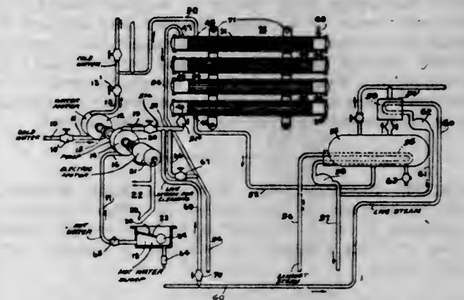
of the treating gas relative to the total amount of water desired to be removed from the product being treated to thereby inhibit the removal of moisture from said particles of sprayed soap powder mixture while the said mixture still has a relatively high water content, effecting incorporation of a major portion of said relatively high water content with the other constituents of the said soap powder mixture as water of crystallization to produce an ultimate product in apparently dry powder form by continuing the treatment of the sprayed soap powder mixture having said relatively high water content in a treating gas of controlled low moisture absorbing capacity until the said sprayed material under treatment has assumed an apparently dry condition, and then separating the apparently dry powder product from the treating gas to constitute the finished product.

1,804,933. TREATING HYDROCARBON OILS. WILL K. HOLMES, Tulsa, Okla., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 13, 1925. Serial No. 49,931. 2 Claims. (Cl. 196—69.)



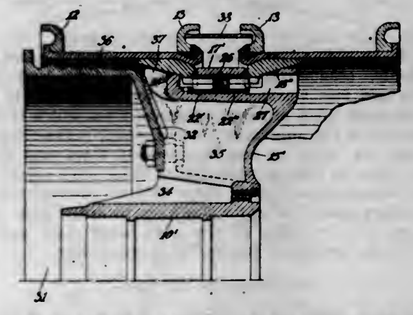
1. The process of converting high boiling hydrocarbon oils into lower boiling products that comprises passing a stream of oil under pressure through a heating coil and delivering it into an enlarged chamber where cracking, distillation, and carbon deposition are effected, applying heat to the coil to raise the oil in transit to a cracking temperature and maintaining a cracking temperature on the oil in said chamber, normally withdrawing tar from the cracking chamber at a normal rate, temporarily increasing the quantity of oil charged through the coil and increasing the rate of tar withdrawal above the normal rate at such times as the gravity of the oil in the chamber exceeds a predetermined density, and concurrently increasing the application of heat to the coil to substantially maintain the rate of distillation from the chamber and the temperature of the oil emerging from the exit of the coil.

1,804,934. FLUID PRESSURE DISCHARGE FOR CONTINUOUS FILTERS. JOHN T. HOYT, Hazleton, Pa., assignor, by mesne assignments, to Oliver United Filters Inc., San Francisco, Calif., a Corporation of Nevada. Filed Sept. 9, 1927. Serial No. 218,443. 4 Claims. (Cl. 210—200.)



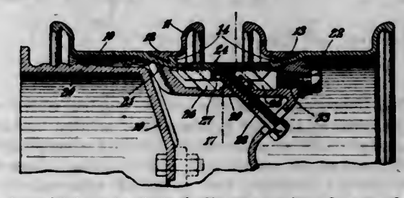
1. In a continuous suction filter of the class described, a rotating filter medium, a support therefor, and a washing and sluicing cake removal mechanism mounted on said support comprising a fluid pressure conduit, a fixed nozzle on said conduit, said nozzle adapted to direct fluid pressure means against said filter medium at a substantially constant angle.

1,804,935. MACHINE ELEMENT. EDWARD JACOBUS, East Orange, N. J. Filed Mar. 7, 1929. Serial No. 345,187. 1 Claim. (Cl. 29—84.)



In a motor combination of a cylinder block and a cylinder head, a gasket seated between them, bolts securing the parts together to form a tight closure, and spaced bolts screwed into the cylinder head and adapted to be forced against the element beneath when the first mentioned bolts are removed whereby the cylinder head can be raised evenly to prevent damage to said gasket.

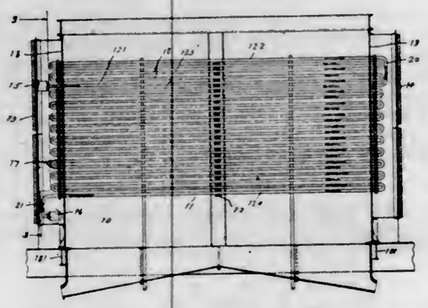
1,804,936. SYSTEM OF HEAT INTERCHANGE. GEORGE T. JACOCKS, Brooklyn, N. Y., assignor, by mesne assignments, to Alco Products Incorporated, New York, N. Y., a Corporation of Delaware. Filed Jan. 27, 1928. Serial No. 249,924. 12 Claims. (Cl. 257—11.)



1. A system of heat interchange comprising, in combination, a source of cold liquid, a liquid motor connected to said source for actuation by said liquid, a source of heated liquid, a liquid pump connected to said source of heated liquid for pumping said heated liquid, and adapted to be actuated by the said motor, outlets for said motor and pump, and a heat interchanger connected with the outlets from said motor and pump.

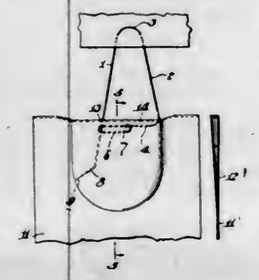
1,804,937. VEHICLE WHEEL. CHARLES G. KELLER, Poughkeepsie, N. Y. Filed Aug. 21, 1926. Serial No. 130,569. 15 Claims. (Cl. 301—12.)

1. A vehicle wheel having a plurality of spokes each presenting at its outer end an outwardly facing surface inclined at an angle to the axis of the wheel, and an outwardly extending lug at the inner end of said surface, a rim having a plurality of lugs each presenting an inwardly facing inclined surface adapted to register with the inclined surface of a corresponding spoke, and clamping bolts each carried by and having threaded engagement with one of said first mentioned lugs and adapted to engage with one of said second mentioned lugs to force the rim axially and firmly engage the opposed inclined surfaces.



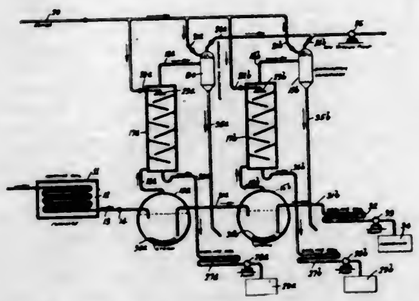
1,804,938. VEHICLE WHEEL. CHARLES G. KELLER, Poughkeepsie, N. Y. Filed Oct. 21, 1926. Serial No. 143,051. 8 Claims. (Cl. 301—12.)

1. A vehicle wheel including a pair of spaced rims each having a projection extending in a radially inward



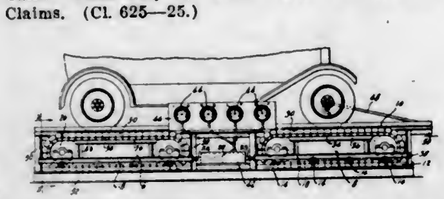
direction and presenting a shoulder facing toward one edge of the rim and an inclined wall facing toward the opposite edge of the rim, the rims being so positioned that the shoulders face toward each other, and a plurality of separate spokes each presenting a pair of oppositely inclined converging faces relatively movable toward and from each other in an axial direction and adapted to engage the inclined faces of said rim projections, a spacing member adapted to engage with and between said rim shoulders, and means projecting through the spoke in a direction having an axially inward component for moving the spacing member into and out of operative position.

1,804,939. ECONOMIZER. HOWARD J. KERR, Westfield, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed May 16, 1929. Serial No. 363,644. 7 Claims. (Cl. 257—240.)



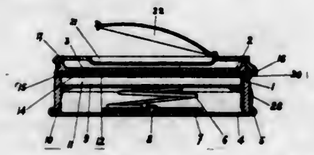
1. In an economizer, a gas flue in which the gases flow upwardly, economizer tubes extending back and forth across said flue, means for conducting feed water to first intermediate tubes of said economizer from which it flows upwardly to the uppermost tubes thereof, connections for causing the water to flow downwardly from said uppermost tubes to second intermediate tubes next below said first intermediate tubes, from which said second intermediate tubes the water flows downwardly from tubes at one level to tubes at the next lower level until it reaches the lowermost tubes of said economizer.

1,804,940. ART OF TAGGING. MATHIAS R. KONDOLF, Lower Merion Township, Montgomery County, Pa., assignor to The Lox Seal Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 11, 1927. Serial No. 182,721. 9 Claims. (Cl. 40—24.)



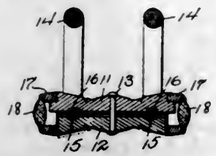
1. The improvement in the art of tagging which comprises a substantially flat tag formed of printed laminated readily rupturable sheet material forming a substantially flat section and an end pocket and a hanger comprising legs connected together and engaging adjacent to the juncture thereof an article and having means for engaging said legs together within the pocket of said tag.

1,804,941. VACUUM DISTILLATION. WILLIAM B. LOGAN, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 27, 1927. Serial No. 242,651. 3 Claims. (Cl. 196—77.)



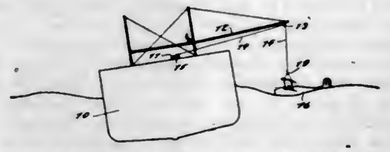
1. The process of distilling mineral lubricating oil which comprises continuously vaporizing the oil under an absolute pressure not exceeding 25–50 mm. of mercury, passing evolved vapors into a tower, introducing water into the upper portion of the tower whereby a portion of said vapors are condensed and the water evaporated, withdrawing steam and oil vapors from the upper portion of the tower and withdrawing condensate comprising the desired lubricating oil from the lower portion of the tower.

1,804,942. BRAKE TESTING DEVICE. FABIAN E. MACABEE and EDWARD L. MACABEE, Hayward, Calif., assignors of one-half to Harry C. Schroeder, Oakland, Calif. Filed May 3, 1927. Serial No. 188,440. 5 Claims. (Cl. 625—25.)



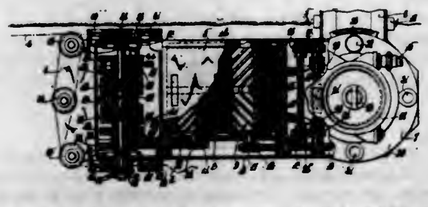
5. A brake testing machine for vehicles, comprising a plurality of units, each unit comprising a movable frame, a member movably mounted in said frame and presenting an endless path along which a vehicle wheel may be caused to roll, the path and the two movements being in parallel planes, means for moving said member to produce such rolling of the wheel and also a reactive movement of the frame, fluid pressure means controlled by such reactive movement of the frame to produce pressure proportional to such movement, and means responsive to such pressure for indicating the amount thereof.

1,804,943. DISPENSER FOR PULVERULENT SUBSTANCES AND THE LIKE. CÉCILE MARIE LOUISE MAILLARD, Nogent-Le-Roy, France. Filed Sept. 7, 1928, Serial No. 304,406, and in France Sept. 16, 1927. 9 Claims. (Cl. 132—82.)



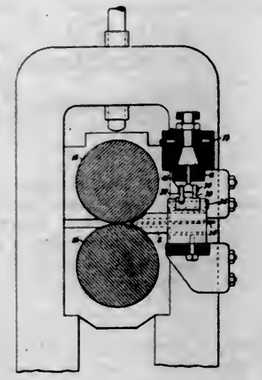
1. A device of the character described having, in combination, a container for pulverulent and like material having a stationary foraminous top wall, a follower piston in said container, spring means for urging said piston toward said foraminous top wall whereby to force said pulverulent material against said wall, a frame rotatably supported in said container, said frame carrying a screen substantially in contact with the under side of said foraminous top wall, and oscillatory means projecting laterally from said container at one side thereof for imparting rotative movement to said frame.

1,804,944. CUFF BUTTON. EDUARD MERZ, South Orange, N. J., assignor to Charlton & Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 24, 1930. Serial No. 430,511. 4 Claims. (Cl. 24—102.)



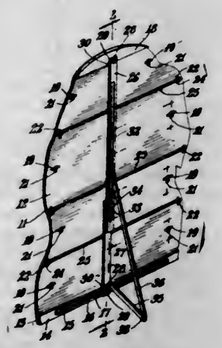
1. A cuff button comprising a bar split longitudinally and recessed near the ends, and rings adapted to swing on the ends of the bar and having square portions in the recesses of the bar whereby the rings can be held in extension of the bar or entirely to one side thereof.

1,804,945. DEVICE FOR HOISTING A FLOATING OBJECT SUBJECT TO WAVE ACTION. THOMAS SPENCER MILLER, South Orange, N. J. Filed June 19, 1928. Serial No. 286,512. 10 Claims. (Cl. 114—.05.)



8. A winch adapted to hoist a float in a seaway comprising a substantially constant speed motor for driving a pump, means for varying the stroke of the pump and the flow of liquid therefrom, a hydraulic motor operable by fluid from the pump, said hydraulic motor driving a train of gearing, a tension governor, and automatic means whereby said tension governor controls the speed of pumping.

1,804,946. MINING MACHINE. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 18, 1923, Serial No. 646,001. Renewed Sept. 15, 1930. 93 Claims. (Cl. 262—80.)

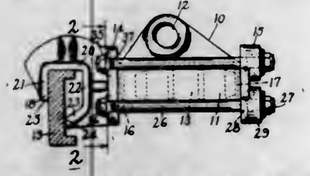


1. In a mining machine, a motor, cutting mechanism driven thereby including a pivoted cutter bar, feeding mechanism including a feed operating member and a take-up member each rotatable on a transverse axis, a shaft rotatable therewith, and means for driving either member including variable speed driving connections between said shaft and motor.

1,804,947. ROLLING MILL GUIDE. PER GUNNAR PALMGREN, Gottenborg, Sweden. Filed Oct. 17, 1929, Serial No. 400,208, and in Sweden Oct. 23, 1928. 5 Claims. (Cl. 80—51.)

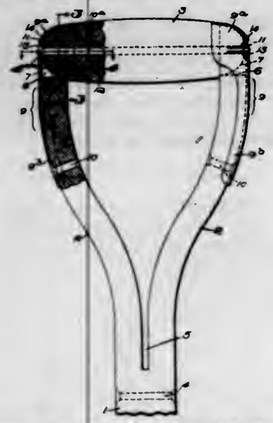
1. The combination with rolls of a rolling mill and an electric motor for driving the rolls, of a guide for the material adapted to open and close, an electro-magnet for actuating the guides, the circuits of the motor and magnet being so connected that the operating load when rolling the metal acts on the circuit of the motor energizes the magnet and closes the guides.

1,804,948. ADVERTISING DEVICE. ISIDOR FRED PETIGOR, New York, N. Y. Filed June 3, 1929. Serial No. 368,115. 9 Claims. (Cl. 40—125.)



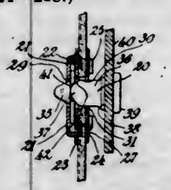
1. A pictorial advertising device comprising a member of sheet material, a stiffening member extending across one end of said sheet material member, a second stiffening member extending across the other end of said sheet member and having a longitudinal slot therein to provide two parallel strips, one of said strips being secured to the sheet material member, and an adjustable strut extending between the other strip and the first named stiffening member for holding them apart.

1,804,949. VIBRATOR. GEORGE B. PICKOP, New Haven, Conn., assignor to Malleable Iron Fittings Company, Branford, Conn. Filed Apr. 4, 1929. Serial No. 352,549. 1 Claim. (Cl. 259—72.)



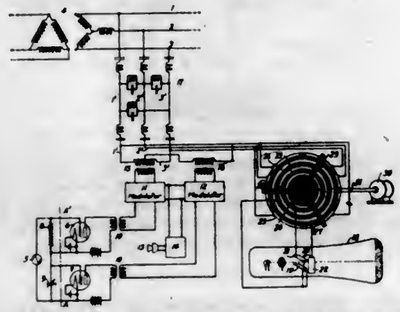
In a vibrator, a casing, a vibratory piston in said casing, heads one at each end of said casing, and bolts for

securing the heads to said casing and to one another, one of said heads being provided with parts in alignment with and overlying the ends of the bolts, said heads being provided with apertures through which the bolts pass and in which the bolts are normally restricted to movement



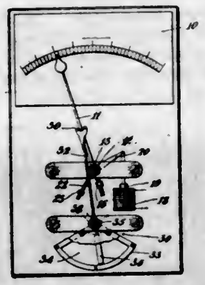
in an axial direction, the head provided with the overlying parts being provided with lateral slots extending into the bolt receiving openings through which the adjacent ends of broken bolts may be withdrawn in a lateral direction, the bolts being restricted to axial movement in the other head at all times.

1,804,950. SPLIT D-HANDLE. WILLIAM A. READY, Brookline, Mass. Filed Feb. 19, 1929. Serial No. 341,132. 7 Claims. (Cl. 294—57.)



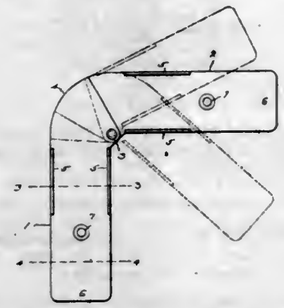
1. A D-handle comprising, in combination, a one-piece stem having one end split to provide two diverging arms at one end of the stem, a grip-piece located between the free ends of said arms, tongue and groove means locking said grip-piece with said arms to prevent relative turning movement, the grooves extending entirely through the arms, a metal reinforcing element secured directly to each arm, each of said reinforcing elements having a portion closely fitting the free end of an arm to conceal the tongue and groove means and strengthen the connection between the arm and grip-piece thereby to prevent splitting and means engaging only the grip-piece and the reinforcing elements to secure the reinforcing elements, arms and grip-piece together against lateral separation.

1,804,951. SNAP FASTENER. DANIEL I. REITER, New York, N. Y. Filed July 16, 1930. Serial No. 468,287. 6 Claims. (Cl. 24—218.)



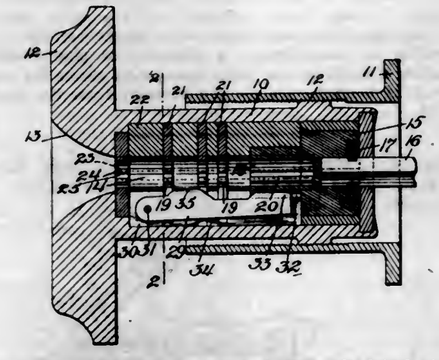
1. A snap fastener comprising a casing having an aperture therein through which a stud may be passed, a flexible stud-retaining element in said casing having a pair of expansible arms lying just within the margin of said aperture and a stud having an abrupt, outer, inwardly-facing, annular shoulder and a flaring, inner, outwardly-facing, annular shoulder to serve as a spreader, the arms of the stud-retaining element having relatively flat surfaces on the sides which engage the abrupt shoulder of said stud when inserted and flaring surfaces to be engaged by said spreader.

1,804,952. WAVE SIGNALING SYSTEM. FRANCIS X. RETTENMEYER, Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1925. Serial No. 70,529. 10 Claims. (Cl. 179—2.5.)



6. In a three-phase wave transmitting system, a source of two-phase modulated carrier current, means for deriving three-phase current from said modulated two-phase current, a three-phase line and a wave filter connected between the source of said three-phase current and said line, said wave filter comprising equal reactive impedance elements connected in series in each phase and equal reactive impedance elements connected in shunt between phases, said impedance elements having values precomputed in terms of two limiting frequencies and of the impedance of said source, whereby waves from said source having frequencies between said limiting frequencies are transmitted with small attenuation through the filter and waves of other frequencies are strongly attenuated.

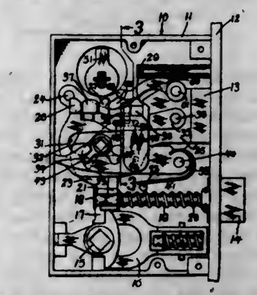
1,804,953. MEASURING INSTRUMENT. FRANK W. ROLLER, East Orange, N. J., assignor to Roller-Smith Company, a Corporation of New York. Filed Jan. 13, 1926. Serial No. 80,867. 6 Claims. (Cl. 73—151.)



6. In a measuring instrument, a rotary element, a needle secured thereto and extending away from said element at one side thereof, a damping device comprising a receptacle located at the opposite side of said element and a vane in said receptacle pivotally mounted about an axis parallel to the axis of said element, and means for operatively connecting said needle and vane consisting of an arm rigid with said vane and formed with a forked end which embraces said needle.

1,804,954. ADJUSTABLE ELECTRICAL CONDUIT ELBOW. CHARLES E. RUTHERFORD, West Hartford, Conn., assignor to The Wiremold Company, Hartford, Conn., a Corporation of Connecticut. Filed Oct. 7, 1929. Serial No. 397,844. 4 Claims. (Cl. 247—31.)

1. A conduit elbow comprising a substantially flat base composed of two members that are pivoted together near one edge and that have their connected ends overlapping, and a channel-shaped cap designed to fit over the base, said cap being composed of two members with the walls on one side permanently joined, and the walls on the other side curved and having a telescopic relation, whereby the base members may be adjusted to a required angular relation, and the cap members may be bent to the same angular relation without disconnection or leaving any opening which would expose conductors in the elbow.



1,804,955. LOCK. WALTER SCHLUMPF, Flushing, N. Y. Filed Apr. 16, 1928. Serial No. 270,238. 1 Claim. (Cl. 70—91.)

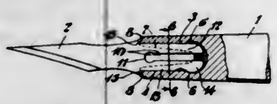
A lock comprising a casing including cylindrical pieces and washers arranged side by side forming a key channel, the washers having symmetrically spaced teeth on their inner curved faces projecting into the key channel so formed and a barrel rotatable at the end of the casing the barrel having a recess with projections corresponding to those on the washers and normally aligned therewith whereby a cylindrical serrated key can be inserted in the lock without regard to its rotative position.

1,804,956. LOCK. JOHN H. SHAW, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn. Filed Mar. 7, 1929. Serial No. 344,975. 11 Claims. (Cl. 70—47.)

1. A cylinder lock comprising a casing, a rotatable key plug in said casing, a rollback mounted on said key plug, an element mounted on said rollback having a radially directed slot, an abutment having a stem slidably received in said slot, the stem of said abutment being provided with a radially directed slot, a fixed element passing through said last named slot and into said rollback, said fixed element serving to limit movement of the stem in the slot of the slotted element, a compression spring mounted in the stem and having one of its ends in engagement with the fixed element, while the other end of the spring is in engagement with the abutment

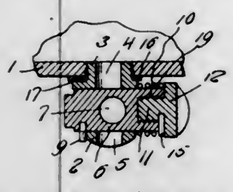
and urges the latter radially outwardly, said key plug being provided with a key receiving slot and the stem being carried in the slotted element adjacent said key receiving slot, whereby it may be engaged by a key inserted in the key plug to be held outwardly against the fixed element.

1,804,957. FURNACE BLOCK. ROLFE SHELLENBERGER, Bethlehem, Pa., assignor to Fuller Lehigh Company, Fullerton, Pa., a Corporation of Delaware. Filed Mar. 7, 1928. Serial No. 259,722. 4 Claims. (Cl. 72—16.)



1. A furnace wall comprising blocks, each having a metallic backing, refractory facings supported on said backings forming the face of a combustion chamber and covering said backings and shielding same from the heat of said furnace, a layer of relatively low heat conductive material located between each backing and refractory facing whereby the rate of heat transfer between said backings and refractory facings is reduced so as to permit a high surface temperature on the side of said facings toward the furnace and relatively low temperature of the metal of said backing.

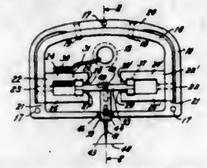
1,804,958. CRANK ARM BEARING. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Mar. 21, 1928. Serial No. 263,366. 3 Claims. (Cl. 208—26.)



1. In a machine of the class described, in combination, a vibratory frame, a fixed supporting frame, and means for movably supporting the vibratory frame upon the fixed frame, comprising crank arms for supporting the vibratory frame in a suspended condition and having laterally extending shafts near their opposite ends, a non-metallic resilient pad snugly mounted upon each shaft, projections upon the shafts for non-rotatively engaging the bore of the pads, and housings having pad gripping projections and constructed to non-rotatably secure one pad of each crank arm to the fixed frame and the other pad of each crank arm to the vibratory frame so that the turning movement of the shafts in the pads will be absorbed by the yielding material of the pads without causing the shafts to rotate in the pads as journals.

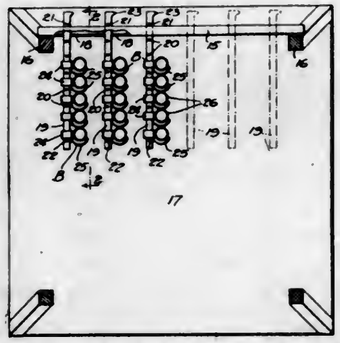
1,804,959. SURGICAL KNIFE. ALEXANDER A. S. STUART, Ridgefield Park, N. J. Filed May 31, 1930. Serial No. 458,019. 4 Claims. (Cl. 30—9.)

1. A surgical knife comprising a blade integrally formed with a flat shank in the plane of the blade and longitudinally bifurcated to form two flexible and resilient fingers; a locking projection integrally formed on one of said fingers at a point spaced materially from the blade and projecting transversely outward from the outer longitudinal edge of the finger and having camming surfaces at the forward and rear edges thereof; a handle formed at one end with a flat shank-receiving socket defining an entrance passage of less width than the expanded shank and locking projection and laterally extended to form locking shoulders extending transversely outward from the opposite longitudinal edges of said passage near the inner end thereof, the shank fingers being compressible toward each other in the plane of the shank and blade for endwise insertion of the shank into the socket and expansible to snap the locking projection into yieldable locking engagement with either of said locking shoulders, the handle, shank and locking projection being formed to cooperate for the insertion and locking of the shank in transversely reversed positions and for the withdrawal of the shank by an outward pull upon the blade through an implement inserted in shank bifurcation, and the handle cross section extending outward beyond the inserted locking projection in both of its locked positions to shield the locking projection from contact with the hand of the user of the knife.



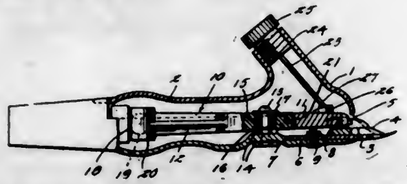
1,804,960. OIL VALVE DRAIN. JOSEPH H. THIBEAULT, Ware, Mass. Filed Mar. 29, 1928. Serial No. 265,740. 2 Claims. (Cl. 251—163.)

1. In a device of the class described, a crank case, a casing having a neck threaded into the lower portion of the crank case, a plug mounted to rotate in the casing and controlling the flow of oil from the crank case through the casing, one end of the casing being formed with a notch, a pin radiating from the plug and engageable within the notch, one end of the plug remote from the pin being provided with an inwardly directed threaded bore, a shank threaded in said bore, a tool engaging head formed on the shank being of greater diameter than the plug to provide a shoulder, a spring disposed about the valve impinging against the shoulder provided by the head and the casing to hold the pin in the notch and lock the plug against casual displacement, and a pin in the plug extending into the shank for locking the shank against rotation in the bore.



1,804,961. ELECTROMAGNETIC INSTRUMENT. ADOLPH A. THOMAS, New York, N. Y. Filed Oct. 12, 1928. Serial No. 312,003. 28 Claims. (Cl. 179—100.41.)

28. In an electromagnetic translating instrument, the combination of a magnet having pole pieces, a vibratory armature bar having its ends in operative relation to said pole pieces, and compressible elastic means inserted between said pole pieces, and the opposite sides of each

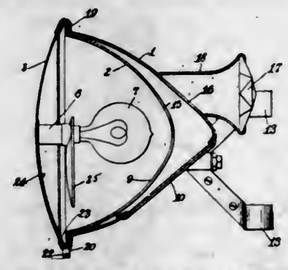


armature end, said elastic means being in pressure contact with said armature and constituting the sole support for the armature.

1,804,962. FINGER BOARD. LESTER RAY THORPE, East Bakersfield, Calif. Filed July 22, 1929. Serial No. 380,044. 8 Claims. (Cl. 211—70.)

4. A device of the character described comprising a support, a finger board slidable on the support, means for limiting sliding movement of the finger board in one direction on the support, a plurality of pipe holding brackets slidable on the finger board, and means for confining the brackets against displacement from the finger board.

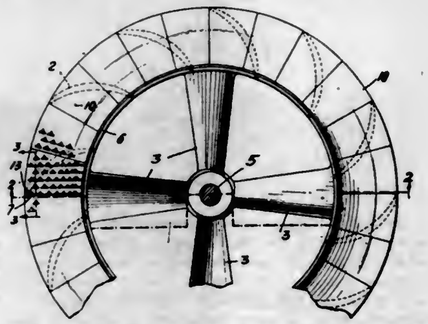
1,804,963. ANIMAL SHEARS. THOMAS H. TROY, Boise, Idaho. Filed Aug. 8, 1929. Serial No. 384,248. 2 Claims. (Cl. 30—1.)



1. A shears of the character set forth, comprising a comb having a large number of short and closely related teeth, a support for the comb extending from the rear end thereof to a point close to the rear ends of the teeth, a bar extending across the comb and contacting throughout its entire length with the upper surface of the comb, screws passing through the support and comb and engaging the bar, a shoulder at the rear end of the support contacting with the rear end of the comb, a movable cutter blade mounted upon the comb, a stationary post adjacent the rear ends of the comb and support, a swivel bar embodying a short front and a long rear section, means pivotally connecting the sections together, said means comprising a plurality of spaced interfitting lugs, and a pivot extending through said lugs, the long fork section being connected to the post adjacent said pivotal connection and the short front section being located above the bar, means securing the front end of the long fork section to the movable cutter blade, a seat secured to the short post section adjacent the front end of the latter and provided with a downwardly and rearwardly inclined upper surface, and a tension bar contacting with said surface of the seat.

1,804,964. BASE EXCHANGE ZEOLITE AND PROCESS OF PREPARING SAME. FREDERICK M. TSCHIRNER, Medford, N. J., assignor to Zeolite Chemical Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 4, 1928. Serial No. 252,032. 23 Claims. (Cl. 23—112.)

15. The process of treating a natural water softening zeolite to improve its water softening qualities which comprises subjecting it to the action of phosphoric acid.

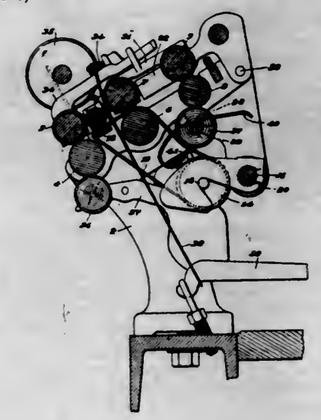


21. A base exchange water softening compound containing insoluble hydrous alumina phosphates possessing base exchange properties.

1,804,965. HEAD LAMP FOR MOTOR VEHICLES. EMILE GUSTAVE EDOUARD VIVES, deceased. St. Pe, France, by Suzanne Jeanne Cazautet (widow Vives), administratrix, St. Pe, France. Filed Nov. 22, 1927, Serial 235,097, and in France Nov. 24, 1926. 2 Claims. (Cl. 240—7.1.)

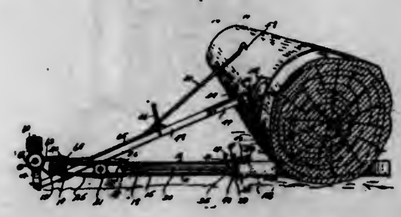
1. An automobile auxiliary headlight comprising in combination a casing having light transmitting apertures for both forward and combined rear and side beams of light, a main reflector, a single source of light located at the focus of the main reflector, supplementary reflecting means for intensifying both beams of light constructed as a single member and mounted within the main reflector between the front light transmitting aperture and the source of light, and a common support for both the supplementary reflecting means and the source of light detachably associated with the main reflector.

1,804,966. MIXING, DISSOLVING OR DISPERSING APPARATUS. KENNETH S. VALENTINE, Hollis, N. Y., assignor to The Turbo-Mixer Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 4, 1929. Serial No. 352,359. 21 Claims. (Cl. 259—96.)



1. In apparatus of the class described, in combination with a tank, and material circulating means therein, including a rotor, a multiplicity of relatively small baffle blades on portions thereof for rapid disintegration, dispersal or diffusion of circulated materials, the baffle blades being located on plates secured to the rotor.

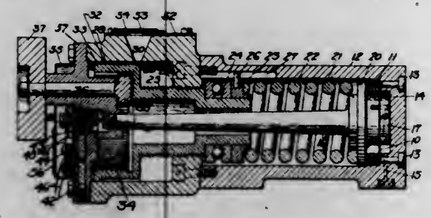
1,804,967. PROCESS OF PRODUCING CELLULOSE FROM LIGNIFIED MATERIAL. ROBERT B. WOLF, New York, N. Y., and RAYMOND P. HILL, Glen Rock, and RAYMOND S. HATCH, East Orange, N. J., assignors to Ligno-Cellulose Corporation, New York, N. Y., a Corporation of Delaware. Filed June 13, 1930. Serial No. 460,976. 10 Claims. (Cl. 92—11.)



1. The method of recovering cellulose from cellulose-containing material which comprises digesting the material at a pressure exceeding six atmospheres with a water solution free from inorganic bases and containing more than 12% of free SO_2.

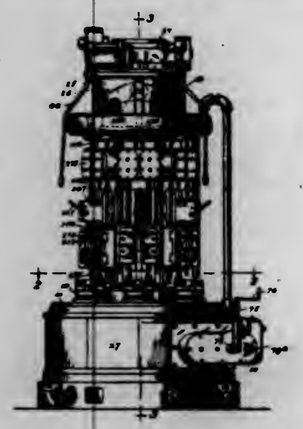
1,804,968. MANUFACTURE OF YARN. EDMUND E. BLAKE, Saco, Me., assignor to Saco-Lowell Shops, Newton, Mass., a Corporation of Massachusetts. Filed Feb. 27, 1929. Serial No. 343,127. 21 Claims. (Cl. 19—131.)

1. The herein described method comprising the steps of subjecting a cotton roving to a preliminary draft by grasping it firmly between moving drafting elements at points spaced at least 1 1/16ths inches apart, driving said elements at a ratio of between 1.20 and 1.45 and thereby feeding the roving through them while they draw it, next subjecting said roving to a main draft, then spinning the roving so drafted and passing the roving continuously from the first of said drafting operations to the next and from the latter to the spinning operation.



1,804,969. POWER DRAG SAW. JESSE T. BOLEN, Beaverton, Oreg., assignor of one-fourth to Katie D. Christy and one-fourth to Fred Christy, Klamath Falls, Oreg. Filed Feb. 11, 1928, Serial No. 253,719. Renewed Oct. 2, 1930. 11 Claims. (Cl. 143—68.)

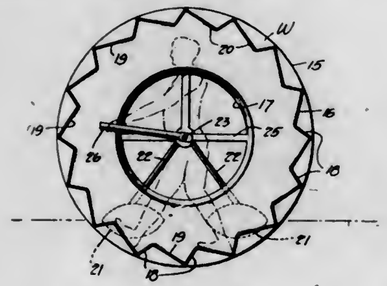
10. In a power saw, a supporting frame formed to provide upper and lower rails, a sprocket wheel mounted



upon one end of said frame and disposed laterally of said rails, a slide mounted at the other end of the frame, a sprocket wheel carried by said slide in alignment with the first named sprocket wheel, means for exerting elastic tension on said slide to draw it away from the first named sprocket wheel, an intermediate slide freely movable upon said rails, a sprocket wheel carried thereby in alignment with the first named sprocket wheels and larger than the same, an endless chain passing over all of said sprocket wheels and engaged therewith, the chain including a link having an inwardly extending lug, a connecting rod pivotally connected to the lug, a saw connected to the connecting rod, the supporting frame having an extension, and the connecting rod at its junction with the saw carrying a member having rocking and sliding engagement with said extension.

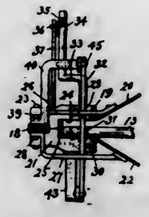
1,804,970. PRESSURE MEASURING INSTRUMENT. ROY W. BROWN, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 7, 1926. Serial No. 139,999. 3 Claims. (Cl. 73—110.)

3. A fluid pressure measuring device, comprising a housing, a diaphragm contained therein, means for connecting a source of fluid to the housing on one side of the diaphragm, pressure means operable upon the other side of the diaphragm, means for indicating the amount of pressure exerted against the diaphragm by said pressure means, and means for indicating the normal or balanced position of the diaphragm, said means comprising a circuit including relatively movable contacts operable by the diaphragm.



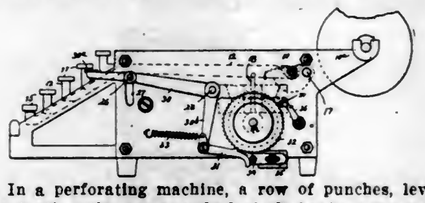
1,804,971. MULTIPLE SPINDLE CENTER TURNING MACHINE. EDWARD P. BULLARD, Jr., Stratford, Conn., assignor, by mesne assignments, to The Bullard Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 2, 1925. Serial No. 27,848. 53 Claims. (Cl. 29—38.)

1. In a center turning machine tool a continuously rotating carrier, a plurality of rotatable work holders carried thereby, a non-rotatable tool holder also mounted on the carrier and adapted to have reciprocatory movement at an angle to the axis of the work holder, means for reciprocating said tool holder, and change speed means between said last means and said tool holder whereby the speed of the tool holder may be varied with respect to said laat means.



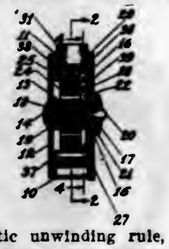
36. In a multiple spindle center turning machine having a loading station and including, a rotatable carrier mounted to rotate about a vertical axis, a series of rotatable work holders mounted thereon for rotation about vertical axes arranged in radially spaced relation about the axis of said carrier, a series of center supports carried by said carrier in coaxial relation to said work holders adapted to support the work at the other end, a non-rotatable tool holder carried by said carrier in respect to each work holder, reciprocatory means for each tool holder adapted to reciprocate it, means common to the several reciprocatory means for imparting successive and equal reciprocatory movement thereto as the carrier is rotated, and means between said last means and said respective tool holders whereby the relative speeds of said tool holders may be varied with respect to said means and to each other.

1,804,972. WATER VEHICLE. CARLOS DE MARCHI, Los Angeles, Calif. Filed Apr. 28, 1930. Serial No. 448,047. 7 Claims. (Cl. 115—20.)



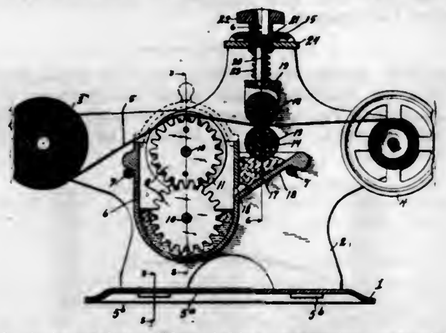
1. A water vehicle comprising pontoons, a wheel mounted upon the pontoons for rotative movement, means on the wheel for imparting rolling movement thereto on the water when rotated, and foot operated means fixed on the inner periphery of the wheel by which the latter can be rotated.

1,804,973. COUPLER. SPENCER C. DUTY, Cleveland, Heights, Ohio. Filed Apr. 25, 1930. Serial No. 447,178. 7 Claims. (Cl. 280—33.44.)



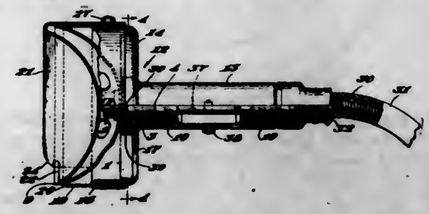
1. In combination, a coupler member for use in connection with a tongue having an opening therethrough, said member comprising jaws adapted to receive said tongue, a coupling pin adapted to be projected through openings in said jaws and through said tongue opening, and a pair of squeeze bars movable transversely of said jaws for drawing said tongue into position in alignment with said jaw openings.

1,804,974. PERFORATING MACHINE. KELLEY D. EVANS, Hamilton, Ohio, assignor of one-half to C. E. Hooven, Hamilton, Ohio. Filed Apr. 30, 1927. Serial No. 187,767. 6 Claims. (Cl. 164—112.)



1. In a perforating machine, a row of punches, levers for actuating the same, a feed shaft having means for engaging and feeding a sheet and having its axis substantially in the same plane with the punches, and means operated by the depression of any of said levers for turning the shaft prior to the perforating of the sheet by the punch corresponding to such lever.

1,804,975. AUTOMATIC UNWINDING RULE. MAXWELL EISENSTEIN, New York, N. Y. Filed May 14, 1930. Serial No. 452,149. 7 Claims. (Cl. 33—138.)

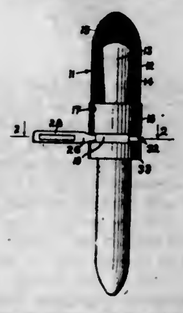


7. In an automatic unwinding rule, the combination with a dished casing of a dished rotor mounted in said casing, said rotor comprising two spaced side walls and one of said side walls being provided with a handle, a spring measuring rule attached to and wound manually on the outer periphery of said rotor by means of said handle, spring means within the rotor for rotating said rotor and for automatically unwinding said spring rule, the said side walls of the rotor being provided with means for engaging with the side edges of the said spring measuring rule and assisting in unwinding said rule, a roller for guiding the free end of said rule and a spring for arresting its outward motion from the casing when unwound, and the said spring measuring rule being of arcuate cross-section and rigid when unwound and of rectangular cross-section and flexible when wound in said casing.

1,804,976. RIBBON INKING DEVICE. JAMES G. FORTIER, Chicago, Ill., assignor to Ribbon-Ink Co., Inc., Chicago, Ill., a Corporation of Illinois. Filed Aug. 15, 1928. Serial No. 299,709. 6 Claims. (Cl. 91—50.)

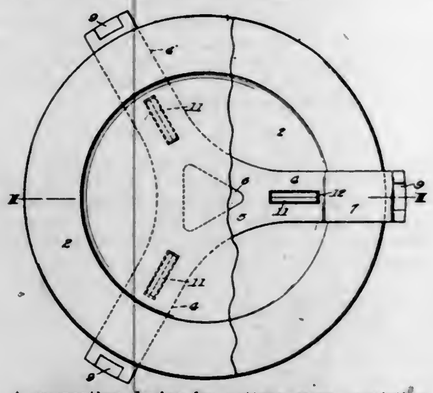
1. A typewriter ribbon inking apparatus comprising means for mounting a supply roll for rotation, means for mounting a take-up spool for rotation, an inking roller over which the ribbon passes from the supply roll to the take-up spool, a pair of wringer rollers between which the ribbon passes from the inking roller to the take-up spool and means for so mounting the upper wringer roller that it may be readily removed without the use of tools to facilitate placement of the ribbon from the supply roll to the take-up stool, the frame of the apparatus having a pair of openings therein, said mounting means comprising a pair of spring members engageable and disengageable with respect to said openings.

1,804,977. CUTTING IMPLEMENT. ERNEST A. GALLISON, Watertown, and ALBERT S. MACDONALD, Quincy, Mass., assignors, by mesne assignments, to Bay State Fishing Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 25, 1928. Serial No. 249,861. 4 Claims. (Cl. 17—7.)



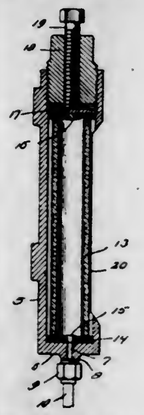
1. A cutting implement of the class described, comprising a rotary cup-like knife and having an annular cutting edge, a plurality of openings spaced inwardly from the edge of the knife, a drive shaft secured to the mid-portion of the knife, an annular guide and guard surrounding the knife, a handle surrounding the shaft and forming a continuation of said guide and guard, and a guard portion protecting the major segmental portion of the cutting edge, said guide and guard being connected to said handle by a wall at the rear of the knife, said wall having openings therein.

1,804,978. SAFETY PAPER. JOHN GENOESE, San Francisco, Calif. Filed Mar. 1, 1926. Serial No. 91,624. 2 Claims. (Cl. 134—33.)



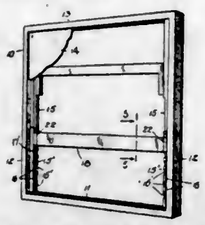
1. A fluid for use in producing a safety paper comprising the solution formed by combining approximately five ounces of alcohol, two quarts of water, a quarter ounce of iodine, a quarter ounce of cobaltous nitrate, and one eighth ounce of sodium thio-sulphate.

1,804,979. CIGAR OR CIGARETTE ASH PROTECTOR. ALPHONSE HAAS, San Bernardino, Calif. Filed Feb. 26, 1929. Serial No. 342,903. 5 Claims. (Cl. 131—51.)



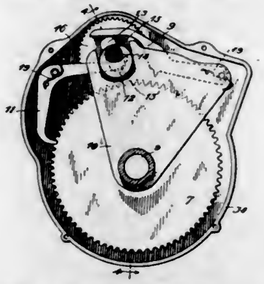
1. An ash protector comprising in combination a first ring, a second ring detachably connected thereto, a clamp having a pair of jaws mounted in the second ring and a hollow structure attached to the first ring adapted to receive the ash of a cigar or cigarette secured in the jaws extending longitudinally through the two rings.

1,804,980. SUPPORTING DEVICE FOR POTTERY. BENJAMIN D. HARDESTY, Beaver Falls, Pa., assignor to Mayer China Company, Beaver Falls, Pa., a Corporation of Pennsylvania. Filed May 17, 1928. Serial No. 278,372. 5 Claims. (Cl. 25—153.)



1. A supporting device for pottery ware consisting of a tripod shaped triple arm body of skeleton form having upwardly sloping ends with downwardly extending pedestals each provided with an upper socket and a lower lug and having on the upper face of each arm a depressed rectangular shouldered bearing face for a separable ware supporting abutment, and an elongated abutment therein having a flat base seated in said bearing face with clearance at the ends and sides.

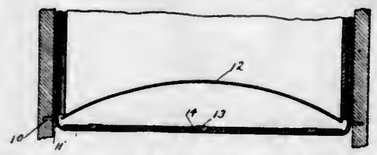
1,804,981. OIL PRESSURE GAUGE. EWING THOMAS HARRIS, Seminole, Okla. Filed June 18, 1928. Serial No. 286,396. 1 Claim. (Cl. 73—31.)



An oil pressure gauge for force feed lubricating systems comprising a tubular metal casing having a bottom wall provided with a central inlet adapted for connection with the pressure line of the lubricating system, a packing washer provided with a groove and seated on the bottom wall of the casing, a transparent tube in the casing seated at its lower end in said packing washer groove, a closure disk provided with a groove on the upper end of said tube within the upper portion of the casing, a rigid follower plate disposed on the closure disk, a plug removably secured in the upper end of the casing, and a set screw threaded axially through said plug with its lower end projecting and engaging the following plate to tightly and uniformly seat the tube in the washer groove and the groove of the closure disk on the tube when adjusted downwardly, said casing being cut away at one side of provide a sight opening through which said tube is exposed to view for the major portion of its length.

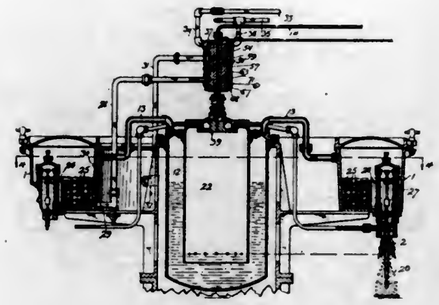
1,804,982. SILVER NITRATE HOLDER FOR PROCESS CAMERAS. HOWARD R. HAYS, Philadelphia County, Pa., assignor to Howard S. Levy and Lionel F. Levy, Philadelphia, Pa. Filed Oct. 31, 1929. Serial No. 403,686. 6 Claims. (Cl. 95—70.)

1. The combination of a plate holder and a wet plate carrier of the character described, and complementary inclined tongue and groove supporting means between the plate holder and carrier to support the latter.



1,804,983. REVERSING MECHANISM. JOSEPH E. HIGGINS, Grand Island, Nebr. Filed Mar. 4, 1930. Serial No. 433,139. 14 Claims. (Cl. 74—50.)

1. A reversing mechanism comprising a movably mounted member, clutch means adapted for driving said member in one direction or the other, rotary means having one off-center portion for imparting proceeding and receding movements or strokes to said clutch means, said rotary means having a second off-center portion for controlling engagement and disengagement of said clutch means with said member in timed relation with the strokes of said clutch means, and means for effecting relative adjustment of said off-center portions about the axis of said rotary means to cause clutch engagement upon either the proceeding or receding strokes of said clutch means.



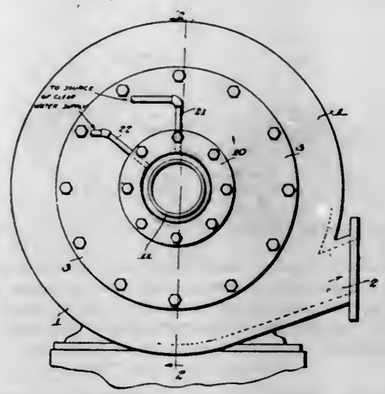
10. In a mechanism of the class described, two co-axially mounted members one of which is adapted to drive the other, a projection on said other member, and a shiftable abutment mounted on the driving member and having abutment portions at opposite sides of the axis of said members, either of said abutment portions being adapted for co-action with said projection in operatively connecting the two members.

1,804,984. DOOR STRUCTURE. CARL H. HOFFSTETTER, Erie, Pa., assignor to Odin Stove Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed May 21, 1930. Serial No. 454,484. 10 Claims. (Cl. 126—194.)

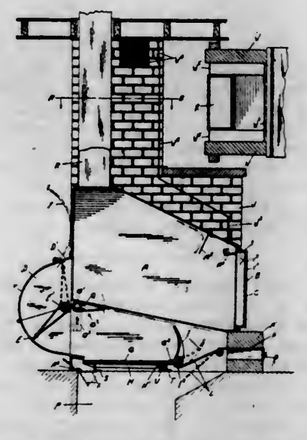
1. In a door structure, the combination of a frame with pintle openings therein; a door in the frame having a pintle connection at one side of the door and an opening in register with the opening in the frame; a pintle-receiving cavity in the door at its opening; and pintles for the door, one of which is insertable from the cavity into the opening.

1,804,985. BOTTLING MACHINE. ALBERT F. HOFFMAN, Newark, N. J. Filed Feb. 10, 1928. Serial No. 253,481. 9 Claims. (Cl. 226—70.)

1. A bottling machine comprising a rotative chamber for holding a supply of liquid for the filling operation, and a cooling device associated with the chamber to rotate therewith and comprising headers, a plurality of tubes connected at opposite ends to the respective headers in multiple relation, and means for introducing cooling liquid into one of said headers and for withdrawing it from the other, to cause a circulation of the cooling fluid through said tubes.



1,804,986. BLANK CARTRIDGE. CHARLES L. HOLDEN, Kings Mills, and PHILIP P. QUAYLE, Lebanon, Ohio, assignors to The Peters Cartridge Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 1, 1930. Serial No. 432,463. 5 Claims. (Cl. 102—14.)

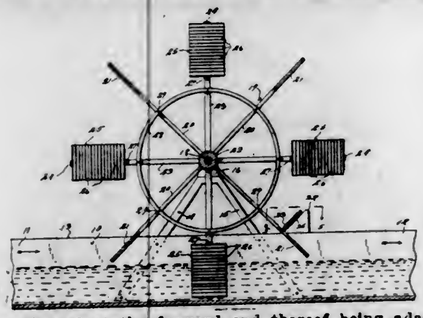


1. A blank cartridge for use in talking moving pictures, comprising, an outer case adapted to fit in the arms to be used, an inner shell disposed in and spaced from the outer case, a primer carried by said inner shell and appropriately located for use in said arms, a charge in said inner shell, and means for constricting said charge in said inner shell to produce sound waves of similar frequencies but lesses amplitude than the sound waves produced by normal gun fire.

1,804,987. SUCTION PUMP. MORTON HOPSON, Eustis, Fla. Filed Aug. 8, 1928. Serial No. 298,348. 3 Claims. (Cl. 103—133.)

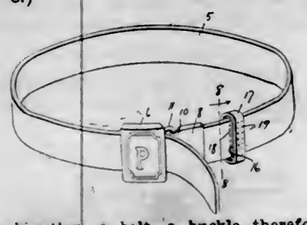
1. A centrifugal suction dredging pump having axial intake and peripheral discharge passages and a pump case provided with a tubular axial extension on its intake side, a suction intake pipe having its inner end coupled to the end of said tubular extension, a rotary impeller in said case, a tubular sleeve carried by said impeller and disposed within the tubular extension of the pump case with its outer end in spaced relation to said suction intake pipe to provide an annular channel therebetween and a supplemental suction passage formed in said tubular extension communicating with said annular channel and with a source of liquid supply to supply, through the suction of the matter drawn through said intake pipe, liquid maintaining the fluidity of the intake of the pump.

1,804,988. FURNACE. FRANK D. HOWE, Cuyahoga Falls, Ohio. Filed Apr. 5, 1926. Serial No. 99,738. 8 Claims. (Cl. 110—33.)



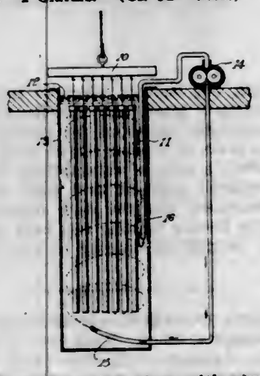
1. A furnace, one wall of which is transparent, said furnace including a grate, said furnace having an inlet and means associated therewith for feeding fuel horisontally onto the grate at a point remote from the transparent wall whereby a zone of substantially smokeless combustion is produced adjacent said wall, and a movable abutment cooperating with the grate adjacent said transparent wall for forcing burning fuel back upon the fresh fuel and for facilitating heaping of the fuel upon the grate.

1,804,989. FISH CONTROL APPARATUS. MELVIN R. JEFFREY, Missoula, Mont. Filed Mar. 6, 1930. Serial No. 433,743. 7 Claims. (Cl. 210—175.)



1. A fish control wheel of the character described comprising a standard and a wheel member rotatably mounted on the standard and adapted to be positioned in a flume, said wheel comprising a plurality of radially inclined pad-

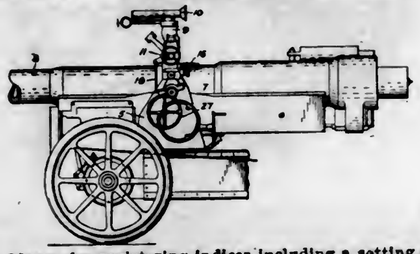
die members, and a plurality of tubular screening members alternately positioned between said paddle members and adapted for rotation therewith, said screening members



when clogged at the forward end thereof being adapted to be rotated rearwardly by pressure of the water at the forward end thereof into a substantially horizontal cleaning position.

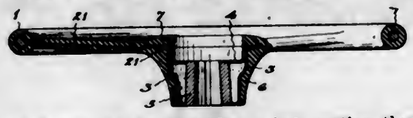
1,804,990. BELT. SAM C. JIMOPOULOS, St. Louis, Mo., assignor of four-tenths to Ralph Nolen, St. Louis, Mo. Filed Mar. 12, 1930. Serial No. 435,195. 2 Claims. (Cl. 241—8.)

1. In combination, a belt, a buckle therefor, and an attaching device engageable with one end of said belt, and having means for detachable engagement with said buckle for securing the latter to said one end of the belt, a pair of inner and outer loop members circumjacent said belt inwardly form said one end, said inner loop member having one side thereof stitched to said belt, and the opposite side of said inner loop member stitched to an adjacent side of said outer loop member.



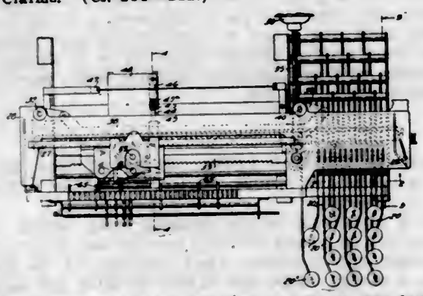
1,804,991. PROCESS AND APPARATUS FOR COATING. GUSTAVE A. JOHNSON, Irvington, N. J., assignor to American Steel Pipe Co. Inc., Irvington, N. J., a Corporation of New Jersey. Filed Dec. 20, 1928. Serial No. 327,250. 4 Claims. (Cl. 91—70.1.)

3. The method of coating pipes with aluminum which comprises dipping the pipes vertically in a tank containing a bath of aluminum powder and a liquid vehicle, which bath is circulated upwardly with a whirling motion from below the pipes so as to enter the interior of the pipes and to evenly flow over the exterior of the pipes.



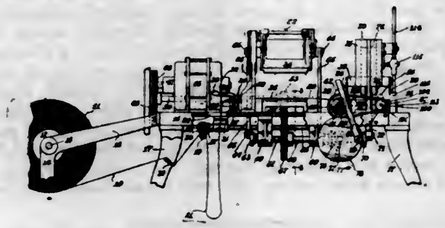
4. The method of coating metal objects with a coating metal which comprises applying a coat of finely divided metal suspended in a liquid vehicle to the surface of the object and baking below the carbonizing temperature of the vehicle for a length of time sufficient to produce a surface alloying of the coating metal with the base metal; applying a second coat of the same material and baking it at a relatively higher temperature below the carbonizing temperature for a longer period of time.

1,804,992. MEANS FOR REGISTERING INDICES OF FIRE CONTROL SYSTEMS. JAMES C. KARNES, Buffalo, N. Y. Filed July 30, 1928. Serial No. 296,356. 4 Claims. (Cl. 33—48.) (Granted under the act of Mar. 3,1883, as amended Apr. 30, 1928; 370 O. G. 757.)



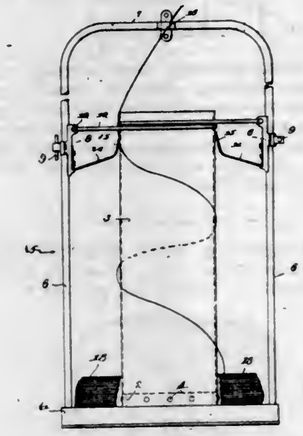
4. Means for registering indices including a setting arm and a gun arm movably mounted to pass each other, a plunger carried by one of the arms, and a block carried by the other arm and adjustable in the direction of movement of said arm, said block provided with a recess for receiving the plunger.

1,804,993. STEERING WHEEL. HERMAN T. KRAFT, Akron, Ohio, assignor to The H. A. Husted Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 18, 1929. Serial No. 356,106. 9 Claims. (Cl. 74—33.)



1. In a steering wheel spider, a hub portion therefor, comprising an outer cup-shaped member, an inner cup-shaped member nested in said outer member and a tubular hub positioned between said cup-shaped members and having lugs at opposite ends thereof engaging the bottoms of said cup-shaped members.

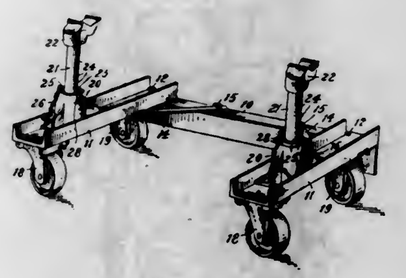
1,804,994. CARD PUNCH. WILLIAM W. LASKER, Brooklyn, N. Y., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 18, 1923. Serial No. 681,334. 7 Claims. (Cl. 164—112.)



7. In a perforating machine comprising punches, a series of power driven operating bars, a step-by-step moving carriage, and means traveling with said carriage whereby any such bar when operated may actuate a punch to perforate a stationary card in whatever position said carriage may be at the time.

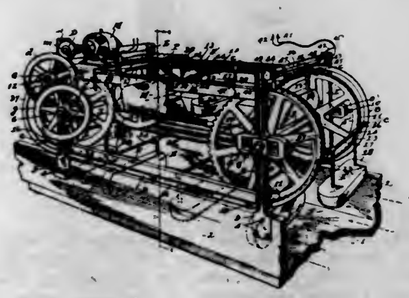
1,804,995. STATISTICAL CARD PRINTING AND CUTTING MACHINE. WILLIAM W. LASKER, Brooklyn, N. Y., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed July 16, 1927. Serial No. 206,740. 5 Claims. (Cl. 164—48.)

1. In a device of the character described, the combination with means for severing cards from a strip by simultaneously cutting the same along two transverse lines spaced in accordance with a predetermined length of card, of intermittent feeding means to advance the strip between cutting operations a distance slightly greater than the length of a card.



1,804,996. WIRE SUPPORT AND GUIDE. ALBERT S. MACDONALD, Quincy, Mass., assignor, by mesne assignments, to Bay State Fishing Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 23, 1928. Serial No. 263,997. 7 Claims. (Cl. 242—129.)

1. A device of the class described, comprising a central cylindrical guide, a support at the lower end of the guide adapted to hold a wire coil concentrically arranged about the guide, an element above the support and juxtaposed to the guide to hold the wire in frictional engagement with the surface of the same when it is being drawn from the coil, a frame about the guide, and an opening in the upper part of the frame to receive wire from the guide.

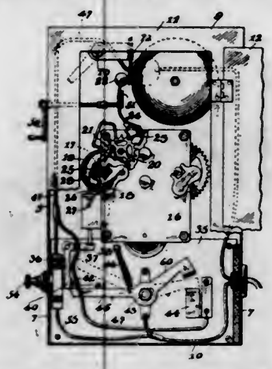


1,804,997. DOLLY. ROBERT E. MANLEY, York, Pa., assignor to Manley Manufacturing Company, York, Pa., a Corporation of Delaware. Filed Oct. 15, 1926. Serial No. 141,846. 3 Claims. (Cl. 280—61.)

1. In a dolly, a plurality of parallel beams, a pair of wheels for each of the parallel beams, and a supporting member on each of the parallel beams between the wheels, and a single transverse bar connecting the rear ends of the two beams so as to leave the space between the beams

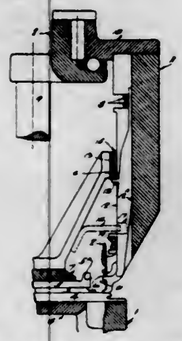
free and unrestricted so that a wheeled jack bearing an automobile may be moved in between the parallel bars and while so positioned be lowered to transfer the automobile from the jack to the supporting members.

1,804,998. METHOD OF AND MEANS FOR COLLECTING MAGNETIC MATERIALS AND SEPARATING THEM FROM OTHER MATERIALS. JAMES N. MCCRACKEN, Los Angeles, Calif., assignor to Black-sand Mining and Manufacturing Company, Ltd. Filed May 16, 1928. Serial No. 278,509. 6 Claims. (Cl. 209—218.)



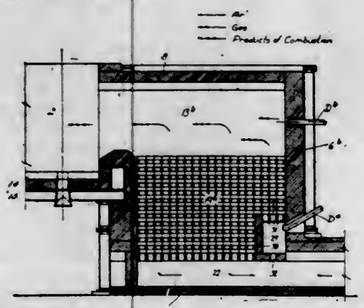
1. A method of separating magnetic materials from non-magnetic materials, the method consisting in arranging a series of electro-magnets so that the magnets are alternately in a substantially horizontal position and alternately in a substantially vertical position; moving a mixed volume of the materials in a passage; causing the magnets to be energized and, while energized, to move through the mixed volume of materials so that some portions of the magnetic materials will be collected by the horizontally disposed magnets, while other portions of the magnetic materials will be collected by the vertically disposed magnets; continuing the movement of the electro-magnets out of the passage; and causing the magnets to be de-energized during a period of their travel out of the passage, thereby effecting the discharge of the collected magnetic materials from the magnets.

1,804,999. ILLUMINATED CLOCK. EMIL A. MEYER, Springfield, Ohio. Filed May 24, 1928. Serial No. 280,185. 2 Claims. (Cl. 200—39.)



1. The combination with a time switch of a clock train including a shaft, actuating means rotating with said shaft, trip means in the path of driving movement of

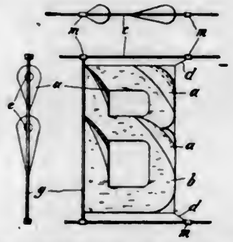
said actuating means, said trip means being movable out of the path of reverse movement of said actuating means,



and a member normally holding said switch open and adapted to move to release said switch upon movement of said trip means.

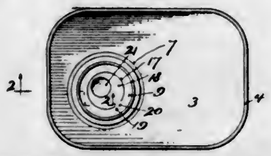
1,805,000. KNITTING MACHINE. MAX C. MILLER, Cumberland, R. I. Filed Apr. 7, 1924. Serial No. 704,562. 35 Claims. (Cl. 66—104.)

1. In a knitting machine the combination with the needles, means including thread guides for feeding two separated yarns, and sinkers for progressively sinking the yarn between the needles, of additional devices acting on the yarns to position them one above the other in advance of the sinking point.



1,805,001. FURNACE. GEORGE NAISMITH and DONALD M. NAISMITH, Pittsburgh, Pa., assignors to Donald M. Naismith. Filed Dec. 9, 1929. Serial No. 412,738. 4 Claims. (Cl. 263—15.)

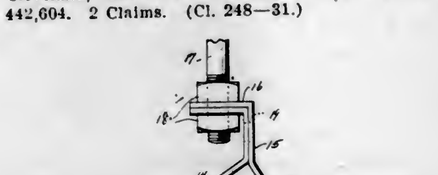
2. In a furnace, main walls enclosing a main heating chamber and side-by-side lower vertically circulating air-preheating chambers having regenerative checkwork therein and an upper mixing portion communicating with the heating chamber, means for alternately supplying air to and withdrawing waste gases from said chambers, an enclosed supplemental chamber in the lower portion of each checkerwork chamber communicating downwardly with the air supply and upwardly through the checkerwork, and a fuel supply pipe leading into said supplemental chamber.



4. A furnace having a main heating chamber, a middle vertical wall terminating at the inner side of the heating chamber, a pre-heating chamber at each opposite side of said wall providing an upper mixing, combustion and delivery conduit leading to the heating chamber, means for introducing fuel thereinto remote from the heating chamber, air pre-heating checkerwork in the lower portion of each chamber below the upper mixing portion thereof, means for supplying air upwardly through the pre-heating checkerwork, an enclosed chamber in the lower portion of each checkerwork chamber communicating downwardly with the air supply and upwardly through the checkerwork, and a fuel supply pipe leading into said supplemental chamber.

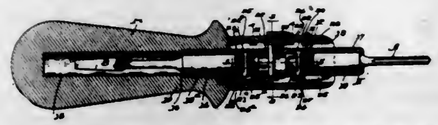
1,805,002. LETTERS, FIGURES, AND SIGNS FOR EXHIBITION FROM AIRCRAFT. FRITZ NEUMEYER, Berlin-Charlottenberg, Germany. Filed Sept. 19, 1929, Serial No. 393,661, and in Germany Sept. 21, 1928. 20 Claims. (Cl. 40—127.)

1. Means for advertising from aircraft comprising parallel wires, stiffening members therefor extending perpendicularly between said wires, characters individually attached to said wires, sustaining means for said characters, a roller and means for winding and unwinding the assembly of wires, stiffening members, and characters, on and off said roller.



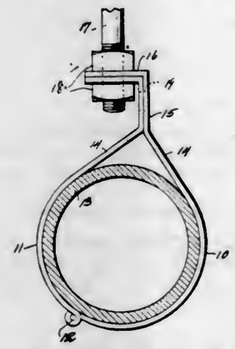
1,805,003. FRANGIBLE SEAL FOR RECEPTACLES. ISIDOR NEWMAN, Bronx, N. Y. Filed Oct. 5, 1929. Serial No. 397,467. 1 Claim. (Cl. 220—28.)

In an article of the class described, a receptacle, a sealing member forming a closure for said receptacle, said sealing member having a scoring for weakening the same, disposed in the form of a ring whereby the disk enclosed by said ring may be fractured, said disk having a depression disposed eccentric to said disk and adapted to be engaged by an implement for fracturing said sealing member along said scoring.



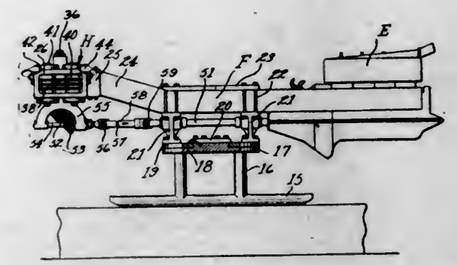
1,805,004. GRADING LEVEL. RALPH G. NEWSOME, Newport News, Va. Filed June 22, 1928. Serial No. 287,488. 2 Claims. (Cl. 33—73.)

1. In a grading level, the combination with a straight edge, of a base bar secured upon said straight edge and having upstanding ears intermediate its ends, a spirit level proper including a bubble tube holder pivoted intermediate its ends between said ears and upon a transverse horizontal axis for longitudinal tilting adjustment, adjusting screws threaded through the ends of said bubble tube holder and bearing upon said base bar for use in



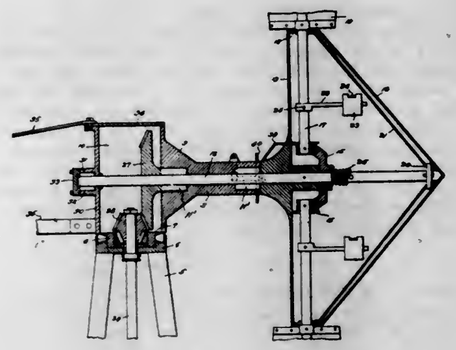
tiltably adjusting said bubble tube holder, said bubble tube holder comprising an elongated hollow body portion having an arcuate top wall provided with a longitudinal slot, and an elongated arcuate bubble tube mounted on said wall of the holder and provided with a series of transverse graduations from end to end exposed through said slot.

1,805,005. COMBINATION TOOL. WILLIAM E. PHILLIPS, La Crescenta, Calif. Filed Apr. 8, 1929. Serial No. 353,479. 11 Claims. (Cl. 7—15.)



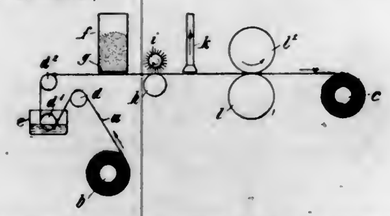
1. A tool comprising a hollow handle member, a holder having instruments on opposed extremities thereof and insertable from one extremity or the other into the handle member to accordingly dispose one instrument in the latter and expose the other instrument in a position for use or vice versa, and means for securing the holder in the handle member in either of its positions, comprising a projection on the holder, and a socket member movably mounted on the handle member and having an entrance opening through which the projectile is insertable into the socket member when occupying one position, the projection abutting a wall of the socket member when occupynig another position, to thereby prevent withdrawal of the holder from the handle member.

1,805,006. PIPE HANGER. PATRICK J. NEILON, East Cleveland, Ohio. Filed Apr. 8, 1930. Serial No. 442,604. 2 Claims. (Cl. 248—31.)



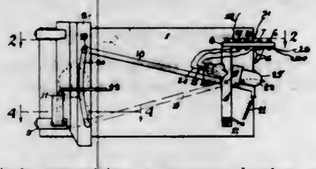
1. A pipe hanger of the character described, comprising two sections hinged to each other, the sections at their free ends being bent upward and inward in convergent relation to each other, then extending upward and then horizontally whereby said angular extremities may be disposed in overlapping relation, the angular extremities being apertured for the passage of a supporting member.

1,805,007. PIPE COUPLING APPARATUS. ELMER C. PEDLEY, Chino, Calif. Filed Dec. 27, 1927. Serial No. 242,845. 9 Claims. (Cl. 255—35.)



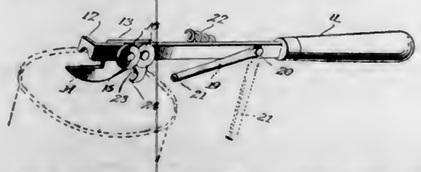
1. A pipe coupling apparatus comprising a head, a frame on the head, a shaft journaled in the frame, a sprocket wheel secured to the shaft, other sprocket wheels journaled in the head, a chain trained about the first sprocket and having engagement with only the confronting sides of the other sprockets to provide a looped portion beyond the sprockets which is adapted to receive a pipe, and means for driving the shaft to effect driving of the chain.

1,805,008. WINDMILL. OSCAR T. RUDE, Mona, N. Dak. Filed Apr. 11, 1928. Serial No. 269,131. 2 Claims. (Cl. 170—68.)



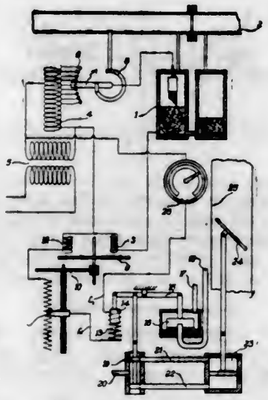
1. A windmill comprising a rotating head having a plurality of blades extending radially therefrom, a horizontally disposed shaft rotatably supporting the head, a rotatable shaft for each of said blades, a gear segment carried by each of said blade shafts, a gear freely mounted on said first named shaft operatively connecting each of said gear segments, wind pressure responsive means for angularly adjusting said blades comprising a coil spring yieldably connecting the said first named shaft with said freely mounted gear, said spring being operable to maintain the blades in a predetermined angular position during rotation of the blades under normal wind conditions and adapted to yield to abormal wind pressure whereby to feather the blades, arms extending radially of the blade shaft and adjustable longitudinally thereon, and weights carried by said arms and adapted to trail upon excessive speed of the head for automatically adjusting the angle of the blades, said spring and said weight being arranged to act oppositely on said blades.

1,805,009. COLOR SCREEN FILM AND PROCESS FOR MANUFACTURING THE SAME. RUDOLF RUTH, Schwedt, Germany. Filed Nov. 8, 1926, Serial No. 147,117, and in Germany Nov. 23, 1925. 3 Claims. (Cl. 95—81.5.)



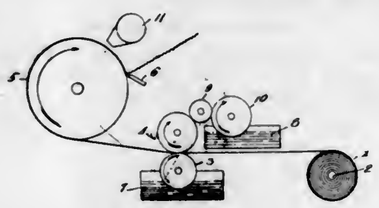
1. A process for the manufacture of a color screen film consisting of a supporting colloid and colloidal screen elements the original spherical shape of which is flattened, wherein the supporting colloid is provided with a layer of screen grains and the whole then passed between pressure rollers, of which the roller acting on the screen grains is heated.

1,805,010. TIME SWITCH. ROMILLY T. RUTHERFORD, Alameda, Calif., assignor to Wood-Barrett Corporation, Ltd., a Corporation of California. Filed Dec. 9, 1929. Serial No. 412,799. 12 Claims. (Cl. 194—9.)



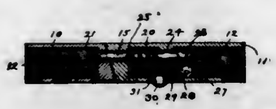
1. A switch comprising a support having a coin or token chute thereon, a rod pivotally mounted on the support having means for intercepting a coin or token dropped into the chute, the said rod being adapted to be moved by a coin or token when dropped into the chute, a thermostat mounted on the support, a plurality of contact points carried by the rod, the said contact points being connected with the terminals of a number of circuits, a wire leading from one of the terminals and one of the contact points to the thermostat, and means engaging with the thermostat for temporarily supporting a coin or token in the chute.

1,805,011. COMBINATION HOUSEHOLD IMPLEMENT. JOSEPH SALOMONE, Brooklyn, N. Y. Filed May 22, 1929. Serial No. 365,160. 1 Claim. (Cl. 7—1.)



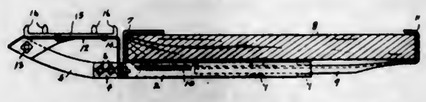
In a tool of the kind described, a shank having a handle at one end and having the other end portion extending laterally thereto, a plate secured to the side of said shank behind said lateral extension and spaced rearwardly therefrom, said plate having a cutter blade thereon underlying and projecting beyond said extension, overlapping discs positioned on the side of said shank opposite said plate, means extending through the axis of said discs, said shank and said plate for molding said parts together; said discs extending beyond the side edges of said shank, said extension having a notch in the edge thereof opposite said blade and positioned to one side of said blade.

1,805,012. MEANS FOR REGULATING COMBUSTION IN BOILER FURNACES. ALEXANDER G. S. SANDISON, Kelda, Baltasound, Shetland Islands. Filed Oct. 5, 1928, Serial No. 310,488, and in Great Britain Nov. 4, 1927. 18 Claims. (Cl. 236—24.5.)



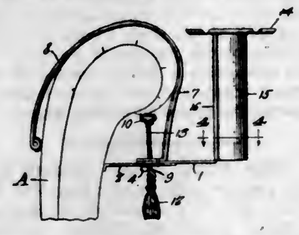
1. A combustion regulating system for a furnace comprising a measuring circuit including a resistance variable as a function of steam flow from the furnace, a control circuit, an electro-dynamic device in said circuits and inductively acted upon by the current in said circuits for regulating the control current in accordance with variations in steam flow, an electro-magnetic device in said control circuit and furnace control means actuated by said last named device to restore said steam flow to its correct value.

1,805,013. METHOD FOR MAKING FAST COLORED CREPE PAPER. GALEN H. SAYLER, Chicago, Ill., assignor to Dennison Manufacturing Company, Framingham, Mass., a Corporation of Massachusetts. Filed May 16, 1929. Serial No. 363,553. 3 Claims. (Cl. 8—5.)



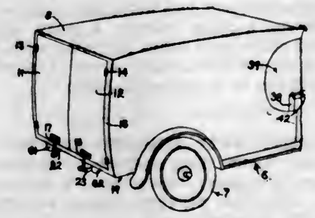
1. A method for making non-bleeding colored paper, which comprises treating a sheet of paper simultaneously with a dye solution and with a solution of fixing reagent.

1,805,014. RAIL LOCKING MEANS. JACOB RUPPERT SCHALK, Rhinebeck, N. Y. Filed Mar. 22, 1928. Serial No. 263,816. 1 Claim. (Cl. 287—103.)



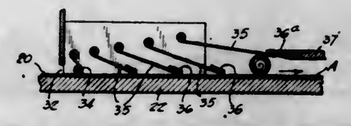
In a marine hinged guard rail locking device, and in combination with two engaging rail members formed with recessed ends for attachment to the adjacent ends of the guard rail, one of said members formed with a dove-tail slot adapted to engage with a dove-tail lug on the other member to form a joint between said members, a lug formed within the recess of one member, a bolt slidably mounted therein and in the end of said member and engaging the end of the other member, a spring mounted on said bolt between said lug and the end of the member to retain said bolt in a locked position, and a releasing finger operated means secured to said bolt for withdrawing the same.

1,805,015. SADIRON HOLDER. ALFRED L. SCHULZE, Houston, Tex. Filed Oct. 4, 1929. Serial No. 397,207. 5 Claims. (Cl. 68—27.)



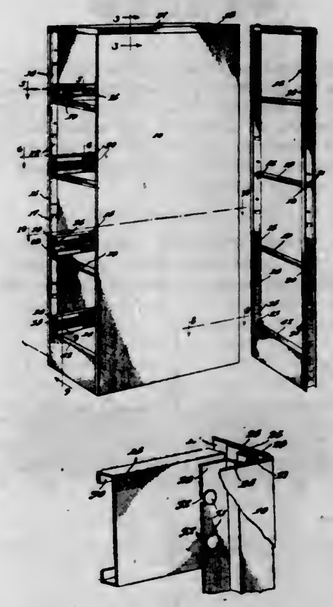
3. An iron holder including a frame formed of two parts, a yieldable member connecting said parts, a clamp hook carried by each part, said hooks being engageable with opposite margins of a support, one end of the frame being extended beyond the corresponding clamp and a supporting platform on said extended end.

1,805,016. ASH TRAY. MIKE SCHWARTZ, Cleveland, Ohio. Filed Mar. 1, 1929. Serial No. 343,645. 3 Claims. (Cl. 248—20.)



1. A support for ash trays comprising a base having vertical and horizontal portions and said vertical portion adapted to support a receptacle, an arm-engaging member slidably and adjustably secured to the horizontal portion and adapted to have one end thereof brought into an engagement with a fixed support below the latter's upper edge, an arm engaging member secured to said base and adapted to engage over the fixed support, and a spring pressed element carried by the horizontal portion and adapted to engage the fixed support between said first and second mentioned arm-engaging members.

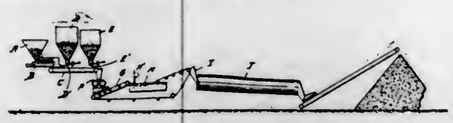
1,805,017. DOOR OPERATING MECHANISM FOR DELIVERY TRUCKS. MALCOLM G. SCOTT, Los Angeles, Calif. Filed May 29, 1929. Serial No. 367,097. 7 Claims. (Cl. 268—3.)



1. A device for operating a pair of doors carried upon a vehicle body, comprising a guide rod rigid with the under side of the body and extending longitudinally from a point beneath the free edges of the doors when closed, a slipper reciprocably mounted on said rod, a pair of rigid arms each pivoted at one end to said slipper and at the other end to one of said doors, and means accessible to the driver of the vehicle for reciprocating said slipper.

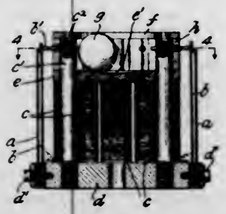
1,805,018. MOLDING MACHINE. FRANK A. SCRUGGS, Los Angeles, Calif. Filed Nov. 13, 1929. Serial No. 406,892. 8 Claims. (Cl. 107—9.)

2. In a mechanism of the class described, a dough carrier, means associated with the carrier for successively condensing, distending and shaping a mass of dough, coiling mechanism above the carrier and positioned with respect to the condensing, distending and shaping means to cause transference of the coiled dough thereto, said coiling mechanism comprising a series of vertically swinging flat members inclined towards the condensing, distending and shaping means and having their axes mounted in progressively stepped relation towards the condensing means and having portions adapted to freely rest upon the carrier and in the path of movement of dough upon the carrier, and means for operating upon the condensing, distending and shaping means for applying respectively varying pressures to the dough.



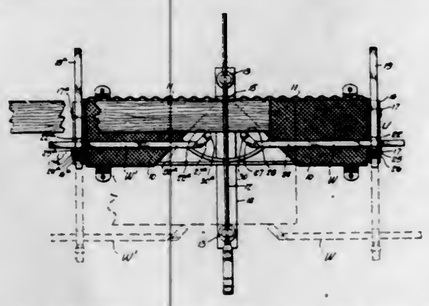
1,805,019. METAL CABINET. SAMUEL SMILEY, Jr., Cincinnati, Ohio, assignor to The Globe-Wernicke Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 21, 1928. Serial No. 327,686. 11 Claims. (Cl. 312—141.)

1. In a metal cabinet, the combination of a rear panel and side panels, the side edges of said rear panel providing



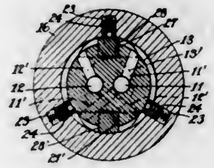
vertical slots, which slots extend inwardly from the side edges of the back and thence turn forwardly, and said side panels having inwardly and forwardly turned flanges along their respective rear edges for disposal in the corresponding slots of the back.

1,805,020. APPARATUS FOR PRODUCING LIGHT AGGREGATES. HARRY H. SMITH, Massillon, Ohio, assignor to Industrial Silica Corporation, Youngstown, Ohio, a Corporation. Filed May 14, 1930. Serial No. 452,441. 6 Claims. (Cl. 18—1.)



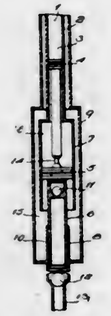
1. Apparatus for producing an aggregate material comprising means for feeding raw material to a conveyor, supplementary feeding means adapted to feed additional materials to the raw material to produce a mix, mixing means for homogeneously mixing and crushing the said materials, an oil bath adapted to receive the crushed mixture, means for passing the said mixture to the said oil bath, a firing kiln, and means to cause the said mixture to pass from the bath to said kiln.

1,805,021. ELECTROMAGNETIC SELECTOR DEVICE. CHARLES WILLIAM SOMERSOALE and JOHN ANDREW BELILE, Montevideo, Uruguay. Filed May 7, 1928, Serial No. 275,806, and in Great Britain Dec. 7, 1927. 8 Claims. (Cl. 200—98.)



1. An electro-magnetic selector device comprising in combination a plurality of independently energizable electro-magnets, not less than three, disposed in a circle about a common centre, an armature, and means for normally holding said armature at said common centre, the said armature having freedom of movement radially towards any of said electro-magnets.

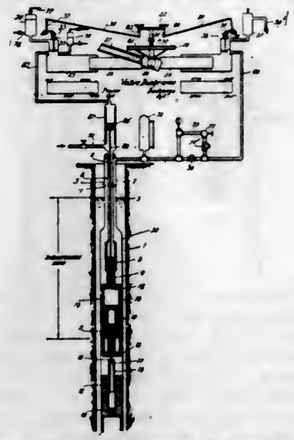
1,805,022. WORK HOLDING DEVICE FOR MITER BOXES. ERIC SODERGREN, Sierra Madre, Calif. Filed Apr. 8, 1930. Serial No. 442,629. 6 Claims. (Cl. 143—86.)



1. In combination, a miter box, a pair of supports secured to the bed of the miter box at opposite ends thereof, and having guideways, carriages slidable in the guideways for movement transversely with respect to the bed of the miter box and having transversely extending openings therethrough, a pair of members having work engaging portions, and slidably mounted in the openings of the carriages to overlie the bed of the miter box for movement through said openings longitudinally with respect to the bed, means for securing the carriages in selected positions of adjustment, and means for securing the members in selected positions of adjustment.

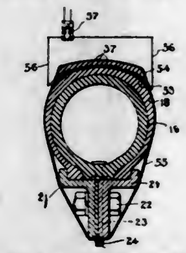
1,805,023. FLUID OPERATED DRIVING MEANS. LUTHER W. SPRINGSTEEN, Afton, N. Y., assignor to National Hydrodriv Company, Binghamton, N. Y., a Company of New York. Filed Jan. 7, 1927. Serial No. 159,616. 6 Claims. (Cl. 121—56.)

1. In a rotary engine, the combination of a casing and a shaft member, one shiftable relatively to the other, said shaft member comprising a shaft having an enlarged concentrically formed portion, one of said members having a plurality of resilient controlled shiftable members and one of said members having a plurality of resiliently controlled eccentrically located shiftable shoes, each of said propellers and each of said shoes having an opening therethrough for relieving the pressure in the rear thereof, each of said shoes comprising a pair of connected, spaced segmentally formed wings, and said enlarged portion having rabbeted ends for the reception of said wings.



1,805,024. DEEP WELL PUMP. WILBUR N. SQUIRES, Joplin, Mo., assignor to Hydraulic Deep Well Pump Company, Joplin, Mo., a Corporation of Missouri. Filed May 14, 1928. Serial No. 277,591. 9 Claims. (Cl. 103—46.)

1. In combination in a deep well pump, a power cylinder, a piston therein, a pump cylinder, a pump plunger connected to said piston, and means providing sediment chambers for each of said cylinders to permit abrasive material from the cylinders to gravitate thereinto.

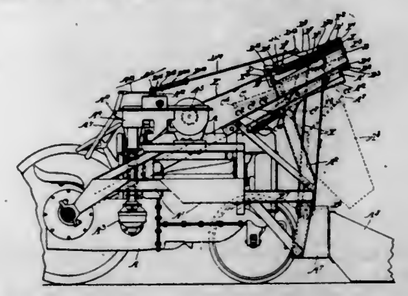


1,805,025. DEEP WELL PUMPING SYSTEM. WILBUR N. SQUIRES, Joplin, Mo., assignor to Hydraulic Deep Well Pump Company, Joplin, Mo., a Corporation of Missouri. Filed Jan. 21, 1929. Serial No. 333,869. 10 Claims. (Cl. 103—46.)

1. In a deep well pump, the combination with a pair of liquid columns one within the other, a piston located in the well and between said columns, a second piston at the head of the well and rigidly attached to said first piston and held apart therefrom by a pressure permanently

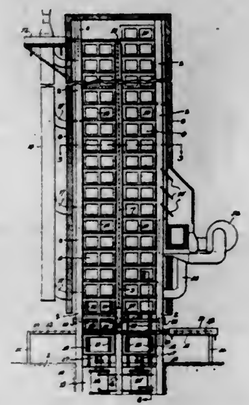
maintained on one of said columns, a pump plunger attached to said first piston, and means for applying impulses of pressure alternately to said columns to operate said pistons to cause said plunger to make strokes.

1,805,026. METHOD OF SECURING A TREAD TO A TIRE CARCASS. WILL C. STATE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 7, 1928. Serial No. 304,497. 7 Claims. (Cl. 18—59.)



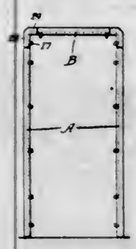
5. The method of securing a tread to a tire carcass which includes mounting a tire carcass for rotation, applying a gum strip to the carcass, embedding a portion of an electrical conductor in the gum strip adjacent an edge thereof rotating the carcass to draw the conductor from a source of supply, moving the source of supply axially of the carcass as the latter is rotated to cause the winding of spaced convolutions of the conductor circumferentially upon the carcass, applying a tread to the carcass, confining the tread and carcass under pressure and passing an electric current through the conductor to vulcanize the tread to the carcass.

1,805,027. BAR HANGER. JOHN A. ADELL, Orange, Mass. Filed Oct. 8, 1928. Serial No. 310,950. 2 Claims. (Cl. 247—22.)



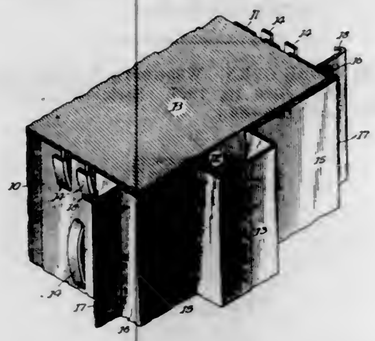
1. In a bar hanger, the combination of a supporting bar having a pair of flanges at opposite sides in the same plane and an outlet box having two pairs of flanges formed integral therewith and projecting from the closed side thereof and bent inwardly toward each other in the same plane and spaced from the wall of the box sufficiently to allow the flanges of the bar to slide under them.

1,805,028. SHOVEL HEAD. WILLIAM C. ANTHONY, CHARLES H. BENEDICT, and LESTER WACHTER, Streator, Ill., assignors to Anthony Company, Streator, Ill., a Corporation of Illinois. Filed Nov. 6, 1926. Serial No. 146,604. 8 Claims. (Cl. 37—126.)



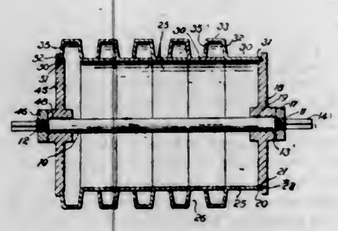
5. In combination with a material handling apparatus having a receptacle and means for moving such receptacle, a mechanical throw-out mechanism adapted to prevent movement of such moving means and two operating means each adapted to operate such throw-out mechanism one in response to any excessive load put upon such moving mechanism and the other adapted to act in response to movement of such receptacle the final throw out operating member being in each case the same.

1,805,029. CORE OVEN. WEDWORTH V. BAKER, Detroit, Mich. Filed June 15, 1927. Serial No. 198,909. 5 Claims. (Cl. 198—85.)



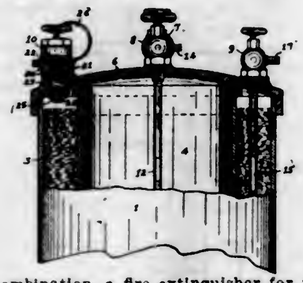
1. A device for raising and lowering material in a furnace comprising ascending and descending columns of carriers mounted therein, independent elevators mounted under each of said columns, pivoted detents mounted adjacent said ascending columns, springs holding said detents in a position where they engage said columns in a manner permitting the same to be elevated and for holding said column against downward movement when the elevator thereunder has been lowered, dogs pivoted intermediate their ends adjacent said descending columns, spring pressed plungers mounted upon the elevator beneath said descending column engaging said dogs beneath their pivots and holding the upper ends thereof into the path of the lowermost carrier in said descending column, said plungers being adapted to engage said dogs above their pivots when said elevator moves upwardly to cause the upper ends of said dogs to move outwardly when the elevator raises the weight of said column of carriers from said dogs and thereby permit the lowermost carrier in said column to be lowered away from said dogs.

1,805,030. METAL BUCK AND WOOD JAMB. ISAAC A. BAUM, Chicago, Ill. Filed Aug. 5, 1929. Serial No. 383,524. 7 Claims. (Cl. 189—46.)



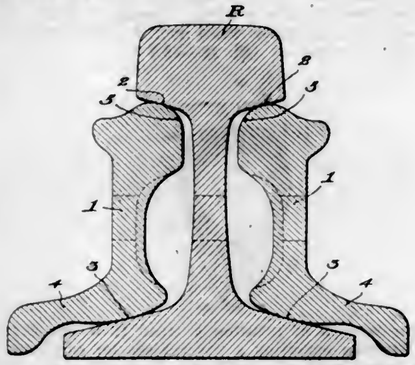
1. In combination, a frame for wall openings comprising side and head members shaped to cooperate with the edges of the wall at the opening, a plurality of spaced generally U-shaped clips secured to the outer faces of the frame members, and a wood jamb held in said clips.

1,805,031. REENFORCED METAL JAMB CONSTRUCTION. ISAAC A. BAUM, Chicago, Ill. Filed Apr. 7, 1930. Serial No. 442,242. 5 Claims. (Cl. 189—46.)



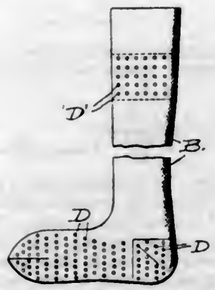
1. In metal frame construction, the combination of a channel shaped metal jamb, the flanges of which are adapted to contact the faces of a tile wall, and a continuous strip secured to said channel flanges and web, the outer margin of which is rebent to form a plaster anchor, said strip constituting a plaster treminal and ground.

1,805,032. DRUM FOR MANUFACTURING ENDLESS RUBBER ARTICLES. JO D. BERWICK, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 16, 1929. Serial No. 355,642. 6 Claims. (Cl. 154—3.)



1. A drum for assembling and curing endless belts, comprising a plurality of annular sections interlocked one with another in telescoping relation to form a hollow construction, a shaft, and means for supporting the end sections upon the shaft.

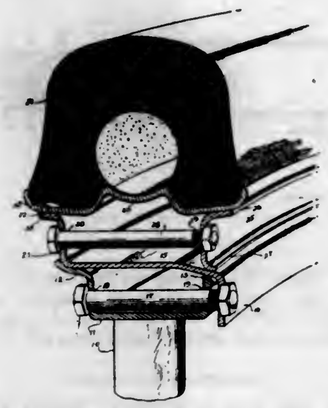
1,805,033. FIRE EXTINGUISHER. JOHN R. BOYD, Pittsburgh, Pa., assignor to Robert L. Wickline, Pittsburgh, Pa. Filed July 17, 1929. Serial No. 378,939. 4 Claims. (Cl. 169—31.)



1. In combination, a fire extinguisher for using carbon tetra-chloride solution comprising a solution tank, a compressed air tank, valve-controlled means establishing communication between said tanks, means for regulating the discharge from said solution tank, and means for automatically maintaining atmospheric pressure in said solution tank, said last mentioned means further preventing the entrance of air therethrough to said solution tank.

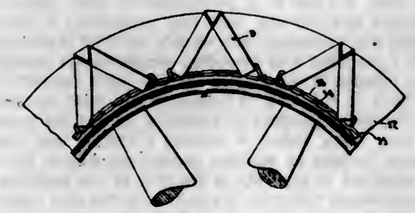
1,805,034. RAIL JOINT CONSTRUCTION. BANCROFT G. BRAINE, New York, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed July 14, 1930. Serial No. 467,875. 5 Claims. (Cl. 238—243.)

1. A rail joint construction including the rail, and a joint member provided with upper and lower laterally curved surfaces respectively contacting with the flat underside of the rail head and the flat upperside of the rail flange.



1,805,035. HOSIERY. HARRY BRANLEY, Honesdale, Pa. Filed Feb. 21, 1930. Serial No. 430,435. 1 Claim. (Cl. 66—178.)

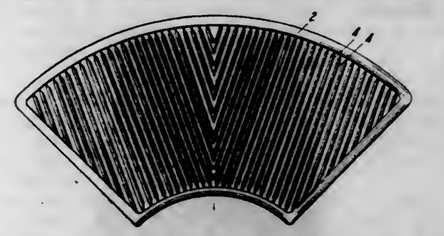
In a stocking or sock, the combination with the leg part having a top portion adapted to be turned downward-



ly. of said leg part having a plurality of knitted openings therein so located as to be covered when said top portion is turned downwardly.

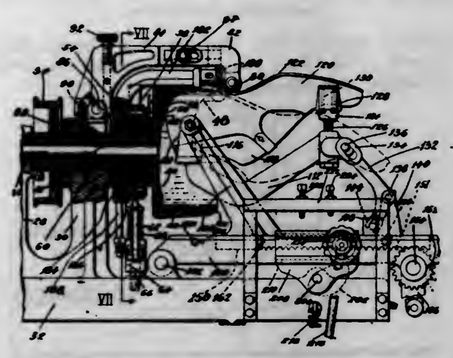
1,805,036. EXTENSION FELLY. RICHARD S. BURDETTE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 29, 1926. Serial No. 84,587. 3 Claims. (Cl. 301—10.)

1. The combination with a wheel felly provided with seating surfaces for a tire-carrying rim, of an annular member demountably secured upon the seating surfaces for supporting one edge portion of a tire carrying band of greater internal diameter than the rim and a removable ring for supporting the opposite edge portion of the base band.



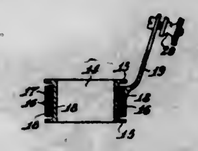
1,805,037. TRACTIVE DEVICE FOR TIRES. GEORGE R. BURRELL, Akron, Ohio., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 24, 1928. Serial No. 280,216. 4 Claims. (Cl. 152—14.)

4. An anti-skid chain comprising a pair of normally annular members adapted to be supported at the sides of a tire, each member being provided with circumferentially spaced integral eyes and rubber tractive devices having their ends looped through the eyes and vulcanized to form integral connections.



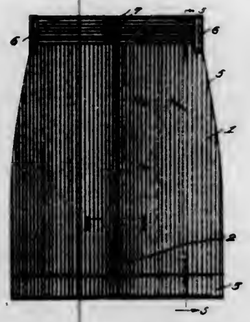
1,805,038. MAT. EARLE W. DERR, Akron, Ohio, assignor to Rubber Craft Products Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 11, 1927. Serial No. 232,569. 4 Claims. (Cl. 154—49.)

1. A mat or the like composed of a body of sponge rubber, and a comparatively thick covering layer of rubber of substantially the consistency of a tire tread stock of substantially even thickness throughout, the cover being formed with a plurality of closely spaced irregularities which present protuberances including sponge rubber,



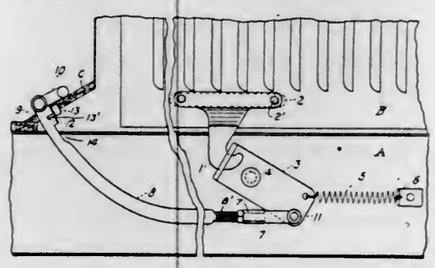
and being sufficiently unyielding so that they do not completely flatten out when pressure is applied thereto, the body of the mat and its cover being vulcanized together.

1,805,039. MACHINE FOR AND METHOD OF HEEL-SEAT FITTING. SIDNEY J. FINN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 15, 1926. Serial No. 122,727. 81 Claims. (Cl. 12—31.5.)



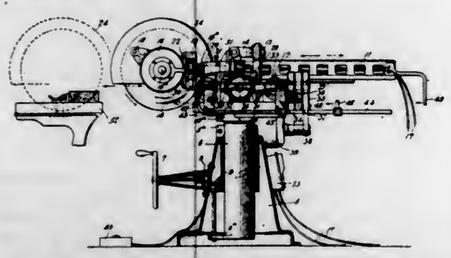
1. A heel-seat fitting machine having, in combination, a work support arranged to support a shoe to be operated upon, a cutter having a cutting edge curved about an axis extending in the general direction of the length of a shoe upon said support, and means for causing relative movement of the cutter and the shoe upon the support to cause the cutter to trim surplus material from the peripheral portion of the heel-seat of a shoe.

1,805,040. ELECTRICAL WARMING MEANS OR DEVICE FOR USE WITH INTERNAL COMBUSTION ENGINES TO FACILITATE STARTING THEREOF. CECIL REGINALD DOWNER GROVES, Thornton Heath, England. Filed Nov. 28, 1928, Serial No. 322,502, and in Great Britain Jan. 10, 1928. 3 Claims. (Cl. 219—38.)



1. An electrical heating device comprising an inner member of conducting material, a ring of conducting material surrounding said inner member, a resistance coil between said member and said ring connected at one end with the former and at its other end with the latter, and means insulating all portions of said coil between its ends from said member and said ring.

1,805,041. SAMPLE DISPLAY. JULIUS HARRY HARRIS and CHARLES FRANKLIN BURNEY, Dallas, Tex. Filed June 19, 1930. Serial No. 462,308. 2 Claims. (Cl. 35—17.)

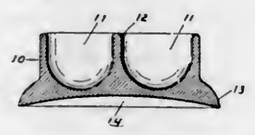


1. A sample display for trousers comprising a sheet of material provided therealong with a crease, a waist band strip secured across one end portion of the sheet a cuff secured across the opposite end of the sheet and belt loops positioned across said waistband.

1,805,042. HOOD LOCK. WALTER GEORGE ROBERT HEINE, Detroit, Mich. Filed May 12, 1927. Serial No. 190,663. 4 Claims. (Cl. 70—14.)

1. In combination with the chassis, hood and toe-board of an automobile, a hook carried by said hood, a latch pivoted to said chassis and having one end adapted to engage said hook, a spring connecting said latch to the chassis and adapted to bring said latch into engagement with the hook, and operating means extending from said latch through said toe-board, said operating means being provided with a notch to engage said toe-board to maintain said latch in one of its positions of adjustment.

1,805,043. SAWING MACHINE. JOHN O. HORTON, Montrose, Pa., assignor to Beach Manufacturing Company, Montrose, Pa., a Corporation of Pennsylvania. Filed June 5, 1930. Serial No. 459,355. 11 Claims. (Cl. 143—6.)

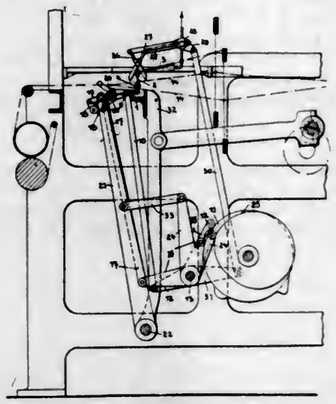


1. A cutting machine comprising a pedestal, a column, a cradle, a ram, a rotary cutter mounted for angular adjustment about a horizontal axis and means for rotating it mounted on the ram, together with a rotor and means for reciprocating the ram operated by the motor mounted on the cradle to be angularly adjusted therewith.

1,805,044. BEET TOPPER. RUDOLF LAEMMLEN, Grossgartach, near Heilbronn, Germany. Filed July 14, 1930. Serial No. 467,879, and in Germany May 5, 1928. 4 Claims. (Cl. 55—107.)

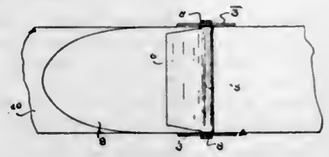
1. Beet topper with rails for the beet top and cutters in a frame, said frame being pivotally connected to a front carriage, said carriage carrying in front outwardly inclined guide shoes and provided at the rear end with rotary disks.

1,805,045. PIN AND CLIP TRAY. MELVIN S. LOWER, Barberton, Ohio, assignor to The Sun Rubber Company, Barberton, Ohio, a Corporation of Ohio. Filed May 10, 1928. Serial No. 276,631. 1 Claim. (Cl. 206—72.)



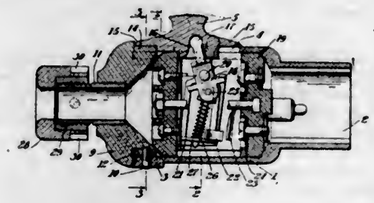
A tray for use as a receptacle for pins, clips, paper fasteners and the like, said tray comprising a one-piece, molded and vulcanized body of soft, resilient rubber formed with a partition wall providing compartments having bottoms rounded to merge with the side walls thereof so that the base of the tray is comparatively stiff, the base of the tray being enlarged to provide a lip and the bottom of the tray being dished to provide a suction cup, said lip adapted to form an effective suction cup despite the rigidity imparted to the body of the tray by the partition and the additional rubber at the bottom of the tray due to the rounding of the bottoms of the compartments, said base being thinnest along the bottom of the compartments so that in the action of the suction cup the base will bend along two lines substantially parallel to the partition.

1,805,046. PROCESS OF PICKING THE WEFT THREADS IN LOOMS FOR WEAVING PREPARATORY CHENILLES. JOHANNES MENSCHNER, Rosswein, Germany, assignor to the Firm Koch & Te Kock, Voigtland, Germany. Filed Oct. 4, 1929. Serial No. 397,188, and in Germany Jan. 14, 1928. 5 Claims. (Cl. 139—127.)



1. The combination in a loom for weaving chenille material, of means for picking, selecting and conveying weft threads, of gripping means operated to grip the front end of a thread, means actuated to pull the thread for a predetermined distance and then push the thread into V-

shape, cutters cooperating with the gripping means, controlling mechanism, and actuating means which selects

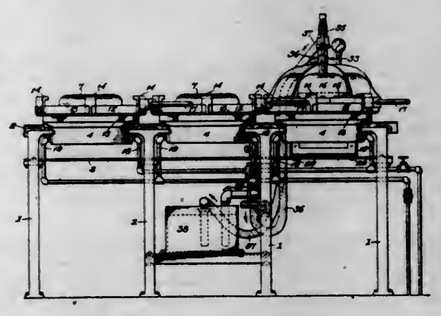


and conveys succeeding weft threads through the shed, the lay operating to bring the weft thread into its final position.

1,805,047. STRAP CONNECTION. EDWIN S. MIX, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Feb. 25, 1929. Serial No. 342,527. 3 Claims. (Cl. 24—191.)

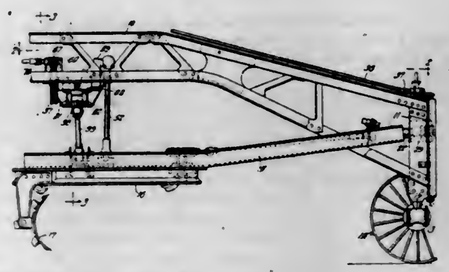
3. A strap slide comprising a front plate provided with side flanges and a clamping member pivotally mounted in said side flanges and having a clamping portion on one side and two pintles projecting from opposite side edges of said clamping member and also from that side of the clamping member opposite the clamping portion, the pintles having outer bearing surfaces turning in the side flanges, and that side of the clamping member from which the pintles project having a space which is substantially as wide as the distance between the side flanges, so that the clamping member when swung substantially 180° will provide a space between the clamping member and the buckle frame, as well as between the inner ends of the pintles through which a strap may be passed.

1,805,048. ELECTRIC LAMP SOCKET. KENNETH PERKINS, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed June 16, 1928. Serial No. 285,801. 3 Claims. (Cl. 173—346.)



2. An electric lamp-socket comprising a socket-shell having a longitudinally extending slideway, a socket-switch mechanism received in said shell and having a pivoted switch-operating lever movable lengthwise of the socket-shell, and an operating button mounted in said slideway and supported by the socket-shell, said button being formed in its under side with a slot in which said operating lever freely extends.

1,805,049. IRON-NICKEL-COPPER ALLOY. NORMAN B. PILLING, Elizabeth, N. J., assignor to The International Nickel Company, Inc., a Corporation of Delaware. Filed Nov. 16, 1928. Serial No. 319,998. 4 Claims. (Cl. 75—1.)

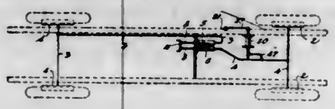


1. An alloy composed substantially of 26% to approximately 74% iron, approximately 25% to approximately 60% nickel, approximately 1% to approximately 26% copper, the nickel content being not less than 1.85 times the copper content to insure homogeneity, and carbon exceeding .40% and being under 2.0%, whereby an alloy is produced which is of substantially uniform softness.

1,805,050. HAT SHAPING MACHINE. JOSEPH F. ROSELLE, Cincinnati, Ohio. Filed Mar. 1, 1930. Serial No. 432,420. 3 Claims. (Cl. 223—31.)

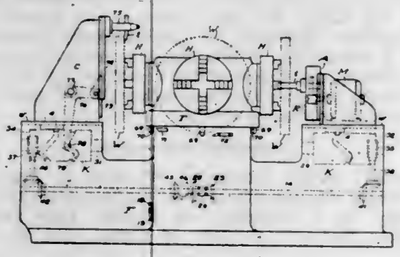
1. In a hat shaping machine, a plurality of stationary heating drums each recessed to encircle the crown portion of a hat shaping die, and a pressure head hingedly and translatively supported for interchangeably cooperating with a selected one of said heater drums for enclosing a hat shaping die and providing a flexible and expansible diaphragm and core for compressing the hat against the hat shaping surfaces of the die.

1,805,051. ROAD GRADER. WILLIAM J. SCHLACKS, Chicago, Ill., assignor to Ryan Mnfg. Corporation, Chicago, Ill., a Corporation of Illinois. Filed July 28, 1928. Serial No. 295,912. 13 Claims. (Cl. 37—156.)



1. In a road grader, a main frame having a hollow front post, a drawbar having its front end extending into said post and means for reciprocating the front end of the drawbar vertically within said post.

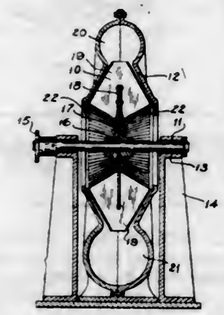
1,805,052. PROCESS FOR PREVENTING THE DISSOLUTION OF METALS IN PICKLING BATHS. LORIN B. SEBRELL, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 21, 1927. Serial No. 227,859. 18 Claims. (Cl. 148—8.)



1. A bath for pickling metals containing a non-oxidizing mineral acid and a reaction product of an aldehyde and hydrogen sulphide.

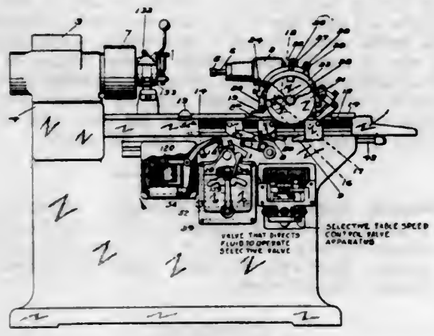
1,805,053. BRAKE MECHANISM. LYLE K. SNELL, Detroit, Mich. Filed July 6, 1926. Serial No. 120,660. 8 Claims. (Cl. 188—151.)

1. In a fluid pressure braking system for vehicles including fluid operated steering wheel brakes, a pressure regulating device for controlling the pressure of fluid for operating said brakes by controlling the escape of fluid during brake activity conditions, and means for operating said regulating device, including a swinging arm and an operative connection between said arm and the steering wheel turning means whereby operating pressure applied to said brakes is reduced in proportion to the turning movement of said wheels in steering the vehicle, brake applying means including fluid conduits to the brake mechanism, said conduits being permanently open to the passage of fluid.



1,805,054. WORK ROTATING TYPE OF CHUCKING MACHINE. JOSEPH JOHN SPAING, New Britain, Conn., assignor to The Goss and Deleeuw Machine Company, New Britain, Conn., a Corporation of Connecticut. Filed Mar. 31, 1928. Serial No. 266,386. 20 Claims. (Cl. 29—38.)

15. A chucking machine of the work-rotating type combining a rotatable work-turret; a plurality of sets of rotating work-spindles supported on said turret with their axes substantially radial thereto, said sets of spindles being spaced apart in the direction of the axis of said work-turret; a work-holder secured to the outer end of each of said spindles; and tools arranged about the periphery of said turret and adapted successively to operate on work-pieces carried by said work-holders.

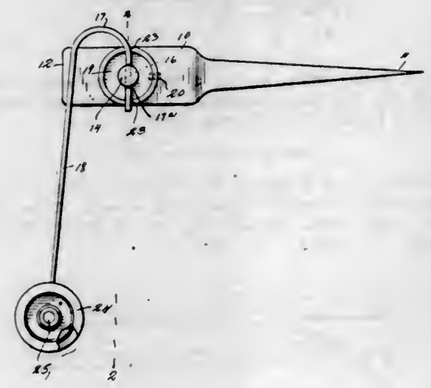


20. A chucking machine combining a work-turret; a plurality of rotatable spindles journaled in said work-turret; a work-holder carried by each of said spindles; a friction clutch element and a toothed clutch element fixed upon each of said spindles; a combined gear and clutch unit rotatably and translatably journaled on each of said spindles intermediate said friction and toothed clutch elements, said unit being provided with a gear, a friction surface and a toothed surface, said surfaces being adapted to engage said friction and toothed elements respectively; a drive shaft common to all of said spindles; a jack shaft journaled in said work turret adjacent each of said spindles; a driving connection between said drive shaft and each of said jack shafts; a gear fixed to each of said jack shafts and meshing with the gear on one of said spindles; and individual hand levers carried by said work-turret to shift each of said combined gear and clutch units axially selectively to engage said friction and toothed clutches.

1,805,055. BLOWER. JOSEPH JOHN STOETZEL, Queens Village, N. Y., assignor to G & G Atlas Systems, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 27, 1926. Serial No. 157,182. 5 Claims. (Cl. 230—128.)

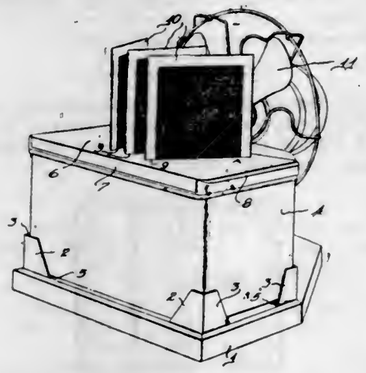
1. In a blower of the centrifugal type, a fan wheel having radially extending vanes whose number is such and whose areas are so proportioned to the speed of rotation of the wheel and to the volume of the air flow as to cause the air passing through the outlets of the fan wheel to travel at a velocity equal to the peripheral velocity of the wheel.

1,805,056. GRINDING MACHINE. EDWARD M. TAYLOR, Worcester, Mass., assignor to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 17, 1927. Serial No. 220,248. 18 Claims. (Cl. 51—50.)



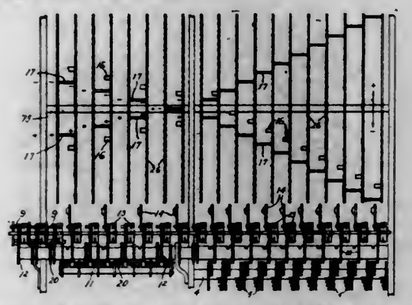
1. In a grinding machine, the combination with a grinding wheel, work holding means, and a table or carriage carrying one of said parts, of fluid pressure means to reciprocate said table or carriage, a valve comprising a main port, a second main port, a further plurality of ports always connected to the first main port but not to the second, and a single movable member which in each position connects one and only one of said plurality of ports to the second main port, and means for shifting said single movable member to cause the table or carriage to move at different speeds.

1,805,057. ACCELERATOR OF VULCANIZATION. JAN TEPPEMA, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Dec. 10, 1927, Serial No. 239,267, and in Great Britain Aug. 27, 1928. Divided and this application filed Nov. 26, 1928. Serial No. 322,086. 8 Claims. (Cl. 18—53.)



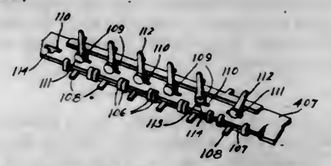
4. A method of treating rubber which comprises subjecting it to vulcanization in the presence of a reaction product of a benzoyl nitro phenyl sulphur halide and an alkali salt of a mercaptobenzothiazole.

1,805,058. UNDERCUTTER FOR SAWING LOGS. JERRY S. VALLEY and EARL P. FORD, Matlock, Wash. Filed Aug. 27, 1929. Serial No. 388,788. 2 Claims. (Cl. 143—163.)



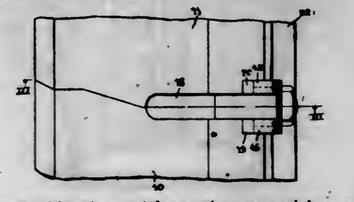
1. A saw supporting device for undercutting including a spike adapted to be driven into a log, a bolt extending through the spike, a stiff leaf spring having one end returned upon itself, the bolt having a slot through which the returned end of the leaf spring passes, the free end of the spring carrying a roller adapted to engage the saw, and means carried by the bolt whereby the spike and spring may be rigidly engaged to each other in a plurality of different angular relations.

1,805,059. HUMIDIFIER. WILLIAM G. WAGENHALS, Detroit, Mich. Filed Apr. 28, 1930. Serial No. 447,950. 2 Claims. (Cl. 261—104.)



1. A humidifier comprising a base having a fan mounted thereon, vertical walls mounted upon said base, a water containing receptacle supported upon said base by said vertical walls, a plurality of capillary plates inserted in said receptacle to project upwardly therefrom, and a cover plate for said receptacle having slots arranged to support said capillary plates whereby the latter obstruct the flow of air created by said fan.

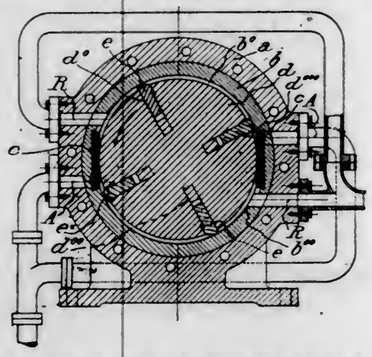
1,805,060. CALCULATING MACHINE. EDWARD C. WALTER, Orange, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a Corporation of Delaware. Filed June 24, 1930. Serial No. 463,442. 2 Claims. (Cl. 235—133.)



1. In a calculating machine having differential value actuators and numeral wheels shiftably related thereto; carry mechanism including a plurality of settable, delayed operation devices, a plurality of devices operable upon a numeral wheel simultaneously with the passage of a lower order wheel to decimal position and located in denominational orders between certain of said first-named devices.

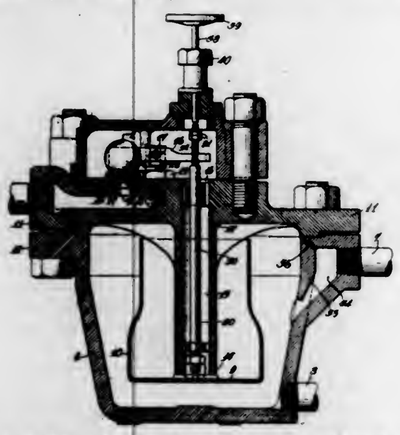
1,805,061. REGISTER. EDWARD C. WALTER, Orange, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a Corporation of Delaware. Filed July 22, 1930. Serial No. 469,823. 3 Claims. (Cl. 235—132.)

1. In a register having numeral wheels; resetting means including devices associated with each numeral wheel, said resetting devices being individually adjustable to active or inactive present position, in correspondence with or alternatively in contrast to the adjustment of the resetting devices related to the next adjacent higher and lower order numeral wheels.



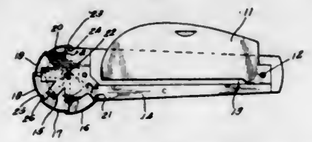
1,805,062. LATCHING DEVICE FOR SPLIT RIMS. ALVA W. WOODWARD, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 9, 1928. Serial No. 291,171. 11 Claims. (Cl. 301—35.)

9. The combination with a rim comprising a transversely split member and an endless member disposed



upon the outer periphery of the split member adjacent one edge thereof, the split in the first mentioned member being enlarged beneath the endless member, of a lug connected to the endless member and having portions engaging the ends of the split member on each side of the enlarged portion of the split.

1,805,063. ROTARY PUMP. CASIMIR WRONA, Ugine, France. Filed Aug. 15, 1929, Serial No. 386,099, and in Luxemburg Sept. 8, 1928. 3 Claims. (Cl. 103—136.)

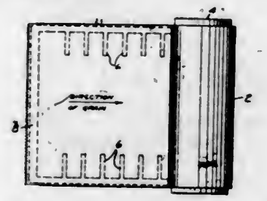


1. In a pump of the type described having a stator, the combination of a rotor concentrically disposed within said stator having a diameter smaller than said stator, a plurality of pairs of inlet and outlet conduits disposed in pairs, opening into the space existing between said rotor and said stator, a plurality of radially disposed slidably mounted paddles carried by said rotor adapted to contact with said stator, a plurality of cut-off plates carried by said stator contacting with said rotor for successively pushing said paddles into said rotor when passing from an inlet conduit to an outlet conduit, there being a pressure retaining recess formed in said stator around each of said outlet conduits and a projection carried by each of said paddles adapted to slide in a groove formed in said rotor opening into the space therearound whereby said paddles are slightly raised by the pressure developed in said pump when passing over said plates and friction reduced.

1,805,064. STEAM TRAP. DAVID ROBERT YARNALL, Philadelphia, Pa., assignor to Yarnall-Waring Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 6, 1926. Serial No. 127,534. 1 Claim. (Cl. 137—103.)

In a steam trap for intermittent discharge, a trap bucket, a compartment therefor, a plurality of spaced independent discharge valves each comprising a seat and a ball adapted to roll over and away from the valve opening, a projection movable with the trap bucket, a lever having one end adapted to engage all of the balls to roll them from their seats, heavier at the end which engages the balls so as normally to exert no pressure upon them, and at its opposite end coming within the path of movement of the projection and a pivot for the lever between its ends.

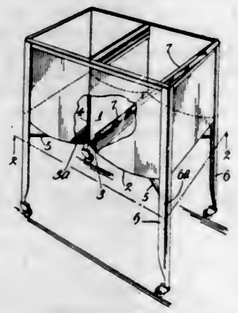
1,805,065. POCKET IMPLEMENT. OTTO ALTENBACH, Los Angeles, Calif. Filed May 17, 1927, Serial No. 192,029. 5 Claims. (Cl. 7—11.)



1. A pocket knife, having a tool at one end, and a guard for the tool comprising a plurality of pivoted sections forming a continuous cover.

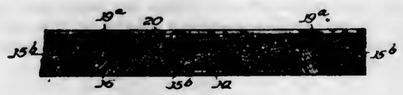
1,805,066. GAS BURNER OR NOZZLE. PIERRE JULES JUSTINIEN ANDRIEUX, Montebourg, France. Filed Apr. 23, 1929, Serial No. 357,534, and in France May 2, 1928. 5 Claims. (Cl. 158—99.)

1. In a process for burning gaseous, liquid or powdered solid fuel, the steps consisting in blending fuel with a fluid supporting combustion, in forming said mixture into an annular and substantially cylindrical layer having thin walls with respect to its diameter, in imparting to said mixture a high velocity while thoroughly guiding same, in surrounding said layer with an external sheath of fluid supporting combustion formed into a substantially hollow cylinder, the inner diameter of which is substantially equal to the outer diameter of said layer and so guided that it will come tangentially into contact with said layer, and in guiding both said annular layer and sheath in contact with one another, while substantially preventing them from mixing together, whereby they will be able to flow through a surrounding heated medium while substantially keeping their cylindrical shape and without burning till the outer sheath will be sufficiently heated by the surrounding medium.



1,805,067. MULTIPLY BAG AND METHOD OF PRODUCING THE SAME. BARTLETT ARKELL, New York, N. Y. Filed Apr. 26, 1928. Serial No. 272,915. 9 Claims. (Cl. 229—55.)

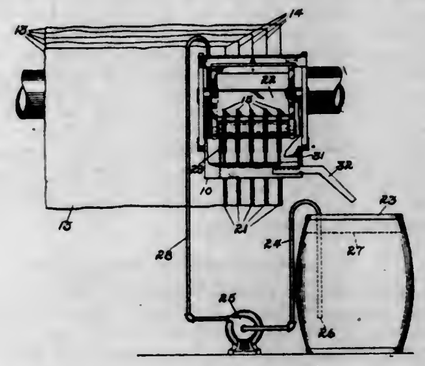
7. A multi-ply bag comprising a paper strip wound upon itself a plurality of times so as to form a tube



with the grain of the paper extending generally transversely of the tube, the outer end of the strip being secured to the underlying portion of the strip, the marginal edges of adjacent convolutions being secured together by substantially continuous longitudinally extending strips of adhesive, and the major portions of adjacent convolutions being otherwise left unsecured, and a satchel type bottom on at least one of the ends of the tube.

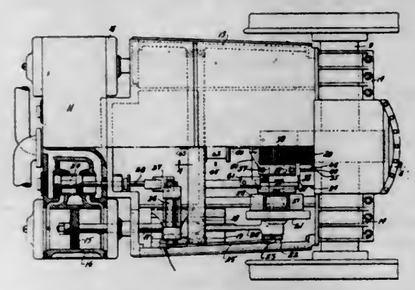
1,805,068. WASHTUB. JOHN L. ARLT, Saginaw, Mich., assignor to Fred W. Stork and John L. Arlt, doing business as Ideal Manufacturing Company, Saginaw, Mich. Filed Feb. 10, 1930. Serial No. 427,190. 1 Claim. (Cl. 68—31.)

Twin tubs having flat upright side walls positioned with two of the side walls together, supporting legs engaging the outside corners of said tubs, and tie members beneath the tubs and connecting diagonally opposed legs to hold the said side walls together.



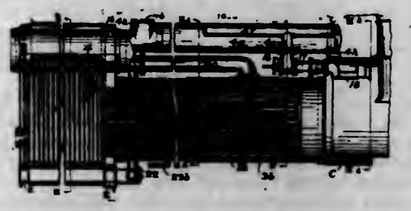
1,805,069. METHOD OF MAKING INSULATING BLOCKS IN THE FIELD. HAROLD S. ASHENHURST, Chicago, Ill., assignor, by mesne assignments, to Insulex Corporation, Chicago, Ill., a Corporation of Delaware. Original application filed Sept. 10, 1924, Serial No. 736,893. Divided and this application filed Mar. 3, 1925. Serial No. 12,882. 2 Claims. (Cl. 72—16.)

1. The process of making a light weight insulating block and reenforcing it and inserting it in a wall structure while still green, which comprises casting the body of the block in a mold from plastic material adapted to expand by chemical action and set in cellular condition in bonded relationship to a base member of fibrous material held stationary in said mold, said body material being exposed at the edges and one face of the block, and shaping said block while still plastic into intimate engagement with the adjacent elements of a wall.



1,805,070. METHOD OF AND APPARATUS FOR APPLYING COATING. ADELMER M. BATES, deceased, Chicago, Ill., by Clara H. Bates, administratrix, Chicago, Ill., assignor, by mesne assignments, to St. Regis Paper Company, New York, N. Y., a Corporation of New York. Original application filed Jan. 19, 1925, Serial No. 3,438, and in Great Britain Jan. 22, 1925. Divided and this application filed Mar. 25, 1926. Serial No. 97,424. 5 Claims. (Cl. 91—12.)

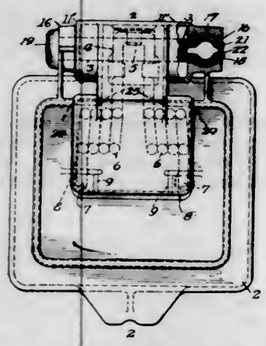
1. Adhesive applying means comprising a tank adapted to contain adhesive material, a disc mounted rotatably with its lower edge in position to run in the surface of a pool of adhesive material in the tank, a scraper, plate or doctor at the side of the disc which rises from the



pool during operation, and an overflow opening in the side of the tank towards which the bottom of the disc moves and substantially at the level of the bottom of the disc.

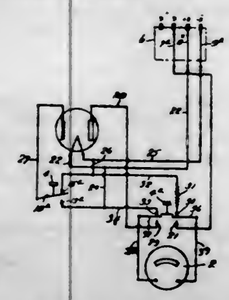
1,805,071. RAILWAY BOOSTER. EINAR JOHAN BRING, Franklin, Pa., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Oct. 16, 1925. Serial No. 62,724. 16 Claims. (Cl. 105—48.)

1. The combination with a railway booster and the axle to be driven thereby, of connecting means between them automatically and intrinsically ineffective when the locomotive speed exceeds that of the booster, said means including a gear on said axle and a cooperating driving gear on the booster shaft, the axis of rotation of said driving gear being shiftable toward and away from said axle.



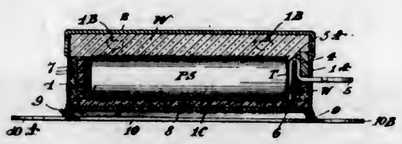
1,805,072. LOCOMOTIVE BOILER. ALFRED W. BRUCE, New York, N. Y. Original application filed Jan. 11, 1927, Serial No. 160,330. Divided and this application filed Nov. 19, 1927. Serial No. 234,346. 9 Claims. (Cl. 122—94.)

1. In a boiler of the locomotive type, the combination of a throttle valve; a fire box section the sides of which



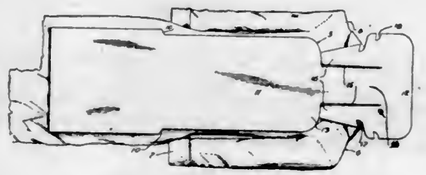
are formed of water tubes; a hollow mud ring communicating with the lower ends of said water tubes; a cylindrical boiler shell section connected to and extending forwardly from the fire box section; a plurality of fire tubes in said cylindrical boiler shell section; a drum extending forwardly from the rear of the fire box section, said drum communicating with the upper ends of the water tubes thereof; a conduit establishing communication between the drum and the forward portion of the cylindrical boiler shell section; means connecting the upper portion of the barrel and the mud ring to afford communication therebetween; a steam receiving chamber communicating with the forward end of the drum and extending forwardly thereof; and a steam delivery connection through which steam passes from the steam receiving chamber to the throttle valve.

1,805,073. JOURNAL BOX. VINCENT J. BURRY, Berwyn, Ill., assignor to Woodman Railway Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 8, 1927. Serial No. 211,361. 4 Claims. (Cl. 308—52.)



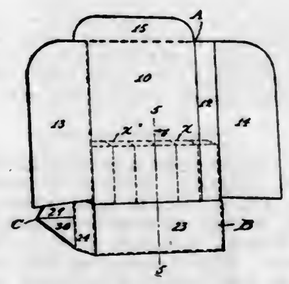
1. A journal box provided with a lid having perforations to receive a fastening member, one of said perforations having an interior rounded enlargement, and a fastening member having a split end expanded into conformance with the contour of said enlargement.

1,805,074. RADIO TESTING DEVICE. JOEL A. BURTCH, Cleveland, Ohio, assignor, by mesne assignments, to Jewell Electrical Instrument Company, a Corporation of Illinois. Filed May 22, 1925. Serial No. 31,999. 10 Claims. (Cl. 250—27.)



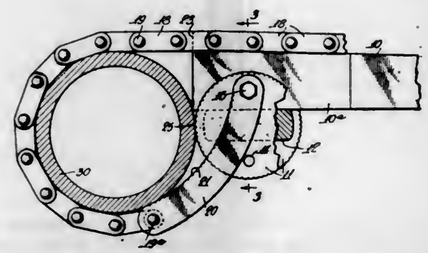
1. In a testing device, the combination of a tester plug having plate and filament contacts and adapted to engage the socket contacts of an audion tube circuit, with conductors leading from said plug contacts, an electrical measuring instrument associated with said conductors and plug, an audion tube socket, and switch means for connecting said instrument to measure voltage or current conditions at said tube socket terminals.

1,805,075. ELECTRICAL CONDENSER. BENJAMIN J. BUTLER, Somerville, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Jan. 18, 1928. Serial No. 247,491. 4 Claims. (Cl. 175—41.)



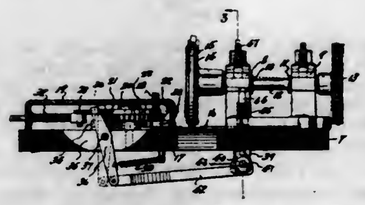
3. In combination with an electrical condenser, a container therefor, a pair of terminal members extending through said container and contacting with opposite armatures of said condenser, a positioning piece for said terminal members, means for securing said members to said positioning piece, an insulating member secured to said terminal and means for clamping said insulating member within said container.

1,805,076. FORM FOR DRESSES. JOEL B. CARLSTON, Galesburg, Ill. Filed June 9, 1927. Serial No. 197,539. 4 Claims. (Cl. 223—18.6.)



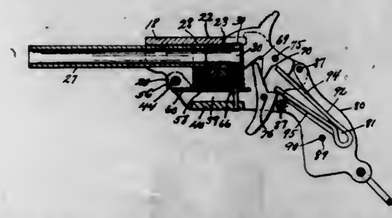
1. A dress form for supporting a dress folded thereon, having in combination a flexible body portion; a head portion; a neck portion for connecting said body portion and said head portion; extensions depending from said head portion, providing slots between said extensions and said connecting neck portion for locking the upper end of said dress in position, the middle part of said body portion having offsets serving to maintain the configuration of the hip portion of said dress, the upper part of said body portion having shoulders adjoining the neck, said shoulders being immediately adjacent the projecting ends of said extensions.

1,805,077. FOLDING TILT DISPLAY CONTAINER. WILLIAM S. CARTER, New York, N. Y. Filed Nov. 30, 1927. Serial No. 236,788. 5 Claims. (Cl. 206—44.)



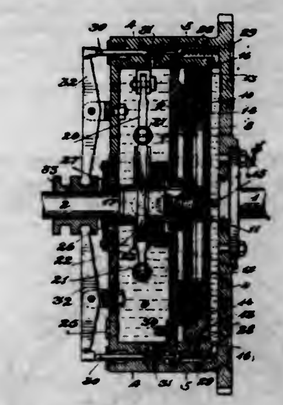
1. In a foldably formed container a display portion, a pocket forming portion, having thereon an inner rear wall section, which is continuous with said display section, a bottom section, foldably connected to said inner rear wall section, an inner front wall section, foldably connected to said bottom section, and an outer front wall section, foldably connected to said inner front wall section, said display portion with said inner rear wall section having at the sides thereof a pair of panel connecting sections, foldably connected thereto, and a pair of panels at the sides of said panel connecting sections, foldable to open free hanging positions, when the container is assembled for display, and foldable to closing position, when the container is in assembled closed form, combined with a pair of outer end wall sections, foldably connected to said outer front wall section, an outer rear wall section, adjacent to and foldably connected to one of said outer end wall sections, and an easel forming portion, foldably connected to said outer rear wall section, said easel to support said container, when assembled for display, and said easel portion being foldable, to lie flat against the rear of said container, when the latter is in assembled closed form, to permit a slip over cover to be drawn over the easel and the upper portion of the container in the assembled closed form of the latter.

1,805,078. PIPE WRENCH. THOMAS F. CUNNINGHAM and ARTHUR H. GIFFORD, Boonton, N. J. Filed July 18, 1929. Serial No. 379,094. 9 Claims. (Cl. 81—64.)



1. In a pipe wrench, a handle lever, a shoe fixed to the end of the lever and adapted to provide a fulcrum at its point of engagement with a pipe, an articulated flexible device to encircle the pipe, pivotally connected at one end to the lever, a member on the handle to be selectively engaged with one of the free links of the articulated device, said member being fixed on the handle at a greater distance from the fulcrum point than the distance of the pivot from the fulcrum point, the shoe comprising a pair of spaced disks to straddle the lever and movable to present different fulcrum surfaces to a pipe, a web block rigidly connecting the disks and including a flattened portion to lie against the edge of the lever.

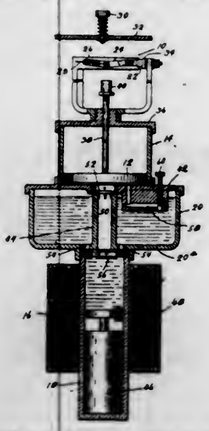
1,805,079. COIN COUNTING MACHINE. EDWARD P. DONNELLAN, Brooklyn, N. Y., assignor to Standard-Johnson Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 15, 1930. Serial No. 444,388. 10 Claims. (Cl. 133—8.)



1. In a coin counting machine having a counting mechanism including an actuating star-wheel and lock means for said counting mechanism including a spring biased lock lever; a coin propelling wheel to engage and move coins in actuating relation to said star-wheel, a rotated shaft for driving said propelling wheel, bearings for said shaft, the inners of said bearings being adapted to support the wheel carrying end portion of said shaft subject to vertical play whereby the same may be lifted to raise said propelling wheel out of coin engagement, means to so lift said shaft, and means actuated by a locking movement of said lock lever for operating said lift means.

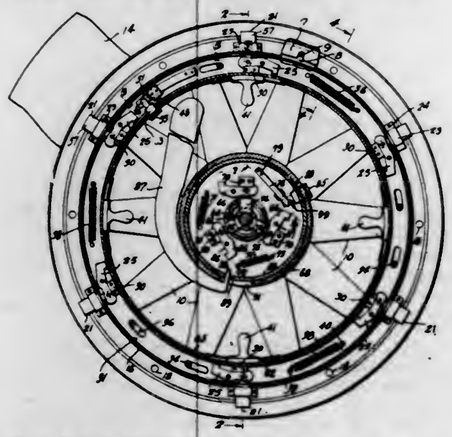
1,805,080. PISTOL CHARM. SAMUEL DOSICK, Providence, R. I. Filed Oct. 23, 1929. Serial No. 401,652. 3 Claims. (Cl. 42—54.)

2. In a pistol charm, a carrier frame comprising interspaced side walls, forwardly directed arms integral with the lower portions of the walls, a barrel casing pivotally supported by the arms and engageable with the walls, a barrel in the casing, a pivot member in the lower portion of the side walls, a vertical trigger pivoted intermediate its length upon said member, and a spring fixed to the arms and normally out of engagement with the trigger projecting between the side walls in the path of the trigger above the plane of the pivot member.



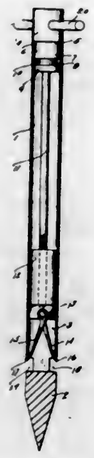
1,805,081. CLUTCH FOR MOTOR CARS. BOHUMIL DRKAL, Buenos Aires, Argentina. Filed Feb. 2, 1929. Serial No. 337,074. 3 Claims. (Cl. 192—85.)

1. A device of the character described having in combination with a driving shaft and a driven shaft, a clutch casing member rotatably secured to the driving shaft and formed with a fluid supply chamber and a compression chamber therein and with inlet and outlet passages from the compression chamber to the supply chamber, a clutch plate rotatively secured to the driven shaft and positioned within the compression chamber, a piston clutch element operable within the compression chamber, to effect coupling engagement with the clutch plate, pumping means within the supply chamber supported to be rotatable with the casing and connected to the inlet passages, actuating means for the pumping means carried by the driven member whereby the fluid will be pumped into the compression chamber in response to relative movement be-



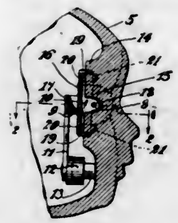
tween the driving and driven shafts and valve means for opening and closing the outlet passages under the control of the operator.

1,805,082. COUNTING RELAY. WILLIAM S. EDSALL, Brookline, Mass., assignor to Condit Electrical Manufacturing Corporation, South Boston, Mass., a Corporation of Massachusetts. Filed Nov. 19, 1927. Serial No. 234,384. 9 Claims. (Cl. 200—97.)



1. A counting relay including a circuit controller adapted to remain in one position until moved therefrom to control its circuit, an operating cylinder, a piston therein normally disposed in the bottom of the cylinder and adapted to return to such position when moved therefrom and being normally free from operative connection with said circuit controller and adapted to actuate said circuit controller when moved to the end of its stroke in said cylinder, a pump piston and cylinder for supplying fluid to said operating piston and cylinder, and a passage between said cylinders providing for free transfer of fluid from said pump cylinder to said operating cylinder, said operating cylinder having a larger volume than the pump cylinder so that it requires a number of strokes of the pump piston to fill the operating cylinder and effect operation of the circuit controller.

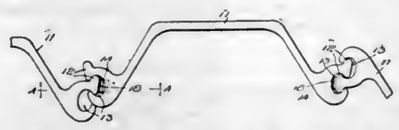
1,805,083. LOCK FOR AUTOMOBILE TIRES, WHEELS, AND OTHER DEVICES. CASIMIRO FERRO, Bayonne, N. J. Filed Nov. 25, 1929. Serial No. 409,593. 14 Claims. (Cl. 70—90.)



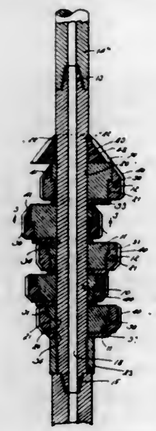
14. In a device for locking an automobile tire rim to a wheel, radially movable securing elements adapted to engage the outer side of the rim and clamp it on the wheel, a pivoted cam member connected to each securing element and having cam surfaces, a movable operating member, means for shifting the operating member in opposite directions, means carried by the operating member to engage said cam surfaces to shift the securing elements in opposite directions, and means for locking the operating member in position to hold the securing elements in clamping position.

1,805,084. TENT STAKE. PETER C. GIANINI, Portland, Oreg. Filed June 24, 1929. Serial No. 373,247. 4 Claims. (Cl. 135—15.)

3. In a device of the class described, the combination of a body element having a driving point and a driving head associated with oppositely disposed ends of the body element, a spindle extending longitudinally of the body element and fixedly secured to the driving head and in threaded engagement with a core slidably disposed within the body element and fastening tongues hingedly associated with the lower extremity of the core and adapted to be extended or repressed as the core is manipulated.



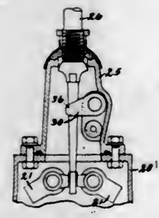
1,805,085. EYE MOUNTING FOR DOLLS. LEO J. GRUBMAN, Belle Harbor, N. Y. Filed Jan. 2, 1926. Serial No. 78,728. 16 Claims. (Cl. 46—40.)



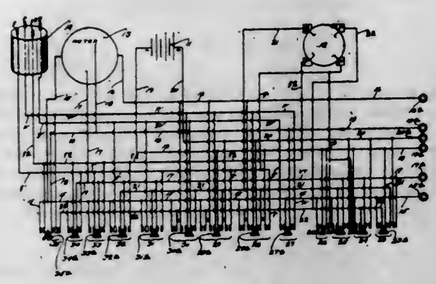
1. An attaching and supporting member for oscillatory eye mountings for dolls having integrally formed parts positioned in angular relation to each other and having means adapted to be impaled in angularly related surfaces internally formed upon the front wall of a doll head.

1,805,086. PILING SPACER. GEORGE A. GUYER, Chicago, Ill. Filed Feb. 15, 1930. Serial No. 428,741. 8 Claims. (Cl. 61—62.)

1. A unitary device of the kind described comprising a relatively thick spacer member, a relatively thin longitudinally extending supporting member and a lateral member projecting from the device, the thickness of the spacing member being less than the distance from the free end of the lateral member to the opposite face of the device.



1,805,087. WELL TOOL. LELAND S. HAMER, Long Beach, Calif., assignor, by direct and mesne assignments, of one-half to Kenneth A. Wright, Los Angeles, Calif., and one-half to Ernest Koppl, Long Beach, Calif. Filed Mar. 7, 1927. Serial No. 173,250. 6 Claims. (Cl. 255—74.)



1. A well tool including a vertical shank polygonal in cross sectional configuration, a bearing having an eccentric opening corresponding to the shank to slidably receive it, a cutter mounted for rotation on the bearing, and cooperating shoulders on the cutter and bearing holding the cutter against upward movement on the bearing.

1,805,088. MOTOR VEHICLE LOCK. FRANCIS D. HARDESTY, Dayton, Ohio. Filed June 25, 1923. Serial No. 647,438. 9 Claims. (Cl. 70—127.)

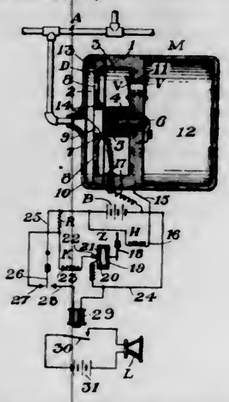
1. In an automotive vehicle provided with a change speed transmission and a motor involving electric ignition, a device included in the transmission tending normally to lock said transmission; means for retaining said device in unlocked position; and means operated upon breaking the ignition circuit to release the retaining means.

1,805,089. RADIO TESTING DEVICE. DOUGLASS HAWLEY, Minneapolis, Minn., assignor to Jewell Electrical Instrument Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 23, 1926. Serial No. 104,044. 37 Claims. (Cl. 250—27.)

1. A testing device of the kind described comprising a plug adapted to be inserted into a socket of an electron tube circuit and having contacts corresponding to those of the removed tube, the contacts of said plug having leads corresponding to the socket contacts, an indicating meter having leads, a socket forming part of the testing apparatus and having connection with the leads extended therefrom, and a plurality of switches, each switch involving a plurality of contacts and the contacts of said switches having leads, certain of which are connected to the several leads above noted, certain of the switch contacts and their leads being arranged for testing of the condition of the several circuits of the electron tube circuit and certain thereof being arranged for testing the condition of a tube inserted in the socket of said testing device, the condition of the tested circuits and the tube to be tested being indicated on said meter.

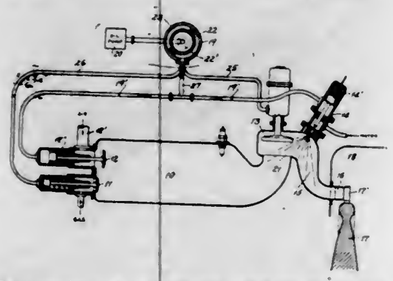
11. In a testing device for audion circuits, the combination of a connector member adapted to be connected to an audion tube socket and having a plurality of contacts for engagement with the contacts of the socket, conductors leading from said connector contacts, and an electrical measuring instrument connected to predetermined conductors and adapted to determine the voltage conditions existing at the corresponding predetermined contacts of said audion tube socket.

1,805,090. SHUTTLE AND METHOD OF MANUFACTURE. PAUL W. HILLS, Auburn, N. Y., assignor to Allen and Hills, Incorporated, Auburn, N. Y., a Corporation of New York. Filed Sept. 23, 1929. Serial No. 394,551. 10 Claims. (Cl. 139—196.)



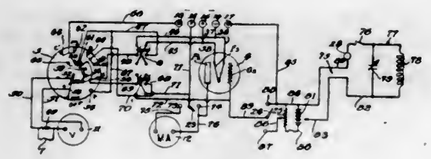
1. In a shuttle, molded end portions and opposed side members having their opposite ends joined to the molded end portions, said side members being reinforced with fabric.

1,805,091. DOORLATCH. GEORGE L. HINMAN, New Haven, Conn., assignor to The Greist Manufacturing Co., New Haven, Conn., a Corporation. Filed Dec. 15, 1927. Serial No. 240,181. 3 Claims. (Cl. 292—164.)



1. A door latch, having a reciprocating latch-bolt; inside and outside handles; inside and outside roll-backs respectively connected with the said handles; and a blocking-finger carried by the inside roll-back and movable by a supplementary reverse movement of the inside handle into the path of movement of the outside roll-back for preventing the retraction of the bolt by the said outside handle.

1,805,092. SIGNALING APPARATUS. HAROLD O. HOLTE, deceased, Pittsburgh, Pa., by Halvor Holte, administrator, Crookston, Minn., assignor to the Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 26, 1926. Serial No. 117,314. 3 Claims. (Cl. 177—352.)



2. A fluid pressure responsive device comprising a chamber having two openings one of which communicates with a fluid pressure system, a closed reservoir communicating with the other opening, a flap valve at each end of said second opening, a diaphragm stretched across said chamber between said two openings, and a microphone having two coacting members one of which is attached to said chamber and the other to said diaphragm.

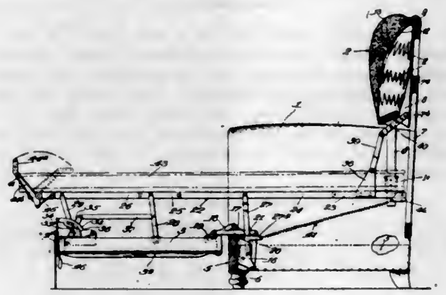
1,805,093. COOLING DEVICE FOR COMBUSTION GAS TURBINES. HANS HOLZWARTH, Dusseldorf, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif., a Corporation of Delaware. Filed Mar. 12, 1927. Serial No. 174,892. 5 Claims. (Cl. 60—41.)

1. In a turbine, a combustion chamber having an inlet for scavenging air and an outlet for combustion gases, a turbine wheel, nozzles in operative relation to said wheel, a channel connecting said nozzles with said outlet, a valve controlling said inlet, another valve controlling said outlet, and a jet means for injecting a cooling liquid into the stream of scavenging air at a point adjacent to said outlet valve.

1,805,094. SET CHECKER. JOSEPH C. HOOVER, Detroit, Mich., assignor, by mesne assignments, to Jewell Electrical Instrument Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1926. Serial No. 143,976. 10 Claims. (Cl. 250—27.)

1. In a testing device for audion tube circuits, the combination of a test connector having contacts corresponding to audion tube terminals and adapted to engage the socket contacts of an audion tube circuit, with a plurality of flexible conductors leading from the contacts of said connector to said testing device, electrical measuring means for indicating the electrical conditions existing at predetermined contacts of said audion tube circuit and a unitary rotary selector switch having test indicia for indicating the various tests controlled by said selector switch and having contacts and circuits for selectively connecting said electrical measuring means to said conductors to indicate the various electrical conditions in the audion circuit on said measuring means.

1,805,095. TRAFFIC SIGN STAND. JOSEPH T. HORNI, Newark, N. J. Filed June 11, 1929. Serial No. 370,073. 15 Claims. (Cl. 40—145.)

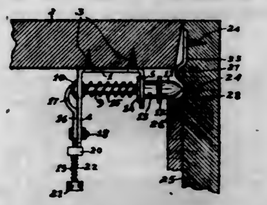


1. In a traffic sign stand, the combination comprising a base plate having a central conical socket, a sign supporting stanchion located centrally in said socket, and wedges in the socket holding the stanchion securely in its central position, said base and said wedges having flanges and bolts passing through orifices in said flanges whereby the wedges may be drawn into the socket and grip the stanchion.

1,805,096. FERTILIZER DISTRIBUTOR. HOWARD M. JOHNSTON and OSBORNE H. SHENSTONE, Toronto, Ontario, Canada, assignors to Massey-Harris Company, Limited, Toronto, Canada. Filed Apr. 11, 1930. Serial No. 443,384. 5 Claims. (Cl. 221—126.)

1. A machine for distributing fertilizer including a receptacle having fertilizer outlets at opposite sides; distributor members extending transversely for causing the fertilizer to be discharged through the outlets; and means connected with the opposite ends of each member for oscillating the members about their centers.

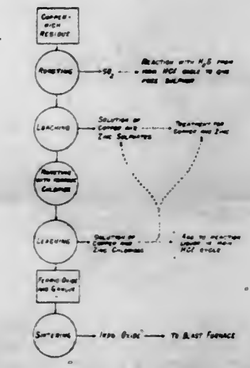
1,805,097. DAVENPORT BED. ADOLPH KROSNER, Naperville, Ill., assignor to Kroehler Manufacturing Company, Naperville, Ill., a Corporation of Illinois. Filed Feb. 17, 1930. Serial No. 428,890. 2 Claims. (Cl. 5—59.)



1. A davenport bed comprising a main frame including stationary base and back frames, a seat frame hinged to said base frame, an extensible bed frame consisting of pivotally connected sections, levers connecting said bed frame sections with said base and seat frames whereby the same are simultaneously elevated and extended in the swinging of said seat frame into open position, a back-rest consisting of a frame bearing against said back frame and having rails extending downwardly adjacent each end thereof and slidably mounted in stationary guides on said main frame, and links operatively connecting the adjacent bed section with said back-rest at points adjacent the upper portion of said rails, whereby the latter is raised and lowered with the movement of said bed section to and from extended position.

1,805,098. DYE BATH AND PROCESS OF DYEING. RICHARD G. KNOWLAND, Wollaston, and NATHANIEL KOSAK, Everett, Mass., assignors to Nashua Manufacturing Company, Nashua, N. H., a Corporation of New Hampshire. Filed Mar. 12, 1928. Serial No. 261,178. 8 Claims. (Cl. 8—5.)

1. That improvement in methods of vat dyeing fabrics which consists in dyeing the goods in a dye bath made alkaline by the addition of a suitable quantity of a quarternary ammonium base, and subsequently, while the goods still contain a considerable percentage of said bath, drying the goods at a temperature serving to decompose said base.

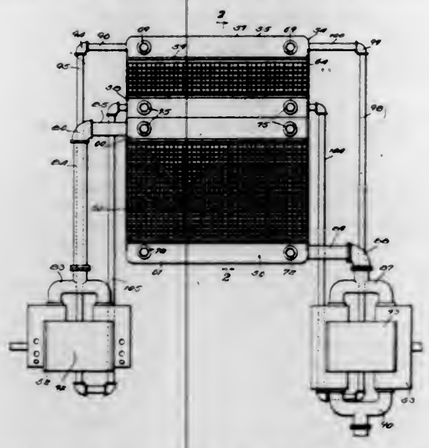


8. A vat dye bath containing suitable proportions of a dye, a reducing agent, and a quarternary ammonium base.

1,805,099. DOOR FASTENER. FREDERICK KUMBER, Pittsburgh, Pa. Filed Nov. 29, 1929. Serial No. 410,356. 2 Claims. (Cl. 292—70.)

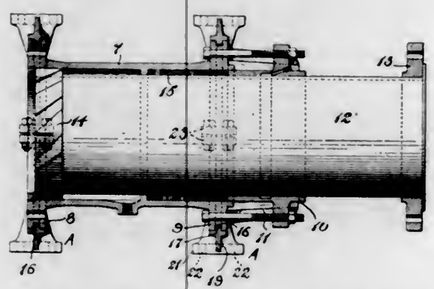
1. In combination, a door fastener comprising a supporting bracket provided with a pair of spaced rearwardly extending arms, a sleeve mounted and longitudinally shiftable in the outer of said pair of arms and provided with a flange disposed on the inner side of said outer arm, a latching bolt shiftably extending through the inner of said pair of arms and through said sleeve, a latching tip removably connected to the outer end of said latching bolt and abutting against the outer end of said sleeve, a head formed at the inner end of said latching bolt and abutting against said inner arm for limiting the outward movement of said latching bolt, a spring mounted on said latching bolt intermediate of said pair of arms and engaging said sleeve flange for normally forcing said latching bolt outwardly to the latching position, and means carried by said inner arm and operable for engaging said head to secure said latching bolt in the latching position.

1,805,100. TREATMENT OF COPPER RICH MATERIAL. STANLEY ISAAC LEVY, London, England. Original application filed Mar. 1, 1928, Serial No. 258,439, and in Great Britain Feb. 10, 1928. Divided and this application filed Apr. 26, 1929. Serial No. 358,350. 1 Claim. (Cl. 75—18.)



A process for the recovery of copper and zinc from the residues left on treatment of the "mainly soluble" residue from iron pyrites with hydrochloric acid, consisting in roasting such residue in air, whereby the copper and zinc are converted into sulphates, extracting the roasted residue thus obtained with solvent, chloridizing the residue left after extraction of the roasted residue by roasting with ferrous chloride, and extracting the residue after the chloride roasting operation.

1,805,101. HEAT EXCHANGE DEVICE. ARTHUR B. MODINE, Racine, Wis., assignor to Modine Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Mar. 25, 1927. Serial No. 178,490. 4 Claims. (Cl. 257—137.)



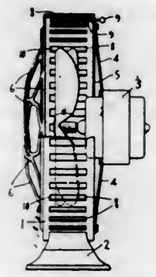
4. In a device of the kind described, the combination of a plurality of radiator units arranged in the same plane,

one of said units providing an element of a liquid passage, and the other providing an element of a fluid passage, air advancing means arranged at one side of said units in a plane substantially parallel to the plane of said radiator units and providing means for advancing air

through said radiator units, a housing, said radiator units being extended across an opening in said housing, said housing having means communicating with the atmosphere and said housing providing an element of a support for said air advancing means.

1,805,102. EXPANSION JOINT AND ANCHORAGE THEREFOR. GEORGE F. MURPHY, Philadelphia, Pa. Filed Oct. 12, 1926. Serial No. 141,171. 3 Claims. (Cl. 248—31.)

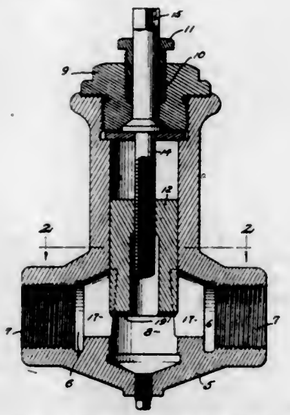
3. An anchor adapted to support an expansion joint provided with an annular flange at an end thereof for attachment, said anchor comprising a split ring adapted to embrace the flange, the two parts of which are complementary, each part being provided with a base pad and each being provided at its ends with a pad for securing the parts together, the body portion of each part being provided with means adapted to interlock with the flange to prevent displacement of the joint longitudinally.



1,805,103. RUBBER ACCELERATOR. DONALD H. POWERS, Penns Grove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed May 10, 1927. Serial No. 190,383. 10 Claims. (Cl. 18—53.)

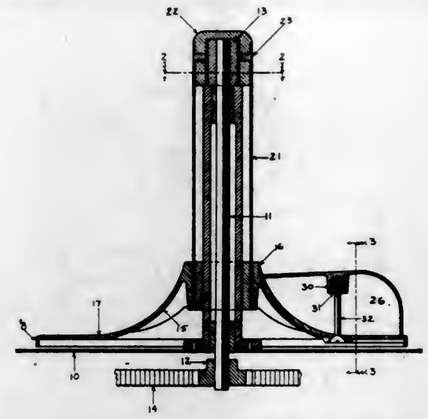
10. The process of treating rubber, which comprises incorporating with the rubber a vulcanizing agent and about 0.5% of the reaction product of 1 mole of carbon disulfide and 2 moles of morpholine and thereafter vulcanizing at 20 pounds steam pressure.

1,805,104. PORTLAND CEMENT AND PROCESS FOR PRODUCING THE SAME. ELLIS WATMOUGH REED-LEWIS, Detroit, Mich., assignor to The Super Cement Co., a Corporation of Michigan. Filed Aug. 11, 1927. Serial No. 212,357. 4 Claims. (Cl. 106—25.)



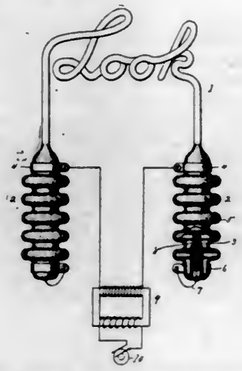
1. A Portland cement consisting of a ground clinker and gypsum, said gypsum having tannin incorporated therein, and a quantity of chemically active silica substantially sufficient to combine with the calcium oxide liberated upon the hydration of the mixture.

1,805,105. ELECTRIC FAN. CLARENCE RINGWALD, North Hampton, Ohio, assignor to Robbins & Myers, Inc., Springfield, Ohio, a Corporation of Ohio. Filed Sept. 30, 1929. Serial No. 396,077. 2 Claims. (Cl. 230—275.)



1. In a portable ventilating fan, a base adapted to set on a desk or similar structure, a cylindrical casing attached to said base and extending upwardly therefrom, an electric motor and fan supported rigidly by said casing with the fan housed by said casing, said casing being open at its ends and also having air admission openings about its periphery, and means for regulating the size of said peripheral openings.

1,805,106. VARIABLE FLOW RESISTANCE. HENRY H. ROBINSON, Los Angeles, Calif. Filed Jan. 27, 1930. Serial No. 423,757. 2 Claims. (Cl. 251—62.)

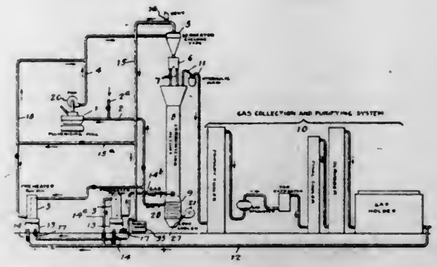


1. Construction of the character described, comprising; a body member having a straight flow passage therethrough, and a laterally extending cylindrical bore intersecting said passage; and a cylindrical plug within said bore, adapted for being longitudinally positioned therein to variably intercept said passage, said passage being of triangular cross-section where it is intersected by said bore; one pair of the opposed apexes of the triangular sections of the flow passage being rounded, spaced from the main wall of the passage, and being so disposed as to afford the only openings through the flow passage when the plug is in its nearly closed position.

1,805,107. AGITATOR MECHANISM FOR WASHING MACHINES. JOHN ROCKE, Bloomington, Ill. Filed Dec. 15, 1927. Serial No. 240,086. 5 Claims. (Cl. 259—101.)

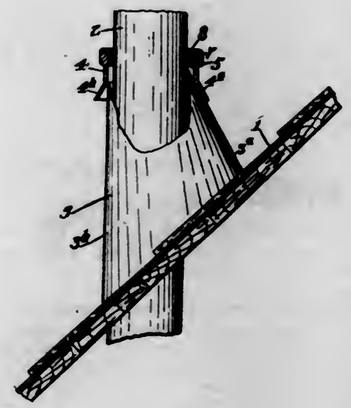
1. An agitator for washing machines comprising a metal disk, a hollow blade of plastic material, the edges of said hollow blade contacting with said disk throughout their length, and means for detachably clamping said blade to said disk so as to form a water-tight joint.

1,805,108. ELECTRIC DISCHARGE DISPLAY DEVICE. SAMUEL RUBEN, New York, N. Y., assignor to Ruben Patents Company, New York, N. Y., a Corporation of Delaware. Filed June 26, 1926. Serial No. 118,865. 8 Claims. (Cl. 176—126.)



1. An electric discharge device comprising, in combination, a container having translucent dielectric walls and containing a monatomic gas and gas absorptive, conductive discharge electrodes, with inductive discharge electrodes and means for maintaining said inductive discharge electrodes at a higher potential than said other electrodes.

8. In an electric discharge device, means for continuously occluding ordinary gases and continuously liberating occluded or mechanically entangled rare gases.

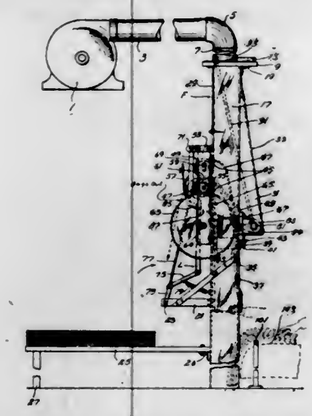


1,805,109. PROCESSING OF COAL. WALTER RUNGE, East Orange, N. J., and EDWIN A. PACKARD, Yonkers, N. Y., assignors, by mesne assignments, to International Coal Carbonization Company, a Corporation of Delaware. Filed Mar. 12, 1925. Serial No. 14,998. 9 Claims. (Cl. 202—16.)

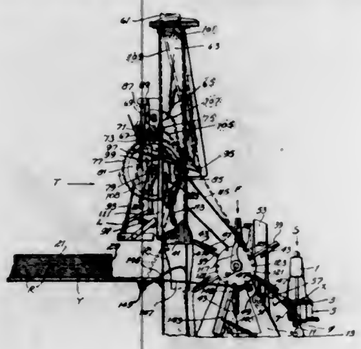
1. In the process of carbonizing powdered coal, the steps of pulverizing and drying coal prior to carbonization comprising feeding coal to a mill wherein all of the coal fed thereto is pulverized, continuously introducing a hot gaseous medium into the mill and carrying out the pulverizing operation, continuously conducting the pulverized coal in suspension in said gaseous medium from the

mill and introducing a gaseous medium hotter than the coal and gas leaving the mill, but not sufficiently hot to cause ignition of the coal into the mixture while in transit on the way to a place where the coal is separated from the gaseous medium, and separating the coal thus treated from the gaseous medium.

1,805,110. ROOF JOINT. JOHN LEO SCHALLER, Wellesley, Mass. Filed Aug. 19, 1925. Serial No. 51,262. 4 Claims. (Cl. 285—31.)



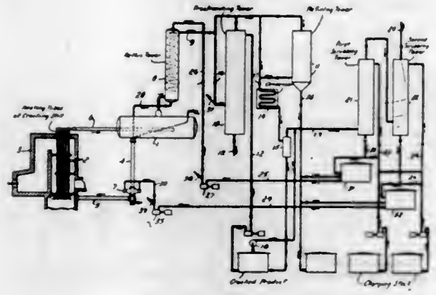
1. A roof joint comprising a flexible frustro-conic riser and a rigid collar having an interiorly beveled lower skirt bearing surface of irregular conic section of varying inclination telescopically fitted upon said riser and independently rotatably adjustable thereon into a position wherein a portion of the zone of mutual bearing contact between the riser and the bevelled skirt of the collar occupies a secant plane which is generally horizontal.



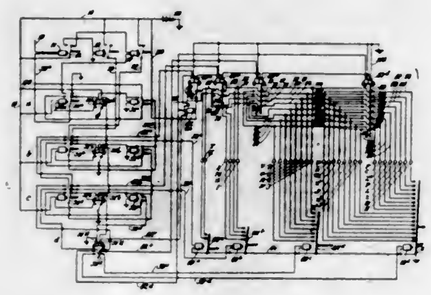
1,805,111. BAG TURNING APPARATUS. CHARLES F. SPARKS, St. Louis, Mo. Filed June 7, 1926. Serial No. 114,285. 14 Claims. (Cl. 223—20.1.)

1. A bag turning machine comprising a substantially vertical casing, valved means for intermittently drawing

air upwardly in the casing to turn a bag therein, and discharge rolls forming a portion of the wall of the casing at an upward point adapted to feed bags from said casing, said means for intermittently drawing air being operable independently of the roll surfaces.



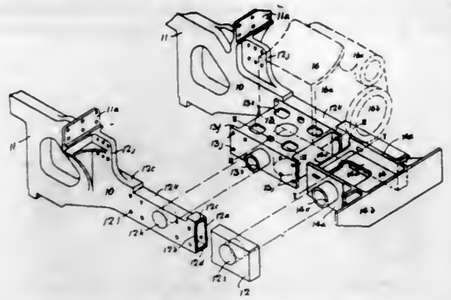
1,805,112. APPARATUS FOR MANUFACTURING BAGS. CHARLES F. SPARKS, St. Louis, Mo. Filed Nov. 22, 1926. Serial No. 149,872. 6 Claims. (Cl. 112—10.)



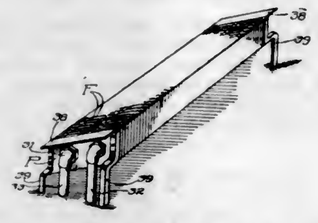
1. Bag manufacturing apparatus comprising a sewing machine, feeding apparatus working in connection with the outlet of the sewing machine, clamping means on said feeding apparatus adapted to effect support of a bag such that the bag hangs downwardly and a bag turner cooperating with the feeding apparatus to receive bags therefrom and turn them.

1,805,113. ART OF CRACKING HYDROCARBONS. GEORGE H. TABER, Jr., Rye, N. Y., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed Oct. 11, 1928. Serial No. 311,738. 2 Claims. (Cl. 196—48.)

1. In cracking operations for the production of lighter hydrocarbon oils from heavier hydrocarbon oils in which vapors and gases are taken off and subjected to a condensing operation, the improvement which comprises subjecting the gas and vapor mixture remaining uncondensed thereafter successively to a first absorbent treatment with raw stock subsequently supplied to the cracking operation and then to a second absorbent treatment with raw stock subsequently supplied to the cracking operation, subjecting the vapors taken off from the cracking operation to a refluxing operation before subjecting them to the first mentioned condensing operation and introducing the raw stock containing constituents absorbed in the first absorbent treatment into direct contact with the vapors therein, supplying reflux condensate and unvaporized raw stock from this refluxing operation to the cracking operation proper, and supplying the raw stock containing constituents absorbed in the second absorbent treatment to the cracking operation so that these absorbed constituents must pass with the stock directly to the zone of maximum temperature in the cracking operation proper.



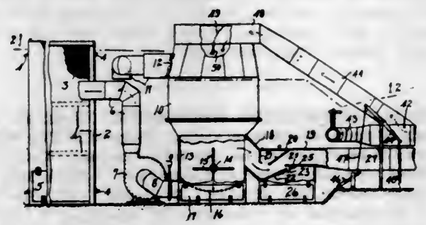
1,805,114. PRINTING TELEGRAPH RECEIVER. ROBERT TEVIS, Jamaica, N. Y., assignor of six-tenths to Edwin B. Lapham, Hoboken, N. J. Filed Apr. 19, 1927. Serial No. 185,055. 14 Claims. (Cl. 178—26.)



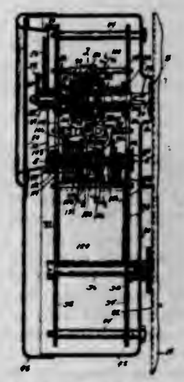
1. In an electric receiving apparatus adapted to receive intermittent electric impulses of two kinds, a pair of electromagnets, a normally open electric circuit, a switch normally connecting one of said magnets into the circuit, means controlled by one of said kinds of impulses for throwing the switch to connect the other of said magnets into the circuit, and means automatically operable during intervals between said impulses for closing said circuit to energize the magnet connected therein.

1,805,115. LOCOMOTIVE STRUCTURE. CHARLES W. TODD, Schenectady, N. Y. Original application filed Mar. 28, 1928, Serial No. 265,388, now Patent No. 1,731,511, dated Oct. 15, 1929. Divided and this application filed Oct. 1, 1929. Serial No. 396,425. 18 Claims. (Cl. 105—44.)

1. A cross-tie for locomotive side frames, comprising a pair of elongated vertical side walls, a transverse wall connecting the side walls, and a dowel projecting laterally outward from each side wall, adapted for engagement in a complementally shaped aperture in a side frame to hold the same against both vertical and longitudinal relative movement.

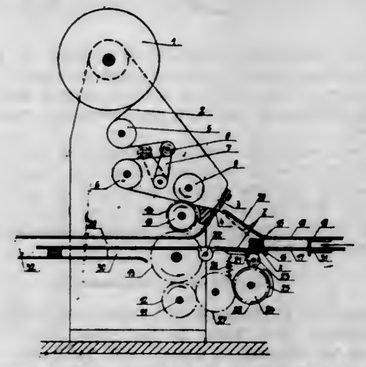


1,805,116. RADIATOR. REUBEN N. TRANE, La Crosse, Wis. Filed Apr. 23, 1926, Serial No. 104,196. Renewed Oct. 22, 1930. 20 Claims. (Cl. 257—136.)



8. A radiator unit comprising horizontal heat tubes, a multiplicity of vertically disposed radiating fins mounted on the tube in spaced relation, a pair of end plates mounted on the heat tube adjacent the first and last fin respectively, heating fluid inlet and outlet connections for the heat tube beyond the respective end plates, offset flanges on the end plates extending at right angles to the direction of air flow through the radiator for overlying the space occupied by said connections whereby the outer corners of the flanges define an all over perimeter for the radiator unit within which air may flow only between the fins and depending legs secured to the end plates for supporting the unit a fixed distance above the floor, the lower ends of the legs being positioned substantially in alignment with the outer corners of said flanges.

1,805,117. APPARATUS FOR TREATING FIBERS AND THE LIKE. KILIAEN M. VAN RENSSELAER, Woodmere, and HUGO R. SWANSON, Brooklyn, N. Y., assignors to Triangle Kapok Machine Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed Oct. 22, 1929. Serial No. 401,584. 4 Claims. (Cl. 19—144.)



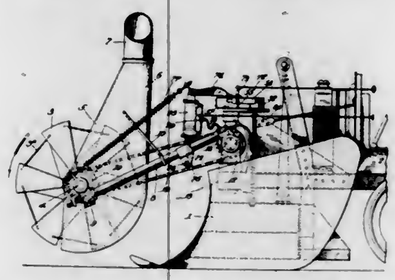
1. In a fiber treating apparatus of the type described the combination comprising an aeration tank, a rotatable paddle in the base of the tank, a closed circulatory pipe system connecting the base of the tank with the top, means in the pipe system for causing air to circulate therethrough so as to be delivered into the top of the tank and removed from the bottom, a screen in the aeration tank below the paddles and suction means connected to the aeration tank below the screen for removing the dust and dirt therefrom.

1,805,118. MAXIMUM DEMAND GAS METER. HANS VITTINGHOFF, Winchester, Mass., assignor, by mesne assignments, to Stone & Webster, Incorporated, a Corporation of Delaware. Filed June 16, 1926. Serial No. 116,457. 23 Claims. (Cl. 235—104.)

1. A gas meter having an enclosing casing, internally-contained metering mechanism having an exposed shaft, a maximum demand metering mechanism disposed externally of said casing and having a shaft which has a detachable connection with said exposed shaft which is disconnectible by movement of said demand mechanism axially of said shaft, and a casing enclosing said maximum demand metering mechanism and also enclosing said exposed shaft, said casing having a front opening, a removable closure therefor and means detachably securing said casing to said gas meter casing and accessible only through the aforesaid front opening when the closure therefor is removed.

1,805,119. APPARATUS FOR COMBINING HORIZONTAL LAYERS OF ARTICLES. ROBERT WILHELM VOIGT, Dresden, Germany, assignor to the Firm "Universelle" Cigarettenmaschinen-Fabrik J. C. Müller & Co., Dresden, Germany. Filed May 21, 1929, Serial No. 364,832, and in Germany Mar. 2, 1928. 7 Claims. (Cl. 226—5.)

1. Apparatus for combining horizontal layers of articles, such as cigarettes fed along a feed track, with

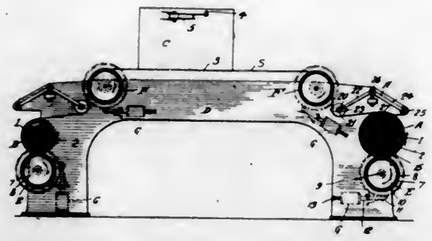


a paper blank or the like, comprising means for depositing the paper blank on a support, means for moving the support vertically to the level of the feed track and means for pushing the articles forwards together with the blank.

1,805,120. CONTROL APPARATUS FOR POWER-TRANSMITTING MECHANISM. RUDOLF VON ERHARDT, South Hadley, Mass. Filed Feb. 15, 1929. Serial No. 340,144. 12 Claims. (Cl. 74—39.)

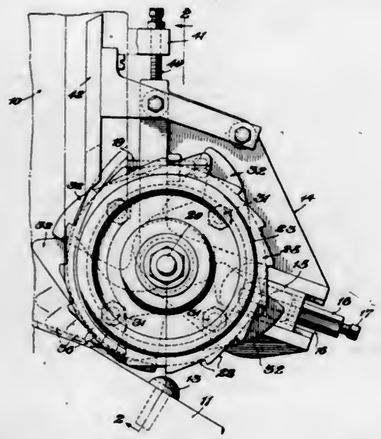
4. The combination with a change-speed gear transmission mechanism including a clutch therefor, of a control device for shifting gears of said transmission mechanism, said control device presenting a single movable element to the operator's hand, means for relieving said movable element from any force reactions substantially exceeding those set up between the cooperating faces of said gear transmission mechanism while said mechanism is being operated with said clutch in disengagement, said means including instrumentalities whereby after operatively establishing a chosen speed ratio by said single movable element a further movement of the said single movable element will engage and the reversal of said further movement re-disengage said clutch.

1,805,121. SNOW REMOVER. ARTHUR B. WEBB, Milwaukee, Wis., assignor to The Rightway Corporation, a Corporation of Indiana. Filed Jan. 9, 1928. Serial No. 245,336. 20 Claims. (Cl. 37—43.)



1. The combination with a snow plow, of a rotary snow remover narrower than the plow mounted to project in advance of the latter to form a narrow path in the snow in advance of the plow, and means for rotating said remover.

9. The combination with a vehicle, of a boom mounted on the vehicle so as to project therefrom, a rotary wheel mounted on the outer end of said boom so as to revolve about an axis transverse to the boom, said wheel comprising radial trough-shaped buckets, and means for rotating said wheel.

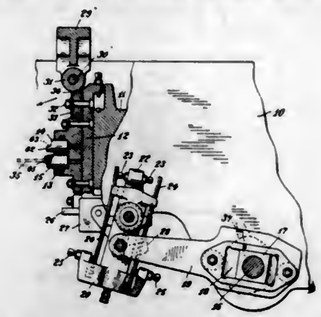


1,805,122. SYNCHRONOUSLY POSITIVE FEED. EMIL WEINHEIM, New York, N. Y. Filed Mar. 27, 1928. Serial No. 265,208. 1 Claim. (Cl. 242—65.)

In combination in a machine for propelling a strip intermittently measured distances, an unwinding roll for said strip; a winding roll for said strip; several rotary propellers adapted frictionally to engage said strip one at the locality of said unwinding roll, one at the locality of said winding roll and one or more at localities intermediate said winding and unwinding rolls; an intermittent

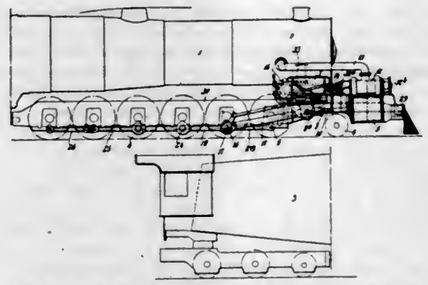
actuator; power means controlled by said actuator for simultaneously imparting an increment of rotation to each of said rotary propellers; and a resilient take-up for said strip comprising a deflector of substantial mass adapted to engage and deflect said strip from its tangential path between two of said rotary propellers.

1,805,123. CLEARANCE MECHANISM FOR IMPROPERLY ALIGNED ARTICLES. RICHARD LESTER WILCOX, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 20, 1930. Serial No. 422,147. 13 Claims. (Cl. 10—162.)



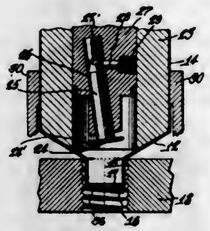
1. In a clearance mechanism; a rotary member; a clearance wheel connected therewith; a kicker associated with the rotary member upon a pivot mounting, the axis of which is substantially parallel with that of the rotary member; and cam means for actuating the kicker upon its pivot mounting located nearer the axis of the rotary member than the kicker.

1,805,124. UPSETTING MECHANISM. RICHARD LESTER WILCOX, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 23, 1927. Serial No. 193,648. 3 Claims. (Cl. 78—81.)



1. The method of automatically upsetting a rod by first rigidly gripping the rod at a distance back of its end, then applying lateral pressure to one side of that portion of the rod projecting beyond the gripping means

to bend such portion at an angle to that part thereof within the gripping means and finally, while the rod is still retained by the gripping means, apply upsetting

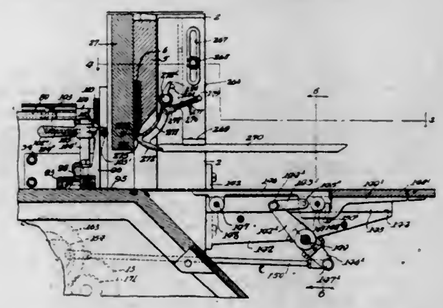


pressure to the outer end of the bent portion of the rod in a path substantially parallel to the axis of the turned portion to upset the same.

1,805,125. LOCOMOTIVE CONSTRUCTION. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed May 8, 1928. Serial No. 276,024. 18 Claims. (Cl. 105—37.)

1. A locomotive including, in combination, a boiler and smokebox, a lending truck, six pairs of drivers, saddle and cross head guides between the leading truck and the forward driver, a pair of cylinders in advance of the saddle adapted to drive all of said drivers and multipart articulated main driving rods coupled to #2 drivers.

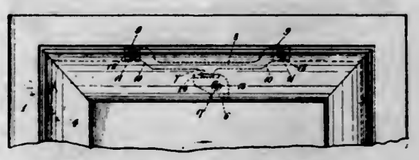
1,805,126. THREADING METHOD AND MECHANISM. EDWIN H. BARKER, Moylan, Pa., assignor to A. H. Wirz, Inc., a Corporation of Pennsylvania. Filed Nov. 10, 1928. Serial No. 318,334. 17 Claims. (Cl. 153—72.)



3. The method of forming a thread upon an initially closed discharge nipple of a collapsible tube, which consists in forming the nipple with thin side walls, supporting the side walls externally along spiral lines corresponding with the bottoms of the thread grooves, and rolling the thread from the interior outwardly at an angle to the axis of the thread.

15. In a machine for rolling a thread from the inside outwardly of a cylindrical discharge nozzle integral with a collapsible tube, a rotatable shaft, a mount for the shaft adapted to fit within the tube, a removable external thread form adapted to surround the nipple, an operating tool carried by the shaft and means for rotating the shaft.

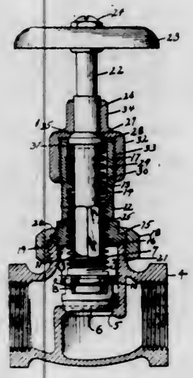
1,805,127. PROCESS FOR CONCENTRATING AQUEOUS SOLUTIONS OF LOWER ALIPHATIC ACIDS. JOSEPH BILLING, Spondon, near Derby, England, assignor to Celanese Corporation of America, a Corporation of Delaware. Filed July 1, 1929, Serial No. 375,341, and in Great Britain July 11, 1928. 12 Claims. (Cl. 260—122.)



1. Process for concentrating aqueous solutions of lower aliphatic acids comprising concentrating in a plurality of stages by extraction with solvent media, employing media, for the various stages such that the ratio of the solubility of the lower fatty acid in the extracting medium to that of water in the extracting medium in the ternary mixture increases successively from stage to stage.

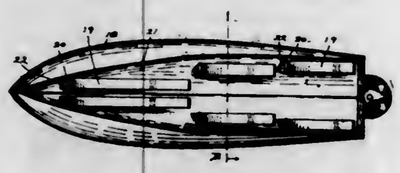
1,805,128. PAPER CUTTING AND TRIMMING MACHINE AND GAUGE AND GAUGE-STOP, CARRIER, HOLD-DOWN, AND SAFETY MECHANISM THEREFOR. EDWARD M. BRACKETT and DIETRICH DANEKE, Topeka, Kans., assignors to Edward M. Brackett and Fred M. Brackett, Copartners doing business under the firm name and style of The Brackett Stripping Machine Company, Topeka, Kans. Filed Apr. 30, 1928. Serial No. 273,967. 10 Claims. (Cl. 164—51.)

1. In a cutting machine having a movable knife and knife-operating means, the combination of a feed table and a movable carrier table located on opposite sides of the knife, a supporting track upon which said carrier table is reciprocatingly mounted and movable toward and from the knife, and carrier-table operating means connected with the carrier table, including means for regulating and coordinating the operations of the carrier table relatively to the movements of the knife.



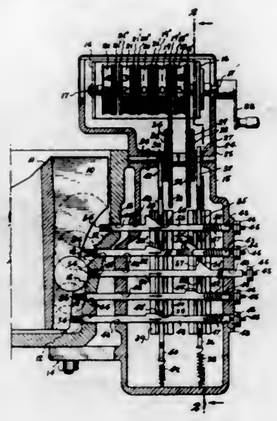
1,805,129. LATCH FOR DOORS. JAMES P. BURT, Taunton, Mass., assignor to Glenwood Range Company, Taunton, Mass., a Corporation of Massachusetts. Filed Nov. 27, 1929. Serial No. 410,104. 4 Claims. (Cl. 292—76.)

1. In a door assembly having a casing member enclosing a doorway and a door member controlling the doorway,



releasable means for holding the door closed comprising a keeper secured to one of said members, a resilient bar secured to the other of said members, means for securing the opposite ends of said bar to said other of the members, and a tongue connecting with said bar between the opposite secured ends thereof with extension through the doorway to have releasable engagement with the keeper when the door is in a closed position.

1,805,130. VALVE. NICHOLAS DE VITO, St. Louis, Mo. Filed Sept. 27, 1928. Serial No. 308,667. 1 Claim. (Cl. 251—47.)

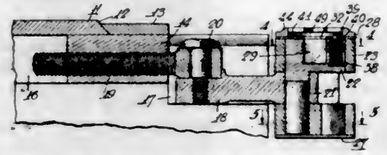


A valve having a body portion and a valve seat formed in the body portion of said valve, a plug for selective engagement in the valve seat of the body portion of said valve, an auxiliary stem, said plug secured to said stem, a bonnet, said auxiliary stem secured in said bonnet, a nut, said nut securing said bonnet to the body portion of said valve, a valve stem having one end in sliding engagement in a rectangular hole in said auxiliary stem, an annular beveled ground seat formed on said valve stem, a ground seat steam nut in rotative contact with a cylindrical portion of said valve stem and securing the valve stem in operative position relative said bonnet, an annular beveled ground seat formed in said ground seat steam nut, the ground seats of said valve stem and said ground seat steam nut held together in sliding engagement by a spring enveloping said valve stem, resting at one end on an internal annular flange formed in said bonnet and in contact with a washer at its other end, which washer is in contact with a section of said valve stem.

1,805,131. BOAT. THEODORE LEWIS DONALDSON, Poughkeepsie, N. Y., assignor to Jacob Ruppert Schalk Rhinebeck, N. Y. Filed June 8, 1928. Serial No. 283,949. 1 Claim. (Cl. 114—66.5.)

In a boat of the class described and in combination with a bottom and a keel, of a series of rectangular planes disposed each side of the keel in a staggered position and having their forward ends secured to the boat bottom, and their rear ends secured thereto at an angle therewith.

1,805,132. COIN COUNTING MECHANISM. EDWARD P. DONNELLAN, Brooklyn, N. Y., assignor to Standard-Johnson Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 19, 1927. Serial No. 234,312. 4 Claims. (Cl. 133—8.)



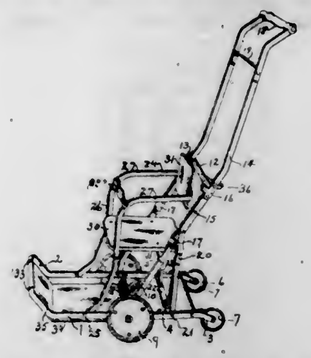
1. An accumulating register for counting coins according to their values, comprising a series of registering wheels having actuating gears and carry over means intermediate adjacent wheels, a vertically reciprocable units rack plate, intermediate transmission means between the actuating gear of the units registering wheel and said units rack plate, a vertically reciprocable tens rack plate, intermediate transmission means between the actuating gear of the tens registering wheel and said tens rack plate, a series of slidable cam rods corresponding to the respective denominations of coins to be counted and adapted to be actuated by the coins, said cam rods having lift cam elements directly cooperating with one or the other of said rack plates according to the denomination of coin by which a particular cam rod is actuated, said lift cam elements being of various sizes proportional to the value of the different coins, said rack plates having abutments engageable by said lift cam elements.

1,805,133. APPAREL GARMENT. EWEN COOPER DUFF, New York, N. Y., assignor to Kops Bros. Inc., New York, N. Y., a Corporation of New York. Filed Aug. 3, 1928. Serial No. 297,342. 3 Claims. (Cl. 2—30.)

1. In an apparel garment, a step-in girdle comprising a front member, a back member, and side members of elastic material, a brassière comprising a front member, a back member and side members all of inelastic material, the lower edge portions of the side members and the back member of the brassière underlying the upper portions of the side members and back member of the girdle, the distant upper edge portions of the back member of the girdle being permanently connected to the distant edges of the lower portions of the back member of the brassière along substantially vertical lines each extending from the upper edge of the girdle to the lower edge of the brassière the back member of the girdle being further permanently connected to the back of the brassière by elastic straps, the side members of the girdle being otherwise unconnected to the side members of the brassière.

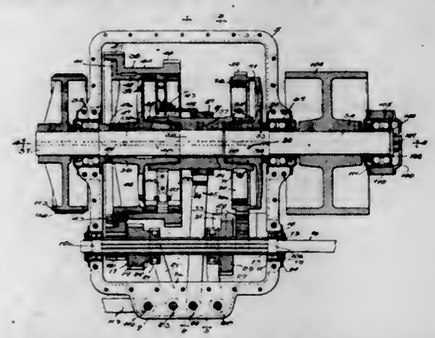
1,805,134. PLATE LOCKING MECHANISM FOR PRINTING PRESSES. WILLIAM DURRANT, Plainfield, N. J. Filed Oct. 16, 1928. Serial No. 312,785. 11 Claims. (Cl. 101—378.)

1. In a locking mechanism of the character described, a thrust block, a clamping member movable with respect to the thrust block and including a crank pin, means operatively connecting the clamping member to the pin, and a guide engaging the free end of the crank pin.



1,805,135. BABY CARRIAGE. JOHN A. EBERLE, St. Louis, Mo., assignor to The Perfection Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 24, 1927. Serial No. 215,013. 1 Claim. (Cl. 280—41.)

In a baby carriage, a rigid body frame, a flexible body carried thereby, a foldable wheel mounted frame supporting said body frame, a plurality of transverse braces connecting the members of said wheel mounted frame, said transverse braces being distributed along the length of said flexible body when folded and arranged to decrease the depth of said flexible body, a folding handle, and an awning on said handle, said handle and awning adapted to lie in close proximity to said body frame to retain bedding within the body when the device is folded.

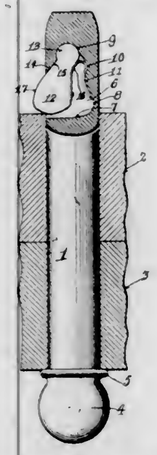


1,805,136. CHILD'S VEHICLE. JOHN A. EBERLE, St. Louis, Mo., assignor to The Perfection Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 22, 1928. Serial No. 301,357. 3 Claims. (Cl. 280—36.)

1. In a child's vehicle, a carriage frame, wheels mounted thereon, a rigid chair frame pivotally connected thereto, a chair supporting frame pivotally connected to the carriage frame and supporting the chair frame, a brace serving as a prop between the carriage frame and chair

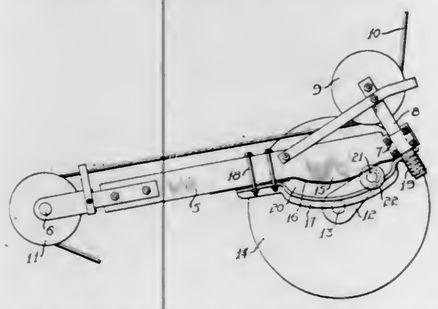
supporting frame, and means for holding the brace in its propping position, said chair frame, chair supporting frame and brace being adapted to fold upon the carriage frame on releasing the holding means.

1,805,137. TRANSMISSION AND REVERSE GEAR. JAMES B. FISHER and JAMES E. DE LONG, Waukesha, Wis., assignors to Waukesha Motor Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Nov. 15, 1928. Serial No. 319,687. 2 Claims. (Cl. 74—59.)



1. In a transmission, a driven shaft, a forward drive gear structure having a hub loose on the shaft, a reverse drive gear structure having a hub loose on the shaft, a driving hub keyed on the shaft between the gear structures and having its ends recessed, the recessed ends of the driving hub providing sleeves receiving the hubs of and extending into the gear structures, said gear structures being held against movement away from each other and the driving hub acting to space the gear structures apart and to hold them against movement toward each other, said gear structures being open at their inner ends and constituting clutch drums, means at the ends of said sleeves and cooperating with the drums for clutching either of the gear structures, optionally, to the driven shaft, a drive shaft, and means for establishing driving connections between the drive shaft and either of the gear structures, optionally.

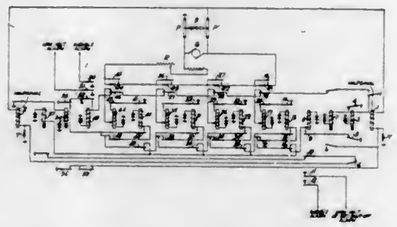
1,805,138. COUPLING PIN. FIELD FREDENDALL, Kaukauna, Wis. Filed Mar. 22, 1929. Serial No. 349,253. 1 Claim. (Cl. 85—3.)



A coupling pin having a cavity extending through one wall, one end wall of the cavity extending transversely of the pin and the other wall rounded to form an arcuate seat, a catch member formed with a rounded head adapted to be loosely mounted in the arcuate seat, the inner lon-

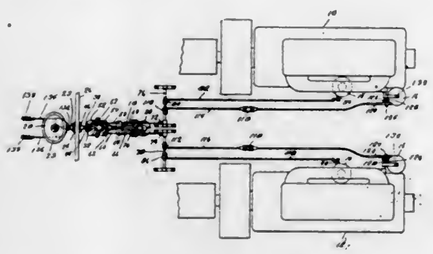
gitudinal wall of said cavity having a curved shoulder with oppositely curved portions upon the sides of the shoulder, a U-shaped spring having one side conforming to the inner wall of the cavity and the other side bearing against the catch member to normally project a

portion of the catch member beyond the outer surface of the pin, the normally extending portion of the catch member having a rounded surface adapted to be engaged for moving the catch member into a cavity within the outer contour of the pin, and means for limiting the movement of the catch member from the cavity.



1,803,139. DRILLING MACHINE. BRUCE Z. GOOD, Tiffin, Ohio, assignor to The Loomis Machine Company, Tiffin, Ohio, a Corporation of Ohio. Filed Jan. 23, 1930. Serial No. 422,941. 1 Claim. (Cl. 255—11.)

In a drilling machine, the combination of a spudding beam pivoted at its rear end, a guide mounted on the forward end of said beam, a flexible line associated with said guide, said beam having a slot extending longitudinally of its front end, and a crank rotating about a horizontal axis and having a pin riding in said slot to rock the beam and thereby control the tightening and the releasing of said line, said slot being curved upwardly toward each end.

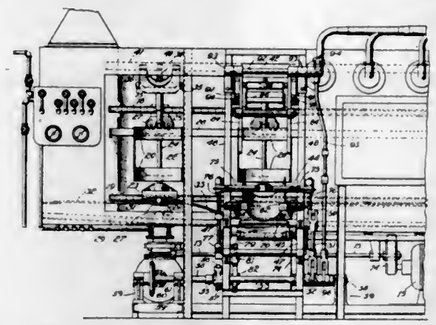


1,805,140. VOLTAGE REGULATING SYSTEM. KENNETH W. GRAYBILL, Villa Park, Ill., assignor to Reserve Holding Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 5, 1929. Serial No. 390,474. 3 Claims. (Cl. 171—314.)

1. In a battery charging system employing a constantly running generator for supplying charging current at a variable rate to a storage battery having predetermined high and low voltage limits, a plurality of resistance elements in series with the generator field, a low voltage test relay normally bridged across the terminals of said battery and adapted to release each time the battery voltage drops below said low limit, a series of relays, one relay for each of said resistance elements, operated one at a time successively with each release of said loy relay to shunt out its associated resistance to increase the charging rate of said generator, a high voltage test relay

normally bridged across the terminals of said battery and adapted to energize each time said battery voltage rises above said high limit, and a second series of relays, one associated with each of said first series of relays and operated one at a time successively with each energization of said high relay to release the associated relay of the first series to remove the shunt about the associated resistance to decrease the charging rate of said generator.

1,805,141. STEERING MECHANISM FOR TWIN ENGINE TRACTORS. ORRIS A. HARKNESS, Veazie, Me., assignor to Great Northern Paper Company, Millinocket, Me., a Corporation of Maine. Filed May 28, 1928. Serial No. 281,033. 9 Claims. (Cl. 180—17.)

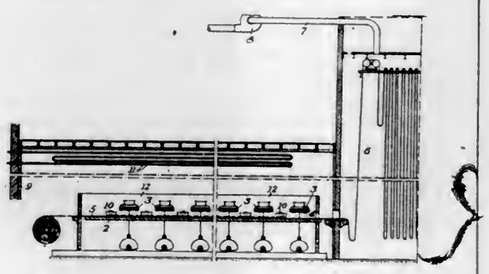


1. Steering mechanism for twin engine tractors comprising throttle operating members each independently associated with a separate engine and both arranged to move in the same direction to control their respective engines in the same sense, a steering shaft rotatable in opposite directions, and members having independent reversely screw threaded driving connections with said shaft and movable respectively toward and away from each other on opposite movements of said shaft and having operative connections with said throttle operating members whereby a rotation of the shaft in one direction advances one and simultaneously retards the other throttle operating member.

1,805,142. UNLOADING MECHANISM FOR CAN WASHING MACHINES. IRVING R. HIPPENMEYER, Waukesha, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed July 5, 1929. Serial No. 376,255. 6 Claims. (Cl. 29—84.)

1. In a can washing machine, a can unloading mechanism comprising a chute operable to receive a can in inclined position and to swing said can to upright position, an operatively mounted bar having a portion extending

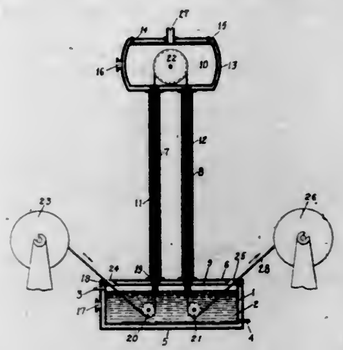
transversely of said chute to engage and retain said can therein, means operable by said chute for disengaging said



bar from said can as said chute is swung into upright position, and a conveyor adapted to receive said can from said chute when disengaged from said bar.

1,805,143. ENAMEL WARE. OSCAR HOMMEL, Pittsburgh, Pa. Filed Dec. 13, 1929. Serial No. 413,932. 4 Claims. (Cl. 91—73.)

1. The method herein described of coating iron and steel articles with vitreous enamel which consists in applying to the surface of the article an initial coating of a jelly containing a solution of a salt of a metal of the iron group, applying to the initially coated surface a vitreous material, and firing the so prepared article.

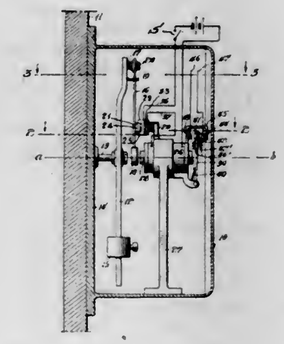


1,805,144. MANUFACTURE OF PRINTED FLOOR COVERINGS. ALFRED JONES, Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a Corporation of Pennsylvania. Filed Aug. 13, 1926. Serial No. 129,026. 18 Claims. (Cl. 101—199.)

1. The method of applying lacquer paint to a floor covering which consists in applying the paint first to a printing block, and pressing the printing block against the floor covering while maintaining an atmosphere about the printing block which precludes any substantial evaporation of the lacquer solvents on the printing block.

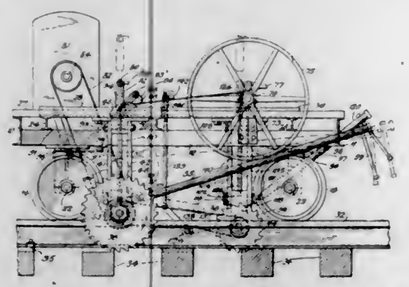
1,805,145. IMPREGNATING APPARATUS. CARL KOOPS, New York, N. Y., assignor to J. P. Devine Manufacturing Co., Buffalo, N. Y., a Corporation of New York. Filed Apr. 24, 1930. Serial No. 446,804. 7 Claims. (Cl. 91—46.)

1. In apparatus of the class described, in combination, a receptacle for impregnating material, a vacuum chamber located above said receptacle, a pair of conduits connecting said receptacle with said vacuum chamber and means for conducting the material to be impregnated through the impregnating material in said receptacle, thence



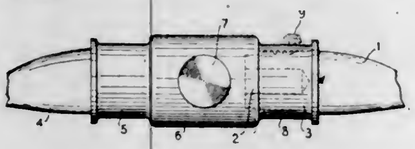
through one of said conduits to said vacuum chamber, then through the other of said conduits to said receptacle, and thence from said receptacle.

1,805,146. RUBBER TIRE AND PROCESS OF MAKING. LAURITS A. LAURSEN, Akron, Ohio, assignor of one-fourth to Pearl Lucile Laursen, Akron, Ohio. Filed Nov. 24, 1925. Serial No. 71,475. 16 Claims. (Cl. 154—14.)



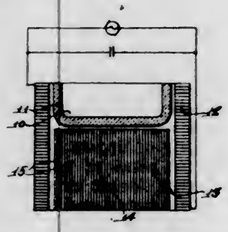
1. The process of making a rubber tire of rubber stock and reinforcing cord structure, consisting of shrinking the cord structure, and curing the stock and cord structure together while the cord structure is in shrunken condition, to provide reserve stretching capacity for the cord structure.

1,805,147. PENDULUM CONTROLLED CIRCUIT CLOSER. HOWARD J. MURRAY, New York, N. Y., assignor to R. M. Company, Inc., East Pittsburgh, Pa., a Corporation of Delaware. Filed Jan. 12, 1921. Serial No. 436,804. 6 Claims. (Cl. 177—314.)



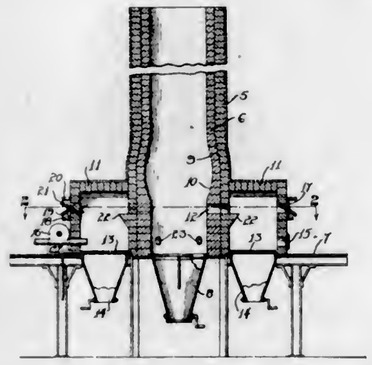
1. In a device of the class described, the combination with a support, a pendulum fulcrumed to said support to swing about a horizontal axis, a second pendulum fulcrumed to said first pendulum above said axis, and normally having its bob in said axis, said second pendulum provided with a pair of fingers adjacent said axis and spaced apart in the plane of swing of the pendulum, means for forming an electric circuit including a circuit closer comprising said fingers and an element disposed between the fingers whereby a swing of the second pendulum in either direction will cause the same to move one of the fingers into engagement with said element of the circuit closed and thus close the electric circuit.

1,805,148. APPARATUS FOR MARKING OR SCORING SURFACES. ANDREW J. NEAFIE, Mountain Lakes, N. J. Filed July 10, 1928. Serial No. 294,477. 6 Claims. (Cl. 144—133.)



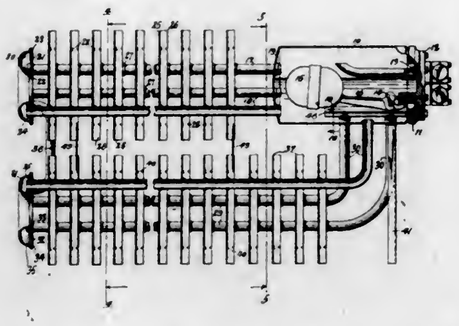
1. Apparatus for cutting and scoring surfaces which comprises a platform, means for supporting it a predetermined distance from the surface to be scored, a saw, means supporting said saw, means connecting said saw support and the platform to adjust the saw a given distance from the platform, means for clamping the saw supports in any adjusted position, cables connecting the saw supports with the platform, and means on the platform connected to the cables to raise the saw to an inoperative position.

1,805,149. METHOD OF BALANCING PROPELLER BLADES. ARVID NELSON, Milwaukee, Wis., assignor to The Hamilton Standard Propeller Corporation, West Homestead, Pa., a Corporation of Pennsylvania. Filed Dec. 12, 1928. Serial No. 325,490. 3 Claims. (Cl. 170—159.)



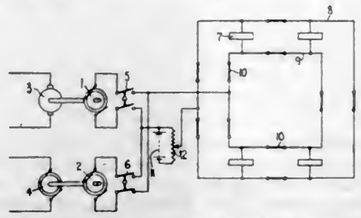
1. In the method of balancing propeller blades for aircraft, the steps of fitting a master blade to one arm of a hub; fitting a new blade to the opposite arm of said hub, said new blade having an axial recess in its shank; placing a sufficient quantity of material on the exterior of the shank of said new blade radially from said recess to statically balance said blades; and subsequently placing said material in said recess and securing it in the bottom of said recess solely by compression of said material.

1,805,150. INDUCTOR TYPE FURNACE. EDWIN FITCH NORTHRUP, Princeton, N. J., assignor to Ajax Electrothermic Corporation, Trenton, N. J., a Corporation of New Jersey. Filed Aug. 2, 1928. Serial No. 296,937. 14 Claims. (Cl. 266—1.5.)



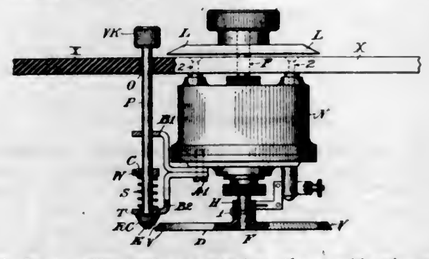
1. The method of reducing the inductor heat losses in a furnace inductor surrounding a charge free from interthreading of transformer iron and much wider than its depth, which consists in increasing the axial length of the inductor much below the bottom of the charge, and in providing a highly permeable path for magnetic lines in the space within the inductor below the charge.

1,805,151. LIME KILN. EMBRA T. REED, Elmore, Ohio. Filed Dec. 4, 1929. Serial No. 411,421. 3 Claims. (Cl. 222—3.)



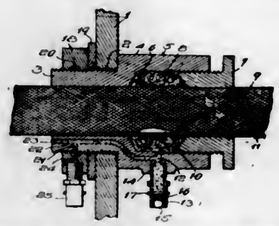
1. In a lime kiln, the combination of a stack, a fire chamber adjacent the base of the stack and provided with fire eyes leading from the upper part thereof into the stack, doors leading into the fire chamber in front of the fire eyes for poking the lime, a shoulder beneath the fire eyes and extending toward the front of the fire chamber to deflect the flow of gases away from the fire eyes and means for directing an oxidizing agent into contact with the gases thus deflected and in a direction to blow said gases away from said doors and toward the fire eyes.

1,805,152. VAPORIZER FOR REFRIGERATOR SYSTEMS. FRANKLIN G. SLAGEL, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed Apr. 1, 1929. Serial No. 351,482. 4 Claims. (Cl. 62—95.)



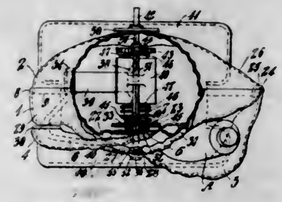
2. A vaporizer for refrigerator systems, comprising a vaporizing chamber, and a plurality of sets or clusters of vaporizing tubes, one set being straight and connected at one end with an end of said chamber, and the other set being of elbow form and having parts thereof parallel with the first mentioned set and other parts at right angles thereto and connected with the side of said chamber, a manifold connecting the rear ends of the tubes of each set, and pipes connecting said manifolds.

1,805,153. TELEPHONE SYSTEM. SIDNEY REYNELL SMITH, London, England, assignor to Associated Telephone and Telegraph Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 14, 1929, Serial No. 392,524, and in Great Britain Nov. 6, 1928. 4 Claims. (Cl. 179—90.)



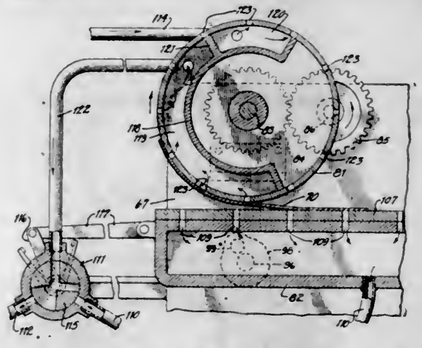
1. In combination, a polarized impulse transmitting relay, an alternating current source with a substantially sine wave output of a desired frequency for alternately energizing and deenergizing said relay to transmit impulses at a desired speed, and a source of direct current superimposed upon the alternating current to alter the duration of the positive and negative waves and thereby alter the impulse ratio of the impulses transmitted by said relay.

1,805,154. VERNIER. WILLIAM STUART WEBSTER, Roslindale, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Oct. 1, 1924. Serial No. 740,906. 13 Claims. (Cl. 74—7.)



1. In a radio tuning apparatus, the combination with the variable tuning element, of a rotatable operating member therefor, means for the direct manual rotation of said operating member, a dial surrounding said operating member, and a vernier comprising a rotatable member independent of said dial and secured to said rotatable operating member to rotate therewith and having a beveled friction surface, a second rotatable member having a beveled friction surface adapted to the beveled surface of said first vernier rotatable member; and a rotatable and reciprocable spindle on which said second beveled member is mounted.

1,805,155. STUFFING BOX. RALPH M. WEEKS, New London, Conn., assignor to Electric Boat Company, Groton, Conn., a Corporation of New Jersey. Filed Oct. 29, 1928. Serial No. 315,652. 8 Claims. (Cl. 247—1.)

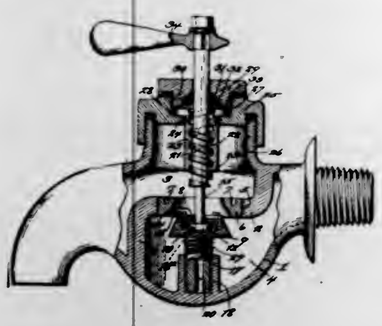


1. In combination, a partition, a stuffing box comprising a body having a reduced neck extending through the partition, the body having a packing space and being provided with two ducts communicating with said space, one of the ducts opening through the body and the other duct extending through the neck and opening therethrough at the opposite side of the partition from said body, a nut screwed onto the neck and cooperating with said body for clamping the stuffing box to the partition, means forming a fluid tight closure between said stuffing box and the partition, the nut hgaving a circumferential groove in its inner face encompassing the outer opening of the neck duct and the nut having a duct opening into said groove, tubular fittings secured in the outer ends of the body duct and the nut duct, respectively, and inwardly opening valves normally closing said fittings.

1,805,156. ANIMATED TOY. PETER PAUL WEHNER, Cincinnati, Ohio. Filed June 13, 1929. Serial No. 370,658. 6 Claims. (Cl. 46—40.)

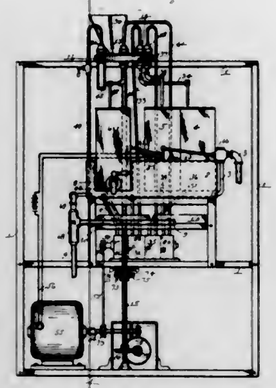
1. An animated toy comprising a piece of sheet material having an opening simulating a mouth, and a flap bent back from said opening, simulating teeth, a simulation of a brush in said opening adjacent to said flap, and means for moving said simulation of a brush.

1,805,157. BOOKBINDING MACHINE. RAYMOND E. ACKLEY, Chicago, Ill., assignor to R. R. Donnelley & Sons Company, Chicago, Ill., a Corporation of Illinois. Filed June 10, 1929. Serial No. 369,862. 8 Claims. (Cl. 154—41.)



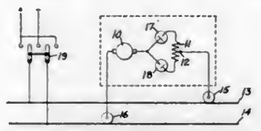
1. In a bookbinding machine, means for gripping and advancing a book, means for gluing the back of the book, and mechanism for applying a super in timed relation thereto comprising means for feeding super from a roll, means for cutting a strip from the roll, means for moving said strip adjacent the book and at the same speed as the book, and means for progressively forcing the strip into contact with said book.

1,805,158. RESEATING LEAKPROOF FAUCET AND VALVE. ARTHUR J. BACON, Philadelphia, Pa., assignor of one-half to Maurice H. Clyman, Camden, N. J. Filed Feb. 28, 1930. Serial No. 432,215. 2 Claims. (Cl. 251—38.)



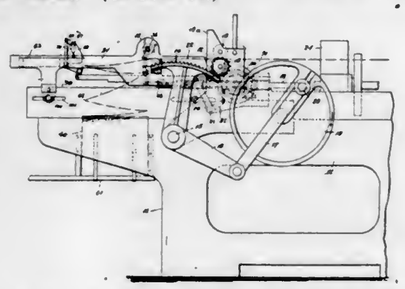
1. In a combined faucet and valve, a casing having a lower pressure chamber and a fluid release chamber

above, a valve seat formed in a wall dividing the two chambers, a disc valve engaging said seat in a direction from the pressure chamber and aided in its engagement with the seat by the fluid pressure, a socket formed on the bottom of the pressure chamber, the disc valve having a depending stem loose in the socket, a spring surrounding said stem and engaged between the top of the socket and the valve to urge the valve toward its seat, a screw stem rising from the disc valve and having a loose



connection with the disc valve, said loose connection between the rising stem and the valve being such as will permit the disc valve to move with the screw stem when the latter is rotated when it is desired to close the valve against the seat, and means for mounting the screw stem in the top of the faucet casing, said last named means having an element, adapted to be loosened, thereby permitting the screw stem to be rotated for grinding the disc valve to its seat without shutting off the pressure.

1,805,159. PERCOLATING APPARATUS. ROBERT BAUER and GEORGE J. LUDWIG, Grand Rapids, Mich. Filed Sept. 30, 1929. Serial No. 396,020. 9 Claims. (Cl. 53—3.)

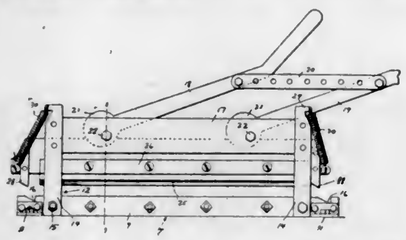


1. In an organization of the character described, a plurality of percolators comprising; a base plate having circularly disposed openings therethrough provided with screens forming the bottoms of the percolators respectively and a vent for the percolated substance; a member on the base plate having circularly disposed openings therethrough forming the sides of the percolators respectively, said member's openings being adapted to contain a charge of the substance to be percolated and being brought into percolator-forming registration with the screened openings respectively by the rotation of said member.

1,805,160. DIRECTIONAL CONTROL OF DYNAMO-ELECTRIC DEVICES. MAURICE E. BIVENS, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 5, 1928. Serial No. 303,989. 1 Claim. (Cl. 172—179.)

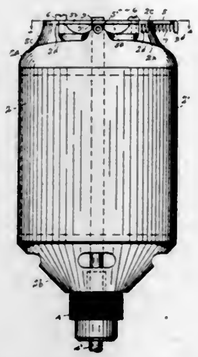
In combination, an electric motor having a rotatable armature and a field winding provided with a mid-tap, and a pair of asymmetrical current conducting units connected to the ends of said field winding for reversing the dynamo-electric reaction between the armature and field upon a reversal in the energization of the motor.

1,805,161. FOLDING MACHINE. CARL W. BRENN, Montclair, N. J. Filed Nov. 14, 1928. Serial No. 319,315. 28 Claims. (Cl. 270—61.)



1. A machine for folding a strip of fabric of indefinite length to form a zig-zag folded pile comprising a gage plate held stationary in a predetermined position during the folding operation; and web-advancing means operative to cause the web intermittently to stop with a line of fold thereon located in the said predetermined position.

1,805,162. PREPARATION OF ALIPHATIC ACID CHLORIDES. EDGAR C. BRITTON, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich, a Corporation of Michigan. Filed Oct. 11, 1928. Serial No. 311,972. 15 Claims. (Cl. 260—123.)

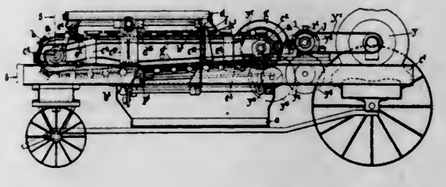


1. The method of making an aliphatic acid chloride, which comprises reacting between the corresponding acid and sulphur tetrachloride in the presence of an anhydrous metallic chloride which is capable of forming a substantially stable double compound with sulfur tetrachloride.

1,805,163. BELT CUTTER. THOMAS E. BUCKNER, Burkburnett, Tex. Filed June 14, 1930. Serial No. 461,161. 8 Claims. (Cl. 164—57.)

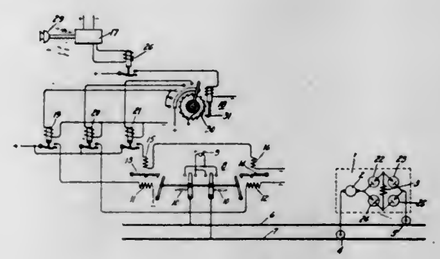
1. In a material cutting device of the class described, a bed plate assembly comprising a central anvil forming member provided in its top with a knife edge receiving groove, and a pair of facing plates on opposite sides of said member, a carrier movable toward and from said bed plate assembly, said carrier including a cutter, supporting means for the carrier, and operating means cooperable therewith.

1,805,164. SHAFT HOLDER FOR APPLYING CHUCKS. RAY L. CARTER, Phoenix, N. Y., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Jan. 31, 1930. Serial No. 425,019. 3 Claims. (Cl. 172—36.)



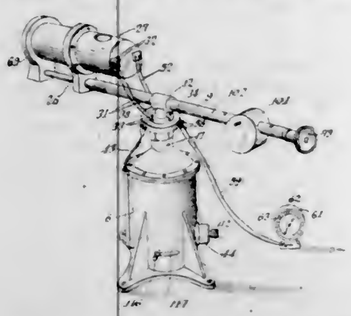
1. The combination with an encased electric motor including the armature shaft and a chuck threaded to one end thereof, the other end of the shaft having a reduced portion projecting beyond the corresponding end of the casing, of a holding member reciprocable in ways formed in said end of the casing having an elongated opening to receive the shaft, a portion of said opening being substantially the diameter of the shaft, an adjacent portion of the opening being contracted to receive the reduced portion of the shaft when the member is moved manually in one direction, to prevent rotation thereof, and compression means to move the member in the opposite direction to free the shaft.

1,805,165. HOT WATER HEATER. LOUIS S. DENNEY, Mount Vernon, Ohio. Filed Feb. 14, 1930. Serial No. 428,471. 3 Claims. (Cl. 122—156.)



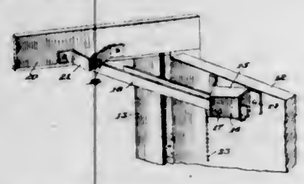
1. A hot water heater, comprising a pair of shell sections provided with abutting flanges at their marginal edge portion, a packing interposed between said flanges for sealing the sections together, detachable means engaging said flanges for securing the sections detachably together and admitting of the separation of the sections for cleaning the interior thereof, an independent flue section enclosed within said shell sections and provided at its lower end with a burner receiving drum opening through one edge portion of the shell sections and provided at its upper end with an outlet drum provided with an outlet pipe leading through the top of the shell sections, means for circulating water downwardly through the shell sections and about said flue section, said flue section and the inner walls of said shell sections being corresponding corrugated throughout substantially the height of the heater to provide relatively long sinuous flue and water passages.

1,805,166. PREPARATION OF VEGETABLE FIBERS. DOUGLAS WILLIAM DRON, Belfast, Ireland. Filed Oct. 2, 1929, Serial No. 396,757, and in Great Britain Nov. 7, 1928. 10 Claims. (Cl. 19—18.)



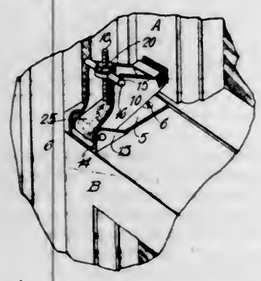
1. A machine for decorticating "pita" or other fibers comprising a broad multi-compartment conveyor with the compartments in parallel thereon gripping devices transversely of said conveyor for gripping a leaf section in each compartment simultaneously, means for automatically dropping a leaf section into each compartment simultaneously, means for positioning said leaf sections in said gripping devices, means for removing the waste material from the fiber and means for automatically and independently discharging the extracted fiber and the butt ends of the leaf sections from the machine.

1,805,167. ELECTRIC CONTROL SYSTEM. ALAN S. FITZ GERALD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 25, 1928. Serial No. 288,012. 6 Claims. (Cl. 104—149.)



1. In combination, a dynamo-electric machine, means for producing current impulses in response to verbal commands of the operator, and means responsive to a certain number of said current impulses for causing said dynamo-electric machine to operate in one direction and responsive to a different number of said current impulses for causing said dynamo-electric machine to operate in the other direction, whereby the direction of operation of said machine may be selectively controlled in response to different verbal commands of the operator.

1,805,168. CENTRIFUGAL CASTING MACHINE. ROBERT P. FRIST, Jr., Long Beach, Calif. Filed Mar. 27, 1929. Serial No. 350,333. 15 Claims. (Cl. 22—65.)



1. A casting machine comprising an arm, means for suddenly imparting rotation to said arm about an axis spaced from an end thereof and maintaining said rotation at a speed as great as the initial speed of said arm, a crucible supported upon said arm adjacent said end thereof, a mold, and means for securing said mold to said arm beyond said crucible from said axis with the gate of the mold in register with an outlet from said crucible.

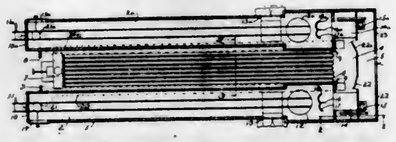
1,805,169. DOOR HOLDER. GEORGE L. FULLER, Orangeburg, S. C. Filed Feb. 26, 1930. Serial No. 431,571. 1 Claim. (Cl. 292—265.)

A holder for a swinging door comprising a sheet metal bracket adapted to be attached to the top portion of the door, a trough-like sheet metal latch pivoted to said bracket and provided near its free end with a notch, a spring coiled around the pivot of said latch and adapted to lift said free end of said latch, a sheet-metal bracket to be attached to a frame part for said door and adapted to be engaged by the notched part of said latch, when said door is opened, and a pull-down member for releasing said latch when desired.

1,805,170. SASH LOCK. SAMUEL GOLDMAN, Brooklyn, N. Y. Filed Apr. 24, 1930. Serial No. 446,937. 6 Claims. (Cl. 292—212.)

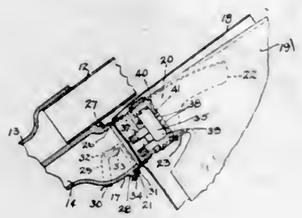
1. A device of the character described, comprising a base, a window sash engaging fastening element pivotally carried thereby, a threaded member carried by the base, a cross arm for engagement with the fastening element, and means carried by the threaded member for maintaining engagement of the cross arm with the fastening element.

1,805,171. ORNAMENTED CANDLE. HARRY H. GRIEVES and ELIZABETH D. FAUTH, Whiting, Ind., assignors to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Oct. 27, 1924. Serial No. 746,065. 6 Claims. (Cl. 87—21.)



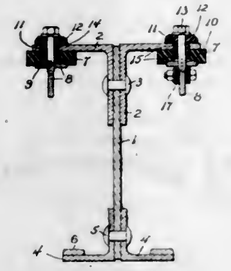
1. The method of ornamenting a wax candle which comprises dipping said candle into a molten composition containing from 30 to 60% stearic acid and a non-mineral wax having a melting point not higher than that of Japan wax, removing the candle and cooling it, whereby crystalline deposits of stearic acid form in the dipped coating.

1,805,172. SOUND POST FOR STRINGED MUSICAL INSTRUMENTS. WILLIAM A. GRIFFITH and WALTER L. MYERS, Holly, Colo. Filed May 2, 1930. Serial No. 449,278. 2 Claims. (Cl. 84—277.)



2. A sound post for stringed musical instruments comprising a metallic sleeve having a bore with the ends thereof flared, plugs of different material from the sleeve engaging the ends of said sleeve, and tapering portions on the plugs and frictionally engaging the walls of the flared portions of the sleeve.

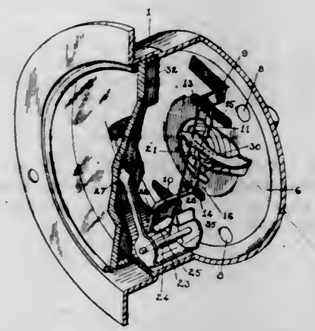
1,805,173. DEHYDRATOR. HENRY M. GRIFFOUL, San Jose, Calif. Filed Apr. 9, 1929. Serial No. 353,752. 3 Claims. (Cl. 34—46.)



2. A dehydrator comprising an air heating tunnel, a plurality of dehydrating tunnels, a chamber communicating with all of the tunnels, air circulating means within the chamber, and additional means within the chamber operable to regulate the flow of air from the heating tunnel and from the outside atmosphere.

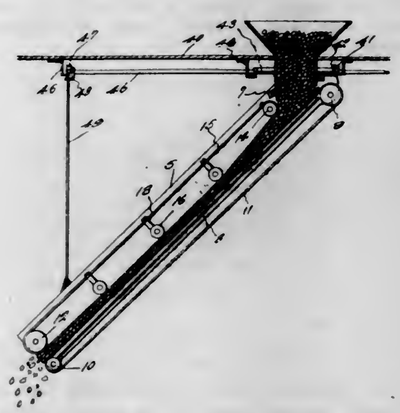
1,805,174. VACUUM CLEANER. ELMER E. GUDKA, Toledo, Ohio, assignor to Air-Way Electric Appliance Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Aug. 31, 1929. Serial No. 389,684. 6 Claims. (Cl. 285—171.)

2. In a vacuum cleaner, the combination of an air-conducting tube, a bag having a neck adapted to telescope with such tube, and means for holding such neck in such telescoped relation; said means comprising a band having parts attached to such tube, other parts adapted for contracting around such tube, and a flared end for facilitating the placement of such neck.



1,805,175. MOTOR CONVEYOR TRACKWAY. EDWARD HANAK, Houston, Tex. Filed Aug. 8, 1929. Serial No. 384,360. 6 Claims. (Cl. 191—22.)

4. In conveyor trackways, an I-beam, T-shaped conductor rails located beneath the upper lateral flanges of the I-beam, insulating spacing blocks located between said upper lateral flanges and said conductor rails, said upper lateral flanges and said blocks having aligning apertures, bushings having flanged heads projected into said apertures, cap screws passing through said bushings and threaded into said conductor bars, and sealing washers between said bushings and said upper lateral flanges for the purpose specified.

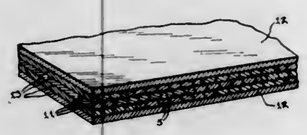


1,805,176. PRESSURE GAUGE. HERBERT HASTINGS, Rochester, N. Y. Filed Feb. 27, 1926. Serial No. 91,237. 15 Claims. (Cl. 73—110.)

1. In a pressure gauge having a diaphragm and a base surrounding said diaphragm, the combination of a shaft contacting with said diaphragm to rotate said shaft on the movement of said diaphragm, a pointer unit, a crank on said shaft, a straight flexible member mounted on said base and held rigid at one end thereof, the free end of said flexible member holding said pointer unit and said crank yieldingly in contact with each other, a movable lug on said base adapted to be swung in a vertical plane parallel to said straight flexible member and either rest against said flexible member or be held away from it at a variable distance for the purpose of controlling the tension of said flexible member.

14. A pointer unit for a gauge comprising two parallel bosses joined together by a yoke, said bosses having perforations therein adapted to form bearings for a stud, a pointer on one of said bosses, a bracket turned up on the other boss, a crank formed on said bracket, said crank being notched at the side to form a reduced neck, the crank outward of the notched part having a contact surface on one side having a geometric curvature.

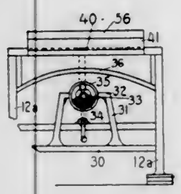
1,805,177. LOWERING APPARATUS. WILLIAM HODNETT, Fillmore, N. Y. Filed May 28, 1930. Serial No. 456,555. 2 Claims. (Cl. 198—165.)



1. In an apparatus for lowering produce, a frame including a pair of spaced parallel inclined side pieces, an upper and a lower endless belt carried by and arranged between the side pieces, the upper belt ending short of the lower belt at its top terminal, a hopper carried by and arranged between the side pieces terminating between the top terminals of said belts for introducing produce therebetween, and spring pressed rollers carried

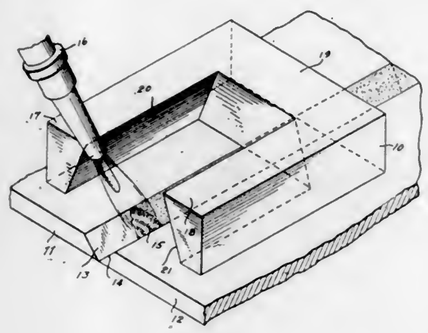
by said side pieces engaging the inner run of the top belt for urging said run toward the adjacent run of the lower belt, all of the spring pressed rollers being spaced from the top terminal of the upper belt to permit the proper introduction of the produce between the belts from said hopper.

1,805,178. REVIVIFYING SPENT FULLER'S EARTH. NORMAN E. LEMMON, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Mar. 20, 1925. Serial No. 17,132. 5 Claims. (Cl. 252—2.)



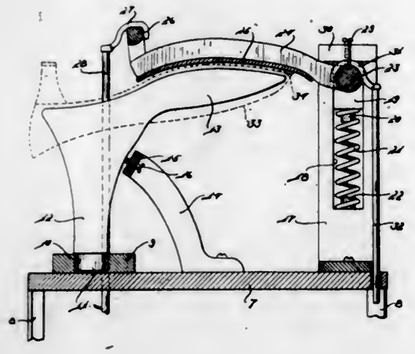
1. In the method of revivifying spent filtering materials employed in decolorizing petroleum oils, the steps of washing such filtering materials with a mixture containing naphtha, benzol and alcohol.

1,805,179. VENEER ARTICLE AND METHOD OF MANUFACTURE. EMIL C. LOETSCHER, Dubuque, Iowa. Filed Aug. 18, 1928. Serial No. 300,528. 4 Claims. (Cl. 144—309.)



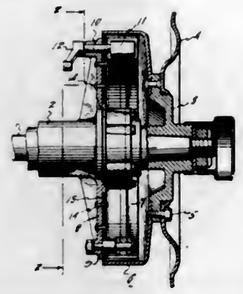
1. A laminated veneer panel, including a core formed of superposed units, each unit consisting of a plurality of fibrous strips connected together by sewing thread, layers of adhesive between the units integrally connecting the same together, and a facing strip secured to one of said units by a layer of adhesive.

1,805,180. TILE MAKING ATTACHMENT TO VIBRATING MACHINES. EUGENE E. MCWAIN, Los Angeles, Calif. Filed May 5, 1928. Serial No. 275,436. 2 Claims. (Cl. 25—41.)



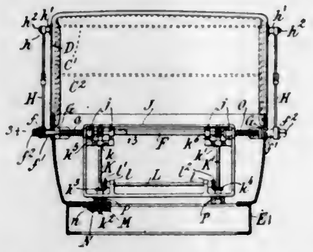
1. In combination with a brick making machine an attachment mountable upon the top portion thereof, and consisting of a top plate, means securing the top plate removably upon said frame, the main body portion of said top plate being raised, a holder having a socket into which the raised portion of said top plate projects, a core box removably registered upon said holder, said top plate, holder and core box having a series of alining holes, and means retractably mounted beneath the top of said frame and designed to project plungers thru all of the alining holes for the purpose of providing the holes of hollow tiles.

1,805,181. HEAT RETAINING HOOD FOR GAS OR ELECTRIC FUSION WELDING. SAMUEL W. MILLER, Hollis, N. Y., assignor to Oxweld Acetylene Company, a Corporation of West Virginia. Filed Nov. 6, 1928. Serial No. 317,607. 3 Claims. (Cl. 113—111.)



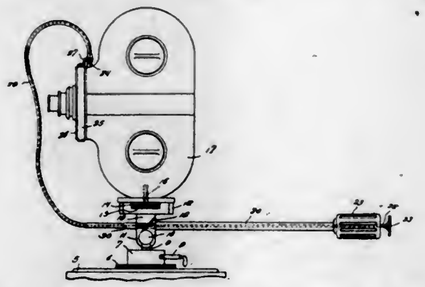
1. A hood for use during welding and adapted to partially surround the weld during its formation, said hood comprising an integral U-shaped member, the inner walls of the sides of said member converging upwardly to form a reflecting surface whereby a portion of the heat is reflected back onto the weld.

1,805,182. SHOE PRESS. ERNESTO B. NAPOLITANO, Detroit, Mich. Filed Oct. 5, 1928. Serial No. 310,469. 4 Claims. (Cl. 12—33.)



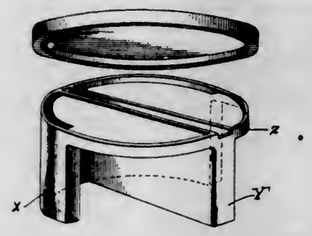
4. In a shoe press of the class described: a last; a supporting member for said last, said last being tiltable relative to said supporting member; a yieldable presser member for pressing a shoe against said last; a frame for supporting said presser member; and means engageable with opposite ends of said frame bodily movable for moving said frame bodily and pressing said presser member into engagement with a shoe on said last.

1,805,183. BRAKE CLOSURE. RAYMOND J. NORTON, Washington, D. C., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Apr. 12, 1930. Serial No. 443,887. 13 Claims. (Cl. 188—218.)



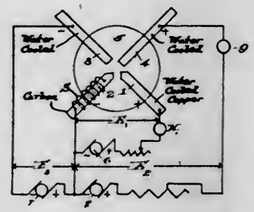
5. A brake apparatus comprising a metallic brake drum and a non-metallic disc positioned at the open face.

1,805,184. VEHICLE TOP OPERATING MECHANISM. PAUL PEDERSEN, New York, N. Y. Filed Mar. 15, 1929. Serial No. 347,207. 8 Claims. (Cl. 296—112.)



1. A vehicle top lowering and raising mechanism, comprising a rigid frame disposed within the vehicle body substantially parallel to the rear wall thereof, said frame having bearings therein, a horizontally disposed shaft carried by said frame, the ends of said shaft extending through the oppposite sides of the vehicle body at the rear thereof, toggle brackets connected to the ends of said shaft and to the vehicle top, means carried by said frame for rotating said shaft, and driving means controllable by the operator of the vehicle for driving said first named means.

1,805,185. COMBINED SUPPORT AND SHUTTER ACTUATING MEANS FOR CAMERAS. JOSEPH M. RAMSEY, Lakewood, Ohio. Filed Oct. 14, 1929. Serial No. 399,565. 6 Claims. (Cl. 95—53.)

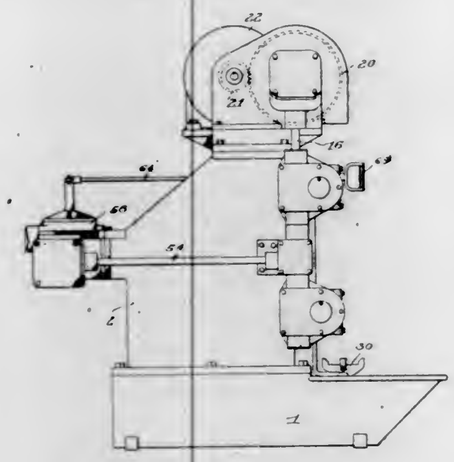


1. A device of the class described comprising a support, means for mounting a camera on said support for being adjusted relative thereto, said mounting means including a movable camera supporting member and a handle operable to adjust said camera supporting member and secure it in any position of adjustment, and means carried by said handle and adapted to be operatively connected to the shutter actuating element of the camera for operating the latter.

1,805,186. SOUND SCREENING DEVICE FOR HYDROPHONES. LEON H. RICHMOND, Fort H. G. Wright, N. Y. Filed Mar. 29, 1928. Serial No. 265,671. 11 Claims. (Cl. 181—0.5.)

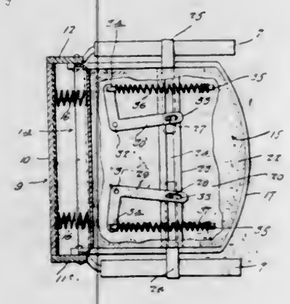
1. A sound screen comprising a hollow metallic shell having a plurality of sheets of fibrous substance introduced therein, said sheets being cut into shaped strips and arranged in such a manner that the strips of adjacent sheets are arranged at right angles to each other.

1,805,187. APPARATUS FOR AND METHOD OF EXCITING ELECTRICAL OSCILLATIONS. TOM C. RIVES, New Haven, Conn. Filed June 20, 1927. Serial No. 200,180. 8 Claims. (Cl. 250—36.)



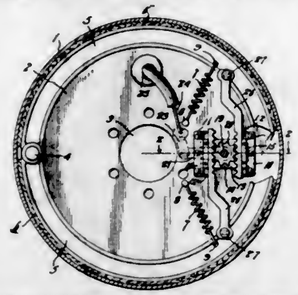
1. An apparatus for producing electrical oscillations comprising in circuit an arc chamber inclosing a pair of arcing electrodes, variable voltage supply means therefor, a pair of control electrodes arranged in said chamber in spaced and opposed relation to said arcing electrodes each of said opposed electrodes being of opposite polarity and having variable voltage supply means therefor, whereby said control electrodes are adapted to attract, repel, and thus regulate the electron flow caused by the arcing of said arc electrodes in accordance with the variance of voltages applied to the various electrodes, and means for automatically discontinuing current flow in the control electrodes upon the blowing out of said arc electrodes.

1,805,188. MACHINE TOOL. ROLAND RUSSELL ROBERTS and WORTHY J. FORWARD, Rochester, N. Y., assignors to Consolidated Machine Tool Corporation of America, Rochester, N. Y., a Corporation of Delaware. Filed Mar. 7, 1927. Serial No. 173,398. 14 Claims. (Cl. 90—16.)



1. A crank shaft milling machine comprising a plurality of cutter spindles arranged one above the other in different horizontal planes on fixed supports, and a work

support including means that permit positioning and clamping a crank shaft vertically supported on and

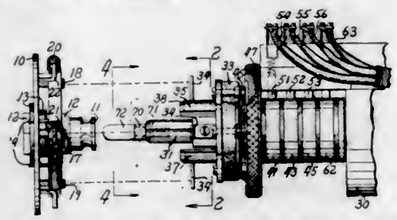


engaging the work support at its lower end, the work support being movable bodily horizontally to feed the vertically arranged crank shaft past the cutters.

1,805,189. BARBER CHAIR. FREDERICK E. ROTHE, Wentzville, Mo. Filed Dec. 23, 1929. Serial No. 416,081. 1 Claim. (Cl. 155—131.)

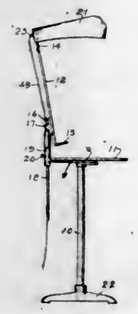
A back for barber chairs comprising a back frame including an open front, a back wall, and side walls extending from the back wall, an inner cushion disposed within the frame and retractile with respect thereto, an outer cushion pivotally connected to the back frame, a channel bar extending transversely of and disposed in the outer cushion, a pair of supporting arms slidable in the channel bar, and retractile means for extending the arms beyond the sides of the outer cushion for engagement with the arms of a chair for supporting the outer cushions when extended from the back frame, and said means including an angular link for each supporting arm, and a compressible spring associated with the arm.

1,805,190. BRAKE OPERATOR. HARRY H. SEMMES, Chevy Chase, Md., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed June 4, 1929. Serial No. 368,389. 6 Claims. (Cl. 188—78.)



1. In a brake mechanism a drum, brake shoes associated therewith, an operator therefor comprising a freely slidable carriage and a pinion mounted thereon, a plurality of rack bars engaging the pinion, one end of each bar being connected to a brake shoe.

1,805,191. BOOKHOLDER. FRANK SKRIPKIN, Toronto, Ontario, Canada, assignor to Arthur S. Porter, Islington, Ontario, Canada. Filed Sept. 6, 1930. Serial No. 480,140. 4 Claims. (Cl. 129—38.)

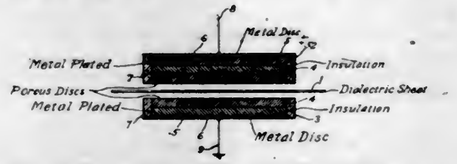


3. A book holder comprising a back portion formed of strip material; a sheet-metal strip arranged at right angles to the back portion and pivoted at one end thereof, the other end of the said back portion being bent at right angles thereto and having an opening extending therethrough; and a hook formed on said strip adapted to enter said opening from the outer side of the said other end.

1,805,192. TESTING DEVICE FOR CENTRIFUGAL SWITCHES. AURILE T. SMITH, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 23, 1929. Serial No. 342,110. 6 Claims. (Cl. 175—183.)

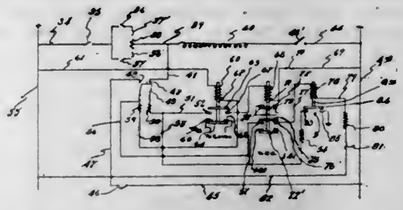
1. A testing device for centrifugal switches comprising means for detachably receiving a switch, means acting to rotate said receiving means with gradually increasing speed, an electrical circuit controlled by said switch, an indicating device in said circuit to indicate when said switch is operated, and means for measuring the speed of rotation of the switch at the instant said indicating device is operated.

1,805,193. LAMP SHADE AND SUPPORT THEREFOR. EDWARD J. SMITH, Cleveland, Ohio, assignor to Mary E. Smith, Cleveland, Ohio. Filed May 8, 1929. Serial No. 361,294. 8 Claims. (Cl. 240—4.)



8. A music stand having a rack at the top thereof, a lamp shade of triangular outline detachably mounted at the base of said triangle upon the upper edge of said rack, and having the vertex extended forward from said rack and a flat plate adjustably mounted on the under surface of said shade for adjustment toward and from said vertex, a lamp pivotally mounted on the under surface of said shade and upon said plate for swinging in a vertical plane, and a shelf mounted adjacent the rack and beneath the shade, the said rack being vertically adjustable toward and from the said shelf to vary the intensity of light directed upon the latter without varying the degree of illumination of the rack, and the sides of the triangle adjacent said vertex having border flanges diverting toward the said base, thereby restricting the rays from the lamp substantially to the surface of said rack and shelf.

1,805,194. TREATMENT OF ALDEHYDE-AMINES. SHERMAN I. STRICKHOUSER, Passaic, N. J., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Apr. 17, 1929. Serial No. 355,984. 14 Claims. (Cl. 23—250.)

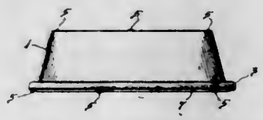


1. The method of retarding the deterioration of aldehyde-amine condensation products which comprises treating said products with a poly hydroxy aromatic body.

1,805,195. ELECTRIC SURGE RECORDER. RAGNAR TANBERG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1928. Serial No. 325,984. 5 Claims. (Cl. 234—1.5.)

1. An electric surge recorder comprising a sheet of dielectric material, and means for simultaneously puncturing said sheet with a plurality of openings in accordance with the magnitude of the current of a single electric impulse discharge.

1,805,196. AUTOMATIC BRAKE RELAY. PHILIP D. TARDIFF, Detroit, Mich. Filed Mar. 3, 1926. Serial No. 91,966. 1 Claim. (Cl. 187—31.)



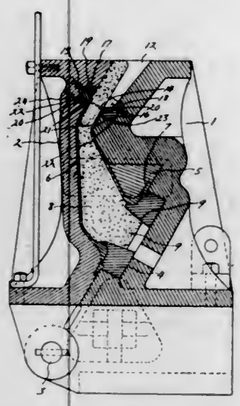
In an electrically operated elevator having electrically controlled gates and brakes and an operating line for supplying electric current to the operating mechanism: direction switches for controlling the flow of current through said operating line; a switch normally closed upon the opening of said gates; and means operable upon the closing of said second mentioned switch while either of said direction switches is closed for breaking the circuit to said operating line.

1,805,197. WEB GUIDE ROLLER. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed May 15, 1928, Serial No. 277,959. Renewed Oct. 4, 1930. 9 Claims. (Cl. 271—2.1.)

1. As an article of manufacture, a guide-roller for a printing press comprising a series of independent roller sections each rotatable independently of the others and each of a length equal to one page width of the web.

1,805,198. FOOD SERVICE DEVICE. JOHN B. ZALLIO, Chicago, Ill. Filed Mar. 18, 1930. Serial No. 436,671. 6 Claims. (Cl. 65—53.)

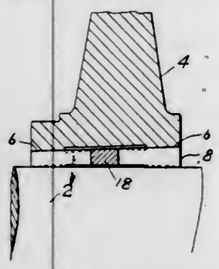
1. In an article of the character described the combination of a hollow body provided with a continuous tubular edge formation, and contact means engaged in said tubular formation and projecting through apertures in the wall of and spaced along said tubular formation to form spaced contact portions.



1,805,199. PREPARATION OF COLLOIDAL METAL. GELLERT ALLEMAN, Wallingford, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Dec. 11, 1929. Serial No. 413,423. 12 Claims. (Cl. 252—6.)

1. The method of preparing colloidal metal including decomposition of an amyl derivative of the metal by heat.

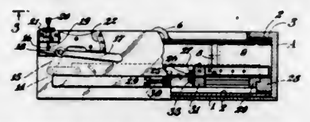
1,805,200. MOLD. ARTHUR T. BATEMAN and ANDREW IRVINE, Detroit, Mich., assignors to Bohn Aluminum & Brass Corporation, Detroit, Mich., a Corporation of Michigan. Filed July 30, 1928. Serial No. 296,378. 9 Claims. (Cl. 22—126.)



1. A mold adapted for use in forming a vacuum cleaner nozzle having a curved passage therethrough with ad-

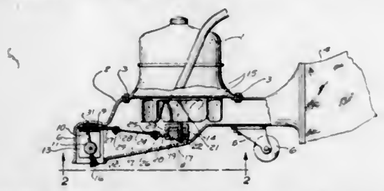
jacent portions of the wall forming the passage merging into each other and an annular flange at one end, said mold comprising a stationary permanent section, a pivotal permanent section adapted to cooperate therewith to form an upright mold cavity, the permanent sections occupying a position such that the portion of the mold cavity

forming the annular flange of the nozzle is at the lower end of the cavity, one of said permanent sections being provided with gate means communicating with the upper end of the mold cavity and a sand core carried by said stationary section and insertable into place when the permanent sections are separated.



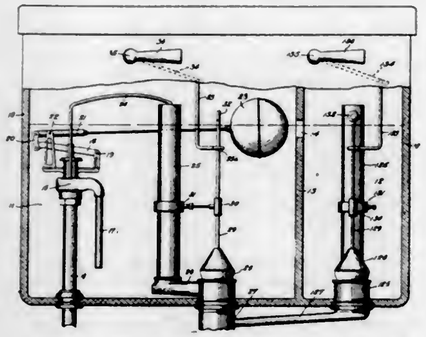
1,805,201. SLEEVE FOR HIGH SPEED WHEELS. RUDOLPH BIRMANN, Trenton, N. J., assignor to De Laval Steam Turbine Company, Trenton, N. J., a Corporation of New Jersey. Filed May 3, 1929. Serial No. 360,283. 9 Claims. (Cl. 287—52.)

1. Means for mounting a rotor upon a shaft including an annular supporting portion carrying two series of resilient axially extending members, the members of one series having outer bearing surfaces and the members of the other series having inner bearing surfaces, the normal difference of radii of the outer and inner surfaces being greater than the normal difference of radii of the portions of the rotor and shaft with which the respective surfaces are to contact, whereby, in the assembly of said means between the rotor and shaft the members are displaced so that they resiliently press in opposite directions to maintain engagement with the rotor and shaft respectively.



1,805,202. PHOTO COMPOSING SCREEN AND PLATE HOLDER. HERMAN C. BOEDICKER, New York, N. Y. Filed Apr. 18, 1928. Serial No. 271,014. 5 Claims. (Cl. 95—69.)

1. In screen and plate holders for photographic composing machines, a casing having an image aperture, and an aperture for receiving a plate holding slide, a screen holder within the casing and in register with said image aperture, means operable from a point exterior the casing to advance and retract the screen holder, slide ways pro-

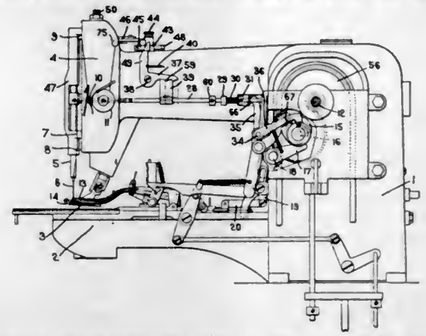


vided by the casing, a plate holder slide in said slide ways and projected through a said second aperture formed in the casing, and means carried by said slide for supporting a plate.

1,805,203. VACUUM SWEEPER. JOSEPH BRASTY, Maple Heights, Ohio, assignor of one-third to Julius B. Lewis, Cleveland, Ohio, and one-third to Lewis Colton, Cleveland, Ohio. Filed June 21, 1929. Serial No. 372,691. 2 Claims. (Cl. 15—8.)

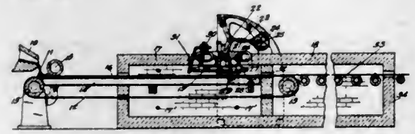
1. The combination with a suction nozzle of a vacuum sweeper the side walls of the nozzle having inner projections, of an oscillating brush extending across the nozzle, a U-shaped bracket bar fitting in the nozzle and supporting the brush, the ends of said bar fitting against said side walls and having notches in which said projections are engaged, and means to oscillate the brush.

1,805,204. CLOSET FLUSHING DEVICE. CHARLES WATKINS BROWN, San Diego, Calif. Filed Oct. 12, 1929. Serial No. 399,350. 6 Claims. (Cl. 4—40.)



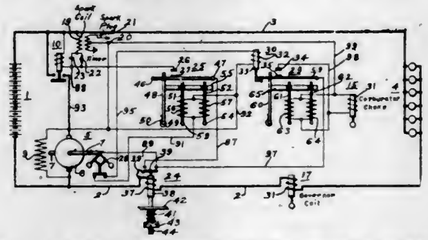
1. A closet flushing device comprising two float valves and two seats with openings therefor, container walls forming separate water spaces for delivering water to the passage through each valve opening and a single closet connection having branches leading from the respective valve openings.

1,805,205. BUTTONHOLE SEWING MACHINE. AXEL F. CARLSON, Cambridge, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed Mar. 20, 1928. Serial No. 263,103. 10 Claims. (Cl. 112—255.)



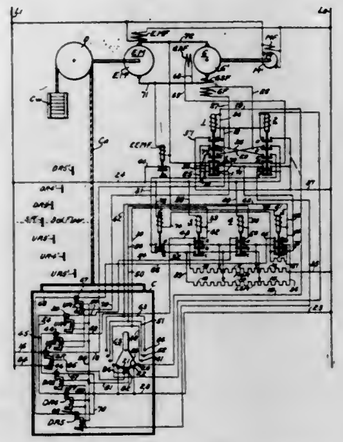
1. In a sewing machine adapted to perform a predetermined sewing cycle and provided with a stop motion to

bring it to rest at the end of said cycle, the combination with stitch-forming mechanism, of a tension for the thread, normally-idle means rendered operative after the stitch-



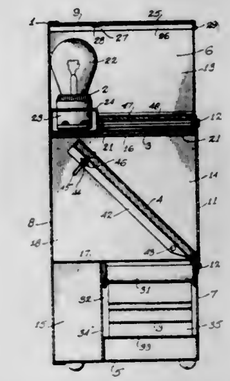
forming mechanism has come to rest to release the tension, a latch for maintaining said tension released, and means to release the latch after the first stitch has been formed in the next sewing cycle.

1,805,206. SHEET GLASS APPARATUS. JOSEPH P. CROWLEY, Toledo, Ohio, assignor to Libbey-Owens Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 22, 1924. Serial No. 751,418. 7 Claims. (Cl. 49—3.)



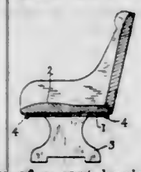
1. Means for pressing a moving sheet of glass to a substantially flat uniform thickness, including a substantially horizontal movable conveyer for supporting said sheet, a pressing member mounted above said sheet, a horizontal supporting member for the pressing member, arms carried by the pressing member and having rollers movably supported by the supporting member, and means for moving the pressing member horizontally with respect to said supporting member when said pressing member is in engagement with the sheet.

1,805,207. CONTROL SYSTEM FOR FARM LIGHTING PLANTS. THOMAS W. DRURY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 7, 1928. Serial No. 324,522. 6 Claims. (Cl. 290—31.)



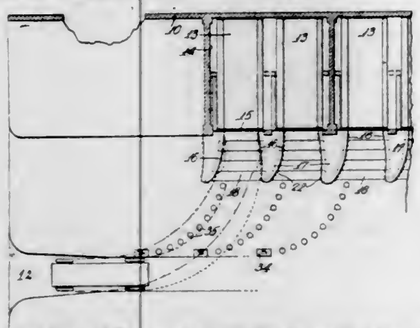
6. In a system for controlling the choking operation of an internal combustion engine provided with a carburetor having a choker valve therefor, in combination, means for cranking said engine, means responsive to the cranking of said engine for actuating said choker valve, temperature responsive means for controlling said valve actuating means, and means responsive to the speed of said engine for precluding the operation of said temperature responsive means until the speed of said engine has reached a predetermined value.

1,805,208. ELEVATOR CONTROL SYSTEM. WILLIAM F. EAMES, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 4, 1929. Serial No. 337,308. 17 Claims. (Cl. 172—152.)



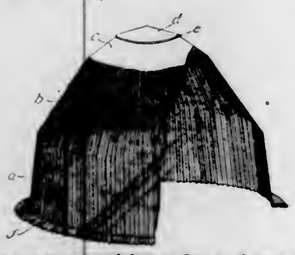
18. In an elevator control system, an elevator car operable past a plurality of floors, motive means therefor, control means for said motive means for operating said motive means at a plurality of speeds, including a plurality of deceleration resistors, a car switch for actuating said control means to select the operating speed of said motive means, transfer means for rendering one of said resistors normally effective, and operable to render another of said resistors effective, and means operable upon selection of one speed by said control actuating means for actuating said transfer means.

1,805,209. DISPLAY DEVICE. ALBERT J. ELLERN, Chicago, Ill., assignor to Travelad Corporation, Chicago, Ill., a Corporation of Illinois. Filed Oct. 24, 1928. Serial No. 314,701. 5 Claims. (Cl. 40—32.)



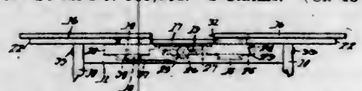
1. A device of the class described comprising a light-transmitting display screen bearing indicia, a source of light on one side of the plane of said screen, a mirror located on the opposite side of said plane for reflecting the images of said indicia, a movable partition adapted to be shifted to a position between said source of light and said screen, and means for moving said screen to cause the images to move on said mirror.

1,805,210. SOUND-ABSORBING STRUCTURE. WILLIAM E. FOSTER, Cleveland Heights, Ohio. Filed Apr. 17, 1929. Serial No. 355,909. 5 Claims. (Cl. 181—30.)



1. The combination of a seat having its under-side exposed to sound vibrations, and sound-absorbing means applied to the underside thereof, said means having a greater sound-absorbing capacity than the material of the seat itself.

1,805,211. AUTOMOBILE GUIDING APPARATUS. ERNST GEIGER, Irvington, N. J. Filed Mar. 6, 1929. Serial No. 344,678. 20 Claims. (Cl. 238—3.)

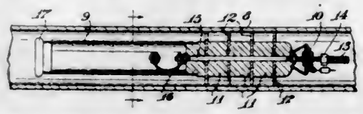


1. A vehicle guiding means including a stationary curb adapted to engage the wheel of a vehicle and a laterally yieldable platform arranged in operative relationship to the curb and upon which the wheels of the vehicle are adapted to travel.

1,805,212. PLANT COVER. FRIEDRICH GRAFFENBERGER, Milwaukee, Wis., assignor to Milwaukee Lace Paper Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 30, 1928. Serial No. 296,281. 6 Claims. (Cl. 47—28.)

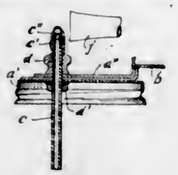
1. A plant cover comprising a dome of translucent material formed of a single sheet of material in a series of frusto-conical sections some of which are fluted.

1,805,213. EXTENSION TABLE. MARCUS J. GREENWOOD, Gardner, Mass., assignor to Greenwood Associates, Gardner, Mass., a Voluntary Association. Filed Sept. 3, 1929. Serial No. 389,961. 4 Claims. (Cl. 45—112.)



1. In an extension table, the combination of a pair of end pieces normally constituting the table top, a center piece normally resting under the adjacent ends of the end pieces, a pin on each end piece, a pair of slides at opposite sides of the table, each having a rack, a pinion meshing with each rack, a cam carried by each pinion and a pin on each slide located in position to be engaged by the corresponding pin on the end piece, whereby the cams will be raised to raise the center piece.

1,805,214. DELAY POWDER. GEORGE C. HALE, Dover, N. J. Filed Jan. 3, 1925. Serial No. 462. 6 Claims. (Cl. 52—1.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

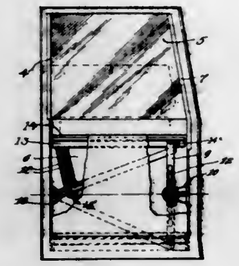


1. A delay powder for time fuses embodying an oxide of lead, silicon and a substance capable of reacting with the lead oxide and forming a binder.

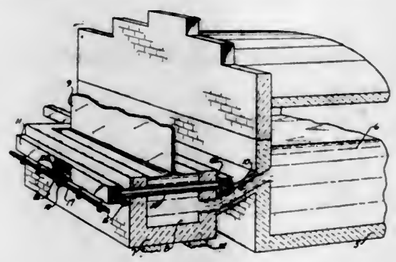
1,805,215. MEANS FOR COATING METALLIC ARTICLES, PARTICULARLY THE INTERIORS OF WATER MAINS (IN SITU). FREDERICK WILLIAM HAMMOND, Chepstow, England. Filed May 13, 1930, Serial No. 452,116, and in Great Britain Mar. 5, 1930. 3 Claims. (Cl. 204—1.)

1. Improved means for depositing a protective coating on metallic articles, including a colloidal solution or emulsion or fluxed bitumen and other ingredients in an aqueous medium from which said coating is deposited by electrolysis, an anode consisting of the positively charged water pipe to be coated, a cathode consisting of a negatively charged copper cylinder movable through said water pipe by a rope attached to a bridge-piece on said cylinder, a travelling carriage of insulating material supporting said cylinder and fitted with rubber discs or rings, a waterproof cable connected to a terminal on the front of said carriage, a conductor and flexible lead between said terminal and cylinder, a wooden box on rear of said cylinder and a source of direct electric current.

1,805,216. SPRAYING ATTACHMENT. CHARLES B. LAWRENCE and EUGENE F. MARTINET, Cleveland, Ohio, assignors to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 30, 1928. Serial No. 273,888. 3 Claims. (Cl. 299—88.)



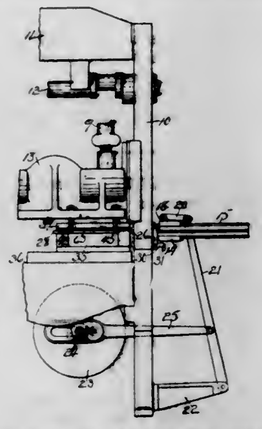
1. In a spraying device of the class described, the combination with the containing chamber and its associated liquid tube, of an axially adjustable tip thereon, an air chamber, and a spraying nozzle removably fitting said air chamber having an elongated discharge aperture positioned adjacent to and comprehending the adjustment of the tip, substantially parallel with the axis of the liquid tube, substantially as set forth.



1,805,217. WINDOW REGULATOR. JOHN D. LAWRENCE and STANLEY W. NICHOLSON, Toledo, Ohio, assignors, by mesne assignments, to The Dura Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 4, 1920. Serial No. 408,289. 4 Claims. (Cl. 268—126.)

1. In a window control mechanism, the combination with a member having a window opening provided with

opposed vertical and inclined edges, a vertical slidable closure for said opening, said closure conforming in shape with the window opening and being free from engagement with the inclined edge thereof, except in its substantially closed position, means engaging the lower portion of said closure and providing a fulcrum therefor when the inclined edge of the closure is disengaged from the corresponding edge of the opening and means engaging said closure adjacent the inclined edge thereof and laterally outward from said fulcrum tending to rock said closure on said fulcrum and force the same at all times against the vertical edge of said opening.

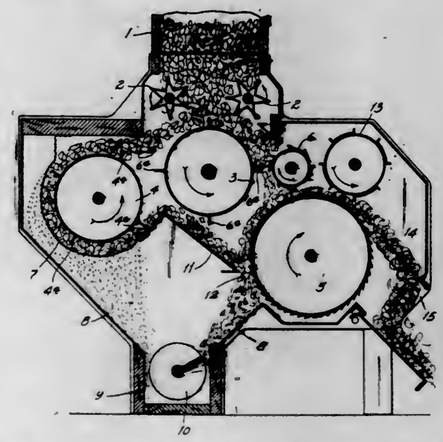


1,805,218. TEMPERATURE CONTROL MEANS FOR MOLTEN GLASS. LEOPOLD MAMBOURG, Lancaster, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 5, 1928. Serial No. 267,529. 8 Claims. (Cl. 49—17.)

4. In apparatus for producing sheet glass, a drawing chamber containing a mass of molten glass from which the sheet is adapted to be drawn, a plurality of heat conducting flues submerged within the mass of molten glass and extending transversely of the chamber at spaced locations longitudinally thereof, intake and exhaust manifolds arranged at opposite sides of the drawing chamber and with which the opposite ends of said flues communicate, means for creating a continuous circulation of gaseous fluid through the manifolds and flues, means associated with the intake manifold for heating the gaseous fluid prior to its passage through said flues, and a damper associated with the intake end of each flue for controlling the amount of heated gaseous fluid passing therethrough to the outlet manifold.

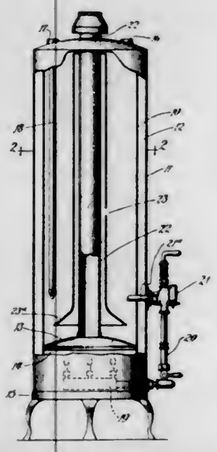
1,805,219. FEEDING MECHANISM FOR PUNCH PRESSES. GEORGE FRANKLYN MATTESON, Rocky Hill, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed May 2, 1925. Serial No. 27,573. 28 Claims. (Cl. 153—2.)

1. A machine comprising means for moving a blank in one direction to a position for operation thereon, means for moving said blank in a transverse direction to another and different position for operation thereon, a single means carrying work performing elements for performing successive operations upon said blank in said different positions, and means for further moving the blank in its initial direction of movement.



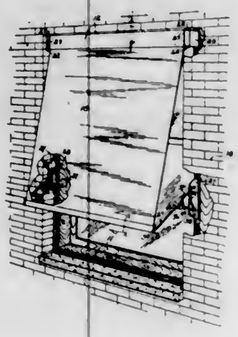
1,805,220. METHOD OF AND APPARATUS FOR BLOCKING HATS. MAURICE MILLER, Pottstown, Pa. Filed July 11, 1928. Serial No. 291,793. 2 Claims. (Cl. 223—23.)

1. In a hat blocking machine, a table, shelves carried thereby, a brim treating member above said table comprising a chambered casing having the central portion of its top face imperforate and the portions surrounding said imperforate portion apertured, and means under the control of the operator to pass steam to the chamber of said casing.



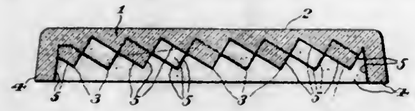
1,805,221. COMBINATION FEEDER-CLEANER AND EXTRACTING MACHINE. JOHN B. MITCHELL, Dallas, Tex. Filed Sept. 23, 1929. Serial No. 394,526. 9 Claims. (Cl. 19—37.)

1. In a combination cotton feeding, cleaning and extracting machine, feeding mechanism for delivering a



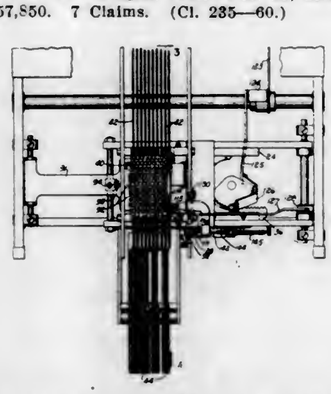
regulated stream of the harvested cotton to the machine, cleaning mechanism positioned to receive the delivered cotton, extracting mechanism adapted to act upon cotton mixed with hulls and sticks passing from the cleaning mechanism and comprising a saw cylinder and a co-operating kicker roll, and means for continuously delivering cotton from the cleaning mechanism to the extracting mechanism and for returning that part of the stream of cotton rejected by the kicker roll to the cleaning mechanism.

1,805,222. WATER HEATER. JAMES P. MORLEY, Michigan City, Ind., assignor to Bastian-Morley Company, La Porte, Ind., a Corporation of Indiana. Filed July 16, 1928. Serial No. 293,112. 6 Claims. (Cl. 122—159.)



4. A thermo-siphonic device for heating and circulating water in a tank comprising a conduit member adapted to be mounted within the tank, and means associated with said conduit member for segregating the water in said tank immediately adjacent the wall of said conduit into an annular series of relatively thin, separated streams which engage and pass longitudinally along in immediate contact with the outer wall surface of said conduit, and means for passing a heating medium through said conduit.

1,805,223. AWNING. NELS H. NELSON, Des Moines, Iowa. Filed May 13, 1929. Serial No. 362,731. 9 Claims. (Cl. 156—44.)

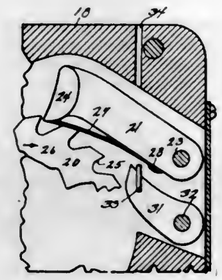


4. In a device of the class described, a flexible element, a swinging frame, a binder strip secured to said flexible element, a hook portion formed on said binder strip for detachably engaging the outer end of said frame; said hook portion having its free end bent inwardly beyond said frame when said frame is in the same for yieldingly retaining said frame in said hook portion.

1,805,224. REFLECTOR AND METHOD OF PROVIDING THE REFLECTING SURFACE THEREOF WITH MEANS FOR COLORING THE LIGHT REFLECTED THEREFROM. VICTOR L. OESTNAES, Westfield, N. J., assignor to American Gasaccumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 16, 1928. Serial No. 262,113. 2 Claims. (Cl. 88—1.)

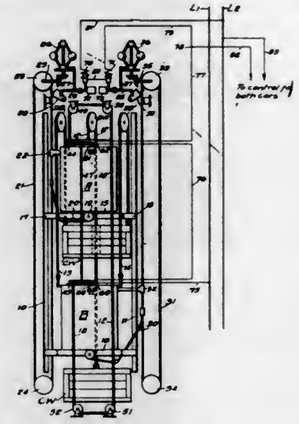
1. A light reflector comprising a transparent member having upon its rear side a plurality of projections the surfaces of each of which are arranged in right angular or approximately right angular relation to each other, and a transparent coating upon the said surfaces having embodied therein a coloring substance, the rear surface of the said coating being the reflecting surface of the said reflector.

1,805,225. CALCULATING MACHINE. WALTER J. PASINSKI and JOHN MAGNUS, Detroit, Mich., assignors to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 29, 1928. Serial No. 257,850. 7 Claims. (Cl. 235—60.)



4. In combination, in a machine of the class described having a laterally movable field of setting-up devices comprising rows of pins with the same number of pins in each row, means for selectively setting up said devices, and means for tabulating said field of setting-up devices laterally step by step; a stationary field of stops comprising a plurality of rows of movable stop pins with the number of pins in some rows differing from that in others, means for moving the field of setting-up devices bodily into engagement with the stationary field of stops to collectively position certain of said stops, and means for selectively positioning the stops in any row of said stationary field of stops in excess of the number corresponding to the number of setting-up devices in each row of said devices.

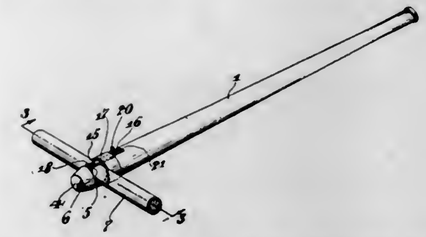
1,805,226. REVERSE MOTION CHECK. EDGAR J. RICHARDSON, Sheridan, Wyo. Filed Aug. 5, 1929. Serial No. 383,663. 9 Claims. (Cl. 192—4.)



1. In a reverse motion check, in combination with a vehicle transmission housing and a transmission shaft

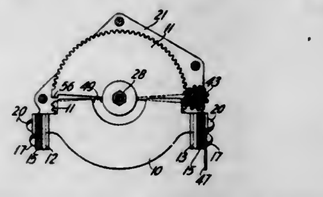
journalled therein, a ratchet wheel secured to the shaft, a pawl pivoted relative to the housing in position to engage the ratchet to check reverse movement of the shaft, and a silencing spring comprising a spring element secured at one end to the pawl and extending substantially

tangentially of the ratchet wheel between the pawl and the wheel, to engage the wheel and to support the weight of the pawl against the wheel, one end of the spring being free to recede away from the wheel to allow the pawl to engage the wheel.



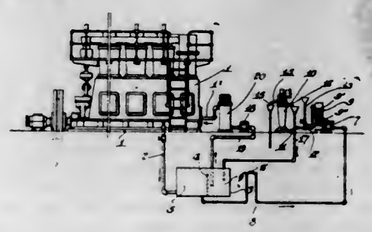
1,805,227. MULTIPLE-CAR ELEVATOR. WALTER S. RUGG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 27, 1929. Serial No. 366,347. 11 Claims. (Cl. 187—16.)

1. The combination with a plurality of elevator cars operable in the same hatchway and motive means for actuating said cars, of a safety mechanism therefor comprising a movable member disposed on each of said cars, means connected to each of said movable members and operably responsive to relative motion of said cars for operating said movable members, and means responsive to operation of said movable members for rendering said motive means inoperative when said cars approach each other within a predetermined distance.



1,805,228. CIGARETTE HOLDER. JAMES HERMAN ABBOTT, Philadelphia, Pa. Filed Dec. 12, 1927. Serial No. 239,284. 5 Claims. (Cl. 131—10.)

1. A holder for holding cigarettes at points intermediate their opposite ends when they are being smoked, the said holder comprising an elongated stem-like portion having a passageway extending lengthwise thereof through which the smoke from a burning cigarette is adapted to be drawn and the said holder having at its outer end an opening extending transversely therethrough

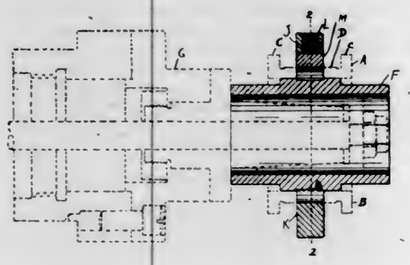


with which the outer end of the said lengthwise extending passageway is in communication, the said transversely extending opening being adapted to receive and hold a cigarette.

1,805,229. VARIABLE ELECTRICAL APPARATUS. GEORGE F. ATWOOD, Newark, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 28, 1926. Serial No. 132,080. 7 Claims. (Cl. 175—41.5.)

1. In a variable condenser, a plurality of stationary plates, a plurality of movable plates insulated from said stationary plates and having gear teeth at a peripheral portion, a pinion gear in mesh with the gear teeth of one of said movable plates, means for revolving said pinion gear to move one of said movable plates between adjacent stationary plates, and means for positioning a second of said movable plates into mesh with said pinion gear as said first mentioned movable plate is moved out of mesh with said pinion gear.

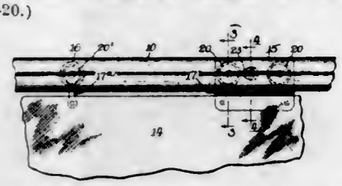
1,805,230. LUBRICATING SYSTEM. ARTHUR U. AYRES, Philadelphia, Pa., assignor to The Sharples Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed Mar. 22, 1926. Serial No. 96,477. 11 Claims. (Cl. 184—6.)



1. A lubricating system for supplying oil to parts to be lubricated which comprises means for collecting and settling oil that has been used for the lubrication of said parts, means for centrifuging a heavier portion of the settled oil, and means for recirculating to said parts the lighter portion of the settled oil together with centrifuged oil both substantially free of unsettled oil, in a continuous sequence of operations.

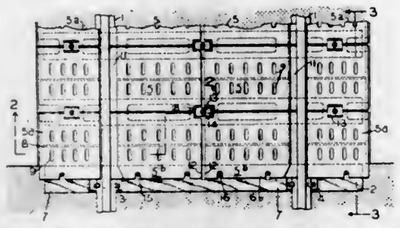
1,805,231. DOLL. ABE BLAUSTEIN, New York, N. Y. Filed July 11, 1930. Serial No. 467,262. 3 Claims. (Cl. 46—40.)

1. A doll having movable eyes and mouth, a bellows cry sounder supported in the doll and exposed through an opening so as to be compressible to give out crying sounds, a lever connected with the movable mouth, a weight connected with the movable eyes and resting on said lever, and means associated with said bellows cry sounder and coactable with said lever to move the latter element for moving the mouth and eyes simultaneously with the crying operation, and moving the eyes and mouth several times for each depression of the bellows cry sounder.



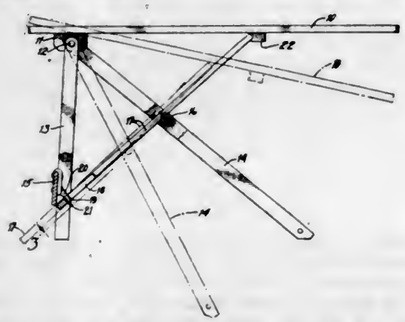
1,805,232. MEANS FOR HOLDING HALF BEARINGS ABOUT AN ARBOR PREPARATORY TO MACHINING. LOWELL C. BLOMSTROM, Detroit, Mich., assignor to Federal Mogul Corporation, Detroit, Mich., a Corporation of Michigan. Filed Aug. 6, 1927. Serial No. 211,085. 8 Claims. (Cl. 82—43.)

1. Means for holding a pair of half-bearings in position about a supporting element for machining operations upon selected portions of their periphera, comprising in combination therewith a two-piece ring having interlockable portions adapted to be united about the intermediate portions of the half bearings after the latter have been placed in position about the supporting element, and a screw carried by one of said ring sections, adapted to be moved transversely of the lengthwise axis of the supporting element and of the assembled half-bearings into frictional engagement with the outer surface of one of the half-bearings.



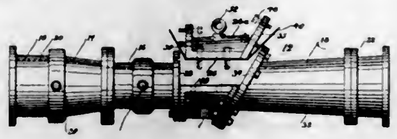
6. The combination, with a two-piece ring formed of terminally interlockable separable pieces, of a screw member adjustably engaging through one of said pieces transversely of the cylindrical axis of said ring when assembled, said screw member when projected against a mass encircled by said ring being adapted to exert a separating influence on the parts thereof which is resisted by the interlocked position of the ends of the component parts thereof, thereby effecting a holding action by the ring structure as a whole upon a pair of half-bearing shells surrounded thereby, and an arbor member positioned coaxially within said half-bearing shells, against whose surface the half-bearing shells are adapted to be pressed by the described action of said ring structure.

1,805,233. CURTAIN SUPPORT. JAMES H. BOYE, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 21, 1930. Serial No. 454,246. 5 Claims. (Cl. 156—20.)



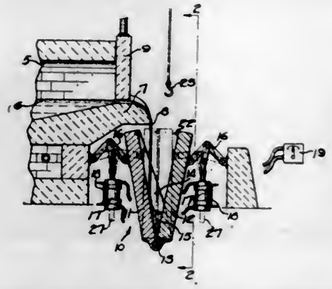
4. As an element of a draw curtain support, a curtain hanger slide comprising a plate, a pair of rollers mounted on one side of said plate to travel in a longitudinally slotted hollow curtain rod, an inclined laterally extending tongue on said plate located between said rollers and adapted to project into the rod through the slot thereof, said tongue being longitudinally slotted for the passage of the cord therethrough, and a clamp screw mounted in said plate adjacent to the base of said tongue adapted to pinch the cord against a wall of the slot of said tongue.

1,805,234. RAILWAY GRADE CROSSING CONSTRUCTION. GEORGE R. BURKHARDT, Chicago, and CHARLES W. BREED, Western Springs, Ill. Filed Aug. 12, 1929. Serial No. 385,135. 11 Claims. (Cl. 238—8.)



1. A metallic railroad crossing composed of substantially rectangular units arranged in rows parallel with the rails of the track, said units being tubular and having laterally extending flanges by which they are suppported.

1,805,235. FOLDING TABLE. CHARLES G. CARLSON, Chicago, Ill. Filed May 7, 1930. Serial No. 450,354. 8 Claims. (Cl. 69—10.)

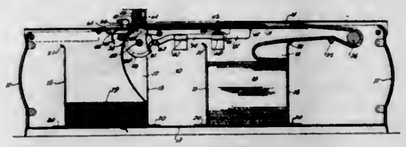


1. An ironing table comprising a board, a pair of leg members pivotally secured thereto, a rigid stay pivotally mounted on one leg member, means on the board adapted to be engaged by the stay, and means including a pin on the other leg member and an L-shaped slot in the stay in which the pin runs for securing the stay to said other leg member against lengthwise movement when erected.

1,805,236. VENTURI METER. FREDERICK N. CONNET, Providence, R. I., assignor to Builders Iron Foundry, Providence, R. I., a Corporation of Rhode Island. Filed Oct. 25, 1927. Serial No. 228,678. 4 Claims. (Cl. 137—75.)

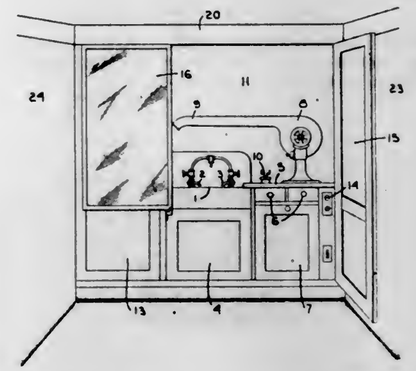
1. A Venturi meter tube particularly adapted for measuring fluids in which reposition or clogging takes place requiring clearing of the meter at intervals, which comprises a converging tube section, a diverging tube section, and a throat section, said Venturi tube having a removable wedge portion at the throat thereof, whereby said portion may be readily removed and replaced without the disturbance of the adjacent sections of the meter.

1,805,237. SHEET MOLDING APPARATUS. JOHN L. DRAKE, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 8, 1926. Serial No. 86,735. 4 Claims. (Cl. 49—72.)



1. In sheet glass apparatus, a mold comprising a pair of approximately vertical mold plates pivotally associated with one another and normally positioned in upwardly diverging relation to create a mold cavity therebetween for receiving therein a quantity of molten glass, and means for moving said plates toward one another to reduce the molten glass therebetween to sheet form, including a link mechanism associated with each plate, and separate operating means for each link mechanism.

1,805,238. VENETIAN BLIND. WALTER E. DUNCANSON, New York, N. Y., assignor to J. G. Wilson Corp., New York, N. Y., a Corporation of Virginia. Filed Mar. 27, 1928. Serial No. 264,983. 7 Claims. (Cl. 156—17.)

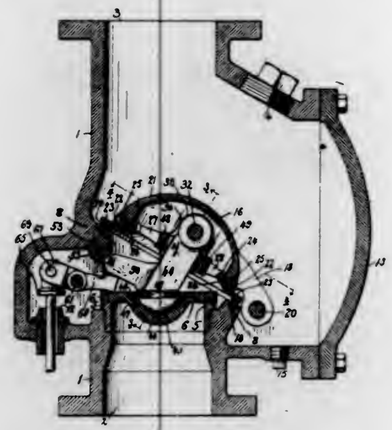


1. In a venetian blind, a plurality of detachable resilient slats supported by supporting tapes, guide members therefor fastened to the sides of a window casing, the flexing of the slats, making the same detachable from the guide members.

1,805,239. AUTOGRAPHIC REGISTER. WILLIAM E. DUNNING, Alliance, Ohio, assignor to The McCaskey Register Company, Alliance, Ohio, a Corporation of Ohio. Filed Sept. 20, 1930. Serial No. 483,268. 14 Claims. (Cl. 282—16.)

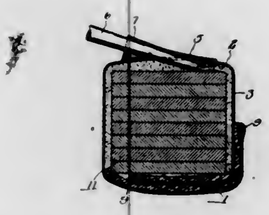
1. An autographic register including a casing adapted to contain a longitudinally folded record strip, a table in the casing, a moveable knife in the casing, feed rolls for feeding the folded record strip over the knife to cut the strip along its folded edges, and means cooperating with the moveable knife for holding the strip taut across the table to permit writing upon the strip.

1,805,240. HAIR-DRESSING BOOTH. BERTHOLD W. FRANKEL, Brookline, Mass. Filed July 11, 1928. Serial No. 291,908. 1 Claim. (Cl. 20—1.11.)



A hair-dressing booth having at one end a closet provided with a swinging door and a compartment adjacent said closet to receive working apparatus and a two-part closure for said compartment comprising a swinging door or panel and a sliding mirror, the door or panel being pivotally hung at the end of the compartment opposite the closet and when closed partially closing the compartment and the mirror being slidable toward and from the free edge of the door when the latter is closed and in a plane parallel thereto, said mirror being of a dimension to close the portion of the compartment between the free edge of the door or panel when the latter is closed and the closet, and being slidable in front of the closed closet door to open the compartment.

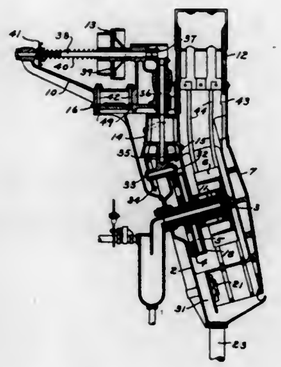
1,805,241. DRY PIPE VALVE. WILLIAM B. GRIFFITH, Audubon, N. J., assignor to Star Sprinkler Corporation, a Corporation of New Jersey. Filed Sept. 23, 1926. Serial No. 137,218. 4 Claims. (Cl. 169—21.)



1. A dry pipe valve comprising a casing having an air valve seat and a water valve seat formed therein, a clapper pivoted upon the casing, an air valve, a clamp-ring secured to the clapper adapted for holding the air valve upon the clapper, a bearing mounted upon said clamp-ring,

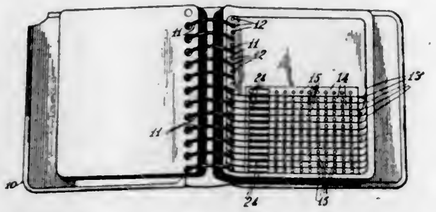
a shaft in said bearing, a lever having one end pivoted upon said shaft, a water valve pivotally mounted upon said lever, a part upon the casing forming a stop, and an

arm fixed to the lever adapted to engage said stop when the water valve is in the closed position upon the water valve seat.



1,805,242. LEAF SPRING OILER. WILLIAM GRUS, Jr., Los Angeles, Calif. Filed July 2, 1926. Serial No. 120,059. 2 Claims. (Cl. 184—1.)

1. A leaf spring oiler comprising a waterproof flexible fabric cover sheet and an inner absorbent pad substantially coextensive therewith of a length to overlap when wrapped transversely about a leaf spring, the pad only having a recess extending from the top downwardly over the edges and constituting a reservoir and passages for saturating the pad and confining a body of lubricant against a portion of the edges of the leaves, the cover sheet having an oil filling aperture above the recess at the top of the pad, and a flexible cover for the aperture composed of a strip of the cover sheet material extending over the aperture and attached at its ends only at a distance from the aperture so that an oil can spout may be inserted from either side and into the aperture for filling the reservoir.

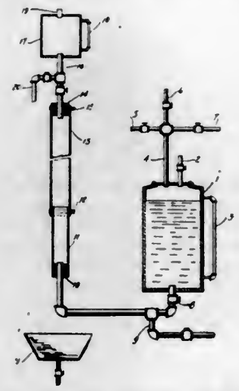


1,805,243. CAN FEEDING MECHANISM. OSWALD H. HANSEN, Milwaukee, Wis., assignor to Hansen Canning Machinery Corporation, Port Washington, Wis. Original application filed Sept. 22, 1922, Serial No. 589,888. Patent No. 1,677,443, dated July 17, 1928. Divided and this application filed Sept. 25, 1926. Serial No. 137,797. 8 Claims. (Cl. 198—22.)

1. In combination, means forming a chamber and a chute for delivering a succession of cylindrical cans with their axes horizontal downwardly toward said chamber, a feed drum having a helical projection extending into one side of said chute, said drum being directly engageable with the open end edges and said projection being rollably engageable with the lower curved side portions of the successive cans passing through said chute to re-

tard the travel of upper cans and to deliver the successive lower cans in definitely spaced relation into said chamber, and means associated with the opposite side of said chute for urging the successive cans into operative engagement with said projection.

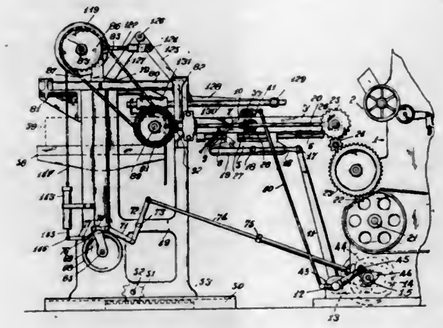
1,805,244. INDICATING MEANS. ROSS HAWKINS, Chicago, Ill., assignor to Harold E. Hawkins, Chicago, Ill. Filed Sept. 26, 1927. Serial No. 221,872. 4 Claims. (Cl. 129—1.)



1. Indicating means of the character described comprising a record or data receiving sheet, one marginal edge whereof is provided with a plurality of pockets open at one side, each pocket being provided with a sight-opening, and signaling slips insertible in said pockets.

3. In combination with a loose leaf binder, a plurality of sheets arranged in the binder so as to expose the lower marginal edge of each subjacent sheet, a strip of thin flexible material disposed throughout the lower marginal edge of each sheet and of width corresponding with the width of the exposed marginal edge of each sheet so as to maintain alignment of the superposed sheets, each of said strips being secured to the sheet at various points so as to provide a plurality of uniform pockets open at one longitudinal edge of the strip, each pocket being formed to permit visibility of its contents.

1,805,245. METHOD OF MAKING ARTICLES OF RUBBER AND FIBROUS MATERIAL, AND PRODUCT. ERNEST HOPKINSON, New York, and WILLIS A. GIBBONS, Little Neck, Long Island, N. Y., assignors to New York Belting & Packing Company, New York, N. Y., a Corporation of New York. Filed June 8, 1925. Serial No. 35,614. 12 Claims. (Cl. 91—68.)

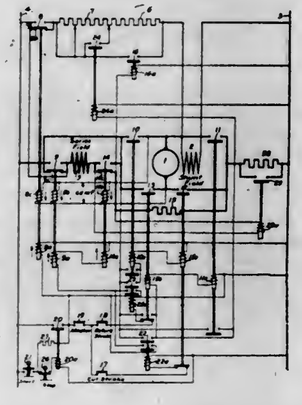


1. A process of manufacturing an article composed of fibrous material and rubber which consists in exposing

a surface of fibrous material to a water dispersion of rubber, continuously withdrawing the water through said fibrous material until a desired thickness of insoluble

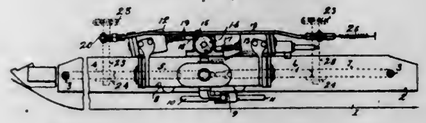
constituents of the water dispersion has been deposited on said surface from the water dispersion, and forming an integral fabric and rubber article by drying the deposit on the fibrous material.

1,805,246. FEEDING DEVICE FOR PRESSES. JOSEPH A. JOHNSON, Chicago, and GEORGE W. CHALMERS, Summit, Ill., assignors to International Patents Development Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 10, 1924. Serial No. 749,088. 13 Claims. (Cl. 271—31.)



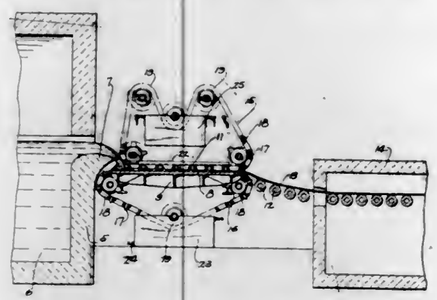
1. A sheet feeding apparatus, comprising a support for the stacked sheets, a vacuum cup for lifting the uppermost sheet, a plunger at the lower end of which the cup is carried, means for raising and lowering the plunger, there being a passage in the plunger communicating with the cup at its lower end and opening out through the side of the plunger at its upper end a guide block through which the plunger is reciprocated, there being a port in the guide block communicating with an exhausting apparatus, the passage in the plunger being brought into communication with the port when lowered and into communication with the open air when raised, and means for tilting the cup when raised.

1,805,247. PROCESS OF PURIFYING SULPHURIC ACID. FRANKLIN ERNEST KIMBALL, Long Beach, Calif. Filed Aug. 14, 1930. Serial No. 475,388. 2 Claims. (Cl. 23—173.)



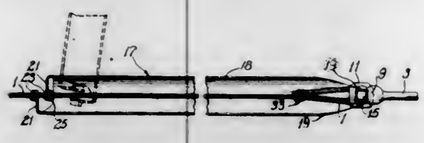
2. The process of oxidizing organic matter and carbon in sulphuric acid consisting in dissolving one per cent of antimonous sulphate therein, continuously agitating the sulphuric acid in a suitable vessel by continuously supplying air at a temperature of 500 degrees Fahrenheit thereto, continuously supplying the sulphuric acid containing the antimonous sulphate thereto, continuously withdrawing sulphuric acid therefrom, continuously withdrawing air therefrom, cooling same, collecting condensed sulphuric acid and continuously returning it back to the vessel.

1,805,248. MOTOR CONTROL SYSTEM. GEORGE E. KING, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 15, 1926. Serial No. 141,715. 19 Claims. (Cl. 172—240.)



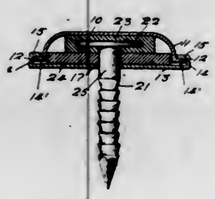
1. A system of motor control comprising a reversible motor having an armature winding, a series field winding and a shunt field winding, a braking resistor, a source of power, means for connecting said motor windings to said source, means rendered active upon failure of said power for connecting said shunt field winding across the armature winding, and means for connecting said braking resistor and said series field winding in series relation with the armature winding in a manner to aid the shunt field winding to provide automatic electric braking when the motor is running in either direction.

1,805,249. LOCK FOR FOLDING DOORS. THOMAS LAURENT, Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Oct. 1, 1927. Serial No. 223,278. 7 Claims. (Cl. 268—64.)



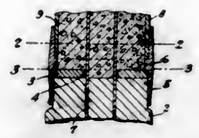
1. The combination with a plurality of folding doors and an engine for moving the doors of a valve for controlling the operation of the engine, separate penumatic means for operating said valve, means for locking the doors closed and means mechanically connected with said valve operating means and said locking means for releasing said locking means upon the operation of the valve.

1,805,250. SHEET WIDTH MAINTAINING DEVICE. LEOPOLD MAMBOURG, Lancaster, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 5, 1926. Serial No. 146,818. 9 Claims. (Cl. 49—17.)



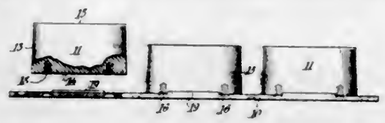
1. In sheet glass apparatus, a slab, means for flowing glass thereon, and means contacting with the edges of the flow while on said slab and moving therewith to prevent narrowing thereof.

1,805,251. GUY GUARD. CLAUDE L. MATTHEWS, St. Louis, LESTER PIERCE BOLL, University City, and LINDELL LLOYD CRUMP, Kirkwood, Mo., assignors to W. N. Matthews Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 15, 1930. Serial No. 502,342. 6 Claims. (Cl. 189—31.5.)



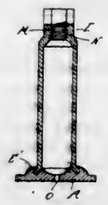
1. A guy guard comprising a longitudinal body portion, spaced gripping means formed on said body portion, said means being adapted to freely receive a guy strand therebetween when said body portion is angularly disposed to said guy strand, said means being adapted to securely engage said guy strand when said body portion is angularly turned to substantially align with said strand.

1,805,252. FURNITURE LEG SHOE. ROBERT E. MILLER, Bronxville, N. Y. Filed Apr. 19, 1928. Serial No. 271,106. 5 Claims. (Cl. 16—42.)



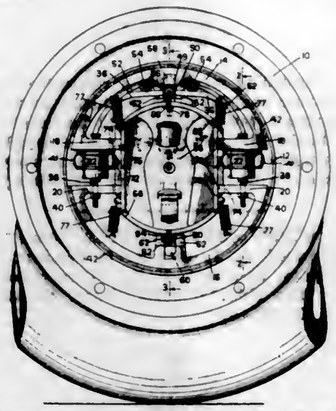
1. A sliding shoe for furniture, comprising a rigid bottom member and a rigid upper member defining an enclosed chamber between them, said members being relatively movable to vary the distance between them, an attaching element having a head within said chamber and a stem extending out of said chamber through said upper member, and a resilient padding between said members for yieldably holding them apart, a portion of said padding lying between said head and said upper member.

1,805,253. COMPOSITE PILE. LOUIS NADEL, New York, N. Y., assignor to Pierce Steel Pile Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 21, 1930. Serial No. 445,875. 2 Claims. (Cl. 61—57.)



1. A composite pile comprising a wood pile, a plate thereon having a central opening, an external sleeve embracing the top of the wood pile and having an internal rib intermediate its ends overlying the margin of said plate, a permanent form stepped in the portion of said sleeve above said rib, a tubular dowel driven part way into the wood section, and a concrete filling inside said form and inside and outside the portion of said tubular dowel above the wood.

1,805,254. RUNNER BLOCK AND MOUNTING MEANS THEREFOR. JACOB R. OSBORN, Du Bois, Pa. Filed Nov. 17, 1925. Serial No. 69,629. 5 Claims. (Cl. 51—209.)

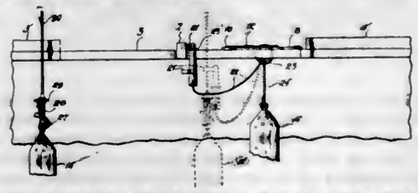


1. The combination, with a grinding deck, of a plurality of grinding runner blocks, a common mounting bar therefor, individual attaching means whereby each of said blocks may be detachably secured to the exposed face of said bar, and means whereby said bar and the attached blocks may be detachably secured to said deck, said bar-attaching means being readily accessible, for application and removal, from the block-receiving surface of the deck.

1,805,255. VALVE TAPPET AND METHOD OF FORMING THE SAME. WILLIAM C. OSTERHOLM, Oak Park, Ill., assignor to Wilcox Products Corporation, Detroit, Mich., a Corporation of Michigan. Original application filed Apr. 21, 1924, Serial No. 708,048. Divided and this application filed Dec. 27, 1926. Serial No. 157,847. 6 Claims. (Cl. 29—156.7.)

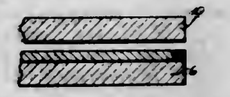
1. The method of manufacturing tappets and the like comprising the forming of a head with an annular recess therein bounded on the inner side by a conical surface, said head member having an annular flange extending substantially parallel to the axis of said head and forming the outer side of said recess, the forming of a separate tubular stem member, the end portion of which is of uniform diameter, applying endwise pressure to said head and stem to flare the end of said tubular member and conform the same to said conical surface, and pressing said annular flange inwardly to turn the same into such frictional inter-locking engagement with said flared tubular end as to prevent rotation of said head and stem.

1,805,256. HYDRAULIC BRAKE. ALBERT D. PENTZ, New York, N. Y., assignor to Pentz Motor Brake Corporation, New York, N. Y., a Corporation of New York. Filed May 26, 1927. Serial No. 194,272. 8 Claims. (Cl. 188—152.)



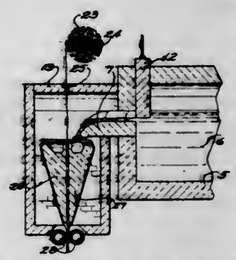
1. In a brake for vehicles, in combination, a brake drum, two semicircular brake shoes oppositely disposed within said drum, and a pair of hydraulic thrust devices between said shoes for forcing them apart and into contact with said drum, said devices being fast to one of said shoes and arranged to thrust directly against the other of said shoes so that the reaction on one shoe will be equal to the thrust on the other shoe.

1,805,257. DISPENSING BOTTLE STOPPER. FREDERICK D. PITT, Kansas City, Mo. Filed Sept. 8, 1927. Serial No. 218,209. 7 Claims. (Cl. 215—78.)



1. A dispensing bottle stopper including an elastic channeled body adapted for location in a bottle neck and having an annular shoulder for engaging the rim of the neck, a cap on said body, an attaching member on said cap having a cam portion engageable with the bottle neck to press the shoulder against the neck rim and retain the stopper, and a valve controlling outlet through the body channel.

1,805,258. AIR MAIL EXCHANGE DEVICE. CORNELIOUS C. PURSLEY, Hillsboro, Tex., assignor of one-half to Douglas W. Cooper, Hillsboro, Tex. Filed July 21, 1930. Serial No. 469,404. 5 Claims. (Cl. 258—1.)



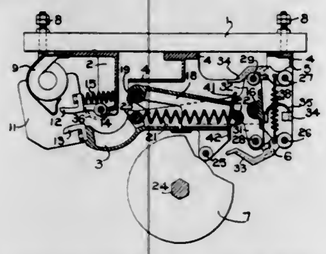
1. An air mail exchange apparatus comprising an elevated support, a platform disposed above the support, said platform formed with inwardly converging guideways leading to a longitudinal opening in the platform; means adjacent said guideways for suspending an outgoing mail bag; a cable adapted to be suspended from an aeroplane and carrying means for suspending an incoming mail bag; means on said platform for automatically releasing said in-coming mail bag by contact with said cable; and a tripping mechanism on said platform for releasing said outgoing mail bag in conjunction with said cable.

1,805,259. PROCESS OF PRODUCING LAMINATED GLASS. JAMES W. H. RANDALL, New York, N. Y., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 24, 1928. Serial No. 256,592. 2 Claims. (Cl. 49—81.)

1. The process of producing laminated glass consisting in arranging a sheet of non-brittle material on a sheet of glass, mounting sealing material strips on said sheet of glass and around the non-brittle sheet and in the same plane therewith, then placing a second sheet of glass thereover and combining the whole into a composite structure.

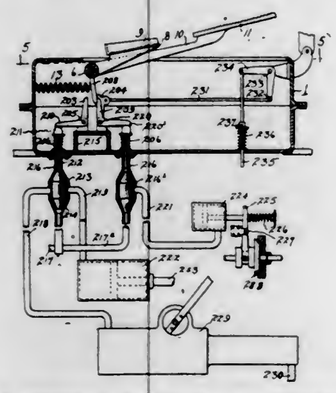
1,805,260. SHEET GLASS APPARATUS. JOSEPH A. REECE, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed July 16, 1927. Serial No. 206,145. 2 Claims. (Cl. 49—32.)

2. In sheet glass apparatus, a substantially vertically arranged slab composed of two adjacent sections having a vertical opening therebetween, each section having a though in its upper end and the opposite ends of the troughs of the two sections communicating with one another, means for flowing glass into one of said troughs from where a portion of it will pass into the other trough, the glass flowing from the troughs downwardly over the slab to form a sheet, means for passing a wire mesh downwardly through the opening between the slab sections, and a pair of rolls for reducing the sheet to the desired thickness as it leaves said slab.



1,805,261. MACHINE FOR MAKING SHELLS FOR AUTOMOBILE HEATERS AND THE LIKE. THOMAS H. ROBERTS and JOHN R. HOLMES, Detroit, Mich., assignors to James W. Kelch, Detroit, Mich. Filed Dec. 31, 1928. Serial No. 329,619. 17 Claims. (Cl. 113—34.)

1. In a machine for making shells for automobile heaters, means including a mandrel for bending a sheet of ma-



terial into the approximate form of the shell, a support for the mandrel having a portion projecting beyond one end of the mandrel for supporting the sheet after the bending operation, and means movable longitudinally of the supporting means for seaming the ends of the sheet to form the finished shell.

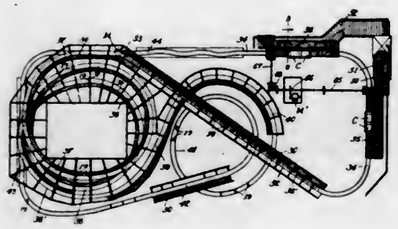
1,805,262. CONTROL APPARATUS. EDWARD E. ROSE, Edgewood, Pa., and JOHN T. WELSH, Westfield, N. J.; said Rose assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 16, 1927. Serial No. 199,146. 3 Claims. (Cl. 200—68.)

1. A circuit-interrupting device comprising a frame, a stationary contact member carried by the frame, a movable contact member disposed to engage the stationary contact member, the movable contact member being pivotally mounted on the frame, resilient latching members disposed to engage the movable contact member, an arm pivotally mounted on the frame for operating the movable contact member, a cam member for actuating the arm resilient means connecting the freely movable ends of the cam actuated arm and the movable contact member, said resilient means being disposed to bias the movable contact member to different positions in response to the movement of the cam actuated arm and to cause said arm to continuously react against the cam, and means operated upon the actuation of said arm for operating the latching members to release the movable contact member when the arm reaches different predetermined positions, to utilize the resilient means in actuating the movable contact member.

1,805,263. HEEL AND TOE CONTROL OF VEHICLES. HAROLD ROWNTREE, Scarsdale, N. Y., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Feb. 9, 1929. Serial No. 338,672. 12 Claims. (Cl. 180—77.)

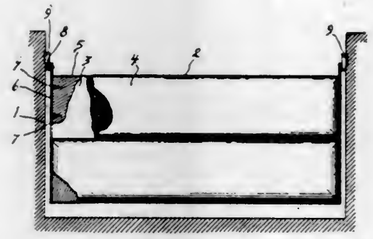
1. In a pneumatic car control, the combination with pneumatic brake, door operating and clutch mechanism, of a single lever for controlling said mechanism.

1,805,264. ATTACHING MEANS FOR REMOVABLE DENTURES. CARL H. SCHEU, Lakewood, Ohio. Filed Dec. 1, 1927. Serial No. 236,911. 12 Claims. (Cl. 32—12.)



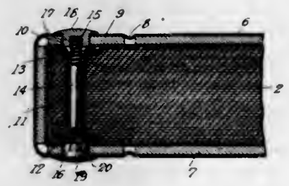
10. In a fastening means for a removable denture, a box-like member adapted to be positioned in the side of a tooth having a vertically arranged fin defining a pair of longitudinally disposed recesses, and a complementary member having portions adapted to be detachably received and supported in the recesses of said first named member.

1,805,265. SCREW CONVEYER PILE. JOHN W. TAUSIG, Englewood, N. J., assignor to Raymond Concrete Pile Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 17, 1926. Serial No. 88,727. 4 Claims. (Cl. 61—57.)



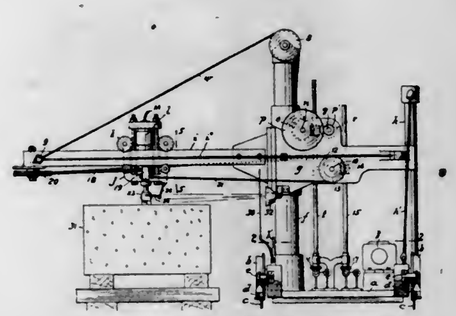
4. The method of forming a concrete pile in situ which comprises driving a screw conveyer having a bore lengthwise through it into position, filling the hole formed thereby with concrete, inserting a reinforcing rod through the bore of the conveyer, and finally withdrawing the conveyer, leaving the reinforcing rod in position in the finished pile.

1,805,266. AMUSEMENT COASTER RAILWAY. HARRY G. TRAVER, Beaver Falls, Pa. Filed Apr. 11, 1927. Serial No. 182,719. 10 Claims. (Cl. 104—63.)



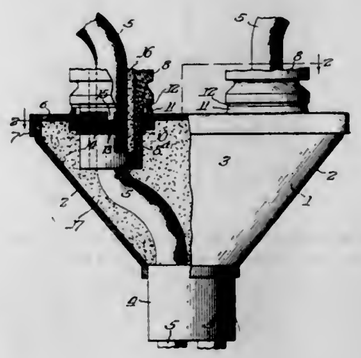
1. In a coaster amusement railway, a continuous track having a loading and unloading station interposed in a low and level section thereof, an ascending section leading from the loading station and a declivous section leading from the top of the ascending section arranged in successive loops evolved about an axis intermediate the perpendicular and horizontal.

1,805,267. BOWLING ALLEY PIT CUSHION STRUCTURE. THEODORE R. TREIBER, Chicago, Ill., assignor, by mesne assignments, to The Brunswick-Balke-Collender Company, a Corporation of Delaware. Filed Oct. 17, 1927. Serial No. 226,592. 1 Claim. (Cl. 273—53.)



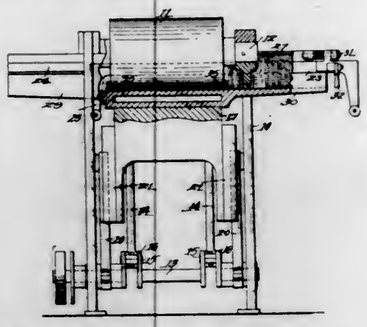
In a bowling alley pit cushion structure the combination with a rectangular pit cushion having a continuous groove about the sides thereof, of U-shaped pivot members adapted to be attached in upright positions to stationary means at the ends of the cushion, a right angled U-shaped supporting member embracing three sides of the cushion and engaged in said groove and adapted for reversal thereon and to be secured therewith, and alined outwardly projecting pivot pins secured at the ends of said supporting member for engagement in said first mentioned pivot members to pivotally support the cushion.

1,805,268. CHECK BOOK. LOUIS F. TRESBACK, Teaneck Township, Bergen County, N. J. Filed June 4, 1930. Serial No. 459,159. 1 Claim. (Cl. 281—25.)



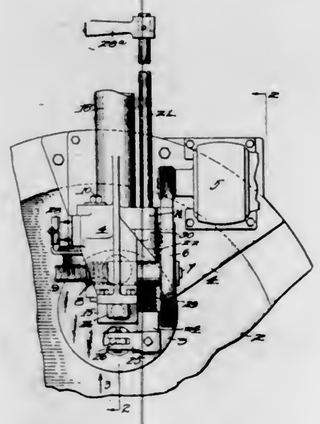
A book comprising a cover having a back portion provided with aligned apertures, a filler consisting of a plurality of sheets secured together by a tubular rivet having upset ends, a bolt provided with threaded ends, positioned in the rivet, and a pair of nuts adapted to be positioned in the apertured portions of said cover back and to have threaded engagement with the threaded ends of said bolt to detachably secure the filler to the cover back, each of said nuts being of a diameter and length to substantially fill the apertured portion of said cover back and to bear against the adjacent end of the rivet and being provided with a flat head adapted to overlie the apertured portion of the back, whereby the filler may be detachably secured in and be detached from the book back without distorting said book back.

1,805,269. STONE DRESSING MACHINE. WILBER H. VAN SICKEL, Langhorne, Pa., assignor to The Dallett Company, Philadelphia, Pa., a Corporation of New Jersey. Filed June 22, 1927, Serial No. 200,618. Renewed Oct. 18, 1930. 6 Claims. (Cl. 125—8.)



1. A stone dressing machine comprising a mobile base, an arm adjustably supported from said base, a power actuated tool supported by and adapted to travel relative to said base, means for adjusting said arm and for moving said tool relative to said arm, prime movers supported on said base and adapted to actuate said means, a prime mover for moving said base, an operator's station on said base and means for the control of said prime movers located at said operator's station.

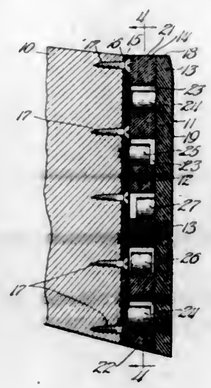
1,805,270. ELECTRICAL CONNECTER. PAUL F. WILLIAMS, Chicago, Ill., assignor to G & W Electric Specialty Co., Chicago, Ill., a Corporation of Illinois. Filed June 17, 1922. Serial No. 569,058. 1 Claim. (Cl. 217—6.)



A device of the class specified, comprising a shell, a screw-threaded aperture therein, an outlet arranged to occupy the said aperture, an exteriorly screw-threaded flexible collar secured to the outlet, a notch in the collar, a key in the outlet integral therewith, the said key engaging the said notch, whereby the rotation of the outlet will transmit rotation to the collar.

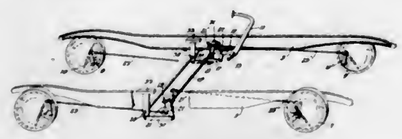
1,805,271. DOUBLE MATRIX OPERATING DEVICE. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Oct. 28, 1926, Serial No. 144,876. Renewed Oct. 2, 1930. 14 Claims. (Cl. 22—5.)

1. In a stereotype plate casting device, the combination with a mold comprising a convex core and a concave back, of means whereby a matrix can be moved out of the mold in an axial direction and supported at the end of the mold.



1,805,272. ELECTRICALLY OPERATED METAL PUMP. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Dec. 18, 1926, Serial No. 155,667. Renewed Apr. 15, 1930. 11 Claims. (Cl. 22—70.)

1. In a stereotype plate metal pump, the combination with the pump, its piston and a by pass valve which, when opened, prevents the pump from forcing metal up the spout thereof, of power operated means for lifting the piston to discharge metal, of a switch for controlling said power operated means, hand-operated means for closing said switch and opening the by-pass, and automatic means for thereafter throwing off the power when the piston has made a complete stroke in both directions.

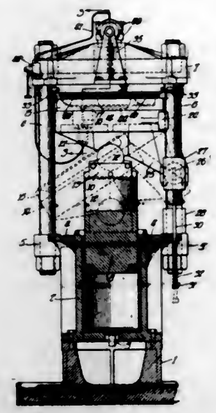


1,805,273. RECOIL PAD FOR GUNS. ALBERT H. AMMANN, Chicago, Ill., assignor to Jostam Manufacturing Co., Chicago, Ill., a copartnership composed of W. D. Stannard and A. H. Ammann. Filed Sept. 3, 1926. Serial No. 369,853. 12 Claims. (Cl. 42—74.)

6. In a recoil pad, the combination of a resilient casing with a plurality of resilient bodies of different size for engaging the walls of said casing at different stages of distortion of said pad.

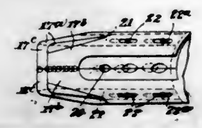
7. In a recoil pad for guns the combination of a support with a resilient rubber cushion carried by said support and having a closed air pocket, said cushion comprising porous rubber adapted to throttle the passage of air from said pocket to improve the resilient characteristics of said pad.

1,805,274. BRAKE. BERNARD H. ANDERSON, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 3, 1929. Serial No. 375,737. 2 Claims. (Cl. 188—204.)



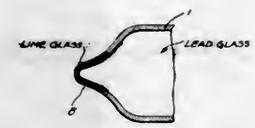
1. In brake operating mechanism, front wheel brakes, rear wheel brakes, brake operating means, connections between the brake operating means and brakes including a rock shaft, means to support said rock shaft for movement whereby said rock shaft may function to effect equalization between the front brakes and rear brakes, inertia means, connections from said inertia means to said rock shaft supporting means whereby said inertia means may, under the influence of deceleration, move said rock shaft supporting means and thereby move said rock shaft to unbalance equalization and vary the intensity of brake action of the front wheel brakes and rear brakes.

1,805,275. FORMING PRESS. JOSEPH W. BISHOP, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 27, 1928. Serial No. 249,843. 8 Claims. (Cl. 18—16.)



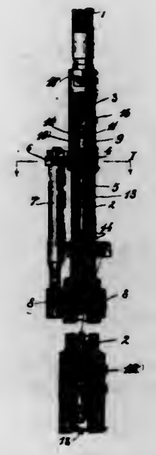
1. In a press, a movable platen, a mold on said platen, a support, a plurality of additional molds shaped to act as complements to the first mentioned mold and slidably mounted on said support, for substantially straight line movement, a cylinder, a double-acting piston rigidly

secured to said additional molds, reciprocable by fluid pressure in said cylinder for sliding said additional molds



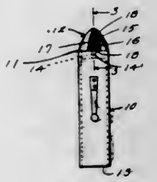
on said support to align any selected one of them with the first mentioned mold, and means for moving said platen to compress the aligned molds together.

1,805,276. PLIERS FOR CUTTING AND SCRAPING INSULATIONS FROM WIRES. THEODORE CHUCTO, Rockaway Beach, N. Y. Filed Feb. 5, 1929. Serial No. 337,552. 2 Claims. (Cl. 81—9.5.)



1. A pair of pliers of the class described comprising a pair of opposed jaw members pivotally connected and operable by handles extended to the rear of the pivot point, insulation stripping walls with opposed knife edges disposed within the outer surface of the pliers with wire passage notches for different gauge wires slidably mounted upon the jaw members and formed with slots, each of the insulation stripping walls consisting of front and rear plates and screws engaged through the said slots and into said jaw members for holding the front and rear plates in relative positions for determining the sizes of the wire passage notches.

1,805,277. CASING STRUCTURE FOR ELECTRICAL APPLIANCES. PAUL K. CHAMBLEY, Elkhart, Ind., assignor, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a Corporation of Delaware. Filed Mar. 5, 1930. Serial No. 433,312. 4 Claims. (Cl. 200—152.)

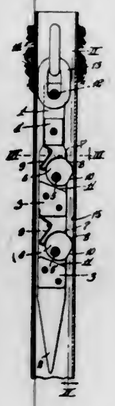


1. A mercury switch comprising an outer envelope of lead glass, electrodes sealed therein, a body of mercury in the envelope cooperable with the electrodes, and a sealing tip constituted of lime glass and fused to the lead glass of the outer case.

1,805,278. RIFLE ATTACHMENT FOR FIRING MINIATURE AMMUNITION. KARL DANTHINE, Bern, Switzerland, assignor to Heinrich Surber, Zurich, Switzerland. Filed Dec. 1, 1928, Serial No. 322,992, and in Switzerland Dec. 8, 1927. 9 Claims. (Cl. 42—77.)

4. A device for firing small calibre ammunition from rifles, comprising an auxiliary barrel disposed co-axially of the rifle barrel and extending in its entirety beyond the end of the rifle barrel, and means insertible in the bore of the rifle barrel to support the said auxiliary barrel beyond the end of the rifle barrel.

1,805,279. FOUNTAIN PEN ERASER AND BURNISHER. WILLIAM M. FLOYD, Cincinnati, Ohio. Filed Sept. 8, 1930. Serial No. 480,556. 4 Claims. (Cl. 120—36.)

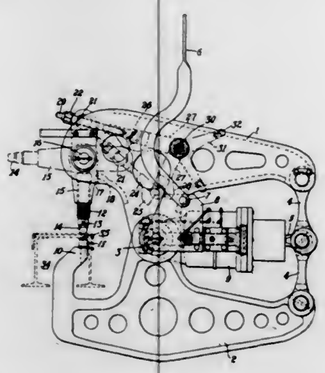


1. In combination with a fountain pen cap, a cone shaped member, means for securing the cone shaped member to the closed end of the cap, said cone shaped member having a pair of diametrically opposed recesses in the surface thereof, an erasing member mounted in one of said recesses, and a burnishing member mounted in the other of said recesses.

1,805,280. PIPE PULLER FOR REMOVING OR PULLING PIPES OR CASINGS FROM WELLS AND THE LIKE. J. RAY GILL, Portland, Mo. Filed Apr. 20, 1929. Serial No. 356,683. 3 Claims. (Cl. 294—97.)

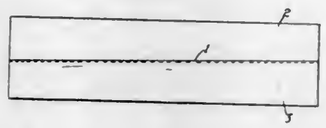
1. A pipe puller comprising a pair of vertically extending side members, and a spring actuated dog having an

arcuate gripping surface supported between said side members adapted to engage the interior of a pipe length



when the puller is mounted in the pipe and force opposing edges of said members against the opposite side of the pipe.

1,805,281. PROCESS FOR EFFECTING ESTER CONDENSATIONS. PAUL HALBIG and FELIX KAUFLER, Munich, Germany, assignors to Dr. Alexander Wacker Gesellschaft fur Elektrochemische Industrie, Munich, Germany, a Corporation. Filed Apr. 19, 1929, Serial No. 356,595, and in Germany May 14, 1928. 6 Claims. (Cl. 260—106.)



1. Process for effecting the condensation of esters comprising heating an alkyl ester of aliphatic monocarboxylic acid in the presence of an alkali metal alcoholate and distilling off the alcohol formed thereby during the reaction.

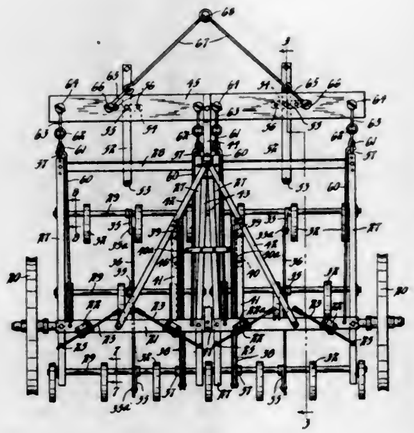
1,805,282. PINCH RIVETER. KARL R. HAMMERSTROM, Hammond, Ind., and LARS H. VOLD, Butler, Pa. Filed Nov. 4, 1927. Serial No. 231,016. 3 Claims. (Cl. 78—48.)

1. A riveting machine comprising in combination a pair of levers, a die holder pivotally mounted on one of said levers, and a die secured on the other of said levers in cooperative alinement with said die holder, and an abutment on said lever for engaging the die holder in its vertical operative position, and a toggle mechanism for moving said holder out of alinement with its cooperating die, said toggle mechanism being provided with abutments for securing the movable die holder against displacement when in its operative position.

1,805,283. METHOD OF MANUFACTURING HOLLOW ARTICLES. KARL R. HAMMERSTROM, Butler, Pa. Filed Nov. 5, 1927. Serial No. 231,376. 3 Claims. (Cl. 113—33.)

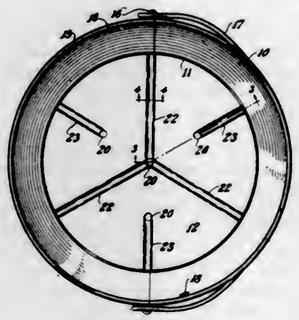
1. The method of forming tapered hollow articles which comprises forming a blank by cutting skelp of rectangular shape at an angle along one side thereof, the angle corresponding to the degree of taper desired in the hollow article and subjecting the blank so made to a series of die pressing operations to form a cylindrical structure with the edges of the skelp in substantial abutment.

1,805,284. AUTOMOBILE BUMPER. GALE H. HEDRICK, Glenshaw, Pa., assignor to Gem Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 8, 1930. Serial No. 442,519. 5 Claims. (Cl. 293—55.)



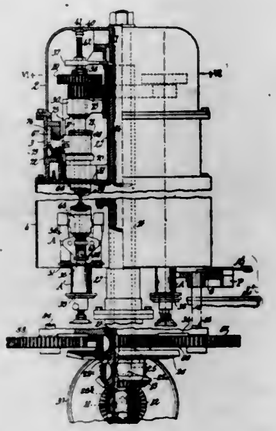
1. A clamp for fastening bumpers for automobiles comprising a medallion having a peripheral flange, and a clamping bracket secured to said flange in spaced relation with said medallion, said bracket having a relatively narrow opening for a bolt the head of which is complementary to the shape of said opening whereby the bolt may be inserted with its head in the space between the bracket and medallion and turned with the longitudinal axis of the head at right angles to the longitudinal axis of said opening.

1,805,285. CENTER TESTER. JOSEPH H. JACOBS, Rochester, N. Y. Filed Apr. 1, 1929. Serial No. 351,665. 4 Claims. (Cl. 33—169.)



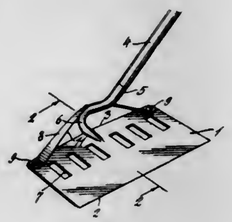
1. A center tester comprising, in combination, a tubular handle having a plurality of radially spaced cuts extending inwardly from one end thereof, whereby a plurality of spaced fingers are formed, the inner surfaces of the fingers being concave near their free ends, a scriber attached to the handle, one end of said scriber terminating in a conical point adapted to be inserted into a depression, the other end terminating in a ball adapted to be seated in the concave portions of the fingers and means for ejecting the ball from its seat.

1,805,286. HARROW HAVING SPRING TEETH. JOHN R. KOVAR and LOUIS W. KOVAR, Owatonna, Minn., assignors to Joseph J. Kovar Company, Owatonna, Minn., a Corporation of Minnesota. Filed Sept. 14, 1927. Serial No. 219,424. 11 Claims. (Cl. 55—92.)



1. A harrow having in combination, a pair of tooth-carrying sections comprisings a pair of spaced relatively movable drag bars, a tie bar to which said drag bars are flexibly connected for universal movement, and a runner pivotally connected to said tie bar for supporting each section when said sections are operating.

1,805,287. FRUIT PICKING PAIL. ARTHUR J. KRANTZ, Dover, Ohio, assignor to The Reeves Manufacturing Company, Dover, Ohio, a Corporation of Ohio. Filed May 21, 1929. Serial No. 364,786. 5 Claims. (Cl. 220—1.)

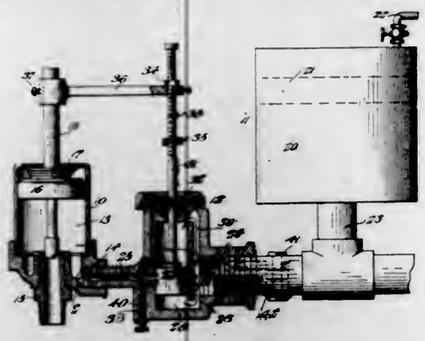


1. A fruit picking pail having an enlarged open top end and a drain aperture in its bottom, said aperture being countersunk to prevent marring of fruit contacting therewith.

1,805,288. MACHINE FOR SEAMING CAN HEADS. PETER KRUSE, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of Delaware. Filed Feb. 28, 1929. Serial No. 342,046. 15 Claims. (Cl. 113—24.)

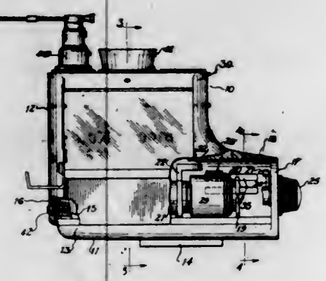
1. A machine for seaming tops on cans or the like, said machine comprising a plurality of rotary seaming-heads, means for carrying said heads progressively through an orbital path, and driving means adapted to synchronously rotate adjacent seaming-heads in opposite directions.

1,805,289. HOE. SHICHIGORO KUNO, Ogden, Utah. Filed Aug. 27, 1929. Serial No. 388,716. 1 Claim. (Cl. 97—65.)



A hoe comprising a blade having a shank of gooseneck shape secured to the center of the rear edge thereof, the end of the shank being provided with attaching means for a handle, a narrow auxiliary blade having its ends connected with the rear corners of the blade, the auxiliary blade being bowed away from the blade in the direction in which the shank extends and secured at its center to the gooseneck shank, the front edge of the auxiliary blade being sharpened.

1,805,290. AUTOMATIC CONTROL FOR LUBRICATORS. JOHN FRANKLIN MACINDOE, Philadelphia, Pa. Filed July 28, 1928. Serial No. 295,982. 9 Claims. (Cl. 184—103.)

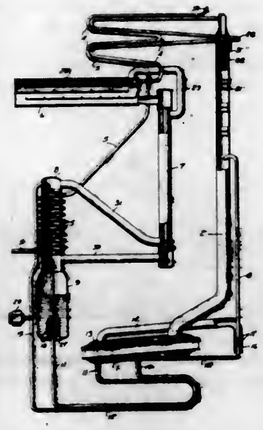


5. A lubricator control system comprising a lubricator attached to a part to be lubricated and arranged to automatically and continuously discharge lubricant therefrom,

under pressure, a source of lubricant having a discharge conduit to supply said lubricator, a valve in said conduit,

means operable at a predetermined lubricant level for opening said valve to replenish said lubricator, and means for varying the effective level of said lubricator.

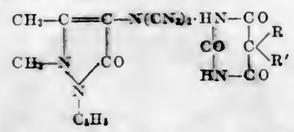
1,805,291. COMBINED HEATER AND ILLUMINATOR. EDWARD L. MONNOT, Canton, Ohio, assignor to The Harvard Company, Canton, Ohio, a Corporation of Ohio. Filed Sept. 10, 1929. Serial No. 391,608. 9 Claims. (Cl. 219—45.)



1. A combined heater and illuminator including walls forming a chamber, an electric heater lamp within the chamber, one of the walls having openings formed therein for receiving articles to be heated in the chamber, another of the walls having an illuminating opening formed therein, a rheostat in the chamber for variably controlling the lamp, and a baffle wall between the rheostat and the lamp.

1,805,292. SHINGLE AND METHOD OF MAKING SAME. FRED A. MOSHER, Grand Rapids, Mich., assignor to Logan-Long Company, Chicago, Ill., a Corporation of Ohio. Filed Apr. 24, 1928. Serial No. 357,720. 6 Claims. (Cl. 108—7.)

6. A composition shingle having a mutilated and charred edge.

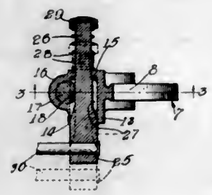


1,805,293. ABSORPTION REFRIGERATING APPARATUS. CARL GEORG MUNTERS, Stockholm, Sweden, assignor to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 27, 1929, Serial No. 350,150, and in Germany Apr. 12, 1928. 8 Claims. (Cl. 62—119.5.)

1. That improvement in the art of refrigeration through the agency of an absorption system including an absorber, a circulating chamber and a generator which comprises flowing strong absorption liquid from the absorber to the circulating chamber, heating the liquid to vaporize a portion of the refrigerant from solution therein, conveying the resulting vapor and remaining liquid through separate conduits to a cooler point outside said chamber, raising the liquid by the vapor due to thermo-siphon action to a level above the absorber, heating the liquid to vaporize further refrigerant and flowing the remaining liquid to the absorber.

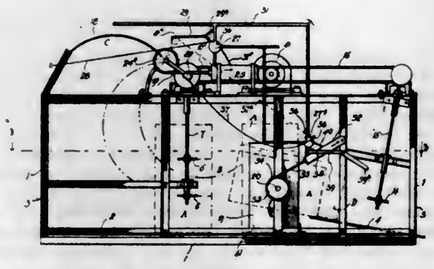
1,805,294. COMPOUND OF DIALKYL BARBITURIC ACIDS AND PROCESSES FOR MAKING THE SAME. ERNST PREISWERK, Basel, Switzerland, assignor to Hoffman-La Roche Inc., Newark, N. J., a Corporation of New Jersey. Original application filed July 10, 1925, Serial No. 42,826, and in Switzerland July 23, 1924. Divided and this application filed Dec. 17, 1927. Serial No. 240,939. 3 Claims. (Cl. 260—33.)

1. As new products, the isolated compounds of the general formula



wherein R and R′ are the same or two different alkyl groups but in any compound in which either represents the isopropyl group the other does not represent the allyl group and in any compound in which either represents the ethyl group the other does not represent the ethyl group.

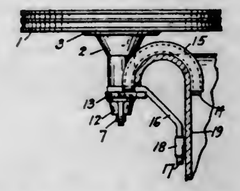
1,805,295. BOTTLE CAPPER. HAROLD G. RICE, Chicago, Ill. Filed Jan. 14, 1929. Serial No. 332,299. 10 Claims. (Cl. 226—84.)



3. In a device of the class described and in combination, a frame comprising a base portion and a vertical overhanging guide portion and having a transverse opening constituting a bearing adjacent said guide portion, a capping plunger slidably mounted in said guide portion

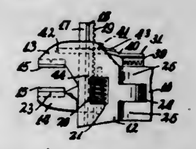
and having rack teeth formed thereon, a shaft rotatably mounted in said bearing and having a pinion formed thereon adapted to co-operate with said rack for reciprocating the same, said shaft being reduced in diameter adjacent said pinion and having an endwise displacement within said bearing sufficient to disengage the pinion from the rack teeth of the plunger, means for rotating the shaft,

and means normally maintaining said pinion in operative engagement with said rack and also permitting said shaft to be axially displaced a distance equal to the width of said pinion to bring the reduced portion of the shaft across the plunger, whereby the pinion may be disengaged from the rack teeth and the plunger freed for quick endwise adjustment.



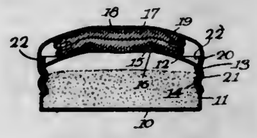
1,805,296. MEANS FOR SCORING ICE BY FLUID PRESSURE. ROBERT H. ROARK, Waco, Tex., assignor, by mesne assignments, to The General Ice Scoring Machine Company, Dallas, Tex., a Corporation of Delaware. Filed Nov. 7, 1927. Serial No. 231,720. 3 Claims. (Cl. 125—13.)

1. In an ice scoring machine, guide means at the entrance end, scoring saws above said guide means, fluid pressure operated means for feeding blocks of ice along the guides between the saws, a tilting cage receiving successive blocks subsequent to their passage between said saws, automatically operating fluid pressure means for tilting said cage for turning the blocks through an arc of substantially 90° as soon as the initial scoring operation is completed, scoring saws at the outlet end between which the blocks pass subsequent to being tilted, gravity means for feeding the blocks between the second named saws, and means engaged by the block of ice in its passage between the last-named saws for cutting off and releasing the fluid from said cage tilting means to permit the cage to return to position for operating upon another block of ice.



1,805,297. BATHTUB CHAIR. THOMAS A. SADUSKY, ALBERT L. MARLOWE, and FRANK D. MILLER, Denver, Colo. Filed Oct. 7, 1929. Serial No. 397,926. 8 Claims. (Cl. 155—36.5.)

3. A bath tub chair having a pivotally mounted seat and composed of a seat unit and a support, the support being composed of a hook unit adapted to hook over the top of the wall of the tub and a brace unit having means adapted to position the chair against either upward or downward



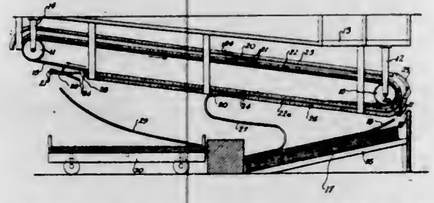
movement, and an assembly bolt and nut adapted to assemble the three units while permitting free pivotal movement of the seat unit on the support.

1,805,298. WRENCH. FREDERICK SCHWEIGERT, New York, N. Y. Filed Jan. 18, 1930. Serial No. 421,642. 4 Claims. (Cl. 81—58.)

1. A wrench, comprising a head member with stationary and adjustable jaws pivotally connected with a handle, means for holding said head member in adjusted angular positions on its pivotal axis, means for securing said holding means in the adjusted positions and means automatically releasing said securing means in the closed position of the jaws.

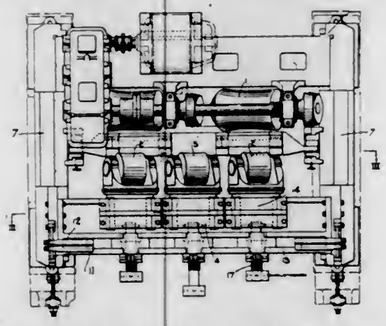
1,805,299. TOILET PACKAGE. ROBERT H. VAN SANT, Chicago, Ill. Filed Apr. 2, 1928. Serial No. 266,572. 2 Claims. (Cl. 132—82.)

1. In a toilet package, a container having a convex top wall provided with a single comparatively large axial opening therein, the inner surface of said top wall sloping toward said opening, the marginal edge of said wall surrounding said opening being extended upwardly to form an upstanding flange, the side wall of said container extending upwardly beyond the top to form a continuous flange for preventing toilet material falling on said top from sliding off the same, an applicator of substantially greater area than said opening adapted to be positioned on said flange and top wall over said opening, and a cap for said container for holding said applicator in position on said flange for closing said opening.



1,805,300. AUTOMOBILE HEATER. PAUL F. VICTOR, River Forest, Ill. Filed May 15, 1929. Serial No. 363,145. 7 Claims. (Cl. 257—136.)

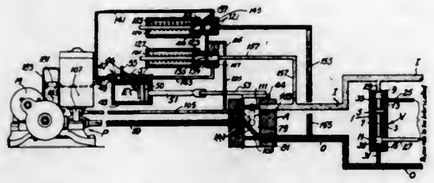
1. In a device of the class described, the combination of a shell forming an elongated heating chamber, said



chamber being provided with a gas inlet and a gas outlet, and a longitudinally extending plate provided with upwardly struck spaced baffles extending transversely of said chamber, the baffles each provided with a recess at a predetermined position on its periphery and extending in close proximity to the walls of the chamber at either side of said recess to define a passage whereby a substantial proportion of the gases are caused to move in relatively close proximity to the wall of the chamber in the vicinity of the recess.

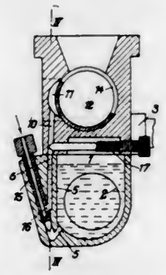
1,805,301. SHEET OPENER. CHARLES C. WENDLING, Dover, Ohio. Filed Nov. 23, 1929. Serial No. 409,238. 9 Claims. (Cl. 29—17.)

1. Sheet opening mechanism including a spaced plurality of tongs, means for continuously moving the tongs in a continuous path toward and from one end of a pack of sheets, tracks for holding each of the tongs open as it approaches said end of the pack, and tracks for closing each of the tongs and holding it closed as it engages the uppermost sheet of the pack and moves backward therefrom, peeling said uppermost sheet from the pack.



1,805,302. ROUND STRAIGHTENER. GEORGE A. WISE, Pittsburgh, Pa., assignor to Sutton Engineering Company, a Corporation of Pennsylvania. Filed Oct. 1, 1929. Serial No. 396,430. 1 Claim. (Cl. 153—60.)

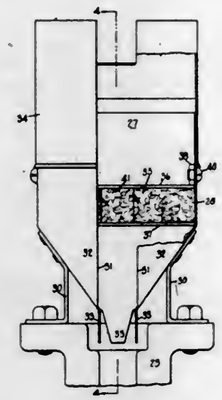
In a cross roll straightening machine the combination of driven rolls stationary as to linear movement, idler rolls, an idler roll mounting frame common to all the idler rolls and movable toward and from the driven rolls for rough adjustment of the idler rolls relatively thereto, an individual mounting bracket for each idler roll mounted in the frame for movement therein in the plane of movement of the frame and support throughout against forces acting angularly to its path of movement, and means for producing independent movement of each of the idler roll brackets in the frame to effect a fine adjustment of the idler rolls relatively to the driven rolls.



1,805,303. LUBRICATING SYSTEM. FRANK S. BARKS, St. Louis, Mo. Filed Dec. 1, 1930. Serial No. 499,172. 36 Claims. (Cl. 184—7.)

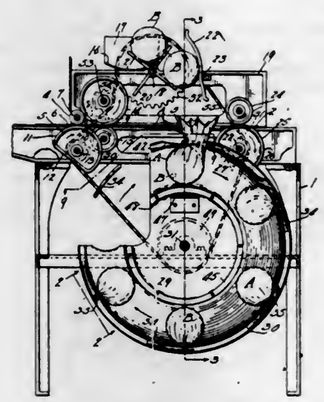
1. In apparatus of the class described, fluid conduit lines, delivery means associated with said lines for delivering a fluid alternately to a plurality of points, a source of fluid under high pressure, means for directing said fluid under high pressure alternately to said lines to effect alternation of the action of said delivery means, and means

operating said directing means to redirect said fluid into another of said lines upon the attaining of a predetermined adjustable maximum pressure in the line into which the fluid is then being directed.



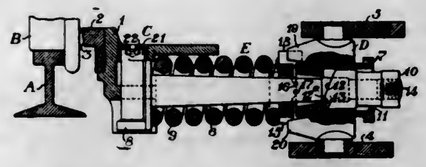
1,805,304. VAPORIZER FOR INTERNAL COMBUSTION ENGINES. OTTO BAUMGARTNER, Wollinsen, Switzerland. Filed Jan. 23, 1930, Serial No. 422,934, and in Switzerland Dec. 16, 1929. 1 Claim. (Cl. 261—121.)

In a nozzleless vaporizer of hydrocarbons for internal combustion engines and in combination, a two-part casing, studs with nuts for joining said parts tightly, a float chamber and a first vaporizing and mixing chamber, both in the lower part of the casing, and a fuel passage connecting the two chambers, a needle-screw arranged at an acute angle to said fuel passage and adapted to control the same, and an axial air inlet in said screw having an opening into the fuel passage, two window-shaped air inlets in the upper part of the casing, and two air passages connecting the same to the first vaporized chamber, needle-screws adapted to control said air passages, a second mixing and vaporizing chamber in the upper part of the casing, and a rotary sleeve-like valve member fitted into said second mixing chamber, and a fuel passage arranged between the two air passages and connecting the first with the second vaporizing chamber, and cell-shaped slits constituting the openings of said fuel passage into the second vaporizing chamber.



1,805,305. LUBRICATING DEVICE FOR ELEVATOR GUIDE RAILS. THOMAS BRADY, East Orange, N. J., assignor to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 19, 1929. Serial No. 393,708. 3 Claims. (Cl. 184—22.)

3. In an elevator installation; a hatchway; a body movable therein; guide rails in said hatchway; guide shoes carried by said body adapted to cooperate with said guide rails to guide the movement of said body in said hatchway; means adapted to apply lubricant to said guide rails near their upper ends; lubricant distributors carried by said body, each distributor comprising, a housing, one end wall and the side walls of said housing having portions which converge near their lower ends, an absorbent pad in said housing, and retainers adapted to support said pad in said housing, said retainers and the front wall and top of said housing being cut away to permit a guide rail to extend into said housing for cooperation with said pad, whereby upon movement of said body said pads wipe lubricant from said guide rails and absorb said lubricant to prevent splashing of said lubricant



by said guide shoes, and said converging portions direct the lubricant flowing from said pad, upon saturation thereof, onto said guide rails and the surfaces of said guide shoes cooperating therewith to distribute the lubricant along said guide rails.

1,805,306. METHOD AND APPARATUS FOR WRAPPING ARTICLES. HARRY CLARK, Middleport, and ROBERT E. METCALF, Gasport, N. Y. Filed Oct. 27, 1928. Serial No. 315,514. 22 Claims. (Cl. 93—5.)

1. A machine for wrapping articles in sheets of paper, comprising a support for holding a sheet outspread and having an aperture smaller than the sheet through which an article and the sheet may pass, together when deposited thereon over said aperture, means for gathering together the edges of said sheet which last pass through said aperture to complete the enclosure of the articles, holding said edges and through said edges drawing the enclosed article in a prescribed path, and means for rotating the enclosed article while so moving about the held edges to twist the gathered edges and prevent unwrapping of the enclosed article when the wrapped article is released.

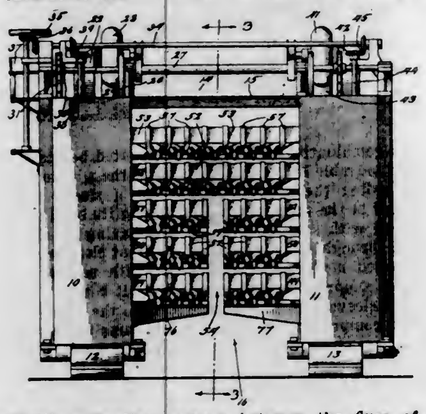
1,805,307. RAILWAY CAR RETARDER. HAROLD C. CLAUSEN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 24, 1930. Serial No. 484,085. 10 Claims. (Cl. 188—62.)

1. In combination, a braking bar located beside a track rail and movable into engagement with the wheels of a car for retarding the motion of the car, a sleeve pivotally supported in the trackway, a bolt having its head pivotally connected with said braking bar and having its shank extending through said sleeve with sufficient clearance to permit limited movement of said bolt with respect to said sleeve, a compression spring on said bolt between its head and said sleeve, and a nut screwed onto the shank of said bolt for compressing said spring, said nut being provided with a cam surface having a projecting portion which engages said sleeve at a region of contact which is located outside of the axis of said bolt.

1,805,308. LABELING. LYMAN W. DIXON, Maywood, Ill. Filed Feb. 19, 1930. Serial No. 429,833. 3 Claims. (Cl. 216—62.)

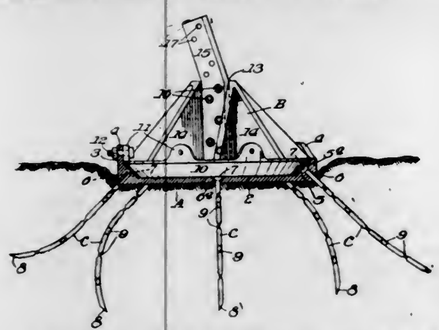
1. A method of adhesively attaching a paper label to a sheet of cellophane, which comprises coating the back of the label with a solution of manila gum in alcohol, permitting the alcohol to evaporate, moistening the residual resinous layer with a solution of castor oil in alcohol, and applying the moistened label to a sheet of cellophane.

1,805,309. DENTAL APPARATUS. FREDERIC B. EGGLER, Goppingen, Germany. Filed Sept. 4, 1928. Serial No. 303,929. 1 Claim. (Cl. 32—7.)



In dental apparatus, the combination of a guide rod, a socket attached to the end of said guide rod, an insertion piece adapted to be introduced into said socket, a slide member adapted to slide on said rod, a flap, a hinge oscillatably fixing said flap on said socket, and a stud on said flap for holding said insertion piece.

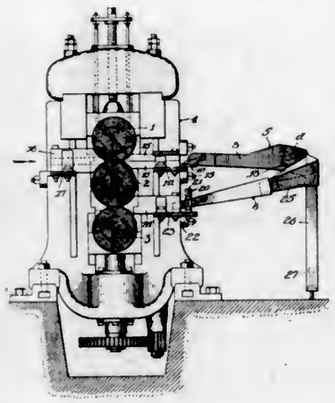
1,805,310. COTTON PICKER. NICHOLAS F. HIGGINS, Chicago, Ill. Filed Jan. 10, 1930. Serial No. 419,889. 8 Claims. (Cl. 56—14.)



1. In a machine of the class described, the combination of a pair of side sections, each including suitable ground travelling and supporting devices, said sections being separated from each other at their lower portions a distance to correspond to the rows of plants to be picked, means for joining together the upper portions of said sections above the plants of a row being picked, each section including a receiving hopper in its rear portion, a longitudinally extending flue, a plenum blower for the front end of said flue and a suction blower for the rear end of said flue, said suction blower delivering into the hopper of the corresponding section, means for driving all of said blowers at constant speed, means for driving the ground travelling devices at variable speed, a pair of upwardly and

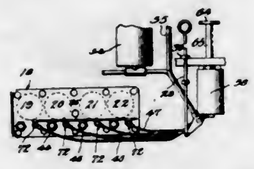
rearwardly extending flues in each section, the upper ends of said flues terminating in the longitudinally extending flue of the corresponding section, a series of transverse horizontally extending flues in each section having their inner ends in communication with the upwardly and rearwardly extending flues of such section, the lowermost horizontally extending flues of the two sections approaching each other without contact to thereby establish a lon-

gitudinally extending passage between the flues of the two sections, the upper-most horizontally extending flues of the two sections being continuous between the two sections, there being a series of boll openings in the lower portion of each horizontally extending flue section, together with means adjacent to each of said openings operative effectively to remove bolls from the plant and deliver the same into the flue openings to be there subject to the current of inflowing air, substantially as described.



1,805,311. FOOTING FOR TOWERS OR THE LIKE. HAROLD O. HILL, Aspinwall, Pa. Filed July 26, 1929. Serial No. 381,157. 6 Claims. (Cl. 189—21.)

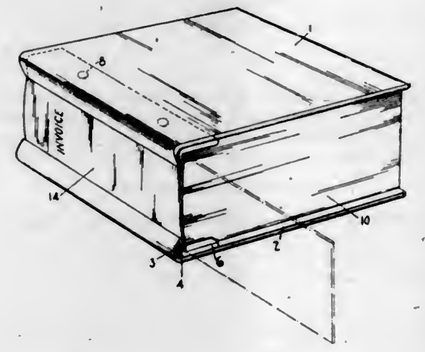
1. A footing for towers and the like comprising a base, stub or leg attaching means mounted on and secured to the base comprising a base portion and upwardly extending means, means for securing the base portion to the base, and a plurality of rods or the like extending downwardly into the ground through openings in the base, said rods having heads countersunk in the base and covered by said base portion.



1,805,312. REPEATER. LEE H. HOOK, PERCY EVANS, and CHARLES S. WALLRAB, Chicago Heights, Ill., assignors to Calumet Steel Company, Chicago, Ill., a Corporation of Illinois. Filed May 3, 1928. Serial No. 274,800. 5 Claims. (Cl. 80—52.)

4. In a rolling mill, in combination, a set of three-high rolls, a pair of supports disposed at different vertical elevations on one side of the rolls in outward spaced relation thereto and arranged with one support for the pass between the upper and the intermediate rolls and the other support for the pass between the intermediate and the lower rolls, a repeater device on the same side of the rolls as the supports and arranged beyond the same, said repeater device comprising two parts only, one part forming a receiving portion and being in the form of an upwardly opening trough with a loop return section with the entrance end of the trough mounted on the upper support to receive the work from the rolls opposite such support, the other part of the repeater device form-

ing a delivery portion therefor and being in the form of a tubular spout, having a telescopic fit at one end with the loop return section and the other end mounted on the lower support to deliver the work to the rolls opposite the same, guide means for the work between the supports and the rolls opposite which the supports are respectively arranged, and a support for the portion of the repeater device beyond the mill, the receiving portion of the repeater device extending substantially horizontally outward from the upper support, and the loop return section and the delivery spout being downwardly inclined toward the lower support.



1,805,313. STARTER FOR INTERNAL COMBUSTION ENGINES. GEORGE R. LAWRENCE, Chicago, Ill., assignor to Lawrence Engine Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 28, 1927. Serial No. 236,167. 10 Claims. (Cl. 123—180.)

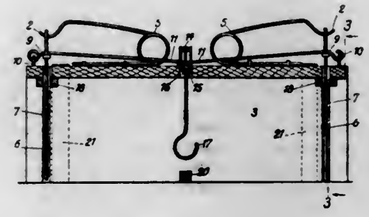
1. The combination with an internal combustion engine having cylinders and pistons working therein, and also having spark plugs and a high tension distributor for delivering sparking current to said plugs in timed relationship with respect to the piston movements, of an air starter cylinder, a plunger working therein, a starting nipple in each cylinder having a discharge nozzle reaching into the combustion chamber thereof for the spray delivery of combustible mixture thereinto, a metering valve including a rotatable plug having therein a series of metering pockets corresponding to the individual

cylinders, said valve also including a common supply passage for combustible liquid, communicating with all of the metering pockets when the plug is turned into a given position to thereby fill said pockets with individual firing charges, said valve also being provided with transverse ducts aligning with the metering pockets of the plug, said plug being provided with transverse passages communicating with said metering pockets and aligning with the ducts aforesaid when the plug is turned to a position where the metering pockets are isolated from the fuel supply passage, said ducts communicating individually with the lower portion of the air starting cylinder, and individual passages from the ducts to the individual starting nipples, substantially as described.

1,805,314. BINDER FOR LOOSE LEAF BOOKS. WILLIAM J. MORTON, San Francisco, Calif., assignor to The McBee Binder Company, Athens, Ohio, a Corporation of Ohio. Filed Apr. 16, 1930. Serial No. 444,688. 7 Claims. (Cl. 281—36.)

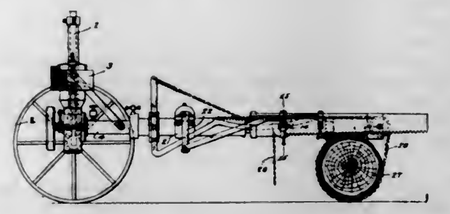
7. A lose leaf binder comprising a pair of covers, portions of which project beyond the rear edges of the leaves to be bound and extend inwardly towards each other and are spaced from said rear edges, and a sliding back fitted to said space.

1,805,315. POWER DRIVE FOR FLAT KNITTING MACHINES. JOHANN GOTTFRIED MÜLLER, Kiel-Ellerbek, Germany. Filed Jan. 11, 1930, Serial No. 420,166, and in Germany Feb. 16, 1927. 5 Claims. (Cl. 66—60.)



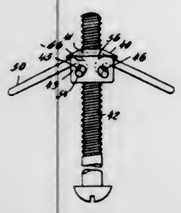
1. A power drive for flat knitting machines, particularly such with short carriage, in which a runner is moved backwards and forwards by means of an endless chain or the like running over sprocket wheels continually in the same direction, comprising in combination with said driving chain and said runner, a horizontal pin on said runner, a toothed driving wheel segment on said runner, said teeth adapted to engage in the two end positions respectively with said driving chain and, on the runner attaining a certain adjustable length of travel, to pass from one side of said chain to the other turning thereby through 180°.

1,805,316. PROCESS FOR THE TREATMENT OF FIBERS. HERMAN G. REICHARD, Brooklyn, N. Y. Filed Aug. 10, 1929. Serial No. 385,064. 10 Claims. (Cl. 8—2.)



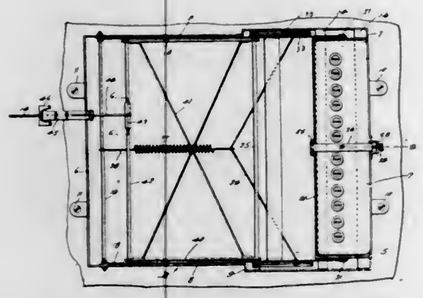
10. In a process for the treatment of fibers, the steps which include treating the fiber with ferric chloride and then bleaching the thus treated fiber by means of hydrogen peroxide in an alkaline solution.

1,805,317. TRAP FOR BEASTS OF PREY. JOHANN SCHOBER, Kleinholzhausen Post Grossholzhausen, near Rosenheim, Germany. Filed Aug. 27, 1929. Serial No. 388,836. 1 Claim. (Cl. 43—86.)



A trap for beasts of prey comprising a housing open at the two ends and having guide grooves, two catching bows arranged one near each end inside said housing and adapted to slide in said grooves, springs mounted on the roof of said housing and tending to force said bows upwards towards the roof of said casing, two locking bars hinged one at each end and extending towards the middle of the roof of said housing and adapted to hold said bows in lowered position against the action of said springs when the trap is set, a transverse bar hinged on said roof and adapted to bear on the free ends of said locking bars, an axle mounted in the middle of the roof, a spiral spring mounted on said axle, a bait hook formed by one end of said spring extending inside said housing, and a catch formed by the other end of said spring adapted to engage said transverse bar in lowered position against the action of the first named spiral springs transmitted through said bows and said locking bars.

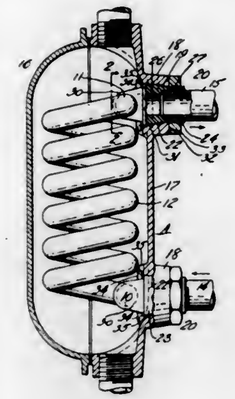
1,805,318. LOG AND TREE SAW. WILLIAM J. STEFFLER, Anderson, Ind. Filed Nov. 7, 1929. Serial No. 405,475. 3 Claims. (Cl. 143—68.)



1. A saw comprising a frame, tubular sections carried by the frame, a motor mounted upon the frame, a saw guide carried by the sections, a blade slidable with relation to the guide, means operatively connecting the motor with the blade, a guide arm pivoted upon the sections and having an end portion overlapping the blade, springs connected at one end with the blade operating means, and at their other ends with the guide arm at points beyond the opposite sides of the end edge of the blade, and spring means tending to hold the overlapping portions of the blade and arm in a depressed position.

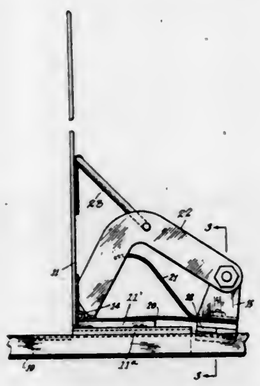
1,805,319. TOGGLE BOLT. CHARLES C. TOMKINSON, Plainfield, N. J., assignor, by mesne assignments, to J. Edward Ogden Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 10, 1927. Serial No. 174,130. 28 Claims. (Cl. 85—3.)

6. A toggle head adapted for use with a toggle bolt and comprising a supporting member, a wing pivotally associated with said member and formed of resilient material, said wing and member having portions coacting to effect the swinging of the wing to open position under force derived from the resiliency of the wing.



1,805,320. CYLINDER HEAD STAND. WILLIAM LEE ROY TRIMBLE, Granbury, Tex. Filed Mar. 30, 1929. Serial No. 351,332. 7 Claims. (Cl. 29—89.)

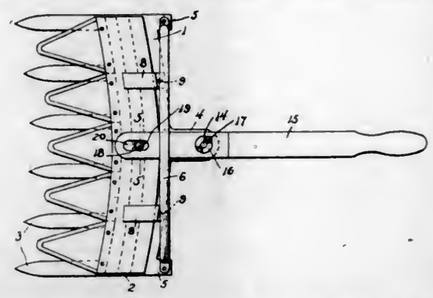
1. A stand of the class described for a cylinder head including a base structure, a swinging structure mounted in the base structure, a holder rotatably mounted in the swinging structure, a ledge on which the head may be rested, a pair of links pivoted together and pivoted to the swinging structure and base structure for holding the swinging structure raised, said holder comprising a rectangular frame with plates across the ends thereof so that a cylinder head may be mounted therein, and adjustable strap means on the frame for holding said head in place.



1,805,321. PIPE COUPLING OR CONNECTION. HERBERT G. ULLMAN, Tuckahoe, N. Y. Filed Sept. 14, 1927. Serial No. 219,455. 2 Claims. (Cl. 285—50.)

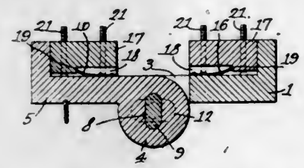
1. In a coupling device for securing the ends of two pipes to the opposite sides of the wall of a chamber in which one of said pipes is so arranged that its end is disposed in lateral relation to said coupling device and wherein said wall is formed with an opening through which said device extends, the combination of a tapered plug having a passage extending lengthwise therethrough and to the outer end of which said other pipe is connected, a tapered seat extending axially of the opening of said wall and into which said tapered plug fits with its ends disposed at opposite sides of said wall, a transverse face arranged exteriorly of said opening at the outer side of the said casing, a threaded member engaging a correspondingly threaded part of said plug and bearing against said face to draw said plug into and hold

the same in said seat, and an integral enlargement on the inner end of said plug and having a lateral opening which is continuous with said passage and into which said laterally approaching end of said first pipe is secured.



1,805,322. MOVABLE PRESSURE DEVICE. NELSON S. WELK, Athens, Ohio, assignor to The McBee Binder Co., Athens, Ohio, a Corporation of Ohio. Filed Oct. 6, 1925. Serial No. 60,787. 5 Claims. (Cl. 129—30.)

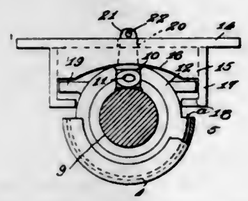
4. A movable pressure device, comprising a follower plate, track members adapted to be mounted in the base of a tray, means for slidably mounting said follower plate on said track members, a locking means for said follower plate mounted on said track members, a spring device connecting said follower plate and said locking means, said device adapted to move said locking means into active engagement with said track members.



1,805,323. HEDGE TRIMMER. EARL L. YOUNG, San Fernando, Calif. Filed July 25, 1930. Serial No. 470,701. 7 Claims. (Cl. 0—11.)

1. In hedge trimmers, a base having fingers extending forwardly therefrom, a cutter bar extending laterally of the base and having a plurality of cutting blades overlying said fingers, said bar and said base having tongue and

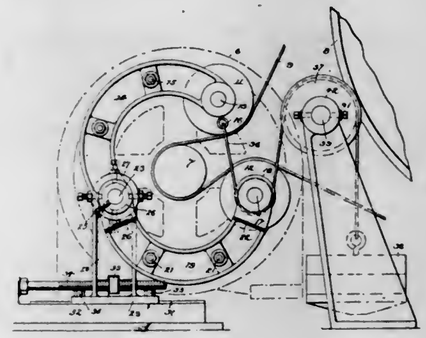
groove connection of curvilinear form, and means to move said cutter bar in the curvilinear direction for the purposes described.



1,805,324. HINGE. HARRY RAY BIRD, Taft, Calif. Filed Sept. 3, 1930. Serial No. 479,533. 5 Claims. (Cl. 16—168.)

1. A hinge including leaves, a pair of ears carried by one of the leaves, there being a slot in one of said ears and a bore in the other ear, an intermediate ear extending from the other leaf having a slot movable into and out of register with the first named slot, a pintle having a key fitted in the slot in the intermediate ear and adapted to withdraw through the other slot when said slots are in alignment, oppositely extending stems on said key extending through the respective ears of the pair, and a key rotatably mounted on one of the stems and removably seated in the slot in one of the ears of the pair.

5. A hinge including separable leaves each having a groove extending thereinto from one edge, a spring secured in the groove, an attaching plate slidable longitudinally into the groove, means carried by said plate for engagement by the spring to hold the plate and leaf against separation, said means including a spring receiving groove extending longitudinally of the plate and provided with a shoulder for engaging the spring, said groove being opened at one end to expose the spring for engagement by a releasing device.



1,805,325. BEARING BOX. DANIEL CLYDE BROWN, West Pittston, Pa. Filed Mar. 12, 1930. Serial No. 435,259. 2 Claims. (Cl. 308—48.)

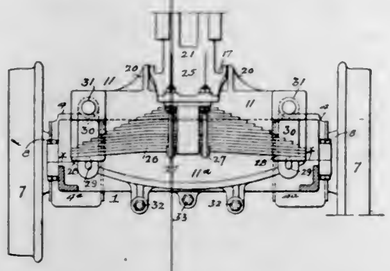
1. A bearing box comprising a body for housing the axle end and the bearings therefor, the body being open

at one end and provided at its said end with a flange extending about substantially the lower half of the said end and provided with a groove, in its inner side, extending longitudinally thereof, a cap for closing said end of the body having an outstanding semi-circular flange to seat within the said groove and hold said cap in closed position in one position of rotation of the cap, rotation of the cap to the reverse position permitting of direct removal of the cap from the body, a head disposed above the body, means upon the head in proximity to the ends of the flange to prevent rotative displacement of the cap with respect to the body.

1,805,326. BELT DRIVE. WILLIAM SYLVESTER BUNKER, Foxboro, and GEOFFREY LEONARD HANSCOM, South Walpole, Mass., assignors to Bird Machine Company, South Walpole, Mass., a Corporation of Massachusetts. Filed May 20, 1927. Serial No. 193,023. 14 Claims. (Cl. 64—5.)

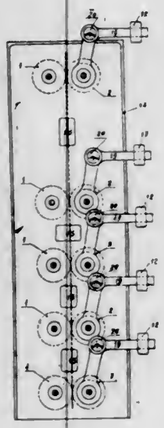
1. In combination, a pair of pulleys and a belt adapted to run on said pulleys in either direction, two tension pulleys engaging opposite runs of said belt, and yielding means connecting said tension pulleys including a flexible connecting member permitting independent motion of each pulley, and a weight for stressing said member.

1,805,327. SIGN. JOHN T. CARR, Trenton, N. J. Filed Sept. 24, 1930. Serial No. 484,173. 5 Claims. (Cl. 40—135.)



1. A sign including a wire mesh base, a flexible transparent waterproof filling for said base, a coating for said filling, said coating covering the filling except at the points where a display member is to be illustrated, and an outline coating at the opposite side of said filling, said outline coating extending around the outline of said display member.

1,805,328. LOCOMOTIVE TRUCK. EDWARD O. ELLIOTT, Jenkintown, Pa. Filed Nov. 29, 1930. Serial No. 499,083. 8 Claims. (Cl. 105—174.)



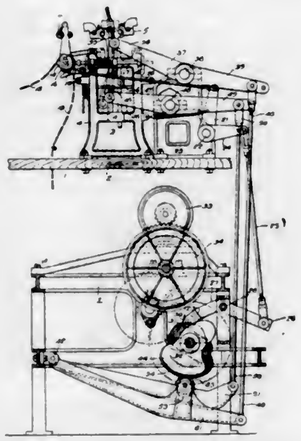
1. The combination in a locomotive truck, of a main frame; rockers resting upon the frame; a rocker casing supported by the rockers; a center pin bolster located

above the rocker casing and having arms; semielliptic springs having their center bearings on the underside of

the arms, the ends of the springs being carried by the rocker casing; an axle; and boxes for the axle, said boxes being mounted in the main frame.

1,805,329. GLASS SHEET DRAWING APPARATUS. PAUL ESCOLE, Jeumont, France, assignor to Ateliers de Construction & Fonderies de Jeumont, Jeumont, France, a French Societe Anonyme. Filed Dec. 12, 1928, Serial No. 325,454, and in France May 5, 1928. 5 Claims. (Cl. 49—17.)

1. In glass sheet drawing apparatus including a pair of rollers and means for pressing said rollers against opposite faces of the sheet, a suspension device for the movable roller, comprising a bearing bush for the trunnion of said roller, a bearing block through which pressure is exerted upon said trunnion, and a spherical seating of said bush within said bearing block.

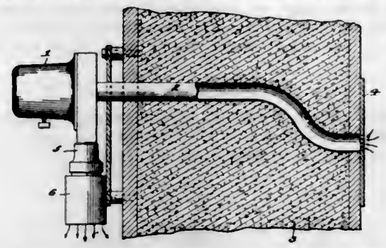


1,805,330. EXTENSION BIT. THOMAS J. FEGLEY and GEORGE O. LEOPOLD, Philadelphia, Pa., assignors to North Bro's. M'f'g. Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 13, 1930. Serial No. 428,111. 3 Claims. (Cl. 279—90.)

1. The combination in an extension bit, of a spindle; a head secured to the spindle; a socket adapted to slide on the head and a spring arranged to project the socket; a slotted casing enclosing the socket; means for vertically adjusting the casing; and a key adapted to travel in a slot in the casing, the slot having a lateral portion to allow the sleeve to be turned to a limited extent independently of the spindle, so that when the parts are in one position the opening in the end of the casing will align with the

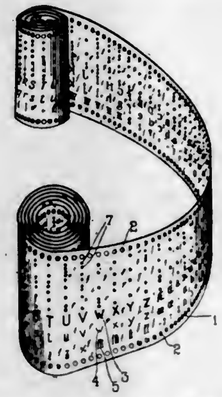
opening in the socket, and when in the other position it will be out of line and lock the shank of the bit in the socket.

1,805,331. LOOM. CHARLES L. FETTERLY, New Brunswick, and WILLIAM E. SMITH, Milltown, N. J., assignors to Gulbenkian Seamless Rug Company, New Brunswick, N. J., a Corporation of New Jersey. Filed Aug. 1, 1930. Serial No. 472,374. 10 Claims. (Cl. 139—59.)



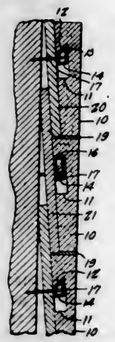
1. The described method of weaving which involves the use of independently operable grids in the jacquard mechanism of a loom, for controlling the pattern warps of the fabric being woven, to bring desired pattern warps to corresponding positions on the opposite faces of the fabric respectively, and the use of alternately disposed back and face cards in a single string of jacquard cards for successively selecting the pattern warps to be controlled by the respective grids.

1,805,332. BANK VAULT VENTILATOR SYSTEM. BYRON C. GOSS, Cleveland, Ohio. Filed May 15, 1930. Serial No. 452,714. 1 Claim. (Cl. 98—39.)



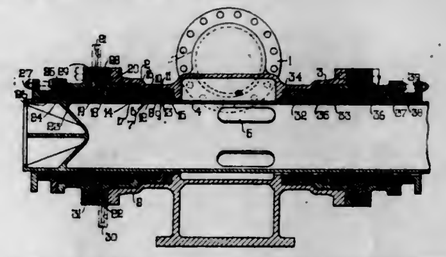
In a vault ventilating system, an air circuit comprising an inlet, a positive air drive, and an outlet, a 3-way

valve comprising an intake and two exhausts, the intake of said valve connected to said outlet, one exhaust connected



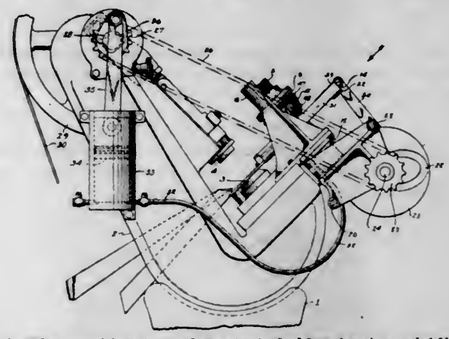
to an irritating gas filter and the other exhaust opening into the vault, which on turning said valve the gas filter may be disconnected from said air circuit.

1,805,333. PHOTOGRAPHIC PRINTING PROCESS AND APPARATUS THEREFOR. EDGAR KENNETH HUNTER, London, England, assignor, by mesne assignments, to Kodak Limited, London, England, and Intertype Limited, London, England. Original application filed Sept. 20, 1922, Serial No. 589,365, and in Great Britain Sept. 21, 1921. Divided and this application filed Dec. 18, 1925. Serial No. 76,286. 8 Claims. (Cl. 95—4.5.)



1. As an article of manufacture a flexible film strip having a number of alphabets each of a different type arranged lengthwise in sequence thereon.

1,805,334. WALL CONSTRUCTION. JAMES F. KELLY, Clifton, N. J. Filed Jan. 24, 1930. Serial No. 423,217. 2 Claims. (Cl. 72—19.)

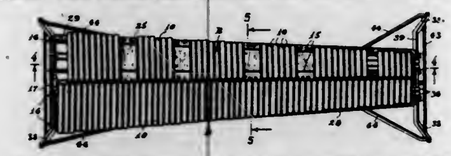


1. In a wall construction, a base, vertically spaced horizontally disposed strips secured thereto, said strips having inwardly inclined upper faces, bricks having longitudinally disposed slots in their rear faces to receive the strips, said slots having inclined upper walls for engagement over the inclined faces of the strips to provide an interlocking engagement, means to hold the bricks against independent longitudinal movement on said strips, and a plastic filling between the adjacent edges of the strips.

1,805,335. EXPANSION PIPE JOINT AND THE LIKE. WILLIAM MARSDEN KERMODE and CHARLES ST. CLAIR PLUMMER, Bradford, England. Filed Apr. 11, 1928, Serial No. 269,269, and in Great Britain June 7, 1927. 1 Claim. (Cl. 285—184.)

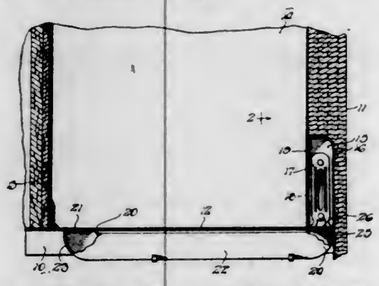
A fluid pressure pipe joint including a tubular element, an outer casing extending around said tubular element to form at least one packing box, a plurality of series of at least two packing cups in said packing box, a pair of split elastic metal packing rings in each of said cups at least one clip ring in each of said cups, a spherical surfaced bearing member at one end of each series of cups and spring means at the other end of each of said series adapted to press the cups towards said bearing member in a direction axially of the angular element, at least one of said groups of cups being spring pressed in a direction opposite to at least one other of said groups.

1,805,336. BLANK FEEDING MECHANISM FOR PUNCH PRESSES. WALTER KOWAL, New York, N. Y., assignor to Phoenix-Hermetic Company, Chicago, Ill., a Corporation of New York. Filed Aug. 14, 1929. Serial No. 385,947. 10 Claims. (Cl. 271—32.)



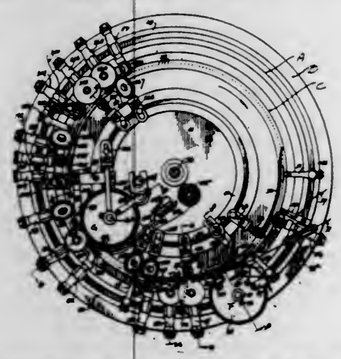
1. The combination of a stack holder having yielding spaced dogs for supporting stacked blanks, said dogs having the supporting faces thereof provided with inclined threads arranged so as to be successively engaged by the blanks as they are withdrawn from the stack holder, and means for forcibly withdrawing the lowermost blank past said threads.

1,805,337. AMUSEMENT APPARATUS. WILLIAM J. MAHONEY, New York, N. Y. Filed Feb. 3, 1930. Serial No. 425,621. 10 Claims. (Cl. 84—403.)



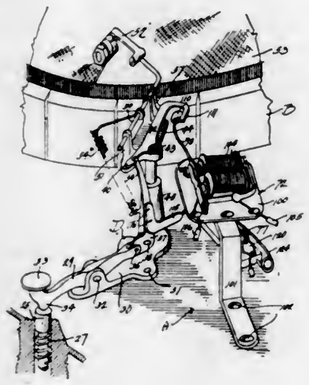
2. A musical device including means for yieldably supporting in a common plane, a plurality of sound produc-

ing elements consisting of groups of note bars, the bars of each group arranged in side by side relation and having the same tone value and the groups having relatively different tone values and said elements mounted to support



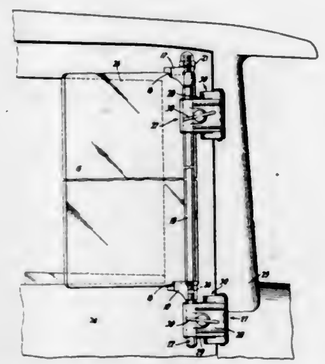
a dancer while dancing and playing on said elements, said supporting means including guard means disposed out of said common plane for limiting the tilting of said note bars.

1,805,338. HEATING APPARATUS. FRANK J. McADAMS, Chicago, Ill. Filed June 21, 1929. Serial No. 372,778. 4 Claims. (Cl. 257—136.)



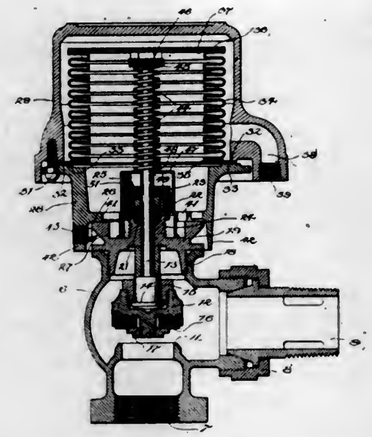
3. In combination with a room having a recess in one wall thereof, a lining for said recess, said recess having an opening in the lower wall thereof, a heating element arranged in said recess over said opening, the floor of said room having an opening therein adjacent the wall opposite the wall having said recess therein, means providing a register construction for closing said last named opening, a duct extended between the joists supporting said floor construction from said register construction in said second named opening to the opening in the lower wall of said recess whereby air picked up at the register end of said duct will pass therethrough into said recess, and means for directing said air through said recess over said heating element, said last named means including a grille construction therein in the upper portion thereof whereby said air may escape from said recess after passage over said heating element.

1,805,339. KNITTING MACHINE. HARRY MCADAMS, Philadelphia, Pa. Filed July 26, 1927. Serial No. 208,483. 11 Claims. (Cl. 66—80.)



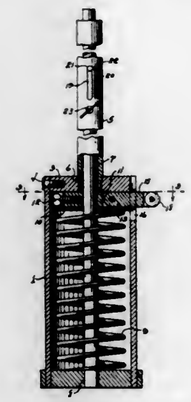
1. In a knitting machine a cylinder having needles, a yarn introducing wheel provided with means to pass between the needles and introduce a yarn in looped relation at the opposite side of the needles from said wheel, and means at the sides of the needles where the loops are produced for holding the loops against retraction as the means of the wheel which forms said loops are withdrawn.

1,805,340. STOP MOTION MECHANISM. HARRY MCADAMS, Margate City, N. J. Filed Mar. 14, 1929. Serial No. 346,985. 2 Claims. (Cl. 66—158.)



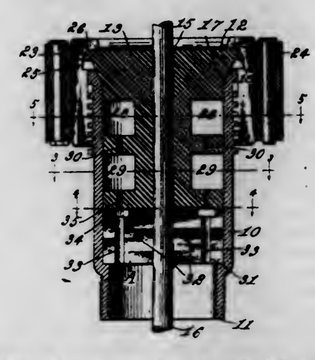
1. In a stop motion mechanism, a support, a controlling lever pivoted upon the support, a detent pivoted on the support engageable with the lever releasably to hold the said inner inoperative, said detent spaced from its pivot having an opening therein, and an electro-magnetically operated device provided with a vibratory armature operatively extending into the opening of the detent so that upon closing of a circuit through the electro-magnet device the armature will vibrate across the opening against the detent for releasing said lever.

1,805,341. WING SHIELD SUPPORT. THEODORE B. NISBET, Irvington, N. Y. Filed Dec. 17, 1927. Serial No. 240,772. 11 Claims. (Cl. 296—84.)



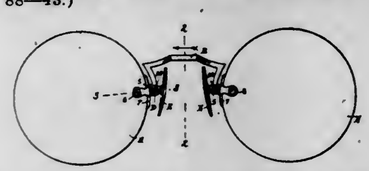
1. The combination with a passenger-carrying body, a door therein having a window, and two hinges, one leaf of each hinge being attached to the door at its edge and the other leaf being attached to said body, of a shield for said window and means for so attaching said shield to said hinges as to turn with said door.

1,805,342. VALVE MOTOR. CARL A. OTTO, Milwaukee, Wis., assignor to Johnson Service Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 30, 1930. Serial No. 492,323. 5 Claims. (Cl. 137—153.)



1. As a new article of manufacture, a combined spring seat and gland nut adjusting member for motor actuated valves, comprising a cup-like body adapted to embrace and turn with the nut without partaking of its axial motion, and having a spring seat formed thereon.

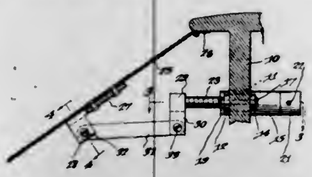
1,805,343. INSTRUMENT FOR DETECTING IRREGULARITIES IN THE BORES OF PIPES AND THE LIKE. JOHN A. ROBBINS, Lawrenceville, Ill. Filed Nov. 22, 1929. Serial No. 409,155. 2 Claims. (Cl. 33—174.)



1. In an instrument for testing tubes and pipes for irregularities in the bores thereof, a cylinder, a tube extending from the cylinder and having a longitudinal slot therein and provided, at one side of the slot, with scale marks, a stem slidable in the said tube and having a pointer thereon for registration with the scale marks, a spider adjustably mounted upon the stem and slidable within the cylinder, the cylinder being closed at its end through which the stem extends, the spider being engageable against the inner side of the closed end, means within the cylinder yieldably holding the spider in such engagement, arms radiating from the spider and pivotally connected therewith, the cylinder having longitudinally extending slots therein and the said arms extending through said slots, and anti-friction elements carried at the outer ends of the arms for contact with the inner surface of the wall of the tube or pipe to be tested, whereby when the anti-friction element of any of the arms engages an irregularity in the surface of the tube or pipe to be tested, the arm will be displaced and the movement of the stem in the tube thus effected will, in turn, effect the registration of the pointer with the scale.

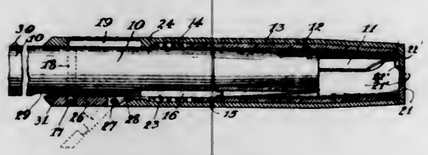
1,805,344. OIL SAVING DEVICE. FRED SIEFKEN, Torrance, Calif. Filed Feb. 13, 1929. Serial No. 339,656. 1 Claim. (Cl. 286—26.)

A packing gland comprising a coupling including an attaching sleeve upon one end having a polish rod passed centrally therethrough, a washer of separable formation clamped about the polish rod within the coupling, a packing of yieldable formation including a central bore to accommodate that portion of the polish rod above the washer, said packing being split longitudinally thereof from the central bore outwardly to one side to facilitate accommodation of the polish rod within the central bore of the packing from the side, the packing being further provided with spaced annular chambers wholly within the body thereof and in communication with each other and the inner side wall of the coupling, the washer having passageways in the bottom thereof in communication with the bore of the sleeve and chambers to facilitate admission of fluids therein under pressure and to compress the adjacent portions of the packing about the polish rod, a clamping member carried by and adjustably mounted upon the coupling, and a flange portion inwardly projecting from the outermost end of the clamping member beyond the adjacent periphery of the coupling frictionally engaging the packing to retain same seated against the upper side of the washer.



1,805,345. BOX STUD FOR NOSE BRIDGES. VINCENT TANASSO, New York, and JACOB J. POMERANZ, Brooklyn, N. Y. Filed Feb. 9, 1929. Serial No. 338,784. 1 Claim. (Cl. 88—43.)

In an eyeglass or spectacle construction, a nose bridge formed of a thin flat sheet of resilient material having a bight portion and depending leg portions disposed in the same plane with each other and in a vertical plane coinciding with the plane of the lenses and a box stud having its major width disposed in a plane coincident with the nose bridge and provided with a vertical bore receiving the lower terminals of the nose bridge leg portions and securing

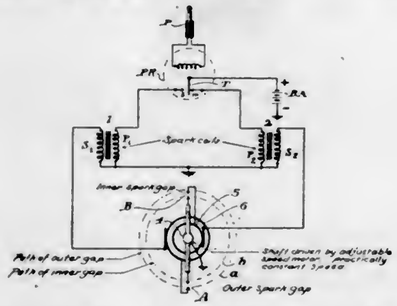


means passing through said box studs and said terminal portions and disposed on axes parallel to the axes of the lenses.

1,805,346. WINDSHIELD VISOR. PETER J. WARAKSA, El Paso, Tex. Filed Oct. 28, 1927. Serial No. 229,459. 1 Claim. (Cl. 296—95.)

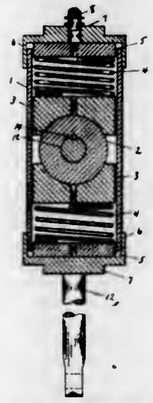
A device for adjusting the angular position of the sun visor of an automotive vehicle, comprising, in combination with a windshield having an opening therein and a sun visor hinged at its upper end to the top of the vehicle, a re-enforcing plate on said windshield having an opening therein aligned with the opening in said windshield, a supporting plate on the opposite side of said windshield having a collar extending therefrom having the interior opening thereof aligned with the opening in said windshield, a sleeve extended through said aligned openings, a headed end on said sleeve disposed in abutment with said reenforcing plate, said sleeve having a screw threaded portion on the periphery thereof on the end opposite said headed end, a handle member mounted on said screw threads and disposed in abutment with the outer end of said collar whereby to hold said sleeve in said openings against lateral movement, said sleeve having the inner periphery thereof screw threaded, a screw member threadedly mounted in said screw threaded sleeve and movable axially with respect to said sleeve when said handle is moved to rotate said sleeve, a block connected to the outer end of said screw member and connected thereto in such a manner that said screw member may be rotated relative to said block, a link connected to said block and pivotally connected to a bracket on said visor whereby when said screw is moved by rotation of said handle member said link will transmit the movement thereof to said visor to move said visor into various angular positions with respect to the windsheld.

1,805,347. CLOSURE DEVICE FOR FOUNTAIN PENS. RICHARD WEINGART, New York, N. Y., assignor to Eveready Pen Company, Inc., New York, N. Y., a Corporation of New York. Filed June 5, 1930. Serial No. 459,327. 20 Claims. (Cl. 120—49.)



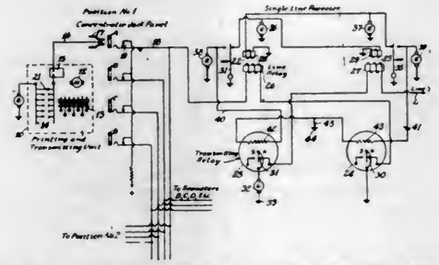
1. A fountain pen, a body with a writing nib, a housing for the nib including two members connected by guide connections with the body for relative movement, both members being connected for endwise movement and one being connected for independent turning movement, said members having cooperative segment ends and openings, the segment end of one member being formed to seat in the opening of the other member, and the member having turning movement being adapted through the turning thereof to position its segment end opposite the segment end of the other member and its opening in registry with the opening of the other member, whereby to alloy the projections of the nib through the registering openings.

1,805,348. FOUNTAIN PEN. RICHARD WEINGART, New York, N. Y., assignor to Eveready Pen Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 5, 1930. Serial No. 479,837. 8 Claims. (Cl. 120—49.)



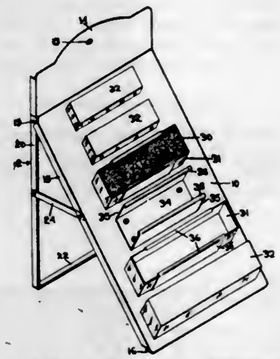
1. A fountain pen the body and nib of which are provided with a covering consisting of a pair of barrels connected for relative longitudinal movement, each of said barrels at the nib end of the pen including a plug and a seat opening, the plug of each barrel being shaped to fit into and effect a seal with the seat opening of the other barrel, said plugs being insertable in and removable from the seat openings on longitudinal movement of one of the barrels.

1,805,349. SIGNAL DISTORTION INDICATOR. RALEIGH J. WISE, Bloomfield, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Feb. 7, 1928. Serial No. 252,564. 4 Claims. (Cl. 178—69.)



1. In combination, a source of signals comprising positive and negative current impulses transmitted in cycles, a relay responsive thereto, means operated in substantial synchronism with said signals to indicate upon separate paths the time cycle of said respective signals, and means controlled by said relay and cooperating with said first means for indicating the time of operation of said relay for each signal impulse.

1,805,350. VEHICLE SPRING SNUBBER. VALENTIN C. WORLEIN, Chicago, Ill. Filed July 19, 1930. Serial No. 469,138. 5 Claims. (Cl. 188—130.)

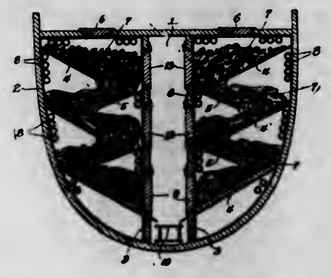


1. In combination with a housing, a crank rotatably mounted therein, a ball mounted upon the end of said crank disposed within the housing, friction members in contact with said ball, compression means, and springs between said friction members and said compression means.

1,805,351. REPEATING APPARATUS FOR CONCENTRATION UNITS. ALBERT ATHERTON, Bloomfield, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Sept. 16, 1929. Serial No. 393,052. 5 Claims. (Cl. 178—4.)

1. The combination with a concentration unit having a telegraph printer associated therewith, of a number of telegraph lines terminating at said concentration unit, repeaters intermediate certain of said lines and said concentration unit, means at the concentration unit for reversing the polarity of current applied to the repeaters and means for supplying current of uniform polarity from said repeaters to the lines when current of either polarity is applied at the concentration unit.

1,805,352. DISPLAY STAND. WILLIAM H. AVERILL, Dorchester, Mass., assignor to Pike Manufacturing Company, Pike, N. H., a Corporation of New Hampshire. Filed May 2, 1928. Serial No. 274,373. 5 Claims. (Cl. 206—80.)



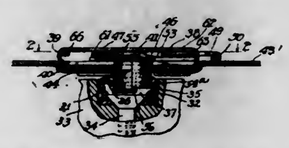
1. A display stand comprising a supporting plate, a U-shaped clip fastened thereon and having parallel sides spaced to hold a box closely therebetween, inwardly turned flanges on the sides of the clip arranged to engage the top edges of a box held therein, and means associated with said plate for engaging the ends of said box to prevent longitudinal movement thereof, said sides of the clip being thin and of such dimensions that the regular box cover may fit over the box supporting members and conceal them from view.

1,805,353. PROCESS FOR DECHLORINATING WATER. ERNST BEEL, Darmstadt, Germany. Filed Oct. 10, 1929, Serial No. 398,804, and in Germany May 10, 1926. 9 Claims. (Cl. 210—28.)

1. A water purifying process which comprises treating the water with chlorine or perchloride compounds, treating the chlorinated water with a lignin bearing material to convert the chlorine into lignin chloride and substantially continuously maintaining throughout the treatment the ratio between the lignin and the chlorine at a proportion of substantially 2 to 1 parts by weight or above.

1,805,354. BIN FOR STORAGE OF FISH. CLARENCE BIRDSEYE, Gloucester, Mass., assignor, by mesne assignments, to Frosted Foods Company, Inc., Dover, Del., a Corporation of Delaware. Filed May 3, 1928. Serial No. 274,769. 3 Claims. (Cl. 62—1.)

1. A bin for the storage of fish comprising enclosing walls, inwardly and downwardly extending shelves alternately projecting in staggered relation from opposite walls, an opening through which fish can be delivered onto the topmost shelf and an opening adjacent the bottom of the bin through which the fish can be discharged.

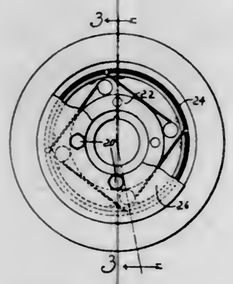


1,805,355. BASIC COMPOUNDS AND PROCESS OF PREPARING THEM. MAX BOCKMÜHL, Frankfort-on-the-Main-Hochst, and ROBERT KNOLL, Hornau-on-the-Taunus, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Dec. 26, 1929, Serial No. 416,742, and in Germany Jan. 2, 1929. 17 Claims. (Cl. 260—124.)

1. The process which consists in causing a compound of the following formula:

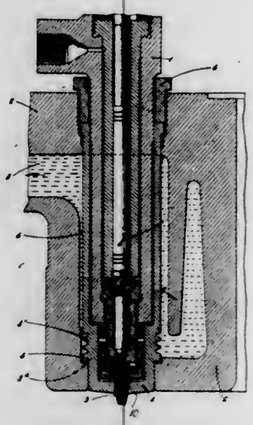
$$R-C\begin{matrix}O\\X\end{matrix}$$

wherein R stands for an aliphatic residue containing at least 10 carbon atoms and X stands for OH, O-alkyl, halogen, NH_2 or a NH_2-group the hydrogen atoms of which are substituted by alkyl, aryl or aralkyl, to react with an amino alcohol containing at least two amino groups one of which being a tertiary one.



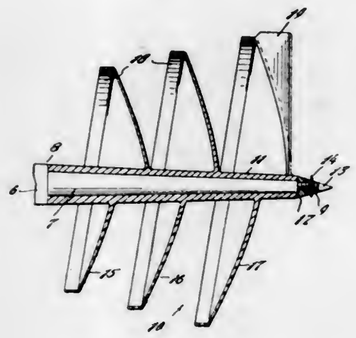
1,805,356. ADJUSTABLE LATCH LOCK FASTENER. HELGE A. BORRESEN, Chicago, Ill., assignor to United Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed Dec. 16, 1922. Serial No. 607,345. 15 Claims. (Cl. 29—211.)

1. A three-side lock fastener comprising, in combination, a socket presenting a stud-receiving aperture, a cooperating stud having a shank portion for passage through said aperture, said shank portion having an opening in one side thereof, a locking portion projecting into the opening in said shank portion, means on the locking portion for locking the stud with the socket, at-



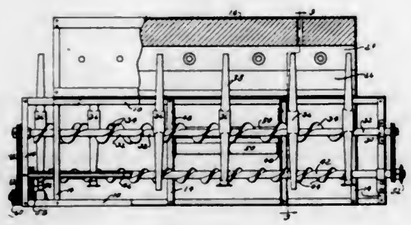
taching means securing the stud to a flexible support, and means cooperating with the locking portion and extending substantially parallel to the flexible support, whereby it may be operated by initial movement of the flexible support relative to said stud thereby to shift said locking portion out of locking engagement with the socket and permit separation of the stud from the socket by a pull exerted upon a predetermined side only of the flexible support.

1,805,357. VIBRATION DAMPENER. CARL BREER, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a Corporation of Delaware. Filed Jan. 24, 1927. Serial No. 163,117. 8 Claims. (Cl. 74—6.)



3. In a vibration dampener of the class described comprising a crankshaft having a flywheel thereon, a member on said crankshaft rotatable therewith and spaced from the flywheel, an inertia ring relatively rotatable on said member, and a radially expansible member rotatable with said member for frictionally engaging with said ring to form a driving connection therebetween.

1,805,358. FUEL VALVE OF INTERNAL COMBUSTION ENGINES. WALTER SCOTT BURN, Hartlepool, England. Filed Apr. 16, 1928, Serial No. 270,527, and in Great Britain Dec. 19, 1927. 7 Claims. (Cl. 123—173.)

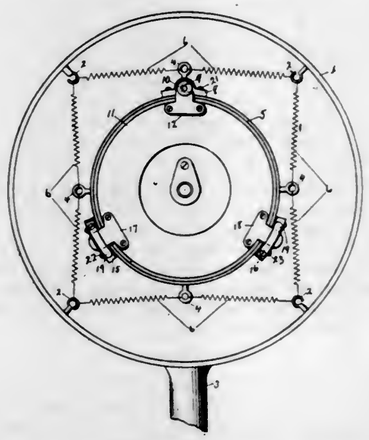


1. In an internal combustion engine having a water cooled cylinder head and a fuel nozzle substantially enclosed in a heat conducting sleeve penetrating the water space and the outer and inner walls of said cylinder head, means for promoting over the exterior surface of the fuel valve containing sleeve a flow of cooling water at a velocity higher than that normally obtaining in the main water space of the cylinder head.

1,805,359. PROPELLER. ALFRED DE POLO, Connellsville, Pa. Filed July 20, 1929. Serial No. 379,852. 2 Claims. (Cl. 170—156.)

1. As a new product of manufacture, a propeller of the class described comprising a centralized hub tapered in diameter and thickness from the inner toward the outer end, and a plurality of integral sectors composed of spiral convolutions, advancing in diameter and receding in helical form from the inner toward said outer ends, the sectors being of general cupped or curvate configuration in cross section, and formed with peripheral flanges constituting power concentrating and confining rims, the outermost convolutions terminating in fins, said fins being disposed at approximate acute angles with respect to the longitudinal axis of the hub, and being graduated from the hub toward the periphery of said section.

1,805,360. HEAT TREATING FURNACE. RAY A. DE VLIEG, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Sept. 8, 1928. Serial No. 304,736. 8 Claims. (Cl. 263—6.)

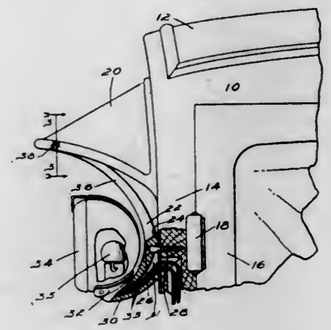


7. A furnace of the class described comprising an oven portion having an opening in its lower wall extending longitudinally thereof from one end of the oven to the other end, a pair of spaced shafts below said opening, a pair of spiral flanges, one on each of said shafts, at least one pair of corresponding ends of said shafts terminating within the limits of an end of said oven portion.

1,805,361. COLOR PHOTOGRAPHY. LOUIS DUFAY, Versailles, France, assignor to Harold Wade, London, England. Filed Mar. 8, 1929, Serial No. 345,604, and in Great Britain Aug. 3, 1928. 13 Claims. (Cl. 95—81.5.)

1. A method of making a multicolour photographic screen consisting in applying to a film of a cellulose ester of an organic acid a coating of cellulose nitrate in solution, drying the coating and thereafter treating said coating to produce therein a multiplicity of differently-coloured regions.

1,805,362. MICROPHONE AND MICROPHONE MOUNTING. HUGH J. ELLIS, Berwyn, Ill. Filed Oct. 9, 1929. Serial No. 398,367. 6 Claims. (Cl. 179—146.)

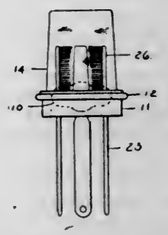


1. In a microphone for use in radio broadcasting, the combination of an outer ring, an inner ring supported within said outer ring by means of tension springs, a microphone unit removably mounted within said inner ring, substantially as shown and described.

1,805,363. GARMENT HOLDER, FOLDER, SUPPORTER, AND BOX STRENGTHENER. JOHN HART, Union City, N. J. Filed Nov. 28, 1928. Serial No. 322,412. 2 Claims. (Cl. 206—7.)

2. Means for retaining a garment against displacement within a garment box, comprising a garment engaging member to extend across the interior of the box in retaining engagement with a garment within the box, and substantially inverted U-shaped loops adapted to overhang the upper edges of the respective opposite walls of the box and engaging the inner and outer faces of the respective walls for removably supporting the member in a proper position.

1,805,364. SUPPORTING BRACKET. HERBERT V. HENDERSON, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Sept. 16, 1929. Serial No. 393,091. 7 Claims. (Cl. 240—57.)

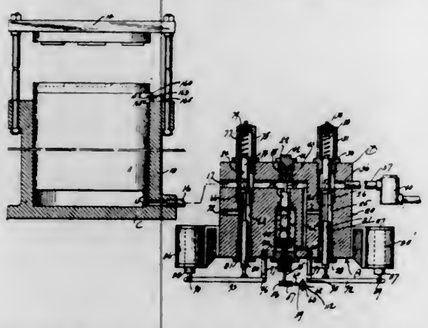


1. A device of the class described comprising in combination, a vehicle body, a visor on said body, a bracket between said body and said visor, and a lamp on said bracket.

1,805,365. PROCESS OF ETHERIFYING CELLULOSE. EUGEN HUBER, Leverkusen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Mar. 20, 1928, Serial No. 263,216, and in Germany Mar. 25, 1927. 3 Claims. (Cl. 260—152.)

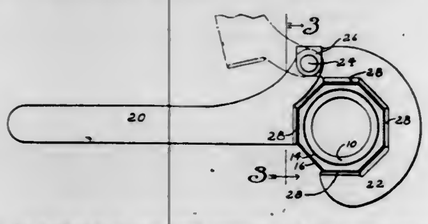
1. The process which comprises introducing cellulose into a mixture of an aromatic high boiling tertiary amine and water, stirring until a homogeneous dispersion has formed, introducing then the amount of caustic alkali which is necessary for effecting conversion of the cellulose into alkali cellulose and subjecting the alkali cellulose thus formed in the reaction mixture to the action of an etherifying agent.

1,805,366. TOOTHBRUSH AND TUMBLER RACK. MAX KADEN, New Britain, Conn. Filed Nov. 28, 1927. Serial No. 236,126. 2 Claims. (Cl. 248—63.)



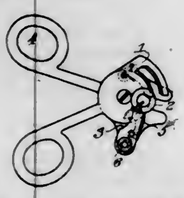
1. A tooth brush holder comprising a cylindrical wall that is provided with inwardly directed means for supporting a tooth brush, a second cylindrical wall spaced from said first mentioned wall and supported therefrom by means of an intermediate platform of annular form, and a ring engaged with the periphery of said second wall serving as the support for said holder.

1,805,367. AUTOMATICALLY OPERATED PRESS. RONALD T. KING, Burlington, N. J. Filed Apr. 18, 1929. Serial No. 356,190. 6 Claims. (Cl. 138—17.)



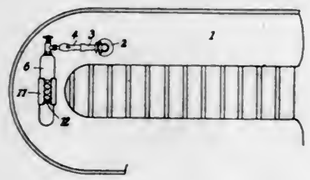
1. In mechaniam for controlling the admission of high and low pressures to the cylinders of an hydraulic

press, the combination of a pressure supply main, valve means for controlling admission of low pressure to the said main, valve means for controlling admission of high pressure to the said main, means operated by the flow of low pressure to the main at the time that the hydraulic press meets work resistance for automatically



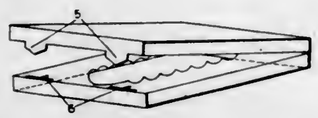
opening the last mentioned valve for admission of high pressure to said main, an exhaust valve for releasing pressure from said main, and delayed action means automatically operated by the means which opens the high pressure valve means for opening the exhaust valve and releasing the pressure after the high pressure has operated the hydraulic press for a predetermined interval.

1,805,368. WRENCH. HOWARD E. MAYNARD, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 23, 1929. Serial No. 342,072. 2 Claims. (Cl. 81—98.)



1. In a device of the class described, a U shaped stamping; nut engaging shoulders upturned about the inner periphery of said U shaped stamping for engagement with a plurality of faces on a nut; an ear turned back upon itself at one end of said U shaped stamping and on the same side as the aforesaid shoulders; a pin passing through the ear and stamping, and a handle pivoted on said pin and adapted to engage another face of a nut in said wrench.

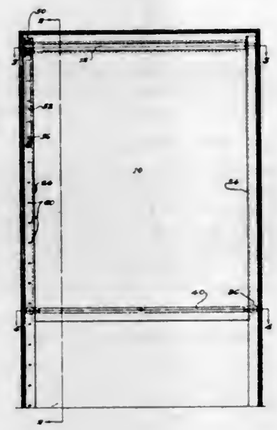
1,805,369. DEVICE FOR OPENING VIALS. WILHELM MERCK, Darmstadt, Germany. Filed Mar. 8, 1928, Serial No. 260,219, and in Germany Mar. 18, 1927. 1 Claim. (Cl. 49—52.)



A device for opening vials comprising a scissor-like mechanism, a semi-circular shaped glass-cutter taking up the position of one of the scissor-blades, a plate with an U-shaped incision taking up the position of the other blade; a small axle mounted on this plate, an arm with a small round plate of medium-hard material on the one end as striker, connected to the axle on the other end; an actuating spring wire around the axle, a disengaging pin mounted on the arm in the direction towards the plate with the incision, a spring wire actuated nose connected pivotally to the glass-cutter, of sufficient length to press the disengaging pin and thereby the arm and the small plate on it away from the glass-cutter when closing the grips of the scissors and to slip from the disengaging pin when the grips of the scissors are closed, whereby the striker is rapidly moved forward in the direction toward the glass-cutter.

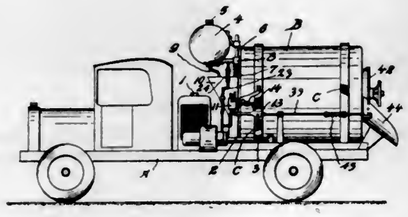
1,805,370. METHOD OF AND APPARATUS FOR INFLATING INFLATABLE BODIES, SUCH, FOR EXAMPLE, AS INFLATABLE BOATS. HERMAN MEYER, Berlin, Germany. Filed Dec. 27, 1929, Serial No. 417,012, and in Germany Jan. 9, 1929. 1 Claim. (Cl. 9—2.)

A boat comprising an inflatable hull of limp flexible material provided with a stud, a container for compressed gas and a duct detachably connecting the container to the stud, said duct including an injector nozzle for the gas and openings for the admission of air so that the gas as it enters the hull draws and forces atmospheric air also into the hull, thereby causing the hull to be inflated with a mixture of gas and air.



1,805,371. CARTON OR LIKE CONTAINER FOR CIGARETTES AND THE LIKE. WALTER EVERETT MOLINS, Deptford, London, England. Filed Apr. 5, 1928, Serial No. 267,775, and in Great Britain Apr. 22, 1927. 5 Claims. (Cl. 229—27.)

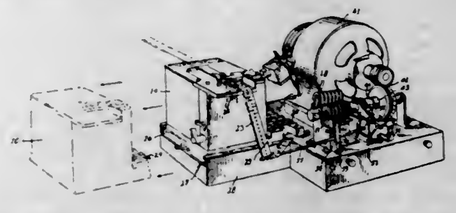
1. A container having a pair of pockets hingedly connected at one end thereof, whereby the pockets may be closed by folding one upon the other so that the opposing faces engage, one of said pockets being provided with a slot in the opposing face thereof, and the other pocket being provided with a co-operating tongue extending toward the opposing face of the other pocket as the pockets are moved to closing position, whereby the tongue automatically enters the said slot during such movement and is frictionally retained therein to hold the pockets in closed relationship.



1,805,372. WINDOW SHADE. PATRICK RAINSFORD, Dorchester, Mass. Filed Sept. 15, 1930. Serial No. 481,843. 2 Claims. (Cl. 156—26.)

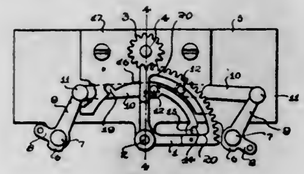
2. A window shade comprising a springless shade roller journaled at opposite ends, a curtain shade wound upon the roller, U-shaped guides each having a narrow guiding slot to engage opposite edges of the shade, rearwardly extending ears projecting from the upper portions of the guides to form bearings for the opposite ends of the shade roller, a slot formed in the upper portion of one of the guides, a flexible pull reversely

wound upon the end of the shade roller and extending through the slot, a series of spaced openings formed lengthwise of the guide, and a latch upon the pull designed to selectively engage with the openings for locking the shade in any adjusted position.



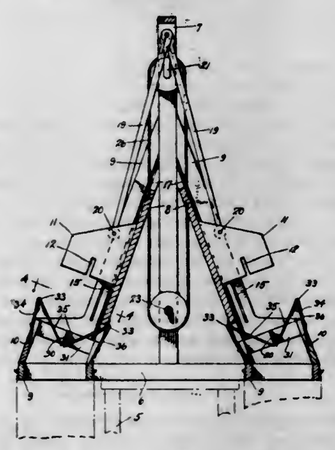
1,805,373. TRUCK MIX METER. JOHN F. ROBB, Cleveland Heights, Ohio, assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed May 2, 1930. Serial No. 449,299. 19 Claims. (Cl. 83—73.)

1. In combination, a truck mixer type of concrete mixing machine, comprising a mixing drum and discharge means, a lock device for said discharge means to prevent opening thereof, means for setting the mixing drum into operation, a batchmeter controlling said discharge means, and instrumentalities between the means for setting the mixing drum into operation and said batchmeter to control starting of the latter.



1,805,374. DISTRIBUTOR-TRANSMITTER FOR SIMPLEX TELEGRAPH CIRCUITS. SAMUEL W. ROTHERMEL, Lynbrook, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Sept. 6, 1929. Serial No. 390,726. 5 Claims. (Cl. 178—17.)

1. A distributor-transmitter for a telegraph system comprising a perforated tape transmitter and a distributor, said distributor having a plurality of switches each having one contact connected to the line and the opposite contact connected to the transmitter and a plurality of

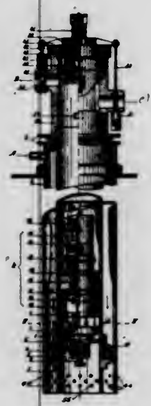


cams for closing said switches in succession to distribute to the line in proper sequence the character combinations previously set up by said tape transmitter.

1,805,375. MECHANICAL MOVEMENT. CHARLES H. SAMPSON, Rochester, N. Y., assignor to Sampson Permagraph Company Inc., Rochester, N. Y., a Corporation of New York. Filed Feb. 18, 1929. Serial No. 340,845. 4 Claims. (Cl. 74—83.)

1. The combination with a shiftable member, and two shifting mechanisms normally out of driving connection with said member, a guide on the shiftable member for holding one shifting mechanism out of driving connection with the shiftable member while the latter is shifted away from normal position, and a fixed guide cooperating with a shifting mechanism when the latter is shifting the shiftable member to hold said shifting mechanism in connection with the shiftable member.

1,805,376. SEED POTATO CUTTER. THOMAS SAMSON, Grafton, N. Dak. Filed Feb. 19, 1930. Serial No. 429,681. 1 Claim. (Cl. 146—169.)



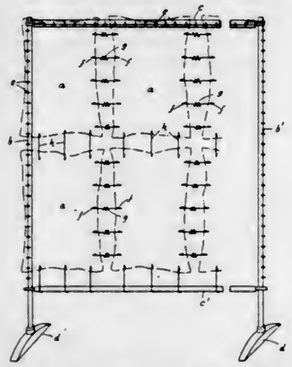
In a mechanism of the class described, a horizontal frame, a vertical frame rising from the central portion

CARNEGIE LIBRARY OF ATLANTA

of the horizontal frame, a pair of plates rising upwardly from the horizontal frame and alining inwardly toward each other to the vertical frame, a plurality of blades associated with the lower portion of each plate, said blades being arranged in cross relationship, follower blocks slidable on the plate, pitmen engaged with the follower blocks, a crank shaft journaled in the vertical frame with which said pitmen are engaged, said pitmen to straddle said vertical train in a manner to afford reciprocatory movement of the follower blocks in their respective inclined plates, on the opposite sides of the vertical frame, means for rotating the crank shaft to cause reciprocation of the follower block, said follower block having grooved faces to receive the blades, side boards on the plates having longitudinally extending slots, and pins extending from the block through the slots, a strip extending along the center of each plate, and lugs extending inwardly from the block under the strip, box like structures on the lower portions of the plates for engaging the blades, rods extending along the inner and outer sides of the box like structures, guide plates rockably mounted on said rods extending between the blades, and springs urging the guide plates upwardly against the under side of the blade.

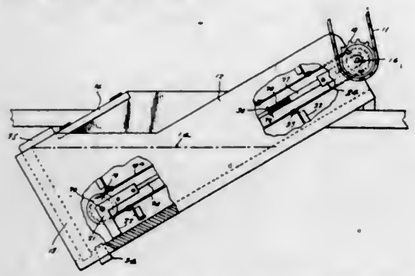
1,805,377. DEVICE FOR RAISING FLUIDS FROM BOREHOLES. BRUNO SCHWEIGER, Lipinki K/Biecza Zach Malopolska, Poland. Filed Dec. 8, 1928, Serial No. 324,602, and in Germany June 2, 1926. 6 Claims. (Cl. 103—52.)

1. Apparatus for raising fluids from deep and narrow boreholes with low fluid levels, comprising tubing having inlets at its bottom for the fluid to be raised, and also having an inlet and an outlet for compressed air and an outlet for the fluid; a valved raising piston within the tubing moved from the bottom of the borehole for the full height of its lifting stroke by the compressed air and then falling back upon the bottom by gravity; and a bottom valve below the raising piston for controlling the admission of fluid and air between it and said raising piston; the valve of the raising piston being closed by the increasing pressure of the air under it when the raising piston falls at too great an acceleration so as to throttle the air escaping above the raising piston, said raising piston having means for controlling the movement of the bottom valve.



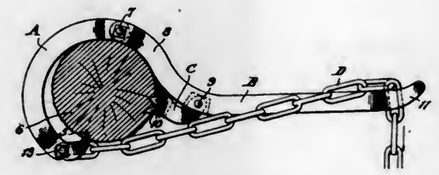
1,805,378. INTERCHANGEABLE SIGN. MAURICE SEND, Detroit, Mich. Filed May 17, 1930. Serial No. 453,148. 1 Claim. (Cl. 40—142.)

In a sign, a back member having a longitudinal groove, the lateral walls of said groove converging towards the mouth thereof, a character, and a resilient loop projecting directly from the back of said character, said loop having greater maximum width than the mouth of said



groove and receivable in said groove under tension, said loop being entirely receivable in said groove whereby the back of said character engages said back member.

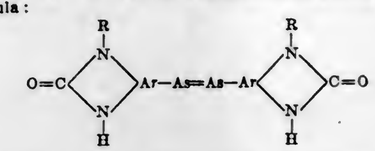
1,805,379. MEANS FOR STRETCHING RABBIT AND OTHER SKINS. GEORGE GRINLEY SHARPE, Ulcombe, England, assignor to The Governor and Company of Adventurers of England Trading into Hudson's Bay, London, England, a British Company. Filed May 31, 1928, Serial No. 281,885, and in Great Britain Aug. 9, 1927. 2 Claims. (Cl. 149—21.)



2. A device for stretching skins of animals, comprising a vertical frame including a pair of side members, a top member connecting said side members adjacent their upper ends, a bottom member having its end slidable longitudinally of side members, a skin-engaging means carried by each of said side and top members and skin-engaging hooks detachably mounted on said bottom member.

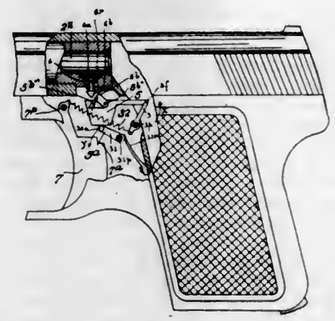
1,805,380. FRUIT DIPPER. CARL W. SHATTO, Sebastopol, Calif. Filed Dec. 13, 1929. Serial No. 413,819. 3 Claims. (Cl. 198—208.)

1. A fruit dipper of the type described for association with a conventional fruit peeler comprising a trough having an inclined bottom and its upper end open and its lower end closed so as to retain a quantity of treating fluid, a shaft carrying a roller at the upper end of the trough, a drive sprocket on one end of the shaft, a roller on a shaft journaled in brackets rested in the lower end of the trough, a conveyor belt trained between said rollers, rigid longitudinally adjustable means connected between said shafts for adjustably and automatically tensioning the conveyor belt, the connection of said means with the shaft at the upper end of the trough being pivotal so as to permit the lower end of the conveyor to be swung out of the lower end of the trough without disturbing the operative relation of the drive sprocket with the driving means of the peeler.



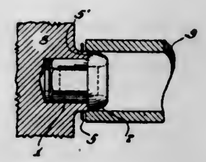
1,805,381. POST TWISTER. JOHN SHIMKO, Uniontown, Pa. Filed June 21, 1929. Serial No. 372,669. 4 Claims. (Cl. 254—131.)

1. In a post twister, the combination of a post-engaging hook, a shank connected thereto and having a seat at the free end, teeth carried by the shank and projecting toward the hook, and a flexible pull chain connected at one end to the hook and adapted to extend over the seat on the shank.



1,805,382. ARSENOBENZIMIDAZOLONS. KARL STREITWOLF, Frankfort-on-the-Main, and ALFRED FEHRLE, Badsoden, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 17, 1927, Serial No. 234,034, and in Germany Dec. 2, 1926. 2 Claims. (Cl. 260—15.)

1. As new products, the arsenobenzimidazolones of the formula:

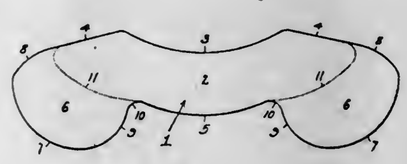


wherein R stands for alkyl or alkylene and Ar for a benzene nucleus.

1,805,383. AUTOMATIC PISTOL. LEON THIRY, Brussels, Belgium. Filed May 3, 1929, Serial No. 360,130, and in Germany May 7, 1928. 5 Claims. (Cl. 42—7.)

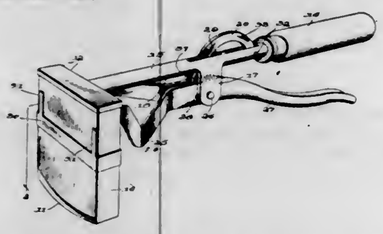
5. Automatic weapon comprising a safety arrangement placed in its safety position by the withdrawal of the magazine by means of the penetration of an element into the seat of the magazine and means for obstructing this element in its safety position by a portion actuated by an element, a portion of which is extended beyond the chamber of the gun when the latter contains a cartridge, so that returning the machine to place is prevented while a cartridge remains in the chamber of the gun.

1,805,384. METHOD OF MAKING CAP NUTS. GEORGE A. VIS, Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 2, 1927. Serial No. 171,914. 2 Claims. (Cl. 10—86.)



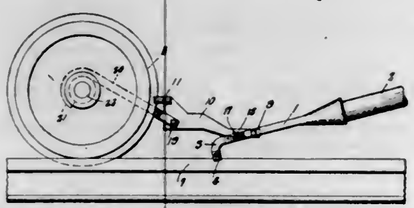
1. The method of making nuts which comprises the formation of a blank into the shape of the nut by pressure between dies producing a flash, thereby providing on the nut a reference surface comprising the flash produced by said die pressing operation, thereafter using said reference surface to locate and align the axis of the nut for a succeeding operation or operations, and finally cutting off the flash after such operation or operations.

1,805,385. HARDENED ARTIFICIAL MASS AND PROCESS OF PREPARING IT. ARTHUR VOSS, Frankfort-on-the-Main-Hochst, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Sept. 19, 1928, Serial No. 307,042, and in Germany Sept. 29, 1927. 14 Claims. (Cl. 260—4.)



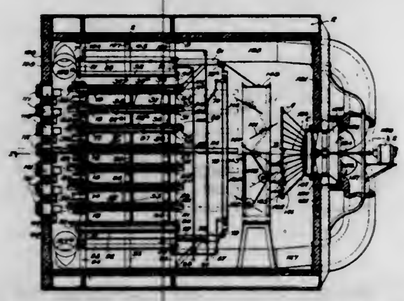
7. The process which consists in heating condensation products, obtained from chloroacetic acid and the condensation product of phenol and formaldehyde, with the addition of glycerine to a temperature of between 100° C. and 200° C.

1,805,386. PROTECTIVE DEVICE. HAROLD V. ALLEN, East Bethel, Vt. Filed Mar. 21, 1930. Serial No. 437,845. 2 Claims. (Cl. 36—70.)



1. A protective device for use in protecting socks and stockings while polishing shoes, which device comprises a blank of flexible sheet material having side portions to be fitted over the sides and top of the instep of the foot, and a connecting intermediate portion to extend around the ankle and heel, the said blank being provided with end portions extending from the ends, and under sides of the intermediate portion, and connected therewith along a weakened line.

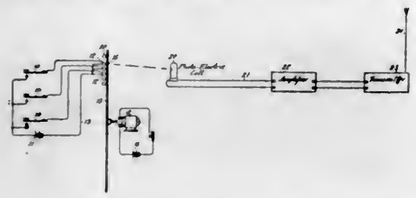
1,805,387. ICE CREAM SCOOP. JAMES L. BALTON, Baltimore, Md., assignor to Joseph Shapiro, Baltimore, Md. Filed July 25, 1928. Serial No. 295,138. 4 Claims. (Cl. 107—48.)



1. An ice cream scoop including a scoop body; an ejector mounted in said scoop body, said ejector provided with rollers mounted on a shaft carried by said ejector; a stem perpendicular to said scoop, and means mounted on said stem for actuating said ejector.

1,805,388. FREIGHT CAR PUSHER. DESMOND B. BROOKS, Haxtun, Ohio. Filed Sept. 16, 1929. Serial No. 392,985. 4 Claims. (Cl. 254—37.)

1. In a device for the purpose set forth, a lever having a downturned and offset end providing a rail engaging fulcrum, a jaw having a shank pivoted to the lever, and said jaw being bifurcated to engage with the rim of the wheel and a hooked element pivotally secured to the shank of the jaw and designed to be arranged over the axle of the wheel.

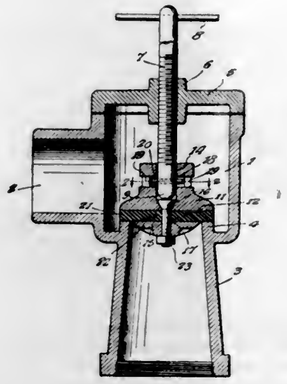


1,805,389. FABRICATING MACHINE FOR LAMINATED GLASS PRODUCTS. WILLIAM C. BULL, Brooklyn, N. Y., assignor to William C. Bull, Inc., a Corporation of Delaware. Filed July 12, 1927. Serial No. 205,132. 29 Claims. (Cl. 18—17.)

2. A glass product fabricating machine including an oven, a press therein having opposite pliable pressure members, pressure and vacuum means acting against said members, and a single control for said pressure and vacuum means.

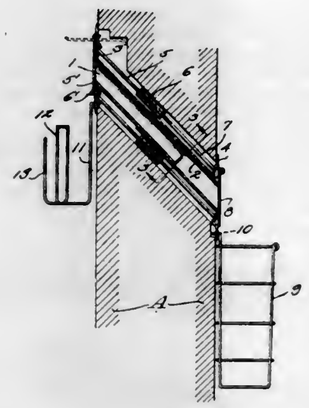
21. A glass product fabricating machine including an oven, a press assemblage mounted within the oven, heating elements arranged in the oven spaces about the press assemblage, and an air circulating system including an air impeller for directing a volume of air into the oven chamber, an air spreader associated with said impeller to spread the air at its point of entry into the oven chamber and piping communicating with the impeller and the front part of the oven chamber to provide for the return of the air from that part of the oven.

1,805,390. MESSAGE TRANSMISSION. ALBERT B. CLARK, Dorchester, Mass., assignor of forty per cent to Alfred H. Howard, Boston, Mass. Filed Feb. 2, 1929. Serial No. 336,994. 9 Claims. (Cl. 178—4.)



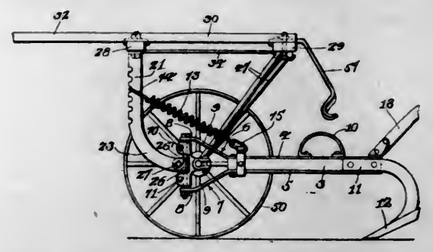
1. A method of communication which includes the energizing of a plurality of lights by a plurality of associated signal devices, and successively and intermittently superposing light from said lights upon light responsive means to propagate a single signal in response to said intermittent and successive superposings of said lights.

1,805,391. VALVE. RALPH A. DOUDS, Lakeland, Fla., assignor to William Peacock and Robert Peacock, Lakeland, Fla. Filed Apr. 11, 1929. Serial No. 354,388. 6 Claims. (Cl. 251—46.)



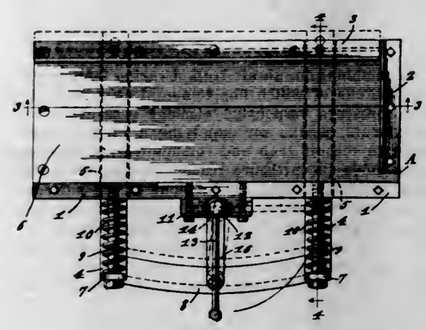
4. A valve comprising a casing formed with an inlet and an outlet and having a valve seat about the inlet, a stem extending into the casing and adjustable towards and away from the inlet, a valve head loose about the inner end portion of said stem and formed with a pocket receiving the inner end of the stem, a pin within the pocket passed through the inner end portion of said stem to retain the valve head in engagement with the stem, said valve head having a side opening communicating with the pocket to permit insertion of the pin, a sealing disk fitting against said valve head, a facing for said disk having arms extending into the inlet to serve as guides, and a fastener passed through the lower portion of the valve head and through the sealing disk and facing and having a head at its upper end received in said pocket, the stem when moved inwardly being adapted to bear against the head of said fastener and move the valve head towards the inlet and seat the disk against the valve seat.

1,805,392. VALVE. RALPH A. DOUDS, Lakeland, Fla., assignor to William Peacock and Robert Peacock, Lakeland, Fla. Filed Nov. 27, 1929. Serial No. 410,236. 4 Claims. (Cl. 251—46.)



1. In a valve structure, a threaded stem having a transverse opening adjacent its inner end, a head formed with an axially extending passage enlarged intermediate its ends to form a chamber and at opposite sides of the chamber formed with openings communicating with the chamber, a sealing disk against said head, a fastener inserted through the end of said passage on one side of said chamber and passed through said disk, said fastener having a head seated in said passage in spaced relation to said chamber, a stem rotatably received in said passage and extending past the chamber and bearing against the head of said fastener, and a pin inserted through a side opening of the chamber and passed through the transverse opening of said stem.

1,805,393. MAIL RECEIVER. ZADA LIZZIE FANCHIER, Wichita Falls, Tex. Filed Jan. 23, 1928. Serial No. 248,887. 2 Claims. (Cl. 232—20.)



2. In a mail receiver, a chute formed from telescopically mounted sections adapted to be arranged in an opening formed in the wall of a building, threaded bolts carried by said sections, and means threadedly receiving said bolts for securing the sections in cooperative adjusted positions with respect to each other.

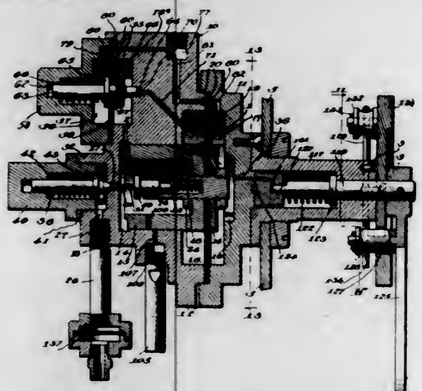
1,805,394. STRADDLE ROW CULTIVATOR. JACK H. L. GAMBLE, Headland, Ala. Filed Oct. 10, 1929. Serial No. 398,699. 4 Claims. (Cl. 97—156.)

1. In a straddle row cultivator, a frame including front rear and side bars, a two-part adjustable axle, said parts adjustable laterally relatively to each other, means for securing said axle to said rear bar and for maintaining the axle in its adjusted position, a pair of rearwardly directed spaced beams, a vertically disposed coupling element attached to and extended forwardly from each axle part, a pair of straps extending forwardly from each beam and opposing the top and bottom of a coupling element, a pivot bolt attached to each element and connecting a pair of straps to the latter, a yoke extending forwardly from each bolt intermediate the ends of the latter, a pair of depending rearwardly directed brace members having the upper ends thereof secured to said front bar and their lower ends to said yoke, said members being toothed, a rack extending transversely of each beam, and downwardly inclined spaced coiled springs for selective connection at their upper ends to the teeth of said members and at their lower ends to the teeth of said rack.

1,805,395. WORK TABLE AND CLAMP. JAMES F. GLASS, Conroe, Tex. Filed Mar. 13, 1930. Serial No. 435,555. 3 Claims. (Cl. 144—291.)

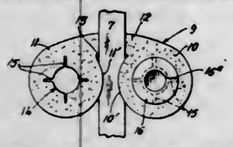
1. A device of the class described comprising a table having a stationary flange at its rear side, a movable flange at the front side, bars passing through the table and connected with the movable flange, springs associated with the rear parts of the bars for holding the flange in clamping position and means at the rear of the table for moving the bars forwardly against the action of the springs to move the front flange forwardly.

1,805,396. EYESHIELD FOR SPECTACLES. ALLEN H. HAVENS, St. Petersburg, Fla. Filed Nov. 20, 1928. Serial No. 320,556. 5 Claims. (Cl. 88—41.)



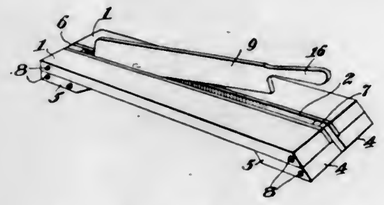
1. An eye shield for spectacles consisting of a pair of lens cover members connected together at the upper edge by a portion integral therewith, the upper edge being pro-

vided with a return bent rolled flange, the portion of the rolled flange over each lens cover being formed with a depending shoulder of short length to clip over the respective lens frames, and the rolled flange between the shoulders being provided with a depending flat flange to stiffen the eye shield.



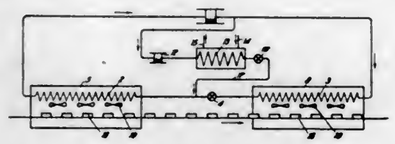
5. A shield for the eyes consisting of a single sheet of tinted celluloid bifurcated to provide two portions covering the eyes of the wearer, and an integral rolled portion along the upper edge and a flat portion extending downwardly over the sheet and terminating short of the bifurcation.

1,805,397. PNEUMATIC TIRE INFLATING AND DEFLATING APPARATUS. WILLIAM A. HARRIS, Greenville, S. C. Filed July 26, 1927. Serial No. 208,612. 23 Claims. (Cl. 50—10.)



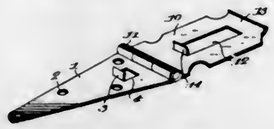
1. In combination, an air trap, a casing having air compartments, one of which has communication with the air trap, a pressure responsive element separating the air compartments, means for supplying a predetermined air pressure to the air trap and communicating air compartment to move the pressure responsive element in one direction, and means operable incident to the movement of the pressure responsive element to permit tire inflating pressure to pass into the other air compartment and conducted to a tire, the tire pressure being communicated to the last mentioned chamber when the tire has been inflated to a predetermined degree to actuate the pressure responsive element to normal position to cut off further air supply to the tire, and a signal moved to operative position prior to the admission of tire inflating pressure into the compartment and retained in said position by the pressure responsive element during the inflation operation.

1,805,398. SHOE BUCKLE CONNECTING MEANS. HENRY HELFANT, Arverne, N. Y. Filed Nov. 1, 1929. Serial No. 404,129. 2 Claims. (Cl. 2—245.)



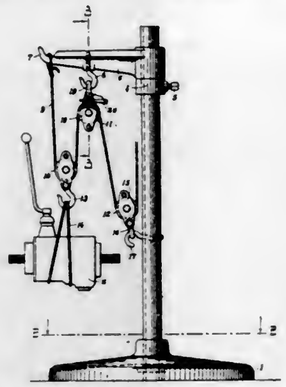
1. The combination with a shoe buckle having a bar attached to the rear side of a connector yoke having wings disposed in overlapping relation to each other around said bar, and a snap button element having interfitting relation with the wings to hold said yoke coupled to said bar, said wings having registering openings therein to receive said element.

1,805,399. CUTTING DEVICE. JOSEPH H. HENDRICK, Oakland, Ky. Filed Apr. 7, 1930. Serial No. 442,311. 2 Claims. (Cl. 164—44.)



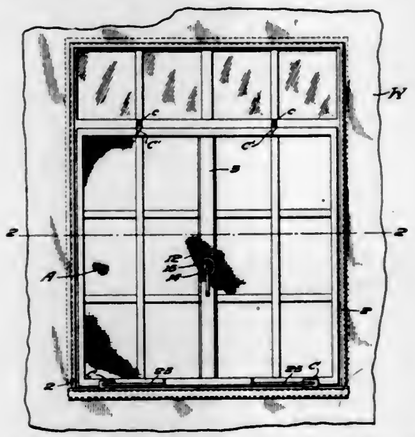
1. In a device of the class described, the combination of spaced parallel primary members, auxiliary members beneath said primary members, metal strips secured to the inner faces of said primary members, metal bushings extending transversely through said auxiliary members, said metal bushings provided with annular flanges on their inner ends positioned below the lower edges of said blade strips and against the inner faces of said auxiliary members, a spindle journalled in said bushings, said spindle provided with a central squared portion and a shear blade mounted on said central squared portion between said metal strips and primary members.

1,805,400. REFRIGERATION APPARATUS. MORITZ HIRSCH, Frankfort-on-the-Main, Germany. Filed May 15, 1928, Serial No. 277,900, and in Germany May 12, 1927. 3 Claims. (Cl. 62—115.)



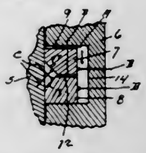
1. A refrigerating plant having an evaporator for refrigerating a material, a condenser, an auxiliary condenser, a compressor for said condenser, a compressor for said auxiliary condenser, said compressors being connected in series, the suction side of one of them being connected to said evaporator, its delivery side being connected with said condenser, the suction side of the other compressor being connected with the delivery side of the first compressor and its delivery side being connected with said auxiliary condenser, and means for supplying the refrigerated material to one of said condensers.

1,805,401. SAFETY HASP. EDWARD K. JANNEY, Buena Vista, Va. Filed Sept. 27, 1929. Serial No. 395,620. 3 Claims. (Cl. 292—281.)



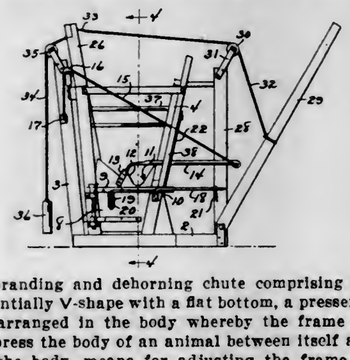
1. A hasp composed of hingedly connected members provided on their inner faces with interlocking elements to hold said members yieldably in folded inoperative position.

1,805,402. AUTOMOBILE TRANSMISSION HOIST. OLOF JOHNSON, Northville, N. Y. Filed Apr. 9, 1928. Serial No. 268,527. 1 Claim. (Cl. 254—139.)



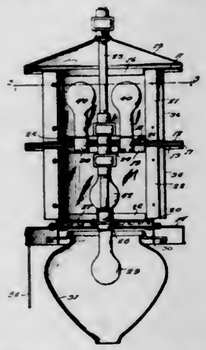
A hoist for automobile transmissions and other objects, including a supporting standard and arm, a pulley structure carried by said arm, a pulley structure carried by said standard, a pulley structure adapted to be connected with the transmission to be lifted, a cable extending through all of said pulley structures and connected at one end with said arm whereby when the cable is pulled in one direction said transmission will be raised, the pulley structure carried by said arm having a solid frame with a passage-way above the cable extending therethrough, a wedge positioned in the passageway, and means connecting the wedge to the frame of the pulley structure so that the small end of the wedge extends in the same direction as the free end of the arm whereby when the load of the transmission is applied to the second named pulley structure movement of the cable will cause the wedge to squeeze the cable to prevent an appreciable movement thereof, and when a pulling force is applied to the cable to draw the same towards the standard, the wedge will be loosened.

1,805,403. CASEMENT WINDOW STRUCTURE. THEODORE JOHNSON, Erie, Pa., assignor to Johnson Metal Products Co., Erie, Pa. Filed Apr. 26, 1929. Serial No. 358,389. 31 Claims. (Cl. 189—69.)



1. A casement window assembly unit comprising a frame for positioning in a wall opening; an out-swinging sash on the frame; and a window lock comprising a locking member and handle mounted on the frame, the frame, member and handle being associated as a unitary structure.

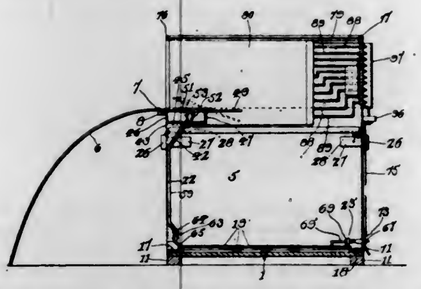
1,805,404. PISTON RING. PAUL LEO JOSLYN, San Francisco, Calif. Filed Oct. 14, 1927. Serial No. 226,207. 1 Claim. (Cl. 74—109.)



In a piston ring, a pair of super-imposed ring sections, said ring sections having their abutting ends chamfered in a direction toward the outer periphery, a series of grooves formed in the upper surface of each of said ring sections, the area of the abutting surface of said ring sections, and said chamfered edges being such that pressure exerted thereagainst will balance to a substantial degree any internal pressure tending to expand said rings.

1,805,405. BRANDING AND DEHORNING CHUTE. WILLIAM L. KUHNS, Clayton, N. Mex. Filed Dec. 26, 1928. Serial No. 328,412. 5 Claims. (Cl. 119—98.)

1. A branding and dehorning chute comprising a body of substantially V-shape with a flat bottom, a presser frame tiltably arranged in the body whereby the frame can be used to press the body of an animal between itself and one side of the body, means for adjusting the frame in the body so that the chute can be used with different sizes of animals, one side of the body being composed in part of vertically arranged removable spaced bars whereby a branding iron can be passed through any desired space between a pair of bars.

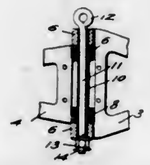


1,805,406. TRAFFIC SIGNALING SYSTEM AND SIGNAL. ROLPH J. LACKNER, Ozone Park, N. Y., assignor to Lackner Products Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed May 13, 1925. Serial No. 30,041. 1 Claim. (Cl. 177—329.)

In a traffic signal, a casing, a post extending vertically in said casing and constituting a conduit for conductor

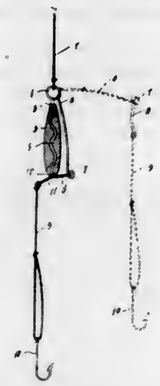
wires, said casing being divided into upper and lower compartments and consisting of a hood secured to said post and projecting radially therefrom, a head for the upper compartments disposed about said post in spaced relation thereto and having its outer marginal portion joined to said hood and its inner marginal portion formed with a depending flange, a bottom for the upper chamber fitting about said post and formed with an annular shoulder spaced from its outer margin, a disk secured about said post and supporting said bottom, a head for the lower compartment disposed about the post in spaced relation thereto and having its outer marginal portion secured to the bottom of the upper chamber and its inner marginal portion formed with a depending flange spaced about said disk, a bottom for the lower compartment carried by said post and having an upstanding annular flange, lamp sockets extending through openings in the disk and bottom of the upper compartment to support bulbs in the compartments, transparent wall sections for the compartments bearing against the flanges and shoulder, and securing means for the wall sections between adjacent side edges thereof.

1,805,407. COMBINED TRAPPING AND ELECTROCUTING APPARATUS. LEONCIO LAGARDE, Mexico, Mexico, assignor of one-half to Celso Martinez, Mexico, D. F., Mexico. Filed June 24, 1929. Serial No. 373,459. 6 Claims. (Cl. 43—99.)



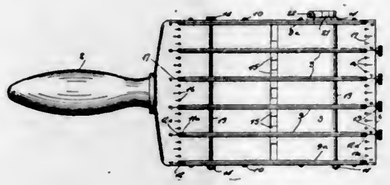
1. In a combined trapping and electrocuting apparatus for rodents a trapping chamber having its bottom provided with oppositely disposed, spaced electrodes, means arranged between said electrodes for maintaining a rodent, after being electrocuted above and in spaced relation with respect to the electrodes, a pair of counterbalanced, oppositely shiftable, pivoted trap doors within said chamber near the top thereof for normally closing it, removable pivot elements for said trap doors, and means to provide a passageway above and of less length than said trap doors.

1,805,408. WELL STRAINER. JOHN M. LOSACK, Orchard, Tex. Filed Jan. 25, 1930. Serial No. 423,427. 2 Claims. (Cl. 166—8.)



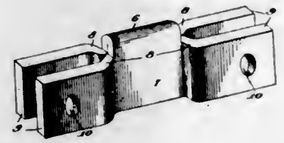
1. A well strainer comprising a tubular body having a spiral recess extending along the body along its outer surface, the bottom of the recess being formed with a groove and there being perforations extending from the bottom of the groove into the interior of the body and a metallic ribbon-like strip disposed in said recess, the strip being transversely slotted throughout its length.

1,805,409. HARROW DRAWBAR AND HINGE THEREFOR. ELI J. MASON and HERBERT L. CROFT, Calamus, Iowa; E. L. Miller, administrator of said Herbert L. Croft, deceased, assignor to said Mason. Filed Jan. 27, 1930. Serial No. 423,843. 1 Claim. (Cl. 55—84)



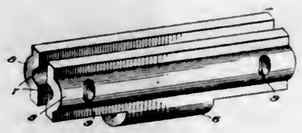
The combination with relatively movable sections of a harrow drawbar, of a hinge connection between the sections including leaves attached to the respective sections, alining sleeves thereon, a tubular pintle extending through all of the sleeves for transmitting transverse thrust from one section to the other, a draw bolt extending through the pintle and relieves thereby from transverse thrust, and a draft element attached to the front end of the bolt, said bolt constituting means for transmitting longitudinal pull from the draft element to the back ends of the hinges at the sleeves.

1,805,410. FISHING LINE. FURMAN H. MCCALL, Anderson, S. C., assignor of one-half to Carl C. McCall, Greenville, S. C. Filed Nov. 14, 1928. Serial No. 319,291. 1 Claim. (Cl 43—15.)



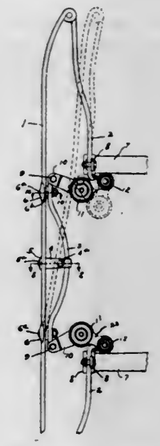
A fishing line appliance, comprising a coiled loop of spring wire adapted to be secured to a fishing line, the ends of the wire forming said loop being extended therefrom and normally spaced from one another, one of said wire ends being provided with bends, a sinker secured to the last mentioned wire end and held thereon by said bends, a link pivotally secured to the other wire end and having an opening therein to engage the extremity of the first wire end, and a fish hook supported on the free end of the link, said link being releasable from the wire end engaged in said opening when the fish hook is pulled releasing the wire ends to permit them to resume spaced relation, the sinker holding the end on which it is secured temporarily inert whereby the other end moves upwardly to impart an upward jerk to the hook.

1,805,411. MEAT CUTTER. JOSÉ N. MONTERIO, New Bedford, Mass. Filed Mar. 11, 1929. Serial No. 346,237. 8 Claims. (Cl. 146—210.)



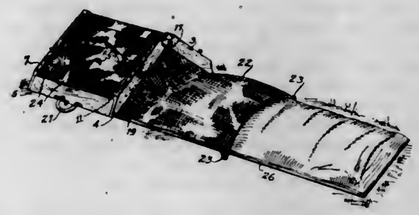
1. In a meat slicer, a backing, edge blades fixed to the backing, intermediate blades adjustable transversely of the backing, and independent means for adjusting each blade, each intermediate blade adjusting means including rack and pinion mechanism operable from one end of the backing.

1,805,412. SPRING NUT LOCKING DEVICE FOR RAIL JOINTS. HARRY G. NORWOOD, New York, N. Y., assignor to Theodore F. Von Dorn, New York, N. Y., Filed Sept. 20, 1929. Serial No. 394,064. 4 Claims. (Cl. 151—38.)



1. A spring nut locking device for rail joints, comprising a single piece of spring steel folded upon itself at its central portion, a vertical depression formed at each face of its central portion, a longitudinal portion extending from each side of its central portion to each outer end thereof, and an opening formed at each end portion for the reception of a securing bolt.

1,805,413. SPRING NUT LOCKING DEVICE FOR RAIL JOINTS. HARRY G. NORWOOD, New York, N. Y., assignor to Theodore F. Von Dorn, New York, N. Y. Filed Sept. 20, 1929. Serial No. 394,065. 5 Claims. (Cl. 151—38.)



1. A spring nut locking device for rail joints, comprising a single piece of spring steel horizontally folded upon itself at its central portion to form two oppositely disposed horizontal members, each of said members being formed with a longitudinally disposed recess in its central inner face extending throughout its length.

1,805,414. BUMPER MECHANISM. EMIL F. OHLENDORF, Moline, Ill. Filed Mar. 26, 1930. Serial No. 439,196. 17 Claims. (Cl. 293—55.)

8. In a bumper mechanism, a resistance unit pivotally mounted on the rear bumper bar and pivotally connected to the front bumper bar.

1,805,415. INSECT PROTECTOR. GEORGE RICHARD PENDARVIS and ELIZABETH LYDIA PENDARVIS, Hampton Roads, Va. Filed Dec. 13, 1928. Serial No. 325,835. 5 Claims. (Cl. 190—2.)

4. A retiring kit comprising frame members secured at an angle to each other and covered with protective material to form a head cover, said frame members having back and front sides, a ground flap secured to the back side of said members.

1,805,416. ARTIFICIAL BAIT. CARL S. RAYMOND, Flint, Mich. Filed Oct. 29, 1929. Serial No. 403,305. 3 Claims. (Cl. 43—42.)

3. An artificial bait comprising an elongated convexo-concave body with a comparatively straight back and with

the side edges thereof made serpentine and the convexities of one edge arranged in staggered relation to the convexities of the other to facilitate the zig-zag movement of the bait through the water.

1,805,417. ELONGATED TABLET PACKAGE AND WRAPPING. WILLIS JOSEPH RITZEL, Pasadena, Calif. Filed Mar. 12, 1929. Serial No. 346,363. 6 Claims. (Cl. 206—46.)

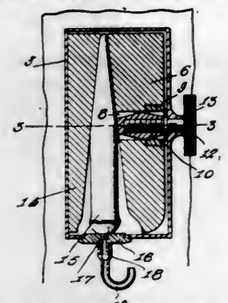
1. A package consisting of a tablet of long, narrow, thin contour, an inner sealing wrapper, and a tablet engaging and ejecting strip having a portion fast to said inner wrapper and extending down about the bottom of said tablet and then up along the side face thereof and protruding out of the upper end of said unit in alignment therewith, said inner wrapper having its side portions folded toward each other into longitudinally overlapping relation and having its lower end portion and its upper end portion with said strip extending therethrough folded toward each other flat against the same side of the unit, and the portion of said strip extending beyond the extreme end of the upper end portion of said inner wrapper being thereafter folded in the reverse direction flat against the outer face of said upper end portion of said inner wrapper and extending appreciably above the extreme upper portion of the rest of the unit, in combination with an individual outer wrapper permanently relatively immovably secured to said inner wrapper and operatively constituting an endless band extending in tight contact at substantially all points about said inner wrapper and the folded ends thereof and between the extreme end portions of said inner wrapper to seal the same against the atmosphere, the said outer wrapper extending across a portion of the reverse fold of the ejector strip to maintain the projecting end portion thereof in proper position extending upward beyond all other portions of the upper end of said unit so as to be easily gripped between the user's teeth or lips, and said outer wrapper being provided with a "hold tab" projecting downward from the lower end of said unit beyond all other portions thereof so as to be easily and certainly grasped between the thumb and forefinger of the user's free hand.

1,805,418. ELONGATED TABLET PACKAGE AND WRAPPING. WILLIS JOSEPH RITZEL, Pasadena, Calif. Filed Aug. 26, 1929. Serial No. 388,365. 9 Claims. (Cl. 206—46.)

1. A package comprising a tablet of long, narrow, thin contour formed with a shoulder at a distance from one of its ends, in combination with a wrapping applied snugly about a portion of said tablet and having a portion ex-

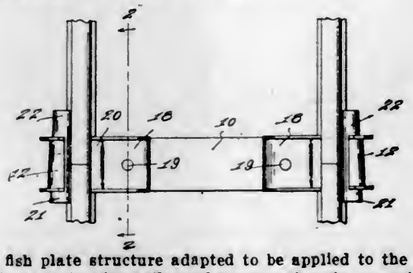
tending across the face of said shoulder and resisting unintentional endwise separation of said tablet and said wrapping.

1,805,419. GLARE SHADE FOR AUTOMOBILES. ANTONEY F. SCHLAIS, Ironwood, Mich. Filed Jan. 23, 1930. Serial No. 422,858. 1 Claim. (Cl. 296—97.)



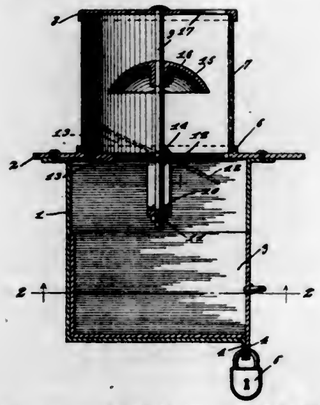
A device of the class described comprising attaching brackets, bearing arms extending forwardly therefrom, a rod securing said bearing arms to the brackets, a rock shaft journaled in the arms adjacent their free ends, a shade carried by the rock shaft, draw means to operate the rock shaft to move the shade to operative position, and spring means surrounding the rock shaft and fastened thereto at one end and to one of the bearing arms at the other end normally urging the shade into contact with said rod.

1,805,420. TUBE HOLDER. JOHN HENRY SCHWEER, Long Beach, Calif. Filed June 29, 1929. Serial No. 374,745. 1 Claim. (Cl. 221—60.)



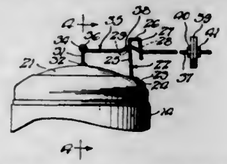
A device of the class described comprising a casing, a pair of jaws arranged in the casing and having their adjacent faces tapering to form a wedge shaped space between them to receive a paste tube, one jaw member having a centrally arranged transverse opening therein, a nut tapering from its center to each end for fitting in the opening, trunnions on the nut, bearing means in the walls of the opening for receiving the trunnions, said nut having

a threaded socket therein, a screw shaft rotatably arranged in one side of the casing and having a threaded part en-



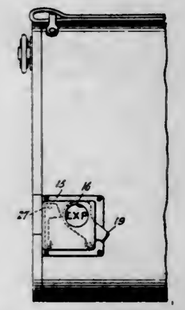
gaging the socket, a handle on the outer end of the shaft and discharge means at one end of the casing through which the paste forced from the tube by the jaws will pass.

1,805,421. FISHPLATE WITH LUGS. ORVILLE B. SHAHAN, Tunnelton, W. Va. Filed Nov. 11, 1929. Serial No. 406,460. 1 Claim. (Cl. 238—10.)



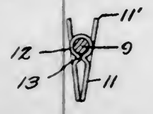
A fish plate structure adapted to be applied to the web portions of abutting rails, and a supporting tie, comprising a plate body provided at its base flange with spaced ears adapted to lie at the sides of the tie, said body having a flange portion provided with spaced openings adapted to register with corresponding openings in the web portions of the rails, pins passing through said openings and fitting snugly therein and having heads lying at the side of the web portion of the body, a wedge adapted to bear against said pins and means for holding the wedge upon the web of the body and pins.

1,805,422. COIN BOX. GEORGE LESLIE SMITH, Rock Island, Ill. Filed Oct. 28, 1929. Serial No. 403,000. 1 Claim. (Cl. 232—7.)



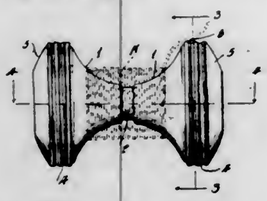
A coin box comprising a support having an opening therein, a transparent member resting on the support and surrounding the opening, a cover for the transparent member having a slot therein, a cross piece depending from the support under the transparent member, a rod passing through the cover and through said cross piece for holding the parts assembled, a bell on the rod adapted to be struck by the coins dropped into the slot, a disk pivoted to the rod and forming a bottom for the transparent member, a weight on the disk, a stop on the rod whereby the weight normally holds the disk in horizontal position, said disk tilting under the weight of coins collecting thereon, a casing depending from the supporting member and surrounding the opening in the supporting member and a drawer in the casing for receiving the coins dropping from the disk.

1,805,423. DRAFT REGULATOR. CARL O. STALEY, Congress Park, Ill. Filed Apr. 27, 1929. Serial No. 358,602. 2 Claims. (Cl. 236—45.)



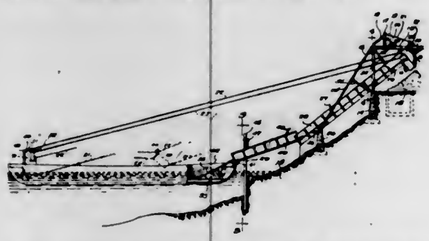
1. In a draft regulator of the character stated, a member adapted for connection with a flue pipe including a cylindrical neck portion adapted to be projected into a flue pipe and including a frusto-conical head portion having a centrally disposed circular opening provided therein, a movable cap member substantially a spherical segment in shape movable in a vertical plane interiorly of said frusto-conical portion for closing said opening, the lower annular edge portion of said last-named member being adapted for having abutting engagement with the upper annular edge of said frusto-conical portion interiorly thereof, a bracket carried by said frusto-conical portion including a substantially U-shaped portion at the upper end thereof providing an arm portion, said bracket having an opening formed in the stem portion thereof and having a slot formed in said arm portion, a lever extended through said opening and said slot, means for connecting one end of said lever to said movable cap member, and adjustable means on the other end of said lever for counterbalancing said movable cap member.

1,805,424. EXPOSURE INDICATING ATTACHMENT FOR CAMERAS. LOUIS STANKEWITZ, New York, N. Y. Filed Feb. 21, 1930. Serial No. 430,349. 7 Claims. (Cl. 95—32.)



1. An attachment for cameras including a casing over the film window, a shutter within said casing for closing said film window, a latch within said casing for controlling said shutter, and means for moving said latch to release said shutter to close said window upon movement of the lens shutter of the camera, said latch having an enlarged end with bearing members and a remote end secured to said casing.

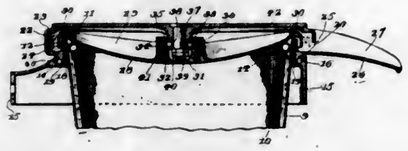
1,805,425. CLAMP. CHARLES E. STOCKS, El Paso, Tex. Filed Jan. 11, 1929. Serial No. 331,822. 1 Claim. (Cl. 24—259.)



A resilient clamping member formed from a single blank of material folded upon itself to provide a split hollow tubular member of uniform diameter throughout its length, the free longitudinal edges of said tubular member normally substantially contacting to close the tubular member, and extended to provide a pair of converging jaws co-extensive in length with the tubular member and having their free ends normally engaged, and finger-engaging extensions projecting from the jaws in the same plane therewith and terminating above the tubular member at opposite sides thereof.

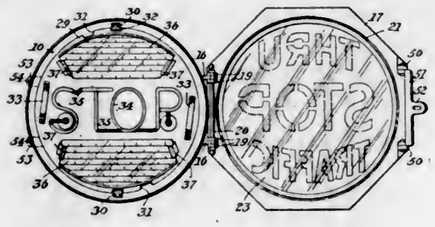
1,805,426. CHALK LINE SPOOL. FRED L. VANATTA, Orland, Ind. Filed June 20, 1929. Serial No. 372,462. 2 Claims. (Cl. 206—47.)

1. A chalk line spool having a hollow body portion provided with threaded extremities, threaded caps adapted to engage said threaded extremities, each of said caps having an inwardly bulged portion to receive a thumb and finger in unwinding the spool, and a spring clip secured to one of said caps and adapted to engage a chalk line.



1,805,427. UNLOADING APPARATUS. WILLIAM WALTON VENABLE, Charleston, W. Va. Filed Sept. 20, 1926. Serial No. 136,653. 3 Claims. (Cl. 214—14.)

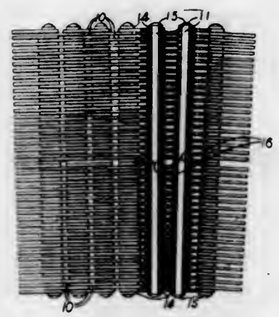
1. A conveyor through comprising a substantially U-shaped inclined body having an opening adjacent its upper end, a depending support carried by said trough within the lower portion of said opening and adapted to support a conveyor bucket therein, and a pair of angular members arranged at the upper limit of said opening and having their lower ends curved inwardly toward said support.



1,805,428. CENTRIFUGAL CLOTHES DRIER. HAROLD F. VIEAU, Liverpool, N. Y., assignor of one-third to Roy C. Higby, Big Moose, N. Y., and one-third to Edward J. O'Neill, Syracuse, N. Y. Filed June 11, 1927. Serial No. 198,273. 13 Claims. (Cl. 210—75.)

1. In an apparatus for the purpose set forth a vertically disposed revoluble receptacle forming a combined rinsing and drying chamber, an adjustable drain board, means carried at the top of the receptacle to permit of adjustably

positioning said board circumferentially with respect to the receptacle for directing the overflow from said chamber to the point desired.

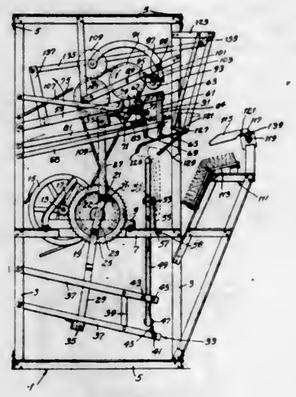


1,805,429. TRAFFIC SIGNAL. WILLIAM B. MCGILL, Dormont, Pa., assignor to Neon Signal Devices, Inc., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 16, 1929. Serial No. 399,979. 5 Claims. (Cl. 40—133.)

7. A signal housing including a rim, a transparency therein, and a stencil overlying the transparency and having its face and edge spaced from said rim.

11. In a sign, the combination with a housing, stencil cutouts in one wall of the housing forming sign characters, of a luminous tube within the housing adjacent certain of said cutouts and conforming thereto in shape, for illuminating said last mentioned cutouts by direct rays and the other cutouts by reflected rays.

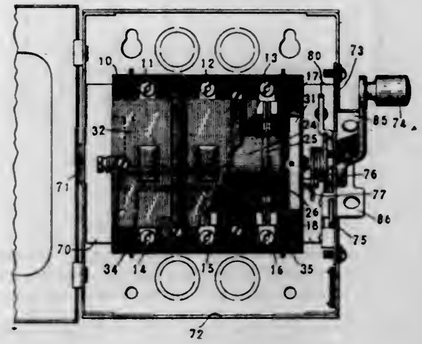
1,805,430. CHAIN CONVEYER. GEORGE E. ROWE, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Feb. 6, 1928. Serial No. 252,127. 8 Claims. (Cl. 198—193.)



1. In a chain conveyer, a plurality of connecting links having apertures in each end thereof, connecting rods of a less diameter than said apertures for holding the links side by side, and bushings for reducing the lost motion between rods and apertures at the middle of the rod.

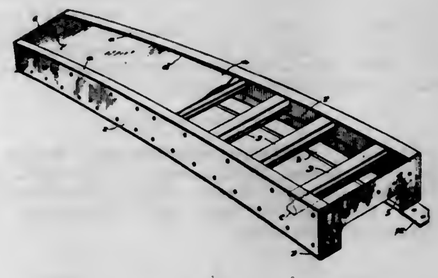
1,805,431. COMPOSITION FOR THE MANUFACTURE OF CONDUITS AND THE LIKE. CARROLL D. RYDER, Danbury, Conn. Filed Jan. 25, 1928. Serial No. 249,497. 2 Claims. (Cl. 106—24.)

1. A fluid carrying molded conduit, composed of a pouring composition comprising a mixture composed wholly of a sand-free aggregate of coarsely broken limestone particles having rough uneven surfaces and fine limestone particles of powdery consistency having a structural and natural affinity for said coarse particles, cement, and water acting as a mixing agent, said powdered limestone adapted to enter into solid, homogeneous interlocked relation with the rough uneven surface of the coarse limestone particles, whereby a non-porous conduit is produced in which fracture will be trans-fragmentary as respects said coarse limestone particles.



1,805,432. BAG TURNING APPARATUS. CHARLES F. SPARKS, St. Louis, Mo. Filed July 25, 1928. Serial No. 295,262. 10 Claims. (Cl. 223—20.)

1. In a bag turning apparatus, reciprocatory means carrying pivoted sticks adapted to turn bags, means for supporting and guiding said sticks, said sticks being curved so as to provide a predetermined movement thereof through the guiding means while turning the bags.

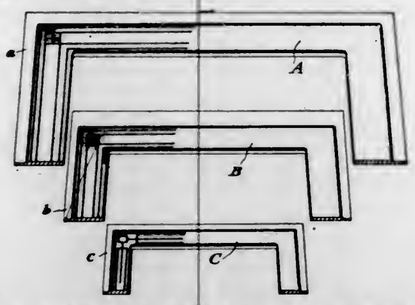


1,805,434. REVERSING SWITCH. FRANK A. YOUNG, Meriden, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Aug. 23, 1930. Serial No. 477,235. 19 Claims. (Cl. 200—15.)

1. A reversing switch including at least two pairs of stationary contacts, a switch member rotatable between said contacts and comprising a number of insulating members, two pairs of divided conducting blades each pair being secured between two of said insulating members, two double ended blades each secured between two of said insulating members, and having contact portions in the same plane as the contact ends of the divided blades of each pair and

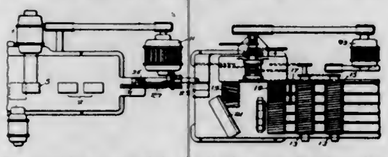
rods connecting each of the divided blades with the oppositely disposed member of the other pair of divided blades.

1,805,435. TUNNEL LINING UNIT. EUGENE C. AMSDEN, Boston, Mass., assignor to Amsden & Barnard, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Mar. 19, 1930. Serial No. 437,035. 8 Claims. (Cl. 61—45.)



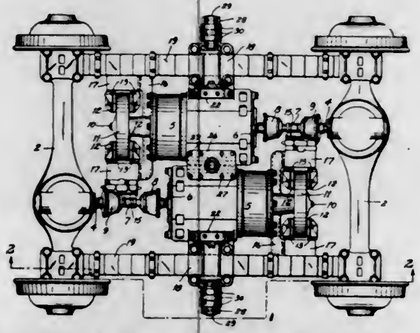
1. A tunnel lining unit comprising two side supports each of angular cross-sectional form and each having a web extending from front to back of the unit and a flange bent inwardly from said web at the inner edge thereof, said flange and the part of the web adjacent thereto being thicker than the parts of the web more remote from said flange, and a back plate connecting said supports and welded to them.

1,805,436. PICTURE FRAME AND METHOD OF MAKING SAME. EDMUND J. BARNARD, Cambridge, Mass., assignor to Boston Book Binding Company, Inc., Cambridge, Mass., a Corporation of Massachusetts. Filed Feb. 24, 1930. Serial No. 430,661. 9 Claims. (Cl. 40—154.)



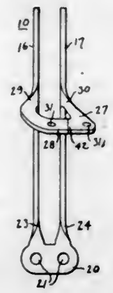
1. That improvement in processes of making picture frames which consists in impressing in a board of thermoplastic material designs for a plurality of front frame sections arranged in nested relationship, and subsequently

cutting said board to form individual frame sections therefrom, each section bearing a design and each having a complete frame outline.



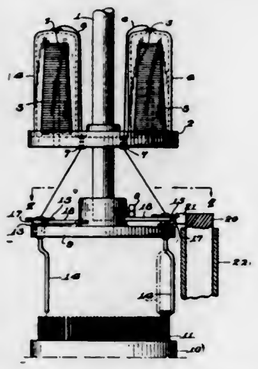
8. A picture frame having a front section of thermoplastic board embossed to give it a surface structure unlike that of the original board and having metal leaf stamped therein in lines and areas forming parts of a design, said front section having a ground work of a color different from that of the original material.

1,805,437. WOOD PLANING MACHINE. LAURENCE E. BLOOD, Boston, and JOHN B. WIARD, Brookline, Mass., assignors to S. A. Woods Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 12, 1929. Serial No. 385,328. 9 Claims. (Cl. 144—242.)



1. In combination with a planing mechanism including planing knives and a feeding means for traversing a board past the same, an overrunning feeding means for delivering boards from a supply to said first feeding means, and means individually controllable for independently driving either or both of said feeding means.

1,805,438. ELECTRIC CAR TRUCK. NELSON R. BROWNYER, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed Dec. 14, 1929. Serial No. 413,993. 13 Claims. (Cl. 105—139.)

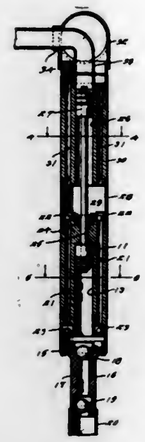


1. A car truck comprising wheeled axles, housings therefor, side springs connecting the axle housings, a transverse housing member mounted on said side springs, and motors mounted in said housing member and operatively connected respectively to said axles to actuate the same, each connection comprising two universal joints.

1,805,439. AIRCRAFT FITTING. ANDREW J. FAIRBANKS, Dayton, Ohio, assignor, by mesne assignments, to Consolidated Aircraft Corporation, Buffalo, N. Y., a Corporation of Delaware. Filed May 8, 1929. Serial No. 361,389. 11 Claims. (Cl. 244—31.)

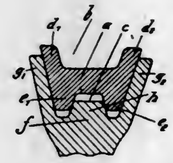
1. An airplane fitting of the class described, comprising a pair of parallel elongated straps providing an anchorage at one end thereof, and a lug interconnecting said straps and extending out laterally therefrom and forming a second anchorage.

1,805,440. KNITTING MACHINE., CHARLES E. MINCEMOYER, Milton, Pa., assignor of one-half to Carl E. Hecht, Milton, Pa. Filed Jan. 30, 1929. Serial No. 336,131. 2 Claims. (Cl. 66—135.)



1. The combination of a knitting machine comprising a cylinder of needles and a support rotatable in synchronism therewith, with a yarn guide rotatably carried by said support upon an axis eccentric to the axis of said support and comprising a toothed head having a central bore and a tube communicating with said bore and having its free end terminating laterally of its axis of rotation with respect to said support and below the level of the upper ends of said needles when they are in raised position, a relatively stationary toothed rack adapted to engage and rotate the toothed head of said guide with respect to said support and to said needles while in a predetermined portion of its path or orbit, to cause yarn from the free end of said guide tube to encircle a predetermined set of needles, and resilient frictionally braking means engaging and limiting the rotation of said head with respect to said support to only the movement imparted thereto by said rack.

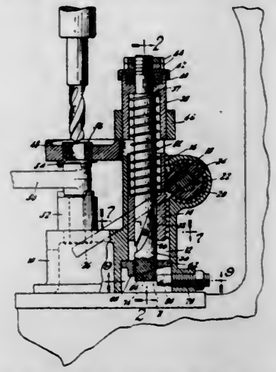
1,805,441. DEEP WELL PUMP. WILBUR N. SQUIRES, Joplin, Mo. Filed Jan. 8, 1927. Serial No. 159,896. 16 Claims. (Cl. 103—46.)



1. In deep well pumping apparatus, a pair of aligned cylinders, a coupling connecting adjacent ends of the

cylinders and maintaining the cylinders in alignment, valves controlling the introduction of fluid to the outer end of one of the cylinders and discharging said fluid to the connection between the cylinders, a discharge line communicating with the connecting coupling, the coupling

engaging end of the last named cylinder being closed, and pistons in said cylinders connected for simultaneous movement, one of said pistons being a motor piston and the other being a pumping piston, the discharge of the pump being external of the motor piston.

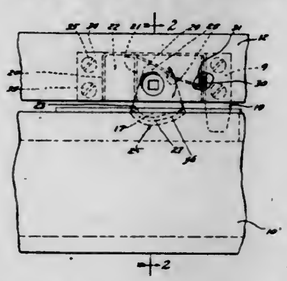


1,805,442. WEDGE SHAPED DRIVING BELT. LUDWIG WALLFISCH, Hirschberg, Germany. Filed Dec. 14, 1929, Serial No. 414,178, and in Germany Dec. 14, 1928. 1 Claim. (Cl. 74—62.)

A wedge-shaped driving belt for power transmission which is of H-shaped cross section having two upper and two lower side flaps so that owing to the curvature of the belt around the belt pulley the upper side flaps bear against the pulley with their outer surface and the lower side flaps with their inner surface.

1,805,443. CLAMPING DEVICE. VERNON E. WALTERS, Detroit, and IRVING GRANT, Grosse Pointe Park, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 12, 1928. Serial No. 277,285. 5 Claims. (Cl. 77—62.)

1. A clamping device comprising, in combination, a fixed member, a movable member, an axially movable sleeve carried in said fixed member, a shaft connected to said movable member and rotatably and axially movable in said sleeve, inclined surfaces on said fixed member, inclined surfaces on said shaft, means to move said sleeve, shaft and movable member toward said fixed member, and connecting means between said shaft and sleeve so constructed that axial movement of the sleeve causes rotary and axial movement of said shaft in said sleeve to cause

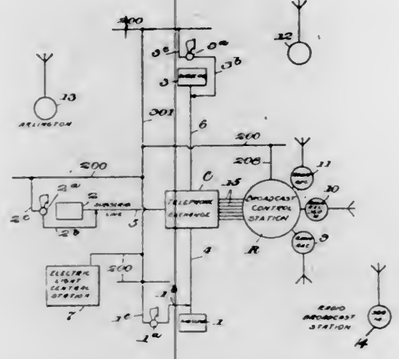


said inclined surfaces to become engaged for the purpose of producing a clamping action between said fixed and movable members.

1,805,444. DESULPHURIZING LIQUID HYDROCARBON. HENRY H. WILSON, Regina, Saskatchewan, Canada, assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Jan. 11, 1928, Serial No. 246,103, and in Canada Jan. 31, 1927. 4 Claims. (Cl. 196—32.)

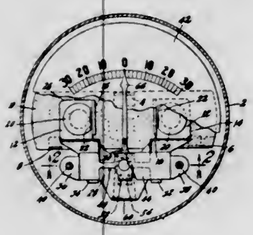
1. In the treating of low boiling petroleum oils containing sulphur in one or more of the forms, elemental sulphur, hydrogen sulphide, and mercaptans, the improvement which comprises bringing the oils in liquid phase into intimate contact with potassium hydroxide in the substantial absence of water.

1,805,445. DECK DOORLOCK. JOHN F. WILSON, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 29, 1927. Serial No. 209,250. 8 Claims. (Cl. 70—14.)



1. In a door lock, a plate attached to the stationary member, a finger on said plate, a catch attached to the door, an arcuate flange projecting from said catch, a depression in said flange, said finger seating in said depression when the door is in locked position.

1,805,446. RADIO BROADCASTING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Original application filed Oct. 6, 1923, Serial No. 667,024. Patent No. 1,576,809, dated Mar. 9, 1926. Divided and this application filed Mar. 8, 1926. Serial No. 93,325. 11 Claims. (Cl. 179—2.5.)



1. In a broadcasting system, the combination of a central broadcasting station serving a local or regional area, sub-

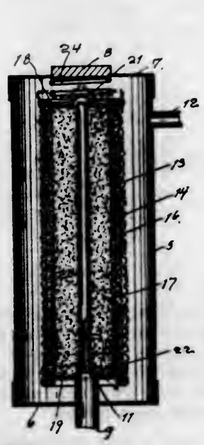
scribers' stations in said area, a common power wire net work connecting said central station and said subscribers' stations, a primary transmitting station, means for transmitting broadcast matter from said primary station to said central station and means at said central station arranged to relay said broadcast matter over said net work

to its local subscribers as modulated carrier current, together with means at each subscriber's station to receive and demodulate said carrier current, and other means actuated in the operation of said receiving means for signaling between the subscriber's station and the central station.

1,805,447. AMMETER. JESSE E. ESHBAUGH, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Apr. 19, 1929. Serial No. 356,478. 14 Claims. (Cl. 171—95.)

1. In an electric measuring instrument, a conductor, a magnet secured to the conductor, and a soft iron member positioned between the conductor and the polar areas of the magnet to concentrate the lines of force of the conductor to reduce the effects of demagnetization on the magnet.

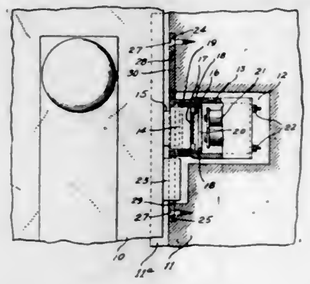
1,805,448. CORROSION-RESISTANT ALUMINUM ALLOY ARTICLE. FRANCIS C. FRARY, Oakmont, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 30, 1929. Serial No. 410,877. 7 Claims. (Cl. 148—32.)



1. A corrosion-resistant article of aluminous metal comprising a main body or core of aluminum-copper alloy and a hard, wrought, protective coating of copper-free aluminum alloy cohesively united with the core, the coating alloy being resistant to corrosion after heat-treatment without artificial aging, and both alloys being susceptible of substantial improvement in physical properties by heat-treatment without artificial aging.

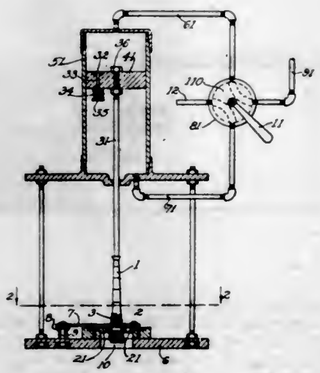
1,805,449. CLARINET. EDWARD J. GULICK, Elkhart, Ind., assignor to C. G. Conn, Ltd., Elkhart, Ind., a Corporation of Indiana. Filed July 10, 1929. Serial No. 377,274. 7 Claims. (Cl. 84—382.)

4. In combination, a tubular metal clarinet body provided with an opening in the wall thereof, and a toue-opening socket mounted in said body wall opening, said socket being provided with a belled bore which is in communication with the instrument body interior.



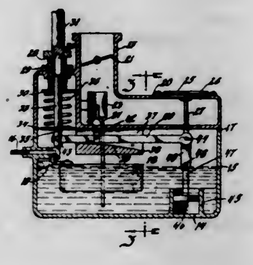
1,805,450. OIL FILTERING AND REFINING MEANS. LEE HARVEY, San Francisco, Calif., assignor to Hiram Parley Burke, Alpine, Ariz. Filed July 1, 1929. Serial No. 375,286. 1 Claim. (Cl. 210—183.)

In an oil filtering and refining device, a case, a bottom and a top for said case and detachably secured with respect thereto, an inlet pipe extending centrally through the bottom and terminating above said bottom in tapered formation, an outlet pipe extending laterally from said case, a filtering element including a cap, a dome centrally formed with said cap, a bottom having a raised conical portion disposed for fitting engagement with the tapered upper end of said inlet pipe, a pipe formed with and rising from the raised conical portion and being provided with a serrated upper end projecting to the dome, said cap and bottom of the filtering element being provided



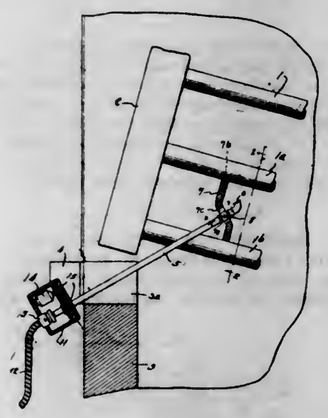
with annular substantially channel shaped recesses arranged at the outer perforations thereof, concentrically arranged cylindrical screen members surrounding the serrated pipe and having their ends secured in the recesses, a fabric element between the screen members, resilient means for urging the conical portion in engagement with the inlet pipe so that the latter is in registration with the serrated pipe, and a plastic refining medium applied to the innermost screen member and arranged therein.

1,805,451. LOCKING MECHANISM. HENRY F. KEIL, Scarsdale, N. Y., assignor to Francis Keil & Son, Inc., a Corporation of New York. Filed Oct. 22, 1925. Serial No. 64,216. 10 Claims. (Cl. 70—52.)



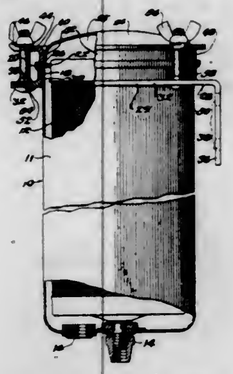
1. In a device of the class described, in combination, an elongated metal plate member adapted to be positioned flatwise against a door frame and having therein a plurality of openings, any one of which is adapted to receive a bolt from a lock on the door, opposed wall portions of said openings being tapered toward the outer surface of said plate member, and removable metal pieces shaped to fit into and close said openings to render any of said openings inoperative independently of the others, said metal pieces being adapted in position to rest substantially flush with the outer surface of said plate and being removable only from the rear thereof.

1,805,452. BOBBIN-STRIPPING MACHINE. WILLIS W. LINDER, Salisbury, N. C., assignor to The Terrell Machine Company, Charlotte, N. C., a Corporation of North Carolina. Filed Aug. 15, 1929. Serial No. 386,117. 5 Claims. (Cl. 28—20.)



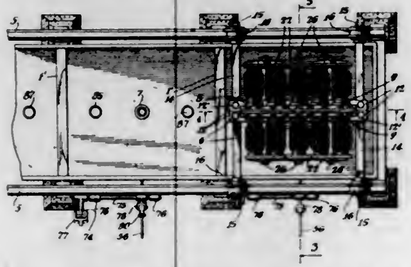
1. In a bobbin-stripper machine, the combination with a bobbin-stripper device, and a bobbin-engaging device, of fluid-pressure actuated means whereby relative movement between the bobbin and the stripper-device is yieldingly produced and the stripping thereby effectuated.

1,805,453. AIR VALVE CARBURETOR. LESTER E. PERRINE, Detroit, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 16, 1928. Serial No. 270,341. 9 Claims. (Cl. 261—64.)



1. In a carburetor, a passage through which air is adapted to flow to the cylinders of an internal combustion engine, a valve for controlling the flow of air through the passage, a spring for resisting the opening of the valve, and means for transmitting the movement of the valve to the spring including a lever having a varying fulcrum.

1,805,454. BOILER CLEANER. NORMAN L. SNOW, FRANK BOWERS, and CURTIS L. HOWSE, Detroit, Mich., assignors to Diamond Power Specialty Corporation, Detroit, Mich., a Corporation of Michigan. Filed Sept. 15, 1924. Serial No. 737,816. 36 Claims. (Cl. 122—392.)



4. In a boiler cleaner for a water tube boiler, the combination with an impact member, of means for actuating said impact member into repeated contact with the outside of a water tube during operation of the boiler, and means for discharging a cooling fluid upon said tube.

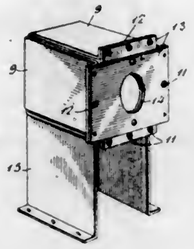
1,805,455. DETACHABLE FILTER COVER. LEROY P. STERLING, Williamsport, Pa., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Aug. 10, 1928. Serial No. 298,843. 8 Claims. (Cl. 220—61.)

1. In a container, a cover, a unitary supporting ring and bracket for said container, and means connected with said ring-bracket for permanently and rigidly securing said cover to said container.

1,805,456. MECHANISM FOR USE IN PROCESS OF TREATING YARN. WALTER C. VOLK, Rome, N. Y., assignor to Skenandoa Rayon Corporation, Utica, N. Y., a Corporation of New York. Filed Apr. 15, 1929. Serial No. 355,283. 21 Claims. (Cl. 8—19.)

1. A yarn processing apparatus comprising a movable carriage, means supporting said carriage for movement thereon, a chambered head mounted on the carriage, a perforated bobbin adapted to carry yarn secured to said head, means for supplying fluid through the head to the interior of the bobbin, and fluid-supplying means adapted in a predetermined position of said carriage to be connected to said head for supplying fluid thereto.

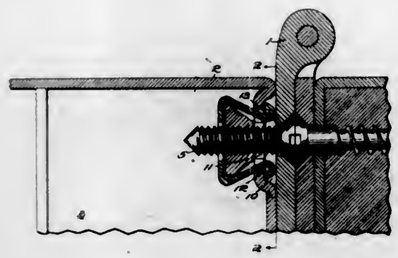
1,805,457. METHOD FOR CUTTING GLASS. PAGE S. HASELTON, Upper Montclair, N. J., assignor to Bessie L. Gregg, Forest Hill Gardens, N. Y. Filed Apr. 17, 1929. Serial No. 355,738. 6 Claims. (Cl. 49—50.)



4. In the manufacture of laminated glass having layers of glass separated by a layer of cellulosic or other shatter preventing binding material, the process of removing the binding material along a desired line which comprises subjecting the material at said line to a substantially localized high temperature sufficient to cause burning thereof.

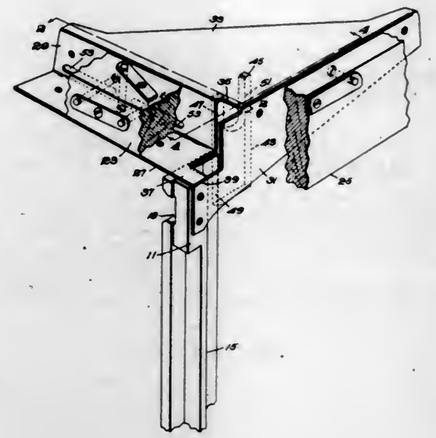
1,805,458. OIL COMPOSITION AND PROCESS OF INHIBITING OXIDATION THEREOF. THOMAS HUNTON ROGERS, Wilmington, Del., assignor to E. I. du Pont de Nemours & Co., Wilmington, Del., a Corporation of Delaware. Filed Aug. 21, 1922. Serial No. 583,364. Renewed Mar. 5, 1927. 20 Claims. (Cl. 134—79.)

1. The process of retarding the development of rancidity in unsaturated fatty oils which comprises mixing with such an oil an hydroxy-polybasic aliphatic carboxylate.



12. A coating composition comprising nitrocellulose, a vegetable oil, and an hydroxy-polybasic aliphatic acid compound capable of retarding development of rancidity in said oil.

1,805,459. MAGNETIC DEVICE. RALPH R. BATCHER, Hollis, N. Y. Filed Apr. 27, 1929. Serial No. 358,732. 7 Claims. (Cl. 174—115.5.)



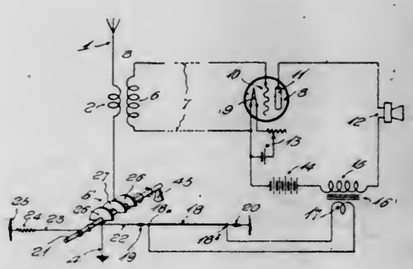
1. In an electro-magnet comprising a core and a coil wound thereon, means for extending the core to bring the pole-pieces thereof into relation to form an annular gap between them, the said means consisting of a plurality of shaped strip members secured to the core and arranged in nested relation to form an enclosing casing for the magnet winding.

1,805,460. NUT AND SCREW FASTENING. FRED S. CARR, Newton, Mass., assignor, by mesne assignments, to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed July 22, 1925. Serial No. 45,273. 3 Claims. (Cl. 85—32.)

1. A fastening unit including a nut-holder presenting opposed converging resilient fingers, a nut assembled with said holder, said nut presenting tapered sides cooperating with said converging fingers and opposed stops presented by said holder for preventing disassembly of said nut from said holder by movement of said nut transversely relative to said resilient fingers, said nut being free to shift laterally in all directions relative to said holder.

1,805,461. ROOF AND PILLAR CONSTRUCTION FOR AUTOMOBILE BODIES. FREDERICK J. KUBLER, New York, N. Y., assignor to A. S. Campbell Company, East Boston, Mass., a Corporation of Massachusetts. Filed Aug. 22, 1928. Serial No. 301,323. 9 Claims. (Cl. 296—28.)

1. In an automobile body construction in combination with a body pillar, an angle receiving the roof of side rail and having its horizontal flange resting on and secured to the top of the pillar, a vertical web to receive the roof front rail lapping on and secured to the front of the pillar, and a substantially horizontal web connecting said front rail web and the upright flange of said angle.



1,805,462. FASTENER ASSEMBLY. WALTER I. JONES, Arlington, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed Oct. 4, 1929. Serial No. 397,401. 3 Claims. (Cl. 24—208.)

1. A fastener installation comprising, in combination, a carrying medium, a fastener part located at one side of the carrying medium and having collapsible means providing an annular groove located adjacent to the carrying medium and an attaching part located at the opposite side of the carrying medium and having means passing through the carrying medium and clenched within the annular

groove presented by the snap fastener part and said means being further clenched when said collapsible means is flattened toward the said carrying medium.

1,805,463. MEANS FOR CONTROLLING THE AMPLITUDE OF ALTERNATING CURRENT. ERNEST R. HENTSCHEL, Washington, D. C.; John Olson, administrator of said Ernest R. Hentschel, deceased, assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 7, 1929. Serial No. 405,438. 10 Claims. (Cl. 250—20.)

1. In a system for automatically controlling the amplitude of alternating current, an output circuit, an input circuit, temperature actuated responsive means in said output circuit controlled by amplitude changes in current delivered to said output circuit from said input circuit, and means in said input circuit for controlling the amplitude of current delivered to said input circuit, said last mentioned means being controllable in accordance with the operation of said first mentioned means.

Patents Nos. 1,805,464 to 1,806,578

THE OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 406—No. 3 TUESDAY, MAY 19, 1931 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual index, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Changes in Classification

Order No. 8,190, April 30, 1931, directs:

In *class 8, Bleaching and Dyeing* (Division 63), abolish the following subclass:

8 **Renovating dress.**

The patents formerly contained in this subclass have been placed for the most part in class 68, Laundry, subclass 38, Renovating dress, established in this order.

In *class 68, Laundry* (Division 27), establish the following subclass:

38 **Renovating dress.**

The patents contained in this subclass have been taken for the most part from class 8, Bleaching and Dyeing, subclass 8, Renovating dress, abolished in this order.

For patents to dry cleaning compositions, see class 87, Oils, Fats, and Glue, subclass 5, Detergents. For patents to removing shine by raising the nap, see class 26, Textiles, Cloth Finishing, subclass 29, Napping. For patents to renewing the dye luster and redyeing, see class 8, Bleaching and Dyeing, subclass 5, Dyeing processes.

In *class 72, Masonry and Concrete Structures* (Division 33), abolish the following subclass, with its definition:

15.5 **Checker bricks.**

The patents formerly contained in this subclass have been placed for the most part in class 263, Heating, subclass 51, Checker bricks, established in this order.

In *class 263, Heating* (Division 3), establish the following subclass and definition:

51 **Checker bricks.**

51. CHECKER BRICKS. Patents directed to the masonry structure itself and elements thereof in which the bricks are so arranged as to furnish a large radiating or exposed structure.

Note.—See this class, subclasses 19, 20, and 46.

Note.—See class 72, MASONRY AND CONCRETE STRUCTURES, for elements of ordinary masonry structures.

Note.—See classes 158, LIQUID AND GASEOUS FUEL BURNERS, subclasses 4, 5, and 7.5; 202, DISTILLATION, subclasses 111, 122, 123, 130, 140, 143, 144, 146, 148, and 267; and 266, METALLURGICAL APPARATUS, subclass 14.

The patents contained in this subclass have been taken for the most part from class 72, Masonry and Concrete Structures, subclass 15.5, Checker bricks, abolished in this order.

In *class 235, Registers* (Division 23), establish the following subclasses and definitions:

145 **Keyboards**
146 Auxiliary.

145. KEYBOARDS. Those portions of registers, usually manually actuated, including keys, shift keys, space bars, etc., which control and initiate the action of the machine to determine what numbers shall be introduced and how; also to control subsidiary operations of the machine.

146. KEYBOARDS, AUXILIARY. Keyboards as defined above which are supported above or otherwise adjacent to the main keyboard of the machine, often for performing some function additional to that of the main keyboard.

The patents contained in subclass 145, above, have been taken for the most part from class 235, Registers, subclasses 26, Cash registers, Key arresters, and 130, Locking Mechanism, and those contained in subclass 146 have been taken from class 235, Registers, subclass 60, Calculators, Recording, Key set.

Condition of Applications Under Examination at Close of Business May 2, 1931

(Total number of applications awaiting action, excluding Trade-Mark Division, 96,264; Trade-Mark Division, 1,307. Oldest new case, Aug. 7, 1930; oldest amended, Aug. 7, 1930. The dates given are 1930 except where † indicates 1931.)

DECISIONS IN PATENT AND TRADE-MARK CASES

Supreme Court of the United States

SMITH *v.* SPRINGDALE AMUSEMENT PARK, LIMITED, WILLIAMS AND BROWN

No. 315. Decided April 13, 1931

1. PATENTS — INFRINGEMENT — DOG-RACING AMUSEMENT. Patent No. 1,379,224 for dog-racing amusement, Claims 1 and 2 construed and *Held* not infringed.
2. SAME — VALIDITY — STARTING CAGE FOR RACING DOGS. Patent No. 1,507,439, for starting cage for racing dogs, *Held* invalid for lack of invention over the prior art.

ON WRIT of certiorari to the United States Circuit Court of Appeals for the Sixth Circuit.

Decree affirmed.

Mr. Meyer I. Goldberg (*Mr. John E. Sater* and *Mr. E. Howard McCaleb* on the brief) for Smith.

Mr. Paul Bakewell for Springdale Amusement Park, Limited, et al.

Mr. Chief Justice HUGHES delivered the opinion of the Court.

This is a suit for the infringement of Letters Patent No. 1,379,224, No. 1,507,440, and 1,507,439, relating to devices for dog races. Judgment in the district court dismissing the complaint was affirmed by the circuit court of appeals. 39 F.(2d) 92; 40 F.(2d) 173. This Court granted a writ of certiorari because of conflict with a decision of the Circuit Court of Appeals for the Fifth Circuit. *American Electric Rabbit Association* v. *New Orleans Kennel Club*, 26 F.(2d) 1016.

Patent No. 1,379,224 was before this Court in *Smith* v. *Magic City Kennel Club*, decided February 25, 1931. 282 U. S. —, 404 O. G. 1043. Referring to the prior art, the Court found that the patentee's improvement was in a limited field. There was no invention in a combination consisting of a covered rail track, conveyer car and an arm projecting over the course and connected with a mechanical lure carried before racing dogs. The patent could be sustained only by virtue of the distinctive feature of the arm employed. This was described in claim 1 as "an arm extending through the longitudinal opening of the casing in a projecting position over the track and adapted to carry a lure, and a wheel rotatably mounted on and supporting the arm at the projecting end thereof", and, in claim 2, as "a horizontally extending arm hinged to said car extending midway of said course, a wheel rotatably mounted near the end of said arm, and resting upon the ground, a platform supported by said arm and a lure or quarry mounted upon said platform for attracting the dogs". The Court reached the conclusion that a rigid, horizontal arm, without hinge or wheel, was not the subject of either claim. In this view, the device of the defendant does not infringe.

Patent No. 1,507,440, relating to "housing for conveyer cars and tracks," we have held to be invalid for want of invention. *Smith* v. *Magic City Kennel Club*, *supra*.

Patent No. 1,507,439 is for an improvement in starting cages for racing dogs. The single claim is as follows:

> In a starting cage for racing dogs, a frame comprising a box-like structure divided into a plurality of compartments and comprising walls formed of wire mesh partially covered with fabric, individual rear doors for each of the compartments and a single front door hinged at its upper end to the top walls of the frame, divergent inclined members secured to the top of the said frame and extending upwardly and outwardly beyond the face of the front door and having their outer ends in the plane of the side walls of the box-like structure, springs secured to the outer ends of said inclined members and to the door and lying in the plane of the hinges, and a latch at the bottom of the cage for coaction with the lower edge of the front door to hold the front door normally closed against the tension of said springs, said springs adapted to raise the front door upon release of the latch.

In the light of the proceedings in the Patent Office upon the rejection of earlier claims, the claim can have but a narrow application. We agree with the circuit court of appeals that the particular sort of spring support and the wire mesh partitions partially covered with fabric, as well as the other elements, are but forms of construction within the range of ordinary mechanical skill. There was an utter absence of invention justifying the issue of this patent.

Decree affirmed.

U. S. Court of Customs and Patent Appeals

IN RE FOX

No. 2,579. Decided February 3, 1931

PATENTABILITY — ANNULAR PACKING.

Claim 1 for an annular packing *Held* patentable over the prior art, claims 2 and 7 *Held* unpatentable.

APPEAL from the Patent Office. Modified.

Mr. Louis E. Giles and *Messrs. Fraser, Myers & Manley* for Fox.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.*:

This is an ex parte application of appellant, in which he seeks a patent on an improvement in packing, adapted for use in ammonia compressors and like machines. Several claims were filed, some of which were allowed. Four claims, numbered 1, 2, 7 and 8, were rejected by the Examiner. Claim 8, afterwards numbered as claim 12, was thereafter allowed by the Board of Appeals, and the Examiner's decision in rejecting claims 1, 2 and 7 was affirmed. These claims are as follows:

> 1. An annular packing comprising a series of rings mounted side by side in coaxial relation, said series including hollow, perforated, lubricant containing, soft metal rings of convex polygonal cross section having outer

and inner cylindrical walls and outwardly bulging annular uniting walls, and alternating soft metal rings having surfaces complemental to the adjacent surfaces of said hollow rings and filling the intervening annular spaces.

2. An annular packing comprising a series of rings mounted side by side in coaxial relation, said series including hollow, perforated, soft metal rings of hexagonal cross section having inner and outer cylindrical surfaces connected by opposed conical surfaces, said hollow rings being filled with lubricant, and intervening soft metal rings, having complemental conical surfaces, filling the annular spaces between the rings of hexagonal cross section.

7. An annular packing as specified in claim 1 in which the ring elements are made in separable sections so assembled that the joints between the sections of each ring break joints with those of adjacent rings.

Appellant's device, upon which he seeks a patent, consists of an annular packing for piston rods and the like, and is made up of a series of hollow rings containing lubricating material, preferably a composition of heavy grease and graphite, and which rings have openings or perforations therein for the escape of the lubricant. The preferred cross section of these lubricating rings is hexagonal. They are separated by X-shaped metallic expansion rings, the surfaces of which make close contact with the adjacent walls of the lubricating rings. In that part of each of these X-shaped expansion rings which forms a V, and is adjacent to the moving part, a Babbitt metal triangular ring is inserted. Abutment rings are provided to fill the cavities at the ends of the packing. That portion of the X-shaped cavity forming a V, and lying on the outside of the packing, is filled with a soft rubber ring. Thus, when the packing is in place, all parts of the space between the moving part and the walls of the stuffing box are completely filled. Lead is preferably used as a material for the lubricating rings and abutment rings.

The X-shaped rings are preferably of Babbitt metal. The hollow rings are inserted in such a way as to break joints with each other, and are, when assembled, forced into contact with the surface of the moving part and the stuffing box by means of a follower of the ordinary type. Whenever it is desired to tighten the packing on account of wear, this follower is moved forward, and thus, by the flattening of the annular rings, all space in the stuffing box is closed and the packing brought into close contact with the moving part.

The Board of Appeals rejected claim 1, on reference to Huhn, 1,079,857, November 25, 1913. Claim 2 was rejected on Pitschel (Ger.) 278,042, September 18, 1914, or Huhn, in view of the patent to Gerhard (Fr.) 477,280, October 8, 1915. Claim 7 was rejected on Judd, 1,038,759, September 17, 1912, as well as on Huhn.

The patent to Huhn is for a metal ring packing, and shows a series of annular hollow rings of triangular shape, made of white metal, filled with lubricant, and having holes therein for the exudation of the lubricant. These rings are circular and have their bases contacting with the moving part. Between these triangular rings are disposed other triangular rings having their bases contacting with the outer walls of the stuffing box, and which are made of cast iron or copper bronze. These two sets of rings are forced into close contact by followers, and when it is desired to take up any looseness caused by wear in the packing or moving part, the followers are tightened by screw threads. When this is done, the apexes of both sets of these triangular rings lose contact with the surface of the stuffing box or moving part, as the case may be, leaving spaces filled with air, or lubricant, if any be present.

We do not believe the Huhn reference is an anticipation of appellant's first claim for at least three reasons: first, the Huhn hollow rings do not have outwardly bulging, annular uniting walls; second, his packing does not have alternating soft metal rings; third, such rings do not fill the intervening annular spaces. It is admitted by the Solicitor of the Patent Office, as well as by the tribunals below, that there are these three points of difference, but these, it is stated, are not patentable distinctions. We do not find ourselves in agreement with this conclusion. It is quite apparent that the applicant's device would operate in a substantially different way than that of Huhn, and that his invention, as embodied in his first claim, is novel and not anticipated by any of the references cited. It will be observed, in connection with this claim, that the claim does not rest upon a hexagonal cross section. Not only the claim, but the specifications as well, are amply broad enough to cover any kind of annular ring with bulging sides. We are of opinion, therefore, that this claim should be allowed.

Claim 2 is based upon metal rings of hexagonal cross sections and intervening metal rings having complemental conical surfaces. We agree with the Board of Appeals that this is anticipated by the patents to Pitschel or Huhn in view of Gerhard. Gerhard shows a packing having hexagonal lubricant filled rings and the conical surfaced intervening rings are shown by both Huhn and Pitschel.

Claim 7 rests upon annular rings being so placed that the joints are broken with each other. This is old in the art and is shown by several of the references, particularly by Judd.

We are therefore of opinion that the rejection of claims 2 and 7 was not erroneous. The decision of the Board of Appeals is affirmed as to claims 2 and 7, and reversed as to claim 1, and patent will issue upon said claim 1.

Modified.

U. S. Court of Customs and Patent Appeals

IN RE BURROWS

No. 2,602. Decided June 4, 1930

[40 F.(2d) 1011]

1. PATENTABILITY — REFRIGERATING DISPLAY COUNTER. Certain claims for a refrigerating display counter *Held* unpatentable since they "are too broad and cover more than appellant's disclosure."

2. SAME—SAME—NONANALOGOUS ARTS. Flooring for indoor skating rinks *Held* to be a nonanalogous art to refrigerating display counters.

3. SAME—SAME—SAME. Certain claims for a refrigerating display counter *Held* patentable since the substitution of the method of refrigerating a skating rink floor for that of a refrigerating counter for food constituted invention.

APPEAL from the Patent Office. Modified.

Mr. A. Miller Belfield, Mr. Joseph R. Milans, and *Mr. Calvin T. Milans* for Burrows.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

BLAND, *J.:*

This is an appeal from the decision of the Board of Appeals of the United States Patent Office, rejecting claims 11 to 25 inclusive of applicant's application for a patent on a display counter, and also is an appeal from the decision of the Board of Appeals refusing to admit and allow claim 26, which was submitted before the Board of Appeals for the first time. In this court appellant abandoned his contentions as to claim 26.

The rejected claims, 11 to 25, read as follows:

11. An apparatus of the class specified having a refrigerating display support and means for maintaining said support in refrigerating condition.

12. An apparatus of the class specified having a frozen display support and means for maintaining said support in frozen condition.

13. An apparatus of the class specified having a refrigerating supporting element for use in connection with the display of perishable articles and means for maintaining said element in a refrigerating condition.

14. An apparatus of the class specified having an icelike refrigerating element for use in displaying perishable articles said element being composed in part of solid material and in part of frozen liquid and means for maintaining said element in refrigerating condition.

15. An apparatus of the class specified having a refrigerating element for use in displaying perishable articles, said element consisting of granular material and frozen liquid and means embedded in said element adapted to maintain same in frozen condition.

16. An apparatus of the class specified having a refrigerating element for use in displaying perishable articles, said element comprising an icy structure containing refrigerating pipes adapted to freeze said element and maintain same in frozen condition.

17. An apparatus of the class specified comprising a refrigerating element adapted for use in the display of perishable articles, said element being composed of sand and ice and refrigerating pipes embedded therein.

18. An apparatus of the class specified having an icelike element adapted for use in the display of perishable articles and an upstanding rim projecting above the surface of said element.

19. An apparatus of the class specified having an icelike element adapted for use in connection with the display of perishable articles, said element consisting of sand and ice and embedded refrigerating pipes and an upstanding rim surrounding said element and projecting above the surface of the same.

20. The method of displaying perishable articles which consists in forming an icelike refrigerating element, placing articles to be displayed above said element and maintaining said element in an icelike condition.

21. The herein described method which consists in forming an icelike element of solid material and frozen liquid placing articles to be displayed above said element, and maintaining said element in an icelike condition.

22. The herein described method which consists in forming a refrigerating element by combining sand and water, freezing the latter, placing articles to be displayed above said element and maintaining said element in said frozen condition.

23. An apparatus of the class specified having an icelike refrigerating support for use in displaying perishable articles, said support being composed in part of solid material and in part of frozen liquid, and means for maintaining said support in refrigerating condition.

24. An apparatus of the class specified having a refrigerating support for supporting perishable articles for display purposes, said support consisting of granular material and frozen liquid, and means embedded in said support and adapted to maintain the same in frozen condition.

25. An apparatus of the class specified having a refrigerating support for supporting perishable articles for display purposes, said support being composed of sand and ice and conditions refrigerating pipes.

The application, which is for the reissue of appellant's Patent No. 1,514,128, discloses a counter in the top of which is set a pan having therein refrigerating coils covered with sand to which water is added. Ice is formed to provide a top surface of smooth ice which, if the top be kept level and clear, will simulate the glass top of a table, counter or show case. The edges of the tray or pan form a guard to keep the articles from sliding off the ice surface.

The claims were rejected on the following references: Carpenter, 938,554, November 2, 1909. Hildebrandt, German, 183,112, April 6, 1907.

Carpenter disclosed a display counter in a refrigerating case having a wooden floor for supporting the food to be displayed and refrigerating coils beneath the floor. The cooling of the wood is brought about by the circulation of air over the coils beneath the floor. It will be noted that the wooden floor could not be maintained in refrigerating condition since it is a nonconductor.

The German patent to Hildebrandt discloses a flooring for indoor skating rinks. The manner of forming the ice and maintaining the same is almost identical with the method of applicant.

[1] Claims 11, 12, 13, 18, 19, 20, 21 and 25 are too broad and cover more than appellant's disclosure.

Claims 14, 15, 16, 17, 22, 23 and 24, we think, describe the invention and their allowance or rejection involves the sole question as to whether or not it involved invention to substitute the method disclosed in the German patent for freezing and indoor skating floor, and maintaining the same in frozen condition, for the construction of a refrigerating device.

Appellant points out that the Carpenter device discloses nothing more than a shelf for displaying goods in a display case without disclosing that the same is constructed so as to remain in refrigerating condition, and further, that the German patent is taken from a nonanalogous art.

We agree with applicant that the Carpenter patent does not anticipate the refrigerating character of appellant's structure.

The rule on the question of rejecting claims on disclosures in nonanalogous art is clearly stated in *Potts* v. *Creager*, 155 U. S. 597,607; 70 O. G. 494, in which case the court, through Mr. Justice Brown, said:

> Indeed, it often requires as acute a perception of the relation between cause and effect, and as much of the peculiar intuitive genius which is a characteristic of great inventors, to grasp the idea that a device used in one art may be made available in another, as would be necessary to create the device *de novo*. And this is not the less true if, after the thing has been done, it appears to the ordinary mind so simple as to excite wonder that it was not thought of before. The apparent simplicity of a new device often leads an inexperienced person to think that it would have occurred to any one familiar with the subject; but the decisive answer is that with dozens and perhaps hundreds of others laboring in the same field, it had never occurred to any one before. The practised eye of an ordinary mechanic may be safely trusted to see what ought to be apparent to every one. As was said by Mr. Justice Bradley, in *Loom Company* v. *Higgins*, 105 U. S. 580, 591: "Now that it has succeeded, it may seem very plain to any one that he could have done it as well. This is often the case with inventions of the greatest merit. It may be laid down as a general rule, though perhaps not an invariable one, that if a new combination and arrangement of known elements produce a new and beneficial result never attained before, it is evidence of invention."
>
> As a result of the authorities upon this subject, it may be said that, if the new use be so nearly analogous to the former one, that the applicability of the device to its new use would occur to a person of ordinary mechanical skill, it is only a case of double use, but if the relations between them be remote, and especially if the use of the old device produce a new result, it *may* at least involve an exercise of the inventive faculty. Much, however, must still depend upon the nature of the changes required to adapt the device to its new use. (Italics quoted.)

It is argued by the Solicitor for the Patent Office that appellant was entitled to no more than he ob-

tained by the claims which were allowed in the Patent Office, which claims covered features of appellant's structure not disclosed in the references, and that the substitution of the method of refrigerating the skating rink floor for the method of providing a display shelf did not constitute invention but was merely a substitution which mechanical skill, alone, would suggest.

[2, 3] The record discloses that the idea occurred to no one but the applicant, and we can not agree that the substitution of a process connected with a floor used in a skating rink for that of a refrigerating counter for food did not constitute inventive genius. Certainly, there is considerable doubt on this question. This doubt should have been resolved in favor of the applicant.

The decision of the Board of Appeals is affirmed as to claims 11, 12, 13, 18, 19, 20, 21, 25 and 26, and reversed as to claims 14, 15, 16, 17, 22, 23 and 24.

Modified.

UPON RECONSIDERATION

Decided February 11, 1931

This case was decided on June 4, 1930, and this court reversed the decision of the Board as to claims 14, 15, 16, 17, 22, 23 and 24, and affirmed the decision of the Board as to claims 11, 12, 13, 18, 19, 20, 21, 25 and 26.

At the time of argument before this court, there being more claims in number than were required to cover appellant's invention, counsel for appellant was asked if he would withdraw some of the claims, whereupon appellant's counsel did withdraw a number of the claims, but which number did not include claims 14, 15 and 17.

After our decision was handed down, the Solicitor for the Patent Office requested that the case be reconsidered and the opinion modified for the reason that at page 2 in the brief of appellant, claims 14, 15 and 17 had been withdrawn and were not discussed by appellant or by the Solicitor for the Patent Office. Rehearing was granted and the case was reargued on January 8, 1931. The court has reconsidered the case and concludes that since claims 14, 15 and 17, on account of said withdrawal in the brief of appellant, were not considered as being before us for argument by the parties, they should not have been passed upon by this court.

Claims 14, 15 and 17 are now regarded as not being before us on appeal. Claim 16 was never withdrawn. Claims 22, 23 and 24 having been withdrawn by reason of the suggestion of the court at the time of argument, the appellant upon rehearing requested that he be permitted to withdraw his withdrawal of the same. In view of these facts and the fact that claims 22, 23 and 24 were fully discussed by both sides, we shall regard them as having been before us for decision.

Our decision is, therefore, modified and the decision of the Board of Appeals is affirmed as to claims 11, 12, 13, 18, 19, 20, 21, 25 and 26, and reversed as to claims 16, 22, 23 and 24, and the appeal is dismissed as to claims 14, 15 and 17.

Modified.

U. S. Court of Customs and Patent Appeals

IN RE DE LANY

No. 2,569. Decided February 3, 1931

PATENTABILITY—RECIPROCATING ENGINES.

A claim for a reciprocating engine *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Nelson J. Jewett and *Messrs. Browne & Phelps* for De Lany.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

LENROOT, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office rejecting claim 9 of appellant's application on the ground that said claim is not readable on appellant's disclosure and that it is unpatentable over the prior art. The appealed claim reads as follows:

In a reciprocating engine, two pistons adapted to reciprocate in opposite directions, a space between the said pistons, an open ended cylinder in which said pistons work, two crank shafts to which the pistons are respectively connected, means to prevent relative movement between the crank shafts, the arrangement being such that one of the cranks is approximately at right angles to its connecting rod when the two pistons are nearest to each other.

The references relied upon are: Reardon, 604,415, May 24, 1898; Pratt, 689,745, December 24, 1901; Manz, 954,982, April 12, 1910; Crew, 1,126,713, February 2, 1915; Jackson, 1,191,311, July 18, 1916.

The application of appellant discloses a reciprocating engine having two pistons adapted to reciprocate inside an open-ended cylinder, the pistons being connected to cranks or shafts by connecting rods. To prevent relative movement between the shafts or cranks, synchronized connecting rods are described. The essence of appellant's alleged invention, as stated in his specification, is "the provision of an engine in which the maximum cylinder pressure will act upon the crank at its position of greatest torque."

Appellant's application was filed May 23, 1924. It appears that a patent for the same alleged invention was allowed to one James Shearer on October 11, 1927, upon an application filed December 31, 1924. This patent being allowed while appellant's application was pending, it was inadvertently issued. Appellant adopted the claim of the Shearer patent and presented it in an amendment to his application three days after the Shearer patent was granted, requesting an interference with the Shearer patent. The Primary Examiner held that said claim did not read upon appellant's disclosure, and also that it was anticipated by prior patents.

Appellant, in his brief, gives what purports to be a statement of certain proceedings had with reference to a proposed declaration of interference, but as such proceedings do not appear in the record we can not consider them, even if relevant to the issues in this case. However, from appellant's statement in his brief, we do not see that such proceedings are in any way relevant to the question before us.

Appellant took an appeal from the decision of the Primary Examiner to the Board of Appeals, which tribunal affirmed the decision of the Examiner, both upon the ground of lack of disclosure and anticipation by prior patents.

The first question presented is the finding of the tribunals of the Patent Office that appellant's claim does not read upon his disclosure as set out in his specification. This depends upon the construction to be given to the phrase "approximately at right angles" in that part of the claim reading as follows:

* * * the arrangement being such that one of the cranks is approximately at right angles to its connecting rod when the two pistons are nearest to each other.

It appears that, according to appellant's specification and drawings, at the point where the two pistons are nearest to each other, the angle between one of the cranks and its connecting rod is 116°, and it is contended by the Solicitor for the Patent Office that this is so far from a right angle that the word "approximately" can not include it. Appellant contends that the patent to Shearer, from which the claim in issue is copied, has an even greater angle at the point mentioned, and yet the Patent Office held that Shearer's specification did support the claim. The construction of the word "approximately", when considered in connection with appellant's disclosure in his specification, presents a difficult question; but, for the purposes of this case, in view of the conclusion which we have reached, we may assume, without deciding, that the claim does read upon appellant's disclosure in his specification.

The second ground of rejection by the tribunals of the Patent Office is that the invention covered by the claim was anticipated by the references cited. Upon this point, the Board of Appeals said:

As to the rejection of the claim on the prior art, the patents to Jackson, Crew and Pratt all have the same object in view as the appellant and Shearer, but instead of using a crank shaft at each end of the cylinder they use a single crank shaft and operate the further piston by side connecting rods. The object in view is well stated on page 3, lines 23–38 of Jackson's specification. An engine of this type is the equivalent of one in which a second crank shaft is used at the other end of the cylinder with connections to cause the cranks to rotate in unison, such arrangement being shown in Manz or Reardon. The brief questions whether it would be possible without considerable study to arrange the cranks in such an engine, when the cranks are of equal length, so that the desired result can be effected. There is no difficulty at all in doing so as it is only necessary to draw the right hand crank and its connecting rod at a right angle, with the pistons at their nearest possible point and locate the left hand crank 90° behind the other in its rotation, as disclosed in Jackson. It makes no difference whether the cranks are of the same or equal length, as it means only that one piston has a longer traverse. Jackson prefers to make them unequal for the reason given on page 3, lines 86–91.

We find nothing patentable in claim 9 over the art cited and the decision of the Examiner is affirmed on both grounds.

We are fully in accord with the views expressed in the language quoted above. Lines 23–38 on page 3 of Jackson's specification, cited by the Board in its opinion, read as follows:

It is one of the characteristic features of my improved engine that the theoretical maximum explosion pressure on the pistons is reached approximately at a time when one of the cranks, to wit, the crank 30 as herein shown, approaches a position to exert its greatest power to rotate the crank shaft, and the relation of the crank travel and high compression to the crank 30 is such that the pressure continues to act with high efficiency upon said crank 30 while it is moving through the arc of its rotary travel in which its most effective lever arm is presented to rotate the crank shaft, or from slightly beyond the position shown in Fig. 6 to about that shown in Fig. 8.

The Board of Appeals, in that part of its decision quoted, has made it so clear that appellant's device lacks invention that nothing further need be said upon that subject.

Appellant contends that it is not only the settled rule of patent practice that, in cases of doubt as to patentability, the doubt should be resolved in favor of the applicant, but that where, in a case such as the one before us, the claim has already been allowed in a patent, with which patent appellant seeks an interference, appellant's claim should be allowed unless it is absolutely anticipated, leaving no possibility of an opposite opinion, and cites in support of this contention the decision of this court in the case of *In re Engelhardt*, 17 C. C. P. A. (Patents) 1244, 400 O. G. 678, 40 F.(2d) 760. In that case, which presented a very extraordinary situation, as will appear from the opinion, we said:

Of course we must find that the Board of Appeals erred in its decision before we can reverse it. The fact that strong equities may exist in favor of appellant does not justify us in finding error where none exists, but we think it is proper for us to consider these facts in determining the weight to be given to the fact that all of the tribunals of the Patent Office concurred in finding lack of patentability in appellant's claims. We have a right to consider that a patent has been issued by the Patent Office, a patent covering the very claims here in issue, that such patent is beyond recall by it, and that it will be considered in any court as presumptively valid.

Before we would be justified in finding error upon the part of the Board of Appeals in finding that the invention covered by appellant's claim was anticipated by the references relied upon, we must be in doubt as to the applicability of such references. We have no such doubt, and therefore, although a patent upon the same claim has been granted to Shearer, the decision of the Board of Appeals must be affirmed.

Affirmed.

Ferngren, Glass feeding and delivering mechanism and process, D. C., E. D. Mo., E. Div., Doc. 8524, *Hartford Empire Co.* v. *Obear-Nester Glass Co. et al.* Dismissed Mar. 23, 1931.

1,407,948, B. G. Rand, Card index cabinet; 1,429,628, J. H. Rand, jr., Record cabinet, filed Mar. 25, 1931, D. C., S. D. Ohio, W. Div., Doc. E 725, *Remington Rand, Inc.*, v. *International Visible Systems Corp.*

1,417,662. (See 1,201,270.) 1,420,072. (See 1,422,075.)

1,422,075, L. V. Aronson, Sparking toy; 1,420,072, same, Mechanical toy; 1,462,317, same, Whirligig; 1,558,450, same, Sparkler, D. C., S. D. N. Y., Doc. E 52/154, *Art Metal Works, Inc.*, v. *S. H. Kress & Co., Inc.* Consent order of discontinuance Mar. 26, 1931.

1,428,762, 1,316,477, H. D. Currier, Telephone system; 1,438,170, same, Telephone system with flickering recall; 1,197,166, C. S. Winston, Universal cord circuit for telephone systems; 1,358,182, C. Sparks, Trunk circuit; 1,566,622, W. G. Shull, Telephone system, filed Mar. 25, 1931, D. C., W. D. N. Y., Doc. 351, *Kellogg Switchboard & Supply Co.* v. *New York Telephone Co. et al.*

1,429,628. (See 1,407,948.)

1,433,975, C. L. Snyder, Abstract of title and method of making same, filed Mar. 30, 1931, D. C., E. D. Mich., S. Div., Doc. 4714, *The Automobile Abstract & Title Co.* v. *F. D. Fitzgerald.*

1,436,459, J. Reece, Seat cover, D. C., E. D. Pa., Doc. 6441, *Evr-Klean Seat Pad Co.* v. *Quaker Auto Supply Stores, Inc.* Consent decree for plaintiff Mar. 14, 1931.

1,438,170. (See 1,428,762.) 1,440,834. (See 1,201,270.)

1,447,090, J. E. Langsdorf, Necktie, D. C., S. D. N. Y., Doc. E 50/385, *Franc-Strohmenger & Cowan, Inc.*, v. *The Hilton Co., Inc.* Consent order of discontinuance Mar. 20, 1931.

1,447,193, J. A. Watt, Water closet valve, filed Feb. 27, 1931, D. C., E. D. Pa., Doc. 6439, *American Rubber Products Corp.* v. *M. Townsend, jr.*

1,462,317. (See 1,422,075.) 1,481,530. (See 1,395,893.)

1,494,075, L. Murray, Belt and process of making same; 1,610,942, J. R. Gammeter, Endless belt and method of making; 1,657,300, H. W. Delzell, Reenforced side-driving belt, D. C. Minn., 4th Div., Doc. E 1218, *Durkee Atwood Co. et al.* v. *The Miller Rubber Co.* Dismissed by consent Mar. 3, 1931.

1,502,540. (See 1,395,893.)

1,502,547, R. Calvert et al., Diatomaceous earth product and process of making, filed Mar. 17, 1931, D. C., S. D. Calif. (Los Angeles), Doc. E T–77–H, *Celite Corp.* v. *The Dicalite Co.*

1,507,016. (See 1,201,270.) 1,507,826. (See 1,588,354.)

1,525,941. (See 1,201,270.) 1,527,464. (See 1,395,893.)

1,556,761. (See 1,221,030.) 1,558,450. (See 1,422,075.)

1,559,520, T. M. Fairbairn et al., Putting green and similar playing surface, D. C. Minn., 4th Div., Doc. E 1734, *National Pipe Products Corp. et al.* v. *H. S. Call.* Consent decree holding all claims valid and infringed (notice Mar. 24, 1931).

1,566,622. (See 1,428,762.)

1,569,413, A. Weingaertner, Weather strip for windows, filed Jan. 29, 1930, and 1,646,155, D. Kulage, Weatherstrip unit, entered by counterclaim Mar. 19, 1930, D. C., E. D. Mo., E. Div., Doc. 8918, *W. J. Moslank* v. *D. Kulage et al.* Patent 1,569,413 held valid but not infringed; 1,646,155 held valid and claims 1, 6, 7, 8, 9, and 10 held infringed Mar. 23, 1931.

1,588,354, L. J. Grubman, Sound producing device; 1,507,826, same, Sound producing device for dolls, D. C., S. D. N. Y., Doc. E 49/385, *Voices, Inc.*, v. *Goodyear Toy Co., Inc.* Dismissed without prejudice Mar. 23, 1931.

1,594,877. (See 1,221,030.) 1,610,942. (See 1,494,075.)

1,630,543, W. H. Scott, Receptacle filling and draining device, filed Mar. 25, 1931, D. C. Mass., Doc. E 3409, *W. H. Scott* v. *Siph-O-Products Corp. et al.*

1,634,032, H. Leoni, Necktie and lining therefor, D. C., S. D. N. Y., Doc. E 49/218, *Franc-Strohmenger & Cowan, Inc.*, v. *Flex Thread Corp. et al.* Dismissed on merits Mar. 23, 1931.

1,646,155. (See 1,569,413.)

1,646,563, J. R. Sonneborn, Box wrapping system, filed Mar. 24, 1931, D. C., M. D. Pa., Doc. E 792, *Autokraft Box Corp.* v. *The Merchants Cigar Box Co.*

1,657,300. (See 1,494,075.) 1,662,436. (See 1,404,936.)

1,662,437. (See 1,405,936.) 1,677,436. (See 1,405,936.)

1,680,207. (See 1,201,270.)

1,681,727, F. M. Emerson, Artificial cast stone and process of producing same, filed Mar. 24, 1931, D. C., S. D. N. Y., Doc. E 59/71, *Varitex Co.* v. *A. Vinci et al.* (*National Cast Stone Co.*). Doc. E 59/70, *Varitex Co.* v. *New York Cut Cast Stone Corp.*

1,694,702, B. B. Deitel, Vanity case; 1,715,821, same, Novelty case, filed Mar. 23, 1931, D. C., S. D. N. Y., Doc. E 59/68, *B. B. Deitel* v. *Unique Specialty Corp. et al.*

1,698,592, C. V. Hill, Refrigerator display case, filed Mar. 2, 1931, D. C., E. D. Pa., Doc. 6445, *C. V. Hill & Co., Inc.*, v. *M. Stein et al.*

1,712,783, M. Alpern, Finger ring, filed Mar. 25, 1931, D. C., S. D. N. Y., Doc. E 59/83, *I. Papick et al.* (*Papick & Schantzer*) v. *Stern & Stern, Inc.*

1,715,821. (See 1,604,702.)

1,722,005, J. A. McCarthy, Soot and grease extractor, filed Mar. 12, 1931, D. C. Md., Doc. E 1854, *Aluminate Co., Inc.*, v. *Monarch Products Co., Inc.*

1,739,280, M. C. Behrman, Razor and blade therefor; 1,773,614, G. Dalkowitz, Safety razor, filed Jan. 30, 1931, D. C., E. D. Pa., Doc. 6407, *American Safety Razor Corp.* v. *Fringe Bros. Co.*

1,747,747, O. B. Walters, Blade controlling device for road maintainers, D. C., S. D. Iowa (Des Moines), Doc. E 4442, *O. B. Walters* v. *C. R. Miller Tractor Co.* Dismissed Mar. 24, 1931.

1,773,614. (See 1,739,280.)

1,781,139, C. Talley, Hospital chart and card holder, filed Mar. 20, 1931, D. C., S. D. N. Y., Doc. E 59/50, *C. Talley* v. *The Presbyterian Hospital of New York City.*

1,784,548, C. Seidman, Corded-edge knit neckband for sweater, filed Feb. 26, 1931, D. C., E. D. Pa., Doc. 6437, *C. Seidman* v. *Carthage Knitwear Corp.*

1,791,030, L. L. Jones, Radio receiving system, filed Mar. 27, 1931, D. C., S. D. N. Y., Doc. E 59/88, *L. L. Jones et al.* v. *Radio Corp. of America.*

Re. 17,207, O. A. Collings, Waterproof plastic, C. C. A., 8th Cir. (St. Louis), Doc. 8954, *Kansas City Southern Ry. Co. et al.* v. *Silica Products Co.* Decree modified and affirmed Mar. 17, 1931.

Re. 17,469, E. Bocchino, Safety device for fire escapes, filed Dec. 1, 1930, D. C. N. J., Doc. E 4158, *Safety Device Fire Escape Co., Inc., et al.* v. *General Iron & Brass Co.* Doc. E 4152, *Safety Device Fire Escape Co., Inc., et al.* v. *I. Golish.*

Re. 17,514, McCabe & Schoenholz, Pocket book top; Des. 80,008, same, Pocketbook latch, D. C., S. D. N. Y., Doc. E 55/178, *McCabe & Schoenholz, Inc.*, v. *Artistic Wire Forming Co., Inc.* Consent decree for injunction Mar. 23, 1931.

Re. 17,885, J. H. Janowitch, Shirt collar stiffener, filed Mar. 25, 1931, D. C., S. D. N. Y., Doc. E 59/73, *Lakewood's Patents Corp.* v. *H. H. Newman et al.*

Des. 54,296, E. F. Wood, Emblem button, D. C., S. D. N. Y., Doc. E 57/63, *The American Legion* v. *General Embroidery & Military Supply Co., Inc.* Consent decree for plaintiff (notice Mar. 26, 1931).

Des. 80,008. (See Re. 17,514.)

Des. 81,431, D. V. Belknap, Textile fabric, filed Jan. 26, 1931, D. C., E. D. Pa., Doc. 6395, *Monumental Mills* v. *E. Wood.*

Adjudicated Patents

(D. C. N. J.) Ornstein patent, No. 1,142,361, for process of antisepticizing water, claims 4, 5, 6, 8, 10 *Held* valid and infringed. *Electro Bleaching Gas Co.* v. *Paradon Mfg. Co.*, 47 F.(2d) 666.

(C. C. A. Minn.) Woodley patent, No. 1,156,122, for fibrous composition and process of manufacture, *Held* invalid. *Woodley* v. *American Container Corporation*, 47 F.(2d) 454.

(C. C. A. N. Y.) Peters patent, No. 1,225,051, for portable electric lamp, claims 1 and 2 *Held* not infringed. *Faries Mfg. Co.* v. *S. W. Farber Mfg. Co.*, 47 F.(2d) 571.

(C. C. A. Okl.) Godbald and Fletcher patent, No. 1,320,384, for drill-cutter, claims 3 and 4 *Held* valid and infringed. *Hughes Tool Co.* v. *International Supply Co.*, 47 F.(2d) 490.

(C. C. A. N. Y.) Wachsman patent, No. 1,358,483, for stop mechanism for knitting-machines, *Held* not infringed. *Wachsman* v. *Wachsman*, 47 F.(2d) 579.

(D. C. Cal.) Keszthelyi patent, No. 1,474,905, for tool joint, claims 1, 2 and 3 *Held* invalid. *Keszthelyi* v. *Doheny Stone Drill Co.*, 47 F.(2d) 648.

(C. C. A. Okl.) Scott patent, No. 1,480,014, for self-cleaning roller drill, claims 1, 2, 3 and 4 *Held* not infringed. *Hughes Tool Co.* v. *International Supply Co.*, 47 F.(2d) 490.

(C. C. A. N. Y.) Hazeltine patent, No. 1,533,858, for method and means for neutralizing capacity coupling in audions, claims 1, 2, 5 and 13 *Held* valid and infringed. *Hazeltine Corporation* v. *National Carbon Co.*, 47 F.(2d) 573.

(C. C. A. N. Y.) Walter patent, No. 1,652,262, for dumping mechanism for semitrailers, claim 2 *Held* invalid, claim 3 not infringed. *Heil Co.* v. *Walter*, 47 F.(2d) 551.

(C. C. A. N. Y.) Kesten reissue patent, No. 15,733, for automatic brake for elevators, claims 1, 7 and 8 *Held* invalid. *Otis Elevator Co.* v. *Atlantic Elevator Co.*, 47 F.(2d) 545.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,715,977, C. J. Bates, jr., and C. P. Bartels, Safe filling, decided April 27, 1931, claim 1.

Pat. 1,718,044, J. M. High, jr., Vibrating motor, decided April 30, 1931, claims 1, 2, 3, 4, and 5.

Pat. 1,762,925, L. A. Jones and C. M. Tuttle, Sound film with sensitometric scale, decided April 8, 1931, claim 1.

Disclaimers

Reissue No. 16,297.—*Humprey F. Parker*, Philadelphia, Pa. CONTROL FOR ELECTRIC ELEVATORS. Patent dated March 23, 1926. Disclaimer filed May 1, 1931, by the assignee, *Otis Elevator Company.*

Hereby enters this disclaimer to claims 34, 35, 36, and 37 in said patent, which are in the following words, to-wit:

"34. A control system for an elevator car comprising a plurality of switches, one for each of a plurality of landings, operable to cause the stopping of the car at the landings for which said switches are operated upon its approaching said landings in the down direction, a plurality of additional switches, one for each of said landings, operable to cause the stopping of the car at the landings for which said additional switches are operated upon its approaching said landings in the up direction, switching mechanism, said switching mechanism being operable to cause the starting of the car from each and every landing.

"35. A control system for an elevator car comprising, a plurality of sets of switches, each set comprising a switch for each of a plurality of landings, the switches of each set being operable to cause the stopping of the car at the respective landings upon its approaching said landings in the down direction, and a plurality of additional sets of switches, each additional set comprising a switch for each of said landings, the switches of each additional set being operable to cause the stopping of the car at the respective landings upon its approaching said landings in the up direction.

"36. A control system for an elevator car comprising, a plurality of sets of switches, each set comprising a switch for each of a plurality of landings, the switches of each set being operable to cause the stopping of the car at the respective landings upon its approaching said landings in the down direction, a plurality of additional sets of switches, each additional set comprising a switch for each of said landings, the switches for each additional set being operable to cause the stopping of the car at the respective landings upon its approaching said landings in the up direction, and switching mechanism, said switching mechanism being operable to cause the starting of the car from each and every landing.

"37. A control system for an elevator car comprising, a plurality of up switches within the car, one for each of a plurality of landings, and a plurality of up switches without the car, one at each of said landings, both the up switches within the car and the up switches without the car being operable to cause the stopping of the car at the respective landings upon its approaching said landings in the up direction; a plurality of down switches within the car, one for each of said landings, and a plurality of down switches without the car, one at each of said landings, both the down switches within the car and the down switches without the car being operable to cause the stopping of the car at the respective landings upon its approaching said landings in the down direction; and switching mechanism

within the car, said switching mechaniam being operable to cause the starting of the car from each and every landing in either direction."

1,585,452.—*John M. Widmer*, Cedar Rapids, Iowa. MANUFACTURE OF STARCH. Patent dated May 18, 1926. Disclaimer filed May 5, 1931, by the assignee, *Penick & Ford, Ltd. Incorporated.*

Therefore, enters the following disclaimer:

Disclaims from claims 1, 2, 4, 5, 8, 13, and 18 all processes, excepting those for manufacturing starch from corn in a system wherein the solubles formerly permitted to run to waste and the waters separated from insolubles are recovered, and wherein, in the separating operations, starch and gluten are washed from bran in a sieve system which includes sieves having minute openings, and wherein starch, gluten, and water are separated from each other at a stage following the bran-washing operation, and wherein the separated starch is washed and wash water and solubles therefrom are included in the recovery.

Further disclaims from claim 1 all processes, which do not include steeping the corn in a portion of the water which has been separated from starch and gluten subsequent to a starch tabling operation, and withdrawal of steep water and recovery of solubles therein, and the reuse of another portion of such water, in connection with necessary make-up water, in effecting separations preceding the starch tabling operation, and which do not include also washing the starch after separation thereof and reusing the wash water as make-up water.

Further disclaims from claim 4 all processes which do not include the re-use of starch wash water as make-up water and introduction of SO_2 into the separating system through the medium of said wash water.

Further disclaims from claim 8 all processes which do not include, as a part of the separating operations, the separation of germs from other insoluble corn constituents prior to the bran-washing operation, and which do not include steeping the corn in a minor portion of the separated water and reusing a major portion of the separated water and starch wash water, as make-up water, in separating operations preceding the step of separating starch, gluten, and water from each other.

Disclaims from claim 14, all processes which do not pertain to the manufacture of starch from grains having as constituents substantial amounts of bran and gluten constituting portions of the materials subjected to separating operations.

Further disclaims from claim 18 all processes which do not include, as a part of the separating operations, separation of germs from insoluble corn constituents prior to the bran-washing operation and which do not include, as a part of the operations of recovering solubles, the withdrawal of steep water and recovery of solubles therein.

1,748,180.—*Charles D. Lawhon*, Knoxville, Tenn. SOLDERING FLUX. Patent dated February 25, 1930. Disclaimer filed April 24, 1931, by *The Fulton Sylphon Company.*

Hereby enters its disclaimer of claims 3 and 4 of said Letters Patent No. 1,748,180, reading as follows:

"3. A soldering flux comprising aniline hydrochloride.

"4. In the art of soldering, the step of cleaning the metal surfaces and facilitating the flow of solder thereon which comprises applying aniline hydrochloride thereto and releasing hydrogen chloride therefrom by heat."

Notice of Cancellation

U. S. PATENT OFFICE, *Washington, May 5, 1931.*

Salomon Bros., their assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Charles J. Wouters, of 3120 Harrison Street, Oakland, Calif., to effect the cancellation of the trade-mark registration of Salomon Bros., of 15 Burling Slip, New York, N. Y., No. 103,363, dated March 30, 1915, and the notice of such proceeding sent by registered mail to the said Salomon Bros. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Salomon Bros., their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Interference Notices

U. S. PATENT OFFICE, *Washington, Apr. 14, 1931.*

George F. Colley, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications for patent of George F. Colley, 1284 Union Avenue, Los Angeles, Calif., and of Stephen Seth, 882 Park Avenue, Baltimore, Md., and counsel for Colley having stated that they do not know the present whereabouts of said Colley, notice is hereby given that unless said George F. Colley, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

U. S. PATENT OFFICE, *Washington, Apr. 18, 1931.*

Loughlin & Company, their assigns or legal representatives, take notice:

An interference having been declared by this office between the application of M. M. Fleron & Son, Inc., 113 North Broad Street, Trenton, N. J., for registration of a trade-mark and trade-mark registered May 13, 1930, No. 270,829, to Loughlin & Company, 703 Mount Vernon Place, Washington, D. C., and a notice of such declaration sent by registered mail to said Loughlin & Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Loughlin & Company, their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, April 22, 1931.*

H. H. Palmer & Co., their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of John F. Jelke Company, Hillsboro and Northeastern R. R. Track, Hillsboro, Wisconsin, for registration of a trade-mark and trade-mark registered April 24, 1917, No. 776,354, to H. H. Palmer & Co., 45 Harrison Street, New York, N. Y., and the Office having failed to secure satisfactory service upon said H. H. Palmer & Co. at the said address, notice is hereby given that unless said H. H. Palmer & Co., their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

CARNEGIE LIBRARY OF ATLANTA

TRADE-MARKS

OFFICIAL GAZETTE, MAY 19, 1931

[VOL. 406. No. 3]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 312,482. HUME-SINCLAIR COAL MINING COMPANY, Kansas City, Mo. Filed Mar. 24, 1931.

The exclusive use of the words "Coal" and "Leaps into Flame" is disclaimed apart from the mark as shown on the drawing.

For Coal.

Claims use since Mar. 9, 1931.

CLASS 2

Receptacles

Ser. No. 311,842. HOWARD E. LOVETT, Pittsburgh, Pa. Filed Mar. 6, 1931.

The drawing is lined for red.

For Metal Boxes for Used Razor Blades.

Claims use since Feb. 5, 1931.

Ser. No. 312,830. ALUMINUM COMPANY OF AMERICA, Pittsburgh, Pa. Filed Apr. 2, 1931.

For Collapsible Tubes.

Claims use since May 12, 1930.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 270,310. THE DOW CHEMICAL COMPANY, Midland, Mich. Filed July 30, 1928.

Applicant is the owner of registration No. 140,588 effected under the 10-year proviso of the 1905 act.

For Cleaning Compositions—Namely, Oil, Fat, and Grease Removers; Tar, Gum, and Organic Resin Removers; Washing and Cleaning Compounds; and Dry Cleaning and Spotting Fluids.

Claims use since 1917.

Ser. No. 307,943. GOLDEN EAGLE SOAP COMPANY, San Francisco, Calif. Filed Nov. 15, 1930.

CAMPAMENTO

For Soap.
Claims use since July 15, 1930.

Ser. No. 312,483. DAVID P. LAVIETES, doing business as Pequot Soap Works, Inc., Brooklyn, N. Y. Filed Mar. 24, 1931.

PEQUOT

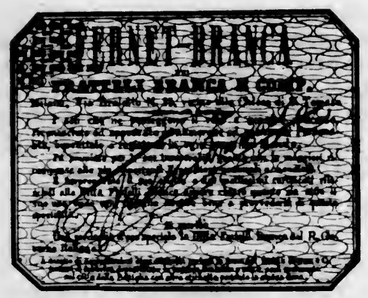
For Laundry Soap for Washing Machines and General Household Use.
Claims use since Dec. 15, 1930.

Ser. No. 312,647. HANSON-VAN WINKLE-MUNNING COMPANY, Matawan, N. J. Filed Mar. 28, 1931.

ACME

For Buffing Compounds.
Claims use since 1888.

Ser. No. 313,037. HARTFORD PRODUCTS CORPORATION, Hartford, Conn. Filed Apr. 7, 1931.



RITZ

For Razor Stroppers.
Claims use since November, 1930.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 272,395. FRATELLI BRANCA, Milan, Italy. Filed Sept. 14, 1928.

The representation of the label is disclaimed per se. The facsimile signature "Fratelli Branca & C." appears on a label running on a diagonal line from the inferior right angle to the superior angle in black ink. All wording with the exception of "Branca", "Fratelli Branca E Comp" and the facsimile signature is disclaimed apart from the mark as shown on the drawing. Applicant is the owner of registered Trade-Mark No. 270,734.
For Stomach Bitters.
Claims use since 1924.

Ser. No. 272,396. FRATELLI BRANCA, Milan, Italy. Filed Sept. 14, 1928.

The representation of the label is disclaimed per se. All wording with the exception of "Branca" and "L. Gandolfi & Co." is disclaimed apart from the mark as shown on the drawing. Applicant is the owner of registered Trade-Mark No. 270,734.
For Stomach Bitters.
Claims use since 1912.

Ser. No. 272,397. FRATELLI BRANCA, Milan, Italy. Filed Sept. 14, 1928.

The representation of the label is disclaimed per se. All wording with the exception of "Branca," "Fratelli Branca & C.," and "L. Gandolfi & Co., Inc." is disclaimed apart from the mark as shown on the drawing. Applicant is the owner of registered Trade-Mark No. 270,734.
For Stomach Bitters.
Claims use since 1924.

Ser. No. 287,703. SAM M. HILL, doing business as Hill's Mfg. Co., Galveston, Tex. Filed July 26, 1929.

FLY ZING

For Insecticide.
Claims use since Mar. 1, 1926.

For Welding Flux.
Claims use since May 9, 1930.

Ser. No. 312,832. ALUMINUM COMPANY OF AMERICA, Pittsburgh, Pa. Filed Apr. 2, 1931.

For Welding Flux.
Claims use since May 9, 1930.

Ser. No. 312,923. FRANK LOTITO, doing business as West Coast Wine Jelly Co., Los Angeles, Calif. Filed Apr. 3, 1931.

GONDOLA

For General Medicinal Tonic Having a Wine Base.
Claims use since Mar. 1, 1930.

Ser. No. 312,951. EARL R. HARFORD, doing business as Bond Chemical Company, Middletown, N. Y. Filed Apr. 4, 1931.

Hygechlor

For Cleaning and Bleaching Disinfectant.
Claims use since August, 1929.

CLASS 7

Cordage

Ser. No. 313,339. THE EDWIN H. FITLER CO., Philadelphia Pa. Filed Apr. 14, 1931.

P. B. T.

For Bundling Twine.
Claims use since June 16, 1927.

Ser. No. 313,340. THE EDWIN H. FITLER CO., Philadelphia, Pa. Filed Apr. 14, 1931.

DOMESTIC

For Manila Rope.
Claims use since Jan. 30, 1929.

CLASS 8

Smokers' Articles, Not Including Tobacco Products

Ser. No. 313,064. RUBEN E. WALL, doing business as Whoopee Pipes, Buffalo, N. Y. Filed Apr. 7, 1931.

WHOOPEE

For Smoking Pipes.
Claims use since December, 1929.

CLASS 10

Fertilizers

Ser. No. 312,918. HUDSON VALLEY FUEL CORPORATION, Troy, N. Y. Filed Apr. 3, 1931.

NUSOIL

For Sulphate of Ammonia for Fertilizer.
Claims use since Mar. 20, 1931.

CLASS 12

Construction Materials

Ser. No. 296,157. VEREINIGTE STAHLWERKE AKTIENGESELLSCHAFT, Dusseldorf, Germany. Filed Feb. 17, 1930.

For Refractory Stones, Refractory Bricks, Coke Oven Stones, and Coke Oven Bricks, Silica Stones, and Silica Bricks, Fire-Clay Bricks, Insulating Stones, and Other Compositions Used for Insulating Against Heat, Cold, and Sound; Ammonia Bricks Used for Furnace Lining; Blast Furnace Products—Namely, Slag Bricks, Slag Wool, Tar-Macadam; Blast Furnace Cement, Iron Portland Cement, Lime, Plaster, Mortar, Pyrolignite of Lime; Ground Refractory Schamotte, Basic and Semi-Acid Schamotte Stones, Acid-Resisting Stones, Prepared Stones, Prepared Broken Stones, Artificial Stones, Fabricated Structural Shapes, Including Girders, Steel Sheet Piling, Mooring Masts; Knocked-Down Structures and Buildings Including Lift Frames, Bridges, Loading Bridges, Railway Sheds, Airship and Balloon Sheds, Work Sheds, Slaughter Houses, Housings and Scaffoldings for Blast Furnaces; Swimming Docks, Lock Doors, Weir Doors, Weir Shutters, and Other Constructional Parts for Weirs of Various Types, All Said Goods Being Materials or Parts Used for Constructional Purposes.
Claims use since July 8, 1918.

Ser. No. 306,822. MARVEX INC., Canton, Ohio. Filed Oct. 16, 1930.

MARVEX

For Composition Material for Constructing the Surface of Miniature Golf Greens or the Like
Claims use since September, 1930.

Ser. No. 309,427. GENERAL INSULATING & MFG. CO., Alexandria, Ind. Filed Dec. 29, 1930.

Gimco FLEXFELT

For Heat and Cold Insulation Material in Which Mineral Wool is the Main Ingredient in Sheet, Granulated, Wool, and Brick Form.
Claims use since Feb. 7, 1924.

Ser. No. 309,428. GENERAL INSULATING & MFG. CO., Alexandria, Ind. Filed Dec. 29, 1930.

Gimco SAVALL

For Heat and Cold Insulation Material in Which Mineral Wool is the Main Ingredient in Sheet, Granulated, Wool, and Brick Forms.
Claims use since Jan. 1, 1930.

Ser. No. 311,551. SANIMETAL TILE CORPORATION, New York, N. Y. Filed Feb. 28, 1931.

SANIMETAL TILE CORP.

For Enamel Tiles.
Claims use since Jan. 12, 1931.

Ser. No. 312,394. VISCO-MENT CORPORATION, Chicago, Ill. Filed Mar. 21, 1931.

Mulsi-falt

For Emulsified Asphalt.
Claims use since Sept. 1, 1930.

Ser. No. 312,512. R. E. CONREY, doing business as Aquabar Waterproofing Products, Philadelphia, Pa. Filed Mar. 25, 1931.

AQUABAR

For Moisture-Resistant Compounds for Application to Plastic Masonry Surfaces.
Claims use since January, 1907.

Ser. No. 312,515. J. H. France Refractories Co., Snow Shoe, Pa. Filed Mar. 25, 1931.

FRANCITE

For Refractory Cement.
Claims use since Apr. 21, 1930.

Ser. No. 312,516. J. H. France Refractories Co., Snow Shoe, Pa. Filed Mar. 25, 1931.

HYDRECON

For Refractory Concrete.
Claims use since Aug. 4, 1930.

Ser. No. 312,554. The Dextone Company, New Haven, Conn. Filed Mar. 26, 1931.

DEXTONE

For Articles Made from Artificial Stone—Namely, Base Course Blocks, Water Table Blocks, Plinths, Pilaster Capitals, Pilaster Bases, Pilaster Shafts, Column Bases, Column Capitals, Column Shafts, Architraves, Archivolts, Frieze, Molding, Coping, Cornices, Stylobates, Balusters, and Rails.
